That Commission Exhibits 195, Contract between Standard Products Company and Minneapolis-Honeywell Regulator Company—1939, was lost while in use at trial table.

That also transmitted herewith is a full, true, and complete copy of the Trial Examiner's Report and Exceptions related to this proceeding.

2 That this transcript and Trial Examiner's Report and Exceptions are certified to the United States Circuit Court of Appeals for the Seventh Circuit, pursuant

to the filing in said Court of a petition for review of an Order to Cease and Desist, dated January 14, 1948, entered by the Federal Trade Commission in the above indicated proceeding.

In witness whereof, I hereunto subscribe my name, and affix the seal of the said Federal Trade Commission, at its office in the City of Washington, D. C., this 5th day of April, A. D. 1948.

Wm. P. Glendening, Jr.,
(Seal) *Acting Secretary.*

4 BEFORE FEDERAL TRADE COMMISSION.

(Caption—4920)

COMPLAINT.

Count I.

Pursuant to the provisions of the Federal Trade Commission Act and by virtue of the authority vested in it by said Act, the Federal Trade Commission having reason to believe that Minneapolis-Honeywell Regulator Company, hereinafter referred to as respondent, has violated the provisions of Section 5 of said Act, and it appearing to the Commission that a proceeding by it in respect thereof would be in the public interest, hereby issues its complaint, stating its charges in that respect as follows:

Paragraph One: Respondent Minneapolis-Honeywell Regulator Company is a corporation organized, existing and doing business under and by virtue of the laws of Delaware, with its general office and principal place of business at 2747 Fourth Avenue, South, in the city of Minneapolis, state of Minnesota. It is now and for more than three years last past has been engaged in the manufacture of automatic temperature controls for oil, gas and coal heating plants and industrial operations and in the sale thereof principally to oil burner manufacturers and also to jobbers, wholesalers and dealers in oil burner equipment located throughout the several states of the United States, the territories thereof, and in the District of Columbia, causing said products when sold, to be transported from the places of manufacture in the states of Minnesota, Indiana, Pennsylvania, and through distribution points

in other states of the United States, to the purchasers thereof located in states other than the states of manufacture. There is now, and has been for more than three years last past, a constant current of trade and commerce in said products between and among the various states of the United States, the territories thereof and in the District of Columbia.

The said respondent is the principal manufacturer of automatic temperature controls in the United States, the total volume of sales of said products by the said respondent, annually, during the past three years, constituting more than 60% of the total number of automatic temperature controls sold annually in the United States to burner manufacturers for domestic heating plants and to contractors and dealers in domestic automatic heating equipment. The respondent in the sale of automatic temperature controls as aforesaid, has entered into and now has in effect annual contracts or agreements with manufacturers of oil burners for domestic heating plants for a number of sets and units of automatic temperature controls equal to approximately the manufacturers annual requirements of such products, and the number of oil burner manufacturers having such contracts with said respondent has constituted for more than three years last past, and now constitutes a majority of all the manufacturers of oil burners for domestic heating plants within the United States.

In the course and conduct of its said business as herein described, respondent has been for more than three years last past and now is in substantial competition in the sale of automatic temperature controls in commerce between and among the various states of the United States, the territories thereof, and in the District of Columbia, with approximately six other corporations, persons, firms and partnerships.

Paragraph Two: In the automatic operation of a domestic oil burner, three types of controls are required and used and are usually, but not necessarily, sold in sets consisting of (1) a thermostat which is placed in the room or space to be heated, (2) a limit control which is a device placed on the heating plant to control the temperature or pressure in the heating plant, such as aerostat for hot air heating plants, aquastat for hot water heating plants and vaporstat for vapor heating plants, and (3) a primary control which controls the cycle of operation of the automatic

burner so as to prevent an explosion, such as a protectorelay. Some domestic oil burner manufacturers, in addition, equip their domestic oil burners with a fan control, the fan being operated as an extra limit control. Many domestic oil burner manufacturers, particularly those who also manufacture furnaces, purchase several thermostats and primary controls, using them as zone controls in the heating of large spaces.

The primary control sometimes referred to as a combustion control, a master control, or a safety control is an essential element in every domestic oil burner installation. The respondent owns or controls most of the existing patents on said primary controls (protectorelay) but there are many thermostats and limit controls being manufactured and sold by said competitors of respondent which could be and are satisfactorily and safely used by oil burner manufacturers, furnace manufacturers and contractors interchangeably with the thermostats and limit controls manufactured and sold by the respondent.

Paragraph Three: Respondent in the course and conduct of its said business as hereinbefore described in the year 1936 and prior thereto entered into, or attempted to enter into, written agreements with all its domestic oil burner manufacturer customers under the terms of which the purchaser is obligated to purchase his requirements of automatic temperature controls from the respondent, said controls to be purchased in sets consisting of one thermostat, one limit control and one primary control at a combination price per set. Said agreements contained the following provisions:

"It is specifically agreed that other control equipment is not to be considered as part of a set within the terms of this contract because the Company's costs are figured to cover a complete set of controls and the following breakdown prices are purely for enforcing purposes. It is agreed that the purchasers' yearly purchases will consist of at least 90% as many thermostats and 100% (but at the company's option not more than 125%) as many limit controls as primary controls. * * * The purchaser agrees that at least 95% of his control requirements consisting of thermostats, primary controls and limiting devices will be purchased from the Company."

Beginning in January 1937, the respondent discontinued the foregoing provision with respect to the 95% of the customer's control requirements in its contracts with its

domestic oil burner manufacturer customers, and since that time has not entered into contracts with its domestic oil burner manufacturer customers containing said provision.

7 The respondent in the year 1939 and in subsequent years in all such agreements with its domestic oil burner manufacturer customers has included similar set prices with the following provision:

"The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract ..... sets or more of the Company's automatic temperature controls. Because the Company's thermostats and primary controls are specifically designed to operate one with the other, it is unsatisfactory and often dangerous to mix controls made by different manufacturers in the same installation, and the Company does not give any assurance of satisfactory operation nor assume any service responsibility if its controls are used with other makes. It is, therefore, further agreed that each set shall consist of but one Thermostat, one Primary Control, and one Limit Control, and that the Purchaser will buy at least 90% as many Room Thermostats and 100% as many Limit Controls as Primary Controls at the following prices."

Paragraph Four: As a result of the acts and practices of the respondent set forth in Paragraph Three herein for more than three years last past a substantial number of oil burner manufacturers for domestic heating plants have been induced to purchase either their entire requirements or a majority of their requirements of automatic temperature controls from the respondent, and competitors of the respondent have been prevented from selling their thermostats and limit controls in substantial quantities to the oil burner manufacturers for domestic heating plants purchasing primary controls from the respondent.

Paragraph Five: Respondent in the course and conduct of its said business has for more than three years last past adopted or pursued the policy or practice of granting or attempting to grant, under threat of infringement suit, a non-exclusive license to certain of its competitors under license agreements to manufacture and sell a combination furnace control system wherein the limit control, a fan control, and a thermostat, neither covered by patent, are operated together under a system patent covering "furnace control" issued to one Edward E. Freeman and

known as the Freeman Patent, owned and controlled by said respondent. In consideration for the granting of said license the respondent exacted and received royalties
8 from licensees of 50c per unit manufactured under said license. In said license agreement the license is granted on the express condition that the prices, terms and conditions of sale of combination furnace controls made in accordance with the terms of the agreement shall not be more favorable to the customer than those fixed from time to time by the licensor for its own products embodying the invention covered by the agreement, and that the licensee will sell said controls only at prices and on terms not more favorable to the customer than those set forth in a price schedule issued from time to time by the licensor. Said price schedule attached to and made a part of said agreement contains net minimum prices to be observed by the manufacturers for a combination furnace control and also those to be observed by jobbers and wholesalers as well as retail dealers.

Respondent for more than three years last past has sold a combination furnace and fan control embodying the said Freeman patent and in connection therewith it manufactures the fan switch but not the fan and manufactures the limit switch and the thermostat. The sales of said combination furnace and fan control by the respondent have substantially increased beginning with the year 1939 when said respondent began to issue licenses to its said competitors as aforesaid.

Paragraph Six: Respondent in the course and conduct of its said business manufactures and sells combustion stoker switches to furnace manufacturers throughout the United States and said respondent has followed the policy of selling said combustion stoker switches to its said customers under so-called exclusive license agreements whereby the said customers are granted licenses to use and sell said combustion stoker switches in combination with other devices under a domestic heating system of maintaining stoker fire which includes stoker switches and which is manufactured under a system patent of which the said respondent was an exclusive licensee, when as a matter of fact respondent well knew that the said patent did not cover or include the said stoker combustion switch.

Paragraph Seven: The acts and practices of the respondent as herein alleged are all to the prejudice of competitors of respondent and of the public; have a danger-

cus tendency to and have actually hindered or prevented competition in the sale of automatic temperature controls for use in domestic heating plants in commerce within the intent and meaning of the Federal Trade Commission
9 Act; have unreasonably restrained such Commerce in automatic temperature controls for use in domestic heating plants; have a dangerous tendency to create in respondents a monopoly in the sale of said products; and constitute unfair methods of competition in commerce within the intent and meaning of Section 5 of the Federal Trade Commission Act.

Count II.

The Federal Trade Commission having reason to believe that Minneapolis-Honeywell Regulator Company, a corporation, hereinafter called respondent, has violated and is now violating the provisions of Section 3 of the Act of Congress entitled "An Act to supplement existing laws against unlawful restraints and monopolies, and for other purposes" approved October 15, 1914 (the Clayton Act), as amended by the Robinson-Patman Act (U. S. C. Title 15, Sec. 13), hereby issues its complaint against said respondent and states its charges with respect thereto as follows, towit:

Paragraph One: For its charges under this paragraph of this Count said Commission relies upon the matters and things set out in Paragraph One of Count I of this complaint to the same extent and as though the allegations of said paragraph of said Count I were set out in full herein, and said Paragraph One of said Count I is therefore incorporated herein by reference and made a part of the allegations of this Count.

Paragraph Two: For its charges under this paragraph of this Count said Commission relies upon the matters and things set out in Paragraph Two of Count I of this complaint to the same extent and as though the allegations of said paragraph of said Count I were set out in full herein, and said Paragraph Two of said Count I is therefore incorporated herein by reference and made a part of the allegations of this Count.

Paragraph Three: For its charges under this paragraph of this Count said Commission relies upon the matters and things set out in Paragraph Three of Count I of this complaint to the same extent and as though the alle-

gations of said paragraph of said Count I were set out in full herein, and said Paragraph Three of Count I is therefore incorporated herein by reference and made a part of the allegations of this Count.

Paragraph Four: For its charges under this paragraph of this Count said Commission relies upon the matters and things set out in Paragraph Four of Count I of this complaint to the same extent and as though the allegations of said Paragraph Four of Count I were set out in full herein, and said Paragraph Four of said Count I is therefore incorporated herein by reference and made a part of the allegations of this Count.

Paragraph Five: In the course and conduct of its said business described in Paragraph One, Two, Three and Four of Count I of this complaint respondent, in the course of commerce between and among the various states of the United States and the District of Columbia as described in said Paragraphs One and Two of said Count I of this complaint, for more than three years last past or thereabouts, has made sales and contracts for the sale of automatic temperature controls for heating plants on the condition, agreement or understanding that the purchasers thereof should not deal in or use any automatic temperature control for heating plants of a competitor or competitors of said respondent. The effect of said sales and contracts for sale and of such condition, agreement or understanding have been or may be to substantially lessen competition or tend to create a monopoly in a line of commerce, namely, the interstate sale and distribution of automatic temperature controls for heating plants.

Paragraph Six: The aforesaid acts of respondent, Minneapolis-Honeywell Regulator Company, constituted a violation of the provisions of Section 3 of the hereinabove mentioned Acts of Congress entitled "An Act to supplement existing laws against unlawful restraints and monopolies, and for other purposes", approved October 15, 1914 (the Clayton Act).

Count III.

The Federal Trade Commission having reason to believe that Minneapolis-Honeywell Regulator Company, a corporation, hereinafter called respondent, has violated and is now violating the provisions of Section 2 of the Act of Congress entitled "An Act to supplement existing laws

against unlawful restraints and monopolies, and for other purposes" approved October 15, 1914 (the Clayton Act) as amended by the Robinson-Patman Act (U. S. C. Title 15, Sec. 13), hereby issues this its complaint against said respondent and states its charges with respect thereto as follows, to-wit:

11 Paragraph One: For its charges under this paragraph of this Count said Commission relies upon the matters and things set out in Paragraph One of Count I of this complaint to the same extent and as though the allegations of said paragraph of said Count I were set out in full herein, and said Paragraph One of said Count I is therefore incorporated herein by reference and made a part of the allegations of this Count.

Paragraph Two: For its charges under this paragraph of this Count said Commission relies upon the matters and things set out in Paragraph Two of Count I of this complaint to the same extent and as though the allegations of said paragraph of said Count I were set out in full herein, and said Paragraph Two of said Count I is therefore incorporated herein by reference and made a part of the allegations of this Count.

Paragraph Three: In the course and conduct of its said business described in Paragraph One and Two of Count I of this complaint respondent, Minneapolis-Honeywell Regulator Company, has been for more than three years last past and is now discriminating in price between different purchasers buying automatic temperature controls for heating plants of like grade and quality by selling its said products to some of its customers at lower prices than it sells said products of like grade and quality to other of its customers, many of whom are competitively engaged one with another in the resale of said products within the United States. The respondent during said period of time has engaged in the following discriminatory practices and methods of determining the prices at which it sells its said products to its said customers:

(1) Respondent has classified its customers as follows: (a) oil burner manufacturers, (b) oil burner jobbers, (c) oil burner wholesalers—Class A, (d) oil burner wholesalers—Class B, and (e) dealers.

(2) Respondent publishes list prices for its said products, with discounts regularly and usually allowed to each respective class of trade, said discounts varying from 25

per cent up to 45 per cent, depending upon the product and the service rendered, that is, whether its customer is a dealer, jobber or wholesaler. Oil burner manufacturers who purchase approximately 95% of respondent's temperature controls for oil business are usually granted the maximum trade discount or approximately 45 per cent from the list price when buying in minimum quantities.

12 (3) Respondent sells its said products, particularly thermostats, limit controls and primary controls in units and in sets to manufacturers of oil burners under contracts providing for annual discount arrangements, including seven separate and distinct price brackets, with net prices fixed in proportion to the quantity requirements of the customer under the contract.

(4) Respondent sells its said contract customer buying up to 50 sets annually at a base price which has varied from time to time, but which is approximately 45 per cent less than the list price in effect, and such customers buying in annual quantities in excess of 50 sets are sold at varying discriminatory prices applicable to the different quantity brackets in effect, the most favored customers being sold at discriminatory prices ranging respectively from approximately 45 per cent less than the base price in 1938, to approximately 30 per cent less than the base price in 1940.

Paragraph Four: The effect of the said discriminations in price mentioned in Paragraph Two and Three hereof has been or may be substantially to lessen competition in the line of commerce in which respondent is engaged and to injure, destroy and prevent competition between the respondent and its competitors, and to injure, destroy and prevent competition between the customers of said respondent in the sale and distribution of automatic temperature controls for heating plants, and has been and may be to tend to create a monopoly in said line of commerce in the various localities or trade areas in the United States in which said respondent and its competitors are engaged in the sale and distribution of said products.

Paragraph Five: The foregoing acts and practices of respondent are violations of subsection 2(a) of Section 1 of the said Act of Congress approved June 19, 1936, entitled "An Act to amend Section 2 of an Act entitled 'An Act to supplement existing laws against unlawful restraints and monopolies, and for other purposes' approved October 15, 1914, as amended U. S. C. Title 15, Sec. 13 and for other purposes."

Wherefore, The Premises Considered, the Federal Trade Commission on this 23rd day of February, A. D., 1943 issues its complaint against said respondent.

Notice.

Notice is hereby given you, Minneapolis-Honeywell Regulator Company, respondent herein, that the 2nd day of April, A. D., 1943, at 2 o'clock in the afternoon, is 13 hereby fixed as the time, and the offices of the Federal Trade Commission in the City of Washington, D. C., as the place, when and where a hearing will be had on the charges set forth in this complaint, at which time and place you will have the right, under said Act, to appear and show cause why an order should not be entered by said Commission requiring you to cease and desist from the violations of the law charged in the complaint.

You are notified and required, on or before the twentieth day after service upon you of this complaint, to file with the Commission an answer to the complaint. If answer is filed and if your appearance at the place and on the date above stated be not required, due notice to that effect will be given you. The Rules of Practice adopted by the Commission with respect to answers or failure to appear or answer (Rule IX) provide as follows:

In case of desire to contest the proceeding the respondent shall, within twenty (20) days from the service of the complaint, file with the Commission an answer to the complaint. Such answer shall contain a concise statement of the facts which constitute the ground of defense. Respondent shall specifically admit or deny or explain each of the facts alleged in the complaint, unless respondent is without knowledge, in which case respondent shall so state.

* * * * * * *

Failure of the respondent to file answer within the time above provided and failure to appear at the time and place fixed for hearing shall be deemed to authorize the Commission, without further notice to respondent, to proceed in regular course on the charges set forth in the complaint.

If respondent desires to waive hearing on the allegations of fact set forth in the complaint and not to contest the facts, the answer may consist of a statement that respondent admits all the material allegations of fact charged in the complaint to be true. Respondent by such answer shall

be deemed to have waived a hearing on the allegations of fact set forth in said complaint and to have authorized the Commission, without further evidence, or other intervening procedure, to find such facts to be true.

14 Contemporaneously with the filing of such answer the respondent may give notice in writing that he desires to be heard on the question as to whether the admitted facts constitute the violation of law charged in the complaint. Pursuant to such notice, the respondent may file a brief, directed solely to that question, in accordance with Rule XXIII.

In Witness Whereof, the Federal Trade Commission has caused this, its complaint, to be signed by its Secretary, and its official seal to be hereto affixed, at Washington, D. C., this 23rd day of February, A. D., 1943.

By the Commission.

Otis B. Johnson,
Secretary.

(Seal)

16 BEFORE THE FEDERAL TRADE COMMISSION.

* * (Caption—4920) * *

ANSWER OF RESPONDENT MINNEAPOLIS-HONEYWELL REGULATOR COMPANY.

Comes now the respondent Minneapolis-Honeywell Regulator Company, a Delaware corporation (hereinafter called respondent), by Messrs. Cravath, de Gersdorff, Swaine & Wood, and Messrs. Bair & Freeman, its attorneys, and answers the complaint herein as follows:

Answer to Count I.

1. Answering paragraph One of Count I of the complaint, respondent admits that it is a corporation organized, existing and doing business under and by virtue of the laws of the state of Delaware, with its general office and principal place of business at 2747 Fourth Avenue South, Minneapolis, Minnesota; that it is now, and for more than three years last past has been, engaged in the manu-

17 facture of automatic temperature controls for oil, gas and coal heating plants and certain industrial operations and in the sale of automatic temperature controls for

oil heating plants principally to oil burner manufacturers, and also to wholesalers (who are sometimes called jobbers) and dealers in oil burner equipment and controls located in various states of the United States, territories thereof, and in the District of Columbia; that respondent causes automatic temperature controls, when sold, to be transported from the places of manufacture by respondent in the States of Minnesota and Indiana, and through distribution points in certain other states of the United States, to the purchasers thereof located in states other than the states of manufacture; that prior to about 1942 there was a constant current of trade and commerce in said products between and among various states of the United States, territories thereof, and in the District of Columbia, that in the course and conduct of its said business prior to about 1942 respondent was in substantial competition in the sale of automatic temperature controls in commerce between and among various states of the United States, territories thereof, and in the District of Columbia, with many other corporations, persons, firms and partnerships; that respondent is one of the principal manufacturers of automatic temperature controls in the United States; that in past years it
18 entered into annual contracts or agreements with many manufacturers of oil burners for domestic heating plants for numbers of sets or units of automatic temperature controls, and that in some instances the quantities specified in such contracts may have been approximately equal to the manufacturer's annual requirements of such products.

Respondent is without knowledge as to the allegations of said paragraph One of Count I that the number of oil burner manufacturers which had contracts with respondent for a number of sets or units of automatic temperature controls approximately equal to such manufacturer's annual requirements thereof has constituted for more than three years last past, or now constitutes, a majority of all the manufacturers of oil burners for domestic heating plants in the United States, and that its total volume of sales of automatic temperature controls for domestic oil burners during the past three years has constituted more than 60% of the total number of automatic temperature controls sold annually in the United States to burner manufacturers for domestic heating plants and to contractors and dealers in domestic automatic heating equipment.

Except as hereinbefore specifically admitted or otherwise answered, respondent denies each and every allegation contained in paragraph One of Count I.

19 Further answering said paragraph One, respondent avers that:

During the year 1942 and at the present time, approximately 90% of its facilities have been and are now devoted to production for the war effort and have no relation to the domestic oil burner control business. By reason of war conditions and of the United States Government's restrictions on the manufacture and sale of oil burners, the domestic oil burner business and the business of manufacturing and selling automatic temperature controls for such oil burners, as those businesses existed prior to 1942, have practically ceased.

Prior to about 1942 respondent was engaged in substantial competition in the manufacture and sale of automatic temperature controls for oil burners with many more than six other manufacturers of such controls. In past years respondent had annual contracts in effect with a substantial number of the oil burner manufacturers in the United States providing for the sale to the manufacturers by respondent of automatic temperature controls for domestic oil burners in quantities as specified in said contracts, which quantities have always been specified by number except in relatively few instances prior to 1939 where the manufacturer did not desire to purchase a specified number

20 of such controls. In such last-mentioned instances such annual contracts stated that the purchaser agreed to purchase his "requirements", or "season's requirements", of respondent's controls, but neither such provision nor any other provision of any agreement or understanding between respondent and its customers was interpreted by respondent, or, on information and belief, by its customers, to prohibit the latter from purchasing domestic oil burner controls from competitors of respondent, or in fact has had any such effect. Many of respondent's oil burner manufacturer customers who had annual contracts with respondent likewise had contracts with competitors of respondent for the purchase of automatic temperature controls for domestic oil burners and the majority of respondent's said customers also regularly purchase and deal in automatic temperature controls for domestic oil burners manufactured by competitors of respondent. Respondent's prices for primary controls and thermostats for oil burners are

invariably higher than those of its competitors for similarly functioning products. Its contracts with customers are voluntarily entered into by its customers and do not limit or in any way directly or indirectly preclude such customers from dealing in or using controls made by respondent's competitors.

2. Answering paragraph Two of Count I of the complaint, respondent admits and avers that three types of controls are required and used in the operations of a
21 domestic oil burner and are usually, but not always, sold in sets, consisting of (i) a thermostat, which is placed in the room or space to be heated, (ii) a limit control, which is a device placed on the heating plant to prevent the temperature or pressure in the heating plant from exceeding a certain safe level, and (iii) a primary control, which controls the cycle of operation of the automatic burner so as to start and stop it when heat is needed or no longer needed (as governed by the thermostat) and to prevent a hazardous condition from occurring when there is a failure of combustion; that an Aquastat, an Airstat, a Pressuretrol and a Vaporstat are limit controls, and a Protectorelay is a primary control, manufactured and sold by respondent under trademarks and names owned by respondent; that some domestic oil burning furnaces are also equipped with a fan control which controls the operation of a fan for driving warm air to the space to be heated; that some domestic oil burner installations include more than one thermostat, the thermostats being used as zone controls in the heating of multiple spaces; that the primary control is sometimes referred to as a combustion control, a master control, or a safety control and is an essential element in every pressure or rotary type domestic oil burner installation (but not an essential element in domestic oil burner installations of the so-called vaporizing or pot types); and that limit controls of the line voltage type manufac-
22 tured and sold by a number of competitors of the respondent could be and are satisfactorily and safely used by oil burner manufacturers, furnace manufacturers and contractors interchangeably with limit controls of such type sold by respondent on installations where respondent's primary controls are used.

Respondent denies that it owns or controls most of the existing patents on primary controls and denies that there are many thermostats being manufactured and sold by com-

petitors of respondent which could be or are satisfactorily and safely used by oil burner manufacturers, furnace manufacturers and contractors interchangeably with the thermostats sold by respondent on installations where respondent's primary controls are used.

Except as hereinbefore specifically admitted or otherwise answered, respondent denies each and every allegation of said paragraph Two.

Further answering said paragraph Two, respondent avers that:

The thermostat and primary control are essential operating mechanisms of an oil burner control system. Respondent manufactures thermostats and primary controls for a particular and distinctive control circuit for electrically controlling the operation of an oil burner and such thermostats and primary controls of its manufacture are de-
23 signed especially to work one with the other in that circuit for bringing about such electrical control of the oil burner. Respondent furnishes oil burner manufacturers and other customers with such electrical circuit layouts for controlling the operation of an oil burner, and its thermostats and primary controls are particularly designed to work one with the other in a proper cooperative relationship for electrically bringing about the sequence of operation and control of an oil burner as set out in such electrical circuit layouts. Thermostats and primary controls manufactured by respondent for use with domestic oil burners do not give satisfactory and efficient performance in the ordinary installation unless the proper primary control of respondent's manufacture and the proper thermostat of respondent's manufacture are used on the same installation and it is often dangerous to mix primary controls and thermostats made by different manufacturers in the same installation. From the point of view of the user, the most satisfactory and efficient operation of an oil burner as customarily installed is attained when it is equipped with a primary control and a thermostat manufactured by the same concern; and it is and has been for many years the custom for manufacturers of domestic oil burners to equip their burners with sets of automatic temperature controls in such fashion that all controls (primary, thermostat and limit control) on a single burner are made
24 by the same manufacturer, whether they be controls manufactured by respondent or by one of its competitors.

3. Answering paragraph Three of Count I of the complaint, respondent admits that in January, 1937, respondent discontinued in all cases the provision at that time contained in some of its contracts with oil burner manufacturers providing as follows:

"The Purchaser agrees that at least ninety-five (95) percent of his control requirements, consisting of Thermostats, Primary Controls and Limiting Devices, will be purchased from the Company";

that since January, 1937, respondent has not entered into contracts with any domestic oil burner manufacturer customers containing said quoted provision; that the provisions quoted in the third paragraph of said paragraph Three of the complaint were contained in some (but not all) of the contracts entered into by respondent with domestic oil burner manufacturing customers for the years 1940 and 1941 (the balance of said customers having contracts containing a provision similar to the 1941 contract provision hereinafter quoted in this paragraph 3 of this answer); and that some of such contracts for sales during the year 1940 were entered into in December, 1939.

Except as hereinbefore specifically admitted, respondent denies each and every allegation contained in said paragraph Three of Count I.

Further answering said paragraph Three, respondent avers that:

Respondent's form of 1937 annual contract for manufacturers of domestic oil burners purchasing respondent's controls in sets (some of which were presented to customers in December of 1936) contained, among other provisions, the following language:

"The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract ..... sets of the Company's automatic temperature controls, each set consisting of one Thermostat, and one Limit Control, and one Primary Control. It is specifically agreed that other control equipment is not to be considered as a part of a set within the terms of this contract. Because the Company's costs are figured to cover a complete set of controls, and the following breakdown prices are purely for invoicing purposes, it is agreed that the Purchaser's yearly purchases will consist of at least 90% as many Room Thermostats and 100% (but at the Company's option not more than 125%) as many Limit Controls as Primary Controls."

Some, but not all, of respondent's 1937 contracts also contained the following:

"The Purchaser agrees that at least ninety-five (95) percent of his control requirements, consisting of Thermostats, Primary Controls and Limiting Devices, will be purchased from the Company"

On January 28, 1937, all such contracts were amended by striking therefrom the last sentence hereinabove quoted by which the purchaser agreed to purchase at least 95% of its control requirements consisting of thermostats, primary controls, and limiting devices from respondent, and by releasing said oil burner manufacturers therefrom. Said sentence was contained in the annual contracts only for
26 a period of less than thirty days, with the result that it never became operative, and no customer was ever required by respondent to comply therewith.

In the normal course of its business respondent entered into contracts with manufacturers of domestic oil burners who preferred to contract for the purchase of its controls in units, which contracts contained substantially the following provision (which is the exact language contained in such contracts for the year 1941):

"The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this Agreement ..... units or more of the Company's automatic temperature controls. The Company's thermostats and primary controls are specifically designed to operate one with the other, and because it is unsatisfactory and often dangerous to mix controls made by different manufacturers in the same installation, the Company does not give any assurance of satisfactory operation nor assume any service responsibility if its controls are used with other makes."

The prices, terms and conditions of sale to oil burner manufacturers who contracted to purchase in sets and to those who contracted to purchase in units were identical; contracts for purchase in sets quoted prices on a unit basis (and not on a set basis) and contracts for purchase in units quoted prices on the same unit basis.

Respondent's purpose in promoting the sale of its automatic temperature controls to manufacturers of domestic oil burners in sets rather than in separate units was
27 to insure proper temperature control and the proper sequence of operation of each installation and thus to avoid the unsatisfactory, inefficient and often dangerous

results which arise from mixing controls of more than one manufacturer on the same installations. Particularly is this true in the case where a thermostat and primary control of different manufacturers are mixed. Respondent's conduct in promoting the sale of its said controls as aforesaid was made in good faith to protect and insure the ultimate user (the purchasing public) in getting the results which should be expected when purchasing heating equipment and to protect the good name and good will attached to respondent's products which would be impaired by inefficient and often dangerous performance of its products resulting from the mixing of controls.

4. Respondent denies each and every allegation of paragraph Four of Count I of the complaint, except that respondent admits that for more than three years last past a substantial number of manufacturers of domestic oil burners have purchased from respondent a majority of their requirements of automatic temperature controls for use as part of their domestic oil burners.

5. Answering paragraph Five of Count I of the complaint, respondent admits and avers that for more than
28 three years last past it has adopted and pursued the policy of offering, and when its offer has been accepted of granting, non-exclusive licenses to a number of its competitors under a patent issued to one Edward E. Freeman known as the Freeman Patent No. 1,813,732, owned by respondent, to make, use and sell a combination furnace and fan control embodying the essence of the advance in the art made by Freeman and as covered by the Freeman patent; that each said license is granted on the express condition that the licensee's prices, terms and conditions of sale of such combination furnace and fan controls manufactured and sold under said license agreements shall not be more favorable to the licensee's customer than those fixed from time to time by the licensor for its own combination furnace and fan control embodying the essence of the advance in the art made by Freeman and as covered by the Freeman patent; that respondent for more than three years last past has sold such combination furnace and fan controls and has also manufactured a fan switch, limit switch and thermostat, but not the fan; and that respondent's sales of said combination furnace and fan control substantially increased during the period from January 1, 1939, to December 31, 1941.

Respondent denies that the price schedule attached to and made a part of its said license agreement, or any other provision of said agreement, provided for net minimum prices to be observed by jobbers, wholesalers, or retail dealers.

Except as hereinbefore specifically admitted or otherwise answered, respondent denies each and every allegation contained in said paragraph Five of Count I.

Further answering said paragraph Five, respondent avers that:

Respondent has granted to five of its competitors non-exclusive licenses under the Freeman patent similar to the license hereinabove described and has not refused to grant such licenses to any other competitors; the royalty provided for in each of said license agreements is 25¢ per unit combination furnace and fan control manufactured and sold under said license; and said combination furnace and fan control manufactured and sold under said license is not usable anywhere except in the Freeman patented arrangement. Respondent has not made any complaint of infringement of the Freeman patent except in cases where a competitor's product, manufactured and sold without a license from respondent, has involved the essence of the Freeman invention and is usable only for such purpose. Respondent's conduct in granting said licenses in the exact form hereinabove described, including prices, terms and conditions of sale of combination furnace and fan controls manufactured and sold under the Freeman patent, and in suing an unlicensed competitor who manufactured and sold a combination furnace and fan control which could be used only as advertised by said unlicensed competitor and only in an installation infringing the Freeman patent, has been approved in the case of *The Mercoid Corporation* v. *Minneapolis-Honeywell Regulator Company*, 133 Fed. (2) 811 (C. C. A. 7th, December 23, 1942) (petition of The Mercoid Corporation for re-hearing denied March 27, 1943), as within respondent's rights as owner of the Freeman patent and as not constituting any violation of the Federal anti-trust laws.

6. Answering paragraph Six of Count I of the complaint, respondent admits that in the course and conduct of its business it manufactures and sells combustion stoker switches to stoker and furnace manufacturers (as well as others) in various parts of the United States; that in con-

nection with each such sale respondent grants to the purchaser a license to use such combustion stoker switches in an installation with other devices for operating a heating system for maintaining the fire from going out when there are low heat requirements, which combustion stoker switches are manufactured and sold under a patent under which respondent has, for several years, had an exclusive license, with the right to grant sub-licenses to others.

31 Except as hereinbefore specifically admitted, respondent denies each and every allegation of said paragraph Six.

Further answering said paragraph Six, respondent avers that:

The patent referred to in said paragraph Six is the Cross Patent No. 1,758,146 and the combustion stoker switches referred to therein, when installed and used by respondent's customers, as advertised by respondent, embody the essence of the advance in the art made by Cross and covered by the Cross Patent and are not usable anywhere except in the Cross patented arrangement. The Cross Patent No. 1,758,146 was held valid by the United States Circuit Court of Appeals for the Eighth Circuit in the case of *Smith* v. *Mid-Continent*, 106 Federal (2d) 622 (1939). Respondent under its said exclusive license with the right to grant sub-licenses did enter into a sub-license agreement with one of its competitors, Detroit Lubricator Corporation, of Detroit, Michigan, and respondent has offered sub-licenses under its exclusive license agreement to others of its competitors. Respondent's use of the Cross Patent, as aforesaid, has been approved in the case of *Mid-Continent Investment Company* and *Minneapolis-Honeywell Regulator Company* v. *The Mercoid Corporation*, 133 Fed. (2d) 803 (C. C. A. 7th, December 23, 1942) (petition of The Mercoid Corpora-

32 tion for re-hearing denied March 27, 1943), as within respondent's rights as licensee of the Cross Patent, and as not constituting any violation of the Federal anti-trust laws or unfair competition.

7. Respondent denies each and every allegation of paragraph Seven of Count I of the complaint.

Answer to Count II.

8. For its answer to paragraph One of Count II of the complaint, respondent relies on the matters and things set forth in paragraph 1 of this answer to the same extent and as though said paragraph 1 of this answer were set forth in full herein and said paragraph 1 of this answer is therefore incorporated herein by reference and made the answer to paragraph One of Count II of the complaint.

9. For its answer to paragraph Two of Count II of the complaint, respondent relies on the matters and things set forth in paragraph 2 of this answer to the same extent and as though said paragraph 2 of this answer were set forth in full herein and said paragraph 2 of this answer is therefore incorporated herein by reference and made the answer to paragraph Two of Count II of the complaint.

10. For its answer to paragraph Three of Count II of the complaint, respondent relies on the matters and things set forth in paragraph 3 of this answer to the same extent and as though said paragraph 3 of this answer were set forth in full herein and said paragraph 3 of this answer is therefore incorporated herein by reference and made the answer to paragraph Three of Count II of the complaint.

11. For its answer to paragraph Four of Count II of the complaint, respondent relies on the matters and things set forth in paragraph 4 of this answer to the same extent and as though said paragraph 4 of this answer were set forth in full herein and said paragraph 4 of this answer is therefore incorporated herein by reference and made the answer to paragraph Four of Count II of the complaint.

12. Respondent denies each and every allegation of paragraph Five of Count II of the complaint.

13. Respondent denies each and every allegation of paragraph Six of Count II of the complaint.

Answer to Count III.

14. For its answer to paragraph One of Count III of the complaint, respondent relies on the matters and things set forth in paragraph 1 of this answer to the same extent and as though said paragraph 1 of this answer were set forth in full herein and said paragraph 1 of this answer is there-

fore incorporated herein by reference and made the answer to paragraph One of Count III of the complaint.

15. For its answer to paragraph Two of Count III of the complaint, respondent relies on the matters and things set forth in paragraph 2 of this answer to the same extent and as though said paragraph 2 of this answer were set forth in full herein and said paragraph 2 of this answer is therefore incorporated herein by reference and made the answer to paragraph Two of Count III of the complaint.

16. Answering paragraph Three of Count III of the complaint, respondent admits that it has been for more than three years last past and is now selling automatic temperature controls for domestic oil burners to some of its customers at lower prices than it sells said products of like grade and quality to others of its customers; that respondent publishes list prices for its said products, with discounts regularly and usually allowed to wholesalers (sometimes called jobbers) and to dealers; that said discounts vary from 25% to 43.75% (or 25% and 25%), depending on and varying with the trade channel in which the purchaser is engaged, such as dealer and wholesaler (or jobber), and in the case of the wholesaler also varying with quantity purchased and the service rendered to respondent; that oil burner manufacturers purchase the great majority of automatic temperature controls for domestic oil burners sold by respondent; that respondent has sold its said products, particularly thermostats, primary controls and limit controls, in units and in sets to manufacturers of oil burners under contracts providing for net prices under separate and distinct price brackets; that the net prices to the oil burner manufacturers varied with the number of sets or units which the customer contracted to buy annually; and that the difference between the highest and lowest prices at which automatic temperature controls were sold to manufacturers of domestic oil burners in 1940 was substantially less than that difference in 1938.

Except as hereinbefore specifically admitted, respondent denies each and every allegation of said paragraph Three of Count III.

Further answering said paragraph Three, respondent avers that:

Respondent in the sale of its automatic temperature controls for domestic oil burners has recognized the three

channels of trade and distribution long ago established by the heating trade generally and recognized and followed by this respondent prior to the advent of controls for domestic oil burners, and now also followed by the domestic oil burner and automatic temperature control industries, including the respondent, to-wit, (i) manufacturers of heating equipment, who ordinarily sell their products including the accompanying controls as original equipment therewith to wholesalers, (ii) wholesalers (sometimes called jobbers) who ordinarily sell both complete heating units
36 and also separate automatic temperature controls to dealers, and (iii) dealers, who are retailers selling to the ultimate user. Respondent has sold automatic temperature controls for domestic oil burners (i) to manufacturers of domestic oil burners for use as original equipment therewith, (ii) to wholesalers for resale to dealers, and (iii) to dealers for resale to the ultimate user. Respondent's sales to wholesalers and dealers have been for resale other than as original equipment on any domestic oil burners they may resell. Such controls are ordinarily sold by wholesalers and dealers for repair, replacement or auxiliary equipment beyond that furnished by the original oil burner manufacturers as part of their original equipment. Respondent's prices and discounts vary among said three channels of trade, as do those of respondent's competitors in the manufacture and sale of automatic temperature controls for domestic oil burners.

Respondent's differences in prices or discounts among said three classes have not been such that any effect thereof may or did substantially lessen competition or tend to create a monopoly in any line of commerce, or injure, destroy or prevent competition with respondent, or with members of said different classes, or with customers of any of them.

Respondent does not recognize as an oil burner manufacturer any purchaser who will not agree to buy at
37 least 50 sets or 150 units annually, although it does sell a few controls to purchasers not belonging in any of the aforesaid recognized trade channels, such customers purchasing less than 50 units annually receiving a discount of 25% and 15% from list, and such customers agreeing to purchase at least 50 units and not more than 150 units annually receiving a discount of 25% and 25% from list.

Respondent's several manufacturer's quantity brackets

determining its prices for automatic temperature controls sold for domestic oil burners in the year 1941 were as follows:

Annual Bracket Amount	Bracket Price
50 to 349 sets or 150 to 1,049 units	Bracket I price
350 to 999 sets or 1,050 to 2,999 units	Bracket II price
1,000 to 2,499 sets or 3,000 to 7,499 units	Bracket III price
2,500 to 4,999 sets or 7,500 to 14,999 units	Bracket III-A price
5,000 to 7,499 sets or 15,000 to 22,499 units	Bracket IV price
7,500 to 9,999 sets or 22,500 to 29,999 units	Bracket IV-A price
In excess of 10,000 sets or 30,000 units	Bracket V price

The differences in respondent's prices for its said products to purchasers in the several quantities set forth above
38 made no more than due allowance for differences in the cost to respondent of manufacture, sale and delivery thereof resulting from the differing methods and quantities in which said products were to such purchasers sold and delivered.

In addition, none of the prices charged by respondent in the sale of its automatic temperature controls to manufacturers of domestic oil burners was less, but in almost all cases such prices were greater, than the prices at which such manufacturers could and in most cases did purchase from competitors of respondent automatic temperature controls for oil burners which controls perform substantially the same functions as do those manufactured and sold by respondent. Some manufacturers paying higher prices for respondent's automatic temperature controls were able to and often did sell their oil burners complete with controls at prices below those which other similar manufacturers paying lower prices for respondent's automatic temperature controls sold their oil burners.

The differences in price at which respondent has sold its automatic temperature controls to manufacturers of automatic oil burners have not been such that the effect thereof

may or did substantially lessen competition or tend to create a monopoly in any line of commerce, or injure, destroy, or prevent competition with respondent or with
39 any of its customers, or with customers of any of them.

The prices for standard primary and limit controls and thermostats for domestic oil burners charged by respondent to any wholesaler who contracts with respondent to purchase annually $750 worth of its controls and to place an initial order for and maintain in its inventory controls in the amount of $200, were 7.5% of the list price less than the prices to wholesalers who did not elect so to contract. A wholesaler who entered into such a contract is referred to by respondent as a "Class A" wholesaler and the status of Class A wholesaler was available on equal terms to every wholesale customer of respondent. The services and facilities furnished by Class A wholesalers were of great value to respondent in the distribution and sale of its products. The aforesaid difference in price to Class A wholesalers was not in excess of the value to respondent of the services rendered to it by said Class A wholesalers. Furthermore, said difference in price has not been such that the effect thereof may or did substantially lessen competition or tend to create a monopoly in any line of commerce, or injure, destroy, or prevent competition with respondent, or with any of its customers, or with customers of any of them.

17. Respondent denies each and every allegation of paragraph Four of Count III of the complaint.

40 18. Respondent denies each and every allegation of paragraph Five of Count III of the complaint.

Wherefore respondent demands that the complaint of the Federal Trade Commission in this proceeding be dismissed.

42 BEFORE FEDERAL TRADE COMMISSION.

* * (Caption—4920) * *

At a regular session of the Federal Trade Commission, held at its office in the City of Washington, D. C., on the 10th day of August, A. D. 1943.

Commissioners:

Garland S. Ferguson, Chairman, Charles H. March, Ewin L. Davis, William A. Ayres, Robert E. Freer.

SUBSTITUTE ORDER APPOINTING TRIAL EXAMINER AND CHANGING TIME FOR TAKING TESTIMONY.

Whereas, Charles A. Vilas, a trial examiner of this Commission, was heretofore appointed to take testimony and receive evidence in this proceeding, pursuant to authority vested in the Federal Trade Commission under an Act of Congress (38 Stat. 717; 15 USCA, Section 41), and whereas, the said Charles A. Vilas, by reason of illness will be unable to continue therein,

It Is Therefore Ordered that W. W. Sheppard, a trial examiner of this Commission, be and he hereby is designated and appointed to take testimony and receive evidence in this proceeding in the place and stead of Charles A. Vilas, trial examiner heretofore appointed.

It Is Further Ordered that the taking of testimony in this proceeding begin on Thursday, August 12, 1943, at ten o'clock in the forenoon of that day (central standard time) in Room 1123, New Post Office Building, Chicago, Illinois, instead of August 10, 1943, as heretofore ordered.

Upon completion of testimony for the Federal Trade Commission, the trial examiner is directed to proceed immediately to take testimony and evidence on behalf of the respondent. The trial examiner will then close the case and make his report upon the evidence.

By the Commission:

A. N. Ross,
Acting Secretary.

(Seal)

1 BEFORE THE FEDERAL TRADE COMMISSION.

(Caption—4920)

Room 1123,
New Post Office Building,
433 West Van Buren St.,
Chicago, Illinois,
Tuesday, August 10, 1943.

Met, pursuant to notice, at 10 a. m. C. W. T.

Before:

Charles A. Vilas, Trial Examiner.

Appearances:

Everett F. Haycraft, Esq., Attorney for the Federal Trade Commission.

Cravath, de Gersdorff, Swaine & Wood, by R. L. Gilpatric, and B. R. Shute, 15 Broad Street, New York, N. Y., and Bair & Freeman, by Mr. Will Freeman, 135 South La Salle Street, Chicago, Ill., appeared for the Respondent.

2 PROCEEDINGS.

Trial Examiner Vilas: Let the record show Docket No. 4920, Minneapolis-Honeywell Regulator Company, hereby convenes according to notice from the Commission.

Also let the record show that because of the sudden illness of the Examiner assigned to hear this case, the case is now adjourned to meet at the same place on Thursday, August 12th, 1943, at ten o'clock a. m., it being impossible to get a substitute Examiner in Chicago prior to that time.

(Whereupon, at 10:15 a. m., August 10, 1943, the hearing in the above-entitled matter was adjourned.)

3 Room 1123,
New Post Office Bldg.,
433 West Van Buren St.,
Chicago, Illinois,
Thursday, August 12, 1943.

Met, pursuant to notice, at 10 a. m. C. W. T.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Esq., Attorney for the Federal Trade Commission.

Cravath, de Gersdorff, Swaine & Wood, by R. L. Gilpatric, Esq., and B. R. Shute, Esq., 15 Broad Street, New York, New York, and Bair & Freeman, by Will Freeman, 135 South La Salle Street, Chicago, Ill., appeared for the Respondent.

4 PROCEEDINGS.

Trial Examiner Sheppard: All right, gentlemen. Come to order.

Mr. Reporter, you may show the reconvening of the hearing pursuant to the agreement, to proceed before me instead of Trial Examiner Vilas, in the matter of Minneapolis-Honeywell Regulator Company, Docket No. 4920, in the office of the Federal Trade Commission in Chicago, at ten o'clock a. m. on this 12th day of August, 1943.

Show the appearance of Everett F. Haycraft, for the Commission; Cravath, de Gersdorff, Swaine & Wood, by R. L. Gilpatric and B. R. Shute, 15 Broad Street, New York, and Bair & Freeman, by Mr. Will Freeman, 135 South La Salle Street, Chicago, Illinois, for the Respondent.

Mr. Haycraft, did Mr. Vilas read into the record the Commission's instructions as to briefs and so forth?

Mr. Haycraft: No.

Trial Examiner Sheppard: I had better do that, so that all of these gentlemen will understand it.

Gentlemen, here are the Commission's late instructions in relation to the handling of exhibits, which I think you ought to know about. With reference to the transcript of

these proceedings, the Respondent and other parties interested may obtain copies of the transcript by purchase from the Official Reporter, who is not a Government em-
5 ployee, at rates fixed by contract between the Reporter and the Government.

Photostatic copies of exhibits which may be needed, will be furnished by the Commission upon application thereto at certain rates, which are also in the contract. I have the old rates here. The new rates you can get from the Reporter.

All the exhibits and the entire record may be inspected at the headquarters of the Commission at Washington. The exhibits will be marked for identification by the Reporter only, in accordance with the specifications of his contract with the Commission.

Exhibits marked for identification remain in the custody of the attorney until received in evidence. Exhibits received in evidence remain in the custody of the Reporter until forwarded to the Commission at Washington, unless in specific instances the Trial Examiner may order otherwise. Exhibits are not available for public inspection until filed in the office of the Docket Section at the headquarters of the Commission in Washington.

Now, gentlemen, as you know, I have had no time to analyze this complaint, and I do not know anything about the case. I will just have to take it as we go along. I want to make a clear and concise record. In all these cases we need all the light on them that we can get, so I am going
6 to be very broad in my interpretation of the reception of the testimony and let your objections be few and far between. We want all the facts in the case, and it may be that we can shorten the taking of testimony as we go along by certain agreements and stipulations, which may make our way lighter than we expect it to be now.

Off the record, Mr. Reporter.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

Miss Reporter, let the record show that the Examiner will receive Commission's Exhibit No. 1 for the record.

(The document referred to was marked COMMISSION'S EXHIBIT NO. 1 and was received in evidence.)

7 Trial Examiner Sheppard: Now, Mr. Haycraft, I am ready to go ahead with anything you have to offer.

Mr. Haycraft: I wish first to offer in evidence as Com-

mission's Exhibit No. 1, the stipulation as to the facts which have been worked out between counsel for the Commission and counsel for respondent.

This, of course, is to be admitted subject to the approval of the Commission, but, I assume it will be approved as it has already been approved by the assistant chief counsel, so I am offering it in evidence at this time as Commission's Exhibit No. 1.

Trial Examiner Sheppard: All right. Any objection, gentlemen?

Mr. Gilpatric: May the record show, without challenging the competency of any part of the stipulation, the respondent objects on the ground of materiality and relevancy to a portion of the stipulation beginning with Paragraph 8, page 10, and continuing through page 14, the beginning of the paragraph beginning with the words "Respondent in the year 1938, etc.", also with the last paragraph of Paragraph 9 on page 17, on the ground that these portions of the stipulation relate to an act of the respondent which took place prior to 1938 and which has not occurred since that time, and which we say is not relevant or material to the issues in this case.

Trial Examiner Sheppard: All right. Let the objection be noted.

Mr. Haycraft: If that is being done at this time, I suppose that I should also note an objection to certain statements in there for the same reason, I can make the same objection as to the relevancy and materiality.

I object to the statement on page 4 beginning at the seventh line from the bottom with the words "The total volume, and so forth, respondent's sales," I object to that statement ending on the top of page 5, inasmuch as it refers to products which were not contemplated in the complaint, in the type of particular device and I also object to the first paragraph on the top of page 20 as to the relevancy and materiality.

Trial Examiner Sheppard: All right. Let those objections be noted, Miss Reporter.

Mr. Haycraft: As my first witness, Mr. Examiner, I wish to call Mr. A. H. Lockrae.

Trial Examiner Sheppard: Have you got a subpoena?

Mr. Freeman: He has been produced by the respondent at the request of the Commission.

ARTHUR H. LOCKRAE, was thereupon called as a witness for the Commission and, having been first duly sworn, testified as follows:

Direct Examination.

By Trial Examiner Sheppard:

Q. Give us your full name, please.
A. Arthur H. Lockrae.
Q. And your address, Mr. Lockrae?
A. My home address is 2831 Benton Boulevard, Minneapolis.
Trial Examiner Sheppard: All right.

By Mr. Haycraft:

Q. What is your occupation, Mr. Lockrae?
A. I have charge of the sales in our heating controls division.
Q. Heating controls division, sir?
A. Division.
Q. Of the Minneapolis-Honeywell—
A. Yes, sir.
Q. —Regulator Company?
A. Yes, sir.
Q. How long have you had that position?
A. Well, I served in that capacity, the same duties. I was assistant manager of sales for a while, and then manager of sales, duties approximately the same since 1928,—'27.
Q. As such, what are your duties?
A. Those attendant to general sales management.
Q. Will you briefly describe the items sold in your division, the heating controls division?
A. Practically all of the controls that we sell are those that go directly to the heating equipment manufacturers, and to the trade handling those products.
Q. Well, just in order to make the record clear, what are the heating controls?
A. Thermostats, limit controls, primary controls and what are termed miscellaneous controls. The first three named comprise a set of controls.
Q. A set of controls which is necessary to furnish control of the heating unit?

A. Yes, sir.

Trial Examiner Sheppard: All right.

By Mr. Haycraft:

Q. These heating controls are intended for use on oil burners?

A. Yes, sir.

Q. And other types of burners as well?

A. That is right.

Trial Examiner Sheppard: That means gas and what else?

The Witness: Stokers, coal.

By Mr. Haycraft:

Q. Would you say that the principal part of your sales were to manufacturers, equipment manufacturers and trade in oil burners?

A. Say that again, please?

Mr. Haycraft: Will the Reporter read it?

(The question above referred to was read by the Reporter.)

The Witness: That represented a very substantial portion of our heating equipment sales. It would be
12 greater than either of those sales to gas or to the stoker field.

Q. Has that been true all through this period of time?

A. Yes, sir.

Mr. Freeman: What period of time are you referring to, since 1928, Mr. Haycraft?

Mr. Haycraft: Yes, sir.

The Witness: That would be true.

Mr. Haycraft: Now, the stipulation that you have gives the definition, Mr. Examiner, of these various controls. I could bring it out in testimony at this time, if you wish.

Trial Examiner Sheppard: Describe the controls.

Mr. Haycraft: I will ask him a question and get it in that way.

Mr. Freeman: I am wondering if I could have the Examiner's statement read, please.

(The statement above referred to was read by the Reporter.)

Mr. Freeman: Just so Mr. Haycraft asks the question specifically as to what product, whether we are talking about oil burners, or something else. There are different types

of controls. Just so we all understand what we are talking about.

13 Mr. Haycraft: I am going to direct all of my questions to oil burners.

Mr. Freeman: Of the domestic heating type?

Mr. Haycraft: Of the domestic heating type, the one that the average household would use, one like I have myself, something like that.

By Mr. Haycraft:

Q. Now, I believe there are two definite types of oil burners that are controlled by temperature controls, the pressure type, or gun type, and the rotary type.

A. Yes, sir.

Q. The pressure type and the gun type are used as interchangeable terms?

A. Yes, sir.

Q. Now, in the operation of oil burners there are three types of temperature controls required, is that correct?

A. That is right.

Q. The first is what?

A. Room thermostat.

Q. What function does that perform?

A. It controls the temperature within the enclosure at which it is located, or—

Q. (Interposing) In the room where it is placed.

A. Or the space to be heated.

Q. The second is a limit control?

14 A. Yes, sir.

Q. Will you define that?

A. The limit control is a device used on the heating plant, whether it be steam, or hot water, or warm air, and it performs a safety function. In other words, it is set to keep the heating plant at a certain temperature or pressure limits.

Q. Just so that we will have the terms as we go along. Now, what term do you apply to the limit control produced and sold by your company?

A. The limit control that is used with the warm air furnace is called an Aerostat; that used with a hot water heating system is called an Aquastat, and that used with a steam boiler is called Pressuretrol.

Q. And also Vaporstat, is that the name of one of them?

A. A Vaporstat where a vaporheating system is involved, which is small in comparison with the others.

Q. That Pressuretrol is spelled P-r-e-s-s-u-r-e-t-r-o-l?
A. That is right.
Q. The third device is a primary control. Will you describe the function of a primary control?
A. The primary control is an actuating device which starts and stops your oil burner at the command of the room thermostat. It stops your oil burner in the event the limit control reaches its setting, and it also performs
15 the duty of controlling the abnormal discharge of oil. Is that clear?
Q. You mean within the furnace?
A. Within the furnace or the heating plant.
Q. What is the name given by the Respondent to that device which it sells?
A. Protectorelay.
Mr. Gilpatric: I will say, Mr. Examiner, attached to our stipulation you will find pictures of these devices.
Trial Examiner Sheppard: I will look at them later.
Mr. Haycraft: I am trying to make it as complete as I can as we go along.
Trial Examiner Sheppard: Yes.

By Mr. Haycraft:

Q. Now, in addition to the three you have just described, do you also have some oil burners with an installation employing a fan control, which operates a fan for driving warm air to the space to be heated?
A. Yes, sir.
Q. Now, that requires a number of thermostats, does it not?
A. Not necessarily, Mr. Haycraft.
Q. It could?
A. Well, the fan control, speaking purely of fan controls, that is an instrument that is installed in the bon-
16 net of a warm air furnace; and one of its functions is to keep the heat, the hot air to be distributed to the enclosure, until the temperature within the bonnet is up to the prescribed amount. In other words, you don't want to blow cold air into the enclosure; you want to blow just warm air; so it prevents the fan from starting until that temperature has been reached.
17 Q. Now, you say that the primary control is sometimes known as a combustion control or a master control.
A. That's right.

Q. Also as a safety control?

A. That's right.

Q. Would you say it was an essential element in every oil burner installation?

A. It is an essential element.

Q. That is, the two types we are talking about?

A. Yes, sir.

Q. The pressure type and rotary type?

A. That's right.

Q. Now, directing your attention particularly to the years 1936, if you can—1935 and 1936, there might be something in '35, during that period of time and all down to the present, what was your sales set-up? Did you have branches through which you sold, or where you had salesmen employed, and so on?

A. We had branches during those years and subsequent years throughout the country in the major population centers where heating was required.

Q. Will you name the branches and where they are located?

A. That is quite a job, Mr. Haycraft. I might omit some of them. I will try.

Q. I will have it understood, of course, if you do we 18 can add it later.

A. All right. Now, let me qualify this. In our set-up we have what we term the "Branch", then we have what we term a "district office," that was under the jurisdiction of the branch. Now, is it your desire to have just our branches or our branches and the district offices?

Q. The branches and the district offices working under each branch.

A. All right.

Q. And the general territory covered.

Mr. Freeman: As of now, or as of 1936?

Mr. Haycraft: Beginning with 1936.

Mr. Freeman: Because there have been some changes.

Mr. Haycraft: If there have been some changes, indicate the changes if you can, as you go along.

Trial Examiner Sheppard: Do you have there something?

Mr. Freeman: We have a catalog that will help.

Mr. Haycraft: Give it to the witness if it will help him.

Trial Examiner Sheppard: Yes, if that will assist him.

The Witness: Los Angeles, San Francisco—

By Mr. Haycraft:

Q. Los Angeles, do you have any district offices under that?

19 A. No. I am not differentiating here between district offices and the branches. I am reading both.

Q. Will you indicate which is which as you go along?

A. Yes. Los Angeles is a district office. San Francisco is a branch office. Hartford, a district. My memory is going to fail me on some of these, because we list cities where I am not certain that we actually maintained an office.

Q. Well, do you have a salesman working out of there?

A. We have a salesman working out of there so, including those as district offices, Bridgeport, Connecticut, Washington, D. C.

20 Q. Go ahead.

A. Washington, D. C., a district office. Atlanta, a branch office. Chicago, a branch office. Peoria, a district office. Indianapolis—

Q. Branch or district?

A. We had a change occur there. I am not just certain of the year. If you are talking about 1935 or '36, I would say it was a branch office. Davenport, Iowa, district. Des Moines, Iowa, district. Mason City, Iowa, district. Louisville, Kentucky, district. New Orleans, district. Portland, Maine, district. Baltimore, district. Boston, branch. Springfield, Massachusetts, district. Detroit, Michigan, branch. Fenton, district.

Q. Fenton?

A. Fenton.

Q. What state is that?

A. That is Michigan. Kalamazoo, Michigan, district. Minneapolis, Minnesota, branch. Kansas City, Missouri, branch. St. Louis, Missouri, branch. Omaha, a district. Albany, New York, a district. Buffalo, New York, district. New York City, branch. Syracuse, a district. Charlotte, North Carolina, district. Cincinnati, Ohio, district. Cleveland, Ohio, branch. Toledo, Ohio, district. Tulsa, Oklahoma, district. Portland, Oregon, district. We construe Portland as a branch. I am sorry. Harrisburg, Penn-

21 sylvania, district. Philadelphia, branch. Pittsburgh, branch. Providence, Rhode Island, branch. Memphis, Tennessee, district. Dallas, Texas, a branch. Houston, Texas, a branch. Richmond, Virginia, district. Seattle, Washington, a district. Milwaukee, Wisconsin, a branch.

I would like to call to your attention again that some of these districts and branches are reversed in years. Just when that occurred, I can't tell you.

Trial Examiner Sheppard: All right.

22 Mr. Freeman: May the record show the catalogues from which you just read the places where the Company has branch offices and district offices. Either give the date of the catalogue or the catalogue number.

The Witness: That is what I am trying to find; 1941 catalogue, issued August 1, 1941.

Mr. Freeman: Off the record, if we may.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Haycraft:

Q. Now, at these branches that you have named, what sort of sales force do you have at those places?

A. We have nominally a branch manager or sales manager, with a number of salesmen, depending on the product sold out of that branch and the quantity of each of the various classifications of our business.

Q. Your company is engaged in the sale of a number of other items besides temperature controls?

A. Yes, sir.

Q. Do you have any way of estimating the percentage of your business in your division to the total sales of the company through the branches?

A. Without referring to the record, Mr. Haycraft, I would rather not hazard a guess. That information

23 can be furnished.

Q. Would you say that it is a substantial portion of your business?

A. Yes, sir; it is a substantial portion.

Q. At these district offices in the other towns you have named, you also have salesmen performing the same function?

A. Those are usually more limited in activities. At the district office we sometimes have one man, rather than salesmen, or we may have two men or three men, depending on the conditions that exist in that particular area.

Q. What are the duties of these salesmen?

A. The same as the duties of any salesmen.

Q. Let us restrict ourselves to these salesmen.

A. To sell our products and get the business.

Q. Do they have anything at all to do with the servicing of the product?

A. These salesmen, particularly in the smaller localities, are always, I might say, qualified to take care of minor service difficulties.

Q. And what class of trade do they call on in the course of their duties?

A. These salesmen would directly call on the manufacturers within the territory, on the wholesalers handling our heating controls, and often times on the dealers handling our heating controls.

24 Q. Will you elaborate somewhat upon this method of distribution. From your experience, how much, or rather, to which of these classes of trade are the principal sales made?

A. The principal sales are made to the manufacturers.

Q. That is manufacturers of what?

A. Oil burners, since that is what we are talking about at the moment.

Q. Oil burners?

A. That is right.

Q. Do these salesmen located in these various territories call upon the manufacturers of the oil burners in their territories?

A. That is right.

Q. Do you personally also call upon oil burner manufacturers?

A. Yes, sir.

Q. About what proportion of your time would you say is spent in calling upon oil burner manufacturers?

A. Well, it would vary from year to year, but it would actually be a small percentage of my personal time that would be devoted to that class of work.

Q. What do you devote most of your time to?

A. Most of my time is at the office in Minneapolis, directing our sales.

25 Q. Now, with respect to the—first, I will ask you this as to the oil burner manufacturers. In calling upon the oil burner manufacturers, what was the policy of the company during the years of 1936 on with respect to the sale of temperature controls on oil burners? Were they spot sales, or were there contracts entered into, or just what were the methods employed?

A. It has been our practice for that period of time to have individual sales agreements with manufacturers.

Q. Covering what period of time?

A. They are usually written on a calendar year basis.

Q. What time of the year do you usually enter into those?

A. Well, it is our endeavor to have these sales agreements prepared along in early December, if possible, of the previous year, for submittal for the following year's business.

Q. Can you tell us approximately how many such contracts were entered into in 1936?

Mr. Freeman: I think it would be better if we can refer to the records. We have stipulated that, and it is a known fact. There is no use of asking the witness to guess at it.

Trial Examiner Sheppard: Is it in the stipulation?

Mr. Haycraft: I think it is.

26 Mr. Freeman: It is in the stipulation. We might just as well have the facts.

Mr. Haycraft: I will withdraw the question, Mr. Examiner.

Trial Examiner Sheppard: Very well.

27 Q. What was your policy with respect to the negotiating of those contracts? Were they negotiated by the salesmen or by your office? Just tell us how that was done. I am talking about the oil burner manufacturing contract.

A. Possibly it would be well if I gave you a little resume of our general procedure along that line.

Trial Examiner Sheppard: That would be advisable.

The Witness: These contracts or sales agreements were prepared in Minneapolis. We had them in the field where various offices—

By Mr. Haycraft:

Q. Branch offices?

A. Branch offices, where we have a meeting of the various personnel that were involved, for the handling of these contracts with the various manufacturers on the quantities, peculiarities and the current problems that evolved around each account. That was discussed at these meetings. Then the contracts were given to the various salesmen involved, and they interviewed the customers and se-

cured their signatures to the sales agreements, to the contract.

Q. And then they would submit them to the home office for approval and signature?

A. The issuance of the contract by the home office constituted the approval of the contract, and they were usually signed by the official either at the home office or the
28 branch manager in the field.

Q. Then were they countersigned later by any other official of the company?

A. No, sir. Only one of the company's official's name is necessary.

Q. Well, the branch managers, I take it, then, were authorized to sign these agreements?

A. Yes, they were, certain of the branch managers.

Q. Did you sign some as sales manager?

A. During the interval of time we are discpssing, I think I can safely answer no.

Q. Usually who did sign as representing the company?

A. Well, as stated—you mean in Minneapolis, for example?

Q. Yes.

A. Well, it would be Mr. C. B. Sweatt.
29 A. Or Mr. Pauling.

Q. What were their titles?

A. Mr. Sweatt, vice president, executive vice president in charge of all sales; Mr. Pauling is vice president in charge of all control activities. That would probably be more apt than "controls." Other officials might sign a contract, if they were out of town, or something of that sort.

Q. During that time was a Mr. Nicholson, vice president of New York City—

A. (Interposing.) Mr. Michelson.

Q. (Interposing.)—authorized to sign?

A. He was authorized to sign.

Q. Was he vice president of the company?

A. Yes, sir.

Q. How do you spell that name?

A. M-i-c-h-e-l-s-o-n.

Q. Suppose that the salesman was unable to get the manufacturer to sign the contract presented to him? What was the procedure then?

A. Well, it would all depend on the circumstances surrounding the situation.

Q. Give us an illustration.

A. There are very few of those cases that would arise. It is hard to start to think of a specific one right now.

Q. These contracts all provide for prices, do they not?

30 A. Yes, sir.

Q. And what determines the price that goes into the contract?

A. They have a schedule of what we term price brackets that are based on the quantity.

Q. Beginning in—first I think I better direct your attention to Commission's Exhibit No. 1, and ask you if Table No. 1 following page 19, contains all of the bracket prices during the period of time 1937 on through 1941.

A. To my knowledge that shows the complete schedule. All the various quantities are shown here.

Q. Was there any change between 1936 and 1937, to your memory?

A. I am sorry. I don't remember.

Mr. Freeman: If that is material, we will get that for you.

Mr. Haycraft: Yes.

By Mr. Haycraft:

Q. There are some changes indicated in this exhibit from year to year?

A. Yes, there have been changes.

Mr. Haycraft: I was wondering if there were any changes.

Mr. Freeman: Had we known you wanted the price bracket structure for 1936, we would have been just

31 as glad to prepare that as for 1937, as any other year.

Mr. Haycraft: It just so happens that was all fixed up.

By Mr. Haycraft:

Q. Who determined those bracket prices?

A. They were determined by several individuals in our home office.

Trial Examiner Sheppard: You mean by "bracket price" the price for the three—

The Witness: (Interposing.) Yes, and the corresponding—

Trial Examiner Sheppard: (Interposing.) Thermostat and limit control and—

The Witness: (Interposing.) Primary controls, that is right.

By Mr. Haycraft:

Q. Are these prices based on sets?

A. Yes, sir.

Q. That is, the sets—

A. (Interposing.) The price; let me make this clear, if I can. All of our prices are based on the individual units which we manufacture and sell. The manufacturer,—and that has been customary throughout my experience in this business since 1924,—that they always think in terms of a set of controls, because that constitutes their cost of
32 control that is going on an oil burner, and while we individually price each instrument in determining the price of a set of controls, the three instruments involved are added together and that constitutes the set price.

Trial Examiner Sheppard: In other words, if I get you right,—I want to ask this quesetion to get the setup,—these three are sold together. Two of them wouldn't do any good?

The Witness: Two of them would not make the installation complete.

Trial Examiner Sheppard: That is what I say. You have got to have the three separate things to make the whole thing?

The Witness: That is right, accepted as being necessary for the proper functioning of an oil burner.

Trial Examiner Sheppard: And each one of these has a separate price?

The Witness: That is right.

Trial Examiner Sheppard: And yet you said when you make your contracts you sell the whole as a unit, at a specified amount for all three?

The Witness: Well, we list each instrument individually. We do not list in our contracts a set of controls at so much money.

Trial Examiner Sheppard: You do not?

33 The Witness: It is listed as thermostats, limit controls and primary controls, of which there are many individual types, and we also, of course, have contracts that specify units and not sets of controls.

Mr. Haycraft: I might clear this up, Mr. Examiner, by a couple more questions.

Trial Examiner Sheppard: All right.

Mr. Haycraft: It is in the stipulation, but—

Trial Examiner Sheppard: All right.

By Mr. Haycraft:

Q. In the printed part of these contracts, I am referring to set contracts, there is a blank space to determine the number of sets?

A. That is right.

Mr. Haycraft: In other words, the contract calls for sets, but the different items going to make up the sets—

Trial Examiner Sheppard: I understand.

Mr. Freeman: I do not think the Examiner is yet clear that in no place in the contracts do we specify the price by the set.

Trial Examiner Sheppard: He just told me that.

Mr. Freeman: Just so that is clear.

Trial Examiner Sheppard: All right.

Mr. Haycraft: I guess we will have to put in something on the contracts.

34 Mr. Freeman: Go ahead: In fact, I was just going to suggest you put in at least one as typical.

Trial Examiner Sheppard: I thought possibly there was one in here.

Mr. Haycraft: The language is in there.

Trial Examiner Sheppard: Put it in, so I will have something to go by.

Mr. Freeman: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

Mr. Haycraft: I am going to ask to have these marked.

Trial Examiner Sheppard: Miss Reporter, give each one of those a separate number, beginning with 2, through 10.

(The papers referred to were marked Commission's Exhibits 2, 3, 4, 5, 6, 7, 8, 9 and 10 for identification.)

Trial Examiner Sheppard: Is there any objection, gentlemen, to those?

35 Mr. Freeman: It is not a question of looking at them, we have copies, we want our exhibit number to appear on the same particular one.

Trial Examiner Sheppard: All right. Miss Reporter, let

Exhibits Nos. 2 to 10 be accepted for the information of the Examiner.

(The documents referred to, heretofore marked for identification COMMISSION'S EXHIBITS NOS. 2, 3, 4, 5, 6, 7, 8, 9, and 10, were received in evidence.)

Mr. Haycraft: The record does not show what they are.

Trial Examiner Sheppard: Yes.

Mr. Haycraft: They will, in a minute. We want the record to show just what they are.

Mr. Freeman: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

Mr. Freeman: Exhibit No. 2 is the agreement with the Automatic Burner Corporation of Chicago, Illinois, dated January 7, 1938.

Commission's Exhibit No. 3, is the contract with Quiet Heet Manufacturing Corporation of Newark, New Jersey, dated January 27, 1938.

Commission's Exhibit No. 4, is the agreement with
36 Electrol Heat, Inc., of Clifton, New Jersey, dated September 27th, 1938 by Electrol, and dated September 29th, 1938 by Minneapolis-Honeywell.

Commission's Exhibit No. 5, is the agreement with May Oil Burner Corporation, Baltimore, Maryland, dated Februdry 14th, 1938, and by Respondent February 24th, 1938.

Commission's Exhibit No. 6, is the agreement with Williams Oil-O-Matic, Bloomington, Illinois, dated February 16th, 1938.

Commission's Exhibit No. 7, agreement with Herco Oil Burner Corporation, of Lancaster, Pennsylvania, dated February 3rd, 1938.

Commission's Exhibit No. 8, agreement with Paragon Oil Company, Brooklyn, New York, dated March 3rd, 1938, also bearing the receiving stamp of the Minneapolis-Honeywell, as of March 5th, 1938.

Commission's Exhibit No. 9, agreement with Petroleum Heat and Power Company of Stamford, Connecticut, dated January 3, 1938.

And Commission's Exhibit No. 10, agreement with Cleveland Steel Products Corporation, of Cleveland, Ohio, dated April 14th, 1938.

37 Mr. Haycraft: Will you identify these documents, please?

(The documents referred to were marked Commission's Exhibits 11-A, 11-B, 11-C and 11-D and 12-A, 12-B, 12-C and 12-D, for identification.)

Mr. Freeman: Exhibit No. 11 is a photostatic copy of an agreement with Timken Silent Automatic Co., of Detroit, Michigan, which is undated, and which has not been signed by Minneapolis-Honeywell Regulator Company.

Mr. Haycraft: It represents the form that was used, and it is one that was submitted.

Mr. Freeman: We will agree with you that it is a form, and it represents a kind that was submitted by the Respondent to the Timken Silent Automatic on December 2, 1935.

Trial Examiner Sheppard: All right. Exhibit No. 12?

Mr. Freeman: Exhibit No. 12 is an agreement with Timken Silent Automatic Division of Timken Detroit Axle Company, Detroit, Michigan, dated February 19, 1936.

Mr. Haycraft: I ask that these exhibits be marked.

(The documents referred to were marked Commission's Exhibits Nos. 13, 14, 15 and 16, for identification.)

38 Mr. Freeman: Exhibit No. 13 is a form of agreement used by the Respondent with respect to sets in the year 1937.

Exhibit No. 14 is a form of agreement used by the Respondent with respect to sets in the year 1939.

Exhibit No. 15 is a form of agreement used by Respondent with respect to sets in the year 1940.

And Exhibit No. 16 is a form of agreement used by Respondent in connection with the sets in the year 1941.

Trial Examiner Sheppard: Now, Mr. Reporter, the Examiner will accept for the record Exhibits 11 and 12, and up to and including Exhibit No. 16 for the record.

(The documents referred to heretofore marked for identification COMMISSION'S EXHIBITS NOS. 11-A, 11-B, 11-C, 11-D, 12-A, 12-B, 12-C, 12-D, 13, 14, 15 and 16, were received in evidence.)

Mr. Gilpatric: May we record, Mr. Examiner, our objection to the introduction and admission of Exhibits 11 and 12 on the ground that they appear to cover periods of time prior to the period covered by the allegations in the complaint?

Trial Examiner Sheppard: I will note your objection. I presume it is sort of a background.

By Mr. Haycraft:

Q. Well, Mr. Lockrae, as I understand it, Commission's Exhibits 2 through No. 16, represent the changes that
39 were made in your set contracts with oil burners during the period of time from December 1936—December, 1935, which is practically January, 1936, through 1941?

Mr. Freeman: You mean changes in the contracts?

Mr. Haycraft: Changes in the contracts.

The Witness: Obviously that would be true.

By Mr. Haycraft:

Q. Are they a full set?

A. Yes.

Q. I think I was questioning you with respect to prices, as to how these prices were made up; and I will ask you this question: What was the basis for the different prices made in the various brackets, quantity brackets I am referring to now, and the bracket prices in Exhibit No. 1, the different prices in these brackets?

A. Yes, I think I understand it. You mean the basic reason for the difference in price between our various quantity prices?

Q. That is right.

A. We realize that it is considerably more expensive to sell merchandise, the same controls, in one quantity than it is in another. We had to have different prices between the different brackets to justify the cost of doing business to the customers falling in those given brackets.

Trial Examiner Sheppard: Different localities?

40 The Witness: Different size customers.

Mr. Freeman: The quantity purchased.

The Witness: The quantity purchased, yes.

By Mr. Haycraft:

Q. Well, have you made any accounting study, any study of your business in 1935 or 1936, or in subsequent years, upon which you base these various quantity prices in these brackets?

A. We never made what we can say was an audited study. We did make, as you know, Mr. Haycraft, a study in 1938 or '39, I have forgotten just which year.

Q. During the course of this investigation?

A. During the course of this investigation, to satisfy ourselves, at least in some measure, that the prices between

brackets were being based somewhat upon difference in cost.

41 Q. But prior to that time you hadn't made such a study?

Mr. Freeman: You mean prior to the passage—

By Mr. Haycraft:

Q. Prior to the year 1938, when you made the study during the course of our investigation.

A. To my knowledge no such study was made.

Q. Now, what use, if any, was made by you or your salesmen of these inspected price notations, in soliciting contracts or agreements with oil burner manufacturers?

A. Mr. Haycraft, you realize that our business with these various manufacturers has continued year after year. We, therefore, always have a connected record of the quantity of their purchases in each given year.

Trial Examiner Sheppard: And their requirements?

The Witness: And their requirements of our controls. We always take into consideration, among other things, the quantity that each customer purchased in the previous year. That was quite a long yardstick in measuring the prospective purchases for the current year. Does that answer your question?

By Mr. Haycraft:

Q. Well, did you discuss such matters with your customer, or prospective customer?

A. Upon occasion, yes.

Q. Is it true that in all instances your customers were users of your devices from the very beginning, or

42 were there instances where they had been or were using competitive devices?

A. Both cases would obtain.

Q. Were there instances where they were using some of your devices and some competitive devices at one and the same time?

A. That would also be true in some cases.

Q. Who were your competitors during that period of time, 1936 through 1941, in the sale of temperature controls to oil burner manufacturers?

A. Is that question concerning sets of controls, Mr. Haycraft?

Q. Well, we will first consider sets of controls, and

then consider the individual units. Make the division, if you wish.

A. Sets of controls with the Penn Electric Switch Company.

Q. Where was it located?

A. Goshen, Indiana.

Q. Goshen?

A. Goshen, Indiana.

Q. When did they come into the field with sets?

A. I am sorry, I cannot tell you, but it was far ahead of the period we are discussing.

Q. With sets?

A. Yes.

43 Then there was Mercoid Corporation.

Q. Where are they located?

A. Chicago.

Q. When did they come into the field with sets?

A. Far beyond the time that we are discussing. Perfex Corporation, Milwaukee.

Q. When did they come into the field with sets?

A. I cannot tell you the exact date, but I am quite sure it was prior to 1936.

Q. It was about that time, wasn't it?

A. I am just not positive, but it was in that neighborhood, somewhere.

Q. And they had sets at that time?

A. They had sets at that time. Then, during this period we also had the General Electric Company, who were manufacturing.

Q. What did they manufacture?

A. They manufactured the thermostat limit controls, primary controls. They were used on burners which they manufactured, and which competed with our customers.

Q. What was that again?

A. They were used on burners which they manufactured, and which competed with our customers.

Q. Then it is not true that they sold to oil burner manufacturers in competition? They didn't solicit
44 the oil burner manufacturing trade?

A. Yes.

Mr. Freeman: I am glad you used the word "solicit". That is different.

The Witness: That would be true.

By Mr. Haycraft:

Q. It wouldn't?

A. It would be true.

Mr. Freeman: They did or did not solicit? I didn't get that.

45 A. They did not. When you speak of complete sets, you understand for the period of time from 1936 on. And there was Delco Appliance, Division of General Motors, at Rochester, New York.

By Mr. Haycraft:

Q. How did they get into the trade?

A. They manufactured their own primary control and thermostat and purchased their limit control.

Q. Who made their limit control?

A. We made their limit control.

Q. And where did they sell the sets?

A. They sold them in conjunction with their own burners, again in competition with our manufacturers.

Q. By "our manufacturers" you mean your customers?

A. Yes, or other burner manufacturers.

Q. But did they solicit burner manufacturers?

A. Not to my knowledge.

Q. What you are saying there with respect to the General Electric and Delco, is that your devices were in competition with their devices on the oil burner, that is, all oil burners; that is, your customers and their burners?

A. That is right.

Q. All right, go ahead. What else? Who else?

A. I think that would cover those manufacturing sets of controls, we sold during that period of time.

Q. What manufacturers of individual devices?

46 A. I don't know that I can recall the entire list.

Q. The principal.

A. There are several. White-Rogers, of St. Louis.

Q. What did they sell?

A. Thermostats, and limit controls, fan controls.

Q. What is that?

A. Fan.

Q. They are a form of limit controls, are they?

A. Well, to the control we spoke of earlier, that control the fan in the furnace.

Q. They did not manufacture a primary?

A. They did not sell a primary. Then there is General Controls, Los Angeles. They also manufactured thermostats and limit controls.

Q. Did these manufacturers attempt to sell these thermostats and limit controls to oil burner manufacturers to whom you were selling?

A. I have never encountered any attempt on the part of the General Controls to sell in the oil heating field. I have never encountered any sales of thermostats, or of the limit controls of White-Rogers to the oil burner field. They have sold their fan controls and other devices in that field. There are several other manufacturers that make thermostats and limit controls.

Q. We are interested in those that were competing
47 with you in the sale of their devices to oil burner manufacturers. That is the one we want to hear from. What other ones, besides those you already designated, were there during that period?

A. When you put the question that way, I would like to refer to our records before I answer it.

Q. You can make a note of that and answer it later.

Mr. Freeman: That is right. We will do it after lunch.

Trial Examiner Sheppard: Whenever you want me to give you that time, say so.

By Mr. Haycraft:

Q. During this period of time, 1936 on, did any of these, Penn Electric Switch or Mercoid or Perfex attempt to sell limit controls or thermostats, or primary controls in units to the same trade that you were calling on, that is, the oil burner manufacturers?

A. To my knowledge those concerns priced their units individually, that is, the thermostat, limit controls, and the primary controls. Whether or not they tried to sell those controls individually to the oil burner manufacturer, I can't say. I would be very skeptical, however, if any of them—

Q. (Interposing) I do not want your skepticism. I want your information, your knowledge.

48 A. Let me put it this way, Mr. Haycraft.

Q. We want to get the facts.

A. It is the custom of the oil burner manufacturers to buy his control that he uses on a particular model of his

burner, direct from one manufacturer. They do not want to divide the responsibility, when it comes to the control.

Mr. Haycraft: I am going to move to strike that, Mr. Examiner, from the record, because it is not information that this witness has.

49 Mr. Freeman: We think this is very pertinent. He has asked about these other companies.

Mr. Haycraft: I did not ask him that.

Mr. Freeman: And he is testifying as to what he actually knows.

Mr. Haycraft: He is testifying as to what is in the minds or knowledge of his customers. I submit that that testimony should come from the customers, that the testimony of those customers is the best evidence on that.

Mr. Freeman: Why not reframe the question?

Mr. Haycraft: The question was all right, the answer was not responsive to my question, and I move to strike it.

Trial Examiner Sheppard: Mr. Reporter, will you read the question back again?

(Question above referred to was read by the Reporter.)

Mr. Haycraft: That is as to his own knowledge.

Trial Examiner Sheppard: Read the answer.

(The answer above referred to was read by the Reporter.)

Trial Examiner Sheppard: Now, from the interruption, strike it, and I will let you go ahead from there and add whatever you want.

50 The Witness: I think then that the answer I gave originally, I didn't know General controls sold for the individual units—

By Mr. Haycraft:

Q. You mean the Penn Electric and Mercoid or Perfex? I am talking about those three; Penn Electric Switch, Mercoid Corporation and Perfex?

A. I can say that all of those sold their controls in sets, and certainly sold them in individual units to the manufacturer.

Q. Did they solicit the accounts?

A. Yes, sir.

Q. That you solicited?

A. Yes, sir.

Q. Do you have any other instance besides Delco where you furnished or sold one of these controls to some of

your customers and the customers bought other controls, from other manufacturers?

Mr. Gilpatric: I object to that question, Mr. Examiner, because it assumes a state of facts not shown. Delco does not buy controls from other manufacturers, it makes its controls.

Mr. Haycraft: All right, I will amend the question to read: Makes their own controls or buy them from other manufacturers?

51 Trial Examiner Sheppard: All right, now you may answer.

The Witness: I know of only one manufacturer who buys controls from two different control manufacturers and mixes them in the same set.

By Mr. Haycraft:

Q. What manufacturer is that?

A. Timken Silent Automatic.

Q. Did you ever sell the American Radiator?

A. Yes, sir.

Q. What do you sell them?

A. We sold them our complete set of oil burner controls.

Q. Did you also sell them some separate units to be used with other units of their own manufacture; that is, manufactured by their own subsidiary?

A. We sold the American Radiator a lot of miscellaneous units, Mr. Haycraft. Now, whether they were used on the same installation, the same boiler installation, frankly, I don't know.

Q. Are you familiar with the Detroit Lubricator Company?

A. Yes, sir.

Q. What do they do?

A. That is one I should perhaps have mentioned earlier when I mentioned General Controls and White and Rogers, because they do make thermostats.

52 Q. Who does?

A. The Detroit Lubricator?

Q. Where are they located?

A. Detroit.

Q. Where do they get their primary controls?

A. They get their primary controls from the Penn Electric Switch Company.

Mr. Freeman: Are you talking about the Detroit Lubricator Company?

Mr. Haycraft: Yes.

Mr. Freeman: Or the American Radiator Company?

Mr. Haycraft: The Detroit Lubricator Company, which is a subsidiary of the American Radiator Company, as I understand it.

The Witness: That is correct.

By Mr. Haycraft:

Q. What does the Detroit Lubricator Company do with the three units, the one from the Penn Electric Switch and the two of the other manufacturers, if you know?

A. I know this, Mr. Haycraft, that they sell a set of controls comprising those units just mentioned to the American Radiator Company.

Q. For use on furnaces manufactured by the American Radiator?

A. For use on furnaces manufactured by the
53 American Radiator, on oil burners manufactured by the American Radiator. I also know, Mr. Haycraft—

Q. (Interposing) Do you know whether they sell to anyone or not besides that?

A. I don't believe that they sell the primary control to anyone else.

Q. You don't know that?

A. I don't know, but I am pretty positive of it.

Q. I am going to ask you now, so that we will have an understanding from now on, that I want your testimony as to what you know. You may get that, your knowledge from observation or official records of your own organization, but I am going to ask you not to surmise or guess.

A. Let me supplement that last answer then. The Penn Switch makes this control for the Detroit Lubricator, and they put their name-plate on that control.

Mr. Freeman: Whom do you mean by "they"?

The Witness: Detroit Lubricator. I know that they sell it to the American Radiator Company.

By Mr. Haycraft:

Q. That is as far as you know?

A. I can add this, that from all of our reports from the field and from personal observation, I have never known them to sell it to any one else.

Q. Now, do your salesmen do anything besides call on

oil burner manufacturers in the sale of your tempera-
54 ture controls?

A. As I said before, they call on wholesalers, and also call on dealers.

Q. Now, those wholesalers, where are they located? What is their function in the distribution of your product?

A. They are located pretty widely throughout the country, and their duty is like all wholesalers, to supply the demand of the dealers in their locality.

Q. The dealers, who are they? What do they do?

A. They are the class of trade that does business direct with the ultimate consumer.

Q. That is, they sell the ultimate consumer of furnaces?

A. And oil burners.

Q. And oil burners?

A. Yes.

Q. Or a furnace with an oil burner?

A. That is right.

Trial Examiner Sheppard: And what kind of controls?

The Witness: I beg your pardon?

By Mr. Haycraft:

Q. Who are the dealers?

Trial Examiner Sheppard: Yes, who are the dealers?

The Witness: They are the retailers.

55 By Mr. Haycraft:

Q. Who are they? Are they coal dealers, or oil dealers, or what?

A. They could be oil dealers singly, or they might handle oil burners, stokers, furnaces and boilers, and so on and so forth.

Q. As a usual proposition don't you usually do business with the dealers in fuel oil or furnaces, or things of that kind, as a general proposition?

A. Well, that is true in a lot of cases, Mr. Haycraft, they are fuel oil dealers, and a lot of them are dealers in fuel oil and some of them are not. Some dealers will be selling furnaces and boilers, very likely.

Q. Isn't that where your principal distribution is, through the oil dealer?

A. A great deal through the oil dealers, and through the dealers in oil burners.

Q. Now, where is your usual sale? Is it not to the oil burner dealer, for installation in a furnace in the

consumer's home, or a heating unit which has an oil burner in it?

A. Yes. They could directly handle both.

56 Q. Now, in addition to that, aren't there contractors and builders who build houses buying furnaces for heating units?

A. That's right.

Q. How do you classify them, as jobbers or dealers?

A. No, no. We would classify them merely as a dealer, because they are doing business with prospective users.

Q. Now, your salesmen call on dealers?

A. Our salesmen call on dealers.

Q. The same salesman who is calling on the manufacturers?

A. In many cases, yes.

Q. And in some cases not?

A. Well, our salesmen are usually allotted a specific territory. If that territory happened to include a manufacturer, he would undoubtedly call on that manufacturer.

Q. But his primary duty would be to call on dealers?

A. No. He would be just as responsible for sales to the manufacturer as to the dealer.

Q. Do you have manufacturers in all the territories you have referred to? Aren't there some territories without manufacturers?

A. Well, as I said in the beginning, Mr. Haycraft, where heating was required. For example, in New Orleans we wouldn't have a man down there to sell heating equipment, because there is very little use for it.

Q. There are a number of other appliances that 57 you would be selling there?

A. That's right.

Q. Just for the record, to make the story complete, what other devices are they selling?

A. Well, they could be selling our air conditioning equipment, our refrigeration equipment, our industrial controls for processed work.

Trial Examiner Sheppard: In addition to the air conditioning equipment and refrigeration?

The Witness: Yes.

By Mr. Haycraft:

Q. I just want to get the picture. I take it all these salesmen are under your supervision?

A. They are directly responsible to their branch managers.

Q. And he, in turn, is responsible to you?

A. That's right.

Q. So far as the heating unit—

A. (Interposing). He is responsible to the home office, that's right.

Q. Approximately how many salesmen did you have calling on them throughout the United States during that period of time?

A. Of course, this is a guess. I cannot tell—I cannot be accurate on that, Mr. Haycraft. I would say it would vary. We have approximately a hundred, a few more or a few less.

58 Mr. Freeman: I think the Examiner should know we are not talking about the year 1942, because we are engaged primarily in war work, so whatever we are talking about, whatever this witness testifies to, it is always the year 1941 as a cut-off. In 1942 we had no selling facilities, we were doing war work.

Trial Examiner Sheppard: I get that.

Mr. Freeman. That is where these men ought to be today.

By Mr. Haycraft:

Q. Now, what is the nature of the solicitation? What is the nature of the solicitation? What do the salesmen do when they call on the dealers?

A. They call on the dealers to take care of any control requirements that he might have along all of our lines. He doesn't try to sell the dealer. The controls that he needs will come with his oil burner, but, there are other special applications where controls are needed, a circulator is needed, or a low water cut-off, and things of that sort, and then he also assists that dealer in any way that he can with the problems that may have come up since the last time he saw them. In other words, he renders general sales service.

Q. Does he call on dealers handling competitive burners?

A. Well, they wouldn't be on the payroll, if they 59 didn't, Mr. Haycraft.

Q. And in doing so, what is their function?

A. Their function is to try to sell M-H equipment.

Q. In other words, if a dealer is handling furnaces with

oil burners equipped with Mercoid or Perfex or Penn Electric, it is his function to try to interest him in M-H controls?

A. Naturally.

Q. Now, as to the jobbers, who are the jobbers and what are their functions?

A. You can call them jobbers or wholesalers. They are the same to our way of thinking.

Trial Examiner Sheppard: I was going to ask you make that distinction between the two.

The Witness: They are the same. These wholesalers are set up in various localities and, as you probably know, they do a general business with the dealers in their vicinity. Th y stock equipment of various types, electrical wire, conduit, copper tubing, electrical fittings, tanks, controls.

By Mr. Haycraft:

Q. What do they stock of your product?

A. That would depend upon the demand in their particular territory.

Q. Do they stock the oil burner complete?

A. They may sell oil burners complete.

Q. And stocked with your control, and equipped
60 with your control?

A. Not necessarily. They might be our controls or competitive controls.

Q. That is what I am getting at.

A. Yes.

Q. I take it your salesmen perform the same function, call on them as they would on dealers?

A. Essentially so, to promote the sale of our equipment.

Q. There is no way that you can determine the length of time that the average salesman would spend calling on the respective trade, is there?

A. No. We can only judge that from experience, Mr. Haycraft. We know about how many calls a man might make in a given territory, on a dealer, or he might make if he were devoting his time to simply the wholesale trade, because that consumes more time. We have a reporting system.

Q. Could you tell how much time he spent on the automatic temperature control as compared with a refrigeration device?

A. Yes, because in general, Mr. Haycraft, our men who do this class of work, they are devoting their efforts par-

ticularly to heating controls. If accidentally they might run into something like refrigeration, they would turn that over to the salesman who was handling that.

61 Q. Would you say that the solicitation of heating temperature controls are seasonal, that there are times when much more time would be spent? At different times of the year would more time be spent than others?

A. Well, our men work twelve months a year, and we hope they are working all the time. Now, they are busier during the fall months and during the winter months than they are the other times; during winter than they are during the summer, it happens particularly so, because those are called the oil months in the season.

Q. I suppose from the fact that you enter into annual agreements with the manufacturers, that most of their time would be calling on manufacturers, and that would be in the fall, late fall?

A. That is not true.

Q. Along in December?

A. No, sir. We call on those manufacturers throughout the entire year. We simply cannot sign a contract and then forget them until the fall, because of the nature of our work, the amount of work we have to do with them.

Q. What do you have to do between times?

A. Well, there are a multiple of things coming up all the time, in conjunction with the manufacturer's business, and our salesmen call regularly to see what has transpired in the business, or what might have transpired, in our

62 minds, that would be of interest to that manufacturer, in making future sales.

Q. How many calls do you make daily, monthly or weekly?

A. It depends largely on the size of the account involved. The salesman might call on one of the major manufacturers, and spend two or three days there. He might call on two smaller manufacturers in the same day, that is, in a sales day.

Q. Then when would he come back again? Do they call periodically?

A. They call periodically.

Q. How often?

A. We try to have them call on the major manufacturers at least once a month. The smaller manufacturer, perhaps they see them every six weeks, or once a month,

or in the same city as the larger manufacturer, we try to have them see them as frequently as possible.

Q. So that their functions, I take it, in between times, are sort of trouble shooters, is that it?

A. No, I don't think you could say that.

Q. You do not have to keep them sold, under a signed contract?

A. We certainly do have to keep them sold.

Q. If they bought any other automatic temperature control during the term of that contract, they would
63 breach the contract?

A. No, I take exception to that, violently.

Q. You expect them to live up to the terms of the contract?

A. We hope they will live up to the terms of the contract. They will not get hung if they don't.

Q. Is it one of the functions of the salesmen that call periodically on the manufacturers to assist them in living up to the terms of the contract?

A. Our salesmen actually calling on an account, they try to keep posted on what is going on.

Q. Do you keep track in your office, and do you communicate with your salesmen with respect to whether or not the manufacturers take the devices as contracted?

A. We maintain the records, Mr. Haycraft, that disclose that automatically from our shipments month by month.

Q. Suppose that you find, or have you found in some instances, that your shipments do not go out as fast, or not as much of them, as you would expect under the contract?

A. We might run into that information. You never can tell. It depends on the size of the contract, or buying habits. Some manufacturers will buy heavily in the early months of the year.

Q. Do you induce that by giving extra discounts?

A. No, sir, we have not.

Q. Haven't you, in a few instances?

64 A. No, we had a plan, I think that is what you have in mind, at one time, where they gave pre-season commitments. I think that probably is what you have in mind.

Q. Yes. If they would take a certain proportion of their season's requirements in the early months of the year—

A. (Interposing.) That is right.

Q. (Interposing.) You would give them an extra discount?

A. I just am hazy on that, Mr. Haycraft. I would like to refresh my recollection on that.

Q. All right.

Trial Examiner Sheppard: Do you want to take a little relaxation?

The Witness: No, I don't want to.

Trial Examiner Sheppard: What time do you want to adjourn for lunch?

Mr. Haycraft: Twelve-thirty until two. Would that be all right?

Mr. Freeman: Fine.

Trial Examiner Sheppard: I thought you might not be feeling all right. Go ahead.

The Witness: I am all right.

By Mr. Haycraft:

Q. You stated that you had reports from your salesmen as to these calls that they make on manufacturers?

A. Yes.

65 Q. Wholesalers and dealers?

A. That is right.

Q. And in these reports I assume they report competitive conditions?

A. Naturally.

Q. Do you in turn also have correspondence with your manufacturing customers?

A. Oftentimes.

Q. Have you, from time to time, had correspondence with respect to the making or renewal of these agreements and contracts?

A. There is some correspondence on that, Mr. Haycraft; because of the nature of the way in which we handle these contracts, there just would not be much correspondence to handle, between the salesmen and person interviewed. It is signed, and he sends it in, and that is that.

Q. In other words, you would look first to your reports of the salesman?

A. That is right.

Trial Examiner Sheppard: Is this company a considerably old company, this Honeywell?

The Witness: Pardon me.

By Trial Examiner Sheppard:

Q. How old is the company?

A. Well, the formation of the Minneapolis Heat
66 Regulator Company goes back to about fifty-five years ago, and Honeywell Division of the business goes back to roughly, I would say, perhaps 1915, '14, '13, along in there somewhere. I don't remember.

By Mr. Haycraft:

Q. How long have you been with them?

A. I was with the Honeywell Company, in 1924, until their consolidation in Minneapolis in 1927, and then when—with Minneapolis-Honeywell since that time.

Q. At that time, 1927, Minneapolis-Honeywell Company was not engaged in the manufacture of as many devices as it is at the present time? In other words, it has expanded since that time?

A. If you are speaking again of just oil burners, they are still building the three types of control. If we are speaking of the over all picture, why, they have expanded many, many times.

Q. Did they acquire the Time-O-Stat Company?

A. Yes.

Q. That was about 1931?

A. Right around '30, '31.

Q. They manufactured oil burner controls?

A. They manufactured oil burner controls and other specialties.

Q. Their plant was at Indianapolis?

A. No, sir, it was at Elkhart, Indiana.

67 Mr. Freeman: Might I ask a question? Are you going into the Robinson-Patman end of this case, because I notice you are asking a question about what the salesmen do, about how much time they spend, and so forth. I had gathered from my preceding conference with you, you were going to exclude from this hearing anything with respect to the Robinson-Patman matter. There are three sections to this complaint, your Honor. Does that agreement still go, that you are not going to dig into the Robinson-Patman matter? I have no objection, if that is what you want to do.

Mr. Haycraft: I am merely getting a background. I am not going any further.

Mr. Freeman: This does not have anything to do with the Robinson-Patman Act.

Mr. Haycraft: I am not going to develop anything on the Robinson-Patman in this hearing.

Mr. Freeman: In this hearing. Just so we understand it this way.

68 Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Haycraft:

Q. Now, Mr. Lockrae, are you familiar with the Automatic Burner Corporation of Chicago?

A. Yes, sir.

Q. Have you made any contacts there directly yourself?

A. Yes, sir.

Q. Who was the man that you contacted, or your salesman?

A. Several people there, Mr. Hirsch, Mr. J. H. Hirsch. We always see him if he is there, and his son, Joe Hirsch, the purchasing agent, and so forth.

Q. How long have you been calling on them?

A. Well, that goes back quite a long ways, Mr. Haycraft. I would say shortly after 1928 or '9, along in there.

Q. What type of burner do they manufacture?

A. They manufacture three types of burners.

Q. Have they during this entire period?

A. Yes, sir. They manufacture a rotary burner, and the gun or pressure burner, and also the vaporizing type of burner.

Q. Now, with respect to the rotary type, is that their principal burner?

69 A. No, the main type is the gun type. The gun type is the big volume type.

Q. During the period of time since 1936 on they have been your customer for sets under contract?

A. They have been our customer since that time.

Q. And do you know whether or not during that period they have purchased or used any temperature control equipment from competitors?

A. Yes, sir; I know they have.

Q. You know they have?

A. Yes, sir.

Q. For which type of burner?

A. I couldn't say as to that, because that type of control could be used on either burner.

Q. In other words, the competitive controls could be used on either burner?

A. Yes.

Q. Do you know whether or not your temperature controls are standard equipment on any of their burners?

A. I think during this period of time they considered our controls as standard equipment.

Q. On all their burners?

A. On the gun type and the rotary type of burner.

Q. On both the gun type and the rotary type?

A. Yes. They are equipped with these other con-
70 trols from our competitors at the same time, and use them on some of the burners.

Q. Do you know the circumstances under which such purchases were made?

A. I couldn't tell you that, I don't know.

Q. Do you have any records indicating the quantity of temperature controls or the number of sets that they have used in the years preceding January, 1938?

A. You mean of our controls?

Q. 1937, I should say.

A. You mean of our controls purchased by Automatic Burner Corporation?

Q. Yes.

A. Yes, those records do exist.

Q. Calling your attention to Commission's Exhibit No. 2, which is the contract dated January 3, 1938, which calls for 7,500 estimated sets, do you know whether or not that is more or less than the number of sets that they purchased in preceding years?

A. Without referring to the records, I could not say.

Q. Do you have those records available?

A. I can get that information for you.

Q. In other words, that question is to be followed by other questions. I want to know the volume of sales to that customer for the preceding years, 1936 and 1937,
71 before 1938. Did you, in calling on Mr. Hirsch, attempt to get him to standardize on Minneapolis-Honeywell controls on both his gun and rotary type?

A. We do, Mr. Haycraft, in calling on Mr. Hirsch or any other account, try to sell them all the controls that we possibly can.

Mr. Haycraft: I think I would like to have an answer responsive to that question, Mr. Examiner.

Trial Examiner Sheppard: Read the question.

(The question above referred to was read by the Reporter.)

The Witness: Yes.

Mr. Freeman: I think you should define what you mean by the word "standardize."

Mr. Haycraft: I would prefer to have the witness do that.

Mr. Freeman: You asked him for that.

Mr. Haycraft: I am sure he is familiar with it.

Mr. Freeman: But you used the term.

Mr. Haycraft: I am taking the term from the correspondence which he wrote.

Mr. Freeman: Ask him that.

Mr. Haycraft: I think he knows what I mean.

The Witness: My interpretation of the word, Mr. Haycraft is, that when an oil burner manufacturer stand-
72 ardizes on a particular type of control, it is the type of control that he sells as standard equipment on his burner. In other words, if he puts out his literature to dealers, and so on and so forth, it lists that type of control. The information that he puts on the literature includes this particular type of control. That in our parlance is what we mean by standardization.

By Mr. Haycraft:

Q. Is there any advantage to the manufacturer of temperature controls to have the manufacturer of oil burners standardize on his equipment?

A. Certainly there is.

Q. And what is that advantage?

A. The advantage is that they can sell more controls.

Q. As you have already tetsified, they advertise your controls in their catalogues?

A. Yes, sir. I would like to add one thing about this word "standardization" and my interpretation of it, Mr. Haycraft, and that is that that did not necessarily preclude the purchase of any competitive controls.

Q. No, but it would necessarily be restricted to those competitive controls where they were demanded by the customers of the manufacturer of oil burners, would it not?

A. These other controls that they might manufacture or want to sell throughout the year.

73 Q. But doesn't the definite meaning of the word "standardization" mean that it would be a standard control on that burner and would be advertised as such?

A. That is right.

Q. Do you know whether or not anything was said to Mr. Hirsch in the solicitation of his account as to his requirements of temperature controls, whether they would be more or less from year to year, and whether an attempt was made to increase the volume of sales to the Automatic Burner Corporation?

A. Well, I think, Mr. Haycraft, that it is pretty hard to answer anything like that.

Q. I will withdraw it and put it this way: During that period of time from 1936 to 1941, was the M-H temperature controls standard or not on the Automatic Burner?

A. It was standard. Of course, anyone could get the other type of control if they wanted it.

Mr. Haycraft: I move to strike the latter part of the answer and ask to have him answer the question, as to whether it was standard on their burner.

Trial Examiner Sheppard: Yes, you can do that.

The Witness: They might also have listed a competitive type of control as standard.

By Mr. Haycraft:

Q. Not what they might have, I want to know what
74 they did.

A. I don't know.

Q. Did you ever discuss that with Mr. Hirsch at all?

A. No, I don't recall any such discussion as that.

Q. Mr. Lockrae, could there be more than one standard equipment on the same burner?

A. Often times, Mr. Haycraft, a burner may have,—a burner manufacturer will list two or three different types of controls, and the dealer takes his choice.

Q. None of them are standard?

A. Yes, they are all standard with the manufacturer.

Q. Can you give me an illustration of that?

A. Yes, I think I can give them. Let us take the Century Engineering Company, for example.

Mr. Freeman: They are located at Cedar Rapids, Iowa.

The Witness: They list both our controls and the Penn Electric Switch.

Trial Examiner Sheppard: Do you mean they may be used interchangeably?

The Witness: Yes, the dealer can get either one he wants; and there are many, many others who do the same thing.

By Mr. Haycraft:

Q. What sort of a contract did you have with the
75 Century Engineering?

A. We have one of our standard contract forms.

Q. What do you provide as to the quantity, and so forth?

A. I have just forgotten what quantities they fall in, Mr. Haycraft, whatever the bracket is in the quantity that is shown in the contract.

Q. The contract does not show the brackets, does it?

A. No, the quantity of a given bracket.

Q. Do you still call on the Century Engineering Company and sell them?

A. Yes, we call on them quite frequently.

Q. Did you make any attempt to get them to standardize on Minneapolis-Honeywell controls?

A. I certainly did.

Q. Exclusively?

A. I was not successful, however.

Q. You never did?

A. I never did, no.

Q. You never got them to standardize on your temperature controls on their oil burners?

A. We would have been very happy to. They were using the Mercoid control and they were using the Penn Switch control, and finally we sold them our control. As I recall, they gave up their Mercoid control, and standard-
ized on Penn and M-H controls. And their purchases
76 of M-H controls were far superior to those of Penn Switch.

Q. Did you take care of that account yourself personally? Did you make calls out there, or did you have correspondence with them?

A. I made calls, yes; and we had correspondence with them like we do with any other company.

Q. In preparing your testimony to testify, have you looked up to see whether there was any correspondence on that subject matter?

A. With Century Engineering?

Q. Yes.

A. No, I did not check into the correspondence files of that particular account, Mr. Haycraft.

Mr. Haycraft: Have you folks got anything on that?
Mr. Gilpatric: No.
Mr. Freeman: We followed what you asked us to look up.
Mr. Gilpatric: You want the recent requirements?
Mr. Freeman: You wrote us a letter and we followed exactly what you asked for, so that this witness is not prepared to reply to that question.
The Witness: I did look up what you asked for and had other people helping me.

77 By Mr. Haycraft:

Q. Did you look up Century Engineering?
A. I don't recall having looked at that folder at all.
Q. Will you do that?
A. Yes. The correspondence that you want there, does that refer to any particular subject?
Q. The attempt to get them to handle your product exclusively.
Mr. Freeman: We will look through all of these files, and we are now looking through all of these files to answer that question.
Trial Examiner Sheppard: You try your best to sell them your product.
The Witness: Naturally, like we try to sell any one else our goods.
Trial Examiner Sheppard: All right.

By Mr. Haycraft:

Q. Are you familiar with the account of the Cleveland Steel Products?
A. Yes, sir.
Q. With whom did you deal there? First, before we leave Century Engineering, who did you deal with there?
A. Mr. E. J. Lattner.
Q. Now, the Cleveland Steel Products, who did you deal with there?

78 A. Primarily with Mr. J. L. O'Brien, who had charge of their oil burners and heating units.
Q. Now, for a number of years you had been selling them temperature controls for their rotary burner, had you not?
A. We sold them controls for several years. Whether they used—it was applicable to either type of burner practically, either the rotary or the gun type.

Q. What did they actually use it for? That is what I am asking, not what they could. I want to know what they did do?

A. I couldn't answer that because I don't know where they used those controls, any more than any other customer who manufactures two types of burners, because they could be used on either type of burner.

Q. Did you attempt to get the Cleveland Steel Products to standardize on Minneapolis-Honeywell Temperature Controls on their burners?

A. Yes, sir.

Q. Were you successful in attempting to get them to standardize on the rotary type burners in 1935?

A. You are going back quite a long ways, Mr. Haycraft, I know that they used some of our controls in 1935, but whether they were used just on the rotary burner or the gun burner, or both, I don't know.

Q. Well, do you remember when they started mak-
79 ing the gun burner?

A. I am sorry, I don't know what year that was.

Mr. Haycraft: I would like to mark these three letters for identification; a copy of a letter, a photostatic copy of a letter from Mr. Lockrae for the Minneapolis-Honeywell Regulator Company, to the Cleveland Steel Products Company, attention J. L. O'Brien, dated September 16th, 1936.

Trial Examiner Sheppard: Mark that Exhibit No. 17-A and B, for identification.

(The document referred to was marked Commission's Exhibit No. 17-A and B, for identification.)

Mr. Haycraft: And a letter dated November 5, 1936, a copy of a letter from J. L. O'Brien to the Minneapolis-Honeywell Regulator Company, attention Mr. Lockrae, under date of November 5, 1936.

Trial Examiner Sheppard: Mark that 19-A and B.

(The document referred to was marked Commission's Exhibit No. 19-A and 19-B for identification.)

Mr. Haycraft: A photostatic copy of a letter from Minneapolis-Honeywell Regulator Company, signed by A. H. Lockrae, to J. L. O'Brien, Cleveland Steel Products, under date of October 19, 1936.

Trial Examiner Sheppard: Mark that 18-A and B.

80 (The document referred to was marked Commission's Exhibit No. 18-A and 18-B for identification.)

Mr. Haycraft: A carbon copy of a letter from Minneapolis-Honeywell by A. H. Lockrae to Cleveland Steel

Products, Att.: Mr. J. L. O'Brien, under date of November 19, 1936.

Trial Examiner Sheppard: Mark that Exhibit No. 20 for identification.

(The document referred to was marked Commission's Exhibit No. 20, for identification.)

Mr. Freeman: You can offer them all as far as we are concerned and get them in now.

Trial Examiner Sheppard: By agreement of counsel, the Examiner will accept Exhibits from Exhibit 17-A and B to and including Exhibit No. 20, for the record.

(The documents referred to, heretofore marked for identification COMMISSION'S EXHIBITS NOS. 17-A and 17-B, 18-A, 18-B, 19-A, 19-B and 20, were received in evidence.)

Trial Examiner Sheppard: We will suspend until two o'clock.

(Whereupon, at 12:25, a recess was taken until 2:00 p. m., this day.)

81 Afternoon Session.

2:00 p. m.

Trial Examiner Sheppard: Let the record show a reconvening pursuant to recess for lunch. Proceed, Mr. Haycraft.

ARTHUR H. LOCKRAE, resumed the stand and testified further as follows:

Direct Examination (Continued) by Mr. Haycraft.

Q. Calling your attention to Commission's Exhibits 17-A and B, I will ask you whether or not that refreshes your recollection as to your negotiations with the Cleveland Steel Products Company, as to their 1936 requirements?

(Handing documents to the witness.)

A. Yes, sir; that is right. I remember that.

Q. I beg pardon?

A. I remember that very well.

Q. What was the Mercoid Control situation mentioned in the second paragraph of that letter?

A. Mr. Haycraft, I think the second paragraph pretty well answers that, because it involved an order which they had placed with Mercoid the previous year.

Q. When was that?

A. I don't know the size of the order, but as I
82 recall, and so stated here, that there was still a balance of approximately five hundred sets to be shipped against that order.

Q. Was there any understanding that Minneapolis-Honeywell could be standardized on Cleveland Steel Products gun type burners as well as the rotary type, beginning with the year 1936?

A. Beginning with the year of 1936?

Q. Yes.

A. No, sir; the understanding, as I recall, in that transaction Cleveland Steel had placed its order with Mercoid, and they were going to use those Mercoid controls as well as ours on that burner.

Q. In other words, they were going to complete the use of the 500 sets, but what about after they got through with the 500 sets, what were they going to do?

A. That was entirely in their hands.

Q. What did they tell you that they were going to do? What did W. J. tell you? By the way, who is W. J.?

A. That is W. J. Smith. As I remember that, we had quoted them on our controls, and they knew the quantities involved in that quotation. If their purchases were sufficient to warrant the next bracket price, then it would be—they would be extended that price, and furthermore, the prices would become retroactive.

83 Q. When was it that you entered into this discussion with Mr. Smith referred to here, with respect to the 1936 contract?

A. Referring to the 1936 contract?

Q. Yes.

A. Well, that letter was dated in September, was it not?

Q. Yes.

A. Well, I don't know, it must have been earlier, it must have been early in that year.

Q. Wasn't it late in 1935?

A. It might have been, it might have been in December 1935.

Q. Did they give you any assurance in December of 1935 that when they had finished the 500 order that they had placed with Mercoid that thereafter your control

would be standard on the gun type as well as the rotary type?

A. Mr. Haycraft, Cleveland Steel Products had always wanted to use and standardize on our control.

Mr. Haycraft: I object to what they wanted to do, and move that it be stricken. I want to find out what they told this witness and what this witness told them.

Trial Examiner Sheppard: It may go out.

The Witness: What was that question?

Mr. Haycraft: Read it, please.

(The question above referred to was read by the Reporter.)

84 I am trying to recall that.

Trial Examiner Sheppard: Would you like to refresh your mind?

Mr. Haycraft: Read that again.

(Question re-read.)

The Witness: Can I answer that this way: Some time previous to 1936, I mean some years previous to that, the Cleveland Steel Products did standardize on and use our controls. They started to use a competitive control.

Mr. Haycraft: Just a minute. Do you mind if I interrupt you there?

The Witness: Not at all.

By Mr. Haycraft:

Q. Was that a rotary type or a gun type?

A. It could have been on both, because our controls were applicable to both.

Q. Not what it could have been. This is important. We want to know exactly. Didn't they start the gun type in 1935?

Mr. Freeman: Are you telling him or asking him?

Mr. Haycraft: I am asking him.

The Witness: I don't know what year they started that.

By Mr. Haycraft:

Q. That is exactly what I want to get at. It is not
85 what they might have done. We want to know what they did.

A. I am sorry. I cannot answer that. I don't know what year that was.

Q. All right.

A. But they were, in some year previous to that, I can-

not recall the exact year, that they had standardized on and were using our control. We had had a discussion with reference to the requirements, and they wanted to buy our controls at a price that we did not feel was right. It was then that they started to use a competitive control.

Q. That was the Mercoid?

A. At that time it was the Mercoid.

Q. And that was in 1935, wasn't it?

A. I cannot recall the year, Mr. Haycraft. Our records would show that, but I just cannot recall whether that was the year or not.

And then, every year after that, when the subject of contract came up at all, of course, this subject arose again, the question of price, and in 1936, in the 1936 contract we gave them a price on the controls that would be retroactive if they reached the quantity in our next price bracket.

Q. And in order for them to reach that quantity, it would be necessary for them to give you their gun type business, to standardize on the gun type as well as
86 their rotary, would they not?

A. I don't know, Mr. Haycraft, because I don't know what that volume was at that particular time.

Q. Read that letter and see if it doesn't refresh your recollection, and if it doesn't, maybe this one will.

(Handing document to witness.)

I show you Commission's Exhibit No. 18 A and B, and see if that does not refresh your recollection.

87 A. This might help a bit. We offered him our retroactive plan. Now, whether he told me that he was going to standardize on it, I don't know, but from what this letter states, such might be the case. Now, in this letter I reminded him of that, certainly, or words to that effect, and also reminded him that if he purchased more of our controls, he could meet that next bracket and get his retroactive credit. That is as I recall that situation, Mr. Haycraft.

Q. Does this refresh your recollection, as to the quantity that you were selling them for the rotary controls and the quantity he was using on the gun type control?

A. That, of course, was debatable. You know, that is rather in controversy right there, isn't it, Mr. Haycraft?

Q. Yes, but I am saying those are the facts you had in mind when you negotiated the contract, were they not?

A. I don't know, at the time we executed that contract, whether he told me the size of the order he placed with Mercoid or not. The only thing, as that letter indicates, my memory is they had about five hundred sets still to take, and they were using our controls that were on both their rotary and on the gun type burner, and on the gun type burner I distinctly recall they had a $5.00 difference in price. If a dealer bought our control, it cost $5.00 more than if he bought Mercoid controls having the gun type burner.

88 Q. Now you state that your salesmen had been reporting that where the Cleveland Steel Products were encouraging your dealers to use competitive controls by that you mean the Mercoid control?

A. That is right.

Q. On the gun type burner?

A. On the gun type burner.

Q. What did you mean here when you say, "We have replied in each instance, advising you were trying to use up your inventory of Mercoid controls, and we have instructed our men in no manner to attempt to disrupt the situation"?

Mr. Freeman: You can look at that letter.

The Witness: Obviously, from that, I recall we had been told that they were going to use up their inventory on Mercoid controls. Now, we tell our men in the field, as near as we can, the status of each one of the manufacturers, what type of controls they are using; if we know, we try to keep them well posted, because they run into their dealers everywhere. We have to do that. Now, then, it is only natural that our salesmen, where they ran into Cleveland Steel burners and found Mercoid controls on them, really want to know how come.

By Mr. Haycraft:

Q. It is their understanding they ought to have Minneapolis Honeywell controls?

A. Not necessarily, I would not say that.

89 Q. Why did they question it?

A. That would be a natural thing for them to do.

Q. Did your dealers know, I mean, did your salesmen know that during the year 1935 that the Cleveland Steel Products had been selling the gun type burner with Mercoid controls on them?

A. A lot of them probably did.

Q. They did not question that, did they?

A. Well, I don't know why they would question it, other than if they ran into a situation that they thought had some considerable value to us, they would report it.

Q. Did you give them to understand, then, in 1936, that if the Cleveland Steel Products Company had used up say five hundred sets of Mercoid, that thereafter gun type, the Cleveland Steel burner would be equipped with Minneapolis-Honeywell controls?

A. I might have done that.

Q. Don't you have any recollection of that?

A. I don't have a recollection of it. I might have done that. It would have been a logical thing, perhaps, to do.

Trial Examiner Sheppard: That would be one hundred per cent, instead of eighty-five per cent?

Mr. Haycraft: Thirty-five.

The Witness: Pardon?

By Mr. Haycraft:

90 Q. You had about thirty-five per cent of the business there, total business, I say.

Mr. Freeman: It wouldn't necessarily make them one hundred per cent.

Trial Examiner Sheppard: No.

Mr. Haycraft: Practically so.

Trial Examiner Sheppard: I mean by one hundred per cent—

Mr. Haycraft: Practically so.

Q. As a result of your understanding with Mr. Smith, the man you discussed this with, apparently, and Mr. O'Brien, whereas you had been getting about one-third of the temperature control business of the Cleveland Steel Products, beginning 1936, after they got rid of this five hundred they had on hand, or they had on order, you were to get all of their temperature control business on both the rotary type and the gun type?

A. I would not say that.

Q. It was to be standardized Minneapolis-Honeywell, rather than Mercoid?

A. I would not say that, Mr. Haycraft, about Cleveland Steel Products, or any other account with whom we do business. They always buy controls from our competitors.

Q. If they are demanded by their customers, isn't that right?

A. Or if they wish to buy them.

Q. If they wish to buy them. If they have stand-
91 ardized, or when would they wish to buy them?

A. They could very well, in the middle of the season, decide they wanted to put out a burner at a low price, and buy a lower priced control from Mercoid, Penn or Perfex. They are all lower priced than ours. That could very well happen.

Q. I am not talking about what can happen. I want to know what did happen. As a matter of fact, do you have the sales figures of the Cleveland Steel Products?

A. For what year?

Q. 1935, '36, '37 and '38?

A. I am sorry. That was some of the information I hoped to get this noon, but we had to phone Minneapolis, and I ended up having to wire them. That will be here in the morning.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Haycraft:

Q. Will you ascertain and be prepared to testify further with respect to your volume of sales during those years, to the Cleveland Steel Products?

A. Yes, sir, we will have that information in the morning.

Mr. Shute: What year?

Mr. Haycraft: '35, '36, '37, '38, '39 and '40.

92 By Mr. Haycraft:

Q. As a matter of fact, you remained as the standard control on Cleveland Steel Products burners, both for gun and rotary type, after 1936, did you not?

A. No, sir, I am sure they used competitive controls in the meantime.

93 Q. Did you have any correspondence with the Automatic Oil Burner Corporation of Chicago, Illinois with respect to standardizing on the Minneapolis-Honeywell temperature controls on their burners during 1936 and 1937?

A. I don't recall that, Mr. Haycraft. I know that we had correspondence with them right along, but whether it was on that particular subject or not, I don't know.

Q. Did you make any search of your files to find that out?

A. We made a general spot search. Of course, we have quite a few accounts and we are still searching, as a matter of fact, but if we found anything on the Automatic Burner it has not come to my attention as yet.

Q. Who handled that work on it?

A. I did quite a bit of work on that myself, and I also had our Chicago man; who also worked on that.

Q. Who was your competitor, who was soliciting that account at the same time that you were?

A. During the years under discussion it was both Mercoid and Perfex and Penn Switch. They were all after it.

Q. All three of them?

A. As far as I know, they were all after that business. As a matter of fact, they are after every account.

Q. And as you indicated a minute ago they were lower than the Minneapolis-Honeywell?

94 A. Yes, sir; they were always lower to my knowledge.

Q. Did you have any question up with Mr. Hirsch with respect to the splitting of the business with Mercoid, with Perfex, or with any other company?

A. I honestly do not recall any such discussion of that nature, Mr. Haycraft.

Q. You haven't any correspondence on that?

A. None has come to my attention yet. We may not have searched that file yet, I am not sure.

Q. Will you make a note to do that?

A. They are still doing it. They are still continuing. This is the second week they are doing it. I have two men on it, and this is the second week I have had two men on it, and I put part of my time on it last week, but it is a tremendous job.

Q. What about the Gould Oil Burner Company at Cambridge, Massachusetts; who handled that account?

A. Mr. Hoyt of our Boston office at that time.

Q. Do you remember who it was that he contacted?

A. Yes, he contacted Joe Gould primarily.

Q. What type of burner were they manufacturing?

A. A gun type burner.

Q. Did you have any competition there?

A. Yes, sir; Mercoid competition.

Q. During what years?

95 A. Well, I know that it was in 1936, and also in 1937, I remember that. It might have been earlier than that, and it also might have been later, but I do remember those two years.

Q. Did they standardize on the Minneapolis-Honeywell?

A. No, sir.

Q. What is the situation there?

A. They used both Mercoid and Minneapolis-Honeywell according to my recollection. I know that was true in 1936 and '37.

Q. How about later years?

A. Well, I don't know, I am not certain about later years, Mr. Haycraft.

Q. Did you make any contacts yourself?

A. No, I never called on that account to my knowledge. I have met Mr. Gould at conventions and things like that, but I have never called on him personally.

Q. Did you have any correspondence either with Mr. Gould or with Hoyt with respect to the sale of your controls to the Gould Oil Burner Company and the standardizing of your controls?

A. I don't recall anything on the standardization of the controls. I know we had correspondence with Gould because I remember going through there and looking for the point you asked me to check; and incidentally I
96 found one letter and perhaps also a report, or two reports, that had some information that you wanted.

Q. You have that?

A. We have those letters here.

(Documents handed to counsel.)

Mr. Haycraft: Will you mark this?

Trial Examiner Sheppard: Commission's Exhibit No. 21.

(The document referred to was marked Commission's Exhibit No. 21, for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit No. 21, which purports to be a photostatic copy of a report of your man Hoyt with respect to an interview dated January 5, 1937 with the Gould Oil Burner Company, in which he called on Mr. Art Farnsworth, some sort of a manager.

A. He was connected with the concern, I have just forgotten his capacity.

Q. I will ask you whether or not that is the report which you had in mind in your last answer?

A. Yes, sir.

Mr. Haycraft: I offer that in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Freeman: No objection.

Trial Examiner Sheppard: Show the document admitted to the record, Mr. Reporter, as Commission's
97 Exhibit No. 21.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT NO. 21 was received in evidence.)

98 Q. A.H.L. instructions refers to yourself, doesn't it?

A. That's right.

Q. And the 95 per cent clause referred to in that report. That report is the clause which had been inserted in the contract with this particular company at the time it was negotiated?

A. At the time it was written.

Q. Which reads as follows:

"Purchaser agrees that at least 95 per cent of its control requirements consisting of thermostat, primary controls and limiting devices will be purchased from the Company."

Reading off of the exhibit.

Mr. Freeman: You are not trying to say by the question it was in that contract submitted to Gould's, are you?

Mr. Haycraft: Yes. This thing indicates it was eliminated. Certainly that is what I am trying to do.

By Mr. Haycraft:

Q. Isn't that right, Mr. Lockrae?

A. From that I would judge so.

Q. In other words, that would be your interpretation?

A. That would be my interpretation.

Q. Do you know whether or not there was an objection on the part of Mr. Gould to sign such a contract with that clause in it?

99 A. The inference is there, that is all I recall.

Q. You don't recall anything further?

A. I don't recall anything further, other than the fact—what was the date of that report, Mr. Haycraft?

Q. January 5, 1937.

A. Yes. The point that he had asked me, and I told him if there was any objection on the part of customers as to that point, to have that clause eliminated.

Q. Do you have any recollection of any conversation with him about it on the telephone?

A. I doubt if there was a 'phone conversation. It might have been discussed in one of our meetings, because that was about the time when we had a meeting previous to that, it was about the first of the year.

Q. You didn't find any letter from him or to him?

A. No.

Q. On that point?

A. I don't recall such a letter.

Q. What is the Reynolds business?

A. That was the Reynolds Metals Company, who were getting into the heating business at that time.

Q. You mean they were building burners?

A. They were not building burners.

Q. Furnaces?

A. They were building furnaces, and incorporated 100 this burner as a part of their furnace.

Q. In other words, with the exception of that account, he was going to use your M-H control exclusively?

A. Apparently from that report, they were going to standardize that control.

Q. Do you know what controls the Reynolds account uses?

A. The Mercoid obviously, in view of the high price difference.

Mr. Haycraft: I am going to ask to strike that.

Trial Examiner Sheppard: That may go out.

Mr. Freeman: If it would stand we wouldn't have to ask him that question later on.

By Mr. Haycraft:

Q. Do you know anything about the Reynolds Company yourself, who was just going into that business? Do you know who owns it?

A. Well, it is the Reynolds Metals Company, who are a nationally known concern. If I am not mistaken, they are the ones that got into the manufacture of aluminum.

Mr. Freeman: How is that material, who owns the Reynolds Company?

Mr. Haycraft: I want to show who they are, that is all.

The Witness: They are not the Reynolds Tobacco Company.

101. Mr. Haycraft: They are not.

The Witness: Not a cough in a carload.

By Mr. Haycraft:

Q. Now, the Wayne Oil Burner Corporation, they are of Fort Wayne?

A. Yes, sir.

Q. And do you know anything about that Company?

A. Yes, I know that account very well.

Q. Did you make any sales to them?

A. Yes, sir.

Q. And back in 1936, did they standardize on the Minneapolis-Honeywell control?

A. I am not sure as to the year, Mr. Haycraft, I cannot tell you.

Q. I am referring now to Commission's Exhibit No. 1, page 10, wherein it stated in our stipulation that in the blank spaces in the contract, some language such as "Season's requirements" or similar phrases used in connection with this contract with this firm, in 1937, for the year 1937?

A. Yes.

Q. For that reason I am asking the question.

A. I do know that they used Mercoid controls, the impression in my memory of the word "Season's requirements" there, I would say that they must have used them there in 1936.

Q. Did they then standardize the Minneapolis-

102 Honeywell the same as Cleveland did?

A. No, sir, they didn't.

Q. What did they do?

A. They gave up the Mercoid controls and started to use Perfex controls.

Q. For how long a period of time?

A. They are still using them, to my knowledge.

Q. And what type of burner were they using?

A. They only made the one type burner.

Q. What is that?

A. The gun type burner.

Q. The gun type burner?

A. That's right.

Q. What proportion of the business did you get in the beginning of 1936 and '37?

A. I cannot answer that exactly, but I would say that we did not get the major portion of their business.

Q. That the Mercoid, it is your belief—

A. Yes, the Mercoid, and then Perfex got the majority of their business.

Q. Did you have any correspondence with the Wayne Oil Burner Corporation? Can you find any?

A. Again I will have to be a little bit vague, because none have come to my attention as yet.

Mr. Freeman: I might say, Mr. Haycraft, those 103 files have been searched, because the Wayne Company was one specific company that you referred to in connection with your season requirements. Just so you know that we have made the search and not as yet found anything.

The Witness: That's right.

Mr. Freeman: It isn't that we haven't come to those files yet.

By Mr. Haycraft:

Q. Now, the Wisconsin Oil Burner Company, do you recall that account?

A. Yes, sir.

Q. And did you contact that account yourself?

A. Occasionally, once a year, something like that.

Q. Who regularly solicited it?

A. Our Milwaukee man.

Q. What is his name?

A. We had two that called on that account at different times. One was Charles Cochran, and another was John Banks. And then, in later years, Harold Pride.

Q. Who was the man who ran that business?

A. There were two men who really owned that concern, John Westmont and Mr. Olson. I don't remember his initials.

Q. What type of burner were they manufacturing?

A. The gun type burner.

104 Q. And did you during that time or about that time attempt to get the Minneapolis-Honeywell controls standardized on that burner?

A. Not at that time. They were using, I believe, the Mercoid controls on that burner, and they continued to use them throughout that year.

Q. That is 1937?

A. During 1937, yes.

Q. Then what happened?
A. I am not certain.
Q. Were you able to get them to standardize in 1938 on the Minneapolis-Honeywell controls?
A. They had standardized, but I am sorry I can't say the year.
Q. Will you get that information?
A. Yes, sir.
Q. Did you find any correspondence on that?
A. We have no correspondence with them on that subject at all.
Q. Malleable Iron Fittings, Branford, Connecticut; did you contact that account yourself?
A. Not very often. I have visited them, but not regularly at all.
Q. Who handled that account for you?
A. That was handled primarily by John Fiegen-
105 baum of our Hartford office, and also our Mr. Chapler.
Q. What is his position? I noticed his name on Exhibit No. 21.
A. Yes, Mr. Chapler was our eastern factory representative.
Q. And who were the men that they contacted at the Malleable Iron Fittings?
A. The principal man is Gillias, G-i-l-l-i-a-s, I believe is the spelling.
Q. In 1937 and '8 were you able to get the Minneapolis-Honeywell equipment standardized on their oil burners?
A. Again I am confused on the year, Mr. Haycraft, because I do know that they used Mercoid Controls as standard for a good many years, and before that they used our controls as standard, but just when that saw-off came there, I don't remember what year.
Q. What type of burner did they make?
A. The gun type burner.
Q. You don't know whether in 1938 and '9 you were standard or Mercoid?
A. I think in the years 1938 and '9 that Mercoid was standard.
Q. Did you find any correspondence with that firm on that subject?
A. I didn't find any correspondence on that point,
106 but I think I can get some information on that if you like to establish that date. I think I can get some information that will establish that date.
Trial Examiner Sheppard: You can do that later.

By Mr. Hayeraft:

Q. The York Oil Burner Company, Incorporated, York, Pennsylvania, what type of burner do they manufacture?

A. Their domestic burner is a gun type burner.

Q. Did you contact that account?

A. I have called on that account, but again not regularly.

Q. Who was your man that handled that account?

A. John Dorsey of the Philadelphia office, and also Mr. Chapper.

Q. Who was the man they contacted?

A. That concern has changed hands in this period of time, and there were two or three individuals who would be involved. I can't recall the date they changed hands, but let's put it this way; when the old regime was there they called on a Mr. Kraber, among others. Under the new regime, I don't recall his full name, only Nordberg.

Q. Did you get the Minneapolis-Honeywell controls standard there?

A. When this new regime came in the Perfex controls were standard.

Q. And that was when?

107 A. That was the date I said I could not establish in my mind.

Q. And what prior to that?

A. Prior to that they used our controls, and I am sure that they used a competitive make, but I don't know whether it was Mercoid or Penn, I am not sure.

Q. To what extent did they use it, do you know?

A. I am sorry, I don't know.

108 Q. Can you get that communication?

A. I will try. I am not sure about that.

Q. Did you find any correspondence at all about that?

A. Nothing that had to do with contracts or with this ninety-five per cent clause.

Q. Standardization?

A. Or standardization.

Q. The Reif-Rex Oil, Buffalo, New York, what type of burner did they use?

A. A gun type.

Q. Did you contact them?

A. Occasionally, but not regularly.

Q. Who called on them?

A. Mr. Kaiser of our Buffalo office, at that time, and also Mr. Chapler.

Q. Who was the man you contacted?

A. There were two brothers, by the name of Reif, Allen and Charles.

Q. What type of—

A. (Interposing) Gun type.

Q. Are Minneapolis-Honeywell controls standard?

A. Again, I will have to search the history to give you the years, but I can give you the progression. First, we were not standard at all. Later we were partially standard, and I think that continued right up until today.

109 Q. What was the competitive control?

A. I believe early it was Mercoid, and later it was Perfex. I may be mistaken about the Mercoid. It might be Perfex all the way through.

Q. Were you able to find any correspondence on that account?

A. There was no correspondence on that account.

Q. How did you get the information, then, as to the situation?

A. You mean just the answer to this last question?

Q. Yes.

A. Yes, just my familiarity with that account.

Q. You might be wrong on it?

A. That is why I said I was in doubt about the Mercoid being standard with us, earlier in the game.

Q. Now, we have quite a long list of accounts in Commission's Exhibit No. 1, where they refer to the ninety-five per cent clause that I read a moment ago, which—

A. Yes, sir.

Q. (Interposing) Were inserted in the contracts that were submitted to the various manufacturers?

A. Yes, sir.

Q. And as I understand it, they were only in existence for a few days?

A. That is true.

110 Q. Less than a month?

A. And never became effective at all.

Q. In other words, you never made any attempt to enforce them?

A. Never.

Q. What is the history of that ninety-five per cent clause? Whose idea was that? Who authorized it, and what happened?

A. Well, I don't know who originated the idea, Mr. Haycraft, but my recollection of the reason for that clause was

this. In 1936 we, like most other manufacturers in the country, were vitally concerned over this new Robinson-Patman law. Now, we were told that we could not extend a contract with a manufacturer in successive years, if he did not live up to the quantity stipulation of the contract.

Now, then we knew that a lot of our accounts, if they would give us ninety-five per cent of their business, could fulfill the quantity obligation of the contract in that year. Now, that is my recollection, and the only one that I have that deals on that ninety-five per cent clause. We were trying to protect ourselves under the interpretation that had been given us of this Robinson-Patman Act.

Q. Who gave you that interpretation?

A. It came from our attorneys.

Q. Well, how did you come to change it, then, and withdraw it, January, 1937?

111 A. We were told that that clause perhaps was not according to Hoyle, and when we heard about that, we naturally investigated, and our attorneys recommended that it be taken out, so we not only took it out of our contracts that had not as yet been signed by the customer, but we also wrote every manufacturer to whom a contract had been sent, and had been executed, eliminating that clause from the contract, and all outstanding contracts we instructed our branches and our salesmen to strike out that clause and notify the account that that clause was not to be effective.

Q. You hadn't consulted your attorney before you put it in?

A. We very obviously had not.

Q. Did you have any other instances, other than the one we have already learned of, where there was objection to the clause, when you were negotiating your contract?

A. Yes, sir. We found a case with the R. S. Products Company, and we have a copy of their letter.

Q. R. S., you say?

A. That is right, R. S. Products Company, at Philadelphia. They are a small manufacturer.

Mr. Freeman: Have you offered that?

Mr. Haycraft: I offer it as the next exhibit number.

Trial Examiner Sheppard: Mark this Exhibit 22 for identification.

112 (The paper referred to was marked Commission's Exhibit 22 for identification.)

Mr. Haycraft: I offer in evidence what purports to be a

photostat of a report of a salesman, Dorsey, dated January 14, 1937, with respect to the price paid on the R. S. contract, Philadelphia.

Trial Examiner Sheppard: Any objection, gentlemen?

Mr. Freeman: No.

Trial Examiner Sheppard: Let it be received, Miss Reporter, as Exhibit No. 22.

(The paper referred to, heretofore marked for identification COMMISSION'S EXHIBIT 22, was received in evidence.)

Mr. Freeman: There is no objection to any of these papers.

113 Q. Those two companies, so far as you know, are the only ones that raised any objection to the ninety-five per cent clause when that contract was submitted to them with that clause in it?

A. There was one other account which I handled personally, which was the Cleveland Steel Products Company. That clause was in their contract that year, and I personally deleted it before we signed the contract.

Q. Before submitting it to them?

A. Well, it was done while I was there. Well, I don't just remember whether it was at the time the contract was signed, but it was deleted and dated on that date, as I recall it, January 18th.

Mr. Freeman: The deletion date is the same as the date of signing the contract?

The Witness: It was. I know that I was there at the time that the question came up.

By Mr. Haycraft:

Q. You have that contract, do you?

Mr. Gilpatric: Yes, we have it.

Mr. Shute: We have a copy of it.

Mr. Freeman: Don't you have a copy of that?

Mr. Haycraft: No, we don't have.

Trial Examiner Sheppard: Five minutes recess.

(Short recess taken.)

114 Trial Examiner Sheppard: On the record.

Mr. Haycraft: I ask that this paper be marked the next exhibit number for identification.

(The document referred to was marked Commission's Exhibit No. 23-A, 23-B, 23-C and 23-D for identification.)

Mr. Haycraft: A photostatic copy of an agreement between the Minneapolis-Honeywell Regulator Company and

the Cleveland Steel Products Company, a corporation, dated December 2, 1936—

Mr. Freeman: That is submitted; it is dated January 15, 1937.

Mr. Haycraft: All right, submitted as December 2, 1936, instead of January 15, 1937.

Mr. Freeman: No objection to that.

Mr. Haycraft: I will offer this in evidence, then.

Trial Examiner Sheppard: By agreement of counsel, the Examiner accepts it.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT 23-A, 23-B, 23-C, and 23-D, was received in evidence.)

By Mr. Haycraft:

Q. Is this Commission's Exhibit 23 the agreement with Cleveland Steel Products Company that you referred to in your last testimony?

115 A. Yes.

Q. I notice the ninety-five per cent clause on page 2 is crossed out and marked "Deleted 1-15-37, A. H. L." That is yourself?

A. Yes, that is mine.

Q. You say that it was made at the time that the contract was executed?

A. It was at the same time, yes. I think the dates will coincide.

Q. Who was it that raised objection to it, Mr. O'Brien?

A. It was Mr. O'Brien or Mr. Smith; I am just not certain who it was, who was there at that particular time. As a matter of fact, I don't recall which gentleman signed that contract, whoever I was discussing it with at the time. I think it was Mr. O'Brien.

Q. Now, are you familiar with the Acme Tool & Gauge Company of Pawtucket, Rhode Island?

A. Yes, sir.

Q. What type of burner do they manufacture?

A. The gun type.

Q. Were your Minneapolis-Honeywell controls standard on that burner in 1937?

A. I believe they were.

Q. Did you find any correspondence with respect to that?

A. There is no correspondence with that account at

116 all that was handled by our Providence office, a man by the name of Lee, Deason Lee, handled that account.

Q. The Alida Manufacturing Company, Brooklyn, New York; what type of oil burner did they make?

A. They made a gun type.

Q. Were the Minneapolis-Honeywell controls standard on that burner?

A. I don't know. I never called on that account, and I don't know.

Q. Can you find out?

A. I can find out. I will try to, at least. I am not sure that they are in business now.

Q. That was handled by your New York office?

A. By our New York office, yes.

Q. The Arcweld Manufacturing Company, Seattle, Washington; what type of burner did they make?

A. Also the gun type burner. Mr. Haycraft, I perhaps might save you some work if I would tell you that all but only a few make the gun type. There are only a few rotary type burners made in the country. If you will give me a list I can give you the names, and all the rest are gun type.

Q. Most of them are gun type?

A. There is Timken, Cleveland Steel Products, Silent Glow, Petroleum Heat & Power Company, Anchor Post Fence Company. I believe that is all—ABC Automatic
117 Burner Corporation.

Q. Those are the rotary type?

A. Yes, all the rest are gun types.

Q. You sell all those accounts?

A. Yes.

Q. Is your control standard on those burners?

A. Read the accounts and I will tell you.

Q. Timken?

A. No, they are not standard.

Q. Cleveland?

A. Yes, sir.

Q. Silent Glow?

A. We only sell a part of Silent Glow's requirements.

Q. Who sells the other part?

A. Perfex.

Q. By part of their requirements do they have, do you mean, certain furnace accounts that take the Perfex and certain accounts that take yours?

A. No, they list both of them.

Q. In that catalog?

A. Yes, both controls are standardized, if you want to put it that way.

Q. They list them both and describe them both in their catalogs?

A. They list them both and offer them both.

118 Q. Do they offer them at the same price?

A. I will have to say I doubt it, but I can't say definitely without checking. I might get that information.

Mr. Shute: What company is that?

The Witness: Silent Glow.

By Mr. Haycraft:

Q. The Petroleum Heat & Power, where is that located?

A. That is at Stamford, Connecticut.

Q. Are you standard on that?

A. Well, they use our controls, and they also use some of Mercoid, and they have used Perfex.

Q. What do they advertise in their catalogs?

A. That I am not certain.

119 Q. Well, that is what is generally accepted as the distinction, standardizing as distinguished from just sale as to order?

A. Many of these manufacturers list two, some three types of controls.

Q. You don't know whether that is true?

A. No. There are burner manufacturers, Mr. Haycraft, who only use the standard. Dealers know if they want the others, they can have them.

Q. The Anchor Post Fence Company?

A. That is it, the Anchor Post Fence Company, standardized on Perfex controls.

Q. Where is that located?

A. Baltimore.

Q. You didn't get in there at all?

A. Well, they offer our controls, and I think there is another place where I think I cannot tell whether they advertise it or list it or not.

Q. I think you have already covered A. B. C.

A. A. B. C.

Q. Then all these others on this listing, they are gun types?

A. They are gun types.

Q. I don't need to ask that question?

A. That's right.

120 Q. Did you answer as to the Arcweld Manufacturing Company?

A. That is a northwest account. I am not familiar with

it personally, and I cannot say yes or no as to that, and I am sure our correspondence would not reflect it. If you want that information I will have to write to our branch out there in order to get it.

Trial Examiner Sheppard: That is at Seattle?

The Witness: That is at Seattle.

Mr. Haycraft: Yes.

By Mr. Haycraft:

Q. The Auburn Burner Corporation?

A. Auburn, Indiana, they use our controls, also Mercoid.

Q. Did they standardize on either one?

A. I cannot tell you how they actually show it in their literature.

Q. Have you had any correspondence with them about it?

A. No.

Q. Who was the man that called on them from your firm?

A. Let me think. George Badger called on them up until 1940 or '41. I am just not sure. I have called on them a few times.

Q. Who negotiated the contract?

A. I believe it was Mr. Badger.

Q. Is he still with you?

121 A. Yes.

Q. What branch does he work out of, Chicago?

A. He does at the present time work out of Chicago.

Q. Bedard-Johnson Company, Minneapolis.

A. They standardize on our controls.

Q. When did they do that, do you know?

A. Well, they are a Minneapolis concern, and I believe from the time they started to do business with us, I cannot tell you what year that was, but I believe they have offered our controls as standard ever since.

Q. In your 1938 contracts you indicate season's requirements there? Have you got a copy of that contract?

Mr. Gilpatric: No.

Mr. Haycraft: You got a memorandum showing what the language was that they used.

Mr. Freeman: It was either season's requirements or estimated requirements.

By Mr. Haycraft:

Q. Do you remember which it was?

Mr. Freeman: I cannot tell you.

The Witness: I believe it was season's requirements.

Mr. Shute: Just season's requirements.

By Mr. Haycraft:

Q. Season's requirements, and yours is the stand-
122 ardized equipment?

A. Yes, sir.

Q. Now, that is true, you say, all during this period of time?

A. It has been standard ever since.

Q. Yes. Now, the Berggren Engineering Company, Brooklyn, New York?

A. As far as I know they standardize on our equipment.

Q. Did you have any correspondence with them?

A. No. They are a small account.

Q. A small account handled from your New York office?

A. Handled from our New York office.

Q. Braden Engineering Company, Providence, Rhode Island.

A. If I remember correctly, they standardize on both Minneapolis and Mercoid.

Q. About what time?

A. Well that has been true, I would say, for practically this entire period up until the last two or three years, and predominantly their sales have been Mercoid.

Q. You say until the last two or three years they have—

A. No, wait a minute. I might be confusing two accounts. Just hold everything. Yes. The name, I believe is Weatherall, I am just not sure about that. I would like to look that up.

Trial Examiner Sheppard: Better check that.

The Witness: Yes, I had better check that, because
123 there are two accounts. I must check that.

By Mr. Haycraft:

Q. Brown Oil Burner Equipment Company, Cambridge, Massachusetts.

A. As far as I know, they were standard on M-H controls.

Q. Was that handled out of the Boston Office?

A. Yes, sir.

Q. And that is true all during that period of time?

A. That's right.

Q. The Buck Engineering, Incorporated, Freehold, New Jersey.

A. That is another small account. I cannot tell you their case history.

Q. Do you know whether or not that was—

A. I don't know if that was handled out of New York. I have never followed that.

Q. You have no correspondence?

A. I have no correspondence.

Q. Burner Parts and Service Company, Lancaster, Pennsylvania.

A. They were predominantly Mercoid. We only sold them a few controls.

Q. That is true all during the time?

A. Yes, sir.

Q. Campbell Machinery, Minneapolis?

124 A. M-H controls, standard.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

125 Mr. Gilpatric: We have that to refresh his recollection.

Mr. Haycraft: I would be glad to have you give him anything you have so we won't have to go over it again.

Mr. Gilpatric: I can give him that.

Mr. Freeman: Just so you understand we have no way of knowing how many oil burners the company manufactures, or how many of the competitors' controls they actually buy and sell, but what we are giving you here is our estimate, that has been made up from the study that is made over a period of time.

Mr. Shute: Which is still incomplete.

Mr. Gilpatric: But it will clear up some of these points.

Mr. Shute: It will help refresh his recollection.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Haycraft:

Q. You can tell us what the situation was in 1941. That will help.

A. And the facts are that same situation will pretty well obtain for some time.

126 Q. What about the burner parts of Lancaster? Is there anything about that in there?

A. I am sorry. We don't even have them listed. I know that they are just a small—

Q. Buck Engineering Company?

A. (Interposing) —concern, and I don't believe they bought anything from us in 1941. That is why they are not listed.

Buck Engineering, fifty per cent Mercoid.

Q. Fifty percent M-H?

A. Yes, sir.

Q. Braden Engineering, Providence, Rhode Island?

A. There were ninety-five per cent Mercoid.

Q. In 1941?

A. Yes, sir.

Q. Auburn?

A. That is questionable. I know they used some Mercoid controls in 1941, but the man who called on that account is Mr. Badger. I did not get in touch with him. I might be able to get you some information on that.

Q. All right. Arcweld, have you anything on Arcweld?

A. I think Arcweld were not in business in '41.

Q. The Alida Manufacturing?

A. And I am afraid the same applies there, because their name is not on the list.

127 Q. Citro Oil Burner Corporation, Fountain Lake, New Jersey?

A. M-H, with standard.

Q. Do you have any recollection of previous to '41?

A. I don't.

Q. Concord Oil Corporation, Brooklyn, New York?

A. M-H with standard.

Q. Have you any information for them previously?

A. I haven't.

Mr. Haycraft: It is understood, Mr. Examiner, the witness' answers now being given relate to 1941, unless I develop otherwise.

Trial Examiner Sheppard: All right.

By Mr. Haycraft:

Q. D'Elia Oil Burner Company, Bridgeport, Connecticut?

A. M-H, with standard.

Q. David Duff & Sons, New Bedford, Massachusetts?

A. M-H, with standard.

Q. Eisler Engineering Company, Newark, New Jersey?

A. That account isn't listed. If my memory serves me right, they were out of business in '41, but when they were in business, they were using M-H standard.

Q. Electromatic Oil Burner Company of Malvern, New York?

A. They are in the same category. We do not have them listed, and I don't know what their status was prior to '41.

Q. You haven't any reports on them?

128 A. No, we have no reports on them.

Q. As to any company that I have asked you about, do you have any other reports, that correspond, other than the ones you are referring to, with regard to them, as to the previous year?

A. No, sir.

Q. Enterprize Oil Burner Corporation, San Francisco?

A. M-H, with standard.

Q. Fairfield Oil Heating Company, Greenwich, Connecticut?

A. We have them. Yes, here they are. They used both Mercoid and Perfex as standard.

Q. In '41?

A. '41, and that would obtain, although somewhat earlier they used nothing but Mercoid.

Q. Was M-H ever standard on their—

A. Never, to the exclusion of Mercoid, that I know of.

Q. Didn't they raise any objection to signing your ninety-five per cent clause contract in 1937?

A. Not that I recall. I don't know, Mr. Haycraft. There was no correspondence on that, and I don't know.

129 Incidentally, they later used some Perfex controls. It shows here in 1941 they were also using Perfex.

Q. Fargo Foundry Company, Fargo, North Dakota?

A. They were M-H.

Q. Gar Wood Industries, Inc., Detroit?

A. They were using both Perfex and M-H.

Q. Now, I want to ask you this question. Will you indicate whether Perfex were selling sets or were they limit controls?

A. When I mention a competitor here, Mr. Haycraft, it automatically refers to a set.

Q. Or you would indicate otherwise?

A. Yes.

Q. As a matter of fact, didn't Perfex and Mercoid both

sell a large quantity of limit controls to customers who did not have their thermostats or the primary controls?

A. If they are selling those to the same accounts that we are selling, then it is absolutely news to me.

Q. Anyway, your testimony refers to sets?

A. That is right.

Q. Do you have any independent recollection as to how long Perfex has been selling Gar Wood?

A. I don't know exactly.

Q. Do you have any report on it?

130 A. I have no report on it, but again I think I can find out for you.

Q. General Oil Burner Corporation of Baltimore?

A. Mercoid and M-H.

Q. Now, do you know whether or not they were buying your controls in 1937?

A. I think they were, but I am not positive of that. I think they were.

Q. In other words, the change has taken place since then?

A. Yes, sir, but it is an old account on our books, and I think they were in 1937.

Q. Was your control ever standard on the General Oil Burners?

A. To my knowledge it was not, I think they have always used Mercoid as well.

Q. Do they manufacture burners and sell them to a number of burner manufacturers?

A. I am not sure. I don't know. I have always thought of them, that they just made merchandise, their own burner. I am not certain, it may be possible they may build a furnace of their own, I am not sure.

Q. Do your records indicate that your business had dropped off with the General Oil Burner Corporation?

A. I can answer that question very specifically tomorrow.

131 Mr. Gilpatric: What was that question?

The Witness: The General Oil Burner Corporation of Baltimore, whether our business has dropped off from 1937 on.

By Mr. Haycraft:

Q. The General Oil Heating Corporation.

A. That is the same situation that exists with the General Oil Burner Company. They use Mercoid and M-H.

Q. Do you know in what proportion?

A. It is estimated that the General Oil Burner Company used 20 per cent, Mercoid; and the General Oil Heating, 25 per cent.

Q. Will you find out in both cases when it was that Mercoid got in there?

A. I will try to.

Q. The Capitol Oil Burner Company, Hartford, Connecticut—wait a minute, before we get into that, on the others, would you say that yours was standard on both of those?

A. I think they list both of them.

Q. Does the 20 per cent and the 25 per cent represent the business that they do with Mercoid?

A. Yes, sir.

Q. Do you know whether they are listed in their catalogues?

A. I will have to check up to be sure, but I think
132 they are.

Q. The Capitol Oil Burner Company, Hartford, Connecticut.

A. Well, that is one that is not on this list, so that they are probably out of business.

Q. Do you have any information on that?

A. No, I haven't.

Q. Can you get some?

A. I doubt it very much, because those smaller accounts we haven't had any correspondence with unless we had some trouble with them.

Q. Carlson Brothers Tool and Machine, Boston.

A. They were, you might say, practically out of business for a number of years. They bought twenty-four units in 1941.

Q. Carter-Korth Oil Burner Company, Roselle Park, New Jersey?

A. They used both M-H and Mercoid.

Q. What proportion?

A. It is estimated here 5 per cent Mercoid in 1941. I know that they used more than that in previous years, but just how much I don't know.

Q. Do you have any way of finding out?

A. I think I can get some information on that.

Q. Harrison Sales Company, Seattle, Washington.

A. That is another one of those small accounts
133 that I do know this about, however, that they were dis-

tributors and handled Mercoid controls. I don't find them listed here.

Q. You don't know what happened after 1937?

A. No.

Q. Or what the situation was in 1937?

A. I don't know.

Q. The Hart Oil Burner Corporation, Peoria?

A. M-H, standard.

Q. That is 1937 on down to 1941?

A. Yes, sir.

Q. Harvey-Whipple, Incorporated, Springfield, Mass.?

A. Perfex and M-H.

Q. What proportion?

A. Approximately 40 per cent Perfex.

Q. Do you have any idea how long that was true?

A. I know they had used the Perfex control for the past several years. Just when they started, I don't know.

Q. You don't have any information on that?

A. No, but I think I can get some information on it.

Q. Hayward Manufacturing Company, Boston?

A. M-H was standard in 1941.

Q. And you think that they were in the period previous to that?

A. I am not certain, I would like to check on Hayward.

134 Mr. Gilpatric: Now, let us make it clear, that this is based on information picked up, and you could not get this tomorrow.

The Witness: No, not all of this.

Mr. Freeman: It will be merely hearsay testimony, but we will get it for you if you wish it. If that is the kind of information you want, we will get it for you, but we will want to put in the same kind when it comes to our turn.

Mr. Haycraft: I want the best that I can get, and if that is the best that you can get, I want that.

Mr. Freeman: Obviously, when you are asking how many Mercoid sold to a certain company, the place to get that information is Mercoid itself. They are going to be your witnesses, and they will give you that information. We will do the best we can, and we are glad to do it, but when you talk about the best you can get, you know where to get it. We will do everything we can.

Trial Examiner Sheppard: I think this, gentlemen—I just gathered your point—if you can get the real informa-

tion from the other company, I don't see any point in guessing at it.

Mr. Freeman: That is one point I wanted to raise, and Mr. Gilpatric wanted to raise. The witness says, "I will get the information." We don't have it in our books
135 and records, and we will have to go out and ask Joe Doaks of that given company, do you know the number of controls that were sold by your company to a given company. If that is the information you want, the kind of information you want, we will try and get it for you.

Mr. Haycraft: I didn't want this witness to tell me how many Mercoid were sold.

Mr. Freeman: You are asking him that.

Mr. Haycraft: No, I am asking him when it was—he said that they used Mercoid, and I asked him how long ago it was, and he said he didn't know, he would have to find out or he would try to find out.

Mr. Freeman: Yes, that information we can get, but when it comes to quantities or percentages, we have no way of checking it.

Mr. Haycraft: I didn't ask him to do that, I don't want him to do that.

The Witness: If I remember correctly you did on some of the earlier ones that we were discussing, on these percentages.

Mr. Haycraft: That is all right, but all that I want you to get is when you lost out or your business declined.

Mr. Freeman: Anything that is in our records we will get for you.

136 The Witness: Yes, we will get that.

Mr. Haycraft: I am not asking you to get anything that we can get from Mercoid. The only thing I may do is try to save going around to the various dealers if we can help it.

Mr. Freeman: We will help you do that all we can.

Mr. Haycraft: I feel I am going to have to go to quite a few of them, and on some of them we will take the best information that we can get.

Mr. Freeman: Even before you go to those dealers, maybe we can sit down and stipulate on the record, or stipulate just what the record will show if we checked it, and it may satisfy you and it may satisfy us, and then we will all be happy.

Mr. Haycraft: All right.

By Mr. Haycraft:

Q. The Hi-Point Corporation, Bellefontaine, Ohio?

A. Yes, M-H standard, and they used some Mercoid.

137 Q. Hoben Manufacturing Company, Waltham, Massachusetts.

A. M-H was standard.

Q. Holtum Manufacturing Company, Freeport, Illinois?

A. I am sorry, I don't have them on this list. I know they were small, we never sold them very much, and I believe Mercoid was standard with them.

Q. Unless you know, we had better not have it.

A. I might check that with our Chicago man, but I am pretty sure that was the case, they were using Mercoid.

Q. Homestead Engineering Corporation, Brooklyn, New York?

A. That concern was out of business in 1941. While they were in business I think they standardized on M-H.

Q. Hubbard Oil Burner Company, Minneapolis?

A. They standardized on M-H.

Q. Hupp Oil Burner Company, Brooklyn, New York?

A. They standardize on M-H.

Q. Hyle Oil Burner Company, Baltimore?

A. They were predominantly Perfex, but we also sold them.

Q. Do you have any estimate as to how much?

A. Yes, I think so. I know that account pretty well, that is why I spoke verbatim. We estimated Perfex was getting ninety per cent of the business.

Q. Jacobson Manufacturing Company?

A. They were out of business.

Q. Of Racine, Wisconsin?

138 A. Yes. But when they were in business they used our controls as standard.

Q. Kelly Oil Sales Corporation, Arlington, Massachusetts?

A. They were out of the burner business in 1941. I know that they used our controls, but I am not certain whether they standardized on them or used someone else's.

Q. LaGrace Oil Burner Company, Woonsockett, Rhode Island?

A. I don't know whether—that is one of those small accounts, and I don't even have them listed in '41.

Q. You have no information?

A. I have no information.

Q. Liberty Research Laboratory, Inc., Farmingdale, New York?

A. Well, that is funny, I thought that was here. I want to check that. I think those people changed their name.

Trial Examiner Sheppard: Is that all you have got on that?

The Witness: Pardon?

Trial Examiner Sheppard: That is all you got on that?

The Witness: Yes. I don't have anything on that at all, but I think that concern changed their name. I can determine that.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

139 (Discussion off the record.)

Trial Examiner Sheppard: On the record.

We will take an adjournment until ten o'clock tomorrow morning, Miss Reporter.

(Whereupon, at 4:05 p. m., an adjournment was taken until 10:00 a. m., Friday, August 13, 1943.)

140 Room 1123,
New Post Office Building,
433 West Van Buren Street,
Chicago, Illinois,
Friday, August 13, 1943.

Met, pursuant to notice, at 10:00 a. m. C. W. T.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Esq., Attorney for the Federal Trade Commission.

Cravath, de Gersdorff, Swaine & Wood, by R. L. Gilpatric, Esq., and B. R. Shute, Esq., 15 Broad Street, New York, N. Y., and Bair & Freeman by Will Freeman, Esq., 135 South LaSalle Street, Chicago, Ill., appeared for the Respondent.

141 Proceedings.

Mr. Haycraft: I am going to ask, Mr. Examiner, to withdraw Mr. Lockrae for a few minutes, because I want Mr. Sweatt to testify to a few matters, and he has to leave.

CHARLES B. SWEATT was thereupon called as a witness for the Commission and, having been first duly sworn, testified as follows:

Direct Examination.

Trial Examiner Sheppard: Give the Reporter your name.

The witness: Charles B. Sweatt.

Trial Examiner Sheppard: And your address.

The Witness: Do you want my business address or home address?

Trial Examiner Sheppard: Wherever you get your mail.

The Witness: 2753 Fourth Avenue, South, Minneapolis.

By Mr. Haycraft:

Q. What is your occupation, Mr. Sweatt?

A. I am vice-president of Minneapolis-Honeywell Regulator Company, in charge of all of the sales activities of the company.

Q. How long have you occupied that position?

142 A. Since 1927.

Q. You were one of the founders of the firm?

A. No.

Q. Your father was a founder of the firm?

A. Yes, sir.

Q. As vice-president in charge of sales, what generally speaking are your duties?

A. Well, broadly speaking, I am in general charge of the entire sales organization, and I am responsible for the sales policies and all matters connected with sales.

Q. With respect to the sale of temperature controls for use on oil burners, do you have direct charge of that?

A. No, Mr. Pauling has direct charge.

Q. Mr. Pauling?

A. Mr. Pauling and Mr. Lockrae.

Q. And Mr. Lockrae is under Mr. Pauling?

A. Yes.

Q. What, if anything, do you have to do with the preparation of contracts or agreements that are used in the sale of controls to burner manufacturers?

Mr. Freeman: You mean oil burner manufacturers?

Mr. Haycraft: Oil burner manufacturers.

The Witness: I review those when made up, generally sit in on the discussions involving the various forms and the terms.

143 Trial Examiner Sheppard: How long have you been in this position?

The Witness: Since 1927.

By Mr. Haycraft:

Q. Taking up particularly the agreement that was in effect at the end of 1935, for the year 1936, in evidence here as Commission's Exhibit 11-A to D, did you have anything to do with the preparation of that agreement?

Mr. Freeman: Are you referring to the form or the contents?

Mr. Haycraft: I am referring to the form and the contents.

The Witness: I did, with the general form, but probably not with the specific contents of any individual customer.

By Mr. Haycraft:

Q. Did they ever come to your attention?

A. Well—

Q. This happens to be Exhibit 11. I call your attention to this one. This is the Timken deal.

A. I doubt very much whether the specific contract would have come to my attention. There are several hundred of them made out every year, and I don't go over the detailed contracts.

Q. Do you have any recollection of anything in 144 particular about the Timken contract which was submitted on December 2, 1935 to the Timken Company? Do you have any recollection about that?

A. Nothing except what this particular contract shows

Q. Do you recall that as it was submitted that it was not accepted in that form, or signed?

A. Only insofar as the fact that it is not signed shows.

Q. Do you have any independent recollection about that?

A. No independent recollection, no.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Haycraft:

Q. Do you know, as a matter of fact, whether that contract was consummated?

A. I do not; no, sir.

Q. In your early contracts, that is, along in 1936, with either one of these two forms, you have this language:

"The Company agrees to sell and the Purchaser agrees to purchase, subject to the reservation hereinafter named, during the life of this contract ..... (blank) number of sets of the Company's automatic, temperature controls, each set consisting of one thermostat, one limit con- 145 trol, and one primary control. It is specifically agreed that other control equipment is not to be considered as a part of a set within the terms of this contract. Because the Company's costs are figured to cover a complete set of controls, and the following breakdown prices are purely

for invoicing purposes, it is agreed that the Purchaser's yearly purchases will consist of at least 90 per cent as many Room Thermostats and 100 per cent (but at the Company's option not more than 125 per cent) as many Limit Controls as Primary Controls."

Now, will you explain the reason for that language, being inserted in the agreement. What was the purpose of having that language put in it?

146 A. Well, there are several reasons. One reason in particular was that we did not desire to sell manufacturers various types of products that would not properly coordinate together, therefore we made it a practice to quote on a complete set of oil burner controls, and under this form of contract the customer purchased the three different units that are necessary in a set of oil burner controls.

There are other reasons, I don't know whether they are particularly material here. One thing, for example, at one time we priced our various types of boiler controls at different prices. That made a rather difficult situation for the oil burner manufacturer, because he had to issue a different price on an oil burner if it went to a hot air furnace, a hotwater boiler or steam boiler. To avoid that confusion in the trade or with the manufacturer, we established a policy of selling all our boiler controls on the same price basis.

That price was figured on an average weighted price, depending upon our past history of operation to each particular type of boiler control that was sold.

In that way we were able to arrive at an average price, so that if we sold all three of them, the three different types, our prices came out equalized.

If, on the other hand, a certain manufacturer should have purchased all of one kind, it might have left us

147 in a hole because that might have been the type that was the more expensive to manufacture. But, if that were evened out or equalized, the general law of averages would bring us out all right.

Q. Now, in this same agreement here that was submitted December 2, 1935, I find this paragraph on the third page of Exhibit 11-C:

"In view of the special prices listed in this agreement, it is understood that the purchaser will standardize on and use the company's products exclusively, except for

field tests or when other makes are specified by dealer." Do you recall having had anything to do with that language being inserted in the agreement?

A. I don't believe I did.

Q. You have no recollection on it?

A. I have no recollection on it other than the fact that it appears there.

Q. That is probably Mr. Pauling or Mr. Lockrae's supervision?

A. It is possible.

Q. They didn't call it to your attention?

A. Not that I recall at this time.

Q. Now, on this Commission's Exhibit No. 12-B, which is the contract which was submitted December 2, 1936,
148 I find this clause:

"The purchaser agrees that at least fifty (50) percent of the quantity of this contract is to be shipped in approximately equal monthly lots prior to July 1, 1937, and will give the Company an order for these controls specifying the required quantity and type of Thermostats, Primary Controls and Limiting Devices. Subsequent orders for shipment in lots of less than 100 units will be invoiced at prices five (5) percent in excess of the net prices specified herein."

Do you recall the insertion of that clause?

A. Doesn't that refer to two different things? Aren't there two different subjects covered there?

Q. It may be. Will you explain it?

A. Yes, sir, I can explain that.

Q. All right.

A. With many of our large purchasers, we ask them to give us what might be called pre-season shipments. In other words, level out our seasonal manufacturing business. As you know, the oil burner business is a highly seasonable one.

The majority of the small manufacturers, being limited financially, purchase as they need them. The larger companies, however, having plenty of capital, they are able to purchase their controls in advance, and this gives a very definite advantage in running our manufacturing
149 plants at full blast during the late winter and early spring months, whereas normally we wouldn't be able to do that.

150 Q. That also, of course, gives the larger purchaser an advantage, if he can get a lower price?

A. That would be open to anyone.

Trial Examiner Sheppard: You mean any one who could take advantage of it?

The Witness: Any one who could take advantage of it.

Mr. Freeman: Of buying the right quantity.

The Witness: It gave us those definite manufacturing advantages.

By Mr. Haycraft:

Q. Was that policy followed any more than that year, do you recall?

A. I believe the same policy was in effect in 19— possibly 1939 and 1940.

Q. Well now, I show you Commission's Exhibit—this has not been marked.

Mr. Haycraft: Mark these the next Exhibit numbers, please.

Trial Examiner Sheppard: Commission's Exhibit No. 24-A and B and Commission's Exhibit 25-A and B.

(The documents referred to were marked Commission's Exhibits Nos. 24-A, 24-B, 25-A and 25-B for identification.)

151 By Mr. Haycraft:

Q. I ask you to identify the two letters, one original letter from Mr. Rockwell, Walter F. Rockwell, vice-president of Timken Automatic Company, dated December 24, 1936, addressed to Harold Sweatt, president of the Minneapolis-Honeywell Company, Commission's Exhibit No. 24-A and B, and carbon copy of your reply to Mr. Rockwell, dated December 29, 1936; and the same as to Exhibit 25-A and B for identification.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: He can identify them, and then I will offer them.

The Witness: Yes.

Mr. Haycraft: I offer them in evidence.

Trial Examiner Sheppard: Any objection to these?

Mr. Gilpatric: No objection.

Mr. Freeman: Why don't you just offer them. We are perfectly willing.

Trial Examiner Sheppard: We would like to make the record show that.

By Mr. Haycraft:

Q. Do you have any independent recollection of the subject matter of this correspondence?

A. I have an independent recollection that the letters refresh, yes.

Q. What is your recollection of the Timken transaction referred to in this correspondence?

152 A. My recollection is that Mr. Rockwell had an idea he had some sort of a credit coming at the end of the year.

Q. A retroactive discount?

A. A retroactive discount, yes, and as my letter very clearly points out, he did not have.

Q. Did you contact Mr. Rockwell at all, in the earlier part of this--

A. No, sir.

Q. How do you know that some such proposition had not been made to him?

A. Had not been made?

Q. Yes.

A. I think if any such proposition had been made I would have known about it and of course, when that letter of Mr. Rockwell's to Mr. H. W. Sweatt came, I consulted with Mr. Pauling, who was directly concerned in it.

Q. He told you he had not made any such proposition?

A. Yes.

Q. Wasn't it customary for you to make retroactive agreements, to make retroactive discounts if certain quantities were reached during the year?

A. That always had been our policy, but Timken, however, were in our lowest price bracket, and therefore they were not able to earn any retroactive credits.

153 Q. How did they come to be in the lowest bracket? Did their purchases place them there?

A. They did.

Q. The volume of sales you made to Timken Company the preceding year was sufficient to put them in the lowest bracket?

A. It was.

Q. Do you have any record of those sales here?

A. No, I haven't.

Q. In 1936 what was the volume required to get them in a lower bracket?

A. I can't remember offhand. I think that is in the stipulation.

Q. or 1937, not 1936. That is the reason I asked the question.

A. I don't recall.

Q. In 1937, according to this exhibit, it was necessary for them to get fifteen thousand units in order to get the highest bracket. I was trying to find out whether that was the same situation in 1936. I do notice this, according to these two agreements, that you made them a lower price in December, 1936, than you did in December, 1935, and also that there was a larger quantity in the contract. Does that refresh your recollection any as to the situation?

A. Well, our whole price structure declined between 1936 and '37.

154 Q. Also was there—

A. (Interposing.) There was a general lowering of prices.

Q. Was there also a change in the quantity that was necessary to obtain the highest bracket price?

A. That I couldn't say without referring to the record.

Trial Examiner Sheppard: You mean that after the Robinson-Patman Act went into effect, certain adjustments were made in both the contracts and your relationship with your customers, is that right?

The Witness: Yes, sir.

155 By Mr. Haycraft:

Q. In the third paragraph of your letter you referred to a plan for increasing the sale of gun type burners by offering it as a private brand to various companies, such as Reynolds, Mueller, and so forth, and at the time of the conversation referred to the Reynolds Company had specified a competitive type of control. What was that competitive type of control, do you know?

A. To the best of my recollection it was a Penn Switch control. The Penn Switch had developed a specialized type of control for continuous ignition gun type burner.

Q. Is it your recollection that the proposition was made to the Timken Company that if they got the Reynolds Company to standardize on M-H that you would give them a dollar a burner up to a maximum of 7,500?

A. If they were able to purchase 7,500 of that special relay referred to, that is correct.

Q. That is not what the letter says. I am asking you now about your recollection of it. The letter says:

"At the time of this conversation the Reynolds Com-

pany had specified a competitive type of control and Mr. Roberts was in hopes that he would be able to get them to standardize on our controls along with the balance of the production. The exact proposition which Mr. Pauling made to Mr. Roberts was that if he was successful in putting
156 this over and you were able to standardize on our controls for this burner, he would grant him a reduction in price on our R116 constant ignition relay of $1.00 per burner up to a maximum of 7,500 burners."

A. There is only one point there that is not clear to me, and it is not clear in that letter; and that is whether that refers in that deal to whether he was successful in selling Reynolds and Mueller and these other people this specialized type of burner. As a matter of fact, we never were successful.

Q. I understand, but I want to see what your proposition was, whether it states—whether this correctly states the proposition at the time, as you understood it.

A. That is what I say, I am not perfectly clear.

Mr. Freeman: I think, Mr. Haycraft, you should read the next sentence, and you will recognize that the proposition included utilizing a special relay.

Mr. Haycraft: Where is that, "from above," do you mean?

Mr. Freeman: (Reading.) "From the above you will note that this was purely a tentative proposition based on a special program, utilizing a special relay."

By Mr. Haycraft:

Q. I will ask you what that special relay was that
157 was to be used in there.

A. Timken used what we termed our R117 relay, which is an intermittent type of relay. The R116 referred to is a continuous ignition relay, or Protectorelay, that eliminates various mechanical parts necessary to obtain the intermittent operation; so it is an entirely different type of relay than Timken used as standard. You will note it was a special relay that we were trying to have them incorporate, and so he had agreed to give them a special price on their standard relay; it was not the case of a special price, or a price that we named there, to be a price for 7,500 on this special type of relay.

Q. You say a special type of relay. It was listed in your contract, wasn't it?

A. I don't believe it was.

Q. R117?

A. R117, yes, but not the R116. That is the relay referred to.

Q. That you say that R116 is not listed in your catalogue?

A. Not in that contract, because Timken never used any of them.

Q. It was new to Timken but it was not new to you?

A. No.

Q. You had been putting them on right along?

A. We had been putting them out right along, yes, sir.

158 Q. So far as "special" was concerned, it was special to Timken, but it was not special to Minneapolis-Honeywell?

A. That is right, special to Timken.

Q. The R116 could be used on a gun type?

A. On the continuous ignition type.

Q. On the continuous ignition type?

A. Yes.

Q. Could it be used as well on the rotary type, or did you sell the R117 for that?

A. The R117 required the rotary type; the rotary type relay, intermittent.

Q. You mean, the rotary type of burner required the R117 rotary type of relay?

A. That is right.

Q. The R117 was the type that Timken was using on their burners?

A. Yes, sir.

Q. The one he had been using on the rotary type burner?

A. Yes, sir.

Q. And he was going ahead with the gun type and using—you wanted him to use the R116?

A. Yes, sir.

Q. Which you sold for the gun type burner?

A. Used for the continuous ignition gun type burner.

Q. It was used for the gun type?

159 A. Yes, that being a special relay which sold at a lower price.

Mr. Haycraft: I believe that is all I have to ask Mr. Sweatt at this time. At some future time I may have something else after we get through with Mr. Lockrae and Mr. Pauling, but that is all I have at the present time.

Trial Examiner Sheppard: I will tell you, this gentleman will no doubt appear on the stand in your case, and if you want to save time now I will let you, at the time that you put him on, go into anything that you want to in connection with this examination, to save his double appearance on the stand.

Mr. Freeman: All right, thank you very much.

(Witness excused.)

Trial Examiner Sheppard: Mr. Reporter, I want the record to show that Mr. Lockrae and Mr. Sweatt have both appeared on the stand without subpoena. All right, now.

Mr. Haycraft: Mr. Lockrae will resume the stand.

Trial Examiner Sheppard: Mr. Reporter, show Mr. Lockrae appeared on the stand again and continues his direct examination.

160 ARTHUR H. LOCKRAE, resumed the stand on behalf of the Commission and testified as follows:

Direct Examination by Mr. Haycraft (Continued).

Q. Before we continue the line of examination that I had been on yesterday evening, Mr. Lockrae, I would like to clear up some matters that I started to develop with Mr. Sweatt on this Timken deal. Do you recall the contract that was submitted to the Timken Company in December, 1935, whether or not it was actually executed?

A. I can't answer that, Mr. Haycraft, I don't remember whether it was or not.

Q. This is the contract, Exhibit 11-B, annd I notice on this contract there was no R-116 listed.

A. That is right.

Q. There is an R117.

A. That is right.

Q. Now, I call your attention to the same thing that I called Mr. Sweatt's attention to, on the first page of this contract: "In view of the special prices listed in this agreement, it is understood that the purchaser will standardize on and use the company's products exclusively, except for field tests or when other makes are specified by dealer."

Do you recall that clause as inserted in that con-
161 tract?

A. Not other than as I see it here.

Q. And you don't have any independent recollection on it?

A. No.

Q. Do you know whether you put it in, or Mr. Pauling put it in? It is typed in, it is not part of the printed contract.

A. No, maybe Mr. Pauling had this contract prepared.

Q. We will see about that when he comes. Now, I call your attention also to the last page of this exhibit, which is 11-D, which appears to be a contract which is to expire December 31, 1937. Would that indicate to you that that was a later contract, rather than the one to which it is attached?

Mr. Freeman: You are just having him to guess, why not wait and straighten it out later.

The Witness: It is certainly not consistent with the rest of it.

By Mr. Haycraft:

Q. I will show you the last page of Commission's Exhibit No. 12, being Exhibit 12-D, and ask you whether that appears to be the last page of the exhibit just preceding? (Handing exhibit to the witness.)

A. That could very well be. The date would indicate that that is true. That could be verified later.

162 Q. That can be verified from your office, can't it, Mr. Lockrae?

A. I think so.

Q. Now, I call your attention to the first page of Exhibit 12-A to D. I notice that there is written in, apparently in pencil on the original, "R116 Protectorelay" with a price of $8.45. Is that the relay that Mr. Sweatt was referring to in his testimony as suitable more for the gun type burner than the rotary type?

A. That is correct, that is, the constant ignition relay.

Q. Can you testify as to the quantities included in these two contracts, whether they would entitle the Timken Company to the highest bracket discount? I noticed in December, 1935 contract it calls for 10,000 or more sets, and in the 1936 contract, December, 1936, 15,000 sets.

A. Well, Mr. Haycraft, I believe that that is in the stipulation.

Q. That is right.

A. That 15,000 sets for the year of 1937.

Q. That is right.

A. That is correct. There is not any doubt about that.
Q. What about 1936?
A. I am not sure about that point.
Q. Will you find out for me on that?
163 A. Yes, sir.
Q. There may be a change in that bracket set up.
164 Now, then, continuing the same line of examination, as I read the name of these different companies I should like to have you indicate in your reply whether or not they were sold by your firm, and, I think you had a memorandum yesterday that would indicate 1941, the particular percentage of business that you did with them.
A. That's right.
Q. And any other information that you may have as to whether or not they had standardized on the Minneapolis-Honeywell control. Gold Star Oil Burner Manufacturing Company, Yonkers, New York.
A. They standardized on both M-H and Perfex.
Q. Do you have any indication—estimate as to the—
A. (Interposing.) It is estimated that Perfex sold approximately 20 per cent of their requirements.
Q. That is in 1941?
A. That is in 1941.
Q. Do you have any independent recollection of how long that has been true, when they came in the picture?
A. I don't know when Perfex came into the picture.
Q. Do you know if you can find that out?
Mr. Gilpatric: Mr. Haycraft, it seems to me you are asking when a competitor came into the picture. The best thing would be to ask the competitor. You subpoenaed us in, you can subpoena the competitor. We have no way
165 of finding out other than picking up the information in the field.
Trial Examiner Sheppard: If this witness doesn't know, we will get the information.
Mr. Haycraft: The main thing that I want to get, Mr. Examiner, that I am trying to get from this witness, is what proportion of the business, if he knows, the M-H Company did with these firms that I mentioned, in the year 1937 and subsequent years. The information that he has there is for 1941, and I am asking him to go back from that and see if he can give the same type of information in previous years.
The Witness: It cannot be done, Mr. Haycraft, except on M-H controls.

Mr. Haycraft: There are the firms, the names I am giving, to which the 95 per cent clause contract was sent in 1937, then they were canceled. Now, I am trying to find out what per cent, or what proportion of their business they were getting at that time, or at that period, for the purpose of examination. If I cannot get it, of course, from this witness—

Mr. Gilpatric: We do not object to asking him, but we are objecting to asking him about finding anything.

Mr. Haycraft: I am asking him if he had anything in his records. I want to take his records or information for whatever it is worth.

By Mr. Haycraft:

166 Q. Do you have anything in your sales records to indicate when the Perfex Company began to sell?

A. To my knowledge, no.

Q. Now, the Goodrich Oil Burner Manufacturing Company, New Haven, Connecticut?

A. In 1941 it is estimated that Mercoid sold them 90 per cent of their requirements, and M-H 10 per cent.

Q. Do you know how long that has been?

A. I do not.

Q. The Greenwood Engineering Company, Glenarm, Maryland?

A. We estimated in 1941 that we, the M-H sold them our controls as standard equipment. I have no record of of any competitor.

Q. Lynn Products Company, Inc., Lynn, Massachusetts?

A. It is estimated in 1941 that Perfex sold them 10 per cent of their requirements, and we sold them 90 per cent. I happen to know that that did not obtain in previous years. Perfex was getting considerably more of their business in previous years.

Q. You don't know what the situation was in 1937?

A. I do not, Mr. Haycraft.

Q. Malleable Iron Fittings Co., Branford, Connecticut. I think we had that. Skip it.

A. Yes.

Q. Master Oil Burner Company, Seattle, Washington?

167 A. Our records show that we—that they standardized on M-H controls in 1941. I know they did not do that in previous years, that they were using competitive controls, but just what type, I don't know.

Q. You haven't any correspondence?

A. No.

Q. Messer Company, Newark, New Jersey?

A. They standardized on M-H controls in '41.

Q. Do you know how long they had?

A. I believe they used a majority of our controls in previous years. I have no record of competition.

Q. Micro-Westco, Inc., Bettendorf, Iowa?

168 A. They standardized on our controls in 1941. Now, in years previous, I know that they used a considerable quantity of Penn controls.

Q. Do you have any correspondence on that subject?

A. I don't.

Q. Mowhawk Oil Burner Manufacturing Company, New York?

A. I don't know. I do not have such a name listed in 1941.

Q. All right. Do you have any recollection of—

A. (Interposing.) I have a recollection, Mr. Haycraft, that that name was changed.

Q. Do you know what it is, or what it was changed to?

A. No, that is what I was trying to think.

Q. Can you look that up?

A. Yes, I will try to find that.

Q. Montag Stove & Furnace Works, Portland, Oregon?

A. It is estimated that Penn sold them 10 to 15 per cent of their requirements, and we sold them the balance.

Q. Do you know anything about the previous years?

A. I think that Penn sold them the previous year, but as to the split, I can't say.

Q. Muehlbach, Minneapolis?

A. I think they were out of business in 1941, Mr. Haycraft. I don't have anything on this. They were a smaller concern, and I would have to check the record on that. I have no recollection of it.

169 Q. National Devices Company, Bellmore, New York?

A. I do not have their name on the list here, and I think they are in the same category as Muehlbach.

Q. Will you check that also?

A. Yes, sir.

Q. Neis & Brechtl, West Allis, Wisconsin?

A. I am sorry. I don't have that name here.

Q. Oil Equipment Laboratories, Elizabeth, New Jersey?

A. This record indicates that was M-H with standard equipment.

Q. Old Colony Machine Works, Fall River, Massachusetts.

A. This record indicates M-H with standard equipment.

Q. Osher and Reiss, Inc., Brooklyn, New York.

A. I am sorry. I don't have that name, either.

Mr. Freeman: On page 2 of your list.

The Witness: I am sorry. Yes, here it is. It is estimated that Mercoid sold 15 per cent, and M-H the balance.

Q. Have you any information as to how long that was?

A. No, sir.

Q. Packard Oil Burner Manufacturing Company, Bridgeport, Connecticut?

A. That name is not on the list.

Q. Do you have any independent recollection of the firm?

A. Just by name only.

Q. Pan-American Engineering Corporation, Berkeley, California?

.170 A. It is estimated Mercoid sold them 10 per cent, M-H 90 per cent.

Q. Have you any indication of how long that was true?

A. No, sir.

Q. Penn Petroleum Products Company, Providence, Rhode Island?

A. M-H was standard equipment for 1941, but I don't know the situation in prior years.

Q. Petroleum Heat & Power Company, Stamford, Connecticut?

A. M-H was standard equipment in 1941, but I believe that they did offer Mercoid, and I have a faint recollection of Perfex.

Q. Have you anything on it there, or any correspondence or reports on that?

A. No, it just sticks in my mind in conversation regarding them, that they bought some Perfex controls, and I know in previous years they did use some Mercoid?

Q. Progressive Machine, Minneapolis?

A. M-H with standard in 1941.

Q. How about previous years?

A. And as well in previous years.

Q. Quiet Heet Manufacturing Corporation, Newark, New Jersey?

A. They used both Mercoid and Penn in 1941. It is estimated that they used 12 per cent Mercoid, and I
171 have no estimate on the other.

Q. What estimate have you got on your own?

A. Well, it would be the difference, and that is rather intangible.

Q. Do you know what the situation was in prior years?

A. And I know that they have purchased Mercoid controls for some years.

Q. Did you have any correspondence or reports on that firm with respect to that?

A. We have letters regarding Quiet Heet, mostly engineering data, and specifications, and that sort of thing, but most of their correspondence was handled right out of our New York office, that is the details attendant to their business.

Q. Didn't you have any correspondence with your New York office with respect to the standardization of the equipment with that firm?

A. No, other than this year when this report was made up. These figures I have given you are the New York office estimates.

Q. Did they report any attempt to standardize on Minneapolis-Honeywell controls, or what their success has been in previous years?

A. I can't say.

Q. Did you look through your correspondence files?

A. Yes.

172 Q. To find anything on that.

A. There was nothing bearing on that. The correspondence mentioned they have used Mercoid controls, and I knew that anyway.

Q. You had considerable correspondence with Quiet-Heet and also your New York office, and other customers of yours, with respect to the price at which Quiet Heet was selling their finished product?

A. That is true.

Q. Which we will go into at another time.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Haycraft:

Q. Reliable Oil Burner Corporation, Madison, Wisconsin?

A. I am afraid they are out of business, too, because I don't have the name on the list, and my recollection is not reliable there, either, because they are a very small concern, and I never called on them.

Q. You don't remember. Roscoe Manufacturing Company, Seattle?

A. It was estimated in 1941 Penn sold them 5 per cent, and M-H sold them the balance.

Q. Do you know about previous years?

A. I can't be certain, but I do believe that they
173 used Penn controls in previous years, as well as ours.

Q. Does that indicate to you they probably standardized on yours 95 per cent?

A. Well, it would indicate to me that they probably used both. Now, whether they showed both in their price sheets or literature, I don't know.

Q. Silent-Flash Oil Burner Corporation, Brooklyn, New York?

A. That name is not on our record for 1941.

Q. Do you have any recollection of the same?

A. I haven't.

Q. Do you have any correspondence on it, or reports?

A. Not that I know of.

Q. S-K Company, Camden, New Jersey?

A. They standardized on M-H in 1941, and I believe they also did in previous years.

Q. Simplex Oil Heating Corporation, New York?

A. It is estimated Mercoid sold them 5 per cent, M-H the balance.

Q. Standard Products, Clinton, Massachusetts?

A. We were not doing business with them in 1941, and our previous history is hazy in my mind. I don't recall their history.

Q. You haven't any correspondence or reports?

A. No.

174 Q. Sunray Oil Corporation, Rockaway Park, New York?

A. I am sorry, I don't have that on here. Yes, Sunray. We do have it. They were standardized on M-H.

Q. Todd Combustion Equipment, Inc., New York City?

Mr. Freeman: Isn't that—

The Witness: (Interposing) That is an industrial burner.

Mr. Haycraft: It is?

The Witness: Yes, sir. They do not manufacture domestic burners.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Haycraft:

Q. They do not have any domestic burners?

A. No.

Q. Volcano Burner Corporation?

A. Volcano?

Q. New York City.

A. They use Mercoid, Penn, Perfex, and M-H. It was estimated 25 per cent Mercoid. No estimate was obtained on the Penn or Perfex.

175 Q. Harry C. Weiskittel, Baltimore, Maryland.

A. They standardized on M-H in 1941. They are a small concern, and we sold them practically nothing in that year.

Q. Westchester Home Equipment Company, Mount Vernon, New York.

A. They standardized on M-H in 1941.

Q. Now, still referring to Commission's Exhibit 1, page 15, we have a list of some firms here that had seasonal requirements inserted in the blank number of sets. Some of those we have already gone over, and some we have not, and we will take those up now. The Bock Corporation, Madison, Wisconsin?

A. They made mostly hot water heaters, and that is another type of burner. I am afraid that is another name that would not apply here.

Q. It is not a pressure or a rotary burner?

A. No, sir.

Q. Diesel Burners, Inc., of Moosup, Connecticut?

A. They standardize on M-H.

Q. Do you have any reports on them?

A. No reports on competition at all.

Q. Electrol, Clifton, New Jersey?

A. They standardize on Perfex.

Q. When?

A. Well, it has been for some years. They also
176 used Penn in past years. They never used very much
of our equipment. It was estimated in 1941 that they used 25 per cent of our equipment and 75 per cent of Perfex.

Mr. Freeman: That also is one of the companies which makes its own primary controls, which has already been testified to.

Mr. Haycraft: I would like to have the witness tell us that.

The Witness: That is true, they have a special control that they mount along side of the blast tube.

By Mr. Haycraft:

Q. Have you made any attempt to get them to standardize on M-H?

A. Well, we haven't been very successful, as these figures show.

Q. Have you made any attempt to?

A. Certainly, we make an attempt with every customer to standardize on our controls.

Q. Do you have any reports or correspondence on that?

A. We know that there are men calling on them constantly. They are one of the manufacturers on our list, and I know those boys are trying to do a job.

Q. Do you have any reports on them or correspondence with respect to the subject matter I have asked you about?

A. No, sir. Again, that is another account that is
177 handled out of New York, and our New York man
calls on them.

Q. The Heil Company of Milwaukee?

A. They have standardized on Perfex for the past several years. In 1941 it was estimated that Perfex got 90 per cent of the business and M-H got 10 per cent.

Q. What was the situation in 1937?

A. I am hazy on that, Mr. Haycraft, because I don't know what year they started to use Perfex. They did use some Penn in prior years.

Q. Hi-Point, Bellefontaine, Ohio. That sounds familiar.

A. I thought we had that.

Q. I think we did.

Mr. Shute: Yes, you did.

Mr. Haycraft: Withdraw that.

By Mr. Haycraft:

Q. Scott-Newcomb, Incorporated, St. Louis.

A. They standardized on M-H in 1941, and M-H has been standard for the past two years. Just how many, I can't say.

Q. The Williams Oil-O-Matic Heating Corporation?

A. They use Mercoid, Penn and M-H; and it was estimated that M-H got 25 per cent of the business in 1941.

Q. What about previous years?

A. In previous years it would be less than 25 per cent for M-H, and the competition percentage would go up
178 proportionately.

Q. Do you have any correspondence on the attempt to standardize on M-H with that firm?

A. We try to sell them all the controls that we possibly could get them to buy, but we were not very successful.

Q. Do you have with you a record of sales to Williams Oil-O-Matic in those years from 1936 on?

A. That is data that we talked to Minneapolis about yesterday.

Q. How are they getting along?

A. I know that they are working on it. We got in a little bit of data this morning. A few of those Century files came down, part of them, but we haven't had a chance to go through them. Here is a figure on Williams for 1941, Mr. Haycraft, if that will help you.

Mr. Gilpatric: Mr. Haycraft, we seem to have some Williams files here.

Mr. Haycraft: May we take a few minutes recess?

Trial Examiner Sheppard: Yes, take a ten minute recess.

(A short recess was taken.)

179 Trial Examiner Sheppard: On the record.

By Mr. Haycraft:

Q. Referring to Williams Oil-O-Matic Company, which is to be identified here—these papers are photostatic copies of reports taken from your files?

A. Yes, sir.

Mr. Haycraft: Mark them the next exhibit number, will you please?

(The documents referred to were marked Commission's Exhibits 26 and 27 for identification.)

Mr. Haycraft: I offer in evidence Commission's Exhibits Nos. 26 and 27.

Mr. Gilpatric: No objection.

Trial Examiner Sheppard: They will be accepted in evidence.

(The documents referred to, heretofore marked for identification COMMISSION'S EXHIBITS NOS. 26 and 27, were received in evidence.)

By Mr. Haycraft:

Q. Now, referring to Commission's Exhibit No. 26, is J. C. Todd one of your salesmen?

A. Yes, sir.

Q. Who is Cornely, one of the customers—I mean one of your dealers?

180 A. Cornely was a dealer or distributor.

Q. And this Commission's Exhibit No. 27, was that—who published that? I mean, who got that out?

A. Charles Cochran, who was one of our salesmen in Chicago.

Q. And that was sent out to some of your other salesmen?

A. That was sent out to some of our other salesmen, as well as to myself.

Q. Now, do you recall what bracket the Williams Oil-O-Matic Heating Corporation was placed in in February, 1938, at the time of this 1938 contract?

A. That was a bracket 5 contract.

Q. That was your bracket 5?

A. I am quite sure that it was.

Trial Examiner Sheppard: Can you stipulate?

Mr. Freeman: The stipulation shows.

By Mr. Haycraft:

Q. What did you take into consideration in giving them the bracket 5?

A. The previous year we had been extremely conscious of this Robinson-Patman Law, and it was our interpretation that if we sold a customer in the price bracket and he did not earn that bracket, we could not give him the same price the succeeding year.

Now, in 1937, we gave Williams a price that was somewhat representative of the quantities that they bought from us in the previous year, and when that price was given
181 them, it was so high that they established a $7.50 dif-

ferential between competitive controls and M-H controls. In other words, their dealers had to pay Williams $7.50 per burner more if they got the M-H controls.

In 1938 we went into Williams Oil-O-Matic, and we quoted them our lowest price, which was still considerably higher than competition, so high, in fact, that they had to establish a price difference of $2.50 when the dealer purchased the burner equipped with M-H controls.

Q. So that your 1938 quotation in the No. 5 bracket to Williams Oil-O-Matic did not have any relation to the quantity they bought during the previous year?

A. No, sir. We had to recognize the competitive situation that existed there, and we did not come close to meet it.

Q. Is that the only year you did that with Williams Oil-O-Matic?

A. No, sir, we have done it with succeeding years.

Q. That is in 1939, 1940 and 1941?

A. Yes, sir.

Q. That was the first year that you did it?

A. To my knowledge, that is so.

Q. Now, is that true with any other of your accounts?

A. Yes, sir. I think there are other accounts where we quoted a price that was lower than their actual purchases from us entitled the customer.

182 Q. Of your bracket?

A. Correct. And yet, in no instance that I know of did we ever come close to meeting the competitive price that existed with that particular account.

Trial Examiner Sheppard: Will you give us a list of your customers that you did that?

The Witness: I will have to work that up, your Honor.

Trial Examiner Sheppard: Would you like to have it?

Mr. Haycraft: Yes, that is very important.

Trial Examiner Sheppard: I think we have to have that. Make a note of it and get that.

183 By Mr. Haycraft:

Q. You were questioned about the Malleable Iron and Fittings Company.

A. Yes, sir.

Q. And I have here some correspondence between your office and the New York Office with respect to that account. Will you glance through it and identify it, and I will have it marked for identification, with permission to substitute photostatic copies for the original.

A. Yes, sir.

Q. Look at all of them in that sequence, and I will identify them later.

(Handing documents to the witness.)

A. Yes.

Mr. Haycraft: Will you mark these Commission's Exhibits Nos. 28, 29, 30, 31, 32-A, B, C, 33-A, B, C, for identification?

(The documents referred to were marked Commission's Exhibits Nos. 28, 29, 30, 31, 32-A, 32-B, 32-C, 33-A, 33-B, and 33-C, for identification.)

Trial Examiner Sheppard: Miss Reporter, we overlooked admitting into evidence Commission's Exhibits 24-A and B and 25-A and B. We will do so at this time. There was no objection.

(The documents referred to heretofore marked for identification COMMISSION'S EXHIBITS 24-A and 24-B and 25-A and 25-B, were received in evidence.)

184 Mr. Haycraft: I now offer in evidence, Mr. Examiner, as Commission's Exhibit No. 30, a copy of a report—

Trial Examiner Sheppard: You had better start with 28.

Mr. Haycraft: 28 is a copy of a report, or rather a letter of instructions from J. W. Pauling, Home Office, to H. E. Chapler, July 8th, 1938. Exhibit 29 is an original report of H. E. Chapler of September 29, 1938, on the Malleable Iron and Fittings Company.

Exhibit No. 30 is a copy of a report of C. E. Swanson, Minneapolis, to J. J. Feigenbaum, Hartford, Connecticut, dated November 24, 1939, and Commission's Exhibit No. 31 is a copy of a report, or rather a copy of instructions from Swanson to Feigenbaum. The date is not shown, but it was received at the office on November 7th, 1939.

Exhibit No. 32-A, is a copy of a report from W. J. Brown of the New York Office, to Mr. Lockrae, with regard to the Malleable Iron and Fittings Company, dated March 25th, 1939.

Exhibits 32-B and C are copies of an announcement by the Malleable Iron and Fittings Company, with respect to Mercoid Controls.

Exhibit No. 33-A is a copy of a letter from A. H.
185 Lockrae, Minneapolis, to J. J. Feigenbaum, Hartford, Connecticut, dated January 16th, 1940. Exhibit 33-B

is a pencil notation memorandum attached thereto, and 33-C is the original report from Feigenbaum to Lockrae, or the Minneapolis office, dated January 13th, 1940.

Trial Examiner Sheppard: All right. These exhibits may go in, subject to the objection.

Mr. Gilpatric: I would like to object to one of them, your Honor.

Trial Examiner Sheppard: All right.

Mr. Gilpatric: Exhibit No. 32-B and C. It is a copy of a report sent out by the Malleable Iron and Fittings Company, apparently, to its trade. It seems to us to have no bearing at all on the issues in this proceeding. We object on the ground it is immaterial and irrelevant.

Mr. Haycraft: I think if counsel had seen the report he would not have said that.

Mr. Gilpatric: I have seen it.

Mr. Haycraft: Because the bulletin, Mr. Examiner, is referred to in this report to which it is attached, and it refers to the Mercoid control being substituted for the Minneapolis-Honeywell.

Trial Examiner Sheppard: Objection overruled at this time. If it develops later that it is of no value, we 186 will consider the motion to strike.

(The documents referred to, heretofore marked for identification COMMISSION'S EXHIBITS NOS. 28, 29, 30, 31, 32-A, 32-B, 32-C, 33-A, 33-B, and 33-C, were received in evidence.)

By Mr. Haycraft:

Q. I will ask you first whether or not you know, in 1938, whether the Malleable Iron and Fittings Company, were placed in the bracket No. 3, or 2, in your contract?

A. In that correspondence I would judge that they started the year in our second bracket, and later earned a retroactive credit.

Q. At least they intended to earn it?

A. They did earn it.

Q. What, in this correspondence, would indicate that they did actually earn it? Will you indicate that?

A. I was simply going by the pencil figures of Mr. Swanson.

Q. I would like to have you determine, if you can, whether or not they were placed in bracket 3, as a result of representations made and indicated in that correspondence?

187 A. In Mr. Swanson's letter to Mr. Feigenbaum, he indicated this customer had purchased sufficient instruments to earn a retroactive credit.

Q. About 800—

A. And I believe, and this I will have to check for you, Mr. Haycraft, that they did earn a retroactive credit that year.

Q. I am interested in finding out whether you gave them one?

A. That is what I will have to determine. I believe that we gave them a credit that year.

Trial Examiner Sheppard: All right, check on that.

By Mr. Haycraft:

Q. Who is Mr. Swanson?

A. Mr. Swanson was my assistant in Minneapolis; now in Australia.

Q. Who is Mr. Lapidus, mentioned in Commission's Exhibit No. 29?

A. He is president of the Quiet Heet Oil Burner Company, Newark, New Jersey.

Q. Now, in 1939 that same matter came up again, did it not, as to whether they should be in bracket 2 or bracket 3?

Mr. Freeman: It would be much better if he had that correspondence.

188 The Witness: I can't say without looking at that, Mr. Haycraft.

(Documents handed to the witness.)

The Witness: I will have to check on that.

Mr. Haycraft: Get the information on that for 1939, also.

The Witness: Yes, sir, 1938 and 1939.

Mr. Freeman: What you want to know is whether they actually earned a retroactive credit, and whether they got it.

The Witness: And when.

Mr. Haycraft: And when, for the two or three years—the two years, 1938 and 1939, under consideration here.

Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

Mr. Haycraft: I ask that these papers be marked, please.

(The documents referred to were marked Commission's Exhibits 34, 35-A, 35-B, 35-C, and 36, for identification.)

By Mr. Haycraft:

Q. I now show you an Exhibit for identification, 189 marked Commission's Exhibit No. 34, which is a copy of an Inter-Office Communication from A. H. Lockrae to H. E. Chapler, dated March 1, 1941, with respect to Anchor Post Fence Company.

I also show you Exhibit No. 35-A, which is a copy of a report from Mr. Lockrae to Mr. Chapler, dated March 7, 1941, with respect to the same subject matter; and a note on the bottom thereof to John Pauling; and also Exhibit 35-B and C, a copy of a mail-o-gram, air-mail-o-gram, from the New York Office, Chapler, to the Home Office, Lockrae, dated March 4, 1941, with respect to Anchor Post Fence; also Commission's Exhibit No. 36 for identification, a report from Chapler, New York office, to Lockrae, Home Office, dated March 12, 1941, with respect to the same company, and ask you to identify that as correspondence taken from your files and passing between the individuals named.

(Handing documents to the witness.)

Mr. Freeman: We will concede that is such correspondence. We gave it to you.

Mr. Haycraft: All right.

The Witness: I identify it.

Mr. Haycraft: I offer it in evidence.

Trial Examiner Sheppard: All right, Exhibits 34, 35 and 36 are accepted.

190 (The documents referred to, heretofore marked for identification COMMISSION'S EXHIBITS 34, 35-A, 35-B, 35-C and 36, were received in evidence.)

Trial Examiner Sheppard: Do you want to make copies of those, too?

Mr. Freeman: Yes, we do.

By Mr. Haycraft:

Q. On this Exhibit No. 34, who is John, mentioned in the first paragraph?

A. John Pauling.

Q. Who is Brannon mentioned in the second paragraph?

A. Brannon is with the Anchor Post Fence Company. I don't know his title. I know he is an official.

Q. In the last paragraph reference is made to the policy

of splitting their business. With whom were they splitting their business at that time?

A. With Perfex, and they had also split it in previous years with Perfex. Perfex was getting a majority of the business.

Q. The John mentioned in the third paragraph of Exhibit No. 35 is also Mr. Pauling?

A. Yes, sir.

Q. Who is Kingsman and Hanson mentioned in the note at the bottom of the page?

A. Kingsman and Hanson referred to were with Perfex.

191 Q. What was their positions?

A. Kingsman was vice-president and Hanson—I have forgotten his title, but they were both officials of Perfex.

Q. Sales manager?

A. I don't know, sir.

Q. The John Dorsey, was your man, mentioned in the second paragraph of 35-B?

A. Yes, from Philadelphia.

Q. And Brannon and Donahue mentioned there they were—

A. (Interposing.) Anchor Post.

Q. Anchor Post men.

A. Yes.

Q. I will ask you who Joe Hauf is, Joe Hauf mentioned in the second paragraph. He is mentioned twice.

A. He is an engineer with the Ray Oil Burner Corporation.

Q. Is that another one of your customers?

A. Yes, sir.

Q. In Baltimore?

A. Yes, sir.

Q. Who is Ted Smoot mentioned in the last paragraph of the page?

A. He is an engineer with Anchor Post Fence, or was at that time.

Q. And then Hobbs mentioned there in that paragraph, which relates to the Morton Oil Burner Company. Is

192 that another one of your customers in Malden, Massachusetts?

A. I think that Hobbs in this letter is connected with the Malden Company, the Morton Company, at Malden,

Massachusetts, and who were and are dealers or distributors of Anchor Post Fence.

Q. And who is Charley White?

A. He is our man in Boston at that time.

Q. Now, can you tell us now in which bracket the Anchor Post Fence was placed in in 1941? I notice that you presented a bracket No. 4 contract, but it does not appear from the correspondence that that was executed.

A. They were placed in bracket 4-A in 1941.

Q. 4-A?

A. Yes.

Q. What is the A?

A. That is one of the bracket numbers in 1941. That is in your stipulation.

Trial Examiner Sheppard: Is that stipulated?

Mr. Gilpatric: Yes.

Mr. Haycraft: Yes, I see it now.

By Mr. Haycraft:

Q. Now, is this one of the firms which has not earned their bracket in the preceding year, and the price was made because of the competitive price?

A. That is right; and in 1941 it was estimated that 193 Perfex still got at least 85 per cent of their business.

Q. And what bracket had this firm been in before, in previous years?

A. I will have to check that up to be certain. I think it was bracket 4, but I am not certain.

Mr. Haycraft: Mr. Examiner, that is all I have until I get some of the information requested yesterday, unless you have some of that.

Mr. Gilpatric: We have some of it.

Mr. Haycraft: Some of it has come in. We had better probably take a recess until after lunch to see what they have here; or do you have that ready now?

Mr. Gilpatric: Some of it we have.

Trial Examiner Sheppard: You may want to look it over.

Mr. Gilpatric: Some of it is just questions, according to my notes here. It is all right with us to take a recess now.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Haycraft:

Q. On page 47 of the transcript I asked you certain questions with respect to White Rogers—pages 46 and 47, and asked who competed with you in the sale of the devices
194 to the White-Rogers Company, and you said you would look that up, you would like to look that up, look up the record on that. What did you find, or have you been able to look up the record?

A. I did not get any further information on that. Would you mind repeating that again, Mr. Haycraft?

Q. You were questioned with respect to manufacturers attempting to sell thermostats and limit controls to oil burner manufacturers to whom you were selling, and you mentioned the White-Rogers selling fan controls and other devices, and that several other manufacturers sold thermostats. I asked about those that were competing with you in the sale of control devices to oil burner manufacturers, what other ones besides the ones you had already designated, there were during that period, and you said you would look that up.

A. I believe I have included Penn, Perfex and Mercoid, did I not, and I think White-Rogers and General Controls, and Detroit Lubricator Company.

Q. The General Controls did not sell, didn't you say?

A. They were making thermostats—

Q. I understand, but that is not my question. My question was very carefully worded. My question was, what manufacturers were attempting to sell controls to the same people as you were selling controls to.
195 Mr. Freeman: He said, "attempted to sell".

Mr. Haycraft: Attempted to sell, yes.

The Witness: General Controls did attempt to sell.

By Mr. Haycraft:

Q. We have on the record here that they did not.

A. I am sorry, because I know definitely—

Q. (Interposing.) Page 45.

A. I know definitely they sold to the Ray Electric—

Q. (Interposing.) That is the General Electric, I will take that back. I stand corrected. General Controls you say then, did attempt to sell?

A. Yes, sir.

Q. What did they attempt to sell?

A. It was thermostats, limit controls and oil valves.

Q. What accounts, do you know, did they attempt to sell to?

A. I know definitely that they attempted to sell some of their products to the Ray Oil Burner Company.

Q. Go ahead.

A. Detroit Lubricator Company, and then I mentioned Delco Appliances.

Q. Delco Appliances came in that other classification. Do you know of any instance where Delco Appliances attempted to sell to Oil Burner Manufacturers?

A. I do not.

196 Q. All right.

A. I mentioned General Electric.

Q. You say they did not sell?

A. I since have been talking to Mr. Chapler last night, and found out that they did, and I think I can get you some data to show that they did attempt to sell.

Q. You do know that?

A. I have made a note of that and I will check up on that. Then the Electrol which was mentioned here this morning, which had their own Primary control.

Q. Did they attempt to sell that to one of your customers?

A. I am not sure, I am not sure. Then the Sampsell Electric Company.

Q. Where are they located?

A. In Spring Valley, Illinois, and I do know that they sold Sears, Roebuck, whom our competitors considered an oil burner manufacturer.

Mr. Haycraft: I move to strike that answer as not responsive to my question.

Trial Examiner Sheppard: It may go out, the latter part of it.

Mr. Freeman: Just so the record is straight as to what is going on, Sampsell still sells thermostats and limit controls for oil burner use.

Mr. Haycraft: That was not the question, Mr.
197 Freeman.

Mr. Freeman: What was the question?

Mr. Haycraft: I am conducting this examination in a certain way, and the witness is constantly answering something else, and volunteering information, and I don't think it is proper. When you come to your side of the case you can develop it to suit yourself, but I don't think the witness should do that constantly.

The Witness: The Spencer Thermostat Company of Attleboro, Massachusetts.

By Mr. Haycraft:

Q. What do they sell and to what oil burner manufacturers?

A. Well, they sell thermostats and limit controls; and I know they have tried, that they have offered them to manufacturers; what manufacturers they sold to, I can't answer that.

Q. What manufacturers did they offer them to?

A. I know for one, the Cleveland Steel Products Company.

Q. All right.

A. The Newark Boiler Regulator Company, Newark, New Jersey. I know that they sold limit controls and low water cut-offs to oil burner manufacturers. I have some other names, Mr. Haycraft, covering low water cut-offs, or is that what you want?

Q. If they are recognized as a limit control or
198 primary control or a thermostat, and they were offered to oil burner manufacturers, who were your customers, that same class of trade, yes.

A. That would be Bender-Warrick Company of Detroit, Michigan.

Q. Will you explain what a low water cut-off is?

A. A low water cut-off is a device that is placed on a steam boiler to prevent the boiler from going dry.

Q. Is that used in domestic installations?

A. Oh, yes. And the Donlon-Miller Company in Chicago, Illinois, make the same type of control.

Q. Something like a limit control?

A. It is a limit control.

Q. It is what you call a limit control?

A. Yes, except it stops the boiler, if the water in the boiler gets too low, it cuts it off. That is where it gets its name, low water cut-off.

Q. Then it is used in domestic installations?

A. It is commonly used in domestic installations, yes.

Q. It is commonly used in domestic installations with installations where the Minneapolis-Honeywell Primary control or thermostat is used?

A. That is right, or any make.

Q. Or any make?

A. Yes.

199 There is another name here, Julian E. Frieze. Now, I cannot say they ever sold limit controls to the oil burner trade, I don't know. They cataloged them and they were called on. They are in Baltimore, Maryland. That is F-r-i-e-z-e.

Q. Now, page 64 in the transcript, you said you would like to look at the matter of pre-season commitments.

A. Yes, sir.

Q. Have you done that?

A. Yes, sir.

Q. Incidentally, I notice in Commission's Exhibit No. 1—

A. (Interposing.) That is shown there.

Q. There is a notation at the bottom of the page, "A special concession in price was offered to four customers under condition that they place order for ten thousand sets prior to September 1, 1938."

That refers to the same subject, does it not?

A. In 1938 we offered four of our customers a proposition whereby they would order 10,000 controls prior to September 1st of that year. Three of those customers approved the plan, one of them did not, and as a result the entire plan was thrown out, and all four of those customers were given the same prices that were included in the plan.

In other words, it never became effective.

Q. I don't understand your answer on that. If you 200 gave them the prices included in the plan, they received the prices without the commitment?

A. We eliminated, in other words, the September 1st commitment. They didn't have to go ahead with the original at all.

Q. But they all went into group bracket 6?

A. They were right in group bracket 6, yes, sir.

Q. They got a special concession of price without the—

A. (Interposing.) They became our standard 6 bracket price.

Q. Were they the only ones that came within that standard?

A. They were the only ones that could meet that qualification at the time when that plan was set up. But when that plan fell through, the prices were extended to them and became the standard to our customers in the sixth bracket.

Q. That was 1938?

A. That was for 1938, for that year.

Trial Examiner Sheppard: Does the record show the names of those customers? Exhibit No. 1?

Mr. Haycraft: There was some mention of it.

The Witness: I would think so. I can name them.

By Mr. Haycraft:

Q. I guess you had better name them.

A. Delco Appliance Corporation, Gilbert & Barker Manufacturing Company, Holland Furnace Company, and Timken Silent Automatic Corporation.

201 Trial Examiner Sheppard: Which one of those didn't accept?

The Witness: I am sorry, I cannot tell you that. I could probably look it up, but from memory I just don't know.

Trial Examiner Sheppard: Well, three did accept and the other did not?

The Witness: Then the whole thing was opt.

By Mr. Haycraft:

Q. I was just going to ask you about that Timken account. I was just wondering whether or not that was one of the instances where you gave the extreme discount without them having earned it for the previous year, on account of the competitive situation.

A. It could very well have been, Mr. Haycraft, because Timken has always enjoyed our best price.

Q. In order to earn it, in 1938 he would have to purchase 15,000 sets or units?

A. I believe that is sets, sir.

Q. And that would be, on 15,000 sets, he would have to have at least 15,000 primary controls, wouldn't he?

A. Yes, sir.

Q. Refreshing your recollection on that—

Have you got something you can give me on that?

Mr. Shute: What?

202 Mr. Haycraft: Have you got something you can give me to refresh his recollection on that? If you haven't, I have.

Mr. Freeman: Well, use what you have got.

By Mr. Haycraft:

Q. Can you tell us whether or not your sales to Timken in 1938 amounted to 15,000 sets?

A. From these figures, they did not.

Q. Now, in 1939 you required—your highest bracket was

Bracket 5, and you required 10,000 sets, is that right? Is that your recollection?

A. If it is in the stipulation.

Q. It is in the stipulation.

A. Yes.

Q. Did they qualify in 1939?

A. They did not buy 10,000 sets.

Q. The same for 1940 and '41.

Do you have '40 there?

(Document handed to counsel.)

By Mr. Haycraft:

Q. Well, then, would you say the giving of the lowest bracket price to the Timken concern was to meet the competitive condition that existed there?

A. Yes, sir.

Mr. Haycraft: Let's go off the record.

203 Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Haycraft:

Q. On page 77 of the transcript you said you were going to look up correspondence with the Century Engineering Company. Have you been able to do that?

A. Part of it came down this morning. It was not here in its entirety, and we did not have time to look through it.

Mr. Haycraft: Off the record again, please.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Haycraft:

Q. You were to look into some correspondence, also, with the Automatic Oil Burner Corporation of Chicago. Have you been able to find any reports or correspondence on that account?

A. No.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

We will go until two o'clock.

(Whereupon, at 12:30 p. m., a recess was taken until 2:00 p. m., this day.)

204 Afternoon Session.

2:00 p. m.

Trial Examiner Sheppard: On the record.

ARTHUR H. LOCKRAE, resumed the stand and testified further as follows:

Direct Examination by Mr. Haycraft (Continued).

Q. Referring to the class of trade that you sold M-H temperature controls, I will ask whether or not you sell to furnace manufacturers or others who do not manufacture burners, giving them prices which you give to the burner manufacturers?

A. Our prices are set up, Mr. Haycraft, on each model, and that model carries its price in our various price brackets.

Now, that instrument is priced the same according to quantity to any manufacturer we might sell, whether a furnace manufacturer, a gas burner manufacturer, or what not.

Q. So then you do recognize that burner account, giving them the same discount as furnace manufacturers who may have burners manufactured for them?

A. That's right.

Q. In that connection, were the Osher & Reiss, the Pan-American Engineering Company, and Montag, were
205 they manufacturers of furnaces, or were they burner manufacturers?

A. Montag manufactured a burner and also a furnace. Pan-American, to my knowledge, made no furnace. They just manufactured a burner. I am not definitely sure but I think Osher & Reiss were in the latter category.

Q. Did you make any sales to Lennets Manufacturing Company?

A. Yes.

Q. Did they manufacture burners?

A. At that time they did not.

Q. Fox Furnace?

A. Yes, in years past we have made sales to Fox Furnaces.

Q. Did they have burners manufactured for them?

A. That's right.

Q. International Heating Company?
A. International—is the address there, Mr. Haycraft?
Q. Utica.
A. They are burner manufacturers, I believe, and they may or may not have been purchasing oil burners, or they may have been manufacturing. I am not sure.
Q. How about Westinghouse, Mr. Lockrae?
A. Westinghouse, I don't believe we ever sold them direct. They bought a burner with a control, and they use it with their furnace.
Q. Did they buy some controls direct?
A. They may have bought some controls direct from
206 us, but whether they were the oil burner controls we are talking about, I am not certain.
Q. In this deal which you had with the Cleveland Steel Products, wasn't there some arrangement there about allowing Cleveland Steel Products to be credited with the volume of business sent direct to some of their customers?
A. I think that was outlined in that letter that we were discussing yesterday.
Q. There was some such arrangement of that kind contemplated?
A. Yes, sir.
Q. Was that customarily your policy where a burner manufacturer sells his burner to a furnace manufacturer without controls, and the furnace manufacturer buys direct from Westinghouse, from the Minneapolis-Honeywell, that the burner manufacturer would be allowed to include as a part of his volume, the controls that were sold direct to the furnace manufacturer?
A. Yes, sir, that is true.
Q. Now, the sales of temperature controls to wholesalers or jobbers, what is your policy with respect to selling them as to discount?
A. Speaking of 1941, we had two prices to wholesalers. If a wholesaler would contract with us to buy $750.00 worth of equipment in a year, and to carry a stock of our controls,
which I believe was the equivalent of $200.00 in value,
207 they would get a discount of 25 and 25 per cent from our list prices.
Now, there are many wholesalers through the country that do not attempt to stock controls. They get an order and they place it with us, and we would ship them the order, and to that class of wholesaler we give a discount of 25 and 15 per cent discount.

Trial Examiner Sheppard: You would ship them direct?
The Witness: If they asked us to do it.

By Mr. Haycraft:

Q. Was that Class A the discount with reference to heating control units as distinguished from other products?

208 A. Well, they generally applied to what we term heating control thermostats, limit controls, water cutoffs and the like.

Q. Approximately how many jobbers did you sell to on that basis, each class?

A. Well, I would say that we probably have five hundred or more of those contracts, where we extend 25, and then 25 per cent discount, or in that neighborhood.

Q. About how many of the other?

A. Well, the other class, Mr. Haycraft, there is no contract on that. They are a recognized jobber, and they send us an order and automatically get 25 and 15 per cent discount.

Q. No contract basis?

A. No, sir.

Q. You use the same basic list price in going to jobbers as you do to the furnace manufacturers?

A. No, sir, Mr. Haycraft. Our list prices have no bearing on the price we extend a manufacturer. They apply where we are selling a wholesaler or where we are selling a dealer.

Q. There is no relationship between them?

A. No relationship. We just can't figure a discount on any of our prices.

Q. You sell dealers direct?

209 A. Upon occasion, yes, although that part of our business is very small. Ordinarily they will buy through their jobber.

Q. Approximately how many dealers' accounts would you say you have?

A. Well, Mr. Haycraft, the last time I saw any statistics there were recorded about 30,000 or more dealers throughout the country; and I know the percentage we have on our books would be extremely small, in comparison to that, but I have no idea as to the number. Our sales to them were extremely small and picayunish.

Q. Do you have a contract with the Chalmers Oil Burner Company?

A. They have been a customer of ours for a good many years, Mr. Haycraft.

Q. Do you know whether you sell them on contract or not?

A. I am pretty sure we had a contract with them in '41, and also the preceding years.

Q. They are a small concern?

A. Very small.

Q. Do you have a contract with the Aldrich Company, Peoria, Illinois?

A. Yes, sir.

Q. What type of control do you sell them? What type burner?

210 A. It is a gun type burner.

Q. Gun type?

A. Yes.

Q. You mentioned the Gilbert & Barker Manufacturing Company.

A. Yes, sir.

Q. What type burner do they manufacture?

A. Gun type burner.

Q. They are a pretty large concern?

A. Yes, sir.

Q. What is their trade name?

A. Gil-Barco.

Q. Is the Minneapolis-Honeywell standard on their burners?

A. They have standardized on Penn, and also on Minneapolis-Honeywell for several years.

Q. On both?

A. Both.

Q. Do you have a contract with the Harding Manufacturing Oil Burner Company, Chicago?

A. We did have, but they were out of business in 1941, if you remember. Harding built lathes, and the war effort took their entire capacity, and they just took their burner.

Q. I neglected to ask you about the Aldrich Company, did they standardize on Minneapolis-Honeywell?

A. No, sir, both Minneapolis-Honeywell and Mer-
211 coid, and I think they have also used some Perfex.

Q. What bracket are they in?

A. They are in our bracket 5, 1941.

Q. That is your highest bracket?

A. Lowest priced bracket, yes, sir.

Q Do their purchases justify such a classification?

A. My recollection is that they do, although I have got those records, Mr. Haycraft. They came in, and I can verify that very easily for you, if you wish me to.

Q. All right.

A. This record of 1941 shows that they purchased 31,735 units, and this abridged record for that year, which they sent down to me, is not split up as to what type controls were involved.

Q. You could not tell?

A. As far as the split up is concerned.

212 Trial Examiner Sheppard: In sets?

The Witness: That is right.

By Mr. Haycraft:

Q. The key would be the primary control, wouldn't it?

A. Yes, sir.

Q. In other words, if you bought 10,000 primary controls, that would be within the requirements?

A. Yes.

Q. How about the American Radiator Company, do you sell them separate from the Fox Furnace Company?

A. No, the American Radiator Company have not used any of our boiler controls for the last two or three years. That is the Fox Furnace Company.

Q. Back in 1939 they did, didn't they?

A. Yes, as I said yesterday, I believe there was one year when we sold them our oil burner controls.

Q. They were in bracket 5?

A. Yes, sir.

Q. Do your records show what percentage of the business of Century was M-H and what was something else?

A. I think I estimated that this morning.

Q. Will you check that?

(Examining documents.)

A. It is estimated that Penn Switch got 75 per cent of their business, and M-H got 25 per cent.

213 Q. When was that, in 1941?

A. 1941.

Q. What about previous years?

A. Well, I would say the ratio would hold pretty well for some years previous, but for just how many, Mr. Haycraft, I couldn't say, because I know Penn and we have been selling them for several years.

Q. Do you think it would be unreasonable or in line with your recollection that 95 per cent of Century's orders, Century's business was M-H controls?

A. In 1940?

Q. In 1940.

A. No, I don't think any such thing would be correct.

Q. Do you think that Mr. Lapner, if he testified to that, that he would be mistaken?

A. I think so, because I don't know how many burners they built, but I do know that Penn Switch was standard on all of the burners which they sold the Crane Company; and I know that represented a substantial part of their volume; at least I think it did, and we got none of that business in 1940.

Q. Well, that would probably account for it. The figure I had in mind had reference to the dealer business as distinguished from Crane. Would that reconcile it, do you think?

A. Well, I don't know. It is pretty hard to estimate the thing.

214 Q. He did not say how much business was Crane and how much was dealer. In other words, you would not know how the business was divided?

A. I couldn't say, in 1940. I would be very grateful if it were that way.

Q. Referring to the Micro-Westco Company, what is your estimate of your business with that firm in 1941?

A. In 1941?

Q. Yes.

Mr. Freeman: Hasn't that already been answered?

The Witness: In 1941 they standardized on the M-H controls.

By Mr. Haycraft:

Q. Was that true in previous years?

A. No, sir.

Q. What was the situation in 1938, 1939 and '40?

A. Well, I know that Penn Switch sold them a considerable quantity of controls prior to 1941, but I don't recollect just what specific years that involved.

Q. Do your records show what brackets they were in in 1939, 1940 and 1941?

A. I think—I have the 1941 record, and they were in our fifth bracket in 1941.

Q. Did they earn that in sales?

A. They did not.

215 Q. How about 1940; do you have any record of that? Do you know whether they earned fifth bracket in 1940?

A. I don't know what bracket they were in in 1940.

Q. They were in bracket 4, to refresh your recollection.

A. And what was the quantity stipulation in 1940 in bracket 4?

Q. 10,000—do you mean for 4?

A. 4, yes.

Q. 5,000.

A. Well, they did not earn it in 1940.

Q. How about 1939? That is the same thing, 5,000.

A. They did not earn it that year.

Q. Can you testify why they were placed in a higher bracket in those years, in 1940 and 1941?

A. It was purely a competitive situation.

Q. Who was the competitor?

A. Penn Switch Company.

Q. Do you have any correspondence or records on that company?

A. I doubt if there would be. I called on those people myself, Mr. Haycraft, and inspected their contracts, and so forth.

Q. Do you recall anything about that company building burners for furnace manufacturers?

A. They manufactured oil burners in 1941, and
216 some years earlier, there to, there was a number of furnace manufacturers to whom they sold furnaces. I don't know the names of them.

Q. Was that business taken into consideration in determining the bracket?

A. It might very well have been.

Q. What is your recollection on that?

A. I would say that it would have been taken into consideration.

Q. Do you have a recollection as to whether it was or not?

A. I don't.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

Mr. Haycraft: I haven't anything further to ask the witness until the reports are forthcoming.

The Witness: We have them individually here, Mr. Haycraft, and we were discussing it at noon, and we thought it would be just as well if we prepared this list and got it on one schedule.

Mr. Haycraft: It would probably be easier to follow.

Mr. Gilpatric: Make it as one exhibit.

Trial Examiner Sheppard: It would be better to
217 prepare it that way, yes.

Mr. Haycraft: When can we have it, by Monday, or would you rather put it over until Friday?

The Witness: We can easily have it then.

Trial Examiner Sheppard: Better make it Friday, because you have these other witnesses Monday.

Mr. Freeman: Off the record, please.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

218 Trial Examiner Sheppard: On the record.

What is your desire, Mr. Haycraft, shall I excuse this witness until next Friday?

Mr. Haycraft: I think so.

Trial Examiner Sheppard: You want to take him up after we come back from the Milwaukee hearings?

Mr. Haycraft: Yes.

Trial Examiner Sheppard: All right. Mr. Lockrae, I will excuse you until ten o'clock on Friday, a week from today.

(Witness excused.)

Trial Examiner Sheppard: Is there anything else we can do now, gentlemen, or do you want to continue until Monday?

Mr. Haycraft: I have made an agreement with counsel for respondent that I would call the Mercoid witnesses Monday morning.

Trial Examiner Sheppard: Monday morning?

Mr. Haycraft: That would be the next step, now.

Mr. Gilpatric: Can you tell us which one you will call first, Mr. Haycraft?

Mr. Haycraft: Mr. Owens.

Trial Examiner Sheppard: We will adjourn, now, and reconvene Monday morning at 10:00 o'clock A. M., August 16th.

219 (Whereupon, at 2:45 p. m., August 13, 1943, the hearing in the above-entitled matter was adjourned.)

220

Room 1123,
New Post Office Building,
433 West Van Buren Street,
Chicago, Illinois,
Monday, August 16, 1943.

Met, pursuant to adjournment at 10:00 a. m. C. W. T.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Esq., Attorney for the Federal Trade Commission.

Cravath, de Gersdorff, Swaine & Wood, by R. L. Gilpatric, Esq., and B. R. Shute, Esq., 15 Broad Street, New York, N. Y., and Bair & Freeman, by Will Freeman, Esq., 135 South La Salle Street, Chicago, Ill., appeared for the Respondent.

221

Proceedings.

Trial Examiner Sheppard: Mr. Reporter, you may show a reconvening of this hearing pursuant to the adjournment taken last Friday.

Gentlemen, while I think about it, I will give you the designated points in Detroit and Cleveland. On August 23, Room 713 in the Federal Building, Detroit, and on August 26th in the Federal Building, Room 410, Cleveland, Ohio.

JAMES WILLIAM OWENS was thereupon called as a witness for the Commission and, having been first duly sworn, testified as follows:

Direct Examination.

Trial Examiner Sheppard: Give your name and address.

The Witness: James William Owens.

Trial Examiner Sheppard: And your address?

The Witness: 4448 North Mozart Street, Chicago.

Trial Examiner Sheppard: All right, gentlemen. You may proceed, Mr. Haycraft.

By the way, while I think of it, there were certain exhibits to be photostated, 28 to 36. Have you had those photostated?

222 Mr. Freeman: Yes.

Trial Examiner Sheppard: Have they been returned to the Reporter?

Mr. Freeman: Not yet. While you are at it, do you have the Room Number in the Federal Building at Milwaukee?

Trial Examiner Sheppard: August 18th, ten o'clock, Court Room, Post Office Building.

Mr. Haycraft: That is all we have. You will have to inquire from the Postmaster.

By Mr. Haycraft:

Q. Mr. Owens, what is your occupation?

A. Executive Vice-President of the Mercoid Corporation.

Q. How long have you occupied that position?

A. Since 1920.

Q. Since 1920?

A. Yes.

Q. What did you do before that?

A. I was for thirteen years with Manning, Maxwell and Moore.

Q. What business were they in?

A. I was in the division of that Company making heating specialties.

Q. While you have been vice-president of the Mercoid Company, what have been your duties?

A. I have been in charge of sales.

223 Q. What products does the Mercoid Company sell?

A. Automatic heating controls.

Q. To whom do they sell those products?

A. To companies manufacturing automatic equipment, such as oil burner manufacturers, stoker manufacturers, refrigeration, and industrial accounts.

Q. Has the Mercoid Company operated under that name all the time that you have been vice-president, or did it have another name?

A. Originally it was the Federal Gauge Company; and the Federal Gauge Company is still the holding Company

and the Mercoid Company is the operating Company. That was changed in 1928, I believe.

Q. How long have you been making automatic controls for oil burner manufacturers, suitable for use on oil burners?

Mr. Freeman: Of the domestic type.

Mr. Haycraft: Of the domestic type.

The Witness: Since 1922.

By Mr. Haycraft:

Q. Will you describe the type of temperature controls that you manufacture for use on oil burners of the domestic type?

A. Well, the primary control today is, or could be stack operated, a stack operated device, or a light operated device. The one that is most commonly used is the stack
224 control, mounted in the stack, for shutting down the burner in the event of flame failure; and it operates in conjunction with the room thermostat, which automatically stops and starts the burner through a change in the room temperature.

We also employ a limit control, which is installed on the boiler to prevent over pressure, starting and stopping with changes in pressure or temperature, depending upon the type of heating system. With warm air it is the change in the warm air temperature.

Q. At the present time you manufacture three different types of controls; that is, primary controls, the thermostat and the limit control?

A. We do.

Q. How long have you manufactured the three of them?

225 A. Well, we made our first primary controls back around 1924 and '25.

Q. And did you sell—

A. But the thermostat and limit controls we made since about 1923.

Q. Thermostats and limit controls since—nineteen when?

A '23.

Trial Examiner Sheppard: Does he sell them in sets?

By Mr. Haycraft:

Q. Well, when you make your sale of these controls, how are they sold? Are they sold in separate units, or do you sell them in sets, or both ways?

A. Well, I would say that the majority of the controls are purchased in sets.

Trial Examiner Sheppard: Well, that is from the purchasers' angle. Do you sell yours in sets?

The Witness: The oil burner manufacturer, we do.

Trial Examiner Sheppard: You do sell them in sets to the person who buys them from you?

The Witness: As a rule, yes. As a rule they buy the thermostats, primary controls and assortment of boiler controls. They are not packaged 1, 2, 3, but they buy 100 primary controls, are very apt to buy 100 thermostats,
226 and maybe 40-40-20, all three different types of limit controls.

Trial Examiner Sheppard: I see. That is what I wanted.

By Mr. Haycraft:

Q. Have there been instances where you have sold the thermostat and the primary control and not a limit control to the oil burner manufacturer?

A. Quite often.

Q. What would be the occasion for that?

A. Some of the burner manufacturers only furnish two controls with the burner, allowing the dealer to buy their own limit control.

Q. When you started to sell automatic temperature controls to oil burner manufacturers, who were your principal competitors?

A. Dating back to the earliest date?

Q. Yes.

A. Well, at that time Absolute Contactor was about the only other company actually offering oil burner controls to the oil burner trade.

Q. Well, what was the name of the firm?

A. Absolute Contactor Company. They were located at Beloit, Wisconsin.

Q. As time went on, what developments took place
227 in the industry in that regard?

A. Well, there was the Honeywell Heating Specialties Company had been making a control that was designed for coal burning, the same as Minneapolis, and along in 1927 Minneapolis and Honeywell got together, and from then on it was the Minneapolis-Honeywell Company, and they decided about that time that the oil burner field

looked pretty good, and they went into the oil burner control business.

Q. About 1927 or 1928?

A. Yes. They didn't amount to anything in that field until Honeywell came into the picture.

Q. That was about what year?

A. 1927. In the meantime, Penn Electric Switch Company started.

Q. Where are they located?

A. They were at that time at Des Moines, Iowa. They are now at Goshen, Indiana.

Q. About what year did they enter the field?

A. Well, it was about the same time, I believe, as Minneapolis-Honeywell got into the oil burner picture, that Penn came in.

Q. Then, as time went on, did other competitors appear?

A. Later on Absolute was taken over by Time-O-Stat Controls Company, and they later on were absorbed by Minneapolis-Honeywell. I think that happened along 228 about 1933.

Q. When did the Perfex Company come into the picture?

A. Perfex came in along about 1935 or '36.

Q. Now, did the Perfex Company manufacture the full set of controls at the beginning?

A. Yes, I believe they did.

Trial Examiner Sheppard: Where are they located?

The Witness: Milwaukee, Wisconsin.

By Mr. Haycraft:

Q. What method do you use in making your sale of automatic temperature controls for use on oil burners?

A. I am afraid I don't quite understand.

Q. Do you have any salesmen calling on the manufacturers, or wholesalers or dealers?

A. Oh yes, both, direct mail and through contact through sales representatives.

Q. Back before the war, back before 1941, say the period from 1936 on to 1941, approximately how many salesmen did you have calling on the trade?

A. 1937, we had three or four men in Boston, seven or eight more in New York, four in Philadelphia, one in Baltimore, one in Cleveland, one in Indianapolis, one in St. Louis, and five or six out of Chicago, and one in Kansas City.

229 Q. What were these men doing? What were their duties?

A. They were directly contacting the trade, selling Mercoid automatic controls.

Q. When you say contacting the trade, will you tell us what you mean by the trade?

A. They were calling upon oil burner manufacturers, oil burner dealers, as well as stoker dealer and industrial accounts, as well as jobbers and distributors of Mercoid controls.

Q. During that period of time did you make any calls yourself on the trade?

A. Yes, I was constantly on the road, probably putting in six months of the year traveling.

230 Q. Did you call on the same trade, the same class of trade, or did you just pick out special accounts?

A. I probably called on more or less special accounts.

Q. During this period of time, and by this period of time I mean from the time that you began making oil burner controls, automatic temperature controls for oil burner manufacturers; did you have any contact or sell any of your controls to the Automatic Burner Corporation of Chicago?

A. Yes, they happened to be one of our earliest accounts, one of the first oil burner accounts; and while we lost their business back around 1927 and 1928, we did keep on contacting them and kept after their business in different ways.

We were doing a lot of missionary work with some of the people to whom they were selling oil burners, and a few times succeeded in getting these companies to specify our controls.

Q. To that extent have you been able to sell to the Automatic Oil Burner Corporation since 1927 or '28?

A. Not every time.

Q. What was the reason for not being able to make sales under those circumstances?

A. Well, I couldn't say exactly; I only know what Mr. Hirsch told me at one time.

Q. And who is Mr. Hirsch?

231 A. He is President of the Automatic Oil Burner Corporation.

Q. What was the reason given?

A. Well, he advanced the reason at this particular time, that if he were to buy Mercoid controls it was going to cost

money; and he explained that in this way; that he had an arrangement with Minneapolis-Honeywell that if he did not reach a certain quota he would not get a credit; and not receiving that credit the Mercoid Controls probably cost him about $2.00 more a set; so he refused to furnish these controls of ours at this particular time to this account.

Q. How did your price compare with the Minneapolis-Honeywell price, or do you know?

A. I believe at the time that we offered the controls to Mr. Hirsch that there was a slight difference in our favor.

Q. What is the trade number for the various controls you described. Your primary control; how do you describe those?

A. The constant ignition today is referred to as Type JM. It was formerly known as KM. The intermittent ignition, formerly KM, is today known as JMI.

Q. When you say "known today," how long has it been known as JMI?

A. Well, for the last two to three years.

232 Q. How long have you been making a constant ignition control? Has that been all the time?

A. I would say since 1925.

Q. How long have you been making the intermittent ignition?

A. Intermittent, about 1927 or—about 1927.

Q. Do you know the trade number or description of the comparable products sold by Minneapolis-Honeywell to those two?

A. I consider the R116 as comparable to type KM. The R117 might be compared with the JMI, except they incorporate a re-cycling feature, which our control did not incorporate.

Q. How do you designate it?

A. Type H Sensatherm.

Q. What different designations do you have for your limit controls?

A. Well, DA31 is a pressure control, and the M41 and M51. Those are the warm air limit controls. Then we have various types of hot water controls, such as DA36, DA37, DA337, 115W, 35; and then we have low water cut outs also for pressure jobs. Those have various designations, for the low water cut outs.

Q. Now, do you know what the Minneapolis-Honeywell designation is for comparable controls?

A. I don't know their number; no, sir. I know
233 they call the hot water control Aquastat; and then they have the Pressuretrol. The warm air control, I don't recall that.

Q. But they have controls which are comparable?

A. Yes.

Q. Do you recall whether or not you have made any sales to the Cleveland Steel Products Corporation, Cleveland, Ohio?

A. Will you repeat that question?

(The question above referred to was read by the Reporter.)

The Witness: We have.

By Mr. Haycraft:

Q. When did you first make sales of automatic temperature controls to that manufacturer?

A. I believe our first sales were in 1935.

Q. Do you remember the type of control that you sold at that time?

A. The KM, type H Sensatherm and type KM primary control.

Q. There were no limit controls sold at that time?

A. There might have been. I have some notes here on that.

Trial Examiner Sheppard: You may refresh your mind from your notes if you want. Don't testify from the paper, but refresh your recollection and then testify.

Mr. Haycraft: We are talking about 1935.

234 The Witness: 1934 was the first year we sold.

By Mr. Haycraft:

Q. 1934?

A. Yes, some KM type and the H Sensatherm type, but I can't see any limit controls.

Q. How many did you sell in 1934?

A. 175 and 34 and 25—175 sets; 25 sets early in 1935 on an order that we had received for 1,000 sets, and that order was cancelled by the end of the year, because they had not—that had not been completed, and the order was cancelled. That was sold to them on the option of taking the balance at the end of the year or cancelling the order, and they cancelled the order.

Q. Do you know what type burner those were used on?

A. Gun type.

Q. Gun type. What did you do in 1935?

A. In 1935, when the balance of the 1934 order was cancelled, that was replaced on March 15th by an order covering 500 sets of controls. They completed that order and ordered another 150 sets besides, making 650 sets for 1935.

Q. When you say sets, what do you mean?

A. Type H Sensatherm and KM primary controls.

Q. There were no limit controls in there?

A. No.

Q. What happened in 1936?

235 A. Well, that year they bought 125, 175—275 type KM primary controls and 100 limit controls, and 315 type H Sensatherms.

Q. In 1937?

A. In 1937 they bought an even thousand sets.

Q. Of what?

A. Type KM Pyratherms and type H Sensatherms.

Q. In 1938?

A. Nothing. They bought 300 limit controls.

Q. 1939?

A. In 1939 they bought for Westinghouse 250 type KM and 250 H Sensatherms, and that was all.

Q. Did you make any contact with this account yourself?

A. Yes, I was in constant touch with Cleveland Steel.

Q. And who was the man that you contacted in that firm?

A. I generally conducted business with J. L. O'Brien.

Q. What was his position?

A. Well, he occupied several different positions there. He not only acted as buyer of controls, but also, I understand, supervised the factory.

236 Q. Was there anyone else you contacted there?

A. Each time I would visit there W. J. Smith was in. I would contact W. J. Smith.

Trial Examiner Sheppard: What was his position?

The Witness: I think he was vice president of the company.

By Mr. Haycraft:

Q. Some higher official, anyway, than O'Brien?

A. Yes.

Q. I noticed that your sales in 1936 were less than '35. Do you have any explanation of that?

A. No, except their business might have fallen off that year.

Q. Did you have any discussion with Mr. Smith and Mr. O'Brien as to your 1936 purchases, or your 1936 sales.

A. I don't recall at this time.

Q. Do you have any explanation of the lack of sales in 1938 and '39?

A. Well, I believe the main reason for the lack of sales in 1938 was the switching over to another make of control.

Q. Another make of control, with the gun type burner, you mean?

A. Yes.

Q. Do you know what other make control they switched to at that time?

237 A. Well, they told me at the time they were contemplating taking on the Perfex, and having their nameplate put on the controls, and I understand they did buy one hundred or two hundred sets of Perfex, but that was all. What they actually did, they switched over to Minneapolis-Honeywell one hundred per cent.

Q. Did you make any sales to Gould Oil Burner Corporation in Cambridge, Massachusetts?

A. I have a memorandum I took on that. What year was that?

Q. Back in '35 or '36, along in there.

A. No, we had not been selling them anything then. The first record I have of any sales is in 1937.

Q. What did you sell them in 1937?

A. Well, a total of 43 sets, consisting of Type KMI intermittent ignition control, Type 8 Sensatherm, and a limit control, and those were picked up out of our Boston stock. We have a branch in Boston, and then in that year they placed an order for 1,000 sets of controls, but they only ordered out 150 sets on that 1,000, and there was some financial difficulties that took place there, so that that order, as far as I could find, was never completed. Later on in the year, they bought 30 more sets of the same control, and on the same basis they had been buying before they bought the 1,000 sets.

238 Q. Do you know anything about the quantity of burners that firm puts out?

A. No, I knew very little about them. They are an Eastern outfit, and were handled by the New York office; in fact, I never called on them, myself.

Q. Referring back to this Cleveland Steel Products Corporation again, I neglected to ask you, did they manufacture the rotary type of burner, as well as gun type, during the time you were selling them?

A. Yes, they made both burners.

Q. Did you sell any temperature controls for the rotary type during that period of time?

A. Temperature controls?

Q. Yes, for the rotary type burner?

A. What do you mean by temperature control?

Q. What we have been talking about.

A. Well,—

Q. Automatic temperature controls?

A. We have never sold them any primary control or room thermostats for the rotary type.

Q. You sold them limit controls for the rotary type?

A. Well, they could have used our limit controls, the ones they did buy in say 1938; they bought 300 limit controls from us. They could have been used with either gun or rotary burners in conjunction with either our equip-
239 ment or competitive equipment.

Q. What type of burner did the Gould Oil Burner Corporation sell, manufacture and sell?

A. I judge from the sales, that it was a gun type burner.

Q. Have you had any experience in selling to the Malleable Iron Fittings Company, Branford, Connecticut?

A. I called on the company, and I know we have sold them.

Q. Do you remember when it was that you made calls and when you made sales?

A. I think the first time I called over there was in 1937.

Q. What type of burner do they manufacture?

A. I believe they make the gun type burner.

Q. What were you trying to sell them in 1937?

A. Primary controls, room thermostats, boiler controls.

Q. Were you able to make any sales in 1937?

A. No, I don't believe we did.

Q. Do you remember any reason why you were unable to?

A. I believe they had, at that time, an exclusive contract with Minneapolis-Honeywell.

Q. You say you believe. What led you to believe that?

A. Well, that is my recollection.

Q. Where did you get the information?

A. Well, at the time I called there, it is my recollection that they told us that.

Q. Did you make sales in 1938?

A. I believe that we started selling them along about
240 1939. I might be wrong about that. We might have sold them earlier than that, but I know at the outset, when we first called on them, they did have an arrangement with Minneapolis, and then they got into some kind of a misunderstanding, and we started to sell them, what date I could not say. I haven't any memorandum on it at all. I did not check that.

Q. You did sell them in 1939, and 1940?

A. I know we sold them back a few years ago. We started to sell them, and it was following a misunderstanding they had with Minneapolis-Honeywell, and I knew from what had happened that they had been an exclusive Minneapolis-Honeywell account.

Q. Have you had any experience in selling the Wayne Oil Burner, Fort Wayne, Indiana?

A. We have sold them on and off, over a period of years.

Q. What type burner do they manufacture?

A. Gun type.

Q. Do you remember whether you sold them any in 1937?

A. I believe we did sell some controls to them in 1937.

Q. You do not recall how many?

A. No, I don't know offhand how many controls we sold.

Q. Did you continue selling them all through since 1937, or have you been changing?

A. No, I believe about three or four years ago that
241 they started buying Perfex with their name on the nameplate.

Q. Did you ever sell any controls to Wisconsin Oil Burner Company, of Madison?

A. We have sold a few. They are a comparatively small company.

Q. Have you any recollection or record of about how many you sold them back in 1937 or '38?

A. I know we never sold them very many. If they bought fifty sets from us, that would be enough to cover their purchases of several years.

Q. Do you recall making any sales to the York Oil Burner Company, York, Pennsylvania?

A. Yes, we have.

Q. That type burner do they make?
A. Gun type.
Q. Have your sales to them been substantial?
A. They are fairly large. They made a fairly large number of burners, but our percentage, the percentage of Mercoid controls used, was small.
Q. Do you recall in 1937 approximately how many controls you sold?
A. No, I couldn't recall. While we might have done $3,000 worth of business with them, I do know the total requirements that Mercoid received was very small.
Q. Are you familiar with the Reif-Rex Oil, Buffalo,
242 New York?
A. Reif-Rex Oil, yes.
Q. Did you ever make any sales of temperature controls to them?
A. No.
Q. What type burner do they manufacture?
A. I believe they make a gun type.
Q. Do you have any reason for not making sales there?
A. Just one of those accounts we couldn't break into.
Q. Do you know who did make their temperature controls?
A. Well, I was under the impression Minneapolis-Honeywell enjoyed their business.
Q. Are you familiar with the Carter-Korth Oil Burner Co., Roselle Park, New Jersey?
A. Yes, sir.
Q. Did you ever make any sales of oil burners, temperature controls to that firm?
A. Yes, sir.
Q. In what quantity?
A. I believe we enjoyed a good percentage of that company's business.
Q. What type of burner do they manufacture?
A. Gun type.
Q. Do you remember when you started selling them?
A. Back quite a few years. I think as far back as 1933.
243 Q. And you enjoyed business all the length of time since then?
A. Well, there was some changes in there. They just wound up as the Korth Oil Burner Company. Jack Korth, head of the Carter-Korth Oil Burner Company died, and

Arnold Eckhart took it over as the Korth Oil Burner Company.

Q. Have you continued to sell them since 1933 or 1934?

A. Yes.

Q. Hi-Point Corporation, Bellefontaine, Ohio, have you made sales to that firm?

A. We have sold them controls up until 1941. We get a few sets each year from them.

Q. What type burner do they manufacture?

A. Gun type.

Q. How do you account for your selling a few sets each year? Is it a small outfit, or did you enjoy any portion of their business?

A. Well, they were a small outfit, but what we received I do not believe would represent more than 25 per cent, not more than 25 per cent of their total business.

Q. Are you familiar with the Gar Wood Industries, Detroit, Michigan?

A. I am.

Q. Did you make any sales to that firm?

A. We did not.

244 Q. What?

A. We did not.

Q. Have you contacted the account yourself?

A. I have.

Q. During what period of time? Over what period of time?

A. Well, in the last eight or ten years, perhaps longer than that.

Q. What type burner do they manufacture?

A. They made a gun burner.

Q. Are you familiar with the General Oil Burner Company, Baltimore, Maryland?

A. I am.

Q. Have you made sales to that firm?

A. Yes, we have. We have sold General Oil Burner at Baltimore.

Q. What type burner do they manufacture?

A. A gun burner.

Q. Do you have all their business?

A. I believe so. It is my recollection that we enjoy a good percentage of their business.

Q. Are you familiar with General Oil Heating Corporation, West New York, New York?

A. I am.

Q. And what has been your experience in selling that account?

245 A. As far as I know, we get the majority of their control business.

Q. Has that been true of the last few years?

A. It has been for quite a few years.

Q. What type burner do they manufacture?

A. A gun type.

Q. Are you familiar with the Goodrich Oil Burner Manufacturing Corporation, New Haven, Connecticut?

A. To some extent, yes.

246 Q. Do you recall whether you made any sales to that firm in 1937?

A. I believe we enjoyed their business that year.

Q. Was it that year or the following year?

A. Well it was around 1937 or 1938. It seems to me that we had the business for a couple of years in a row.

Q. What type of burner did they make?

A. Gun type.

Q. Are you familiar with the Fairfield Oil Heating Company of Greenwich, Connecticut?

A. I am.

Q. Have you had any experience in selling to that firm?

A. We have sold them, I couldn't say what year, or to what extent, but I do know that we sold them some controls.

Q. What type of burners do they manufacture?

A. Gun type.

Q. Are you familiar with the firm of Petroleum Heat and Power Company, at Stamford, Connecticut?

A. I am.

Q. Did you sell them any temperature controls?

A. We sold them temperature controls, oh, for a period of—wait a minute, I have a note here on that.

(Examining papers.) —In 1937 and '38 we did sell them what we call temperature controls, but they were used on large pre-heaters for large industrial burners; and

247 we sold them quite a nice sizeable quantity of those controls.

Q. Did you sell them any controls for domestic oil burners?

A. No, not outside of a few limit controls and low water cut-outs and relays. What those were used on, I couldn't say.

Q. Do you know who were selling them temperature controls for their domestic burners?

A. I was under the impression that they were buying from Minneapolis-Honeywell.

Q. Are you familiar with the firm of Electrol Incorporated, Clifton, New Jersey?

A. Yes, sir.

Q. Have you had any experience in selling temperature controls to that company?

A. No; they about that time, in 1937—they were making their own primary control. We sold them mercury tubes and gave them a free license on the circuit, on the circuit control, on the patent which we had; and they in turn bought all the mercury tubes from us, and also a number of pressure gauges. Our sales amounted—

Q. Did you sell them sets of temperature controls?

A. No, we haven't sold them any sets.

Q. Or any Sensatherms or Pyratherms?

A. No, sir.

248 Q. What type of oil burner do they manufacture?

A. Gun type.

Q. I neglected to ask that question with regard to the Petroleum Heat and Power Company. What type do they manufacture?

A. They have the gun and the rotary type, a horizontal burner.

Q. Are you familiar with the Hi-Point Corporation, Bellefontaine, Ohio.

Mr. Freeman: You asked that once.

By Mr. Haycraft:

Q. Are you familiar with the Quiet Heet Manufacturing Corporation, Newark, New Jersey?

A. Yes, sir.

Q. Back in 1937 and '36 did you sell them any temperature controls?

A. Well, I know we enjoyed their business at the outset, and they finally got to be a good sized manufacturer; and about that time one of our competitors stepped in and took the business over.

Q. What do you mean?

A. About the time they got selling a decent number of burners. I think that was around 1936 or '37.

Q. How long had you been selling them before that?

A. Oh, a couple of years.

249 Q. Do you remember who the competitor was that sold them at that time?

A. Minneapolis-Honeywell.

Q. How long did you sell them before that?

A. Oh, a couple of years.

Q. Do you remember who the competitor was that sold them at that time?

A. Minneapolis-Honeywell.

Q. Are you familiar with the Volcano Burner Corporation of New York City?

A. No, I am not.

Q. Do you know whether you made any sales to them or not, or do you know anything about them?

A. I don't recall just what we might have sold Volcano. It is familiar to me, but I don't recall what we sold, if anything.

Q. Are you familiar with the Simplex Corporation of New York City, New York?

A. Yes, sir.

Q. What experience have you had in attempting to sell temperature controls to that corporation?

A. I don't think we really sold them anything. Maybe we sold them an odd control here and there. As far as I know, they have never given us any of their business.

Mr. Hayeraft: That is all, Mr. Examiner.

250 Trial Examiner Sheppard: Cross-examine.

Mr. Gilpatric: May we have a few minutes recess, please?

Trial Examiner Sheppard: Yes, we will take a five minute recess.

(A short recess was taken.)

Trial Examiner Sheppard: On the record. All right, proceed with the cross-examination.

Cross-Examiation by Mr. Gilpatric.

Q. Mr. Owens, you mentioned your Company enjoying a small percentage of the control business of the Automatic Oil Burner. Do you know the other manufacturers controls that were sold to that oil burner company?

A. No, I would just have to guess.

Q. Isn't it a fact that the Perfex sold controls to that Company?

A. In what year?

Q. 1937 and 1938, in that period of time, and since that time?

A. No, I don't believe that Perfex sold them back at that time. They might have sold them at a little later time than 1938; but I don't believe in 1937 or '38 Perfex enjoyed any of their business.

Q. You testified on direct that Minneapolis-Honey-
251 well stepped into the Quiet Heet business in 1937 and 1938. It is a fact that you continued to sell them controls since that time, is it not?

A. Nothing to brag about.

Q. But you have sold them controls?

A. We sold them some controls. Back along about 1939 I believe Mr. La Pedus came into my office; and I think the only reason he bought those controls was to put a little pressure on Minneapolis-Honeywell as to price.

Mr. Gilpatric: I object to the last part of the statement as not responsive, and ask that it be stricken.

Trial Examiner Sheppard: It may go out.

By Mr. Gilpatric:

Q. Did you sell any in 1940 to Quiet Heet?

A. No, we did not.

Q. Or 1941?

A. We sold them one year; it might have been 1939 or it could have been 1940; but he never completed that one order that he gave us; and that is the reason that I interposed that other remark. I wanted to clear up that point, that he gave us this one order and he didn't finish the order. He may have taken some of it the same year, and some the following year.

Q. Do you have any memorandum there to refresh your recollection?

252 A. I don't have to have any memorandum on it. The order was completed mostly in 1939. That is, the order was shipped, what part of it that was shipped, was shipped in 1939 and 1940; but not in its entirety. In 1941 we enjoyed some of their business, and about one-third as much in 1942.

Q. So that it is a fact that during those latter two or three years you did ship controls to Quiet Heet Company?

A. I would say about 7 per cent—6 or 7 per cent of their total requirements.

Mr. Gilpatrick: That is all.

Trial Examiner Sheppard: Any redirect?

Mr. Haycraft: No.

Trial Examiner Sheppard: Thank you, Mr. Owens. You may be excused.

(Witness excused.)

Mr. Haycraft: May we have another recess? I have another witness coming in. May we have a ten minute recess, please?

Trial Examiner Sheppard: Yes, take a recess for ten minutes, awaiting another witness.

(A short recess was taken.)

253 Trial Examiner Sheppard: All right, gentlemen, we will come to order.

Mr. Haycraft: I will ask Mr. McCabe to take the stand.

Trial Examiner Sheppard: Give us your name, Mr. McCabe.

Mr. McCabe: Ira Emmett McCabe.

Trial Examiner Sheppard: Your address, Mr. McCabe?

Mr. McCabe: 5806 Newark Avenue, Chicago.

Trial Examiner Sheppard: Rise to your feet, hold up your right hand, and I will take your oath.

IRA EMMETT McCABE, was thereupon called as a witness for the Commission, and having been first duly sworn, testified as follows:

Direct Examination.

Trial Examiner Sheppard: Speak up loud, so the gentlemen over there can hear you, and also Mr. Haycraft and myself.

All right, go ahead.

By Mr. Haycraft:

Q. What is your occupation, Mr. McCabe?

A. Inventor and engineer.

Q. Do you have any official position with the Mer-
254 coid Corporation?

A. Chief Engineer of the Mercoid Corporation, also chairman of the board of directors.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Haycraft:

Q. Have you had anything to do with the development of the products manufactured by the Mercoid Corporation?

255 A. All the products, the majority of the products come under my department and are developed in my department.

Mr. Haycraft: Mr. Examiner, I have here some catalogues of the Mercoid Corporation that I would like to put in evidence. There are two or three of them which are the only copies the company has.

Mr. Freeman: We will accept photostats.

Mr. Haycraft: I thought we might take them down to Washington and photostat them and return the original to the Company.

Trial Examiner Sheppard: Will that be satisfactory to you gentlemen?

Mr. Freeman: Yes, just so that the originals will be available if we want to look at them.

Trial Examiner Sheppard: Mr. Reporter, mark these catalogues beginning with 37.

(The documents referred to were marked Commission's Exhibits Nos. 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49 and 50, for identification.)

Trial Examiner Sheppard: Under agreement of counsel, Mr. Reporter, those exhibits will be received for the record, 37 to 50 inclusive.

(The documents referred to heretofore marked for identification COMMISSION'S EXHIBITS NOS. 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49 and 50, were received in evidence.)

256 By Mr. Haycraft:

Q. Do these catalogues contain a description of all of the products sold by the Mercoid Corporation during that period of time from 1934 until 1943?

A. It would not contain all, it would contain most of them.

Q. It would contain most of them?

A. We have some products which we do not have in there.

Q. Would you say that they contain most of the products sold to oil burner manufacturers during those years?

A. Yes.

Q. And do they contain the prices at which controls were to be sold?

A. Yes. The prices shown here are list prices.

Q. To what class of trade do they apply?

A. Well, that would be to the consumer.

Q. To the consumer?

A. I imagine so. I am not on the selling end of the business, I couldn't say for sure. I do know that these are list prices, and there are discounts to various classes of trade.

Trial Examiner Sheppard: Do you furnish these catalogues to jobbers?

The Witness: Yes.

257 By Mr. Haycraft:

Q. Do you furnish them to your salesmen in calling on the trade?

A. Yes.

Q. Will you indicate or testify as to the primary control, the thermostat and limit control that was most popularly sold to the oil burner manufacturers for use on oil burners; what type of primary control, limit control and thermostat?

A. Well, we have several types in there. How far back do these catalogues go?

Q. Let us take 1936, and indicate by page reference and description the different controls that were sold to oil burner manufacturers during that year?

Mr. Freeman: Give us the catalogue number and the exhibit number, so that we will have some sort of a record from here on.

258 A. Catalogue "C," I believe this is C-40, Commission's Exhibit 40. This is our 1936 catalogue, No. 100A, on Page 13, is KMI, the KMI Pyrotherms.

Q. Well, it is your primary control?

A. Yes, that was the primary control, at that particular time.

Q. All right.

A. In 1936.

Q. Will you also, then, describe in the same way, your thermostat and the limit control?

A. Yes. Of course, there are a variety of limit controls. The thermostat is shown on Page 3.

Mr. Freeman: Page 3?

The Witness: And 4. Does that answer your question?

Mr. Haycraft: Yes.

By Mr. Haycraft:

Q. Then the limit control?

A. The limit controls were shown on Pages 6—and pressure controls and vacuum controls and high pressure controls; Page 7 is warm air limit and fan controls, also lever air controls, and Page 8, hot water controls of both immersion and clamp-on types. Page 9 is also additional models of hot water controls, and on Pages 10 and 11 were combination low water and pressure controls, and low water
259 controls only.

Q. In that catalogue do you have, you say, a fan control?

A. Yes.

Q. I think it is on Page 7?

A. Page 7.

Q. What was the purpose or function of that fan control?

A. That was used to limit the temperature for the furnace, where it was operating as an oil burner, as you asked me, to prevent overheating of the furnace, by reversing it, so that instead of it being normally closed, in low temperature, it was normally open, and we use it as a fan control.

Q. During that year did you sell what is known as a combination fan and limit control?

A. Not in 1936.

Q. What is the first year you sold the combination fan and limit control?

Mr. Freeman: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

The Witness: It is first shown in our 1938 catalogue.

Trial Examiner Sheppard: What is the exhibit number?

The Witness: No. C-45.

260 By Mr. Haycraft:

Q. And your catalogue number is—

A. 100F. It may have been introduced earlier than that. That is the first catalogue it is in.

Mr. Haycraft: Mark this Commission's Exhibit 51, for identification.

(The paper referred to was marked Commission's Exhibit 51, for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit No. 51, for identification, which is a bulletin, sales advertisement of some kind, entitled "Mercoid Combination Fan and Limit Control for Warm Air Furnaces," and ask you if that describes the combination control and if so, when it was published or put on the market, if you can tell?

A. That is the control, and here it says 32,000, June, 1937, on this bulletin.

Mr. Freeman: Just a little louder, please.

The Witness: There is a notation on the last page, down in the left hand corner, that designates—it says that 32M-6-37. It also says, copyright, 1937, the Mercoid Corporation.

Mr. Haycraft: We offer this in evidence.

Trial Examiner Sheppard: Any objection, gentlemen?

261 Mr. Freeman: We might look at it. Is that one of your M80 circulars?

The Witness: Yes.

Mr. Freeman: Where does it come from, Mr. Haycraft? Is it one Mr. Royal picked up, or somebody?

Mr. Haycraft: Yes.

Mr. Freeman: Mr. Haycraft, who is this Mr. Moore, whose name appears upon the circular? Just so we get that straight, Langdon Moore?

Mr. Haycraft: I can't tell. That part is not in. He did not know anything about it.

Mr. Freeman: Do you want to introduce it with it on or off?

Mr. Haycraft: With it off.

Mr. Freeman: No objection.

Trial Examiner Sheppard: Let Exhibit 51 be accepted in the record.

(The paper referred to, heretofore marked for identification COMMISSION'S EXHIBIT 51, was received in evidence.)

By Mr. Haycraft:

Q. How do you describe this Mercoid combination fan and limit control in the business, what terminology do you give to it?

A. Mercoid type, M80, combination fan and limit control.

262 Q. Did it replace any other device used for the same purpose?

A. I might take the statement of the catalogue, which states that the Type M80 Mercoid warm air control is a duplex instrument, combining within one case, all the well known, field proven features of the Type M51 limit control, and the Type M53 fan control.

Q. Those are the controls you had been selling previous to that time?

A. Yes.

Q. Now, did you continue to sell these controls through 1938 and 1939?

Mr. Freeman: What controls are you referring to, by "these" controls?

Mr. Haycraft: I will say this control, Mercoid combination fan limit control, Type M80?

The Witness: Yes.

By Mr. Haycraft:

Q. I notice the price which you first brought out was $15 to the consumer. Do you know what price they were quoting to the manufacturer? Do you know what price you sold the combination fan control at, when you first brought it out?

A. I would have to look it up. I am not familiar.

263 Q. I am talking about the oil burner manufacturer, not the consumer. Do you remember the price you sold them at?

A. I would have to look up the prices, for I don't carry those in my head, but I can find out for you.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

The Witness: $6.75 to $7.50.

By Mr. Haycraft:

Q. Did there come a time when you were notified or apprised of the fact that this M80 combination fan and limit control was alleged to be an infringement of a patent known as the Freeman patent, owned by the Minneapolis-Honeywell Regulator Company?

A. Yes.

Mr. Freeman: We will concede that it was, and that will save time.

Mr. Haycraft: If you please, Mr. Examiner, I am conducting this examination.

By Mr. Haycraft:

Q. When did you first learn that, and under what circumstances?

A. I think the latter part of 1939 or early in 1940
264 they discussed with us the possibility of a license under that patent.

Q. With whom did you discuss it?

A. There were various ones. I remember there was Mr. Harold Sweat, I believe, Mr. Huff, up in Minneapolis, I think.

Q. Any one else from your firm?

A. Well, at one time I believe there were others; I believe there was Mr. Owens at one time, and another time Mr. Courteol.

Q. Where did this discussion take place that you have referred to?

A. I think it was over at the Blackstone Hotel one time, and another time I think it was discussed at one of the NEMA meetings down east.

Q. By NEMA you mean National Electric Manufacturers Association?

A. The National Electric Manufacturers Association.

Q. When was that?

A. I don't remember exactly the date. I thought I had a paper here to determine that.

Trial Examiner Sheppard: It was sometime after the first one, wasn't it?

The Witness: Yes, it was.

By Mr. Haycraft:

Q. What was the proposition that was put up to
265 you by the Minneapolis-Honeywell officials?

A. Well, they told us that we could accept a license under this patent, and we were to pay them a royalty, I think of 25 cents an instrument; and they were to fix the sales price of the instrument; and they submitted an agreement to us, which we finally rejected on account of our inability to reach an agreement on account of the price fixing arrangement in it. That contract was handed to us sometime prior to April 10th, because I have a record that was submitted to us—

Mr. Gilpatric: What year?

The Witness: Of 1940. We received an opinion from our attorneys on the 18th of April.

Trial Examiner Sheppard: 1940?

The Witness: 1940.

Trial Examiner Sheppard: And then you rejected this?

The Witness: We rejected it on our objections.

By Mr. Haycraft:

Q. Then was there a suit? Did you get notice of a suit? Did you get notice of a suit being instituted later than that?

A. Yes, at a later date they advised us that they were going to file suit; but inasmuch as we had had previous difficulties with infringement suits, where they filed suits against our customers, and then they would be dropped,
266 we moved to file a suit by a declaratory judgment on the agreement.

Q. And that resulted in a suit which is now pending in the Courts?

A. Yes, sir.

Q. In the United States Supreme Court?

A. Yes, sir.

Mr. Haycraft: I will have these marked for identification.

Trial Examiner Sheppard: Mark them beginning with Exhibit 52.

(The documents referred to were marked Commission's Exhibits Nos. 52 and 53, for identification.)

Mr. Haycraft: I have had marked for identification the transcripts of record, Volume 1 and Volume 2, entitled Mercoid Corporation *vs.* Minneapolis-Honeywell Regulator Company;—the Mercoid Corporation, Plaintiff-Appellee *vs.* Minneapolis-Honeywell Regulator Company, Defendant-Appellant No. 8019 and the Mercoid Corporation, Plaintiff-Appellant *vs.* Minneapolis-Honeywell Regulator Company, Defendant-Appellee, No. 8020, Appeals to the District Court of the United States for the Northern District of Illinois; transcript filed May 23, 1942.

Now, there are some items in this record that I would
267 like to refer to. As a matter of fact, I wish to offer them in evidence, with permission to have them withdrawn for the time being and put in later, because I understand the Respondent has a copy of this exhibit which it can use. This set is being used by the witness' attorneys at the present time in that litigation, and they do not want to part with them.

Mr. Freeman: Why don't we agree now that you can put in photostatic copies of any of the pages that you want. We certainly want to object to 2,000 pages of record going in for the purpose of proving something which may appear on three or four pages. I think it is an imposition, if the Respondent has to appeal this case, to have to print 2,000 pages.

Mr. Haycraft: You would not have to do that. It would go in as a physical exhibit.

Mr. Freeman: Why not put in the three or four pages as a photostat copy, as an ordinary exhibit?

Trial Examiner Sheppard: You gentlemen may get together and agree on exactly what you want.

Mr. Freeman: We have no objection to any part of it going in but—

Mr. Haycraft: (Interposing.) This will never be printed in the record. It is always a physical exhibit, and will be handled as such.

Mr. Freeman: With that understanding, that it will 268 be a physical exhibit, all right.

Mr. Haycraft: Very well. I want to refer to only a few pages at this time, but there may be other pages we may have to refer to in our brief, and also the Respondent may want to refer to other pages. Of course, this will depend on what the future development of the case is in the Courts. I am merely putting this in as a foundation.

Let me put it this way; certainly, in the event that the Court, the Supreme Court should decide in favor of the Respondent, then the Commission will have to look at the record to see whether they want to dismiss this case based upon the opinion of the Supreme Court. In order for them to do that, we will have to have all of the record.

Mr. Freeman: That is your problem, not ours.

Mr. Haycraft: That is the reason I am presenting it at this time. If that can be stipulated, I would like to have these received in evidence as our exhibits.

Mr. Freeman: Yes.

Mr. Haycraft: With that understanding.

Trial Examiner Sheppard: All right. With that understanding, gentlemen, I am going to accept Exhibits 52 and 53 for the record, for whatever use either side wants to make of them.

(The documents referred to, heretofore marked for identification COMMISSION'S EXHIBITS NOS. 52 and 53, were received in evidence.)

269 By Mr. Haycraft:

Q. Mr. McCabe, at the conferences that you had with officials of the Minneapolis-Honeywell Corporation, were there any representatives of any other manufacturers of temperature controls present?

A. There were, I believe—I kind of forget who they were, I don't have those records. I thought I brought them, but I don't see them here.

Trial Examiner Sheppard: Just tell from your memory.

The Witness: I remember at one of the meetings there people from the Detroit Lubricator.

By Mr. Haycraft:

Q. Do you remember who they were?

A. I think Mr. Swan and Mr. Hodges. And there were people from White-Rogers.

Q. Where are they located?

A. At St. Louis.

Mr. Freeman: Now, is he giving us the names of people or the names of companies? White-Rogers happens to be the name of a firm.

Mr. Haycraft: He said that there were people from that firm.

The Witness: I think it was Mr Rogers, if I am not mistaken. And there were two or three meetings, but I
270 don't remember just at which ones they were. At some of the meetings I believe some people from Penn were there, and Perfex.

By Mr. Haycraft:

Q. Who was there from the Perfex Company?

271 A. I think Mr. Luthe was one of them.

Q. At the meetings where these representatives of companies were present, what was the discussion about?

A. The discussion was regarding the licensing under this, and I remember one of the companies reported that their attorneys said the price-fixing clause was not acceptable, and they couldn't take the license.

Q. Which firm was that?

A. Detroit Lubricator.

Q. Did they ever take a license, to your knowledge?

A. I wouldn't know.

Q. At the time these discussions were taking place, in 1940, do you recall the prices at which you were selling the

M80 combination fan and limit control to the oil burner manufacturers?

A. I could find out for you from the records.

Q. I show you Commission's Exhibit 53, which is the transcript of the record just admitted in evidence.

Mr. Freeman: What page?

Mr. Haycraft: Page 783, which is the second page of the contract, dated January 27, 1940.

The Witness: Type M80 or 80B, combination fan and limit control, the list price was $11, and the net price was $4.75.

By Mr. Haycraft:

272 Q. That net price was the price to the manufacturer, is that right?

A. Yes.

Q. Do you recall the price that the officials of the Minneapolis-Honeywell were fixing as the price to the manufacturer under the license agreement at that time?

A. May I have that, and I can look and give you the exact price; on Page 913.

Q. The same exhibit?

A. Exhibit 53. It states: "Net minimum price for combination furnace control shall be $5.25."

Q. $5.25?

A. Yes.

Q. Was anything said to you by the officials of the Minneapolis-Honeywell Regulator Company with respect to that price, and the price you were quoting your control?

A. When Mr. Swan stated there—

Q. My question was whether anyone from the Minneapolis-Honeywell said anything to you about the price you were getting for your fan, in the combination fan control?

A. They wanted to get our price up.

Q. Up to what?

A. The same as in the price list I have just quoted from.

Q. Did they give any reason for doing that?

A. Well, they were concerned in prices generally.

273 Q. How long had you been selling that fan for $4.75, do you remember?

A. Probably not very long. The price was down every year, the cost was going down because of increased manufacturing. We had absorbed the tool charges, and the volume having increased, the prices were reduced.

Q. Did you tell that to either Mr. Huff or Mr. Sweatt, during the course of those discussions?

A. At the initial time we were more concerned whether we could operate under the license, and that was our preliminary reaction, was to get an opinion from our attorneys as to the validity of the license.

Q. Was there anything said to you by any of the officials of Minneapolis-Honeywell with respect to what they hoped to accomplish by the granting of this license?

A. As I remember, they hoped by licensing under the patent it would be possible to stabilize the prices of instruments.

Q. Did they make any proposition to you about increasing your price, even though you did not take out a license?

A. Well, at a later date, when I met Mr. Huff.

Trial Examiner Sheppard: What position with the respondent had Mr. Huff?

Mr. Freeman: He is vice president.

Mr. Gilpatric: And treasurer.

Mr. Freeman: That memo Mr. McCabe is referring
274 to, will be available to us, will it not, those papers he is referring to?

Mr. Haycraft: I don't know.

The Witness: These are my own notes I had after I talked to him, and I don't know. They are private papers.

Mr. Freeman: We want to see them if he is referring to them.

The Witness: I am just merely refreshing my memory as to what Mr. Huff—

Mr. Freeman: We still want to see them.

Trial Examiner Sheppard: All right.

The Witness: When we received an opinion from Mr. Wilkinson regarding that, he considered the price-fixing improper; he suggested we might pay the royalties and leave the price-fixing out; and that was not satisfactory to the Minneapolis-Honeywell Regulator Company, and we therefore rejected the license, and later the suit was filed, and at a later date I discussed the possibility of settling the suit with Mr. Huff, and they offered to eliminate any license. Such royalties as you want, we will forego that, but he did not eliminate the price feature, so the suit is continued.

By Mr. Haycraft:

Q. Do you remember when it was you had this last discussion with Mr. Huff, approximately?

275 A. That was in October of that year, 1940.

Mr. Haycraft: That is all.

Trial Examiner Sheppard: Cross-examine.

Cross-Examination by Mr. Freeman.

Q. Was that opinion you received from Mr. Wilkinson in writing?

A. Yes.

Q. Do you have a copy of it?

A. I have.

Q. May we see it?

Mr. Haycraft: I have no objection, if the witness has no objection, Mr. Examiner. It is up to the witness. It is a privileged communication, of course. It is up to him.

Mr. Freeman: He has waived any privilege when he tells us what is in it.

Trial Examiner Sheppard: You tell what the opinion was, if you want to.

The Witness: I can give conclusions and read them to him, if he wants. I don't know what Mr. Wilkinson would say. I am merely using reference to facts relating to these questions.

Mr. Haycraft: Do you want to read it into the record?

276 Mr. Freeman: You mean the letter?

Mr. Haycraft: No, the opinion.

Mr. Freeman: I want to know what he bases those conclusions on. I do not want to just take whatever Mr. McCabe relegates from the letter, what he thinks is pertinent. He has made the statement here, and he has testified with respect to what he was advised by Mr. Wilkinson as to what was legal and what was illegal, and so forth. I think we are entitled to know. Otherwise, we move all the testimony of this witness with respect to anything he received, or testified with respect to price fixing, and so forth, as he was advised by Mr. Wilkinson, be stricken.

Trial Examiner Sheppard: That was an opinion from your counsel to you?

The Witness: Yes.

Trial Examiner Sheppard: You consider that a confidential document, do you, or do you want to tell these gentlemen? I will let you do either one, whatever you want to do. If you want to tell them, O. K. If not—

The Witness: I would rather ask Mr. Wilkinson's permission. It is a communication to us. If he has any objection,—merely as a matter of courtesy.

Mr. Freeman: We could adjourn, and he can get that during the noon hour.

277 The Witness: Yes.

Trial Examiner Sheppard: You could call him up, and come back.

The Witness: I will take it over.

Trial Examiner Sheppard: All right.

Mr. Haycraft: It is almost 12:30.

Mr. Freeman: I would just as soon go on.

Trial Examiner Sheppard: We will take until two o'clock, and you be on the stand, and you can testify about that.

(Whereupon, at 12:30 p. m., a recess was taken until 2 o'clock p. m. this day.)

278 Afternoon Session.

2:00 p. m.

Trial Examiner Sheppard: All right, gentlemen, proceed.

IRA EMMETT McCABE resumed the stand and testified as follows:

Trial Examiner Sheppard: Now, Mr. McCabe, did you check up on that figure that you wanted to check up on this morning, the price of the combination fan? You wanted the manufacturer's price, wasn't that it, this morning, Mr. Haycraft?

Mr. Haycraft: Yes.

Trial Examiner Sheppard: Did you find that?

Mr. Haycraft: I don't think he did anything about it.

The Witness: I did not have a chance to do anything.

Trial Examiner Sheppard: Do this, Mr. McCabe. Mr. Owens over there gave you that price, and I am perfectly willing to accept that. If you check up and find any difference, write a letter to Mr. Haycraft, and we will put it in the record.

The other matter was about the communication. Do you wish to tell us about that?

279 The Witness: Yes, if he wants to look at it, all right.
Mr. Freeman: May I look at it?
(Document handed to counsel.)

Cross-Examination (Continued) by Mr. Freeman.

Q. Mr. McCabe, I think you testified that you are an inventor of a number of products now sold by the Mercoid Corporation; is that correct?
A. Most of them.
Q. And those are patented products, are they not?
A. Many of them.
Q. And some of those products made and sold by Mercoid include primary controls?
A. Yes.
Q. And some of them include thermostats?
A. Yes, sir.
Q. And some limit controls?
A. Yes, sir.
Q. And I take it that the primary controls of your development are patented in your name; is that correct?
A. Some of them are. Well, there might be some by others there, I can verify that; but the majority of them are in my name, or have been assigned to me.
Q. The Mercoid Primary controls are made under
280 patents owned by your Company?
A. Owned by me.
Q. Owned by you, Mr. McCabe?
A. Yes, sir.
Q. And I take it likewise that the thermostats made and sold by your company are made under patents either under patents owned by you, or patents taken out by somebody else and owned by you, is that correct?
A. I think there are one or two—I think that Mr. Egelston of the American Radiator has a patent; but the others are mostly mine.
Q. But the Sensatherm type, that is made under your patent?
A. Yes.
Q. And I take it that the products made and sold by Mercoid known as limit controls are likewise patented, and you are the patentee or owner of the patents?
A. Yes, sir.
Q. And I take it that you have been making primary

controls since about 1923 or 1924. When I say "you" I mean the Mercoid Corporation.

A. The Mercoid Corporation. It would be the Federal Gauge previous to that.

Q. That was a primary control as early as 1923?

A. Well, we made some of the drip switch type even
281 earlier than that, I would say about 1920.

Q. How far back does your experience in the making and sale of domestic oil burner controls go back to?

A. I came with the Company in 1921.

Q. Had you taken out any patents yourself prior to that time, that is, prior to 1921 with respect to domestic oil burner controls?

A. No.

Q. Your experience with respect to domestic oil burner controls started in 1921?

A. Yes, sir.

Q. And it has been continuous ever since?

A. Yes.

Q. And you have continued to take out patents during the last twenty-two years with respect to primary controls, limit controls and thermostats, is that correct?

A. Yes.

282 Q. About how many patents do you own or control directed to primary controls?

A. Well, I would have to look and find out.

Trial Examiner Sheppard: You can estimate it for us, if you want to.

The Witness: All right.

Trial Examiner Sheppard: I do not think Mr. Freeman wants anything specific.

The Witness: I have taken out one hundred and some patents, but I don't know. I would have to make a list and find out, because I don't keep track of them that way.

By Mr. Freeman:

Q. Would you say ten or twelve were directed to primary controls, or more than that?

A. Probably more.

Q. Closer to twenty? What is your best guess, Mr. McCabe?

Mr. Haycraft: I object to guessing. I have no objection—

By Mr. Freeman:

Q. Give us your estimate?

A. Here is the list of my patents, in the back of my catalogue. If you want to find that out, you could do it by looking over those, and ascertain what is important to you.

Q. What is your best estimate, that is all I am in-
283 terested in now.

A. I would just as soon not estimate, because I haven't given any thought that way. I know there are a number of limit controls.

Trial Examiner Sheppard: I do not want to spend too much time. Would you say eighteen or twenty?

The Witness: It might be.

Trial Examiner Sheppard: O. K.

By Mr. Freeman:

Q. How about thermostats?

A. Well, there were several of those.

Q. How about limit controls?

A. It would be the same.

Q. Around eighteen or twenty?

A. No. I say, there are several. They are listed in the catalogue, but you find out, as I suggested.

Mr. Freeman: Have you answered my last question?

Mr. Haycraft: He answered it.

By Mr. Freeman:

Q. What was your number with respect to limit controls, for domestic oil burners?

A. Well, there are several of them. I wouldn't off hand be able to give you,—the trouble,—that is, there may be improvement in patents on, for instance, a Mercoid switch,
and may reach into limit controls, and there may be
284 a patent on limit controls, and different styles, and all that. We can find out, if it is important to you, but you can find out from the patents themselves. They would speak better than I can.

Q. You referred to your 1936 catalogue with respect to KMI. That was a primary control, was it?

A. That was.

Q. Of the intermittent ignition type?

A. Yes.

Q. And how long has your company been making a primary control of the intermittent ignition type?

A. That would depend on what you mean. We made, for the American Oil Burner, as early as 1922, an intermittent ignition control, which operated from the pressure of the oil, in combination with the drip switch unit.

Q. That was a primary control arrangement, though, was it not?

A. Yes.

Q. So that you had been making a primary control where the ignition would go on only when the demand for heat was present, since about 1922, correct?

A. Yes.

Q. And how long has your company been making and selling a primary control for domestic oil burners of the continuous ignition type?

285 A. That would be about the same.

Q. So that your company had on the market, for sale, primary controls of both the intermittent ignition type and constant ignition type, since 1922?

Mr. Haycraft: I object to that. That is not what the witness said.

Trial Examiner Sheppard: Well, Mr. McCabe, is that correct?

The Witness: We made what was known as drip switches originally, where there was a cup which received the oil, and opened the circuit from the oil burner, then shut it off and the fire went out, as early as 1922. Other types came along like that.

By Mr. Freeman:

Q. That was a primary control?

A. Well, we called it a drip switch.

Q. And it was of the intermittent ignition type?

A. Not that.

Q. Was that constant?

A. That could be for either one. The safety device could be used on any burner where they could accumulate the oil, that particular type, as early as 1922.

Q. When did your company, Mercoid Corporation, start making a primary oil burner control?

A. We started making oil burner controls in 1922,

286 but when you speak of primary, I think your definition is not as we used it.

Q. When did your company start making primary controls, using your own definition?

A. We started making oil burner shut-off devices in 1922.

Q. And these oil burner shut-off devices were used with a limit control and with a thermostat, correct?

A. Quite frequently they were.

Q. And the oil burner shut-off device was distinct from the thermostat and distinct from the limit control, is that correct?

A. Yes, they were usually hooked in a series.

Q. That is, the three controls were hooked in series?

A. Yes.

Q. When those three controls both were used upon the same installation, then you got proper operation of the oil burner from a safety standpoint, is that correct?

A. If they were—

Q. (Interposing.) Properly connected together?

A. Properly connected and properly installed.

Q. And I take it you get that same safe operation today, if you use your DA31 limit control and the Honsatherm, Type H, and KMI, or your more recent type primary control, is that right?

A. Yes, provided again they are properly installed and—

287 Q. Assuming that the controls are properly installed as recommended by your company, then you would get safe oil burner operation today, with the three controls made and installed by Mercoid Corporation?

A. Yes.

Q. And on that same assumption that back in 1922 the three controls were properly connected together, in accordance with the recommendation and instruction from the Mercoid Corporation, you would then get proper oil burner control, is that correct?

A. Yes.

Q. That has been true from 1922 on through the years, up to and including the present time, is that correct?

A. Yes.

Q. Your company came out with its combination M80 combination fan and limit control in 1937, did it not?

A. Yes.

Q. And when did you first hear of the Freeman patent?

288 A. Probably many years before, I knew of the Freeman patent.

Q. As a matter of fact, you knew it was referred to in a letter to your company by H. W. Sweatt in 1932, do you not?

A. Well—

Q. (Interposing.) You can refer to these transcripts of the record which you have here.

Mr. Haycraft: What page.

Mr. Freeman: I don't know.

The Witness: I would not know just when I saw that letter. I know I have seen this letter, but I don't know when I saw it first.

By Mr. Freeman:

Q. You do find in the letter of November 28th, 1932 a reference to the Freeman Patent 1813732, do you not?

A. Yes, sir.

Q. And that is addressed to the Mercoid Company?

A. It is addressed to the attention of Mr. Van Ness.

Q. But it is addressed to the Mercoid Corporation?

A. Yes, sir.

Q. Were you an officer or director or in any way interested in the Mercoid Corporation in November, 1932?

Trial Examiner Sheppard: You were there then, were you not, Mr. McCabe?

289 The Witness: I was there, but he said, was I a director or officer.

By Mr. Freeman:

Q. Or in any way connected with the Company at that time?

A. I was associated with them under my contract.

Q. By the way, speaking of contracts, that was a royalty contract which you had with the Mercoid Corporation?

A. Yes, sir.

Q. And they paid you a royalty on all of the items made and sold by the Mercoid Corporation?

A. Yes, sir.

Q. They were paid to you, weren't they?

A. Yes, sir.

Q. Did you likewise receive a royalty on the combination fan and limit control, M80 sold by the Mercoid Corporation?

A. Yes, sir.

Q. When I speak of the M-80 I am referring to the device illustrated on Commission's Exhibit No. 51.

Mr. Haycraft: Also mentioned in 52 and 53.

Trial Examiner Sheppard: All right, Mr. Freeman, go ahead.

By Mr. Freeman:

Q. Now, I understand you to say that you had a meeting with Mr. Huff sometime in the fall of 1941, or rather, 1940. Is that correct?

290 A. Yes.

Q. And you also spoke about some meetings at the Blackstone Hotel where an agreement was submitted to you; is that correct?

A. Yes. There were two or three meetings there that I remember of, but I don't remember which one.

Q. I am referring to the one—

A. (Interposing.) It was prior to April, I know that.

Q. Prior to April 10th of 19—

A. (Interposing.) 1940.

Q. And at the meeting prior to April 10th, 1940 I understood you to say that there were some people present from the Detroit Lubricator Corporation; is that correct?

A. At one of those meetings.

Q. I am now asking you with respect to the meeting where Minneapolis-Honeywell presented to you or to your corporation a proposed license agreement under the Freeman patent.

A. I am not sure which of the meetings this license agreement was. One meeting it was talked about, and at another meeting they gave us a copy, and later meetings there were other discussions. I am not sure as to the time.

Q. Have you any memos or any record by which you can distinguish which meeting you were presented with a proposed agreement, where other people were present? And by "other people" I am referring to the people

291 from other companies like the Detroit Lubricator, or Perfex or White-Rogers?

A. The only thing would be they were NEMA meetings, and at a couple of those meetings, the NEMA meetings they called us back and talked to us, and the agreement was there.

Q. You mentioned White-Rogers, and thought Mr. Rogers of that firm was present when the agreement was presetned. Do you know whether W. L. Huff asked Mr. Rogers of the White-Rogers Company to take a license under the patent, the Freeman patent, at that time?

A. I don't know when he asked him, just when it was. I know that Mr. Rogers was at one of the meetings discussing prices; and they were also discussed with Mr. Swan of the Detroit Lubricator, who said, as I remember it—he was with the American Radiator, and he said that patent counsel said that they could not accept it on account of the price fixing clause.

Q. Do you recall any conversation carried on by Mr. Huff or any other officer of the Minneapolis-Honeywell and Mr. J. K. Luthe of the Perfex, at the same time? I am talking now about the time that the agreement was presented to your Company or to you?

A. I would not say at just what meeting it was. I know it was discussed at two or three meetings. I don't know just exactly when they attended it, the exact date. I don't carry that in my mind, but I remember Mr. Luthe, discussing it at two or three of those meetings when they were
292 all there; but I didn't make up any notes.

Q. This morning you testified to a meeting at the Blackstone Hotel.

A. Yes, sir.

Q. And another NEMA meeting down east.

A. Yes.

Q. Do you recall at which of those two meetings the various people you have referred to this morning were present?

A. Well, some were present at both. Some were absent as to some meetings, and others were present. It would be rather difficult for me to say now. I could get the NEMA files, and it would probably disclose some of those things to you there.

Q. Do you know when that NEMA meeting was held?

A. What?

Q. Do you know when that NEMA meeting was held?

A. It was in the spring of—

Q. (Interposing.) That was 1940?

A. 1940 sometime.

Q. Do you recall who was present at the time Mr. Huff spoke to you with respect to the Freeman patent, or your Company, about taking out a license?

A. I did not make notes as to the date, and as to who all was present at every one of the meetings. I remember
293 distinctly Mr. Swan being there, and Mr. Hodges, and Mr. Huff, I believe, and I think Mr. Henning or Mr. Luthe—

Q. (Interposing.) —Mr. Henning was with the Penn Company, is that correct?

A. Yes.

Q. And Mr. Rogers is with the White-Rogers Company of St. Louis?

A. Yes, sir.

Q. And Mr. Hodges is with the Detroit Lubricator Company?

A. Yes, sir. I know the meeting at which Mr. Swan was; I remember that he said that he could not accept the license, that he was willing to personally as far as he was concerned, he was willing to go along, but he was not able to because of what counsel was objecting to in the license as offered.

Q. Was that the time that the Minneapolis-Honeywell offered a license to your Company?

A. I don't know whether it was just at that time that they offered it, that they offered us a license, but they offered us a license somewhere in there. I don't know just when it was. I know they discussed it first, and later they gave us copies of that license.

Q. Were you not offered a license in 1939 and a changed form in 1940?

A. I could not say just when it was, somewhere around 1939, or the early part of 1940 they offered a license;
294 and later furnished an agreement after Mr. Wilkinson's report, I believe.

Q. You know that was in 1940?

A. In April, April 10th, we had a report submitted by Mr. Wilkinson, because we had discussed it—I had discussed the method of licensing with Mr. Moore, this method of taking patents and licensing them for the different switches that we sold; and he said that we could not do it; and I reported at one of these meetings to the people, and they did not like what Mr. Moore said; and I said, "How about having Mr. Wilkinson decide it."

They said they would accept his opinion, which we procured, and that is the information you have there.

Q. You said that to whom?

A. At one of these meetings I brought out that counsel also stated that it was not legal to fix rates on unpatented articles with a system of patent. I did not say the Freeman patent. I used one of my own as an example to my own attorney to get his reaction to it. After hearing what

Mr. Swan had stated, I thought it would be a little better if he passed on another patent first, as if I was going to get the patent and license it.

Upon his report I mentioned it at one of those meetings, that Mr. Moore said we could not do that; so then we called in Mr. Wilkinson, who handled this oral case for us,
295 and who had done work for us before, and they said they would be acceptable to them; and we got his opinion, and that is the opinion which you have there.

Q. To whom was that to be acceptable; that is, Mr. Wilkinson's opinion, that you are talking about?

A. They just pooh-poohed Mr. Moore's reaction, and told me that—he told me that that was in restraint of trade, and they said that is not so; you get a good firm, and they will tell you different. I said, "How about Mr. Wilkinson?"

Q. Who told you that?

A. The boys that were there.

Q. Will you name them?

A. Probably Mr. Harold Sweatt of the Minneapolis-Honeywell.

Q. Do you know when it was that they told you to do that?

A. Prior to this—about the time that we went there. That was in April.

Q. Of 1940?

A. 1940.

Q. And you did get the opinion from Mr. Wilkinson that he thought that Freeman made an invention and that his claims consequently were valid, did you?

A. That is the opinion, because that is what he stated. That opinion there gives what he stated.

Q. You did get an opinion from Mr. Wilkinson that
296 the claims in the Freeman patent were valid and that Freeman made an invention.

Mr. Haycraft: I object to that. If you want to put any of that in, I have no objection.

Mr. Freeman: I would like to offer the whole document.

Mr. Haycraft: All right, there is no objection to that.

Mr. Freeman: I offer in evidence the opinion of Wilkinson, Huxley, Byron and Knight, by George L. Wilkinson, dated April 18, 1940, as Respondent's Exhibit No. 1; and may we substitute photostat copies?

Trial Examiner Sheppard: You may have photostat

copies made, and that exhibit will be accepted for the record.

(The document referred to was marked RESPONDENT'S EXHIBIT NO. 1 and received in evidence.)

The Witness: He stated—

Mr. Haycraft: Now, don't volunteer anything.

Mr. Freeman: Why don't you let him finish his answer and tell us what he wanted to tell us.

By Mr. Freeman:

Q. Go ahead and tell us what you wanted to tell us before you were interrupted by counsel for the Commission.

Mr. Haycraft: I object to that.

297 Trial Examiner Sheppard: I think that is covered in the certificate, isn't it?

Mr. Freeman: I don't know what he wants to say. Let him say what he wants to say, and if it is not responsive, it may be stricken.

Mr. Haycraft: That is an improper question, Mr. Examiner, and I object to it.

Trial Examiner Sheppard: Read the question.

Mr. Freeman: There is no question pending.

Mr. Haycraft: Yes. He asked him if they had an opinion, and what it was.

The Witness: I had not answered that.

Mr. Haycraft: I know you hadn't, because that is improper and I objected to it.

Trial Examiner Sheppard: Read the question.

(The question above referred to was read by the Reporter.)

Mr. Haycraft: I object to that question. I say that the opinion speaks for itself.

Mr. Freeman: And we have just offered it.

Mr. Haycraft: Then the question was not answered.

Trial Examiner Sheppard: I am going to let the opinion go in as Respondent's Exhibit No. 1 and you can get anything that each other of you want out of it. As to anything else, the objection is sustained.

298 Mr. Freeman: You will get that back.

Mr. Gilpatric: Can't we photostat the original, Mr. Examiner?

Trial Examiner Sheppard: Yes, I think that would be better.

Mr. Freeman: That is a new one. They claim privilege, and Mr. Haycraft had a copy of it all the time.

Mr. Haycraft: I did not.

The Witness: He did not.

Mr. Haycraft: What do you want to make that statement for? We have been playing ball here very well. What do you mean by that sort of thing?

The Witness: I got that copy from Mr. Wilkinson this noon, and Mr. Owens and Mr. Black will testify to it. He gave it to me, and he said, "If you need an extra copy, here it is." I am sorry.

Mr. Haycraft: Didn't you see him hand it to me?

Mr. Gilpatric: No.

Mr. Freeman: I saw you hand it back. Off the record.

Trial Examiner Sheppard: Off the record.

(Conference off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Freeman:

Q. You first sold the M80 at a price from $6.75 to
299 $7.50. Can you tell me what brought about that difference of 75 cents? Was that a quantity discount, or was that a price structure you had at one time, and you lowered it? All I want to know is, what are the facts?

A. I don't know. You would have to find out from the records. It might be a different temperature scale. There are different list prices, according to the circuits and all. I would not be familiar enough with that. The prices speak for themselves.

Q. Isn't it a fact that you had a different price where you sold a mounting bracket, by which the combination M80 could be mounted on a furnace, and when you did not furnish—

A. It might be. Mr. Owens could tell you more about that.

Q. You know, as a matter of fact, there was a different price when the mounting bracket went with the combination M80, and when it did not go with the M80?

A. Also there is a different price when it had a different temperature scale.

Q. Now, you referred to that Minneapolis-Honeywell price of $5.25 this morning. Do you know whether that included a mounting bracket or not?

Trial Examiner Sheppard: Don't you remember about it, Mr. McCabe?

The Witness: No.

300 Trial Examiner Sheppard: Ask Mr. Owens.

Mr. Haycraft: It is Respondent's—

The Witness: What was the question?

Trial Examiner Sheppard: Read the question.

(The question above referred to was read by the Reporter.)

The Witness: According to this, it does not state whether it does or not. I presume it would include one. It does not include summer switch, because the net minimum price and combination—

Mr. Freeman: I was not asking about a summer switch, and I move that be stricken as not responsive.

Trial Examiner Sheppard: That may go out.

By Mr. Freeman:

Q. Then, as a matter of fact, you do not know whether that $5.25 price which you referred to this morning included a mounting bracket, whether the price included a mounting bracket or not?

Trial Examiner Sheppard: Do you remember about that, Mr. McCabe? Have you anything that would refresh your mind?

The Witness: I imagine it wouldn't make any difference, whether it was with or without, because it says, "Price for combination control shall be." If you took off a lot of stuff, it would still be a combination control.

301 Mr. Freeman: I move the answer be stricken, and ask the reporter to read my question, and ask the witness to answer my question.

(The question above referred to was read by the Reporter.)

By Mr. Freeman:

Q. Do you know?

Trial Examiner Sheppard: The response can be stricken if it was not in response to the question.

The Witness: The statement here is the net minimum price for a combination furnace control shall be $5.25.

Now, whether it included a mounting bracket or ten brackets, it says a net minimum price shall be $5.25.

Trial Examiner Sheppard: All right.

Mr. Freeman: I move that be stricken. All I want to know is whether this witness knows or does not know.

Mr. Haycraft: I object to that.

The Witness: That is what I am trying to tell you. It states —

By Mr. Freeman:

Q. If you don't know, say so.

A. It states the net price for a combination furnace control shall be $5.25. It does not matter whether one or ten brackets, or anything else. It says "Net price for a combination furnace control shall be $5.25."

302 Q. Mr. McCabe, I think we can save a lot of time if you will tell me whether you personally know or do not know. That is all I want to know.

Trial Examiner Sheppard: Just answer that yes or no.

The Witness: Would you read the original question again?

(The question above referred to was read by the Reporter.)

The Witness: Which is that $5.25 price that I referred to this morning? Can you give me the question where that was involved? You are asking a question. I want to know what I am answering.

By Mr. Freeman:

Q. You referred to Page 913 of the record this morning, and referred to $5.25 as the price. Do you recall so doing?

A. I wish you would read those notes back.

Trial Examiner Sheppard: Read the notes, if you have them.

(The record as above referred to was read by the Reporter.)

The Witness: I would say, whether it included a mounting flange or not, as long as the price was a minimum price, "shall be $5.25," if you took a flange off, it wouldn't let you sell it at less than $5.25.

303 By Mr. Freeman:

Q. I understood you this morning to make a comparison between your price of $4.75 and the Minneapolis-Honeywell price of $5.25, and what I would like to know now is whether or not when you made that comparison, you took into consideration that the Minneapolis-Honeywell price list was predicated upon a mounting flange, whether you knew?

A. I don't know what the Minneapolis price was predicated on. I just know it says here, under this price schedule, "The net price for a net minimum—a net mini-

mum price for a combination furnace control shall be $5.25."

Q. You can answer the question yes or no. Then, you do not know whether or not the price included a mounting flange or not?

A. It might.

Q. I do wish you would answer the question, as long as you tried to make a comparison this morning between Mercoid M80 prices at $4.75, and the price contained in the Minneapolis-Honeywell schedule?

A. I want to explain to you, if the minimum price for it was such, it would not matter what was included. You might have no case on it.

Mr. Freeman: I move to strike.

Mr. Haycraft: I would like to have counsel indicate whether he is now talking about $4.75, or $6.75, or
304 $7.50. He changed the question. The question is not the same as propounded the first time. There is nothing in the record to show $4.75, that that price had any mounting flange. The comparison is not correct.

Mr. Freeman: You made one comparison.

Mr. Haycraft: I move to strike all his testimony on the question with respect to this mounting flange, when the comparison was between $4.75 and $5.25, and he is bringing in $6.75 and $7.50.

Trial Examiner Sheppard: My principle is for the witness here to testify on the price as he sees fit.

The Witness: He is asking me about price.

By Mr. Freeman:

Q. I am asking whether you know or not. That is all I am asking, not what is contained in the document. I am asking whether you know.

A. I know if it was a combination furnace control, at a certain net minimum price,—it says it should be $5.25. It does not say what kind of combination, what appurtenances or accessories go with it. It says minimum.

Q. I take it you do notknow whether a mounting flange went with the price schedule contained on Page 913?

A. It might go, because as long as you did not go below that minimum, you could still sell it according to this basis.

305 Trial Examiner Sheppard: Then it may not be either, but the case would be the same in either case?

The Witness: Yes.

By Mr. Freeman:

Q. I am asking whether you know then, as a fact, that the price was the same in either case?

A. All I know is what this states.

Q. Tell us what you personally know, not what you are now reading.

Mr. Haycraft: I object to that, Mr. Examiner. No foundation has been laid for that. The witness, in his direct testimony, referred to that same document. He hasn't any knowledge outside of that.

Trial Examiner Sheppard: If you have anything to add, refer to that.

The Witness: I haven't anything to add to what I have already told you.

Trial Examiner Sheppard: Nothing further.

By Mr. Freeman:

Q. What was your price for the combination fan and limit control in 1939?

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

306 The Witness: Page 775 of this record, I find it.

Mr. Haycraft: Exhibit 53.

The Witness: Exhibit 53, I find a net price of $5.35.

By Mr. Freeman:

Q. That is to the Herco Company?

A. Yes.

Q. What did you find as the 1940 price to the Herco Company?

A. Page 783, I find a price of $4.75.

Q. I understood you to say this morning that the prices, starting with about 1937 up to 1939 came tumbling down, as production increased, was that correct?

A. Well, as the tool charge goes off.

Q. This downward trend in price, was that characteristic of all the products made by your company, or just the combination M80?

A. No, we usually come out with a new model control, and the first production costs are higher for that, and it is reflected in the selling price. As improvement is made possibly in the manufacturing, or changes, we usually bring it down as a follow through.

Q. I understood you to say you had meetings in the fall of 1940 with Mr. Huff of the Minneapolis-Honeywell?

A. Yes.

307 Q. And I think you said something about him telling you that he wanted you to go along, some words to that effect, is that correct, without a license agreement?

Trial Examiner Sheppard: Do you remember that?

The Witness: I am just trying to get my memory back. It is hard for me.

Trial Examiner Sheppard: Will you read those notes, if you have them?

(The record above referred to was read by the reporter.)

Trial Examiner Sheppard: Is that what you mean?

The Witness: Is that what you mean, Mr. Freeman?

By Mr. Freeman:

Q. You testified as to that this morning, did you not?

A. Yes, they said they would forego royalties, but they did not forego the price, if that would satisfy us. Such royalties as you are worrying about, you need not worry about those. They offered to forego them. That was not the—if you will read Mr. Wilkinson's letter here, in which he stated that "the license tendered you by the Minneapolis-Honeywell violates the Anti-trust Laws, but a license probably could be drafted which would be lawful, provided it contains no price restriction as to merely a part of the patented invention, i. e., the combination furnace control."

Q. That letter was written in April of 1940?

308 A. Yes.

Q. And your conversation with Mr. Huff was in October of 1940?

A. Of course, there was another conversation after this letter, but I don't remember the dates and all. I did not know we were going to be involved.

Q. And your declaratory judgment suit against Minneapolis-Honeywell was filed in the United States District Court here in Chicago on June 29, 1940?

A. Yes. After we had a letter from Mr. Huff, telling us that—I will read you the letter of June 21st in which Mr. Huff wrote me as follows:

Dear Ira:

The question of your company taking a license under the Freeman patent has been dragging along, as you know, over a period of several months. In view of your failure to reach a decision on the matter, we have no choice but to enter suit, and this we expect to do on July 1st. I am sure that you can appreciate our position in the situation and that every opportunity has been given to you to accept the license under this patent, and that the necessity for our filing suit is the result of the necessity to be fair to our other licensees and to ourselves in this present price situation.

Very truly yours,
Minneapolis-Honeywell Regulator Co."

309 "Willard.
"W. L. Huff, Vice-Pres. & Treasurer."

Q. What page of the record are you reading?
A. Page 923. In answer to that, we wrote, on June 28th:
"Your letter of June 21, 1940 addressed to The Mercoid Corporation, Attention, Mr. Ira E. McCabe, has been referred to me for acknowledgment and reply.
"The reason why this matter has dragged along is that Mercoid has been loath to take a license under the Freeman Patent No. 1,813,732, because as Mercoid interprets this license, Mercoid would pay a royalty upon every patented Mercoid fan or limit control sold by it whether or not adapted by the purchaser in an installation such as described in the Freeman Furnace Control Patent. Also, under this license Mercoid would agree to control the sale price of such Mercoid instruments, and this we have been advised is not in accordance with the law.
"Furthermore, from our knowledge of the prior patents, and such prior public uses, Mercoid denies the validity of said Freeman Patent, and further Mercoid does not sell nor install a complete apparatus for a furnace control as disclosed and claimed in the said Freeman Patent. Mercoid denies that the sale of its patented fan or limit control which may be claimed in the said Freeman Patent, in any way infringes or contributes to the infringement of
310 the said Freeman Patent No. 1,813,732.

"Yours very truly,
"The Mercoid Corporation,
"Hugh Courteol,
President."

311 Trial Examiner Sheppard: All right, go ahead.

By Mr. Freeman:

Q. As a matter of fact, Mr. McCabe, you know that the Minneapolis-Honeywell offered your Company a license during 1939 under the Freeman patent while your price was still $5.35, is that not so?

A. I can point you to our letter of January 24, 1940, on page 863, which says:

"Dear Mr. Courteol:

"Please tell me whether or not you or Mr. McCabe have had an opportunity to give consideration to the matter under the Freeman patent along the lines which I discussed with you in Chicago last."

That was dated January 24, 1940.

Q. Will you tell us now that you had no other discussion with respect to Mr. Huff, with respect to taking a license under the Freeman patent prior to that time, that is, prior to January 24, 1940?

A. I don't recollect a 1939 license agreement at all being offered us.

Q. You knew that in March, 1939, Minneapolis-Honeywell's price, that is, its manufacturer's price on its combination furnace control was $5.25, did you not?

A. I don't know whether it was or not.

312 Q. Will you refer to page 907 of the record, which you have there, and there you find an agreement between Minneapolis-Honeywell and Cook Electric, dated March 31, 1939, do you not?

A. There is —.

Q. Do you find there an agreement dated March 31, 1939 with Cook Electric, involving the Freeman patent?

Mr. Haycraft: What page is that?

Mr. Freeman: 907.

The Witness: What about it?

By Mr. Freeman:

Q. Do you there find an agreement with the Cook Electric dated March 31, 1939?

A. Yes, sir.

Q. And you find on page 913 the manufacturer's price, that the manufacturer's price for the combination furnace control shall be $5.25, do you not? That exhibit A is part of the price schedule with the Cook agreement, is it not?

A. That may be, but how do I know?

Mr. Freeman: Mr. Reporter, will you read the question?

(The question above referred to was read by the Reporter.)

The Witness: Yes.

313 By Mr. Freeman:

Q. Your primary control sold in 1937 as shown in the catalogues which were presented this morning by counsel for the Commission, gave satisfactory service when properly installed, is that correct?

A. Yes.

Q. And likewise your primary controls when properly installed on a domestic oil burner in 1936 gave satisfactory service?

A. Yes.

Q. As a matter of fact, your company has been one of the leading manufacturers of controls for the past fifteen or twenty years, is that not so?

A. Well, we hope so.

Q. You have always made a good product?

A. We tried to.

Q. An engineered product?

A. Yes.

Q. And that goes back to about the time that you started in the oil burner control business, in 1923 or 1924, up to date?

A. Yes, sir.

Q. You have been rather proud of the items manufactured and sold under the name of the Mercoid Corporation; those products which you have engineered for the last

314 twenty years; is that not so?

A. Yes, sir.

Q. You have had a lot of satisfied customers during the period of the last twenty years for domestic oil burner controls; isn't that so?

A. I think so.

Q. And you have had a lot of customers who kept on buying the Mercoid controls for the period of the last twenty years; is that not so?

A. Yes, sir.

Mr. Freeman: That is all.

Mr. Haycraft: Just one question.

Redirect Examination by Mr. Haycraft.

Q. When did you first manufacture and sell an intermittent primary control of the KMI type?

A. KMI; I will have to look back.

Trial Examiner Sheppard: I think he said 1923.

The Witness: Not the KMI.

Mr. Haycraft: No, not the KMI.

The Witness: I think it was 1936 or did we have the other model. I am not sure. I can't remember all of those things.

Trial Examiner Sheppard: If that is another matter that you want to ask Mr. Black, that is all right.

Mr. Freeman: Yes, we have no objection to that.

315 The Witness: We have one particular control now, but I don't remember the exact date that that control came out.

Trial Examiner Sheppard: Was that 1933?

The Witness: I imagine he is referring—they asked me when we made the intermittent ignition primary control, and I stated that we had built for the American Oil Burner an intermittent ignition control in 1922. I based that on the fact that we were still at the 12 South Jefferson address, and we moved in January, 1923; and we made a number of them at that time; and that was an intermittent ignition device which operated from the oil pressure. It was operated from the unit with a grip switch, but it was called an ignition shut off control.

By Mr. Haycraft:

Q. How is that distinguished from the present type of intermittent primary control?

A. Later we began to use temperature instead of an accumulation of oil.

Q. When did you start to make the ignition switch to operate on temperature?

A. The intermittent ignition based on temperature would be along in 1927 or 1928, along in there.

Q. When was it that the Minneapolis-Honeywell put intermittent temperature control on the market, the 316 primary control, do you remember?

A. It would be—we first came out with a temperature operated safety device in 1925; and there was Minneapolis Heat Regulator, and there was then the Honeywell

Heating Specialties, was a different company. They were not all one company then, in fact, there were three companies; the Minneapolis and the Honeywell Companies; the Minneapolis Heat Regulator Company, I believe it was, and the Honeywell Heating Specialties, and the Absolute Contact Corporation. Later they became—All of those interests are now part of the Minneapolis-Honeywell.

Q. Were you the first one on the market with an automatic temperature control of the intermittent ignition type?

A. No, I would not know who was the first one. There was one of our customers, the Williams Oil-O-Matic who was building a stack control in those early days; and I think the Hart people adopted it after that, and then there were—what is that fellow's name I am trying to think of, one of the early people—

Q. (Interposing.) Were they selling it to the trade?

A. No, more so the people built them as part of their burners, and sold them as their own. There was Honeywell, Minneapolis and Absolute, and myself, who were building them.

317 In 1924 the Underwriters set up a regulation calling for the safety control of a different type to eliminate the difficulties we were having with the trip switches at that time, and everybody broke their neck to build some form of stack control. I was myself working back in 1923 on a light operated device, and also a temperature operated device, but they were mostly of an experimental nature at that time. We were operating them and watching them on oil burners of some of our friends. The manufacture started in about 1925 with us, or late in 1924; the first safety temperature control as a standard item.

Q. Was that an intermittent ignition?

A. No, the burners at that time had their own intermittent device on them that we supplied them, and then we generally added different devices over a period of years.

Q. Who was the pioneer among the intermittent temperature controls?

A. A fellow down there—do you know what his name is?

Mr. Freeman: Sherman?

The Witness: Sherman, I think they were the pioneers.

By Mr. Haycraft:

Q. When was that?

A. That was about 1916, I believe.

Q. I am talking about commercially, I am not talking

about inventions. I am talking about when they first
318 put them on the market, when they first sold them to oil burner manufacturers; when the temperature control manufacturers first sold them to oil burner manufacturers.

A. Probably along about the same time, along in 1924 there were four manufacturers then; Absolute Contact, Minneapolis Heat Regulator, and Honeywell Specialties, and then the Federal Gauge Company, which was the predecessor of the Mercoid Corporation.

Q. What is the difference between the KM primary control and the KMI?

A. There is an extra switch in there which is actuated by the stack temperature to open the ignition switch, but it is locked out. The stack temperature does not close that until the unit—until the fire goes out, or something breaks the circuit.

Q. Which one is that?

A. The KMI.

Q. Is that known as the intermittent?

A. Yes, sir; that is known as the intermittent type.

Q. How long have you been making the KMI type for oil burners?

A. I think it was around 1935 or 1936, somewhere in there. We had some models ahead of that, high voltage types, which used the same arrangement.

Q. What about the low voltage?

319 A. There was one ahead of the KMI which used low voltage.

Q. What year did that come out?

A. I can find that out.

Q. In 1932?

A. I am trying to place it. We have several models, and it is hard for me to remember that. The SMI I think was in 1930.

Q. The question is on the low voltage now.

A. Just a moment. You are asking me a lot of questions which are hard to remember in a hurry. We have had so many models it is hard to remember. I can readily find out from the records, but it is hard for me to remember the exact date.

Trial Examiner Sheppard: Well, it is hard to remember that far back, yes.

By Mr. Haycraft:

Q. What do you have in 1934?

A. We had the KMI there, and we had another model ahead of that. You asked me about the low voltage?

Q. That is right.

A. That is even earlier. I am trying to get the exact date. I know in 1930 we had the SMI, and we had difficulty with the relays sticking, and I worked out the transformer relays; and in—that was in the fall in 1931 that we were
320 making them.

Q. It was about 1931, is that right?

A. There was a model ahead of the KMI being sold then with the heating elements in the high voltage, and that heating element broke the circuit. The relay was used with it in combination. That was in 1931. I am quite sure that the first model was put out about 1931.

Q. Did you have the re-cycling device in the KMI that you had in 1934 and 1935, along in there?

A. Well, we had—

Mr. Freeman: I didn't understand him to say that there was a device which had a re-cycling in 1934 and 1935.

Mr. Haycraft: That is what I am asking him.

Mr. Freeman: Will you read Mr. Haycraft's question?

(The question above referred to was read by the Reporter.)

Mr. Freeman: Your question assumes that they did.

Mr. Haycraft: The question assumes nothing. I am asking him the question.

The Witness: The KMI was re-cycling for current failure, but not for flame failure. The was the KMR. That is shown here in the catalogue in 1934 for that device.

By Mr. Haycraft:

Q. Was that a re-cycling device?

321 A. That was a re-cycling device.

Q. Referring now to this combination fan and limit control, M-80, was there any mounting flange in that $4.75 price? Is there a difference whether it was mounted or unmounted, in that 1940 catalogue? Is that price listed in that exhibit which you referred to this morning?

(Handing document to the witness.)

Trial Examiner Sheppard: Read the question.

(The question above referred to was read by the Reporter.)

The Witness: That is not in there. On page 783 it states the price of $4.75. It says the M80 or M80-B combination fan and limit control is furnished standard with built in summer switch.

By Mr. Haycraft:

Q. Is there any charge for mounting the flange or anything of that kind?

A. It does not show it here.

Q. Do you know whether there was or not?

A. I will have to ask Mr. Black.

Mr. Black: That included the flange, Universal.

Mr. Haycraft: That is all.

Trial Examiner Sheppard: Anything further, Mr. Freeman?

Mr. Freeman: Yes.

322 *Recross Examination by Mr. Freeman.*

Q. Just so that we get the record straight, when did Mercoid first put on the market a temperature responsive primary control?

A. The first was in December of 1924, I am sure, and we sold it to the Williams Oil-O-Matic in 1925, I believe it was.

Q. That was temperature responsive?

A. Yes.

Q. As distinguished from the drop bucket switch type?

A. Yes.

Q. When did your company first come on the market and manufacture for resale purposes a temperature operated primary control with intermittent ignition?

A. You mean with the intermittent ignition operated by the stack temperature? You see, we made the pressure intermittent ignition, and we also made a magnetic operated unit in—it was when we were down at the other plant.

Trial Examiner Sheppard: Can you give him any information on that, Mr. Black?

Mr. Black: SDE.

The Witness: SDE was pressure, and then there was an electrically operated ignition using a separate stack mounting, and also we used the flame type.

323 Mr. Black: That was not a temperature type of ignition.

The Witness: No, that was a magnetic type. What time did we have that?

Mr. Black: That was around 1931, the SMI.

The Witness: Well, we had one before that.

Mr. Haycraft: I think the question should be read to the witness again. The question was for resale.

The Witness: That is what I am talking about, for resale, Mr. Haycraft, but I don't remember the year.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Freeman:

Q. You testified that you began the sale of the temperature responsive primary controls to the Williams Oil-O-Matic Company in 1925?

324 A. 1924.

Q. And you continued to sell temperature responsive primary controls since that time to date, is that correct?

A. That is right, but you asked about temperature—

Q. I am now asking when you included in that temperature operated primary control, a control of the ignition, by which it became intermittent?

A. Yes.

Trial Examiner Sheppard: Can anybody help Mr. McCabe out?

Mr. Owens: I answered that question for Mr. Freeman this morning.

Mr. Freeman: Why don't you tell him now? We are asking Mr. McCabe.

Mr. Haycraft: It is all right.

Mr. Owens: 1927, we brought out the SMI high voltage intermittent stack control. I could be wrong within a year. I estimate 1927.

The Witness: There was another model we sold a few of. He asked me a question, and I am looking back.

Trial Examiner Sheppard: Will you accept that as your answer?

The Witness: I am not sure that is right, to be honest. I can verify myself from records if I had records here which go back. It might be earlier.

325 By Mr. Freeman:

Q. I am not trying to get any exact dates, but we can say about 1930 or shortly before, your company has

made a temperature responsive primary control, with intermittent ignition, isn't that correct?

A. Well, we made them before then, because we moved to the present plant in 1930, and we had a line of those controls in the other plant, and I am trying to place the years, trying to go back over twenty-two years and say this happened a certain date, it is hard. We had a couple hundred to take off.

Q. Your company, prior to 1930, made temperature responsive controls of the intermittent ignition type?

A. That is right.

Q. And since 1930 it has continued to sell temperature responsive primary controls, of the intermittent ignition type?

A. Yes.

Q. And I understand your company began making a low voltage control, so that the thermostat would be in a low voltage circuit, as distinguished from a high voltage circuit?

A. Yes.

Q. When did your company begin doing that, approximately?

A. I think sometime in 1931. The exact date, I 326 wouldn't know.

Q. Since 1931, your company has offered for sale a thermostat which was to be included in a low voltage circuit, with a primary control, temperature operated, of the intermittent ignition type, in the high voltage circuit, is that correct?

A. Yes.

Q. And since about 1931, your company has made and sold a limit control that likewise would be in the high voltage circuit?

Mr. Haycraft: Limit control?

Mr. Freeman: Limit control.

The Witness: Since 1922.

By Mr. Freeman:

Q. But at least since 1931 on?

A. Yes.

Q. So that since 1931 your company has made and sold, for use in connection with domestic oil burners, a room thermostat, in the space to be heated, which was in the low voltage circuit, is that correct?

A. That is right.

Q. And that thermostat in the low voltage circuit, controlled a primary in the high voltage circuit, is that correct?

A. Yes.

Q. And in that same high voltage circuit, which
327 included one primary, there was placed a limit control, is that correct?

A. In the high voltage circuit, yes.

Q. In the high voltage circuit. So that since 1931, the company has been selling the three controls which I have just referred to, to-wit, a primary temperature operated with the intermittent ignition type, together with a limit control, and a room thermostat?

A. Yes.

Mr. Freeman That is all.

Trial Examiner Sheppard: Thank you, Mr. McCabe.

Mr. Freeman: I would like to ask one more question, if I may.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. In order for your company to make and sell primary controls of the kind we have been discussing for domestic oil burners, since 1931, has it been necessary for your or your company to ask for any license from Minneapolis-Honeywell, under any of its primary control patents?

The Witness: Would you read that?

Trial Examiner Sheppard: Read the question.

(The question above referred to was read by the Reporter.)

The Witness: No.

328 Mr. Freeman: That is all.

(Witness excused.)

Trial Examiner Sheppard: We will take a recess.

(A short recess was taken.)

JAMES W. OWENS, was thereupon recalled as a witness for the Commission, and having been previously duly sworn, testified as follows:

Direct Examination by Mr. Haycraft.

Q. Mr. Owens, are you familiar with the M80 stack control or combination of limit control and fan switch?

A. I am.

Q. You heard Mr. McCabe testify with respect to the price at which that was sold during the years 1936, '37 and '38, and along in there?

A. It was 1937, I believe, was the first year.

Q. Can you tell us as to the price at which that switch was sold during the year 1939?

A. Yes.

Q. That device. Will you please do so, giving the dates, if you can?

A. Well, in the early part of the year of 1939, we had bracket prices established around $5.25 and $5.35, and then we handled special orders down to $4.75 and $4.80. I 329 quoted Cleveland Steel Products Company on August 3, 1939, a price of $4.95, on a special painted flange mounted M80 control.

Q. Then coming into the year 1940, at what price did you sell them?

A. We sold them generally at $4.75.

Q. As indicated in your price list?

A. As indicated in our price list.

Mr. Haycraft: That is all.

Mr. Freeman: What price list is that you are referring to?

Mr. Haycraft: It is in the M53, Commission's Exhibit 53, if you want to look at it.

Cross-Examination by Mr. Gilpatric.

Q. Did you sell this particular item to Sears, Roebuck in 1939 and 1940?

A. We did.

Q. What price did you quote them?

A. I believe the price to Sears, on the green paint case was $4.80.

Q. At what time?
A. In 1939.
Q. And in 1940?
A. In 1940, the price was $4.75.
Q. Was there an extra charge for the flange mounting?
330 A. Well, I should not have said a flange mounting on the Sears. That was what I call a screw mounting. It had three holes in the back of the case, and the flange mounting on the outside case was slightly more expensive than the Sears type.
Q. What was the flange type quoted at?
A. $4.95.
Q. Did you offer a different price where the control and switch was furnished without any adjustable mounting?
A. You will have to repeat that question.
(Whereupon the question above referred to was read by the Reporter.)
The Witness: I still don't understand the question.
By Mr. Gilpatric:
Q. Did you have any variance in price, depending on how the control and switch were to be mounted?
A. Yes. We quoted, with an adjustable flange we were quoting $4.75. That price included an adjustable flange. As a matter of fact, where we furnished a straight, non-adjustable flange, and not a flange on the case. The other price to Cleveland referred to a flange, or a flange mounted case. The other was a separate, straight flange we sold during 1940, or quoted on them, to two different concerns that could use that type, at $4.60.
Q. Still in 1939?
331 A. 1940.
Q. What time of the year?
A. I couldn't say. I would have to check my records. I recall that I quoted a couple of concerns. I think one was Lennox Furnace, and one other company. I can't remember who it was now, that could use a straight flange, and the price was $4.60. We made a 15-cent allowance for the adjustable flange over the straight flange.
Q. Did Sears, Roebuck use a straight flange in any of their control switches?
A. They use the three screws in the back of the case. The case was painted to match the furnace.

Q. That was the only type you sold them?

A. In 1940, when they were putting them out on what you might call conversion jobs, with their oil burners, they got the regular $4.75 price on the regular M80 combination control.

Mr. Gilpatric: All right. That is all.

Mr. Haycraft: That is all.

Trial Examiner Sheppard: Thank you.

(Witness excused.)

Mr. Haycraft: Mr. Examiner, I have some other testimony in mind, that I have to look into. If it develops, I will have them here Friday, so we can adjourn, take an adjournment to Milwaukee.

332 Trial Examiner Sheppard: I can take an adjournment until ten o'clock in the morning, if you want any?

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

In view of what Mr. Haycraft has said, we will take an adjournment to convene in the Post Office at Milwaukee, at ten o'clock on the morning of the 18th. We stand adjourned to that date.

(Whereupon, at 4 o'clock p. m., August 16, 1943, the hearing in the above-entitled matter was adjourned.)

333

Room 376,
Post Office Building,
Milwaukee, Wisconsin,
Wednesday, August 18, 1943.

Met, pursuant to adjournment, at 10:00 a. m. C. W. T.

Before: W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Esq., Attorney for the Federal Trade Commission.

Cravath, de Gersdorff, Swaine & Wood, by R. L. Gilpatric, Esq., and B. R. Shute, Esq., 15 Broad St., New York, N. Y., and Bair & Freeman, by Will Freeman, Esq., 135 South La Salle Street, Chicago, Ill., appeared for the Respondent.

334 PROCEEDINGS.

Trial Examiner Sheppard: Are you ready to proceed, Mr. Haycraft?

Mr. Haycraft: I think so.

Trial Examiner Sheppard: Is your witness here?

Mr. Haycraft: We have one witness here, and another one will be here in a few minutes.

Trial Examiner Sheppard: Come to order. Mr. Reporter, show the usual appearances.

Mr. Haycraft: I will ask Mr. Luthe to take the stand.

JULIUS K. LUTHE, was thereupon called as a witness for the Commission and, having been first duly sworn testified as follows:

Trial Examiner Sheppard: Mr. Reporter, this is Mr. Julius K. Luthe of the Perfex Corporation, 500 West Oklahoma Avenue, Milwaukee, Wisconsin.

All right, Mr. Haycraft, proceed.

Direct Examination by Mr. Haycraft.

Q. What is your occupation, Mr. Luthe?

A. President of the Perfex Corporation.

Q. Where is that located?

A. 500 West Oklahoma in this city.

335 Q. In what business is that company engaged?

A. We manufacture industrial radiators, and a line of automatic temperature controls.

Q. How long has the Perfex Company been engaged in the manufacture of a line of automatic temperature controls?

A. Since 1935.

Q. And you have been associated with the Company all that time?

A. Yes, sir.

Q. Before 1935 what was your occupation?

A. Up to the spring of 1933 I was associated with the Minneapolis-Honeywell Regulator Company.

Q. From when and to when?

A. From February 1931 until April or May of 1933, approximately.

Q. In what capacity were you associated with Minneapolis-Honeywell?

A. Director and vice-president.

Q. Before that what did you do?

A. I was president of the Time-O-Stat Corporation of Elkhart, Indiana.

Q. How long were you with that firm?

A. From the time it was organized, which was in January, 1929.

Q. What business was it engaged in?

336 A. Manufacture of automatic temperature controls.

Q. And was that firm merged with or bought out by the Minneapolis-Honeywell?

A. It was purchased by M H through the exchange of stock.

Q. Had you had any experience in the automatic temperature control industry prior to 1929?

A. I had been in the control business since 1924 as president of the Time-O-Stat Controls Company of Milwaukee, which was absorbed by the Time-O-Stat Corporation in January, 1929.

337 Q. At the time you were with Time-O-Stat, what line of temperature controls did you manufacture and sell?

Mr. Freeman: Which Time-O-Stat Company are you referring to?

Mr. Haycraft: Both of them.

The Witness: The original Time-O-Stat Company only

made a very limited line of temperature controls for automatic gas burners, automatic gas burners only. The later Time-O-Stat Corporation made a complete line of temperature controls for all types of fuel and also for refrigeration.

By Mr. Haycraft:

Q. Did they make a line of temperature controls for oil burners?

A. Yes, sir.

Q. What particular controls did they make at that time, that is, did they make primary, limit controls and thermostats?

A. They made a complete line, such as controls—such controls as are used to control a domestic oil burner.

Q. That was between 1929 and 1931?

A. Yes, sir.

Q. Who were your competitors at that time in that field?

A. Minneapolis-Honeywell Regulator, Mercoid Corporation, Penn Electric Switch Company are the only
338 ones I can now recall.

Q. When you were with Minneapolis-Honeywell, did you have anything to do with the temperature controls end of the business?

A. I was active as an officer, but practically all my time was devoted toward patent work.

Trial Examiner Sheppard: What year were you with the respondent?

The Witness: From the time it was merged with Minneapolis-Honeywell, which I believe was February, 1931, until I left in the spring of 1933.

Trial Examiner Sheppard: All right.

By Mr. Haycraft:

Q. During that period of time, did you have anything to do with the acquisition of what is known as the Freeman Patent?

A. I did.

Q. Combination patent?

A. Yes.

Q. From whom did you purchase that patent, do you recall?

Mr. Freeman: The assignment records would be lots better than his memory.

The Witness: I would not state, because I am not certain.

By Mr. Haycraft:

339 Q. Do you remember what it cost?

A. The owner and inventor—

Q. Do you remember what the cost was?

Mr. Freeman: I object to that as immaterial, what that patent cost, or what we paid for it.

Trial Examiner Sheppard: It may be an item in the case. I will let you answer, if you know.

The Witness: I would rather have the record of it, because I think it probably would be available.

By Mr. Haycraft:

Q. Do you have any recollection on it?

A. My recollection tells me it was $5,000, but that is very hazy.

Q. Was there any use made of that patent at the time you got it?

A. What would you mean by use?

Q. Well, did you license anyone to make it, or did you manufacture under the patent at that time?

A. We were manufacturing controls that came within the claims,—we were manufacturing controls that came within the claims of that patent at that time.

Q. At that time?

A. Yes.

Q. Do you know of any other manufacturer that was doing the same thing at that time?

340 Mr. Freeman: You mean infringing or licensed?

Mr. Haycraft: I want to know whether or not there were any other manufacturers, any competitors that were manufacturing a combination control, that is, a combination of fan control and limit control that would in this witness' judgment come within the terms of that patent.

Mr. Freeman: That is objected to because I do not think this witness is competent to state what claim came within the scope of the claims of that patent, particularly when the structure was made by somebody else. If he is qualified to testify what Minneapolis-Honeywell made, because they themselves—

Mr. Haycraft: Withdraw the question.

By Mr. Haycraft:

Q. I will ask the witness whether or not any attempt was made, while he was with the Minneapolis-Honeywell, to license any other manufacturer under the patent.

A. Not to my recollection.

Trial Examiner Sheppard: I want to get straight in my mind, Mr. Luthe, did that patent cover the combination, I mean, of the fan and the other, or was that just straight, some patent that did not cover both? You said to Mr. Haycraft just now something I would like you to tell me about that patent, a little bit. Was it an improvement on the old, or something he had before used, had already been using?

341 Mr. Freeman: Would you let me tell you what that patent covers, Major?

Trial Examiner Sheppard: I would like to have him.

The Witness: Well, the patent covered the use and combination of a means of controlling the circulation in a warm air furnace, wherein a fan was used to provide forced circulation of the air, and the patent covered a device which would start and stop that fan within certain temperature limits.

Trial Examiner Sheppard: Was that an improvement over things that existed prior to that time?

The Witness: In my judgment it was.

Trial Examiner Sheppard: O. K.

By Mr. Haycraft:

Q. And it was a combination of the things that existed prior to that?

A. A combination which was an improvement of previous methods or practice.

Q. When you started the Perfex Corporation—you did start it, I take it, did you not?

A. I did.

Q. In 1935?

A. 1934, sir, June, 1934.

Q. June, 1934, and when you first started, what 342 automatic temperature controls did you manufacture?

A. You mean what did we first produce?

Q. Yes, what did you first produce?

A. First, we produced a line of limit controls.

Q. When did you start producing a line of limit controls, do you remember?

A. That I could not tell you, except that we did sell some in 1936. Whether we sold any in 1935, my memory does not serve me.

343 Q. And where did you attempt to sell limit controls in 1936?

A. To certain selected customers in the trade that bought such products.

Q. Do you have any recollection of any accounts that you were selling during that time?

A. I recall our first account was the Timken Oil Burner.

Q. You sold them limit controls for use on what type of burner?

A. I couldn't answer that, because it was entirely at their option as to what burner they wanted to use then on. They made more than one type.

Q. Do you remember what type they were making at the time that you sold them?

A. They were making both gun and rotary burners.

Q. Who had charge of your sales at the beginning of 1936, and on for the next few years?

A. I believe I was responsible for directing them.

Q. Did you make any contacts yourself with the trade?

A. Yes, sir.

Q. Do you recall some of the accounts that you were selling or attempting to sell when you had the limit control only to offer?

A. As far as I can recall, about the only account I personally contacted was Timken. The others were 344 contacted by other men in the organization.

Q. Did you contact or attempt to contact the Cleveland Steel Products Corporation?

A. I believe that was quite a later date.

Q. At a later date?

A. I believe it was.

Q. But the only account that you recall now that you personally contacted is the Timken account?

A. Well, during the first year, when we had the limit controls only to sell; yes, sir.

Q. Well, during the time that you only had limit controls to sell, did you have any difficulty in selling those controls to oil burner manufacturers because of the fact that you did not have a primary control to offer as well?

A. Well, it was very much of a handicap.

Q. And that was for what reason?

A. Well, the manufacturer for many years in trade practice preferred to have a complete set of controls on his burners produced by one manufacturer; and we really didn't very diligently try to sell many limit controls until our line was quite complete.

Q. Was that the only thing that you encountered in those early years when you had limit controls to offer, with respect to the lack of the other controls?

A. That is all that I can recall, as far as I can recall.

345 Q. Do you have any recollection of calling upon accounts that were using controls of other manufacturers, primary controls of other manufacturers, and thermostats of other manufacturers, aside from the Timken account?

A. Will you restate that?

Trial Examiner Sheppard: Read it.

(Question referred to above was read by the Reporter.)

The Witness: We sold other manufacturers, but I cannot recall our first customers.

By Mr. Haycraft:

Q. In your calling on the accounts in the early days, did you ever meet the objection on the part of the manufacturers, of the oil burner manufacturers, that they could not buy your product because of an arrangement that they may have had with the Minneapolis-Honeywell Corporation?

Mr. Freeman: That is objected to as leading, and grossly so.

Trial Examiner Sheppard: Well, I don't know. Leading questions may be indulged in, but not too much. Sometimes you can get at the truth of the question a good deal quicker by that method. I will allow both sides to do that to save time. Go on and answer the question.

The Witness: Well, the question of a contract, if the customer had one with the Minneapolis-Honeywell
346 Regulator, it usually came into the conversation in selling the controls.

By Mr. Haycraft:

Q. What did you find out with reference to those contracts?

A. Well, they questioned whether they had the moral or legal right to buy controls from another source after

they had entered into such a written contract with Minneapolis-Honeywell.

Trial Examiner Sheppard: Mr. Reporter, will you read that answer?

(The answer above referred to was read by the Reporter.)

By Mr. Haycraft:

Q. Were you familiar at that time with the written contract of Minneapolis-Honeywell Corporation, that they had entered into with the oil burner manufacturers?

A. I was.

Q. Are you familiar with the clause which provides, "because the company's costs are figured to cover a complete set of controls, the following breakdown prices are purely for invoicing purposes. It is agreed that the purchaser's yearly purchases will consist of at least 90% as many thermostats and 100% (but at the Company's option not more than 125%) as many limit controls as primary controls."

347 Are you familiar with that language?

A. Yes.

Trial Examiner Sheppard: What year was that used, Mr. Haycraft?

Mr. Haycraft: 1936—1937, according to this stipulation, at the beginning.

Trial Examiner Sheppard: All right.

Mr. Haycraft: It has been in a little changed language in the contract, according to this stipulation, pages 10, 14, 15, 16 and 17.

Trial Examiner Sheppard: All right.

By Mr. Haycraft:

Q. Is that the language in the contract, the Minneapolis-Honeywell contract, which you referred to in your testimony a moment ago?

A. That paragraph was usually discussed; yes, sir.

Q. And how were you able, or were you able to overcome the provisions of those contracts in many instances?

A. Well, if the customer bought controls from us, in the light of having such a contract, he must have felt that they had some legal or moral right to proceed, in spite of that paragraph.

Q. Did you have some customers who did that?

A. Yes, sir.

Q. Timken is one that you have a definite recollection of?

348 A. Yes, sir.

Q. According to the stipulation that we have in this record, there was for a short period of time in the year 1937 the following clause in the contract which was offered to the Minneapolis-Honeywell accounts, and I will ask you whether or not you ever encountered or learned of this clause in your contracts with the trade in 1937:

"Purchaser agrees that at least 95 per cent of his requirements of Thermostats, primary controls and limit controls will be purchased from the Company."

Was that ever brought to your attention?

A. Yes, sir.

Q. Where did you learn of that provision?

A. Through our sales organization.

Q. And what if any effect did that have upon your contacts in the trade?

A. Well, temporarily it sort of tied up our contacts with such manufacturers who had signed such an agreement.

Q. According to this stipulation also in 1938, the beginning of 1938, the Minneapolis-Honeywell entered into contracts with some oil burner manufacturers for season requirements, or their estimated requirements, and so on. In your competition did you ever run into that sort of a contract?

349 A. Yes.

Q. What if any effect did that have upon your ability to sell those accounts?

A. In a very great majority of instances we sold accounts we were endeavoring to sell, in spite of the conditions set forth in the contract.

Q. Did you sell them in substantial quantities?

A. We did.

Q. I will call your attention to the Cleveland Steel Products Corporation of Cleveland, Ohio, which was one of the companies which had such a provision in the contract for the year 1938. Were you able to sell Cleveland Steel Products Corporation during the year 1938?

A. Well, we sold them controls, but I can't tell you whether it was 1937, '38 or '39.

Q. Do you remember in what quantities you sold them?

A. Well, for a while we sold them a fair volume of complete sets of controls.

350 Q. By the way, do you recall when it was that you first brought out your primary control to go along with your limit control?

A. I could not tell you that, except by looking at the record.

Q. Do you think Mr. Tate would be in position to tell us with respect to that?

A. I think it would be best to ask him that, or call the office.

Q. Do you remember whom you contacted in Cleveland Steel Products Company, or did you have any discussion with them?

A. Mr. Smith and Mr. O'Brien.

Q. Did you have a direct contact there yourself?

A. Yes, sir.

Q. Do you recall discussing with them that contract with Minneapolis-Honeywell Corporation?

A. When we received their initial order, yes, sir.

Q. What did they tell you at that time?

A. They felt free to buy from us, in spite of the situation.

Q. Do you remember what year that was?

A. Only as the record would show, when they bought the first sets of controls from us.

Q. You do not remember what year that was?

A. I could not say that. The record, again, would 351 establish it without question.

Q. And perhaps Mr. Tate can better tell as to that date?

A. Or by contacting our office.

Q. Did they ever inform you with respect to the contract later on, after that initial order was given?

A. They did not.

Q. They did not discuss it with you at any later date?

A. No, sir.

Q. Did they say at that time they had refused to sign a contract that had the 95 per cent provision in it?

A. I could not recall specifically, because some companies did tell us that, but which ones informed us of that at that time, my memory would not serve me at all.

Q. Now, with respect to this Freeman Patent, this combination patent, did you have any discussions with officials of the Minneapolis-Honeywell Corporation with respect to taking out a license under that patent?

A. I did.

Q. When did you first discuss that matter with officials of the Minneapolis-Honeywell Corporation?

A. Very shortly after that, after they sent us a written notice of infringement.

Q. Do you remember when that was?

A. I could not recall the date.

Q. I show you Page 1,051 of Commission's Exhibit 352 No. 53, and ask you if you recognize that as a copy of a letter received from Minneapolis-Honeywell dated April 18, 1939, with respect to the Freeman patent? (Handing document.)

A. I do.

Q. Does that refresh your recollection with respect to the time when you had your discussions with the officers of the Minneapolis-Honeywell Corporation, with respect to taking out the license?

A. It does not, because it does not refer to any time at which the license agreement had been entered into, except that it was previous to April 18, 1939.

Q. Previous to April 18, 1939?

A. Yes, sir.

Trial Examiner Sheppard: It would be subsequent to that date?

Mr. Freeman: No, earlier.

The Witness: No, previous. That letter refers to the license agreement, but does not refer to the date of the agreement.

Trial Examiner Sheppard: All right.

The Witness: I might add, I could have had all these dates and data for you, had I known you wanted the specific information.

By Mr. Haycraft:

Q. You do not remember the date that the license 353 agreement was entered into?

A. I cannot recall, no, sir.

Q. Do you recall that it was any substantial length of time prior to April, 1939?

A. I could not tell you whether it was in '37, '38 or '39.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

On the record.

By Mr. Haycraft:

Q. Whenever it was, will you tell us what was said to you by the officials of the Minneapolis-Honeywell with respect to taking out that license?

A. Well, there were a number of lengthy conversations held, in trying to arrive at a mutual acceptable basis of proceeding.

Q. Was there anything said with regard to the price at which you were to sell—

A. The indication was if the license was allotted to us, that they would leave the agreement provide for both, in royalty, and the right on their part to determine the selling price.

Q. Was anything said at the time that these discussions took place, with respect to the prices at which the
354 Perfex Company was selling the combination fan and limit control?

A. That was discussed, yes, sir.

Q. What was said about that?

A. Well, the discussion came down to the fact that they wanted to determine the price, and the price they determined would be the one at which we would sell, and the price that was mentioned in the agreement was the price that was agreed upon.

Q. What was that price, do you remember?

A. I believe it was $5.25.

Q. Do you remember at what price you were selling the combination fan and limit control at that time, and prior to that time?

A. My recollection tells me that the lowest price at which we sold it was $4.85.

Q. Did you make any offer with respect to advancing that price, in the event that the license was granted, or what was said about that?

A. Could you state the question more specifically?

Q. What was said with respect—

A. Because these conversations lasted several half days.

Q. Who were present at these conversations?

A. At different times, Mr. Harold Sweatt, Mr. Willard Huff, Mr. Freeman, Mr. Tate of our company, and myself.

Q. And Mr. Freeman is Mr. Will Freeman, the attorney here?

355 A. Yes, sir.

Q. The question—what was said with respect to

that price at which you were selling the combination fan and limit control?

A. That a price of $5.25 was a fair price to the trade, as a minimum price.

Q. They did not think your price was sufficient?

A. They did not.

Q. Do you know whether or not any of your competitors at that time were selling a combination limit and fan control at or about that same price?

A. The competitors' prices, to my recollection, were all within fifty cents of that price, either higher or lower.

Q. By the way, did you ever attend any meetings of competitors, as well as yourself? Did you ever attend any meetings with competitors where this matter of the Freeman patent license was discussed?

A. It was never discussed except between officers of M. H. and officials of our company.

Q. You never were at a meeting where any other—

A. We had many, many meetings with competitors, but the Freeman patent was never discussed, at any of those other meetings.

Trial Examiner Sheppard: I want to know this. They may have asked it, but I did not catch it. Did you
356 gentlemen take over the license agreement with the Respondent at that time?

The Witness: We entered into a written license agreement.

Trial Examiner Sheppard: At that time?

The Witness: Subsequent to those conversations, which is still in effect.

Trial Examiner Sheppard: That included the royalty basis?

The Witness: Royalty basis, and right on the part of the licensor to establish the selling price.

Trial Examiner Sheppard: And that agreement automatically raised your price from $4.85 to $5—

The Witness: $5.25.

Trial Examiner Sheppard: $5.25?

The Witness: Yes.

Trial Examiner Sheppard: How long did that agreement stay in existence?

The Witness: It is in effect for the life of the agreement, unless cancelled by us, which the contract has provision to cover.

Trial Examiner Sheppard: All right.

Mr. Haycraft: Mark this Commission's Exhibit No. 54, for identification.

(The document referred to was marked Commission's Exhibit No. 54, for identification.)

357 By Mr. Haycraft:

Q. I show you photostatic copy of a memorandum marked Commission's Exhibit No. 54, for identification, which purports to be one issued by your firm, by Frederick Hanson, addressed to Gene Geldabini, with respect to the price of $4.75 series controls, dated April 18, 1939, and I ask you if you can identify that in any way? (Handing document.)

A. I recognize this.

Q. Was that issued by your office?

A. It was issued by our vice president of our company.

Q. In charge of sales?

A. Substantially so.

Q. What is that other gentleman's name there, Geldabini? Who is he?

A. He handles all the office correspondence, records and other data with reference to controls, sales.

Q. Did this go out to your sales force?

A. No, it did not.

Q. Where did it go?

A. We have regular price sheets in our salesmen's handbooks, and as a result of such a memorandum, Mr. Geldabini, to whom this is addressed, would then have a price sheet printed, or typed, to go into the salesmen's handbooks.

358 Mr. Haycraft: I offer that in evidence, Mr. Examiner.

Trial Examiner Sheppard: Any objection?

Mr. Freeman: None.

Trial Examiner Sheppard: Let the Exhibit 54 be accepted in the record.

(The paper referred to, heretofore marked for identification COMMISSION'S EXHIBIT 54 was received in evidence.)

Mr. Freeman: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

On the record.

Mr. Luthe, what size is your company? Is it large or small, in reference to the output?

The Witness: You mean as far as automatic temperature controls are concerned?

Trial Examiner Sheppard: That is right.

The Witness: Well, for what year, sir? Presently the volume is very low.

Trial Examiner Sheppard: Say from 1936 on?

The Witness: The volume was very, very small in 1936. We did not reach a very substantial volume in relationship to our business, until the years 1939, '40 and '41.

359 Trial Examiner Sheppard: All right.

Mr. Haycraft: Mark this Commission's Exhibit 55, for identification.

(The paper referred to was marked Commission's Exhibit 55, for identification.)

360 By Mr. Haycraft:

Q. I show you Commission's Exhibit No. 55 for identification, which purports to be a price list to oil burners manufacturers of Perfex automatic controls, No. 1031, issued June 15, 1936, and ask you if you can identify that as a photostatic copy of the price list as indicated?

(Handing exhibit to the witness.)

A. I do.

Q. What use was made of that price list?

A. Well, it is a price list for oil burner manufacturers, as indicated.

Q. What use was made of it? What did you do with them? Did you give them to your salesmen?

A. That is right.

Q. And were they given to the trade?

A. Yes, sir; that is right; they were distributed to the trade.

Q. Does that sheet give the price of the automatic temperature control being sold by your company on the date indicated?

A. I think so; yes, sir.

Mr. Haycraft: I offer it in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Freeman: None at all.

Trial Examiner Sheppard: Commission's Exhibit
361 No. 55 will be received for the record, Mr. Reporter.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT NO. 55, was received in evidence.)

By Mr. Haycraft:

Q. Referring to Commission's Exhibit No. 54, the 475D referred to there is the combination limit and fan control, is it not?

A. Yes, sir.

Mr. Haycraft: That is all I want to ask Mr. Luthe, Mr. Examiner. I have some more detailed questions when I get the next witness, that I want to ask, the next witness that comes from this firm.

Trial Examiner Sheppard: All right, cross-examine, please.

Cross-Examination by Mr. Freeman.

Q. Mr. Luthe, Commission's Exhibit No. 55 is a dealers' price list, is it not?

A. Yes, sir.

Q. And these are prices, even the lowest prices contained on Exhibit No. 55, are not prices at which you sold limit controls to oil burner manufacturers; by way of example, the Timken Company of Detroit, is that not so?

A. These are dealer and not manufacturers' prices.

362 Q. So that the prices contained upon the price list, Commission's Exhibit No. 55, are not applicable to Timken, or Cleveland Steel Products, or any other company such as Williams Oil-O-Matic, or Petroleum Heat and Power, Gilbert and Barker, and companies of that kind; is that not so?

A. Yes, sir.

Q. Will you mind telling us, and you can use 1936, since this is a price list as of June, 1936, what the prices were for limit controls, or whatever items appear upon the particular price list which I have in my hand, Commission's Exhibit No. 55, when such items were sold to such companies as Timken of Detroit, Cleveland Steel of Cleveland, and other large customers on whom you called in the year 1936?

A. If my memory serves me correctly, the list price of a standard limit control, such as are exhibited in this price list, was $2.50.

Q. Just so the record is complete, will you refer to the standard limit control that you referred to in your last answer, which appears upon Commission's Exhibit No. 55, and give us the low price appearing on Commission's Exhibit No. 55?

A. $5.70 is the lowest price shown on this price list of a similar type of product.

Q. What was that type numbered? In other words, identify the particular limit control involved which
363 you quoted at $2.50 to such companies as Timken, Cleveland Steel, and Petroleum Heat and Power?

A. No. 500-A-1 would be a typical example.

Q. Now, may I ask you, Mr. Luthe, whether or not on Commission's Exhibit No. 55, under the heading "Perfex Oil Burner Combustion Control (constant ignition)", if that had to do with the type of control which has been here referred to as a primary control?

A. It would.

Q. And were you then as of the date of Commission's Exhibit No. 55, June 15, 1936, making or getting ready to make a primary control for use in connection with domestic oil burners?

A. We were making such a control at that time.

Q. And actually selling them at that time?

A. Yes, sir.

Q. And do you recall at what price you quoted prospective customers; and I would like to limit your prospective customers in this connection to such companies as Cleveland Steel Products and Timken, to distinguish from dealers?

A. Yes. Well, I could not recall the price.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

364 By Mr. Freeman:

Q. Now, Mr. Luthe, do you know how that price compared with the primary control of a comparable type manufactured say, by Penn Electric Switch Company?

A. I would not know.

Q. About the same price, or more or less?

Mr. Haycraft: I object, Mr. Examiner, to questioning along this line. The witness has said he did not know the details of those prices, and I refrained from questioning him further with respect to that. I have another witness who is more familiar with the detailed prices.

Mr. Freeman: I have a perfect right to examine this witness with respect to any document put in by the Fed-

eral Trade Commission, and I am referring now to the data found on Commission's Exhibit No. 55.

Mr. Haycraft: If that is the basis, Mr. Examiner, if that is the basis for questioning him on that subject, I have the further objection that the document speaks for itself. The prices are there; I object to any further interrogation with respect to any other prices that are not on that document.

Mr. Freeman: Mr. Examiner, I think what we are all trying to do in this case is to find out the competition in connection with primary controls, thermostats and
365 limit controls; and we are talking about what were sold to oil burner manufacturers, not dealers. In other words, list prices has nothing to do with it. What we are really trying to find out is the low down, the rate at which Minneapolis, Perfex, Penn Switch, White-Rogers, Mercoid, and the other companies engaged in the manufacture and sale to oil burner manufacturers were competing with each other.

Mr. Haycraft: Mr. Examiner, I agree with that, but this witness is not offered for that purpose, and this exhibit is not offered for that purpose. This witness has testified to a general situation, and I have another witness, as I said before, who can answer these questions.

Mr. Freeman: With that understanding, that if the other witness does not answer those questions we will have the opportunity to further cross-examine Mr. Luthe—

Mr. Haycraft: No, I don't have any such understanding. This witness is not put on for that purpose, and is not qualified to testify to that. I object to having him brought back for that purpose.

Trial Examiner Sheppard: We will not have any fight about that, gentlemen. I will just ask Mr. Luthe myself, if you have any information; do you have any information by which you can answer the question that Mr. Freeman asked?

366 The Witness: It is available at the office.

Trial Examiner Sheppard: You haven't got that here?

The Witness: I was not asked for prices, and I did not prepare for it or refresh my recollection. I would like to state, however, that I believe that the price of the limit control at that time that I was asked about was $2.75 and not $2.50. I am sorry that I seem stupid—

Trial Examiner Sheppard: In other words, to save time I am going to support Mr. Haycraft's objection on the ground that you are not ready to testify to this now, and you will get that from the other witness. In other words, if not, I will ask that Mr. Luthe come back.

Mr. Freeman: With that understanding, fine.

Trial Examiner Sheppard: Yes. I want both of you gentlemen to have every access to submitting all the testimony that you want in this case, on both sides. All right.

By Mr. Freeman:

Q. Mr. Luthe, did you recognize the Penn Electric Switch Company's competition when you entered into the control burner field in 1935 and 1936?

A. They were competitors; yes, sir.

Q. And they were manufacturing primary controls, limit controls and thermostats for use in connection
367 with oil burners?

A. Yes, sir.

Q. And you were getting into that business to compete with Penn Electric Switch, as well as Minneapolis-Honeywell, and the other companies then engaged in the manufacture and sale of controls for use on domestic oil burners?

A. We opened that business to produce and sell a line of automatic controls, not particularly to compete with any company.

Q. But you recognized such companies as Penn Electric Switch, Minneapolis-Honeywell, and Mercoid, and such companies as that were engaged in the same line?

A. Certainly.

Q. And what companies then were then making an effort to sell to the general purchasing public, and by purchasing public I am limiting my question to oil burner manufacturers, making primary controls, room thermostats and limit controls?

A. Penn Electric Switch, Mercoid Corporation, Minneapolis-Honeywell.

Q. That is, as to primaries?

A. Yes, sir.

Q. How about the companies that were then making room thermostats and limit controls?

A. Well, there had been a number of companies
368 that produced a small quantity of room thermostats, but for some reason or other they never developed to

any considerable amount, but there was a variety of them made.

Q. Do you have any recollection, and can you give us a few names at this time?

Mr. Haycraft: That is objected to unless they are restricted to the sale of those products to the oil burner manufacturers.

Trial Examiner Sheppard: All right, I will limit it in that respect.

The Witness: Detroit Lubricator Company; the General Electric Company, the Iron—

Mr. Haycraft: Iron what?

The Witness: They are stoker people, that is all I can recall.

By Mr. Freeman:

Q. Do you recall Roy Johnston, of the Automatic Devices Corporation of Milwaukee?

A. Yes, sir. I very distinctly recall him now.

Q. Do you recall whether or not Automatic Devices offered room thermostats for sale to oil burner manufacturers?

A. They did.

Q. And then you had to meet the competition of the Automatic Products, that is, this Roy Johnston Company at Milwaukee, in connection with making your own 369 sale of room thermostats to oil burner manufacturers?

A. We have.

Q. Do you recall any other company that you have to meet competitively, who make and offer for sale to oil burner manufacturers of room thermostats and limit controls?

A. White-Rogers of St. Louis.

Q. Any other company; I am restricting my questions to those companies who make controls and offer them for sale to oil burner manufacturers for use in connection with domestic oil burners?

A. I can't recall any others right now.

Trial Examiner Sheppard: Where is that White-Rogers Company located?

The Witness: St. Louis.

By Mr. Freeman:

Q. Mr. Luthe, do you recall, or can you give us the approximate dollar volume of sales of limits controls by your Company to Timken in 1936?

A. I could not give it by the breakdown, no.

Q. Did you sell them some controls other than limit controls in 1936?

A. I believe we did.

Q. Then could you give us your over-all sales in dollars volume of controls sold to Timken in the year 1936?

A. I believe it was approximately $10,000.

370 Trial Examiner Sheppard: Is that a big account in this business?

The Witness: They were one of the largest buyers of limit control equipment for oil burners at that time.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. And do you mind giving us the over-all, approximately, sales volume of your company to Timken for the year 1937?

A. It was approximately $37,000.

Q. And does that include, if you know, primary controls as well as limit controls?

A. It did.

Q. And I take it from what you said earlier that oil burner manufacturers preferred to buy all of their controls, that is, the three controls usually used on a single oil burner, from a single control manufacturer; is that so?

A. That is the usual trade practice.

Q. And that is the practice that is followed now?

A. Yes.

Q. That practice has not changed in the last two years, has it?

A. It has not, it has not.

Q. Do you know from your personal experience, calling on the trade, why they preferred to buy controls from
371 a single company as distinguished from buying controls from several companies, and using those controls on the same burner?

A. Well, automatic oil burners are the kind of a device that have to have a certain amount of service. If the control equipment is supplied by different control manufacturers, the question arises as to who is responsible for the service of that burner; so the manufacturer usually likes to use all the controls of a single manufacturer on a single burner, from a single manufacturing source, so that, there is no divided responsibility when the question of service arises.

Q. Is the service problem of your company, or the control manufacturers, a real problem?

Mr. Haycraft: That is objected to as irrelevant and immaterial, and not proper cross-examination, and going into new matter.

Trial Examiner Sheppard: I will let him answer that.

The Witness: The question of service has always been one of the most important ones in the—the question of service on automatic controls, that is, the real extent to which they give trouble, or are trouble free, has always been one of the biggest bones of contention in the oil burner industry.

372 By Mr. Freeman:

Q. When you sold Timken controls in 1936, did they put them out under their own name, or did they put them out under the name of Perfex?

A. We developed an individual name plate for our controls, on which we left our name off and put on their name and trade-mark.

Q. So that the purchasing public bought a Timken control as distinguished from a Perfex control?

A. Yes.

Trial Examiner Sheppard: But your Company made them?

The Witness: Yes, sir.

Trial Examiner Sheppard: And put their name on them?

The Witness: On the outside cover of the control.

By Mr. Freeman:

Q. So that any of the Timken burners with your controls on, without your name on, if they got into trouble, Timken would be the company that the purchasers would look to for repair or replacement, is that correct?

A. That is right.

373 Q. Have you ever had any calls with respect to service, where your name appeared upon the controls, any of your salesmen or branch officers?

Mr. Haycraft: I am renewing my objection, going into a field that is not proper cross-examination. If he wants to go into that with his own witnesses, I have no objection, at the proper time.

Trial Examiner Sheppard: Yes. I am sorry I did not tell you before. It was my own fault, Mr. Freeman,

I want to restrict on cross-examination. I think you are going a little bit too far on that. I do not object, but it will all be brought out.

Mr. Freeman: I think we are about through on that line. I would like to get this answer. It fits in with this service problem, whether or not he knew, when selling one control, whether he sold a Perfex control, or whether it was sold as a Timken control.

Trial Examiner Sheppard: You may answer that, Mr. Luthe.

The Witness: I would rather have you state the specific question again, if you will, Mr. Freeman.

Mr. Freeman: I will reframe the question, Mr. Luthe.

By Mr. Freeman:

374 Q. Have you ever had occasion, in your experience as a manufacturer of oil burner controls, where an oil burner in someone's home got into trouble, wherein such person may have called you up, or your branch, or your salesman, whether your name appeared upon the thermostat?

A. Many times.

Q. Many times?

A. Yes. Our name appears inside on the control, attached to it in very small type, as made by Perfex Corporation, which is observable when the cover is removed.

Q. But your thermostat has your name on, has it not?

A. Yes, sir.

Q. Mr. Luthe, you stated that the so-called 95 per cent clause in the M-H 1937 contracts temporarily tied up your activities. You know, as a matter of fact, that that clause was eliminated within three or four weeks after it was put into effect?

A. That is right.

Q. So that the effect on your activities only lasted for a very short period of time?

A. That is it.

Q. And you have not had—

Trial Examiner Sheppard: Is that the one, Mr. Freeman, that was cancelled out?

Mr. Freeman: Yes.

By Mr. Freeman:

375 Q. You have not had any similar problems or troubles since January or February of 1937, is that correct?

A. No. The question continues to arise about the 90 per cent clause.

Q. I am speaking about the 95 per cent.

A. No, that has never come up subsequent thereto.

Q. Do you know of any instance where an M-H contract with an oil burner manufacturer prevented you from getting any business?

A. Yes, it did.

Q. Where?

A. I cannot tell you the companies without interviewing our representatives, but certain companies felt, after they had signed the Minneapolis-Honeywell contract, if they were not legally, at least they felt morally bound not to buy controls from us.

Q. Isn't it true that a good many of your customers that you sell controls, continued to sell the controls to since 1936, actually had Minneapolis-Honeywell signed contracts?

A. That is correct.

Q. And you have been able to break into the field notwithstanding those agreements?

A. That is correct.

376 Q. You manufacture your primary oil burner control in rather substantial volume, do you not?

A. Relative to the total volume in the industry, I would say yes.

Q. That is, you make a substantial number of primary controls?

A. Yes, sir.

Q. And a good percentage of the total over all primaries made by the industry?

A. I would say so.

Q. And the Examiner asked you as to how your company stood, whether it was a large company or small company. Am I correct in my understanding that your company is substantially second in position in the control field?

A. I would judge that to be correct, when you limit it to automatic temperature controls.

Q. This is all directed, Mr. Luthe, to automatic temperature controls.

A. Yes, sir.

Q. So that the record is clear, your company would come pretty much in the so-called second position?

A. I believe so.

Q. When you started, you started from scratch, in 1935, did you not?

A. Right, sir.

Q. That is, you did not take over any company,
377 I mean, any automatic temperature control company?

A. No, sir.

Q. You started from zero, then?

A. Yes, sir.

Q. And you have been able to build up your business year by year, until today you consider yourself substantially the second company in the industry?

A. I believe that is correct.

Trial Examiner Sheppard: The respondent being the largest?

Mr. Freeman: That is correct.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. And you have been able to do that notwithstanding Minneapolis-Honeywell's position in the field?

A. The record speaks for itself.

Q. And you have been able to do that notwithstanding the fact that you had to compete with the Penn Electric Switch Company, who likewise were selling thermostats, limit controls, primary controls for use in connection with domestic oil burners?

A. Yes.

Q. And you have done that notwithstanding Mercoid?

A. Yes, sir.

Q. Has been selling Oil burner controls?

378 A. Yes, sir.

Q. By the way, you said when you were with Time-O-Stat Controls Corporation, back about 1930 or '31, you then were in competition with Mercoid Corporation?

A. Yes, sir.

Q. And you know, do you not, that they then sold oil burner controls back in those days?

A. Yes, sir.

Q. If you know, what was Mercoid's standing in the trade, back in 1931? What was its position with respect to the making and selling of automatic controls, temperature controls?

Mr. Haycraft: I object. No foundation has been laid. The witness does not know anything about it, in the first place, and, secondly, it is not proper cross-examination.

Trial Examiner Sheppard: Objection sustained. I do not want to go into that. We will have a man on that, on the stand, and get all that information.

By Mr. Freeman:

Q. Do you know what the present position of Mercoid is?

Mr. Haycraft: The same objection.

Mr. Freeman: The same ruling, I suppose?

Trial Examiner Sheppard: I doubt this gentleman knows those things.

379 Mr. Freeman: I think he knows. It is not very far afield. Your Honor, I am trying to limit it pretty much to the line of examination that has gone on here.

Mr. Haycraft: I have been very lenient in my objections, Mr. Examiner, but I think that he has gone clear beyond any proper cross-examination.

Trial Examiner Sheppard: Yes. Objection sustained to anything in reference to Mercoid at this time because that will come out by a man who knows better than this man.

Mr. Freeman: That is all.

Mr. Haycraft: I just have a few questions.

Redirect Examination by Mr. Haycraft.

Q. You say you are second in the industry now?

A. Yes.

Q. How do you compare in volume in sales of automatic temperature controls with Minneapolis-Honeywell?

A. I could not tell, because they make so many other parts, and we can only know their approximate total sales volume.

Trial Examiner Sheppard: You mean the respondent?

The Witness: I base the statement on the fact that Penn Electric Switch published a financial statement 380 showing their sales volume each year, which includes automatic temperature controls, refrigeration controls, and pressure controls for pumps, and it is quite evident from that, that our volume of automatic temperature controls for heating alone must be somewhat greater than their volume.

Mr. Freeman: By "their," you mean the Penn Electric?

The Witness: Yes.

By Mr. Haycraft:

Q. But you haven't any way of comparing your volume of sales of such controls with the sales by Minneapolis-Honeywell?

A. We have no way of comparing that.

Q. Would you say they are many times as large as yours?

A. I believe it would be several times.

Q. You go beyond "many"?

A. Yes.

Q. How do you account—you were asked about your success in this field. How do you account for your rapid growth in the sale of automatic temperature controls?

Mr. Freeman: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

On the record.

381 Go on, Mr. Luthe, if you want to.

The Witness: Well, I believe one thing was that we endeavored to sell only large, nationally-known companies, and we approached them with the idea of putting their own name on the accessory, or their burner, instead of some accessory manufacturer's name, so that we had to have no public acceptance of the name "Perfex," but rather took the manufacturer's trade mark name, and put that on our product, which is called private brand type of merchandise, so that we had no real sales resistance toward acceptance of the new name in the industry.

Trial Examiner Sheppard: Are you through?

Mr. Haycraft: One question.

By Mr. Haycraft:

Q. Had there been a very substantial increase in the volume of oil burner business generally?

A. Up to the time of the war it was continuing to grow.

Q. In other words, it grew very rapidly?

A. It was expanding up to the time of the war.

Trial Examiner Sheppard: It is sort of at a standstill now?

The Witness: Completely restricted, practically, since the war started.

Trial Examiner Sheppard: All right.

By Mr. Haycraft:

382 Q. Do you know anything about the volume of business done with the oil burner manufacturers, by

the Detroit Lubricator Company, the General Electric and White-Rogers and these others you named?

A. Relatively, yes. I would say it is not very large.

Q. While you were with the Time-O-Stat Corporation, you contacted the oil burner manufacturing industry, also, did you not?

A. Yes, sir.

Q. So that you were not an unknown man in that field?

A. Correct.

Q. Would you say that had something to do with your success in building up the Perfex Corporation?

A. I hope it did not hinder it.

Mr. Haycraft: That is all, Mr. Examiner.

Mr. Freeman: That is all.

Trial Examiner Sheppard: Thank you, Mr. Luthe.

(Witness excused.)

Mr. Haycraft: I will call Mr. Tate to the stand.

Trial Examiner Sheppard: We will take a little recess.

(A short recess was taken.)

383 Trial Examiner Sheppard: Mr. Reporter, this gentleman is Mr. V. R. Tate, Secretary of the Perfex Corporation, 500 West Oklahoma Avenue, Milwaukee, Wisconsin.

V. R. TATE was thereupon called as a witness for the Commission and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Haycraft.

Q. What is your occupation?

A. I am secretary of the Perfex Corporation.

Q. How long have you been secretary of the Perfex Corporation?

A. I believe I was elected secretary in 1936, and I have been with the Perfex Corporation since December, 1934.

Q. What have been your duties generally with the company during that period of time, since 1934?

A. Primarily as patent attorney.

Q. Did you have anything to do with the sales end of the Company?

A. Yes, I have been closely associated with it, but I have not been directly responsible for sales.

Q. And who has been directly responsible for sales during that period of time?

A. Mr. Luthe, the president of the company, in
384 combination with Mr. Frederick B. Hanson, who is vice-president.

Q. Is Mr. Hanson now with the Company?

A. No, he is not. He is a Major in the Army.

Q. How long has he been away from the Company?

A. About two years.

Q. I show you Commission's Exhibit No. 55 and ask you if you are familiar with that price sheet which was identified by Mr. Luthe.

(Handing document to the witness.)

A. Yes, I am.

Q. Will you refer to that and tell us which of those items listed there are limit controls, and which are primary controls, and which are thermostats, by giving their number.

A. Do you want me to describe them by the numbers down here?

Q. Yes, sir.

A. 100-A-1, room thermostat; 150-A-1, room thermostat; 170-A-1, room thermostat; 120-A-1, room thermostat; 400-A-1 is a limit control; 402-A-1 is a limit control; 401-A-1 is a limit control; 500-A-1 is a limit control; 501-A-1 is a limit control; 700-A-1 is a limit control; 701-A-1 is a limit control; 702-A-1 is a limit control; 703-A-1 is a limit control; 704-A-1 is a limit control; 705-A-1 is a limit control; 706-A-E is a limit control; 707-A-1 is a limit control; 708-A-1 is a limit control.

385 5200-DB-1 is an oil burner primary control; 5000-DB-1, electrical relay; 3000-D-1 is solenoid water valve; 3000-B-1 is a solenoid water valve; 3000-J-1 is a solenoid water valve.

Trial Examiner Sheppard: Do you want that latter part, Mr. Haycraft? Or did you just want the primary and limit controls?

Mr. Haycraft: That is all right, that gives a complete story of the exhibit.

Trial Examiner Sheppard: All right.

By Mr. Haycraft:

Q. Were those limit controls that you mentioned there for use on oil burners, or for other than oil burners?

A. Oil burners and stokers.

Q. They could be used on either one?

A. That is right.

Q. Now, the primary control, was that for use on oil burners?

A. Domestic oil burners.

Q. Domestic Oil burners?

A. Yes.

Q. Now, do you recall when the primary control which you described as 5200—

A. (Interposing) 5200-DB-1.

Q. 5200-DB-1; when you went into production of
386 them and began to sell and offer them to the trade?

A. This price sheet was published in June, 1936, and it is my recollection that shipments were not made until probably several months after this went out. I believe this was in advance of actual production, to the best of my recollection.

Q. Do you recall the prices at which those various items were sold to the oil burner manufacturers, or some of the principal items there, for use on oil burners, along in 1936, late in 1936 or early in 1937?

A. Yes, I have some prices here.

Trial Examiner Sheppard: Refer to any data that you brought with you, Mr. Tate, and then testify from it, but not from the paper itself.

The Witness: Which did you want, sir?

By Mr. Haycraft:

Q. Take some of the limit controls first that you have there listed, that were most popularly sold to the oil burner manufacturers.

A. Limit controls; the low prices to some of the manufacturers were $2.50 and $2.60.

Q. What were the prices on the primary controls?

A. The primary control was around $8.00, as I remember it. I have a figure here of $7.90 to one manufacturer at that time.

387 Q. Did you contact the trade at all, or did you just work in the office?

A. I contacted the trade very little. I have called on a few accounts, mostly in connection with patent work.

Q. In the sale of limit controls, do you know whether they were sold to the manufacturers who had their own thermostats and their own primary controls, or purchased them from other sources of supply?

A. Well, in 1936 before we had primary controls, they were sold to manufacturers who were using primary controls of other manufacturers.

Mr. Haycraft: Will you mark these?

(The documents referred to were marked Commission's Exhibits Nos. 56, 57, 58 and 59-A and 59-B, for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit No. 56 for identification, entitled, "Instruction Sheet for Series 500 Strap On Hot Water Control; Models 500-D-1, 500-D-4 and 500-D-5"; and Commission's Exhibit No. 57, "Instruction Sheet for Series 5300 Primary Controls"; also Commission's Exhibit No. 58, entitled "Perfex Pressure Control, Series 700"; and also 59-A and B, "Instruction Sheet for No. 100 Supersensitive Low Voltage Room Thermostat, Model 100-A-3"; and ask you if you can identify these, and if so, what use was made of them 388 by your organization?

(Handing exhibits to the witness.)

Trial Examiner Sheppard: Take them up one at a time. Begin with Exhibit No. 56.

The Witness: Exhibit No. 56 is an instruction sheet covering one of our limit controls, Series 500.

Mr. Haycraft: I offer that in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Freeman: No.

Trial Examiner Sheppard: Exhibit No. 56 will be admitted.

(The document referred to heretofore marked for identification COMMISSION'S EXHIBIT No. 56 was received in evidence.)

By Mr. Haycraft:

Q. What use was made of that?

A. This was shipped with each control, and it was also distributed to our salesmen and to our customers for use in their service manual at that time.

Q. All right, take 57.

A. 57 is an instruction sheet covering our Series 503 primary controls, which was printed in May, 1943.

Trial Examiner Sheppard: That is rather recently, isn't it?

The Witness: Yes.

389 By Mr. Haycraft:

Q. What is No. 58?

Trial Examiner Sheppard: Better offer that.

Mr. Haycraft: I will offer it.

Trial Examiner Sheppard: Any objection?

Mr. Freeman: We object to it because it has to do with stoker primary controls, which are not involved or in issue in this case.

Trial Examiner Sheppard: How about that, Mr. Haycraft?

Mr. Haycraft: I see that it has. I did not know it was when I first had it marked.

Trial Examiner Sheppard: Objection sustained.

Mr. Freeman: And I ask that the testimony with reference to Exhibit 57 for identification be stricken.

Trial Examiner Sheppard: It may be stricken.

Mr. Haycraft: I will withdraw the offer.

Trial Examiner Sheppard: Offer withdrawn. Cancel, Mr. Reporter, Commission's Exhibit No. 57.

By Mr. Haycraft:

Q. Take up No. 58.

390 A. Exhibit 58 is an instruction sheet covering our Series 700 pressure controls.

Q. When was it published?

A. January, 1936.

Q. Is that for use on an oil burner?

A. This is for use on oil burners, and other heating equipment.

Mr. Haycraft: I offer that in evidence.

Trial Examiner Sheppard: Any objection, Mr. Freeman?

Mr. Freeman: Has he offered it?

Trial Examiner Sheppard: Yes.

Mr. Freeman: May we look at it first?

Trial Examiner Sheppard: Yes.

Mr. Freeman: No objection.

Trial Examiner Sheppard: Let Exhibit 58 be received in evidence.

(The paper referred to, heretofore marked for identification COMMISSION'S EXHIBIT 58, was received in evidence.)

Trial Examiner Sheppard: Take up the next.

The Witness: Exhibit 59, instruction sheet covering our

Series 100 room thermostat, was printed October 1936. It was shipped out with each room thermostat of that type
391 and was also distributed to our salesmen and customers.

Trial Examiner Sheppard: All right.

By Mr. Haycraft:

Q. What use was made of Exhibit 57 in that respect? Was that sent out?

Mr. Freeman: 58.

The Witness: 58 was also packed with each pressure control, as well as distributed to our salesmen in the trade.

Mr. Haycraft: I offer Exhibit 59 in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Freeman: May I see it?

The Witness: Yes. (Handing document.)

Mr. Freeman: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

On the record.

Mr. Freeman: If the witness will merely state this has to do with room thermostats with reference to oil burners, we have no objection.

By Mr. Haycraft:

Q. Can that be used in connection with domestic oil burners?

A. It can.

Mr. Freeman: No objection.

392 Trial Examiner Sheppard: Exhibit 59 may be admitted in evidence.

(The paper referred to, heretofore marked for identification COMMISSION'S EXHIBIT 59-A and 59-B, was received in evidence.)

By Mr. Haycraft:

Q. What was the purpose of the preparation and publication of these exhibits I just called your attention to, Mr. Tate?

A. They are the instructions for the installation in installing the equipment and containing wiring diagrams, suggesting methods by which the controls can be wired in connection with other controls, to control oil burners and other heating equipment.

Q. That is, other controls, manufactured by other manufacturers?

A. That is right.

Q. And included in other manufacturers were Minneapolis-Honeywell?

A. In some of the diagrams I believe we have the Minneapolis-Honeywell controls, or at least inferentially included, probably by the word "Series 10". In the trade generally that is recognized as Minneapolis-Honeywell.

Q. Where reference is made to Series 10, in this exhibit, that refers to Minneapolis-Honeywell?

393 A. The device.

Mr. Freeman: He has already testified.

The Witness: That the trade would accept it as that.

Mr. Haycraft: Mark this Exhibit 60.

(The paper referred to was marked Commission's Exhibit 60, for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit 60, and ask you if you can identify that as a price list of Perfex Company of 1941?

A. Exhibit 60 is our dealer's trade price list. It was published in March, 1941.

Q. Does that contain prices as to products having to do with oil burner equipment?

A. This includes dealer prices on controls for use in oil burners, stokers, gas burners, and so forth.

Mr. Haycraft: Mark this Commission's Exhibit 61, for identification.

(The paper referred to was marked Commission's Exhibit 61, for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit 61, for identification, which purports to be Perfex twin contact controls handbook or catalog, and ask you if you can identify

394 that as a catalog of the Perfex company containing, among other things, the oil burner controls?

A. Exhibit 61 is our handbook, illustrating and describing our controls, many of which are for use with oil burners, domestic oil burners.

Mr. Haycraft: I offer the two exhibits in evidence.

Trial Examiner Sheppard: Any objections?

Mr. Freeman: With the understanding that we may ex-

amine him with respect to any domestic oil burner controls illustrated in the Perfex handbook, Exhibit 61.

Mr. Haycraft: Having to do with oil burners.

Mr. Freeman: I limited it to oil burners.

Trial Examiner Sheppard: Let the exhibits Nos. 60 and 61 be admitted in evidence.

(The papers referred to, heretofore marked for identification COMMISSION'S EXHIBITS 60 and 61, were received in evidence.)

Trial Examiner Sheppard: Is there a picture in there of a primary control?

Mr. Haycraft: I was just going to ask the witness to refer to the different principal controls for use on oil burners, giving the page number.

The Witness: Such controls are illustrated.

By Mr. Haycraft:

395 Q. Will you look through the catalogue and describe and refer to those that are the principal items for use on oil burners?

Trial Examiner Sheppard: Mr. Tate, for my information, I want you to give me the description, in your own words, of a limit control and a primary control. I have no idea of what they look like, and I want to see one. I want to see what I am hearing on this, what it is about. I want to get some idea of the difference between a limit and primary control.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

On the record.

Mr. Freeman: It is understood further that Exhibit 61 will be treated as a physical exhibit.

Mr. Haycraft: Oh yes, by all means.

Trial Examiner Sheppard: Yes.

Mr. Haycraft: Always.

Trial Examiner Sheppard: Whatever use you gentlemen want to make of it, and me.

Mr. Freeman: Will that kind of understanding, then, govern throughout this case, so that every time some big document comes in, we do not have to worry whether you have two thousand pages to reprint?

396 Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

On the record.

Give us a good description of a limit control.

The Witness: A limit control as known in this industry is an electrical control device which is mounted on a domestic heating system, whether warm air furnace or hot water boiler or steam boiler, to protect the furnace or boiler from overheating the oil burner. In other words, on a steam boiler, when the pressure increases to a certain predetermined amount, the limit control opens the circuit and causes the oil burner to stop operation.

Trial Examiner Sheppard: That is automatic?

The Witness: Automatic, and the same is true on a warm air furnace, or on a hot water boiler. These controls are different for different types of heating systems.

Trial Examiner Sheppard: Look at that exhibit 61, and see if you can find a picture, an illustration of a limit control, and I want the reporter to get the page number, so I can give it consideration.

Mr. Haycraft: The page number and item number.

The Witness: Our Series 400, warm air limit controls, are shown on Form 113. There is no actual page 397 number. I believe the sheets are filed according to form number.

Trial Examiner Sheppard: All right. Is that the only one, or are there several of them?

The Witness: On the same page there is a Series 405, warm air limit control.

Trial Examiner Sheppard: All these are limit controls?

The Witness: Series 450 and Series 455 are also warm air limit controls. Correction on that. Series 450 and 455 are hot water fan controls that are also mounted on a warm air furnace, but they are for the purpose of controlling the operation of the fan, and not for the purpose of starting and stopping the primary heating unit. They are shown on Form 114.

Mr. Freeman: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

On the record.

The Witness: The internal mechanism of Series 400 limit controls is shown on Form 216, in Exhibit 61.

Mr. Haycraft: That is on a green sheet in the back of the catalogue.

Off the record.

Trial Examiner Sheppard: Off the record.

398 (Discussion off the record.)

Trial Examiner Sheppard: On the record.

399 By Mr. Haycraft:

Q. In those Exhibits 60 and 61 is there a description of what is known as the combination fan and limit control sold by Perfex?

A. There is.

Q. What is that?

A. That is our No. 475.

Q. Do you remember when you first put that device on the market?

A. Approximately in 1938. I don't have anything with which to refresh my recollection as to the exact date.

Mr. Haycraft: Will you number these?

(The documents referred to were marked Commission's Exhibits Nos. 62, 63, 64, and 65, for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit No. 62, for identification, which purports to be a photostatic copy of an invoice of a Perfex combination fan and limit control to the Timken Company in October, 1938; also Exhibit No. 63, a photostatic copy of an invoice of a Perfex combination fan and warm air control, to Electrol, Inc., under date of November 25, 1938; also Exhibit No. 64, a photostatic copy of a posting medium, covering the sale of a Perfex combination fan and warm air control to Timken Silent

400 Automatic Division of the Timken Detroit Axle Company, under date of April 26, 1939; and Commission's Exhibit No. 65 for identification, which purports to be a photostatic copy of a posting medium covering the sale of a Perfex combination fan and warm air control to Timken under date of June 30, 1939, and ask you if you can identify these as copies of invoices and posting mediums taken from the files of the Perfex Corporation representing the sale of that item on the dates indicated?

(Handing documents to the witness.)

Trial Examiner Sheppard: Take them up one at a time.

The Witness: Exhibit No. 62 is the photostatic copy of our invoice C-7036 to Timken, covering one of our 475-D combination fan and limit controls.

By Mr. Haycraft:

Q. The date was correct that I mentioned, October, 1938?

A. This invoice is dated October 28, 1938.

Exhibit No. 63 is a photostatic copy of our invoice C-7954, dated November 22, 1938, to Electrol, Incorporated, covering two of our 475-D combination fan and limit controls.

Exhibit No. 64 is a photostatic copy of our invoice C-2401, dated April 25, 1939, to Timken, covering 50 of our 475-D combination fan and limit controls. This
401 particular photostatic copy was made from the posting copy of the invoice.

Exhibit No. 65 is a photostatic copy of our invoice C-4029, dated June 30, 1939, to Timken, covering 50 of our No. 475-D combination fan and limit controls. This photostatic copy was made from a posting copy of that invoice.

Q. Those invoices correctly state the prices at which those controls were sold to the parties indicated?

A. They do.

Mr. Haycraft: I offer them in evidence.

Mr. Freeman: No objection.

Trial Examiner Sheppard: Exhibits Nos. 62 to 65 both inclusive will be admitted into evidence.

(The documents referred to, heretofore marked for identification COMMISSION'S EXHIBITS NOS. 62, 63, 64 and 65 were received in evidence.)

By Mr. Haycraft:

Q. Were you present at any of the discussions between Mr. Luthe and the officers of the Minneapolis-Honeywell Corporation with respect to a license under the Freeman patent of your combination fan and warm air control?

A. I can't be positive. To the best of my recollection I was at one meeting in Chicago with Mr. Harold Sweatt.

Q. Do you have any recollection of a discussion
402 with respect to the price at which Perfex was selling its combination fan and warm air controls in 1939, 1938 and 1939?

A. The price was discussed, yes.

Q. What is that?

A. The price was discussed.

Q. Do you recall what was said with respect to that price by Mr. Sweatt?

A. I don't remember the exact words, but the facts as I remember them were that we were selling them at a lower price than Minneapolis was selling them at that time.

Q. Did he call your attention to that, or did you already know it?

A. I think it was known.

Q. And was anything said with respect to advancing that price by the Perfex Corporation? Was anything said by you or Mr. Luthe or Mr. Sweatt?

A. Only in connection with this Freeman license.

Q. What was said with respect to that?

A. Well, the license agreement as it was proposed at that time, and later executed, gave Minneapolis the right to fix the minimum selling price.

Q. Do you remember the price which was fixed?

A. It was later fixed at $5.25.

Q. And does that account for the price on Com-
403 mission's Exhibit No. 65?

A. It does.

Q. Now, I call your attention to Commission's Exhibit No. 64, which shows the same item sold for $4.95 in April, 1939; and also direct your attention to the fact that in 1938 the two invoices which you identified, 61 and 62, show the price at $4.85. Have you any explanation of the difference in the price of $4.85 and $4.95 between those two years?

A. My recollection at this time is that we raised that price voluntarily from $4.85 to $4.95 sometime around the first of the year 1939.

Q. And what was the purpose in raising the price at that time?

A. Well, there might have been more than one reason, but I think one of the reasons discussed was that we were negotiating for this license agreement, and were in hopes that the minimum price—that the maximum price would be $4.95 instead of $5.25. We did not know at that time, I don't think, what the figures might be.

Trial Examiner Sheppard: You raised this price voluntarily?

The Witness: Yes.

Trial Examiner Sheppard: Do you remember when this license agreement was executed?

404 The Witness: I think it was in April, 1939, approximately.

Mr. Haycraft: See if that will refresh your recollection. (Handing document to the witness.)

The Witness: I think it was approximately the 18th of April, 1939.

By Mr. Haycraft:

Q. When did you put the higher price into effect?

A. The $5.25 price?

Q. Yes.

A. 30 days from that time.

Q. 30 days from April 18th?

A. Yes.

Q. So that the price of $4.95 on April 26th was still the old price, you had not put the new price into effect?

A. That is right.

Q. The new price did not go into effect until May 18, 1939, is that right?

A. That is correct.

Q. Are you familiar with the various accounts that were sold by Perfex Corporation during the years beginning, say, about 1936 or 1937?

A. Generally.

Q. Have you any data, or have you refreshed your 405 recollection so that you can testify as to the extent of sales, for instance, to the Automatic Burner Corporation since that time?

A. According to our records our first sales to Automatic Burner Corporation in Chicago were in 1938, and that amounted to almost $6600.

Q. Do you have any way of knowing what those items were?

A. No, I haven't.

Q. The same question with respect to the Gould Oil Burner Corporation, Cambridge, Massachusetts.

A. We sold Gould Oil Burner some controls in 1936 and 1937, none in 1938.

Q. Do you know what items they were?

A. No, I don't. They would be oil burner controls, and they might have been thermostats, or limit controls, or they might have been primary controls late in 1937.

Q. Were your sales substantial, or otherwise?

A. About $2300 in 1936.

Q. In dollars?

A. In dollars, and a little over $1,000 in 1937, and no sales in 1938.

Q. The same question with respect to the Malleable Iron Fittings Company, Branford, Connecticut?

A. We sold them $800 worth of controls in 1936 and only $4.00 in 1937, and nothing in 1938.

406 Q. The Wayne Oil Burner Company, Fort Wayne, Indiana?

A. We did not sell them any controls in 1936. We sold them about $1,600 in 1937.

Q. What about 1938?

A. We sold them about $16,000 in 1938. And we have continued to sell them ever since that time.

Q. The Wisconsin Oil Burner?

A. In 1936 we sold the Wisconsin Oil Burner a little over $500 worth of controls, and about $2,500 worth of controls in 1937, and nothing in 1938.

Q. The York Oil Burner Company, York, Pennsylvania?

A. We sold the York Oil Burner $25.00 in 1936, $900 in 1937, and $2400 in 1938.

Q. And the Reif-Rex Oil, Inc., Buffalo, New York?

407 A. Our first sales to Reif-Rex Oil, in 1938, about $6,000.

Q. Acme Tool & Gauge Co., Pawtucket, Rhode Island?

A. We did not sell Acme Tool & Gauge Company anything in 1936. We sold $150 in '37; nothing in 1938.

Q. Alida Manufacturing Company, Brooklyn, New York?

A. We have not sold them anything.

Q. Citro Oil Burner Corporation, Pompton Lakes, New Jersey?

Mr. Freeman: What is that last company?

Mr. Haycraft: Citro Oil Burner Corporation, Pompton Lakes, New Jersey.

The Witness: Citro Oil Burner Corporation, we did not sell them any controls in 1936; we sold them $139 in '37, $21 in 1938.

By Mr. Haycraft:

Q. Concord Oil Corporation, Brooklyn, New York?

A. I believe about $600 in 1936 we sold Concord Oil Corporation; about $300 in 1937, nothing in '38.

Q. Auburn Burner Corporation, Auburn, Indiana?

A. We did not sell Auburn Burner any controls in '36; we sold them about $600 in 1937; about $3,200 in 1938.

Q. Bedard Johnson Company, Minneapolis, Minnesota?

A. I have no record of any sales to them.

Q. Berggren Engineering Company, Brooklyn, New York?

408 A. I have no record of any sales for them.

Q. Braden Engineering, Incorporated, Providence, Rhode Island?

A. I have no record of any sales to Braden.

Q. Brown Oil Burner Equipment Company, Cambridge, Massachusetts?

A. In 1936 we sold Brown Oil Burner a little less than $300, and 1937 a little over $300. Nothing since.

Q. Buck Engineering Company, Incorporated, Freehold, New Jersey?

A. I have no record of any sales to them.

Q. Burner Parts & Service, Lancaster, Pennsylvania?

A. In 1936 we sold Burner Parts & Service about $760; 1937, about $2,500; 1938, $735.

Q. Campbell Machinery, Minneapolis?

A. We sold Campbell Machinery $18 in 1936 and $125 in 1937; nothing in '38.

Q. Capitol Oil Burner Company, Hartford, Connecticut?

A. I have no record of any sales to them.

Q. Carlson Brothers Tool & Machine Company, Boston, Massachusetts?

A. In 1936 we sold Carlson Brothers $10 worth of controls; $128 in 1937; nothing in '38.

Q. Carter-Korth Oil Burner Company, Roselle Park, New Jersey?

409 A. We did not sell Carter-Korth any controls in '36; we sold them about $400 in 1937; $21 in 1938.

Q. Harrison Sales Company, Seattle, Washington?

A. I have no record of any sales.

Q. Hart Oil Burner Corporation, Peoria, Illinois?

A. No record of any sales.

Q. Harvey-Whipple, Incorporated, Springfield, Massachusetts?

A. 1936, we sold Harvey-Whipple $28; 1937, about $300; 1938, about $900.

Q. D'Elia Oil Burner Company, Bridgeport, Connecticut?

A. In 1936, we sold D'Elia $29; nothing in 1937; $18 in 1938.

Q. David Duff & Sons, New Bedford, Massachusetts?

A. I have no record of any sales.

Q. Eisler Engineering Company, Newark, New Jersey?

A. No record of any sales.

Q. Electromatic Oil Burner Company, Malverne, New York?

A. 1936, we sold Electromatic Oil Burner Company $24 worth of controls; nothing in 1937 or '38.

Q. Interprise Oil Burner Corporation, San Francisco, California?

A. We did not sell them any controls in '36, '37 or '38.

Q. Fairfield Oil Heating Company, Greenwich, Connecticut?

A. Fairfield, we sold about $550 in 1937; about 410 $470 in 1938.

Q. Fargo Foundry Company, Fargo, North Dakota?

A. We sold Fargo Foundry $19 in '37; nothing in '36 or '38.

Q. Gar Wood Industries, Inc., Detroit, Michigan?

A. We sold Gar Wood Industries $22 in 1936; nothing in 1937 or 1938.

Q. General Oil Burner Corporation, Baltimore, Maryland?

A. We sold General Oil Burner Corporation about $260 in 1937; nothing in 1936 or 1938.

Q. General Oil Heating Corporation, West New York, N. Y.?

A. We did not sell General any controls in 1936, but we sold them a little over $200 in 1937, about $750 in 1938.

Q. Gold Star Oil Burner Manufacturing Company, Yonkers, New York?

A. We sold Gold Star Oil Burner Manufacturing Company $62 in 1936; $2,000 in 1937; a little less than $1,000 in 1938.

Q. Goodrich Oil Burner Manufacturing Corporation, New Haven, Connecticut?

A. I have no record of any sales.

Q. Greenwood Engineering Company, Glenarm, Maryland?

A. We sold Greenwood Engineering Company $17 in 1937; nothing in 1936 or 1938.

Q. Lynn Products Company, Inc., Lynn, Massachusetts?

411 A. I have no record of any sales in 1936, '37 or '38.

Q. Hayward Manufacturing Company, Brooklyn, New York?

A. I have no record of any sales to Hayward Manufacturing Company.

Q. Hi-Point Corporation, Bellefontaine, Ohio?

A. I have no record of any sales.

Q. Hoben Manufacturing Company, Waltham, Massachusetts?

A. We sold Hoben $24 in 1936, $4 in 1937, nothing in 1938.

Q. Holtum Manufacturing Company, Freeport, Illinois?

A. I have no record of any sales.

Q. Homestead Engraving Corporation, Brooklyn, New York?

A. We sold Homestead $23 in 1936, nothing in '37 or '38.

Q. Hubbard Oil Burner Company, Minneapolis?

A. I have no record of any sales in 1936, '37 or '38.

Q. Hupp Oil Burner Company, Brooklyn, New York?

A. 1936, we sold Hupp approximately $150; $65 in 1937, and about $1,100 in 1938.

Q. Hyle Oil Burner Company, Baltimore, Maryland?

A. We sold Hyle $52 in 1936, $300 in 1937, $27 in 1938.

Q. Jacobson Manufacturing Company, Racine, Wisconsin?

A. I have no record of any sales.

Q. Kelly Oil Sales Corporation, Arlington, Massachusetts?

A. I have no record of sales.

Q. LaGrace Oil Burner Company, Woonsocket, Rhode Island?

412 A. We sold LaGrace Company $36 in 1936 and about $117 in 1937.

Q. Liberty Research Laboratory, Farmingdale, New York?

A. We did not sell Liberty any controls in 1936, but $130 in 1937, and $46 in 1938.

Q. Penn Petroleum Products Company, Providence, Rhode Island?

A. I have no record of any sales.

Q. Petroleum Heat & Power Company, Stamford, Connecticut?

A. The only year we sold Petroleum was in 1937, a little less than $1,000.

Q. Progressive Machine, Minneapolis?

A. I have no sales to Progressive in 1936; we sold them $30 in 1937 and a little over $200 in 1938.

Q. Quiet Heet Manufacturing Corporation, Newark, New Jersey?

A. We sold Quiet Heet $460 in 1936; nothing since.

Q. Master Oil Burner Company, Seattle, Washington?

A. I have no record of any sales.

Q. Messer Company, Newark, New Jersey?

A. We sold Messer $3 in 1936 and $70 in 1937; nothing in 1938.

Q. Micro-Westco, Inc., Bettendorf, Iowa?

A. We sold Micro-Westco $37 in 1937; nothing in 1936 or '38.

413 Q. Mohawk Oil Burner Manufacturing Company, New York, New York?

A. We sold Mohawk about $50 in 1936; about $700 in 1937, and nothing in '38.

Q. Montag Stove & Furnace Works, Portland, Oregon?

A. I have no record of any sales.

Q. Muehlbach, G. T. Muehlbach, Minneapolis, Minnesota?

A. We did not sell Muehlbach any controls in '36 or '37; we sold about $130 in 1938.

Q. National Devices Company, Bellmore, New York?

A. We sold National $17 in 1936; $140 in 1937, and $300 in 1938.

Q. Neis & Brechtl, West Allis, Wisconsin?

A. I have no record of any sales.

Q. Oil Equipment Laboratories, Elizabeth, New Jersey?

A. I have no record of any sales.

Q. Old Colony Machine Works Company, Fall River, Massachusetts?

A. I have no record of any sales.

Q. Osher and Reiss, Brooklyn, New York?

A. 1936, Osher & Reiss, $15; $37 in 1937.

Q. Packard Oil Burner Manufacturing Company, Bridgeport, Connecticut?

A. I have no record of any sales.

Q. Pan-American Engineering Corporation, Berke-
414 ley, California?

A. I have no record of any sales.

Q. Standard Products Company, Clinton, Massachusetts?

A. 1936 we sold Standard about $2,400; about $3,300 in 1937; about $500 in 1938.

Q. Sunray Oil Burner Corporation, Rockaway Park, New York?

A. We sold Sunray about $125 in 1936, and in 1937 or '38, nothing.

Q. Todd Combustion Equipment, New York, New York?

Mr. Gilpatric: Isn't that industrial?

Mr. Haycraft: Yes, take that out.

415 Trial Examiner Sheppard: I think we had better suspend.

Mr. Haycraft: I am pretty near through.

The Witness: We sold Reliable about $180; $15.00 in 1937 and $78 in 1938.

By Mr. Haycraft:

Q. Rossoe Manufacturing Company, Seattle, Washington.

A. No record of any sales whatever.

Q. The Silent Flash Oil Burners Corporation, Brooklyn, New York?

A. No record of any sales.

Q. S-K Company, Camden, New Jersey?

A. No record of any sales.

Q. Simplex Oil Heating Corporation, New York?

A. No record of any sales.

Q. Cleveland Steel Products, Cleveland.

A. In 1936 we sold Cleveland Steel Products about $375, in 1937 about $2,000 and $2,200 in 1938.

Q. On that Cleveland Steel Products account, do you remember what the items were that you sold them?

A. We sold them room thermostats, limit controls and primary controls, but the ratio I don't know.

Q. Can you break that down as to the number of units, and the various items of the various units that you sold?

A. I don't have it for 1936 or 1937, but I have the 416 breakdown for 1938.

Q. Suppose you give us that, then?

A. In 1938 we sold 36 of our 475-D combination controls; 200 of our 400-D limit controls, 200 of our 402-D limit controls; 52 of our 650-D limit controls; 206 of our 502-D limit controls; 1 700-D-4 limit controls; 25 5520-D oil burner primary controls, and 25 100-A room thermostats. That is all in 1938.

Q. Do you have your sales to Electrol, Incorporated?

A. We sold Electrol approximately $2,000 in 1936, and $11,000 in 1937, and $22,000 in 1938.

Q. Do you know what items they were that you sold that firm?

A. That was also room thermostats, limit controls and primary controls. I think most of them were room thermostats and limit controls, because Electrol built a large percentage of their own primary controls.

Q. The Heil Company, Milwaukee, Wisconsin?

A. We did not sell Heil any controls in 1936; in 1937, $300; and about $16,000 in 1938.

Q. Do you remember the items that you sold Heil?

A. We sold Heil our room thermostats, limit controls and primary controls.

Q. The Williams Oil-O-Matic Corporation, Bloomington, Illinois?

A. No sales in 1936 or 1937, and about $250 in 1938.

417 Q. Volcano Burner Corporation, New York City?

A. In 1936 we sold $20.00; $300 in 1937 and $20 in 1938.

Q. Harry C. Weiskittel Company, Baltimore, Maryland?

A. We sold Weiskittel $100 in 1936 and nothing in 1937 or '38.

Q. Westchester Home Equipment Company, Mount Vernon, New York?

A. We sold Westchester about $67 in 1936, $300 in 1937, and nothing in 1938.

Q. Bock Corporation, Madison?

A. We only sold Bock about $4.00 in 1936, $65 in 1937, and $40 in 1938.

Q. Diesel Burners, Mossup, Connecticut?

A. No record of any sales.

Q. Scott-Newcomb, St. Louis?

A. We did not sell Scott-Newcomb any in 1936 or 1937, and in 1938 we sold about $6700.

Q. When you first started in business how much of a sales force did you have selling temperature controls, and where were they located?

A. Well, we had one man in Boston, one in New York, and one in Chicago, and we had two at the home office.

Q. Did you increase that force later as time went on? How many did you have in 1938?

A. In 1938 we had one in Philadelphia, and one
418 additional in New York at that time, and one or two more in our home office. In 1938 we also had two in our Chicago office.

Q. Did you make any attempt to sell in the western part of the United States?

A. One of the salesmen made that trip several times, yes. We did not contact them regularly.

Mr. Haycraft: That is all I have at this time. I may have a question or two later, we may have our recess now.

Mr. Freeman: Just before we leave, I understood that Mr. Tate was going to testify with respect to prices at which these devices were sold to oil burner manufacturers. At least I so understood, or we were to have Mr. Luthe back.

Mr. Haycraft: To Timken and the Cleveland Steel Products. Those were the ones that we were talking about.

Mr. Freeman: No, I asked for the price list at which these products were sold at oil burner prices to oil burner manufacturers, and I understood I was going to get that.

Mr. Haycraft: No, sir; I didn't have any such understanding, we were talking about Timken and Cleveland Steel.

Mr. Freeman: Then I want Mr. Luthe recalled, or Mr.
Tate to get the information from the Company. We
419 are entitled to that.

Mr. Haycraft: I called on this witness to testify as to what he sold these various accounts.

Mr. Gilpatric: You put in evidence of prices to dealers from 1936 to 1941.

Mr. Haycraft: And I restricted it to Timken, for illustration. I don't think it is fair to hunt out every manufacturer that they sold to.

Mr. Freeman: I am not asking that. I am just asking for their low prices.

Mr. Haycraft: He has given it to you. He has testified what he got. That is in the record.

Trial Examiner Sheppard: That is what I understood.

Mr. Haycraft: You can get that further on cross-examination if you want to.

Mr. Freeman: We will get it again. Mr. Luthe was excused with the understanding that we would get it from Mr. Tate, or we would have Mr. Luthe back.

Mr. Haycraft: I did not have any understanding to that effect at all.

Mr. Gilpatric: All the direct examination was directed to that.

Trial Examiner Sheppard: We will have the gentleman give this information.

420 Mr. Haycraft: He has. He can't give us any more.

The Witness: I think you had better tell me definitely what you want so that I will know what I have to get.

Trial Examiner Sheppard: Tell him right now what you want.

Mr. Freeman: Mr. Tate, I would like to get this, the price which your company quoted oil burner manufacturers for the several types of thermostats and controls for the years 1936 to 1941.

Mr. Haycraft: I object to that. I think he is entitled to cross-examine with respect to the prices for 1936 and 1937. That is what my direct was on.

Mr. Freeman: But you introduced the price list up to 1941.

Mr. Haycraft: That was merely for a description of the articles. I am willing to strike out any reference to prices.

Mr. Freeman: I don't see where that has anything to do with the description. This is the prices.

Trial Examiner Sheppard: When I consider this, I will not consider the prices.

Mr. Freeman: Any time we have sort of tough going we have the thought of reneging about what was to

421 be put in, and I don't like it.

Mr. Gilpatric: He has the catalogue if he wants the description of the articles. He did not have to put the prices in.

Trial Examiner Sheppard: I don't think it would hurt any to have the prices in.

Mr. Freeman: I move that the exhibit on Dealers Prices for 1941 and all the testimony of this witness thereon be stricken.

Mr. Haycraft: I am willing to have it understood that no reference will be made to the prices listed in the exhibit, because they do not mean anything.

Mr. Freeman: I still move that it be stricken because when you take that out the exhibit means nothing. It ought not to be in there to clutter up the record.

Mr. Haycraft: The exhibit is offered as a concise statement of the items that this company makes and sells.

Otherwise you would have to thumb through the catalogue of over 100 pages, and this lists all the products sold by the company.

Trial Examiner Sheppard: Mr. Freeman, to decide this little matter which has come up between you and Mr. Haycraft with reference to Exhibit No. 60, the Examiner will consider only the list of materials appearing in here and not anything with reference to prices.

422 Mr. Freeman: Then I move that the testimony of this witness be stricken.

Mr. Haycraft: There is no testimony of this witness with respect to the prices in that exhibit. There is nothing to strike.

Trial Examiner Sheppard: Objection overruled.

Have you made up your mind what you want this gentleman to give you, because I am going to have him give it to you.

Mr. Freeman: I want the prices of the Perfex Company for the years 1936, 1937 and 1938—

Mr. Haycraft: (Interposing) 1936 is in evidence.

Mr. Freeman: No, it is not. That is what we have been talking about.

Mr. Haycraft: Yes, it is, it is in evidence.

Mr. Freeman: What I am asking for is the manufacturer's price list.

Trial Examiner Sheppard: All right, get that for Mr. Freeman.

Mr. Haycraft: I don't think that there is any such thing.

Mr. Freeman: Let him testify.

Mr. Haycraft: The witness has testified as to what the prices were, and that is in evidence.

Trial Examiner Sheppard: Of course, I don't know 423 anything about that. I will leave that to Mr. Tate to get the manufacturers prices for the years 1936, 1937, 1938. Do you know what they want now?

The Witness: Do you mean some particular manufacturer?

Mr. Freeman: No, just your low price. I don't want you to go back and check through a thousand records. I realize that is an imposition. You can tell us what your low price was to oil burner manufacturers.

Mr. Haycraft: He has already done that, Mr. Examiner.

Trial Examiner Sheppard: Let him do it again.
Mr. Haycraft: He has done that once.
Trial Examiner Sheppard: All right.

By Mr. Haycraft:

Q. Mr. Tate, in my examination did you give me the low price to oil burner manufacturers?
Mr. Freeman: The record speaks for itself.

By Mr. Haycraft:

Q. During the year 1937?
A. The prices that I gave you were taken off of the record of one manufacturer. I don't know that they were the lowest, I have no way of testifying to that.
Trial Examiner Sheppard: You can get that for us and give it to Mr. Freeman this afternoon.
424 All right, Mr. Reporter, take an adjournment until two o'clock.

(Whereupon, at 12:50 p. m., a recess was taken until 2:00 p. m., this day.)

425 Afternoon Session.

2:00 p. m.

Trial Examiner Sheppard: We will proceed.

V. R. TATE, resumed the stand and testified further as follows:

Direct Examination (Continued) by Mr. Haycraft.

Q. Mr. Tate, can you tell us the lowest price at which Perfex sold their thermostats, limit controls and primary controls in 1936, 1937 and 1938?
A. Yes. I was able to find a price list for 1938, and I picked off the price for the standard controls. I took off two thermostats, one of which is 100A. That was 2.25, and 150A, which was our standard thermostat. was 2.65. The limit controls, standards, were all 2.50.
Q. What numbers were those?
A. 400, 500, 700. 5200 constant ignition oil burner primary controls, 8.60.

Mr. Gilpatric: What year is this?

Mr. Haycraft: 1938 he is speaking of.

The Witness: 1938. No. 5500 and 5520 oil burner intermittent ignition controls, 9.60. Now, for those years 1936 and '37, I was unable to find a price list, sent the boys to the warehouse, who pulled the invoices for
426 Timken, and this tabulation I am giving you is off the invoices to Timken, which was a company receiving our lowest price in 1936 and '37.

Q. Your biggest customer at that time?

A. That is right. Series 100 thermostat, 1936, 2.75, and 1937 I was unable to find a price for it. I don't think we sold them any of that model for that year. 150A thermostat, 3.50 in 1936; 2.95 in 1937. Of the limit controls, 400, series 400, $3.00 in 1936, 2.40 in 1937.

Mr. Freeman: $3 in 1936?

The Witness: 2.40 in 1937.

Series 500 is $3.00 for 1936, 2.40 in 1937.

Series 700 was $3 in 1936, 2.40 in 1937.

5200 oil burner primary control, 10.25 in 1936, 7.90 in 1937.

The 5500 and 5520 oil burner primary controls, were not sold in 1936; in 1937 the price was 8.90.

By Mr. Haycraft:

Q. Do you remember anything about an attempt to sell the Cleveland Steel Products Company in 1938?

A. Recently I reviewed the correspondence and sales reports, but I was unable to pick up much information, except the salesman was always reporting it looked like he was going to get the business, in report after report, and that is about all I found in the correspondence.

427 Q. Did you make any contact with the firm, yourself?

A. I never contracted the firm, myself.

Mr. Haycraft: That is all. You may cross-examine.

Trial Examiner Sheppard: Cross-examine.

Cross-Examination by Mr. Freeman.

Q. Mr. Tate, did you sell oil burner controls to the Anchor-Post Company in 1936, 1937 or 1938?

Mr. Haycraft: That is objected to as irrelevant and immaterial, and not proper cross-examination.

Mr. Freeman: That was brought out on direct. He named some 75 different companies.

Mr. Haycraft: That was not one of them. Mr. Examiner, I confined my direct examination to those companies that are mentioned in Commission's Exhibit No. 1, which is the stipulation, where there was the contract in 1936 and 1937; I mean, the season's requirements, or the 1938 contract that had the season's requirements or group of contracts.

Mr. Freeman: Anchor-Post is referred to in connection with his examination of Mercoid, for the same reason.

Mr. Haycraft: No, Mr. Examiner, there was an entirely different proposition with Mercoid, and it has
428 nothing to do with this witness.

Trial Examiner Sheppard: I do not want to broaden the scope.

Mr. Freeman: I do not either, but I think there are three or four companies, and I think we are entitled to know. They were omitted for some reason or other.

Mr. Haycraft: I have just given the reason.

Mr. Freeman: I think we are entitled to have some information.

Mr. Haycraft: There was no evidence, Mr. Examiner,—I don't know whether there was or not, but no evidence of any restrictive clause in any contract with the Anchor-Post. That is the reason we did not ask the witness.

Mr. Freeman: We object to the term "restrictive clauses." That remains to be seen.

Mr. Haycraft: I will stand on the record on that.

Trial Examiner Sheppard: Objection sustained.

By Mr. Freeman:

Q. Will you tell us whether or not you sold, in 1936, '37 and '38, Silent Glow?

Mr. Haycraft: The same objection. That is not in the group.

Trial Examiner Sheppard: Was there anything on direct on that?

Mr. Haycraft: No.

429 Trial Examiner Sheppard: Objection sustained.

By Mr. Freeman:

Q. I will ask you the same question with respect to Chrysler Air Temp?

Mr. Haycraft: The same objection.

Trial Examiner Sheppard: Sustained.

By Mr. Freeman:

Q. Mr. Tate, your business in the sale of oil burner controls was better in 1937 than it was in 1936, was it not?

A. That is correct.

Q. And likewise the sale of oil burner controls by your company was better in 1938 than it was in 1937?

A. I think that is correct. Generally business dropped back in 1938, but I think, to the best of my recollection, that is correct.

Q. And likewise your business was better in 1939 than it was in 1938?

Mr. Haycraft: I object to that as irrelevant and immaterial. We have not presented any testimony with this witness, Mr. Examiner, as to contentions beyond 1938. As I understand it, the season's requirements clause was left out of the accounts after that date, and that is what the direct examination was.

Trial Examiner Sheppard: Is that your under-
430 standing?

Mr. Gilpatric: Mr. Examiner, the complaint in this case defines the issues after alleging these contract provisions in the years 1937 and '38. Your Honor then assumes the same conditions obtained for the following years.

Trial Examiner Sheppard: I will let you go into 1939 on both sides, if you want to.

Mr. Freeman: I think we ought to.

Mr. Haycraft: All right, then. We will get total figures from both sides.

Trial Examiner Sheppard: Go ahead. I think that will be all right there.

Mr. Freeman: Will you answer the question, now?

Trial Examiner Sheppard: Repeat it.

(Question read by the reporter.)

The Witness: That is correct.

431 Q. And would the same follow for 1940 and 1941?

A. Yes.

Q. So that each year from the inception of your business, that is, when you began selling oil burner controls, there has been an increase in the over-all volume year after year up to 1941? I am excluding 1942 because of the war situation.

A. That is correct.

Q. What were your sales to the Wayne Oil Burner Company in 1939?

A. About $18,000.
Q. And how about York Oil Burner in 1939?
A. About $20,000.
Q. And the Rief-Rex Oil Company?
A. About $10,000.
Q. And the Auburn Oil Burner Company?
A. $1400.
Mr. Haycraft: These are all dollars, I take it?
The Witness: Dollars, for the year 1939.

By Mr. Freeman:
Q. Harvey Whipple?
A. $6400.
Q. Lynn Products?
A. $5,000, approximately $5,000.
Q. And if my memory is correct, you did not sell
432 them in 1936, '37, or '38?
A. That is correct.
Q. And how about the Hayward Company?
A. Hayward Manufacturing Company?
Q. Yes.
A. I have no record of any sales to them.
Q. Did your Company ever sell oil burner controls to that company?
A. I have this sheet prepared from our records, and it shows no sales to them. It could be in error, but it does not show on this sheet.
Q. Did you sell any controls in 1939 to the Micro-Westco, and if so, give us the dollar volume?
A. Micro-Westco; no sales to them except in the year 1937.
Q. And sales to Heil in 1939; I have reference to the Heil Company of Milwaukee.
A. $22,600.
Q. And how about Electrol?
A. $42,000.
Q. $42,000?
A. Yes.
Trial Examiner Sheppard: What year is this?
The Witness: 1939.

By Mr. Freeman:
433 Q. Do you know whether that breakdown includes limit controls, thermostats and primary controls; that being the company that you testified this morning made a good many of its own primaries?

A. I don't have that breakdown. Sometime along there, it might have been later, we sold them some primary controls. I think we sold them primary controls in 1939.

Q. And how about the Scott-Newcomb Company in St. Louis?

A. $1,200 in 1939.

Q. Did you sell any controls to Quiet Heet in 1939?

A. I have two Quiet Heets listed; one in Newark and one in Brooklyn.

Q. The one in Newark, New Jersey?

A. Nothing in 1939.

Q. How about the Cleveland Steel Products in 1939?

A. $700.

Q. You heard Mr. Luthe testify this morning that he made it a point to call on large users of oil burner controls. Might I ask if you know when that policy was adopted, or when you began calling on large oil burner accounts?

A. I think that policy was followed from the beginning in 1936, primarily for the reason that we only had a few men and it was almost impossible to contact all the manufacturers.

Q. So there might have been many manufacturers in that year, in 1937, that were not contacted because of 434 lack of manpower?

A. I think that is correct. There might have been enough manpower to contact them once, but I might say that we did not feel that we had enough manpower to service the accounts.

Q. I understood you to say that you really came on the market with a primary control in the fall of 1936?

A. The constant ignition oil burner control was put in production in the fall of 1936.

Q. And when did you come out with the intermittent ignition?

A. Sometime in the spring of 1937.

Q. Isn't it true that in the oil burner control field, from your experience, before a company will adopt any given control for its oil burners, it buys a few controls and uses them for field test purposes?

A. That is correct.

Trial Examiner Sheppard: You mean before they buy in big bunches they sort of try it out?

Mr. Freeman: What I mean is this, and I think Mr. Tate means the same thing, and he can correct me if I

state it erroneously; before any one changes from one type of burner control to another type, they buy a few of them and put them out in the field and find out what is necessary in the way of servicing them, how they fit into their scheme of doing things; and all those different things, and if it turns out o.k., they come back to them
435 and talk quantities.

Trial Examiner Sheppard: That seems a reasonable thing to do.

By Mr. Freeman:

Q. Mr. Tate, I have stated that accurately, have I not?

A. That is right.

Q. So in 1936, in the fall, when you came out with the constant ignition type of oil burner control, you were just then feeling your way in making your sales, is that correct?

A. That is right.

Q. And you expected larger sales in 1937 as a result of the field experience that you obtained in 1936?

A. That is correct.

Q. And did your company succeed in enjoying a better business in 1937 than it did in 1936 in connection with the constant ignition primary controls?

A. We did.

Q. And in 1937, when you came out with your intermittent ignition primary control, you likewise felt your way; that is, sold a few controls to customers for the purpose of having them go through the field test experiments?

A. That is correct.

Q. And that would even be true, even though during the preceding year you had made another primary control of the constant ignition type?

436 A. That is correct, but not to the same degree. The manufacturers will change easier, make a switch from one model to another model of the same manufacturer, than they will to a control of another manufacturer.

Q. They are a little reluctant to make the change, but they will still go through the field test. Maybe for not so long a period, is that correct?

A. That is correct.

Q. So that in 1938 you expected better business on primary controls of the intermittent ignition type than you experienced in the year 1937?

A. Yes, sir.

Q. And did that expectancy come true?

A. It did.

Q. And likewise I take it that in 1938 you sold more constant ignition primary controls than you did in 1937?

A. That is correct.

Q. So that the first full oil burner year in connection with the sale of the intermittent ignition type primary control was the year 1938?

A. Well, as I remember it, we had the intermittent primary control out shortly after Christmas—shortly after the first of the year, 1937. I don't remember how much field experience we had that spring, but it is my recollection that we got enough field experience in the spring of
437 1937 to increase the sales in the fall of 1937.

Q. And those sales increased during 1938?

A. That is right.

Q. And you had substantially the same experience, that is, with the upward trend of sales in your constant ignition type of primary control from the time you came on the market in 1936, up through 1937 and 1938?

A. Yes, sir.

Trial Examiner Sheppard: Why do you use the word "constant" there?

Mr. Freeman: I use the term "constant" because there are two types of primary controls. Mr. Tate is a patent attorney, and he understands these structures as well as I do, and he can correct me if I am wrong. In one case, when the burner goes on, the ignition is on constantly.

Trial Examiner Sheppard: That is -c-o-n-s-t-a-n-t?

Mr. Freeman: Yes. Then the intermittent is a type that goes on and stays on until the oil burner starts to burn, and then goes off.

Trial Examiner Sheppard: I see.

By Mr. Freeman:

Q. You did testify, did you not, that the intermittent type of oil burner control sold for more money than the constant ignition type?

A. That is correct.

438 Q. And I take it that there has always been the same practice followed from 1936 and 1937 on up?

A. Yes, sir.

Q. In other words, the intermittent type has always sold for more money?

A. It is a more expensive control, and has always sold for more money.

Q. Do you happen to have the Timken volume for 1938 and 1939? We got the 1936 and 1937 from Mr. Luthe this morning.

A. No, I don't have the Timken. I only have the list that we have prepared here.

Q. Could you tell us whether or not Timken increased its business in 1938 over 1937? I am not asking for the exact dollar volume, Mr. Tate.

A. If they increased in 1938 over 1937?

Mr. Haycraft: I have something here, a confidential statement prepared by the witness with respect to that particular account, if you will let him look at it.

Mr. Freeman: He can look at it, or you can help him out, that is agreeable to me. All I want to know is whether it was more.

Mr. Haycraft: For what years are you asking?

Mr. Freeman: 1938 and 1939 for Timken.

Trial Examiner Sheppard: Hand it to the witness and let him testify to it.

439 Mr. Haycraft: That happens to be units I am showing him now.

The Witness: Our sales in 1938 were slightly less than in 1937. In 1939 there was an increase. 1937 was 11,000 units, 1938 10,000, 1939 21,000.

By Mr. Freeman:

Q. Did I understand you to say that 1938 was a little less than 1937?

A. That is right.

Q. And that was the year—

A. It was the second depression.

440 Q. What was the year?

A. It was the second depression.

Q. Were you giving us the unit figures in 1938?

A. Those figures I just gave you were units. The total dollar sales would be roughly three and a half times that, four times that.

Q. So that the dollar volume in 1938 would run between thirty-five and $40,000?

A. That is correct.

Q. And the dollar volume then, for 1939, would run anywhere from between seventy thousand and perhaps $80,000? That is correct?

A. Yes.

Q. What were the Perfex sales of oil burner controls to A, B, C, in 1939?

Mr. Haycraft: To the Automatic Burner Corporation.

The Witness: We had no sales in 1939.

By Mr. Freeman:

Q. Now, I understand you to say that you were in charge of the Patent Department of the Perfex Corporation?

A. That is correct.

Q. You are a patent attorney, and a lawyer?

A. I am.

Q. I understood you to say that you were employed
441 by Minneapolis-Honeywell prior to the formation of the Perfex Corporation, that is correct?

A. I was with Minneapolis-Honeywell three and a half years.

Trial Examiner Sheppard: Let me get that. Were you employed by the respondent, too?

The Witness: Three and a half years, 1931 to '34.

Trial Examiner Sheppard: I knew that the gentleman who preceded you was.

Mr. Freeman: I thought he testified to that.

Mr. Haycraft: He didn't.

Mr. Freeman: We will bring it out so the record is clear, anyway.

Trial Examiner Sheppard: O. K.

By Mr. Freeman:

Q. And you were in the Patent Department of the respondent, Minneapolis-Honeywell Regulator Company?

A. I was.

Q. I take it that Perfex followed the usual practice of taking out patents on its primary controls, the kind you have been referring to in your testimony today, and the kind that are illustrated in the catalog that has been introduced as Commission's Exhibit 61?

A. Yes, we do.

Q. Would you mind telling us approximately the
442 number of patents that your company either owns or controls or operates under in connection with its manufacture and sale of oil burner primaries?

A. What number, did you say?

Q. The number, yes?

A. I don't remember the exact number, but I prepared a list for you the other day. I don't have the carbon copy with me.

Q. I hand you the list, and ask you to refresh your memory, and then tell us.

A. With reference to oil burner primary controls, we either own or operate eight patents. We own eight patents, and operate under five additional.

Q. So that the primary controls made and sold by your company come under one or more of some thirteen primary control patents?

A. That is correct.

Q. Will you look at that same list that you are now holding in your hands, and tell us the number of patents under which your company manufactures and sells room thermostats for use in connection with oil burners, particularly referring to that type of room thermostats which you identified this morning, and as illustrated in Commission's Exhibit 61?

A. We own four thermostat patents, and operate 443 under three additional.

Q. So that your thermostats are made under one or more of some seven patents owned or controlled by your company?

Mr. Haycraft: That is not what he said. I object to that. He did not say those were exclusive licenses.

The Witness: I don't think that is correct.

Mr. Freeman: Strike out my question as to "or controlled." You operate under—all I am interested in is the number of patents having to do with thermostats under which you operate.

Trial Examiner Sheppard: That is right.

The Witness: We operate under seven at the present time.

By Mr. Freeman:

Q. In connection with the manufacture and sale of either your constant ignition type oil burner control or the intermittent ignition type oil burner control, was it necessary for your company to seek from Minneapolis-Honeywell any license in order to be free to make the primary controls for oil burners you are now making?

A. No, it wasn't necessary to secure a license. We were able to buy some patents, get some licenses under some additional, and handle the rest of it by a matter of design.

Q. From your experience in the oil burner control field, do you know of any company, outside of Timken, I be-
444 lieve that was referred to by Mr. Luthe, where primary controls manufactured by one control manufacturer are used, and a thermostat of another manufacturer is used, with a limit control of still another manufacturer?

A. I personally do not know of any manufacturer today that is following that practice, using three controls made by three separate control manufacturers.

Q. Do you know of any oil burner manufacturers that follow the practice of using a primary made by one of the control manufacturers, and a thermostat made by still another control manufacturer?

A. No, I don't.

Q. I notice on these exhibits that the Commission introduced, particularly Exhibit 56, the figure 10 illustrates a Series 10 relay, does it not?

A. Yes, it does.

Q. And that Series 10 relay is understood by the trade to be a Minneapolis-Honeywell product, is that not so?

A. That is correct.

Q. Minneapolis-Honeywell is the only company, as far as you know, that refers to its electrical hook-up by the term "Series 10"?

A. That is correct.

Trial Examiner Sheppard: I did not get that term.
445 The Witness: Series 10.

Mr. Haycraft: Series 10.

Trial Examiner Sheppard: O. K.

By Mr. Freeman:

Q. A Series 10 circuit is a peculiar type of circuit, where contacts are successively made and successively broken, is that correct?

A. That is correct.

Q. And the one that makes contact first breaks last, and the one that makes last breaks first, is that correct?

A. That is correct.

Q. I think you said you are familiar with the primary control made by Minneapolis-Honeywell, employing the Series 10 circuit?

A. I am.

Q. And you are likewise familiar with the thermostat that goes with that primary, embodying a Series 10 circuit?

A. I am.

Q. I take it, Mr. Tate, you are familiar with the sequence of operation of the primary, when the thermostat makes its first contact and then makes its second contact?

A. That is correct.

Q. I take it, likewise, that you are familiar with the electrical operations that occur when the last contact to make on the thermostat breaks first, are you not?

446 A. Yes.

Q. And then, of course, you understand what takes place with the primary when the first made contact of the thermostat breaks last?

A. That is correct.

Q. And you are familiar with the Series 10 hookup as used by Minneapolis-Honeywell, on its primary controls, and its room thermostats?

A. I am.

Q. You understand the sequence of operation as a result of the cooperation of the thermostat with the primary control?

A. Yes, sir.

Q. Now, when you use the ordinary thermostat that merely has a make-and-break contact, which we might call a single line make and break, as distinguished from a three-wire job, that we sometimes refer to as Series 10, that is, when you use the standard conventional thermostat with a Series 10 circuit arrangement, primary control, you then omit use of one of the contact points or binders or the primary, is that not so?

Mr. Haycraft: That is objected to as irrelevant and immaterial, Mr. Examiner, not proper cross-examination.

Mr. Freeman: Your Honor, it is cross-examination, because we have here a Series 10 and wire. I want to

447 examine him with respect to what takes place with respect to the co-mingling or mixing of the controls.

Mr. Haycraft: But he is going outside. He is taking something that is not the Series 10, or not the thermostat.

Mr. Freeman: I am asking about Series 10, the Perfex thermostat.

Mr. Haycraft: Then why didn't you say so?

Trial Examiner Sheppard: Let's proceed.

Mr. Freeman: I have assumed we were talking about what was on the Commission's Exhibit No. 56.

Trial Examiner Sheppard: All right. I think I am learning. Go on, Mr. Tate.

The Witness: I think I will have to state it a little bit differently than you did now.

By Mr. Freeman:

Q. You state it as you wish.

A. When you use a two-wire room thermostat, such as this one on the list, described on Exhibit 56, with the Series 10 primary control, you have to short two other terminals on the primary control, because there are three terminals on there for the thermostat, and you only use two wires for our standard thermostat.

Q. When you short two of the terminals, what you are really saying is you connect two of the terminals up
448 electrically, as though there was one terminal there?

A. That is correct.

Q. And when you do that, do you then eliminate any of the function of the Series 10 relay, as made by Minneapolis-Honeywell?

A. There is one set of contacts on the relay that become inoperative, or not used.

Q. But those contacts are usable when properly connected with a thermostat of the Series 10 type?

A. That is right.

449 Q. That set of contacts is just an unnecessary, or extra, or at least not used or made use of, when you connect that Series 10 primary control to a Perfex thermostat of the two-wire type?

A. That is right.

Q. Now, what happens with the use of a Perfex thermostat of the heat anticipating type with a Series 10 Minneapolis-Honeywell relay, assuming that you use a jumper or short circuit two of the terminals of the primary? What problems arise electricaly?

A. Since our heater thermostat is equipped with an electrical resister in series with the line, that is balanced against the relay coil in the transformer, so that we do not get the proper amount of heat in the thermostat. In other words, the relay in the Minneapolis-Honeywell Series 10 oil burner primary control draws a different amount of current than is drawn by the relay in our oil burner primary control.

Trial Examiner Sheppard: Is there a difference in the cost of operation?

The Witness: I would not say so, no.

So that the record is straight, this particular piece of

literature is not on a heater type thermostat. The one that was in there was on a plain type of thermostat.

450 By Mr. Freeman:

Q. The Perfex Catalogue, Commission's Exhibit No. 61, does illustrate a heater type thermostat?

A. That is correct, but I don't believe that it shows any wiring diagram connected to a Minneapolis-Honeywell Series 10 circuit.

Mr. Haycraft: I move to strike the testimony contained in the last two questions and answers, Mr. Examiner. In other words, if he did not cross-examine on this exhibit, if the cross-examination did not go to this exhibit, where there were wiring designs shown, then the testimony has no place in the record.

Trial Examiner Sheppard: All right.

Mr. Freeman: I wonder if you will reserve ruling on that until we check this catalogue.

Trial Examiner Sheppard: Yes.

By Mr. Freeman:

Q. What is meant in your catalogue on page 120, of Commission's Exhibit 61, wherein it is stated:

"In selecting the proper model of heater type thermostat make sure that the heater element is matched with the current characteristics of the device to be controlled. For instance, see specifications."

Does that not refer to using a thermostat of the
451 heater type with a device that is controlled by the thermostat?

A. I think the statement is clear. A further explanation merely means that with a heater type of thermostat it has to be matched with the relay coil, or the device that it is controlling, so that the proper amount of current is flowing through the thermostat into the resister, which is inside the thermostat.

Mr. Haycraft: Now, Mr. Examiner, as I understand it, the document to which the cross-examination was directed was not the heater type.

Mr. Freeman: Oh yes, it was.

Mr. Haycraft: No, it was not the heater type. I am talking about the one that he was testifying to when you asked him questions about the design and the hook up between the thermostat and the primary control.

Trial Examiner Sheppard: I don't know. I have

been letting him go into this because I thought it would make the record clear.

Mr. Haycraft: The trouble is, Mr. Examiner, as the witness pointed out a few moments ago, that he had not been talking about the heater type; and these exhibits are put in evidence showing the wiring designs were not the heater type.

Mr. Freeman: I think I can shorten this materially by asking just one question.

452 Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. Would you say that a room thermostat of the heater type could not be used successfully with a primary control of the Series 10 type?

Mr. Haycraft: That is objected to as irrelevant and immaterial. We did not go into that on direct.

Mr. Freeman: That will cut out the heater type if he answers that it can't be.

Trial Examiner Sheppard: I will let him answer, it may shorten it.

The Witness: On that particular question I would have to say yes, because the Minneapolis Series 10 has a thermostat of the heater type, but its wiring is different. But as a general proposition, maybe this will clear the proposition, as a general proposition the heater type thermostats cannot be promiscuously connected to control devices, like the plain thermostats can.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. And when you connect plain thermostats of Perfex manufacture to a Series 10 primary control you have to take the control and provide a permanent jumper between two of the binding posts provided on the primary. Is that correct?

A. That is correct.

453 Q. And that is what is illustrated in Commission's Exhibit No. 59?

A. That is correct.

Q. Do you provide your customers with a jumper to put across two terminals?

A. We do not.

Q. And you have to know which particular two ter-

minals to put the jumper across in order to get any sort of operation, is that not so?

A. That is right.

Q. And you cannot connect your ordinary thermostat to just any two terminals, that is, any two of the three terminals on the Minneapolis-Honeywell primary and get satisfactory operation?

A. No, you cannot.

Q. There are three terminals on the Minneapolis-Honeywell primary?

A. That is right.

Q. And you might get the two that would work, provided that you included there an auxiliary and you had a jumper between two of the three terminals?

A. That is correct. The terminals are color coded.

Q. If the average installer using your two-wire thermostat connected color to color, which is the usual way, that is, red to red, or white to white, or blue to blue, using
454 your room thermostat of the kind illustrated in Commission's Exhibit No. 56, would you then get a proper connection?

Mr. Haycraft: That is objected to, because we have no definition of what an average installer is. These products are sold, Mr. Examiner, to experts, to oil burner manufacturers, and I submit that the question is improper.

Mr. Freeman: With that change in the question, so what it is understood that I am referring to any installer who goes out and installs these devices.

Trial Examiner Sheppard: With that explanation, you may answer.

By Mr. Freeman:

Q. Just answer my question. Would he connect color to color?

Mr. Haycraft: Mr. Examiner, he must also assume that he does not see the letter of instructions that goes along with the burner. I don't think that is fair. These instructions go with the burner. Now, he is asking him to suppose that the man who is doing the thing does not have the instructions, and does not know what he is doing. That is what the question assumes.

Trial Examiner Sheppard: That is very far fetched, but I will let Mr. Tate straighten that out.

The Witness: I don't believe the record is com-

pletely clear, because this is not a room thermostat. I
455 think that is confusing. I think you had better get another sheet.

By Mr. Freeman:

Q. I am now handing you Commission's Exhibit No. 59, and ask you that question with respect to Commission's Exhibit No. 59?

(Handing document to the witness.)

Trial Examiner Sheppard: Would you like to have the question repeated?

The Witness: It is not necessary.

Trial Examiner Sheppard: All right.

The Witness: There is no color code on our thermostat Series 100 shown on Exhibit No. 59, so that the question raised by Mr. Freeman would not exist.

Trial Examiner Sheppard: You don't have those different colors?

The Witness: Not on that thermostat.

By Mr. Freeman:

Q. And if the individual making the installation had misplaced the instruction sheet that you sent along, and he was endeavoring to connect the thermostat made by Perfex to a Minneapolis-Honeywell primary of the Series 10 type, he would not have any way of knowing when he made the correct and proper installation, is that correct?

A. That is correct. He could not do it unless he had
456 the sheet or unless he knew from personal experience how to do it.

Q. Then on primaries manufactured by your Company, where you have two terminals but do not employ any Series 10 arrangement, the installer connects the two terminals of the thermostat with two terminals of the primary and he gets satisfactory operation, is that correct?

A. That is correct.

Q. And he can connect either terminal of the thermostat to either terminal of the primary and get a proper connection and satisfactory operation?

A. That is correct.

Q. Is that correct?

A. That is correct.

Q. So that when a room thermostat of the two-wire type, distinguished from the Series 10 type, is used with a Minneapolis-Honeywell primary, either the R116 or the

R117, it is necessary to do something more to the primary controls made by Minneapolis-Honeywell than merely connect the two terminals of the thermostat with two terminals of the primaries?

A. That is correct.

Trial Examiner Sheppard: Let him say what is necessary.

457 By Mr. Freeman:

Q. What is necessary to be done is to follow your instruction sheet wherein a permanent jumper is used for connecting two of the binding posts or terminals of the primary, is that correct?

A. That is correct.

Q. And it is necessary, in addition, to connect a particular two of the three together, is that correct?

A. That is correct.

Q. And improper connection or connecting just any two terminals by a permanent jumper would not provide a proper connection, is that so?

A. That is right.

Q. So that the installer would not only have to have the controls but a set of detailed instructions to use the Minneapolis-Honeywell primary with your thermostat?

A. That is correct.

Q. Incidentally, Mr. Tate, do you know from your own experience whether or not the color code of the Minneapolis-Honeywell primaries in years gone by have been changed?

A. They have two color codes, one for Series 10 and one for Series 20; and the Series 20 is different than the Series 20 used by the old Honeywell Company before the merger.

458 Q. Now, how many companies do you actually know of that actually go to the pains necessary to connect up the two of the Terminals of the Minneapolis—primaries so that they can use your thermostat? I am asking now what is an actuality as distinguished from what might be done?

A. Will you read the question, please?

(The question above referred to was read by the Reporter.)

The Witness: I don't know of any company that is following that as a standard practice.

By Mr. Freeman:

Q. It is a makeshift, from your experience, is that not so?

A. Maybe that is a little bit loose.

Q. Well, we had one loose connection, so the question might be a little loose. But seriously you don't know of anybody doing that in the field?

A. Not as standard practice in the regular line, no.

Q. Now, in addition to having just an ordinary thermostat—and we have been talking about an ordinary thermostat—being connected with the Minneapolis Series 10 primary, the thermostat would have to be of the snap acting kind, wouldn't it, in order to function?

A. That is correct.

Q. So that if you used the ordinary thermostat, with the walking off connections, that is, contacts, it would not work, would it?

A. No, it would not.

459 Q. In other words, any of your thermostats, even though they did not have a heater in them, might not work with a Minneapolis-Honeywell primary, even though the individual followed your instructions, and put a permanent jumper across two of the binding posts?

A. As far as our thermostats are concerned, I think that would be attempting to serve a slow-moving contact thermostat in the line.

Q. Are all of the thermostats snap acting?

A. Yes.

Q. How about the phrase that I find in your catalogue, Commission's Exhibit 61, wherein you say, "Important. Do not use a non-snap-acting Series 10 or Series 20 thermostat or limit control"? Why was that put in, that I have just read?

Mr. Haycraft: In connection with what? What are you referring to?

By Mr. Freeman:

Q. Do you understand my question, Mr. Witness?

Mr. Haycraft: I would like to have the question read.

(The question above referred to was read by the Reporter.)

Mr. Haycraft: That is objected to, unless the question includes what item they are talking about. What is
460 the product? What is the device you are referring to?

Mr. Freeman: I will reframe the question.

Trial Examiner Sheppard: All right, reframe it.

By Mr. Freeman:

Q. Can you use a non-snap acting thermostat with a Minneapolis-Honeywell primary of the Series 10 type, and I am referring to the two devices involved here, the R116 and the R117, made by respondent.

Mr. Haycraft: I object to that question, Mr. Examiner, because the witness has said the Perfex Company will have only the snap-acting type. That is what we are talking about.

Trial Examiner Sheppard: That is what I understand. Go ahead. We will let you answer the question, Mr. Tate, if you can.

Mr. Freeman: I think he is well qualified to answer these questions, your Honor.

The Witness: I will answer it in the positive way, that you must use a snap-acting thermostat. The negative is you cannot use a non-snap-acting thermostat of the 2A type, with a Minneapolis-Honeywell Series 10 primary control.

Mr. Haycraft: I move to strike that, Mr. Examiner, as having no value in this case, with respect to this witness, certainly, because he does not have that type. Why
461 go into that? Why put up a straw man and knock him down?

Mr. Freeman: Mr. Haycraft, are you willing to stipulate now you cannot use these controls interchangeably, and state on the record that there may be a particualr type of thermostat that might, under some exceptional circumstance, be used with a Minneapolis-Honeywell primary? If you will so state, I will stop quickly.

Mr. Haycraft: I will not do anything of the kind, but I am trying to restrict this cross-examination to the direct examination. By this witness we put in certain exhibits and certain testimony with respect to it. I have no objection to cross-examination as to those exhibits and what they mean, as far as that is concerned, but I do object to going beyond that, and some other product that is not in the record.

Mr. Freeman: May it please the Examiner, when Mr. Tate referred to the exhibit I hold in my hand, Exhibit 59, he said you could connect up a thermostat with a Series

10. That is the way the record stands, and I think we are certainly entitled to show that it just can't be any thermostat.

Mr. Haycraft: He is talking about his own thermostat, and that is all he is talking about. Anything beyond that is improper.

462 Mr. Freeman: He did not say, at the time he testified when you asked him, anything with respect to a heater thermostat. He said "our" thermostat, and I think that we are entitled to define what kind of a thermostat will under some exceptional circumstances work.

Mr. Haycraft: He has restricted it to his own thermostat. If you go beyond, it is just encumbering the record.

Trial Examiner Sheppard: All right. I am going to let the record stay like it is, taking it all into consideration, Mr. Tate's testimony on that point.

Mr. Haycraft: The motion to strike, I take it, is overruled? I believe I made a motion to strike.

Trial Examiner Sheppard: Well, I will deny that motion. I will let it stay in for whatever it is worth.

By Mr. Freeman:

Q. I would like now to ask you what is meant, in your catalogue, Commission's Exhibit No. 61, wherein it is stated: "Important. Do not use a non-snap-acting Series 10 or Series 20 thermostat or limit control." What does that refer to?

Mr. Gilpatric: Page 111.

The Witness: That phrase in our catalogue means that our relays in our primary controls are so designed that they will not operate except with a two-wire snap-
463 acting thermostat. Therefore, we put the caution in, telling them not to use any thermostat or limit control in which the contacts move slowly.

By Mr. Freeman:

Q. In other words, your company recognizes that an improper thermostat connected up with your primary would not give satisfactory operation?

Mr. Haycraft: I object. There is no basis, no foundation.

Mr. Freeman: I am reading right from the catalogue now.

Trial Examiner Sheppard: Yes, I will let him answer that.

The Witness: Will you read the question?

(The question above referred to was read by the Reporter.)

The Witness: We do.

By Mr. Freeman:

Q. So that it would be improper, or you would not get satisfactory operation from the hook-up for an oil burner, using your primary controls and limit controls, and using, say, automatic product device thermostat, of the non-snap-acting type?

Mr. Haycraft: That is objected to as irrelevant, immaterial, and not proper cross-examination,

464 Mr. Freeman: That is only an example, your Honor, so that we all understand what we are talking about, what is meant by the caution in the catalogue.

Mr. Haycraft: Yes, but the caution in the catalogue was not brought to the witness' attention in direct examination. It is not a matter which should be gone into at this time with this witness. We are going to have to present this case from time to time. I am not saying I am going to, but if I wish to present a different type of primary with this limit control and this thermostat, I will do it at the proper time. That is not what this examination is, and there is nothing in here to show either in this exhibit, or any exhibit received in evidence, other than the respondent's devices, with the Minneapolis-Honeywell device. When you go beyond that, and go into something else, into someone else's device, you are going beyond the direct examination, and beyond the purpose of the offer.

Mr. Freeman: As a matter of fact, I think it is very proper cross-examination. They produce a circular and they show how you can connect a room thermostat. They do not say what kind, with a Minneapolis-Honeywell primary, and I think you can use it for no other purpose, if you wanted to impress this witness, although we are not trying to do so, to show they themselves—Commis-

465 sion's exhibit clearly indicates you have to use a proper thermostat. That is the only point we want to make, and I am confining all of my questions to these two documents.

Mr. Haycraft: Your last question, about those documents, 59 and 61, the last question, went beyond those documents, and assumed something entirely different.

Mr. Freeman: Strike out "Roy Johnson" or "Auto-

matic Products," and say a thermostat of the non-snap-acting type.

Mr. Haycraft: That is objected to.

Trial Examiner Sheppard: Gentlemen, you all know more about this case than I do. I do not want any of you to go beyond the scope of the case. I do not want to merge our hearing into something that is going to take place in the court here in the next six months or a year. Mr. Haycraft says this is not relevant to the issues. You say it is relevant.

Mr. Freeman: The Commission will have all the information and facts, and that is one thing we want to give them.

Mr. Haycraft: Many things tend to mislead.

Mr. Freeman: You are looking through your glasses, and not mine.

Trial Examiner Sheppard: I am going to let Mr. Tate testify in reference to that last question, you just
466 brought out, and then I want you to move to something else. Repeat that question to Mr. Tate.

(The question referred to was thereupon read by the reporter.)

By Mr. Freeman:

Q. And you will recall I amended that by even excluding the name of the company that has now been mentioned, so we are just talking about non-snap-acting types, whether made by any company?

Trial Examiner Sheppard: Mr. Tate, if you have that in your mind, you may answer.

The Witness: That combination would not operate correctly.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. And that reference as to not using a snap-acting type thermostat is referred to on Page 41 of Commission's Exhibit 61?

A. That is correct.

Q. That same notation is referred to again on Page 43 of Commission's Exhibit No. 61?

A. Correct.

Q. And likewise on Page 45 of Commission's Exhibit 61?

A. Correct.

Q. And likewise on Page 51 of Commission's Exhibit 61?

467 A. Correct.

Q. And likewise on Page 53?

A. Correct.

Q. And likewise on Page 57?

A. That is correct.

Q. And likewise on Page 59?

A. That is correct.

Q. And Page 61?

A. Correct.

Q. And Page 63?

A. Correct.

Q. The pages I have been referring to had to do with oil burner controls, that is, installations for oil burners?

A. That is correct.

Mr. Freeman: That is all.

Trial Examiner Sheppard: Anything else, Mr. Haycraft?

Mr. Haycraft: Yes.

Redirect Examination by Mr. Haycraft.

Q. Does your company sell any thermostat that is not a snap-acting type?

Trial Examiner Sheppard: Read the question.

(The question referred to was thereupon read by the witness.)

468 The Witness: We do not.

By Mr. Haycraft:

Q. What was the purpose of printing this precautionary language in your catalogue?

A. To prevent the dealer or installer from using some thermostat that he might have on hand of some other manufacturer, or trying to use one that was already in the home from an old damper operator set, or something like that.

Q. You simply were trying to give them a proper thermostat for use with your device?

A. That is correct.

Q. You said you did not know of any oil burner manufacturer that had used your devices, about which you testified in directions, Exhibits 56, 57, 58 and 59? Is that at the

present time, or would you say you never had known any manufacturer to use those devices as suggested in your instructions?

A. Use these devices with—

Q. No. 56?

Mr. Freeman: You do not mean to use 56?

Mr. Haycraft: Nos. 55, 57, 58 and 59.

The Witness: Repeat the question.

(The question referred to was thereupon read by the reporter.)

The Witness: They were used to a considerable
469 extent by Timken back several years ago. I believe in the last few years they tried to match them up in sets.

By Mr. Haycraft:

Q. Was Timken the only manufacturer you personally knew that had used those?

A. No, there were others, because most of our sales in 1936, our controls had to be used with other primary controls.

Q. Do you remember some of your customers back in those years?

Mr. Freeman: We want customers that you know that actually used your thermostat with somebody else's primary. We are talking about your thermostat and somebody else's primary.

The Witness: Electro used our thermostats with their own primary. That is the only one I know for sure, offhand, on the thermostats.

By Mr. Haycraft:

Q. How about the limit controls that you sold?

A. Limit controls generally go in the main line, and we don't have this problem of terminal connections, and so forth.

Q. It was not necessary, then, for you to issue special instructions for the use of your limit controls, with the Minneapolis-Honeywell setup?

470 A. Not if they were hooked in the high voltage line, where they are ordinarily recommended for, although in the oil burner, of course, a lot of installers do connect them in the low voltage line. For that reason, we did issue special instructions in connection with the limit controls.

Q. What is that exhibit number?

A. Exhibit 58. The other one, I believe, you have over there. This is the stoker.

Q. The stoker is out.

What companies, to your knowledge, used your limit control in conjunction with Minneapolis-Honeywell primary?

Mr. Freeman: What was that question?

Trial Examiner Sheppard: Read it.

(The question above referred to was thereupon read by the reporter.)

The Witness: The only one I know, of my own knowledge, would be Timken, but since we sold quite a few limit controls to other oil burner manufacturers, I would assume a percentage of those was used in connection with Minneapolis-Honeywell primaries.

Mr. Freeman: I move the last portion of that answer be stricken, especially where he starts with an assumption.

Trial Examiner Sheppard: That can go out.

By Mr. Haycraft:

471 Q. I will put it this way:

What companies bought limit controls from you before you mentioned the primary controls? Could you give us a list of those?

A. No, I couldn't. I have this list that I made up, of the names you gave me, which merely shows the dollar volume sold the companies. We did not have much to sell in the case of controls in the year 1936, except limit controls, and thermostats, but I cannot tell, from the information I have here.

Q. Don't you have any recollection on it, outside of that?

Mr. Freeman: That recollection should be limited to limit controls used in connection with oil burners, controls for oil burners.

Mr. Haycraft: Yes.

Mr. Freeman: As distinguished from stokers or commercial installation, because the same limit control can be used interchangeably with gas or oil.

The Witness: I have no recollection on that.

By Mr. Haycraft:

Q. Do you know whether Timken did?

A. Whether Timken used our limit control or Minneapolis-Honeywell Series 10 primary?

Q. Yes.

472 A. I would say they did.

Q. Do you know whether Cleveland Steel Products did?

A. Not of my own knowledge. They bought some $378 worth of controls in 1936, but I don't know.

Q. You know Electro did?

A. Electro bought limit controls.

Mr. Freeman: He has already testified Electro used them in connection with their own primary. I thought you were limiting this to limit controls of Perfex with Minneapolis-Honeywell primaries.

The Witness: You asked about Cleveland Steel Products?

By Mr. Haycraft:

Q. Yes.

A. Even up in 1938, we sold them some 650 limit controls, and only 25 primary controls.

Q. Do you know whether or not they were using Minneapolis-Honeywell primary controls in that year?

A. I do not.

Mr. Haycraft: That is all.

Recross Examination by Mr. Freeman.

Q. Mr. Tate, of your own personal knowledge, do you know whether Timken ever used one of your limit controls with the Minneapolis-Honeywell primary?

473 A. I have never been out and inspected them, but I have been told by the Chief Engineer they did.

Q. Strictly hearsay?

Mr. Haycraft: I object to that, Mr. Examiner.

Trial Examiner Sheppard: Yes.

Mr. Freeman: I am asking you, then, Mr. Tate, as a lawyer, whether or not that is not hearsay, or your understanding?

Mr. Haycraft: I object to that question and the form of it.

Trial Examiner Sheppard: Do you understand that question?

The Witness: I did not think it was a question to me.

Mr. Haycraft: He is asking him to characterize his testimony as hearsay.

474 Trial Examiner Sheppard: Well, I thought it would be that.

Mr. Haycraft: That is what it amounted to.

Trial Examiner Sheppard: That is the impression I had in mind. The objection is sustained.

The Witness: There was one question back in there some place I think should be clarified. I did not answer it correctly or completely.

Trial Examiner Sheppard: All right, straighten it out right now, Mr. Tate.

The Witness: I can't paraphrase the question, but I can give you the substance of it.

Trial Examiner Sheppard: Was it Mr. Freeman's question or Mr. Haycraft's?

The Witness: It was Mr. Freeman's question. The question was that we did not need any license from Minneapolis-Honeywell in order to design our primary controls, and I answered that "no", that we bought some patents and licensed under some other patents, and licensed around the Minneapolis controls. There was a group of controls at that time in which Minneapolis-Honeywell was the licensee, and there was some question as to whether it was an exclusive license, and whether they had a right to grant licenses, known as the Zoro patent group; but those patents were later invalidated, so they are no longer in
475 the picture. I did not bring that in before, but that was a part of the record back in 1936 and 1937.

Trial Examiner Sheppard: I remember his asking that question and your answering it in the negative, and I will consider the answer you made now with the answer that you made then.

Mr. Freeman: I would like to ask him a question on that.

Mr. Haycraft: I would like to ask a question on that, too.

Trial Examiner Sheppard: All right.

Mr. Haycraft: You mean by that it was necessary that you get the license under the Zoro patent?

The Witness: My recollection is that we asked for one. I don't know whether we did in writing or not.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. Mr. Tate, do you know whether you asked the Minneapolis-Honeywell Company or did you ask the Cleveland Trust Company, the owners of the Zoro patents?

A. I don't remember which now.

Q. And the Zoro patent, that is a group of patents which are collectively referred to as the Zoro patents, they never kept your company from going ahead and making a primary control?

476 A. No, we went ahead in face of the patents.

Q. And those patents were ultimately knocked out by the Second Circuit Court of Appeals?

A. That is right.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Freeman:

Q. Reference was made on your direct to Commission's Exhibit 58, having to do with a pressure control where you now have a limit control. The Perfex limit control has a plurality of terminals on it, is that correct?

A. The one illustrated in that piece of literature does.

Q. I am referring to Figure 4 of the illustrations.

A. That is correct.

Q. In that case it is shown connected to a Series 10 relay?

A. That is correct.

Q. And I take it that Series 10 is illustrative of the Minneapolis-Honeywell relay, or the Protectorelay, either type of R116 or R117?

A. That is correct.

Q. In that case I notice the Perfex wiring diagram connects the terminal marked W, which I take it means white, and the terminal on the relay marked R, which

477 I take it means red.

A. That is correct.

Q. So when your Perfex limit control of the kind illustrated on Commission's Exhibit No. 58 is connected up with a Minneapolis-Honeywell Series 10 relay, you connect white to red?

A. That is right.

Q. And I notice that there is a second connection on your Perfex control also, marked W. That is a second white terminal, is that correct?

A. Yes, sir.

Q. And in that case you connect white to white?

A. That is right.

Q. And it is also necessary, is it not, in the wiring

diagram illustrated on Commission's Exhibit No. 58 to provide a permanent jumper between the R terminal and the B terminal, that is, representing the blue terminal on the Series 10 relay?

A. Yes, sir.

Q. And that illustration here does not refer to the connection at B, between R and B, as any example or any special notation that the individual who does the connecting up must provide a jumper between the two, other than the diagramatic illustration; is that correct?

A. That is correct.

478 Q. And in following the color combination, that is, connecting the R terminal on the Perfex control with the R terminal on the Series 10 primary, the way that you would connect color to color, will give you a wrong connection, is that correct?

A. That is right.

Trial Examiner Sheppard: Do you mean red to red?

Mr. Freeman: Red to red.

By Mr. Freeman:

Q. Connecting B or blue on your Perfex color combination to B or blue on the Minneapolis-Honeywell Series 10 relay will give you a wrong connection?

A. That is right.

Q. So the color combination of the Perfex control and the color combination of the Minneapolis-Honeywell Series 10 primary would be confusing; that is, you could not make a proper connection if you connected white to white, or red to red or blue to blue?

A. That is correct. Also, I would like to say that I don't believe that we manufactured that particular control around 1936 and 1937.

Q. So that any testimony as to any use of this control that is illustrated on Commission's Exhibit No. 58 occurred more than six or seven years ago at least, at least six or seven years ago?

479 A. Well, we will build Series 700, and we merely added two additional terminals, and left the color code there as it was, and left the two-wire pressure control.

Q. And then you would have to know just what two terminals of the Series 10 relay to connect together by a jumper in order to get the proper connection with the Perfex control?

A. That is right.

Q. I take it that this literature which illustrates the four different color combinations of a Perfex control has been off the market for the past six or seven years? I mean, illustrated on Commission's Exhibit No. 58?

A. About that length of time.

Q. How do you recommend that your present Series 700 control, the connection of it with a Minneapolis-Honeywell Series 10? In other words, some modern version of it, as distinguished from digging back into the archives?

A. Did you ask me how to connect it, or what did we sell the customer?

Q. What do you do now, since you no longer use a color combination and no longer use the four terminals; just what do you now illustrate as diagramatic or as bringing about the elimination of one of the binders or terminals on the Minneapolis-Honeywell primaries?

A. It would be connected as shown on Exhibit No. 59.

Q. And 59 has to do with a thermostat, and you are
480 now telling us that you do very much the same way if you used one of your pressure controls or limit controls?

A. That would be correct. Well, that is not exactly correct either. You would connect if as shown here if you were connecting a limit control. It is meant to be used in series with a low voltage thermostat or used in series with the main line of the motor.

Q. This diagram illustrated on Exhibit No. 59 is a room thermostat, and it would not necessarily follow that you would use a 700 series relay there?

A. That is correct.

Q. That is the thing I wanted to get at. Do you have a wiring diagram that would tell us now how you would connect up a limit control in the circuit with Minneapolis-Honeywell's primary of the Series 10 type?

A. I don't have any of the literature with me.

Q. Without the literature then, Mr. Tate, am I correct in my understanding that the room thermostat would be connected up one way with a Series 10, even though your room thermostat has two terminals on it, and a limit control would be connected up another way even though your limit control had two terminals on it?

A. That is correct.

Q. So the individual making the connection would not

necessarily follow the two terminals from thermostat
481 to the primary and use this same connection for the limit control?

A. That is correct.

Q. Isn't it true that in your catalogue you show a good many limit controls where the limit control is not at all connected up with the primary circuit but is used merely as a safety boiler control coordinating with the primary?

A. That is correct.

Q. In such case it is not used as a safety device?

A. That is correct.

Q. What we have been talking about here, that is, proper connections, had to do with a thermostat and limit control and the primary controls; those three controls that we all think of as standard in connection with the oil burner. That is correct, is it not?

A. That is correct.

Q. So that some limit controls, even of the same kind, might be used, even on an oil burner, but not in the primary circuit, but in that case it would not serve as a safety boiler control coordinating with the primary; is that correct?

A. That is correct. There are quite a few auxiliary controls used on heating plants.

Q. And the problems of connecting up the auxiliary controls, even though they be a limit control, is different than connecting up with a direct connection with three
482 controls that are used as the main controls for the proper functioning of an oil burner; is that correct?

A. That is correct.

Mr. Freeman: That is all.

Trial Examiner Sheppard: Anything else?

Mr. Haycraft: That is all.

(Witness excused.)

Trial Examiner Sheppard: Anything else this evening?

Mr. Haycraft: I have nothing further. Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

Take an adjournment until nine-thirty o'clock tomorrow morning, Thursday, August 19th, 1943.

(Whereupon, at 4:30 o'clock p. m., August 18, 1943, the hearing in the above-entitled matter was adjourned.)

483 Room 376,
United States Post Office,
Milwaukee, Wisconsin,
Thursday, August 19, 1943.

Met, pursuant to adjournment at 9:30 a. m. C. W. T.

Before W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Esq., Attorney for the Federal Trade Commission.

Cravath, de Gersdorff, Swaine & Wood, by R. L. Gilpatric, Esq., and B. R. Shute, Esq., 15 Broad Street, New York, N. Y., and

Bair & Freeman, by Will Freeman, Esq., 135 South La Salle Street, Chicago, Illinois, appeared for the Respondent.

484 PROCEEDINGS.

Trial Examiner Sheppard: Mr. Reporter, show Mr. Arthur H. Lockrae on the stand, having been previously sworn, and appearing again at the call of the Commission.

ARTHUR H. LOCKRAE was recalled as a witness for the Commission and, having been previously sworn was examined and testified as follows:

Mr. Haycraft: Mr. Examiner, you will recall we had some discussion with respect to Commission's Exhibit No. 11, whether or not it was the agreement entered into between the Minneapolis-Honeywell Regulator Company and the Timken Silent Automatic Company on December 2, 1935; and we have here a statement which has been furnished me by counsel, which they state is the contract entered into for that season, dated February 19, 1936; and I would like to substitute if I may, this agreement for the one that has already been received in evidence as No. 11, because of the fact I know this is correct and the other one is not.

Trial Examiner Sheppard: All right.

Mr. Freeman: That is not going to be very clear on the record.

Mr. Gilpatric: 11 and 12 were mixed up before.

Mr. Haycraft: It does not make any difference, 485 if you want me to, I will give them a separate number.

Mr. Freeman: I think it should be filed as a substitute, but when you say "this" it does not mean anything in the record.

Mr. Haycraft: All right, I will give it a number now.

Trial Examiner Sheppard: Mr. Haycraft, as those two things are together, let us make this 11-F, G and H.

Mr. Freeman: Off the record, please.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

Mark this 66-A, B, C, and D.

(The documents referred to were marked Commission's Exhibits 66-A, 66-B, 66-C and 66-D, for identification.)

Trial Examiner Sheppard: By agreement of counsel, Commission's Exhibit 66-A, B, C, and D is accepted into the record and will be considered by the Examiner in lieu of Commission's Exhibit No. 11-A, B, C and D.

(The documents referred to heretofore marked for identification COMMISSION'S EXHIBIT NO. 66-A, 66-B, 66-C, and 66-D, were received in evidence.)

Mr. Haycraft: I ask to be marked for identifica- 486 tion as Commission's Exhibit No. 67, a letter from the Timken Silent Automatic Company to the Minneapolis-Honeywell Regulator Company, dated June 11, 1935.

As Commission's Exhibit No. 68, I ask to have marked for identification a carbon copy of a letter from the Minneapolis-Honeywell Regulator Company, by J. W. Pauling, to the Timken Silent Automatic Company, dated June 18, 1935.

As Commission's Exhibit No. 69, a letter dated September 27, 1935, to Mr. M. J. Powers, care of the Timken Silent Automatic Company, from the Minneapolis-Honeywell Regulator Company.

As Commission's Exhibit 70, for identification, a letter from the Timken Silent Automatic Company, dated September 30, 1935, to Mr. John Pauling, Minneapolis-Honeywell Regulator Company.

As Commission's Exhibit No. 71, a letter from the Minneapolis-Honeywell Regulator Company to Mr. M. A. Powers, Timken Silent Automatic Company, dated October 3, 1935.

As Commission's Exhibit No. 72, a letter from the Timken Silent Automatic Company, dated November 26, 1935, to Mr. J. W. Pauling, Minneapolis Regulator Company.

And as Commission's Exhibit No. 73, a copy of Manufacturers Contract Report of the Minneapolis-Honey-
487 well Regulator Company signed by D. J. Peterson, giving report on Timken Detroit Axle Company, Timken Silent Automatic Division, bearing a date of January 15, 1937.

(The documents referred to were marked Commission's Exhibits Nos. 67, 68, 69, 70, 71, 72 and 73 for identification.)

Mr. Haycraft: Will you mark this document Commission's Exhibit No. 74-A and B?

(The document referred to was marked Commission's Exhibit No. 74-A and 74-B, for identification.)

Direct Examination by Mr. Haycraft.

Q. Mr. Lockrae, I show you Commission's Exhibit No. 74-A and B for identification, and ask you if you can identify that as correspondence between yourself and the Cleveland Steel Products Company with respect to the 1938 contract for that firm?

(Handing exhibit to the witness.)

A. Yes, sir; I can.

Mr. Haycraft: I offer in evidence then, Mr. Examiner, Commission's Exhibit No. 74-A, which is a carbon copy of a letter from the witness to the Cleveland Steel Products Company, dated February 3, 1938; and a telegram from the Cleveland Steel Products Company to Minneap-
olis-Honeywell Regulator Company, A. H. Lockrae,
488 dated February 2nd, 1938.

Trial Examiner Sheppard: Is there any objection?

Mr. Freeman: No.

Trial Examiner Sheppard: Mr. Reporter, show that the Exhibit 74-A and B is accepted for the record.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT NO. 74-A and 74-B was received in evidence.)

Mr. Haycraft: Will you mark this for identification?

(The document referred to was marked Commission's Exhibit No. 75-A and 75-B, for identification.)

Mr. Haycraft: And also mark these for identification.

(The documents referred to were marked Commission's Exhibits Nos. 76, 77, 78, 79, 80, 81, 82 and 83, for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit No. 75 for identification, 75-A being a carbon copy of a letter dated February 15, 1938 from C. B. Sweatt, Vice-President of the Minneapolis-Honeywell Regulator Company, to the Fairfield Oil Heating Company, Inc., Greenwich, Connecticut, and 75-B being an original letter from J. R. Johnson,
489 president of the Fairfield Oil Heating Company, Incorporated, to C. B. Sweatt, Minneapolis-Honeywell Regulator Company, dated February 18, 1938, and ask you if that was produced in response to my request with respect to correspondence of your Company with the Fairfield Oil Heating Company?

A. It was.

Mr. Haycraft: I offer it in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Freeman: No.

Trial Examiner Sheppard: Exhibit No. 75-A and B will be accepted.

(The documents above referred to heretofore marked for identification COMMISSION'S EXHIBIT NO. 75-A and 75-B was received in evidence.)

By Mr. Haycraft:

Q. Mr. Lockrae, I show you Commission's Exhibit No. 76 for identification, which is a carbon copy of a letter from yourself to the Rae Oil Burner Company, San Francisco, California, dated January 18, 1938, and ask if that was produced in response to my request with respect to correspondence with that firm?

(Handing exhibit to the witness.)

A. Yes, sir.

Q. I notice at the top there is a note about C. L. Peterson. Who was he at that time?

490 A. He was and still is manager of our San Francisco branch.

Q. And who is the John referred to in that paragraph?

A. Let me see that again.

(Document handed to witness.)

The Witness: Mr. Pauling.

491 By Mr. Haycraft:

Q. The reference to John also in the body of the letter is the same party?

A. The same party.

Q. Hayward is mentioned in the paragraph at the top of the page. Is that the Hayward who is one of your customers out on the Pacific Coast?

A. Mr. Hayward is the vice president of Ray Burner Company.

Mr. Haycraft: I offer this exhibit in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Gilpatric: No objection.

Trial Examiner Sheppard: It may be accepted as Exhibit 76.

(The paper referred to, heretofore marked for identification COMMISSION'S EXHIBIT 76, was received in evidence.)

By Mr. Haycraft:

Q. I now show you Commission's Exhibit No. 77, a carbon copy of a letter from yourself to the Century Engineering Corporation, attention E. J. Lattner, President, dated January 21, 1937, and Commission's Exhibit No. 78, for identification, an original letter from Century Engineering Corporation to the Minneapolis-Honeywell Regulator Company, dated January 29, 1937; Commission's Exhibit 79, for identification, a carbon copy of a letter
492 from the Minneapolis-Honeywell Regulator Company, signed by C. E. Swanson, addressed to the Century Engineering Corporation, dated February 2, 1937; Commission's Exhibit No. 80, for identification, a carbon copy of a letter from yourself to Mr. E. J. Lattner, President of Century Engineering Corporation, dated January 5, 1939; Exhibit 81, for identification, a carbon copy of a letter from Minneapolis-Honeywell Regulator Company, signed by Charles S. Saunders, Vice President, addressed to the Century Engineering Corporation, dated January 29, 1940; Exhibit 82, for identification, a carbon copy of a letter from yourself to Mr. E. J. Lattner, dated September 22, 1941, and Exhibit 83, for identification, an original letter from the Century Engineering Corporation to Min-

neapolis-Honeywell Regulator Company, attention Mr. Lockrae, dated October 20, 1941, and ask you if this correspondence I have just described was furnished by you pursuant to my request a few days ago?

A. It was.

Mr. Freeman: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

On the record.

By Mr. Haycraft:

Q. I notice some typewritten notations on Commission's Exhibit No. 81, for identification, at the top of
493 the page; were they put on there in your office, directing the filing of the copy of the letter, as to what was done, or what was the significance of that?

A. No, sir. Apparently those were put on in our Chicago office, simply directing where the carbon copies would go.

Mr. Haycraft: I offer those in evidence, Mr. Examiner.

Trial Examiner Sheppard: Any objection?

Mr. Gilpatric: No objection.

Trial Examiner Sheppard: Let them be accepted as Exhibits 77 to 83, inclusive.

(The papers referred to, heretofore marked for identification COMMISSION'S EXHIBITS 77, 78, 79, 80, 81, 82 and 83, respectively, were received in evidence.)

By Mr. Haycraft:

Q. I show you Commission's Exhibits No. 84-A to D. It does not have a title, but it contains certain figures under dates, with respect to a number of oil burner manufacturers, customers of Minneapolis-Honeywell Regulator Company. Would you describe that for the record, as to how it was prepared and what it purports to contain?

A. This is a list of accounts that Mr. Haycraft asked
494 that we get some figures to show their purchases of Minneapolis-Honeywell controls, in the years of 1937 to 1939, inclusive.

Q. And these were taken from your books?

A. Our records.

Q. You are satisfied they are correct?

A. As far as I know, they are correct.

Mr. Haycraft: I offer that exhibit in evidence.

Mr. Gilpatric: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

On the record.

Mr. Gilpatric: No objection.

Trial Examiner Sheppard: It may be admitted as Exhibits 84-A to D.

(The papers referred to were marked for identification COMMISSION'S EXHIBITS 84-A, 84-B, 84-C and 84-D, respectively, and were received in evidence.)

495 Trial Examiner Sheppard: Now, Mr. Haycraft, you have everything in here except—

Mr. Haycraft: (Interposing.) Everything except 67 through 73, and I am taking them up with Mr. Pauling when he takes the stand.

Trial Examiner Sheppard: O. K.

By Mr. Haycraft:

Q. Did you conduct the negotiations with the Cleveland Steel Products Corporation leading up to the signing of their 1938 contract?

A. Yes, sir.

Q. In this letter which you wrote to Mr. O'Brien, Commission's Exhibit No. 74-A, dated February 3, 1938, do you remember whether you saw Mr. O'Brien after the date of that letter and before the signing of the contract in April?

A. I am not certain.

Q. I notice that you state here:

"If you could standardize on our constant ignition controls it would go a long way toward obtaining a lower price; but failing that, then if you can see your way to place as nominal a price difference as possible between your burner equipped with our controls and our competitors', it would be extremely beneficial."

496 Who were you referring to there? Were you not referring to the Mercoid—well, which one were you referring to, either the Mercoid or Perfex?

A. They were kind of intermingled that year, as I remember. I am sure that Mercoid was involved, and I think Perfex was involved.

Q. Did you know that Perfex at that time was making name plates for the Cleveland Steel Products Company to put on their oil burners?

A. I know that was a practice of theirs, and they could very well have been doing it at that time.

Q. But you don't recall then which competitor you had in mind in that paragraph, or both of those paragraphs?

A. Well, as I say, I am sure Mercoid was involved, and Perfex might have been, I am not certain.

Q. Previously the oil burners of the Cleveland Steel Products Company equipped with the Mercoid controls had been selling for $5.00 less than the one with the Minneapolis-Honeywell controls?

A. They had been sold for less, and I believe the amount was $5.00.

Q. Do you know, as a result of your negotiations in 1938, what was done with respect to that; what came out of that situation there?

A. As I recall, Mr. Haycraft, they continued to use
497 the Mercoid controls that year.

Q. Well, you heard the testimony on that in the record, which showed the volume of sales of Mercoid in 1938?

A. I just did not recall that, but it is my recollection that they did continue in 1938 and bought some Mercoid and used it.

Q. Very small. But the point is, your proposition was either to standardize on your control or to wipe out the differential. Do you remember whether or not they wiped out the differential?

A. No, sir; they did not.

Mr. Freeman: The letter does not say wipe out the differential.

The Witness: No, reduce it, if I remember correctly.

Mr. Haycraft: Perhaps that would be better.

The Witness: Yes.

By Mr. Haycraft:

Q. But they did sign a contract calling for their season requirements, estimated at 3,000 sets?

A. As I recall it, they did.

Q. And your sales of primaries and thermostats during the preceding year, according to Commission's Exhibit 84, was about 1200, around 1200 sets; is that correct?

498 A. That is correct.

Q. So what I am trying to get at is, what transpired between February 3, 1938 and April, 1938 that led up to the signing of this agreement. Do you have any recollection of any further negotiations on that?

A. I do not, Mr. Haycraft. I just remember that the agreement was executed.

Q. In your letter to the Century Engineering Company, dated January 21, 1937, Commission's Exhibit No. 77, you make a quotation on 7500 sets, or bracket 5, and state:

"It would mean that those sets of controls would cost you approximately $1.25 more than the figure you mentioned at which you could obtain low voltage competitive controls, and that this means if a dealer difference in price could be set we know that we could get our share of the business, as on other business with our dealers this has been done on line voltage controls."

What competitor did you have in mind there?

A. What year was that, Mr. Haycraft?

Q. This was in January, 1937.

A. I believe at that time that there were two competitors involved, Mercoid and Penn Switch.

Q. Now, you mentioned in there a low voltage competitive control. Does that indicate who the competitors were?

499 A. No, because they both made low voltage.

Q. In the last line you referred to line voltage controls.

A. Century had previously used a line voltage control.

Q. And who manufactured the line voltage controls?

A. Well, at that time Perfex—pardon me, at that time Penn and Mercoid both manufactured a line voltage control, and we also manufactured one.

Q. Will you explain for the record the difference between what you referred to as a line voltage control and low voltage controls? That term has been used before, and I think it would be a good idea to get some definition of it.

A. With a line voltage control there is no transformer in the primary control, and you have to lead the line voltage wires from the primary control to the room thermostat, which meant the requirement calls for BX or conduit, and that is because of the absence of the transformer it was a lower priced control.

500 Q. The Minneapolis-Honeywell made both?

A. Yes.

Q. That is, R116 and R117?

A. That is the low voltage control.

Q. Did your competitors specialize on low voltage controls, or did they sell more line voltage controls?

A. They had both.

Q. You do not know whether or not they had more of one than the other?

A. I can say this, Mr. Haycraft, if it will help the record any. I can tell you the line voltage control went out of the picture very shortly after 1937. In other words, the field requirement was for the low voltage control. It was no longer necessary to manufacture the line voltage for general usage.

Q. How long would you say, then, that the line voltage control was out of the picture?

A. Its popularity was on the wane in 1937, and shortly thereafter it was out of the picture.

Q. What is the number of your line voltage primary controls, what line, or series?

A. The R416 for constant ignition, and the R417 for intermittent ignition.

Mr. Haycraft: I haven't anything further to ask Mr. Lockrae at this time, Mr. Examiner, and I should like 501 to call Mr. Pauling for the correspondence that I have, that he had to do with.

Trial Examiner Sheppard: Gentlemen, do you want to cross-examine Mr. Lockrae?

Mr. Gilpatric: No. You have nothing to ask him on the Fairfield matter?

Mr. Haycraft: No, I think the correspondence speaks for itself.

Trial Examiner Sheppard: Whatever you want to touch on can be done later.

You are excused, Mr. Lockrae.

(Witness excused.)

Mr. Haycraft: You can call him any time you want to, anyway.

Mr. Gilpatric: I am refraining on cross-examination, on the basis when we come to our case we can include it.

J. W. PAULING was thereupon called as a witness for the Commission, and having been first duly sworn, testified as follows:

Direct Examination.

Trial Examiner Sheppard: Give us your name and address, please.

The Witness: J. W. Pauling.

502 By Mr. Haycraft:

Q. Mr. Pauling, what is your occupation?

A. Vice President, Minneapolis-Honeywell Regulator Company.

Q. As such, what are your duties?

A. I am manager of the heating controls division.

Q. How long have you been occupying that position?

A. Since about 1928, I think.

Q. Do you have any particular territory, other than the United States, that you cover, or any particular accounts?

A. I have no particular territory. My position is more of an executive one in Minneapolis, but I do make various contacts over the United States.

Q. On what occasion? What occasions those contacts?

A. Oh, I accompany other salesmen, and make what we might term good will contacts, sales promotion.

503 Trial Examiner Sheppard: Your address, Mr. Pauling.

The Witness: Minneapolis.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

On the record.

Mr. Haycraft: Mark these documents Commission's Exhibits 85, 86 and 87, for identification.

(The papers referred to were marked Commission's Exhibits 85, 86 and 87 for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit 85, for identification, a photostatic copy of a letter from Mr. T. A. Crawford, General Chief Manager of the Timken Sound Automatic Division of Timken-Detroit Axle Company, Detroit,

Michigan, addressed to the Minneapolis-Honeywell Regulator Company, attention J. W. Pauling, dated May 19, 1936, and ask you whether or not you received that letter, and can identify that as a photostatic copy of it?

A. I received this letter.

Q. And there are some pencil notations apparently on the original, on the lower left hand corner. Do you recognize those?

A. I do not.

504 Trial Examiner Sheppard: You do not recognize the handwriting?

The Witness: I do not.

Trial Examiner Sheppard: Possibly somebody not in your office?

The Witness: Probably someone in our office that I had passed this letter along to, to get the information.

By Mr. Haycraft:

Q. Can you interpret the notations?

A. I assume it was Timken's price.

Q. We will take that up later.

A. The fourth bracket, $12, the third, $12.30, Timken price, $9.15. That is the different brackets, I presume.

Mr. Haycraft: I offer that in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Gilpatric: No.

Trial Examiner Sheppard: Let Exhibit 85 be accepted in evidence.

(The paper referred to, heretofore marked for identification COMMISSION'S EXHIBIT 85, was received in evidence.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit 86, for identification, purporting to be a carbon copy of a letter from yourself to the Timken Sound Automatic, Attention T. A.

505 Crawford, dated May 22, 1936, which is apparently in reply to Commission's Exhibit 85, and I ask you if you mailed the original of that letter to Mr. Crawford?

A. Yes, sir.

Mr. Haycraft: I offer that in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Gilpatric: No objection.

Trial Examiner Sheppard: Let Exhibit 86 be accepted in evidence.

(The paper referred to, heretofore marked for identification COMMISSION'S EXHIBIT 86, was received in evidence.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit 87, for identification, which is a letter from H. C. Shafer, Purchasing Agent of the Timken Sound Automatic, dated January 15, 1937, addressed to Minneapolis-Honeywell Regulator Company, in the form of an agreement, in view of the noted acceptance in the lower left hand corner, and I ask you to identify that as your signature, and as an agreement that was entered into between Minneapolis-Honeywell Regulator Company and the Timken Company.

A. Yes, sir.

Mr. Haycraft: I offer that in evidence.

Trial Examiner Sheppard: Any objection?

506 Mr. Gilpatric: No objection.

Trial Examiner Sheppard: Let Commission's Exhibit 87 be accepted into evidence.

(The paper referred to, heretofore marked for identification COMMISSION'S EXHIBIT 87, was received in evidence.)

By Mr. Haycraft:

Q. I also show you Commission's Exhibit 67, for identification, the original letter from H. C. Shafer, addressed to the Minneapolis-Honeywell Regulator Company, attention John Pauling, dated June 11, 1935; Exhibit 68, for identification, a carbon copy of your letter to Timken, attention H. C. Shafer, in reply to Commission's Exhibit No. 67, dated June 18, 1935; also carbon copy of a letter unsigned, addressed to M. A. Powers, Timken Sound Automatic, dated September 27, 1935, Commission's Exhibit No. 69, for identification; also a letter from M. A. Powers, Vice President and Chief Engineer of Timken Sound Automatic, dated September 30, 1935, addressed to you, John Pauling, Commission's Exhibit No. 70, for identification; also Commission's Exhibit No. 71, for identification, a carbon copy of a letter from yourself to Mr. Powers, dated October 3, 1935, apparently in reply to Exhibit 70, for identification. I show you Commission's Exhibit No. 72, for identification, the original letter from M. J.

507 Roberts, Vice President and General Manager of Timken Sound Automatic, to J. W. Pauling, dated

November 26, 1935, and ask you if you can identify those papers as correspondence passing between you and the representative officials or employees of the Timken Sound Automatic Company, on the dates indicated?

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

On the record.

The Witness: Except this one. I think that that is my letter, but it has no identification. It is probably a personal letter.

By Mr. Haycraft:

Q. What is the date of that one?

A. The date of it is September 27, 1935.

Q. Exhibit No. 69, for identification?

A. I don't recall having written the letter, but I think I probably did, as a personal letter.

Trial Examiner Sheppard: If it not important, you can blank it out.

Mr. Haycraft: I will ask him some questions about it.

Are you willing to stipulate you did write that? for the record?

Mr. Freeman: Off the record.

508 Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

On the record.

509 Mr. Haycraft: Will you stipulate that he wrote that letter?

Mr. Freeman: No, we will not stipulate, when he says that he does not remember it, that he wrote it. Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

Mr. Haycraft: I offer them all in evidence.

Trial Examiner Sheppard: Let them be accepted. Those are Commission's Exhibits Nos. 67 to 72.

Mr. Haycraft: Yes, I haven't offered 73 yet.

(The documents referred to heretofore marked for identification COMMISSION'S EXHIBITS NOS. 67, 68, 69, 70, 71 and 72, were received in evidence.)

By Mr. Haycraft:

Q. I will show you Commission's Exhibit No. 73 for identification, which purports to be a carbon copy of a report of Salesman D. J. Peterson, under date of January 15, 1937, with respect to his call on the Timken Detroit Axle Company, and a number of individuals named, and ask you if you can identify that as a copy of an original report from Mr. Peterson which came to your attention on or about the time that it was written?

A. Yes, sir.

510 Mr. Haycraft: I offer that in evidence.

Mr. Freeman: No objection.

Trial Examiner Sheppard: It may be accepted.

(The document referred to heretofore marked for identification COMMISSION'S EXHIBIT NO. 73, was received in evidence.)

By Mr. Haycraft:

Q. Did you accompany Mr. Peterson on the call referred to in this report?

A. Yes, sir.

Q. Does it correctly state your recollection of what transpired?

A. It does.

Q. Do you remember when it was that you submitted the contract to Timken with respect to the 1937 business?

A. I don't remember the exact date. It would be late in the winter of 1936.

Q. I show you Commission's Exhibits 12-A; B and C, and 11-D, and ask you if you can identify those pages as the sheets of the form of the agreement which you submitted to Timken on or about December, 1936?

A. This is a contract that I submitted on December 2nd.

Q. Did any one from the Timken Company sign it?

A. No, it was not signed.

Q. Do you recall what reason was given by the

511 officials of the Timken Company, as to why they would not sign that contract as submitted?

A. I think I can.

Q. And what were those reasons, as you recall them?

A. I think at that time they told me that they were not signing any contract or any commitments for the year; and if the contract had to be signed at that time, it necessi-

tated referring it to their legal department, which would involve quite some delay.

Q. Did they ever sign any contract after that?

A. I think so.

Q. With your company?

A. Yes. Just before this there had been a change in the Timken management.

Q. Will you explain what the change was, and what took place?

A. I don't know just the date, but just before 1935 the Rockwell people came in, replacing the previous management at Timken.

Q. Did you negotiate the 1935 contract, dated in 1935, and entered into for the 1936 business with the Timken Company, the year previous?

A. Yes, I did.

Q. And was Rockwell in there at that time?

A. I don't recall.

512 Q. Do you recall whether he was the one that you contacted or not?

A. No.

Q. Were you able to get a contract signed after 1937 with the Timken Company, for 1938 and 1939?

A. I don't believe that after that date they signed a contract, I am not sure.

Trial Examiner Sheppard: What is the date of that contract that they did not sign?

Mr. Haycraft: December 2, 1936.

Trial Examiner Sheppard: December 2, 1936?

Mr. Gilpatric: Yes.

Trial Examiner Sheppard: All right.

Mr. Haycraft: I will ask now, just in order to keep the record straight at this point, whether or not counsel for the Respondent will produce any such agreement for 1938 and 1939.

Mr. Gilpatric: There are no such agreements after the year 1937.

Mr. Haycraft: You have made a search on that?

Mr. Gilpatric: Yes, we have made a search, and there are none.

Mr. Haycraft: I just wanted to make that clear right there on that point, so we will not have to come back to it again.

513 By Mr. Haycraft:

Q. Who was Mr. Roberts mentioned in Commission's Exhibit No. 67?

A. Mr. Roberts was manager of the oil heating division of Timken, manager of the Timken Silent Automatic Company.

Q. Mr. Schaeffer was the purchasing agent?

A. That is right.

Q. Now, in your letter of June 18th, Commission's Exhibit No. 68—

Mr. Gilpatric: What year is that?

Mr. Haycraft: 1935, June 18, 1935.

By Mr. Haycraft:

Q. You state that on the basis of your price that you were making to them, that it was based on "purchases from us this year of 40,000 units."

Do you recall whether or not that many units had been purchased at that time or not? Whether they came up to that amount?

A. In what year?

Q. In 1935.

A. I do not.

Q. Do you recall having a conversation, a telephone conversation with Mr. Powers of the Timken Company? By the way, who is Mr. Powers, or who was he at that time?

A. Engineer.

514 Q. In 1935, in September, 1935?

A. Engineer of the heating division.

Q. Do you recall talking with him with respect to the subject matter of this letter of September 27th, 1935, Commission's Exhibit No. 69?

(Handing document to the witness.)

A. No, I do not recall that conversation.

Q. Do you have any recollection at all with respect to the competitors who were making a quotation of $2.50, or, as he says in a letter in response to that, dated September 30, 1935, Commission's Exhibit No. 70, as low as $2.00 for Pressure controls?

A. I recall a discussion with Powers regarding this particular type of Pressuretrol, building a cheaper Pressuretrol, leaving off some of the features which were on our standard unit. At that time, if my memory serves

me, he told me that there were other companies, I don't remember how many, that were designing a less expensive unit and offering them to the Timken Company.

Q. And that is what you call a limit control, is it not?

A. That is right.

Q. What type was Timken putting out at that time?

A. At that time, well, I am not sure, but I think that at that time that they were building a rotary type of burner, but along in there somewhere they started developing
515 a pressure type, what is commonly known as a gun type.

Trial Examiner Sheppard: Is the gun type sometimes known as the pressure type?

The Witness: Yes.

By Mr. Hayeraft:

Q. This letter of October 3, 1935, Commission's Exhibit No. 71, what does that refer to?

(Handing document to the witness.)

A. It relates to the design of a cheaper Pressuretrol.

Q. By your firm?

A. Yes. The letter is quite specific. It says:

"I have had it up with our engineering department and we have started to design a Pressuretrol to meet the specifications set forth."

Q. And did they succeed in getting one which was satisfactory?

A. We did.

Q. And did you sell them that after that?

A. We did.

Q. What number did you give to that Pressuretrol, do you remember?

A. I do not. I think that the line voltage was numbered P-404, I would not swear to that.

Q. Would that be high or low voltage?

516 A. P-404 would be a line voltage.

Q. Calling your attention now to Commission's Exhibit No. 85, and Commission's Exhibit No. 86, correspondence between you and Mr. Crawford with respect to the Mueller Furnace Company, dated in May, 1936, I ask you if you can recall the subject matter of that correspondence?

A. Yes, sir.

Q. And what is this R126 primary control referred to there? How does that differ from R116 and R117?

A. R116 and R117 are stack mounted controls, and R126 is a boiler mounted control that sights the flame, affected by the radiant heat of the fire, whereas R116 and R117 are actuated or affected by the temperature of the stack gases.

Q. Did this deal go through?

A. No, it did not go through.

Q. I wish to show you Commission's Exhibit No. 87—

A. (Interposing.) I wish to correct my answer. I think that there were some few that were sold to the Mueller Furnace Company, but not many.

Q. Not in the quantity—

A. (Interposing.) Not in the quantity that we were talking about.

Q. I show you Commission's Exhibit No. 87, and ask you whether or not that is not the agreement entered into between your firm, that is, Minneapolis-Honeywell
517 Regulator Company, and the Timken Company, referred to in Commission's Exhibit No. 73, which is the report of Mr. Peterson. In other words, isn't that the 1937 agreement between Minneapolis-Honeywell and Timken?

(Handing exhibit to the witness.)

518 A. Yes, this refers to the '37 agreement with Timken.

Q. Is that the 1937 agreement?

A. No.

Q. Exhibit 87, that photostatic exhibit, is that the agreement?

A. That is the agreement.

Q. Do you know whether or not any such similar agreements were made for any succeeding years? In other words, that is not on your regular form, but was any agreement to that same effect made for succeeding years?

A. I don't recall a similar agreement.

Q. Do you recall any understanding or agreement between Minneapolis-Honeywell and Timken, that you were a party to, or that you negotiated for the years 1938 and 1939?

A. I don't recall offhand any agreement in writing.

Q. That is what I mean?

A. There may have been.

Q. That calls for a minimum of 23,000 units, does it not?

A. 23,000 units to be shipped in the first six months of the year.

Q. Let me see it.

A. Yes. (Handing document.)

Q. Do you know whether or not that was carried out?

A. I think so.

Q. They bought, according to Commission's Exhibit
519 84, in 1937, approximately 30,000 units, and it is your recollection about 23,000 orders were placed before the 1st of July, 1937?

A. I had definite orders for 23,000 units when I executed this agreement.

Mr. Haycraft: That is all, Mr. Examiner.

Trial Examiner Sheppard: Cross-examine.

Mr. Gilpatric: No cross-examination.

Trial Examiner Sheppard: O. K. Thank you, Mr. Pauling.

(Witness excused.)

Trial Examiner Sheppard: Anything further, gentlemen?

Mr. Haycraft: I haven't anything at this time further here, and there was a matter that I had in mind, of putting in some more, a couple of volumes of transcript, in respect to the cross patents in Chicago, and at our hearing to be held there tomorrow, and that is all I have now, in addition to what has been done here, except that I may want to possibly recall someone from the Mercoid Corporation, but I do not know. I would like, if it would not inconvenience the Examiner and counsel for the respondent, to set a tentative hearing for tomorrow morning at eleven o'clock, in Chicago.

Mr. Freeman: Off the record.

(Two volumes were marked Commission's Exhibits 88, 89 for identification.)

520 Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

On the record.

Mr. Gilpatric: Our suggestion is, Mr. Examiner, that Mr. Haycraft be permitted at this time to make an offer of the record in the cross case, which is entitled "In the United States District Court of Appeals, for the Seventh Circuit, October Term, in session, 1942, No. 8008, Midcontinent Investment Company, a corporation, and Minneapolis-Honeywell Regulator Company, plaintiffs-appel-

lants, *vs.* The Mercoid Corporation, defendant-appellee; and No. 8009, Midcontinent Investment Company, a corporation, and Minneapolis-Honeywell Regulator Company, plaintiffs-appellees, *vs.* The Mercoid Corporation, defendant-appellants, on appeals from the District Court of the United States for the Northern District of Illinois, Eastern Division," and to such an offer we will agree on the understanding that he can supply the reporter with the record at a later time, and presently offer the two volumes in evidence.

Mr. Haycraft: I offer the two volumes, as Commission's Exhibits Nos. 88 and 89.

Trial Examiner Sheppard: That is right, 88 and 89.

521 Mr. Gilpatric: And those will be physical exhibits.

Mr. Haycraft: That is right.

Trial Examiner Sheppard: Physical exhibits 88 and 89, and the examiner accepts those into the record.

(The books referred to, heretofore marked for identification COMMISSION'S EXHIBITS 88 and 89, were received in evidence.)

Mr. Haycraft: Then, in view of that, Mr. Examiner, and the understanding also that at any hearing held in Chicago in behalf of the respondents, if there is any piece of evidence that I need to put in that I may have overlooked, they will allow me to do it at that time.

Trial Examiner Sheppard: Before they start their case.

Mr. Haycraft: Before they start taking their testimony.

Trial Examiner Sheppard: All right.

Mr. Haycraft: I will then not ask for another hearing in Chicago, and ask that we now adjourn to reconvene in Detroit, on next Monday morning, at 10 o'clock a. m.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

On the record.

Mr. Haycraft: I might say, Mr. Examiner, that
522 with respect to the hearing set for Cleveland on August 26th, I find that it is not possible to have the witnesses present, and therefore I am asking that that hearing be cancelled, and that a new hearing be set for September 14, 1943.

Trial Examiner Sheppard: And I will have the hearing in New York, if you want one, four days later. I think that would give you plenty of time.

Mr. Haycraft: Three days later.

Trial Examiner Sheppard: Three days later. I do this, gentlemen, because it is very had to make arrangements to travel, and I want you all to have plenty of time.

Mr. Gilpatric: We are in complete agreement.

Trial Examiner Sheppard: I will fix the hearing in Cleveland for the 14th, at 10 o'clock, in a room that will be designated later, and the hearing in New York for the morning of the 16th of September, at 45 Broadway, New York City, which is our regular hearing room there.

Mr. Freeman: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

On the record.

Is that all we can do at this hearing?

Mr. Haycraft: Yes.

Trial Examiner Sheppard: Miss Reporter, we will take an adjournment, to reconvene in the City of Detroit, Michigan, in Court Room No. 713, Federal Building, at 10 o'clock in the morning on August 23, 1943, and we stand adjourned.

523

(Whereupon, at 11:15 a. m., August 19, 1943, the hearing in the above-entitled matter was adjourned.)

524

Room 715,
United States Post Office,
Detroit, Michigan,
Monday, August 23, 1943.

Met, pursuant to adjournment at 10:00 a. m. C.W.T.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Esq., Attorney for the Federal Trade Commission.

Cravath, de Gersdorff, Swaine & Wood, by R. L. Gilpatric, Esq., and B. R. Shute, Esq., 15 Broad Street, New York, N. Y., and

Bair & Freeman, by Will Freeman, Esq., 135 South La Salle Street, Chicago, Illinois, appeared for the Respondent.

525

PROCEEDINGS.

Trial Examiner Sheppard: Mr. Reporter, you can convene the hearing in the Minneapolis-Honeywell Case, Docket No. 4920, in accordance with the adjournment taken in Milwaukee on the 19th day of August, 1943.

You will show the usual appearances of Mr. Haycraft and the Respondent's counsel.

Mr. Haycraft has informed me that the first witness has requested that he appear on the stand at two o'clock, and therefore we will take a recess and reconvene at two o'clock in this room, Court Room 715.

We will stand in recess until that time.

(Whereupon, at 10:05 a. m. a recess was taken until 2:00 o'clock p. m. of the same day.)

526 Afternoon Session.

2:00 o'clock p. m.

Trial Examiner Sheppard: All right, gentlemen, come to order. Mr. Reporter, you can get on the record.

Mr. Haycraft, you may call your first witness at this time.

Mr. Haycraft: I will ask Mr. Rockwell to take the stand.

WALTER F. ROCKWELL was thereupon called as a witness for the Commission and, having been first duly sworn, testified as follows:

Trial Examiner Sheppard: Give me your name, please, Mr. Rockwell.

The Witness: Walter F. Rockwell.

Trial Examiner Sheppard: And your address, Mr. Rockwell?

The Witness: 2240 Seminole Avenue, Detroit.

Trial Examiner Sheppard: All right.

Direct Examination by Mr. Haycraft.

Q. What is your occupation?

A. I am president of the Timken Detroit Axle Company.

Q. And where is that company located?

A. 100 Clark Avenue, Detroit, Michigan.

527 Q. In what business is that company engaged?

A. Its principal business is the manufacture of truck axles and transmissions.

Q. Does it, among other things, manufacture oil burners?

A. That is a relatively small part of our business, yes.

Q. Is it operated as a division of the Company?

A. That is right.

Q. How familiar are you with the operations of that division?

A. Well, only in a general way. My duties naturally require supervision of that division, but I don't have any direct working connection with it. That is, the division

is managed by Mr. Crawford, and the purchasing, contracting and sales work, and so forth, is done by executives employed in that division. We haven't, of course, made any oil burners for a couple of years, and we are now entirely devoting our energies towards the production of war materials.

Q. How long have you been president of the Timken Detroit Axle Company?

A. Since 1939, I think, '39.

Q. Before that did you have a position with the firm?

A. I was vice-president and general manager.

Q. How long had you been vice-president and general manager?

A. Since 1933.

528 Q. Who is the individual in the organization who has charge of signing of agreements for the purchase of materials and equipment?

A. Well, the actual physical purchasing is done by Mr. Shafer; but the policies with regard to that are probably established by Mr. Crawford, who is general manager of that division, for the most part.

Q. What position does Mr. Shafer hold?

A. He is purchasing agent.

Q. Do you recall ever having any business relations with the Minneapolis-Honeywell Regulator Company?

A. Yes.

Q. And what were those business relations that you recall?

A. Largely in connection with the purchases that we made or contemplated making from them from time to time.

Q. Purchases of what?

A. Controls for our oil burners.

Q. Controls for your oil burners?

A. Yes.

Q. Do you recall the different item of controls that you were accustomed to buy or did buy from the Minneapolis-Honeywell Regulator Company?

A. No, I could not name them. There were four different controls involved.

Q. I take it Mr. Crawford would be more familiar

529 with those items?

A. Yes, he would.

Q. I show you Commission's Exhibits 24-A and B and 25-A and B, and ask you to look those over.

(Handing documents to the witness.)

A. I have recently looked at these, Mr. Haycraft, so I am familiar with their contents.

Q. You wrote Commission's Exhibit No. 24-A and B and you received Commission's Exhibit No. 25-A and B?

A. That is right.

Q. How did you come to write this letter? You say you are not very close to the details of the business; do you recall the occasion, and how you were prompted to write the letter?

A. Well, I think it is a normal course of business. We had an argument about this matter, and it was put up to me to see what I could do about it.

Q. What was it that was put up to you; what was the argument?

A. Well, we figured that we had a lower price coming to us as a result of having purchased a quantity of units.

Q. What was the basis of that belief on your part?

A. Well, I think largely because we figured we bought a large quantity of material and we were entitled to a lower price.

530 Q. Did you have any discussion with any representative of the Minneapolis-Honeywell Company with respect to that matter prior to the time that you wrote this letter?

A. I can't recall.

Trial Examiner Hayward: When is the letter dated?

Mr. Haycraft: December 24, 1936.

By Mr. Haycraft:

Q. You mention in the second paragraph that Mr. Pauling had made you a visit in the week previous to that time.

A. That is right.

Q. But you were out of town?

A. That is right.

Q. Was Mr. Pauling the representative of Minneapolis-Honeywell who regularly called upon you?

A. That is right.

Q. And you had business relations with him before?

A. That is right.

531 Q. You refer to, in this second paragraph, an agreement between Mr. Roberts,—and who is he?

A. Roberts was formerly the manager of the division. He died.

Q. He preceded Mr. Crawford?

A. That is right.

Q. You referred to an agreement reached with Mr. Roberts early this year, which agreement was the basis for our favoring you with our business during 1936.

What was that agreement that you recall?

A. Well, as I recall, Roberts had an understanding with them to the effect if we bought a certain number of units, we would get a lower price.

Q. Do you recall what that number of units was?

A. No, I don't.

Q. Do you have any memorandum or any data in your hand that can refresh your recollection on that?

A. No, I don't believe so. The figures have been made available, I think, to you.

Q. A reference is made in this paragraph to a memorandum prepared by Mr. Roberts, with respect to that agreement. Do you still have that memorandum?

A. Well, there should be a copy of it in the file.

Q. Do you want to consult Mr. Shafer or Mr. Crawford to see if there is such a thing?

532 A. Yes.

(Consultation off the record.)

The Witness: No.

By Mr. Haycraft:

Q. What is the memorandum that you have there?

A. Just a pencil notation. I don't know who wrote it, and it is not my handwriting.

Q. Do you recognize the handwriting?

A. No, I don't, Mr. Haycraft. It is not mine. I don't believe it is Roberts'.

Q. Is this the memorandum you had in mind when you wrote the letter?

A. I doubt it.

Q. Is that the only memorandum you can find that bears on that question?

A. Well, I haven't personally searched for it, but Mr. Cooper has, and Mr. Crawford, and I assume if it was available it would be here.

Q. You say you do not recognize that handwriting?

A. No, I don't. I don't see where this has much to do with the letter either.

Mr. Haycraft: Mark this Commission's Exhibit No. 90.

(The document referred to was marked Commission's Exhibit No. 90 for identification.)

533 The Witness: (Continuing.) Because, as I see it, we agreed to buy a certain number of units from him, and for that G. C. burner, and if we bought that many we were to get a lower price. Isn't that what the letter says, in effect?

By Mr. Haycraft:

Q. What is the G. C. Burner?

A. The gun type burner, that differs from our larger production burner in its type.

Q. How long had that burner been in production?

A. Well, I think it went into production at about that time, or maybe a little before that.

Q. Did it go into production in 1935?

A. I think it probably did, yes.

Q. Do you recall from whom you purchased the controls for the burner when it first went into production?

A. No, I do not.

Q. Do you have any way of refreshing your recollection on that?

A. I think Mr. Crawford would know.

Q. Do you remember from whom you were buying controls for the gun type burner at the time this letter was written in December, 1936?

A. Well, we had bought controls from the Penn Automatic Switch Company, or whatever the name is, then.

534 Q. Penn?

A. Penn control.

Q. And it was the Penn Company, then, you had in mind in the third paragraph, where you say, "This concession was apparently made to persuade us to drop another make of control"?

A. It is possible.

Q. Was it a fact? I am trying to find out what the fact is.

A. I couldn't say it was a fact.

Q. Do you have any way of refreshing your recollection on that?

A. Well, I rather imagine the records would show where we bought the controls in prior years.

Q. What did you do in 1936? Had you purchased controls for your G. C. burner from Minneapolis-Honeywell?

A. I think we probably did, along with other makes, too.

Q. You stated here in this second paragraph, "I believe, our purchases from you during this year will exceed $300,000".

Did that include any controls for your G. C. burners?

A. I would assume it probably includes both the G. C. and the wall flame type.

Q. How many types of burners were you making at that time?

A. Two types, our largest production being in the
535 wall flame type.

Q. The wall flame type?

A. The wall flame type, yes.

Q. Is that sometimes referred to as the rotary type?

A. That is right.

Q. How did the percentage run, do you recall, approximately?

A. Well, I rather imagine it was about two-thirds of the rotary, one-third gun type.

Q. In Mr. Sweatt's reply to you he referred to a plan or sale of gun type burners to Reynolds and Mueller and other manufacturers than yourself. Did that coincide with your recollection of the situation, or not?

A. I do know we had a contract with Reynolds to supply them with burners. I don't recall whether or not that is specified, a certain make of control, or not.

Q. Were you using thermostatic, limit controls and primary controls from Minneapolis-Honeywell during this period of time?

A. I assume so, although I am not familiar enough with the exact workings of this oil burner division to state specifically.

Mr. Freeman: Mr. Haycraft, when you refer to "this period of time", are you referring to the year 1936?

Mr. Haycraft: Yes.

536 Mr. Freeman: Or 1935?

Mr. Haycraft: 1936, at the time this letter was written.

Mr. Freeman: Then your question was restricted to the year 1936, when you said "this period of time", is that correct?

Mr. Haycraft: That was my intention, yes.

By Mr. Haycraft:

Q. In Mr. Sweatt's letter, in reply to your letter, he says, "At the time of this conversation, the Reynolds Company had specified a competitive type of control."

Do you remember what that competitive type of control was that the Reynolds Company had specified?

A. No, I do not.

537 Mr. Haycraft: Will you mark these?

(The documents referred to were marked Commission's Exhibits 91-A, 91-B, 91-C and 91-D, for identification.)

By Mr. Haycraft:

Q. Mr. Rockwell, I show you Commission's Exhibit 91-A, B, C, D, and ask you whether or not this Exhibit was prepared under your direction pursuant to the requirements in the subpoena served upon you?

(Handing documents to the witness.)

A. Yes, I have seen it.

Q. Who prepared this exhibit?

A. It was prepared by our purchasing department under the direction of Mr. Shafer.

Mr. Haycraft: That is all, Mr. Examiner, that I wish to ask Mr. Rockwell at this time. I am going to call Mr. Crawford and Mr. Shafer for the details.

Trial Examiner Sheppard: Have you any cross-examination?

Mr. Gilpatric: Yes.

Trial Examiner Sheppard: Proceed.

Cross-Examination by Mr. Gilpatric.

Q. Mr. Rockwell, you said in answer to Mr. Haycraft's questions on this letter which you wrote to Mr. Sweatt
538 in 1936, that you had some argument about prices.

Were you always trying to get the lowest price you could on materials that you purchased from the Minneapolis-Honeywell Regulator Company?

Mr. Haycraft: That is objected to as irrelevant and immaterial, and not proper cross-examination.

Trial Examiner Sheppard: I will let you answer that. Go ahead and answer that question.

The Witness: Yes, sir.

Mr. Haycraft: Mr. Examiner, I wish to urge further

that objection for the reason that the question did not correctly summarize the witness' testimony, in view of the fact that he said that the purchasing was done by the purchasing department, and it was only when there was a case of an argument that it was put up to him as a final proposition; so the witness does not do the purchasing, and is not in the position of seeking the lowest price, and so on. I object to that sort of question being propounded to this witness, because there is no foundation laid for it, either in the testimony or any other place.

Mr. Gilpatric: This witness stated that on matters of policy he was consulted as the principal executive, and I am asking the witness if it has always been his objective to get the best price he could from the Minneapolis-Honeywell Company.

539 Trial Examiner Sheppard: I think that is apparent to every businessman.

Mr. Gilpatric: I am beginning a line of questions which I think are relevant.

Trial Examiner Sheppard: I will let him answer. He has already answered it, and I will give the answer the weight which I think it deserves.

By Mr. Gilpatric:

Q. Now, during the year 1936, Mr. Rockwell, you said that your Company had purchased controls from the Penn Company, I understand. Is that correct?

A. That is right, yes.

Q. Did you also buy controls from the Perfex Company during 1936?

A. That is possible. I could not state for sure without checking the records on that.

Q. You did purchase from Perfex in subsequent years?

A. That is right, yes, sir.

Q. What was your objective in buying controls from other control manufacturers besides Minneapolis-Honeywell?

A. To secure a better price.

Q. Are you familiar with the contract which your Company entered into for the year 1936 with the Minneapolis-Honeywell Regulator Company, which I show you, being Commission's Exhibit No. 66.

540 Mr. Haycraft: I am going to object to that, Mr. Examiner, not proper cross-examination, and state in connection with that objection that I purposely refrained

from questioning this witness with reference to this agreement because I have another witness who is more familiar with that, and who will go into details, and be subject to cross-examination.

Trial Examiner Sheppard: I don't think he went into that on direct.

Mr. Gilpatric: Mr. Examiner, this gentleman has been asked about purchases by his company of controls, from the Respondent during 1936. Now, that is certainly connected with the contract. If this witness does not know anything about that contract, he can say so, and I will not pursue that line any further.

Trial Examiner Sheppard: What about that, Mr. Rockwell; do you know anything about that, do you know enough about it to testify?

The Witness: Do you want me to answer the question?

Trial Examiner Sheppard: Yes.

The Witness: Well, I am familiar with the contract only to this extent, that I recently have seen a copy of it, and probably saw it when it was under discussion; but personally I do not consider it a contract. It is a pur-
541 chase agreement entered into between our purchasing department and the sales department of the Minneapolis-Honeywell. Similar agreements are being made, I assume, right along. If it had been a binding contract on the Company, it would have been signed by an officer of the company. Since it was not, I assume it was treated by us as a purchase agreement only.

By Mr. Gilpatric:

Q. Mr. Rockwell, do you know anything about the clause in Commission's Exhibit No. 66—

Mr. Haycraft: I am going to object to any further interrogation about this document. It is not proper cross-examination, particularly in view of what the witness has just stated, as to what he considers this document.

Mr. Gilpatric: He stated that he knows about the agreement.

Mr. Haycraft: That does not entitle you to cross-examine him on it.

Mr. Freeman: We are entitled to find out what he knows.

Mr. Gilpatric: We are entitled to that.

Mr. Haycraft: Not when it is on a matter which is not touched upon on direct examination. There are a lot of things that I did not ask him about on direct.

Trial Examiner Sheppard: I will sustain the ob-
542 jection. There is no use of going ahead with the argument.

Mr. Gilpatric: Mr. Examiner, I make an offer to prove on this point that this witness knows about the clause in Commission's Exhibit No. 66 which reads as follows:

"In view of the special prices listed in this agreement it is understood that the purchaser will standardize on and use the company's products exclusively, except for field tests, or when other makes are specified by the dealer."

I further propose to show according to this witness that did not have the effect in the mind of the Timken Company of binding it to buy exclusively Minneapolis-Honeywell controls; and that it was this witness who determined the policy of the Timken Company in that respect; and that the phrase beginning with the words "of other companies" were added at the insistence of the Timken management when the contract was presented to them by Minneapolis-Honeywell. And we further state that that testimony, if elicited, would be relevant to the direct examination of this witness.

By Mr. Gilpatric:

Q. You were asked, Mr. Rockwell, about the two types of oil burners which your company manufactured in 1936, the wall flame or rotary type, and gun type. It is a
543 fact, is it not, that the rotary type of burner uses the intermittent type of primary control, the intermittent ignition type of control?

A. By intermittent do you mean recycling?

Q. Yes.

A. That is right.

Q. The gun type uses what is known as the constant ignition type of control?

A. That is right.

Q. Do you know how many controls for your gun type of burner were bought during 1936 from Minneapolis-Honeywell?

A. No, I could not say, except that I would infer from the correspondence that we bought at least 7,500 sets.

Q. For the gun type burner?

A. Yes.

Mr. Freeman: For the purpose of the record, do I understand, Mr. Haycraft, that you will not let me see Commission's Exhibit No. 91, for identification, at this time,

although this witness has testified to having it made in accordance with a subpoena received from the Commission?

Mr. Haycraft: Not unless the Examiner will direct me to do so. Under the ordinary procedure of the Commission and of the Courts that I am familiar with, opposing counsel cannot see exhibits until they are offered in evidence.

544 Mr. Freeman: We are entitled to see them before they are offered in evidence, so that we can determine whether or not they are relevant, whether or not we want to object to them.

Mr. Haycraft: You can determine that when I offer it.

Mr. Freeman: I still ask you, Mr. Examiner, to direct counsel for the Commission to let us see Commission's Exhibit No. 91 for identification.

Trial Examiner Sheppard: I don't see why you gentlemen should fight over whether you should see an exhibit or not. It is something that you ought to get along nicely and pleasantly about.

Mr. Gilpatric: Mr. Examiner, we are not trying to prove our case during the Commission's case; but we do realize that we are dealing with men like Mr. Rockwell who are associated with and engaged in war production; and to call them back a month and a half from now, when we come back on our side of the case, seems to be an imposition on men of this type. That is all we are trying to do, is to save their time, and Mr. Haycraft is raising technical objections because certain things were not asked on direct examination.

Mr. Haycraft: I want to get the witness off the stand as soon as possible and put on a man who is familiar with the details, and then they can cross-examine him to

545 their heart's content.

Mr. Freeman: There is only one question before the Examiner now, and that is whether or not we can see Commission's Exhibit No. 91 for identification at this time.

Mr. Haycraft: You can see it in just a moment, just as soon as I can put a witness on who can identify it. Then I will be glad to let them see it. I don't want to part with it at this time.

Trial Examiner Sheppard: Gentlemen, I don't want to see you gentlemen fighting back and forth about exhibits. But you raised something interesting, Mr. Gilpatric. I am perfectly willing, if your side and Mr. Haycraft can get

totgether on the matter, I am perfectly willing and would be glad to have these gentlemen answer your questions now so that they will not have to come back again.

Mr. Gilpatric: That is our principal point, we are not trying to broaden the scope.

Trial Examiner Sheppard: Can't we let him answer these few questions?

Mr. Haycraft: I don't know what few questions he is going to ask. I certainly don't want them to put in their side of the case at this time. That is not orderly procedure.

Trial Examiner Sheppard: No, if that is what you
546 are trying to do, I don't think it is fair.

Mr. Freeman: We are not trying to do that.

Mr. Gilpatric: All we are trying to do is to look at the paper which Mr. Haycraft for reasons of his own has asked the witness about, but which he now refuses to let us see.

Mr. Haycraft: I asked him about it simply because Mr. Rockwell was the man who produced it.

Mr. Freeman: If he was the one who produced it, then it is proper that we see it in connection with his testimony.

Mr. Haycraft: This exhibit will be further identified by the man who actually prepared it, and you can cross-examine him as to the method of preparation, and as to the document itself. This man did not prepare, but at the time the other witness is on the stand, I will be glad to have Respondent's counsel have access to the exhibit; but I want to have it identified by the witness who can testify as to the details of it. I submit just because it was produced by this witness that does not entitle counsel for the Respondent to look at it now.

Trial Examiner Sheppard: Would it hurt anything if they looked at it?

Mr. Haycraft: No, but I want to get through with this witness and put a witness on the stand who does know
547 the details. One of my principal reasons that I don't want them to cross-examine this witness as to its contents is because I did not ask this witness any questions about the exhibit. If he had been asked about the contents of the exhibit, that would be different.

Mr. Gilpatric: You can object to any questions if they are improper. You always have.

Mr. Haycraft: I am trying to save time, to get the witness off the stand and put another witness on the stand who can testify to these things.

Mr. Gilpatric: Mr. Examiner, but to go back to the point you asked me what sort of questions I would ask if you gave me leeway, in order to save Mr. Rockwell from coming back at some future time. It is simply if he has knowledge, which I think he has, about this 1936 agreement.

Mr. Haycraft: To which I object, to any further cross-examination.

Trial Examiner Sheppard: I sustained the objection because Mr. Haycraft said he had gone into it on direct.

Mr. Haycraft: Further, this witness said he did not have anything to do with the execution of the document, and his name does not appear on it.

548 Trial Examiner Sheppard: To shorten it up, I am going to rule that Mr. Haycraft can withhold this exhibit until it is a part of the record, and then you can see it. Get through with this witness as soon as you possibly can, and put on a witness who knows about it, and then we can take that up, and then you gentlemen can see it.

All right, proceed.

549 Q. Mr. Rockwell, have you any knowledge concerning Commission's Exhibit No. 66, the agreement dated December 2, 1936, between your Company and the Minneapolis-Honeywell Regulator Company?

A. In a general way, yes.

Q. I hand it to you, and ask you to look at the clause appearing on the second page, and ask you whether in reading that, that recalls to mind any of the circumstances relating to the entering into of that so-called agreement with your Company?

(Handing document to the witness.)

Mr. Haycraft: Mr. Examiner, I object to that question and ask that if it is answered, that I be allowed to cross-examine this witness on this new matter.

Mr. Freeman: Call it cross-examination, call it redirect, whatever you want. Go ahead and examine.

Mr. Haycraft: We are going to get confused. We are putting in their side of the case with my witness, on matters which were not gone into on direct examination at all.

Mr. Gilpatric: It is one of the Commission's exhibits. We have heard other testimony elicited by Mr. Haycraft on that same subject. Here is a man who knows something about it. He is head of the company which signed the agreement, and I think it is proper for us to ask
550 him, particularly in order to save time in this proceeding.

Trial Examiner Sheppard: Was it brought out on direct?

Mr. Haycraft: No.

Mr. Gilpatric: The matter of 1936 purchases of controls from the Respondent Company was brought out. Here is the contract, the best evidence of what that business was. He did not choose to call it a contract.

Mr. Haycraft: I will put a man on who executed the contract. They are going entirely outside of this case, by bringing this to this witness' attention at this time. I have the witnesses here waiting.

Trial Examiner Sheppard: I think we can shorten things, Mr. Gilpatric, by getting the other witness, and going through with it in an orderly way.

By Mr. Gilpatric:

Q. Let me ask you, Mr. Rockwell, who is the better qualified, as between you and Mr. Crawford, to testify as to this agreement?

Mr. Haycraft: I object to that. That is for the Commission to determine.

Mr. Gilpatric: In his judgment.

Mr. Haycraft: I object.

Trial Examiner Sheppard: I will let you answer the question.

551 The Witness: Shall I answer?

Trial Examiner Sheppard: Yes.

The Witness: This paragraph reads as follows:

Mr. Haycraft: Now, I object to that, to reading the paragraph.

Trial Examiner Sheppard: Yes.

Mr. Haycraft: The question was,—and I will remind the witness he already said Mr. Crawford had the details of the purchase of this.

The Witness: I am only going to say this, that the paragraph referred to—

Mr. Haycraft: I object to reference to the paragraph.

Mr. Gilpatric: Let him finish.

Mr. Haycraft: This witness was asked one question, who is the best qualified to testify as to this agreement. He is not going to read into the record provisions of the agreement, about which you have already sustained an objection, Mr. Examiner.

Trial Examiner Sheppard: Just answer the question.

Mr. Freeman: I think this witness has a legal right to say what he wants to say. The Commission can move it be stricken. This man has already said he has control. He is trying to tell what he knows about it, and I think the Commission ought to hear it.

552 Trial Examiner Sheppard: Not unless it was brought out on direct. I do not want to hear your case before I hear Mr. Haycraft.

Are you or the other man better competent to testify as to the agreement?

The Witness: I think I am, in view of the fact that the policy of the company is involved.

Mr. Haycraft: May I cross-examine the witness now, Mr. Examiner?

Mr. Freeman: You will get your turn.

Mr. Haycraft: Wait a minute. They have taken this witness and made him their witness for the purpose of introducing testimony with respect to a clause in the contract about which he was not allowed to testify on direct examination. Am I going to put in my side or are they?

Trial Examiner Sheppard: I am going to put your side on.

Mr. Haycraft: Then I object, and move to strike this last question and answer.

Trial Examiner Sheppard: All right. That can go out. I do not want anything on your side until Mr. Haycraft puts on his.

Mr. Gilpatric: I want to very emphatically but respectfully except to that ruling as inconsistent with your ruling that you were going to let this man, while he is here,

553 tell what he knows about it. Mr. Haycraft is taking a very fine position here, and I hope he will observe the same rules when we are putting in our case.

Trial Examiner Sheppard: I am going to hear the Commission's side, and then the other. I am not going to hear your side before I hear the Commission.

Mr. Gilpatric: You will recall, Mr. Examiner, that this witness was asked on direct examination about the policy of this Company, and about purchases during this year.

I just cannot see that we are broadening the scope of the examination when we follow that line up to its logical conclusion.

Trial Examiner Sheppard: Mr. Haycraft said he did not go into that at all.

Mr. Haycraft: I have not. I asked him as to the foundation for calling Mr. Crawford, who has charge of the purchases, and he said Mr. Crawford had. He only had general supervision. Therefore, I am ready to call Mr. Crawford.

If I ask questions of Mr. Crawford, he can cross-examine. He is vice-president and an official of the organization.

Trial Examiner Sheppard: I suggest you let this witness stand aside until we finish with Mr. Crawford, and then you can put him back on.

554 Mr. Gilpatric: I do not want him to waste a whole afternoon here. That is the only point. He has told you now he is better qualified, and in view of that, you are going to stop the examination, I take it from your ruling, and not let me follow this line up.

Trial Examiner Sheppard: If it was not brought out on direct, I am going to stop it, yes.

Mr. Gilpatric: We say it was opened up on direct.

Mr. Freeman: Mr. Examiner, I just want to call your attention to the fact that Mr. Haycraft asked him whether or not he did not govern the policy of the company, and I think we are entitled to find out whether this agreement for the year 1936, which is the year that Mr. Haycraft is making inquiry about, whether this agreement was not signed or executed by someone in his organization in accordance with the policy dictated by this gentleman here, Mr. Rockwell, and I think we are entitled to find that out, and entitled to find out what his policy was.

Trial Examiner Sheppard: The ruling has been made, gentlemen. You can go on and proceed.

Mr. Gilpatric: In view of that ruling, as far as we know, we have no further questions to ask.

Trial Examiner Sheppard: You are excused.

The Witness: Must I wait?

Trial Examiner Sheppard: Yes. Do you want to

555 call him again, or excuse him for good, Mr. Haycraft?

Mr. Haycraft: I haven't anything further at this time.

Trial Examiner Sheppard: All right. Sign your voucher, Mr. Rockwell, and I will let you go.

(Witness excused.)

Mr. Haycraft: I think I will call Mr. Shafer first, if you do not mind.

Mr. Freeman: We don't care who you call.

Mr. Haycraft: Mr. Shafer, will you take the stand.

Mr. Gilpatric: Off the record.

Trial Examiner Sheppard: Off the record.

(Discusion off the record.)

Trial Examiner Sheppard: On the record.

Miss Reporter, this is H. C. Shafer, 100 Clark Avenue, Detroit.

Is that right, Mr. Shafer?

Mr. Shafer: Yes, sir.

H. C. SHAFER was thereupon called as a witness for the Commission and, having been first duly sworn, testified as follows:

556 *Direct Examination by Mr. Haycraft.*

Q. What is your occupation, Mr. Shafer?

A. Purchasing agent.

Q. What firm?

A. Timken Detroit Axle Company.

Q. How long have you been purchasing agent?

A. Since December 1, 1924.

Q. What are your duties as purchasing agent?

A. To buy the material from which axles, from which the production of the company is fabricated.

Q. Does that include temperature controls, automatic temperature controls?

A. It does.

Q. Do you recall when the Timken Company first engaged in the manufacture of oil burners?

A. About 1927 or '8.

Q. What type of oil burner did they manufacture at that time?

A. A gun type burner.

Q. When was it they first manufactured what Mr. Rockwell described as a wall type or rotary type burner?

A. I can't answer that definitely, probably three or four years later. It might possibly have been five years later.

We were experimenting, and as to when that went into
557 production, I don't remember.

Q. Do you recall from whom you purchased temperature controls in say, along 1934 and '35?

A. May I use this (indicating)?

Q. Surely. Go ahead. Refresh your recollection all you can.

A. Well, here is correspondence and memoranda in 1932, '3 and '4.

Q. During those years from whom did you buy automatic temperature controls?

A. This correspondence and data is all with Minneapolis-Honeywell. This memoranda is 1932. Here is one in 1933 and here are a couple in '34.

Q. From that memoranda can you tell us, or will you tell us as to the various items that went into the temperature controls that you bought from Minneapolis-Honeywell in those years, 1932, '33 and '34?

A. I am unable to do so from these records, as to exactly what we purchased, sir.

Q. The items are lumped together?

A. They are memoranda relative to what we might use and a few memoranda relative to prices, but what we actually purchased, I doubt if there is any record available for those years.

Q. Do you have any independent recollection?

558 A. To the best of my knowledge and belief, all of our buys were from Minneapolis-Honeywell.

Q. During those years?

A. During those years.

Trial Examiner Sheppard: What years were they?

Mr. Haycraft: 1932 to '34.

The Witness: '2, '3 and '4, 1932, '33 and '34.

By Mr. Haycraft:

Q. Do you recall whether they consisted of thermostats, limit controls or primary controls?

Mr. Gilpatric: I object to this line of questioning, Mr. Examiner, on the ground we are now going back ten or twelve years. Our stipulation, our examination to date has been conducted with regard to 1936 and following. Now we are going back to 1932.

Trial Examiner Sheppard: Unless you have some reason; I am surprised too. That is the reason I asked you the years.

Mr. Haycraft: It is simply a historical background. I haven't anything further.

Mr. Freeman: It clutters the record.

Trial Examiner Sheppard: I do not think we want to go back that far, Mr. Haycraft, for the background on this case. I am going to sustain the objection there. I do not see any reason for going back too far on this matter.

559 I think 1935 on up to 1939 is the time.

Mr. Haycraft: Mr. Examiner, may I join with counsel for the Respondent, or may we stipulate with you it is understood we have exceptions to all rulings?

Mr. Freeman: We started that originally.

Trial Examiner Sheppard: Yes, they are automatically taken care of.

By Mr. Haycraft:

Q. Begininng in 1935, what items of temperature controls did you purchase, and from whom did you purchase them?

A. We purchased from Minneapolis-Honeywell in 1935. Whether we purchased from others I am unable,—yes, we purchased also from Penn-Electric in 1935.

Q. Do you remember what items you purchased from Penn Electric during that year?

A. I have copies of my purchase orders in '35, sir.

Q. What do they indicate?

Mr. Freeman: Do you want quantity, Mr. Haycraft, or items?

Mr. Haycraft: Quantity and price, yes, and the items.

The Witness: Here is a purchase order. This is faint, dated 5/23/35. This order covers 1,000 sets of controls, consisting of 1 No. 600 Safetrol, 1 No. 852-C-50 Temtrol and limit controls as required.

560 By Mr. Haycraft:

Q. The Safetrol, is that a primary control?

A. That, I believe, would be a limit control.

Q. What about the Temtrol?

A. Temperature control.

Q. Are these all limit controls that you have just referred to?

A. Well, they are controls which are used on the governing of the burner, the operation of the burner.

Q. You do not know whether they are primary or limit controls?

A. I wouldn't identify this over this long period of time. However, there is a clause in here which may be interesting:

"This order is predicated on our receipt of satisfactory letter from you covering your guarantee and liability in connection with our purchase and use of your instruments. Furthermore, this order does not become effective until you receive written notice from us that all conditions outlined in said letter are acceptable to us."

Mr. Gilpatric: Does the record show these are Penn Electric orders?

Mr. Haycraft: Yes.

561 By Mr. Haycraft:

Q. Do you know how much of that order was filled?

A. I don't know how much was filled. It was not filled completely.

Q. You do not know whether they were used on the gun type or rotary type burner?

A. Not from these records, no, sir.

Q. Do you have any recollection about it yourself?

A. I do not, because there are copies of two purchase orders here, a lot of copies; copies of one purchase order only. We have copies of that.

Q. Did you make any purchases from the Minneapolis-Honeywell Regulator Company during that same year?

A. Yes, sir.

Q. What did you purchase during that year from Minneapolis-Honeywell?

A. I do not have a record of our purchases for Minneapolis-Honeywell during 1935. Those records were not available.

Q. Take the year 1936. What were your purchases of temperature controls that year? From whom did you purchase and what were the items?

A. We purchased from Minneapolis-Honeywell and Perfex in 1936.

Q. You did not purchase from Penn Electric during the year 1936?

562 A. To the best of my knowledge and belief and from my records, no, sir.

Q. Do you have any recollection of why you did not continue your purchases from Penn Electric during 1936?

A. The instruments gave too much trouble, sir.

Q. What did you buy from Perfex during 1936?

A. I do not have a record. Those records were unavailable.

Q. You do not even know the items that were purchased?

A. No, I do not know the definite items that we purchased.

Q. You do not know whether they were limit controls?

A. No, sir.

Q. Or other types?

A. No, sir.

Q. The year 1937, what controls did you buy during that year and from whom?

A. Here is a record of 1937, Minneapolis-Honeywell control purchases.

Q. Does that show the volume and the general types and the price?

A. Yes, sir.

Q. Did you prepare that yourself?

A. I did not. This was prepared back in 1937, by some of my clerks. I do not know who.

Q. What does it indicate?

A. It indicates our part number, the quantity and
563 the price, the total number purchased, or the total price.

Q. Will you tell us as to your purchases of thermostats, limit controls and primary controls from the Minneapolis-Honeywell, and the price during that year?

A. I submit the exhibit, but I am unable to tell just the various controls.

Q. Do they have a number?

A. They have our part number, which does not identfiy them with Minneapolis part numbers, or Perfex.

Q. I show you Commission's Exhibit No. 91-A, B, C and D, for identification, and ask you if you prepared that?

(Handing exhibit to the witness.)

A. My clerks prepared this, sir.

Q. Under your supervision?

A. Under my supervision and direction.

Q. And you are satisfied it is correct?

A. To the best of my knowledge and belief, yes, sir.

Mr. Hayeraft: I offer it in evidence, Mr. Examiner.

Trial Examiner Sheppard: Any objection?

By Mr. Haycraft:

Q. Do you have an extra copy they can have?

A. I have, yes, sir.

Q. Could you get it for them?

A. Yes.

564 Mr. Freeman: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

Mr. Freeman: There are a large number of figures with respect to the years 1938, '39, '40 and '41, which we have no way of checking. Even with all of our facilities, it might take a day or two or three, and we want the opportunity to object to any portion of this document, should we discover on checking, that it is incorrect and improper.

Trial Examiner Sheppard: I think I will suspend acceptance or rejection of the exhibit. What is the number, 91?

Mr. Haycraft: 91-A, B, C, and D. I want to examine the witness on it. I won't be able to if you do not rule on it.

Trial Examiner Sheppard: I thought possibly we could—

Mr. Haycraft: It can be stricken. I will make this stipulation, if it is determined later any of this information is in error, you can either move to strike the whole exhibit, or have the exhibit corrected.

Trial Examiner Sheppard: I see the importance of going on with this witness, so I think I will accept it
565 with that reservation. You can take all the time you need to check it, and anything you object to, we can strike it out if it is not pertinent to the issue.

All right, then, we will accept Exhibit 91-A, B, C, and D.

We have not done anything with 90 here, have we?

Mr. Haycraft: No.

Trial Examiner Sheppard: All right, let the record show the acceptance of Exhibit No. 91-A, B, C and D, with the express understanding the Respondent shall have the opportunity at a later time to check, on each item, and make whatever further objection they wish.

(The document referred to heretofore marked for identification COMMISSION'S EXHIBIT NO. 91-A, 91-B, 91-C, 91-D, was received in evidence.)

By Mr. Haycraft:

Q. I notice in Commission's Exhibit No. 91-A, B, C, and D you have here the Minneapolis-Honeywell number and the Timken number?

A. Yes, sir.

566 Q. Now, from this Exhibit can you refer to your 1937 records and indicate the purchases of Minneapolis-Honeywell, and Perfex, and so on, for that year, using Exhibit 91 as a guide?

A. Some of these numbers are the same.

Q. Will you go ahead and testify as best you can, to the purchases for 1937?

A. That is very considerable of a job, to compare this part with that.

Mr. Freeman: That is, comparing Exhibit No. 91 with the papers which you have in your hand for the year 1937?

The Witness: Yes.

Mr. Freeman: Just so that the record will be clear.

Mr. Haycraft: Just do the best you can. We don't want to be too burdensome.

Mr. Gilpatric: I might point out, Mr. Examiner, that Commission's Exhibit No. 84 has this very information on it, and so we are just wasting time there. It is in evidence. It was put in evidence as Commission's Exhibit No. 84.

Mr. Haycraft: Exhibit No. 84 does not have the price.

Trial Examiner Sheppard: That is in evidence?

567 Mr. Gilpatric: Yes.

Mr. Haycraft: Exhibit No. 84 does not have the price.

Mr. Gilpatric: It has the type of control.

Mr. Haycraft: It does not have the price. Believe it or not, I know what I am doing.

The Witness: I find our Part No. A-1615-D-56 on the '37 record. It is also on the 1938 record, and is the same control.

By Mr. Haycraft:

Q. What does your record show as to the purchases and the price paid?

A. From Perfex, 2,748 at a price of $2.40 each.

Q. Do you have anything to show the purchases of that same item from Minneapolis-Honeywell?

A. For 1937?

Q. For 1937.

Mr. Freeman: You mean a comparable item, as distinguished from the same item?

Mr. Haycraft: I should say a comparable item. I stand corrected.

The Witness: A-1615-T-46 is the Minneapolis-Honeywell in 1937 which shows a purchase of 735.

By Mr. Haycraft:

Q. At what price?

568 A. 650 of them at $2.85 each, and 85 of them at $3.05 each.

Q. Now, are those the only comparable items that you find?

A. No, sir.

Q. Will you indicate some others? Take the thermostats and primary controls particularly. That is what I am interested in at this time.

A. They seem to have changed numbers—

Mr. Freeman: (Interposing.) Can I point them out to him? I happen to know these numbers.

Mr. Haycraft: Yes, go ahead and help him.

The Witness: Apparently we changed numbers. Here is U-21, that corresponds, $2.70.

By Mr. Haycraft:

Q. Get that in.

A. Let's wait until we find if we have a comparable item from Perfex.

(Examining papers.)

In the year 1937, Perfex, Timken Part No. A-2598-S-19; 400 bought at $2.95 each.

Q. That is a thermostat, is it?

A. That is a thermostat, sir. In 1937, from Minneapolis-Honeywell—that is U-21 in that year—my record says that we purchased 114 of the corresponding instrument

569 from Minneapolis-Honeywell at $2.70 each.

Q. Now, do you have the primary controls?

Trial Examiner Sheppard: For the same year, 1937?

Mr. Haycraft: Yes.

Trial Examiner Sheppard: All right, run through that and see what you have got on that.

The Witness: What is confusing is the fact that from year to year we change part numbers; and what I am trying to do is to match this with this, with this.

Mr. Haycraft: I know it is a job.

The Witness: In 1937 we purchased 237, our part number A-3550-F-58 from Minneapolis, 112 of them being at $8.45 each, and 125 at $8.50 each.

By Mr. Haycraft:

Q. What is their number on that; does your record show?

A. I do not know, sir.

Q. All right, go ahead.

A. In the corresponding year we purchased 150 from Perfex, our part number A-3550-M-65, at $7.90 each. Here is this 59—that is apparently a different number.

Q. Those were primary switches?

A. Those were relays. 59 does not appear on here, so I don't know what the corresponding number is on these.

Q. Have you covered all of your thermostats in your testimony a moment ago, or is there another one which
570 you did not cover?

A. There probably would be another one.

(Examining papers.)

Well, for all practical purposes this probably would be a comparison: From Minneapolis-Honeywell in 1937, a total of 5,137, our part No. A-1-2598-U-21; also our Part A-2598-U-21. Now, the difference between the 2598, A-2598 and A-1-2598 would be some infinitesimal difference, a different color, or something of that kind; the price being the same, at $2.70 each.

Over the same period we purchased from Perfex 400, our Part No. A-2598-S-19 at $2.95 each.

Q. And those are the principal items, are they?

A. Yes, sir.

Q. Now, do you recall whether you executed any agreements with the Minneapolis-Honeywell Regulator Company for the purchase of these items during the years 1935, '36 and '37, along in there?

Mr. Gilpatric: May we have that question, Mr. Examiner, please?

Trial Examiner Sheppard: Read it.

(The question referred to was read by the Reporter.)

The Witness: There is a copy of a purchase agreement dated January 15, 1937 with Perfex—with Minneapolis-
571 Honeywell, I mean, I am sorry, sir.

By Mr. Haycraft:

Q. What is the date on that?

A. January 15, 1937 there is a letter—

Q. (Interposing.) I show you Commission's Exhibit No. 87, and see if that is a photostatic copy of the document that you just referred to.

(Handing document to the witness.)

A. It is, sir.

Q. Now, what about the year 1936?

A. I have a purchase agreement with Minneapolis-Honeywell dated December 2, 1935, covering 1936.

Q. I show you Commission's Exhibits 11-A, B, C, and D, and 12-A, B, C, and D, and call your particular attention to 11-A, B, and C and 12-D, and ask you whether or not those exhibits, or those portions of exhibits are photostatic copies of the agreement which you have before you?

(Handing exhibits to the witness.)

A. This—

Q. Will you refer to it by number? That is 12-D?

A. 12-D should be a part of 11-A, B, and C. This should be—

Q. (Interposing.) In other words, what is now 12-D, should be 11-D, is that correct?

A. Yes, sir.

572 Q. I show you Commission's Exhibits 66-A, B, C and D, and see if that is a correct photostatic copy of the agreement which you just referred to, and which you entered into in February, 1936?

A. Yes.

Q. On the second page of this agreement I notice a typewritten provision as follows:

"In view of the special prices listed in this agreement it is understood that the purchaser will standardize on and use the company's products exclusively," and in smaller type there appears:—

"except for field tests or when other makes are specified by dealer."

Are you familiar with the clause, that clause in the original agreement that you have before you?

A. I am not sure that I understand what you mean by being familiar with it.

Q. Can you explain the difference in type in that paragraph?

A. Apparently—

Mr. Gilpatric: I am going to ask that this witness be confined to testifying of his own knowledge. We don't want any "apparently". We have the best evidence, and we don't want something secondary.

573 Mr. Haycraft: I move to strike that part about the best evidence. I am willing to agree that the witness should testify of his own knowledge.

Trial Examiner Sheppard: Yes, that is what we want.

The Witness: The two are written on different typewriters; that is very apparent.

By Mr. Haycraft:

Q. Did you sign this agreement?

A. I did, sir.

Q. Did you have anything to do with negotiating it?

A. Yes.

Q. What did you have to do with it?

A. A general discussion in our plant with our management.

Q. With whom did you discuss it?

A. May I ask somebody off the record?

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

The Witness: Mr. Roberts, Mr. Rockwell, Mr. Crawford.

Mr. Gilpatric: Is that Walter Rockwell, the man who testified here before you?

The Witness: Yes, sir. And Mr. Powers, to the best of my knowledge and belief.

574 By Mr. Haycraft:

Q. Who authorized you to sign the agreement?

A. I would not know. I assume Mr. Rockwell, but that is memory.

Q. Do you have any recollection on it?

A. Agreements of that kind were discussed with Mr. Rockwell, and I would not sign a contract of that magnitude in dollars and cents without his full knowledge.

Q. Do you have any recollection of discussing this with Mr. Rockwell or Mr. Crawford or Mr. Roberts?

A. Not definitely, except that such agreements were discussed between the four of us in all instances as far as possible.

Q. Now, referring back again to this typewritten clause on the second page, do you have any recollection of the use of the two different types, the two different typewriters, and if so, what is your explanation?

A. My explanation, sir, would be, I hate to say it, but a good guess.

Q. Why do you say that it is a guess?

A. Because I can't remember definitely back to this date in 1935.

Q. Do you remember whether or not this clause was discussed at the discussions that you had with the other—with your superiors?

A. Yes, sir.

575 Q. Do you recall anything that was said with respect to it at that time?

A. Not anything that I could repeat in words.

Q. I will ask you whether or not as this agreement was presented to you, that matter in small type was in the agreement?

A. I doubt if it was.

Q. Do you have any recollection of it?

A. I am quite sure that it was not, but I am not one hundred per cent sure.

Trial Examiner Sheppard: You say it was not a part of the agreement?

The Witness: As presented to us originally, sir.

By Mr. Haycraft:

Q. Then is it your recollection that the part in small type was inserted by you or someone else in your office?

A. Yes, sir; that is my opinion.

Mr. Freeman: Is that your recollection?

By Mr. Haycraft:

Q. Is that your recollection?

A. To the best of my knowledge and belief. It is difficult to make a definite statement, yes, or no, about that.

Trial Examiner Sheppard: Let me get this straight, Mr. Shafer. Do you mean to tell me it was put in there after the agreement was executed by you?

576 The Witness: No.

Trial Examiner Sheppard: You don't mean that?

The Witness: No.

Trial Examiner Sheppard: What do you mean by that, exactly?

The Witness: Can we go off the record?

Mr. Haycraft: No, on the record.

Trial Examiner Sheppard: On the record. I just want to get it clear.

The Witness: My recollection is that the contract was presented to us for signature without the last clause—

Trial Examiner Shepard: (Interposing) Beginning "In view of the special prices"?

The Witness: No, sir; the last clause "except for field tests or when other makes are specified by dealer."

Trial Examiner Sheppard: I see, the very last part there.

The Witness: The last clause. The original contract did not carry that. After discussion in our office that was typed, probably in my own office, and afterwards signed by me.

Trial Examiner Shepaprd: You knew it was there then when you signed it?

The Witness: Yes.

577 By Mr. Haycraft:

Q. Now, do you remember the reason for the insertion of that language?

A. So that we would be free to purchase other controls as we required in reasonable quantities for tests or otherwise.

Trial Examiner Sheppard: You mean from other parties?

The Witness: Yes, sir.

By Mr. Haycraft:

Q. Now, do you recall with whom you discussed this agreement, representing the Minneapolis-Honeywell Regulator Company?

A. If it was any one it would be Mr. Pauling.

Q. Do you remember whether you handed this to him at the time you executed it or whether you mailed it to him?

A. I do not remember.

Q. Is your copy that you have there—does that bear the signature of Charles E. Kingsland, vice-president?

A. Yes, sir.

Q. Dated 2-24-36?

A. Yes, sir.

Q. Was the date of February 19, 1936 the date that you signed the agreement?

A. Yes, sir.

578 Q. Now, is it your testimony then that when you sent this agreement to the Minneapolis-Honeywell Company it carried this small typed portion of the clause on the second page?

A. To the best of my recollection and belief, yes, sir.

Q. You signed it, of course, before you sent it to them?

A. Yes, sir.

Q. Then you received the copy that you have there with Mr. Kingsland's signature, later?

A. Yes, sir.

Q. Now, did Minneapolis-Honeywell present you with a similar agreement for 1937, dated December 2, 1936? When I say "similar agreement", I mean in general form; I don't mean as to the exact language.

A. Yes, sir, dated December 2, 1936.

Q. I show you Commission's Exhibit 12-A, B and C, and 11-D, and ask you whether or not Commission's Exhibit 12-A, B and C and 11-D constitutes the form of the agreement that was submitted to you on or about December 2, 1936?

A. Yes, they are.

Q. They are?

A. Yes.

Q. Do you recall what happened to that draft which was given you on December 2, 1936?

A. There was considerable discussion about it. I 579 definitely remember that.

Q. With whom?

A. With our management.

Q. The same men that you have already mentioned?

A. Except probably Mr. Roberts was dead by that time.

Trial Examiner Sheppard: Let me inquire. Do any of you gentlemen know the date of Mr. Roberts' death? That may be important.

By Mr. Haycraft:

Q. When did Mr. Roberts die?

A. June 15th, 1936.

Q. Do you recall what the objection was to this as submitted in December, 1936?

A. No, sir; I do not. There was too much conversation to remember.

Q. But it was not acceptable any way?

A. It was not acceptable.

Q. And later you executed this agreement on January 15, 1937, which is Commission's Exhibit No. 87. That is the one that you identified a moment ago.

(Handing document to the witness.)

A. Yes, sir.

Q. Now, do you have any agreement for the years 1938, 1939, or 1940 or 1941?

A. No, sir.
580 Q. No written agreement?
A. No, sir.

Trial Examiner Sheppard: Do you mean with the Respondent?

Mr. Haycraft: With the Minneapolis-Honeywell Regulator Company.

By Mr. Haycraft:

Q. Do you know why that was?
A. We did not want to sign one.
Mr. Haycraft: That is all, Mr. Examiner.
Trial Examiner Sheppard: Cross-examine.

Cross-Examination by Mr. Gilpatric.

Q. Why didn't you want to sign one?
A. We did not want to be tied down; also we were about that time marketing our burners, advertising Timken controls, regardless who made them. They were sold and guaranteed to the dealers by Timken. Mr. Crawford can explain that better than I.
Q. And those controls were manufactured by other companies than Minneapolis-Honeywell?
A. Yes, sir.
Q. By Perfex?
A. By Perfex.
Q. Any by Penn Electric Switch Company?
581 A. Not at that time.
Q. Now, Mr. Shafer, you testified in connection with this 1936 contract, that is, Commission's Exhibit No. 66, dated December 2, 1935, that there was a discussion by your management, and you included in that term Mr. Roberts, Mr. Rockwell, who was here earlier, and yourself and Mr. Powers.

Mr. Haycraft: And Mr. Crawford.
Mr. Gilpatric: And Mr. Crawford.

By Mr. Gilpatric:

Q. Which one of those gentlemen would be the one in your organization to make a decision as to whether or not the contract would be acceptable at all?
A. Obviously Mr. Rockwell would be the last word.
Q. In connection with this clause that has been referred to on the second page of Commission's Exhibit No.

66, and beginning with the words, "in view of" and so forth, which one of your executives did determine whether or not that would be acceptable as submitted and without that language that was attached to it?

A. As I said, Mr. Rockwell would have the last word, and quite possibly Mr. Powers would be the suggestor, if I may use that word.

Q. Did this particular language involve what you would call a question of policy on the part of the Timken Company.

582 A. We would not want to definitely sign an agreement knowing that we did not intend to live up to it, and therefore it was put in there so that we could purchase from other than Minneapolis.

Q. By that you mean that you had no intention of buying all your controls from Minneapolis-Honeywell during the year of 1936?

A. That is very true.

Q. Having bought Penn and Perfex controls before and afterwards?

A. Yes, sir.

Q. Now, Mr. Shafer, in connection with your testimony as to the purchases made by your company of comparable items in 1937, you testified that the thermostats sold to your Company by Perfex, costing $2.95, that is, your No. A-2598—

Trial Examiner Sheppard: (Interposing.) What is the Commission's Exhibit Number?

Mr. Gilpatric: I am reading from Commission's Exhibit No. 91.

Trial Examiner Sheppard: 91. All right.

By Mr. Gilpatric:

Q. (Continuing.) —S-19; comparable to the thermostat manufactured by the Minneapolis-Honeywell Company for which the price paid by you was $2.70. Now, isn't it a fact that the $2.95 thermostat came equipped

583 with a screen or a cover which was not on the Minneapolis-Honeywell item for the lower price?

A. I would not know that without examining our engineering records.

Q. Can you do that?

A. Sure. They would be in our plant, in our drawings, and so forth.

Mr. Gilpatric: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record. We will take a short recess while they are checking that.

(A short recess was taken.)

584 Trial Examiner Sheppard: We will proceed, gentlemen.

By Mr. Gilpatric:

Q. Mr. Shafer, you were asked to investigate and find out if you could, the explanation for this $2.95 price on the Perfex thermostat?

A. That was a special screen.

Q. That was a special screen?

A. Yes, sir, or cover.

Q. What was the standard price for a Perfex thermostat without that screen? It was $2.65, wasn't it?

A. $2.65, yes.

Q. So that the comparable item I am referring now to is a regular thermostat with the special screen, in the case of the Minneapolis-Honeywell controls, would be the item for $2.70 you just referred to?

A. Yes, sir.

Mr. Gilpatric: That is all we have.

Mr. Haycraft: I forgot to ask the witness a question.

Redirect Examination by Mr. Haycraft.

Q. Can you identify the handwriting of this note that Mr. Rockwell handed me?

Mr. Freeman: We object.

Mr. Haycraft: No. 90.

585 Mr. Freeman: (Continuing.) It not having been referred to on direct examination or cross-examination.

Mr. Haycraft: All right. I recall the witness for that purpose.

Trial Examiner Sheppard: Wait a minute, gentlemen. It is too small a matter to fool with. Do you know the handwriting there?

The Witness: I do not, sir.

Trial Examiner Sheppard: That settles that.

Mr. Haycraft: All right. Witness excused.

Trial Examiner Sheppard: You may be excused, sir.

(Witness excused.)

Trial Examiner Sheppard: All right, the next witness.

Mr. Haycraft: Mr. Crawford is the next witness.

Trial Examiner Sheppard: Miss Reporter, this is Mr. T. A. Crawford, 100 Clark Avenue, Detroit, Michigan; general sales manager of the Timken Detroit Axle Company. Hold up your right hand, Mr. Crawford.

586 T. A. CRAWFORD was thereupon called as a witness for the Commission and, having been first duly sworn testified as follows:

Direct Examination by Mr. Haycraft.

Q. What is your position with the Timken Company?

A. General Sales Manager of the Timken Silent Automatic Division.

Q. As such what are your duties?

Trial Examiner Sheppard: Is that T. A. or T. G., please?

The Witness: T. A. In charge of sales matters, principally.

By Mr. Haycraft:

Q. What types of burners do you manufacture and sell?

A. Wall flame and wall flame rotary and pressure type or gun type.

Q. How long have you manufactured and sold wall flame rotary type burners?

A. Approximately 1928 or '9.

Q. How long have you manufactured the pressure or gun type?

A. We started with it in 1925.

Q. Beginning in 1935, were you selling both types that year?

587 A. Yes, sir.

Q. Where did you buy your temperature controls during that year?

A. Principally from Minneapolis-Honeywell, some from Penn Electric Switch.

Q. Do you recall the type that you bought from Penn Electric Switch and the use that was made of them?

A. By part number, no. By name, yes. By use, yes.

Q. All right. Give us the name and the use.

A. I should say Safetrol was their trade name, and that was the primary control. We used it on the pressure

type burners. Temtrol. Temtrol is the principal thermostat. We used it in combination with Safetrols on pressure type burners.

Q. Where did you obtain their limit controls, or did you put them on the burners?

A. We supplied them with burners, but I cannot tell you for certain whether we used any Penn limit controls, other than those that went on our gun type, pressure type burners. We may have.

Q. Do you remember where you bought the limit controls, other than Penn, of the gun type, in 1935?

A. I should say Minneapolis-Honeywell. I don't know of any bought from Perfex during that period.

Q. Do you have any recollection as to the quantity
588 of primary controls, and thermostats you bought from the Penn Electric in 1935?

Mr. Freeman: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

The Witness: I don't believe I could tell you that with any degree of accuracy.

By Mr. Haycraft:

Q. In June, 1935, what was your position with your firm?

A. I was in charge of sales.

Q. You did not have anything to do with the purchase of temperature controls that year?

A. If so, it only would have been in the advisory capacity, as the influenced sales procedure.

Q. Do you have any recollection of the quantity of rotary burners and gun type burners you sold during 1935?

A. Off the record. I have a record that starts just after that.

Q. Do you recall when it was you began to buy temperature controls from the Penn Electric?

A. I believe it was 1935.

Q. Do you know whether or not you had been purchasing from Minneapolis-Honeywell in what is known as their highest bracket, or bracket 5 during that time?

589 A. I doubt it very much, whether we knew there was such a thing as a bracket 5 in 1935.

Q. Had you been given to understand you were getting their lowest price on controls?

A. I was seldom involved in purchase negotiations at that time, except as to the type of controls, and so on. The prices were not in my direct province.

Q. What is the function of a pressuretrol as put out by the Minneapolis-Honeywell Company?

Mr. Gilpatric: I object to this as cumulative evidence. We have had the functions of these instruments several times in this hearing to date.

Trial Examiner Sheppard: Are you familiar with what the Respondent puts out, Mr. Crawford?

The Witness: Generally. If he wishes a technical answer, my answer will be I don't know.

Trial Examiner Sheppard: I will let you testify to what you know.

Mr. Freeman: It has already been answered, it is already in the record. This instrument has already been defined. We do not have any objection to this man telling what this instrument is, but there is no use of cluttering up the record.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

590 (Discussion off the record.)

Trial Examiner Sheppard: On the record.

The Witness: Do you wish me to answer, sir?

Trial Examiner Sheppard: Yes, go ahead.

The Witness: My understanding of a pressuretrol is that it is a device used to stop the operation of the oil burner when the pressure of the heating plant exceeds the predetermined amount.

By Mr. Haycraft:

Q. Were you buying a similar device from Penn Electric in 1935?

A. I presume so.

Q. Is that your recollection?

A. Yes, a device to perform a similar function.

Q. That is what I meant.

A. Yes.

Q. I show you Commission's Exhibits 85 and 86, and ask you whether or not you identify that as a photostat copy of correspondence between yourself and I think it is Mr. Pauling, of the Minneapolis-Honeywell Regulator Company?

(Handing exhibits to the witness.)

A. Yes, sir.

Q. The Mueller Company, what business are they engaged in?

A. I know they make furnaces. I believe they make gas fired furnaces. I believe at that time they were negotiating for the purchase of oil burners, to install in their furnaces, concerning a complete oil burning furnace.

591

Q. And you were bidding on that business, were you?

A. We were bidding on oil burners to be installed in their furnaces.

Q. That was the reason for your negotiations with—

A. (Interposing.) Yes, sir.

Q. (Continuing.) The Minneapolis-Honeywell?

A. Yes.

Q. Did anything come out of that? Did you get the Mueller business?

A. I don't think we sold them more than half a dozen samples, or maybe a dozen, no volume at all.

Q. I show you Commission's Exhibit No. 66, and ask you if you had anything to do with the negotiation of that agreement?

(Handing document to the witness.)

A. I doubt it very much, as to any of the business end of the deal. I probably was in on the conversations, as to how many we should purchase, and what kind.

Q. What was your position at that time?

A. In charge of sales.

Q. Who was in charge of purchases?

A. Mr. Shafer. Purchases?

Q. Yes.

592

A. Mr. Shafer.

Q. What was Mr. Roberts' position?

A. Mr. Roberts was general manager.

Q. Was he alive at that time, that the contract was negotiated?

A. On December 2, 1935, yes, sir.

Q. Did you have anything to do with the negotiation of this agreement, Commission's Exhibit No. 87?

(Handing document to the witness.)

A. I think I was undoubtedly involved in the conversations that were collateral.

Q. What do you recall of those conversations?

A. Well, I know that we were at that time well into negotiations with Perfex Corporation. We had used some of their controls the year before. We were trying to expand

the use of their controls, to develop a second source of supply. I know there were a lot of arguments about the price before we finally made this arrangement with Mr. Pauling. I know that as a solution to the problem, it was probably somewhat unsatisfactory to him, we made that arrangement to buy one-half of our prospective year's requirements from him. I think it also, at that time, involved the question of having our controls fully identified as Timken, and made distinctly different from the controls supplied to others.

Q. Do you remember the submission of an agree-
593 ment similar to Commission's Exhibit No. 12-A, B, C, and 11-D, about which Mr. Shafer testified, about the first of the year 1937?

(Handing exhibits to the witness.)

A. I presume there was one.

Q. Do you remember seeing it?

A. I have seen copies of it recently.

Q. But you don't have any recollection of it at that time?

A. Not particularly. I probably saw it at that time.

Q. Do you recall any discussion as to whether that agreement was acceptable?

A. A good deal of discussion.

Q. In that discussion do you recall what objections were raised to that agreement?

A. Well, I know Mr. Rockwell had a basic objection to signing anything other than a purchase order. I know that all of these other negotiations were going on at the same time with Perfex and the others. Can you ask me a specific question?

Q. Did you have any objection to the agreement submitted in December, 1936, which was in discussion, before Exhibit No. 87 was signed?

A. I objected to any arrangement which would require us to buy all of our controls from Minneapolis-Honeywell, if that is your question. I would think that would be the objective of the agreement.

594 Q. I notice in this agreement No. 87 that you did place an order, or did agree to place an order for 51 per cent of your requirements. What was the reason for making such an agreement as that?

A. That is a purchase order that is freed from any collateral terms and conditions, I would say. We were then getting under way with a program to buy a substantial part of our controls from Perfex.

Q. I notice in the fourth paragraph the agreement provides it will not be necessary to order the controls in sets. What was the reason for that?

A. Probably because there was a reference to purchase in sets in the standard form of agreement offered by Minneapolis-Honeywell.

Q. Did you object to that?

A. Yes.

Q. Why did you object to that?

A. I believe I would stand for correction on dates. I believe in the preceding year we had bought some 2,500 or 3,000 limit controls from Perfex of one type, and that they were at that time preparing to put on the market another type that we wanted to use.

Q. What were those types of limit controls you had bought from Perfex and those you were going to buy?

A. The one we bought in quantity in the preceding year was a steam pressure control, the approximate equivalent of the one you described as a pressuretrol, and we prepared to buy a complete line of controls from Perfex, as soon as they had them acceptably available.

595

Q. Referring to Commission's Exhibit No. 91-A, B, C, and D, will you indicate whether or not the controls are described on that exhibit?

(Handing documents to the witness.)

A. The controls which we purchased in 1936, Mr. Haycraft?

Q. 1937 or 1936, if they are referred to. Are they described in this exhibit, beginning in 1938? I just want to see whether or not they are there, what type of controls. I am confining myself to this steam control you are talking about.

A. The steam control, I said we purchased in 1936, according to my recollection. That is the Perfex No. 700-D.

Q. 700-D?

A. D.

Q. And that is described on that exhibit, also, as a steam control?

A. A steam control, yes.

Q. What was the new control they were bringing out in the way of a limit control?

A. What is the date we are in now?

Q. 1937, I think you said, January, 1937, this contract or agreement was made. You said something about some new limit control that was coming out.

596

A. According to my recollection during 1936 we purchased not only that 2,500 to 3,000 steam controls, but also samples of various other controls needed to give us a complete line, and we were expecting, during that period, they were going to have these other controls available.

I don't think it referred to any specific one, but to a complete line of them.

Q. Did you charge any different price to your customers for the controls they were manufacturing, that were manufactured by Perfex and those that were manufactured by Minneapolis-Honeywell?

A. During the entire period?

Q. During 1937 and '38. I will ask you the same question as to 1936. From the time you brought that control out, that you bought from Perfex, was there any difference in price you quoted to the trade?

A. If I can answer off the record, by the way of explanation, while we did quote prices on controls separately from our burners, actually we sold very few separate from burners. They were included in the prices of the burner.

Q. Make your answer, and whatever explanation you wish.

A. These records are in 1937, unfortunately.

Q. Did you follow the same policy in 1936, do you think, that you did in 1937?

597 A. I find the Perfex control lisited here, so I will be able to quote it to you in a moment. Yes. I find on May 21, 1937 we quoted Minneapolis-Honeywell L-409-1, water control at $5.10, and on the same date, the 500-D-6 Perfex water control at $5.10; steam control, Minneapolis, L-404-2 at $5.10, and Perfex 700-D at $5.10. Vapor control, Minneapolis-Honeywell, L-408-2 at $7.95, and the Perfex vapor control 700-D-10 at $5.40, a quite substantial difference in that case. Air control L-415-2 at $6.65. That is a Minneapolis-Honeywell Number, and Perfex No. 400-D-6 at $5.00.

Q. Are those all the comparable items that you have there of those two companies?

A. Those are all that I identified, Mr. Haycraft. I find thermostats on here. The nearest comparable item is the same price, $5.10; for T-11 or 151-A.

Q. Do you sell a substantial quantity of these controls separate from the burners?

A. For service replacements and for a fourth control,

along with an oil burner installation to control domestic water supply. Other than that, practically none.

Q. To whom do you sell these separate items?

A. To our same dealers, who purchase burners from us.

Q. The same dealers that buy the burners?

A. Yes.

598 Q. Do you have any idea as to the quantity compared with your total number of burners that you sell for service?

A. For service, I do not have any such record, Mr. Haycraft. I do have an approximation of the way control usage is divided up, in the study we made in 1941, if that would be of any value.

599 Q. All right. Do you have it there?

A. I have an analysis here that was compiled partly from estimates and partly from records for two years, showing that if we sold 1,000 burners we would expect to sell burners to be equipped with controls as shown here, and we would expect their usage to be as shown across there; which shows that if we expect to sell 1,000 burners that we would expect to sell 1,000 thermostats, 755 intermittent master controls, 30 constant ignition master controls, 283 steam limit controls, 294 air limit controls, 225 combination air and fan controls, 191 water limit controls, 7 vapor controls, and 306 domestic water controls. Those are the fourth units.

Q. That was in 1941. Were there any changes in the preceding years in that proportion or ratio?

A. I think that would be quite obvious. In 1935 and '36 I don't believe that we had any combination air and fan controls, so that we would have had to have used two controls for that purpose. Of course, during the period that you are talking about there we were not selling very many completely coordinated air furnace units.

Q. I notice you drew a distinction between the constant and intermittent type of controls there. Would that proportion remain the same, or did that vary?

A. During the period that you are talking about we were selling more pressure type burners than we were
600 during this period. We changed to the use of constant ignition primary controls on our pressure type burners, except for some certain customers who specified that they wanted the ignition—the intermittent ignition control. I would say that the usage of constant ignition controls would be considerably higher in those earlier years.

Q. Where did you buy them principally?
A. In which year?
Q. In 1936, '37 and 1938?
A. In 1936, '37 and '38, my recollection would be that we bought the majority of them from Perfex.
Q. Did you buy any intermittent?
A. Yes, the record, I believe, will show that.
Q. Referring to Commission's Exhibit No. 91-A, B, C, and D, will you tell us which of those are the constant and which are the intermittent types?

(Handing exhibit to the witness.)

A. The intermittent type is R-117-A.
Q. Timken?
A. No, I mean the Minneapolis-Honeywell, R-117-A. The constant ignition type is R-116-A. Perfex 5520-D-1 is the intermittent ignition; and Perfex 5200-D-3—that is an earlier year—that is Perfex constant ignition type.
Q. Can you tell from that exhibit the years that you bought the constant ignition type from Perfex and
601 the year that you bought the intermittent type from Perfex?
A. I don't see any identification on this sheet, I don't find it—it was in 1938 that we bought, according to this record, seven hundred constant ignition controls from Perfex.
Q. During that same year you did buy constant ignition controls from Minneapolis?
A. Mr. Shafer's record shows 150 Minneapolis-Honeywell constant ignition controls.
Q. Did you buy any intermittent type controls that year from Minneapolis-Honeywell?
A. A great many.
Q. How many?
A. Mr. Shafer's record shows 5,976; two different types.
Q. That is the large figure?
A. Yes, sir.
Q. Now, in 1939 and subsequent years you began to buy intermittent types from Perfex, is that right?
A. We began to buy more intermittent types from Perfex, yes; but in 1938 the purchases appeared to be sampling quantities, getting them out in field tests.
Q. I show you Commission's Exhibit No. 90 for identification. Do you recognize the handwriting on it?

(Handing document to the witness.)

A. I cannot for certain, but from the notation that
602 is at the bottom I find that appears to be in Mr. Rockwell's handwriting. The other probably may be Mr. Goldie's.

Q. And what is his position with your firm?

A. Vice-president.

Q. In any particular capacity?

A. He is in charge of manufacturing now, although several years ago he took more active interest in some of these other matters.

Q. Do you recall having any discussion with Mr. Pauling, with Mr. Goldie, with respect to the purchase of temperature controls in 1936, and to the effect that Minneapolis-Honeywell will allow you a dollar on each set of controls purchased on your G. C. burners up to a total of 7,500 burners?

A. Answering that specifically, no. I have a recollection of some brief mention of that to me by Mr. Roberts, something suggested like "We have worked out a deal."

Q. Is Mr. Goldie still with your firm?

A. Yes, sir.

Q. Is he in the city?

A. I don't know. He was not during the last week, but I don't know whether he is now or not.

Mr. Haycraft: That is all.

Mr. Gilpatric: Mr. Examiner, before Mr. Freeman cross-examines I want the record to show that it now appears
603 from the testimony of Mr. Crawford and Mr. Shafer that Mr. Rockwell was the man who knew all about this 1936 contract, and the policies that entered into these changes, and I think when we come to apply for a subpoena to have Mr. Rockwell back to tell us about the provisions of that contract, we don't want to be met with opposition to a subpoena by Mr. Haycraft. If Mr. Haycraft wanted to get the facts about it, he had the man here this morning to give the facts, and instead of putting in the sort of testimony that he did.

Mr. Haycraft: I think that should be stricken out. That has no place in this record.

Mr. Gilpatric: But we don't want any opposition to a subpoena coming from you.

Mr. Haycraft: Wait until you get it, before you object. I don't think that counsel for the Respondent should be the judge and jury of how I should try my case.

Mr. Gilpatric: You told us you were going to bring this

out from Mr. Shafer and Mr. Crawford after Mr. Rockwell was excused. These two men have already been on the stand and you have not brought it out.

Mr. Haycraft: I still say that they identified it, but that does not give you the right to cross-examine Mr. Rockwell because I did not offer it in evidence through him.

604 Mr. Freeman: You told us as a lawyer that you would have these other men testify to it.

Trial Examiner Sheppard: I don't see anything to fight about.

Mr. Freeman: Your Honor will recall that when Mr. Rockwell was here we asked some questions about this 1936 agreement and the policies of the Timken Company in 1936, and we were told by Mr. Haycraft that he was going to have a witness who would tell us about it. Mr. Rockwell was excused, and then Mr. Shafer testified that Mr. Rockwell was the executive who passed upon questions of policy, and Mr. Crawford testified with respect to the 1936 agreement that Mr. Rockwell had the last word. In other words, we now find that Mr. Rockwell has the last word, after Mr. Rockwell has gone off the stand.

Trial Examiner Sheppard: Haven't you got what you wanted on both sides?

Mr. Freeman: No, not at all.

Mr. Haycraft: It is just a case of trying to put in their case again with my witness while he is on the stand and I am putting in my case. That is the whole point of this thing. I don't care when they call Mr. Rockwell on their side of the case, but I am putting in my side of the case and I am doing it in my own way.

Mr. Freeman: Then don't tell us when we endeavor

605 to cross-examine Mr. Rockwell that you are going to have Mr. Crawford or Mr. Shafer testify all about it.

Mr. Haycraft: Certainly Mr. Crawford and Mr. Shafer both testified and they did identify the document.

Trial Examiner Sheppard: All right, gentlemen. There is nothing to be excited about on either side. We have had all three of these gentlemen here.

Mr. Haycraft: I don't like to be accused of sharp practices on the record.

Mr. Freeman: Don't tell us after this that you are going to have a witness testify to it if you don't mean it.

Mr. Haycraft: I had two witnesses testify to it.

Mr. Freeman: And they told us nothing at all with respect to that agreement, particularly that clause.

Mr. Haycraft: Because you don't like it, I can't help it. I am not putting on my case the way that counsel for the Respondent likes it.

Trial Examiner Sheppard: I think that the record already shows plenty from both sides. We will have no more of this discussion on the record. If you want to discuss it off the record, you can do so.

Mr. Freeman: I want the record to show these remarks. We don't want to be prejudiced in the presentation of our case.

606 Trial Examiner Sheppard: I am going to let the record stay just like it is now. All right, cross-examine.

Cross-Examination by Mr. Freeman.

Q. Mr. Crawford, you bought limit controls from the Penn Company in 1935, did you not?

A. I presume so.

Q. And you bought controls in sets, that is, the Safetrol, the Temtrol, and the limitrol from the Penn Company?

A. Yes, sir.

Q. And all instruments were used on the same burner in a set relationship with respect to the burner, is that correct?

A. I don't believe it is exclusively correct.

Q. You used the Penn thermostat, known as the Temtrol, and the primary control, known as the Safetrol, in connection with your oil burners in 1935?

A. My recollection on that, Mr. Freeman, would be that the Temtrol and the Safetrol were invariably used in combination.

Q. That is, the primary and thermostat were always used together?

A. That is right.

Q. And not used independently?

A. That is my recollection; yes, sir.

607 Q. And likewise no Penn Temtrol or thermostat was used with somebody else's primary?

A. Not to my knowledge.

Q. Was there any reason for not using one make of primary with another make of thermostat on the same oil burner?

Mr. Haycraft: That is objected as calling for a conclusion, and calling for an answer not based upon the witness' knowledge so far as this record goes.

Trial Examiner Sheppard: If he knows, he may answer.

The Witness: I know definitely that there were different electrical characteristics which would make it entirely impossible or impractical to use two different ones together.

By Mr. Freeman:

Q. You know that from the position you now hold and have held with the Timken Company for over a period of ten years, do you not?

A. I know it because of my association with the Timken Company of considerably more than ten years.

Q. So what you are testifying to is facts and knowledge, what you know?

A. That is right.

Q. And your company purchased Perfex controls in 1936 from Perfex, did it not?

A. Yes, sir.

608 Q. And I believe that you said that the 1937 letter agreement with Minneapolis-Honeywell included the last paragraph because you were buying controls, not in sets, is that correct?

A. We had not been buying controls in sets, and we did not wish to be bound to buy them in sets.

Q. Although your 1936 agreement, Commission's Exhibit No. 66, does specify the purchase of controls in sets, does it not?

A. I couldn't tell you.

(Examining documents.)

The language says "10,000 or more sets, each set consisting of three controls, one limit control, one thermostat, and one primary control."

Q. Nothwithstanding your 1936 agreement, which provides for purchase in sets, your Company actually did go out and buy controls from Minneapolis-Honeywell competitors; is that not so?

A. That is correct.

Q. And I believe that you said that in the early days you used more constant ignition controls, that is, primary controls, than of the intermittent type, is that correct?

A. May I correct your statement?

Q. Go ahead and correct it. All we want are the facts.

A. My statement to Mr. Haycraft was that we used
609 more constant ignition controls in those days that you are reviewing than we are using now.

Q. Then, as a matter of fact, constant controls can be

bought for a little less money than the intermittent controls, is that correct?

A. That is correct.

Q. I wonder if I might see that tabulation that you made for the year 1941 with respect to the use of controls for use on your thousand oil burners. You talked about a fourth control. That is, some control over and above what we referred to as the standard three controls, the thermostat, the primary and limit controls. Will you point out on the figures, that you have prepared for 1941—

Mr. Haycraft: I object to that unless it is an exhibit in evidence.

Mr. Freeman: I can put it in evidence. But you kept referring to things for identification, and we want to ask him about this.

Mr. Haycraft: I object to the interrogation of the witness on a paper not in evidence.

Mr. Freeman: Will that go for all from now on?

Trial Examiner Sheppard: We will mark that Respondent's Exhibit No. 2.

Mr. Haycraft: I am willing to make that my exhibit, if you want.

610 Trial Examiner Sheppard: Mark it Respondent's Exhibit No. 2.

(The document referred to was marked Respondent's Exhibit No. 2, for identification.)

By Mr. Freeman:

Q. The last paper I referred to, Mr. Crawford, is now Respondent's Exhibit No. 2 for identification—

Mr. Haycraft: (Interposing.) I agree that it may go in evidence, Mr. Examiner.

Trial Examiner Sheppard: It may go in.

(The document referred to, heretofore marked for identification RESPONDENT'S EXHIBIT NO. 2 was received in evidence.)

By Mr. Freeman:

Q. Just tell us what are the so-called fourth controls.

A. Those which are in the last column to the right, marked "domestic water control".

Q. How are the thermostats or any of the controls used on the domestic water—as domestic water controls, compared with the controls used on the domestic oil burners; are they different controls or are they the same?

A. I am afraid I don't understand your question.

Q. Will you tell us what controls are used on the domestic water devices, that is, for heating water for domestic use?

A. Immersion Aquastat.

611 Q. That is a limit control?

A. That was somewhat similar, but not normally used for a limit control.

Q. How does it differ from the immersion aquastat used in connection with domestic heating?

A. The limit control that we use for domestic heating is a surface type of aquastat, because it costs less money and is easier to install than the immersion type of aquastat. It performs the same function. The immersion type of aquastat used for this purpose may be used for a limit control if the contacts are arranged differently, or the circuit wires are arranged a little bit differently.

Q. In both cases they serve as a limiting control for making and breaking the circuit depending upon temperature?

A. It is used for making and breaking the circuit, depending upon temperature, yes, sir.

Q. The settings might be different?

A. Yes, sir.

Q. The limit controls might have different settings even for oil burner use, isn't that correct?

A. Yes, sir.

Q. And the instruments are provided for such settings, are they not?

A. Yes, sir.

Q. Now, Mr. Haycraft asked you as to the number 612 of relays purchased from Minneapolis-Honeywell and from Perfex for the years 1938 and 1939, and I am wondering if you have like information for the years 1940 and 1941; and you can refer to Commission's Exhibit No. 91.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

The Witness: May I answer?

Trial Examiner Sheppard: Yes, go ahead.

The Witness: In the year 1940 the exhibit you have given me shows that we bought from Minneapolis-Honeywell 1,895 RA-117-A intermittent primary controls, and

51 R-116-A constant ignition primary controls; and in that same year it shows that we obtained 10,450 5520-D-1 Perfex primary controls and 575 5200-D-4 Perfex constant ignition primary controls. That is for the year 1940. Is that what you wish?

By Mr. Freeman:

Q. Yes, and 1941, Mr. Crawford, please?

A. In 1941 the same exhibit shows that we purchased from Minneapolis-Honeywell 3,778 RA-117-A intermittent ignition primary controls, and 158 R-116-A constant ignition primary controls. During that year, 1941, it shows that we purchased from the Perfex Corporation 17,290 613 of their No. 5520-D-1 intermittent ignition primary controls, and 872 Perfex 5200-D-4 constant ignition primary controls.

Q. It is true that in the years 1938 to 1941 the comparable controls that you have referred to were selling for less money; that is, you could buy for less money from Perfex than you could from Minneapolis-Honeywell, is that correct?

A. My recollection is that that is the case.

Q. And that likewise is true in connection with the thermostat, is it not?

A. My recollection is not so clear on that. I believe there was a difference of a few pennies, about five cents.

Q. That difference meant that Perfex cost less money than Minneapolis by that slight difference?

A. That would be correct.

Q. How about the limit controls.

A. I believe on the limit controls the price was 10 cents difference.

Q. That is, Perfex sold for 10 cents less?

A. The price on the Perfex controls, I believe, was 10 cents less.

Q. Mr. Haycraft asked you about your prices, how your prices compared when you sold controls for replacement purposes, and so forth, during the year 1937, and I now ask you what the relationship is in the price of controls with the oil burner. Does it materially affect your 614 selling price of the oil burner?

A. Within reasonable limits a difference in the price controls would not affect our price on the oil burner.

Q. Did it in fact, in the year 1937, change your price on the oil burner?

A. I doubt if that would be an important factor in price.

Q. So that whether you purchased from Minneapolis-Honeywell or from Perfex, even though there was a difference in price, it did not have any effect on your ultimate selling price of the oil burner, complete with controls; is that correct?

A. That is hard to say, Mr. Freeman. I can't say that the saving of one penny does not make any difference, because ultimately it does, but it in itself would not be an important factor.

Q. So far as your company is concerned, when you sold your oil burners with Minneapolis-Honeywell controls you did not charge more for them than when you sold the same burner equipped with the Perfex control?

A. Yes, during certain periods we did.

Q. And when was that?

A. I can tell you by the circumstances rather than the time.

Q. Go ahead.

A. When we had them packed with the burners and had them as standard equipment, and a man said he
615 wanted to change to Minneapolis-Honeywell, we said that cost extra money. I might be able to find it on one of my records here.

(Examining papers.)

I find a price sheet here that shows that if an R-116-A master control was wanted instead of the 5200-3 master control which was specified as standard equipment, an additional charge was made.

Q. That is, where you substituted Minneapolis-Honeywell controls for your then standard Perfex controls you charged more money?

A. That is correct.

Q. How about 1937 when you had Minneapolis-Honeywell as standard, did you make any allowance or give your customers any difference in price on your burners if your burners were shipped out equipped with Perfex controls?

A. I find a price sheet here current in April, charging 50 cents extra, where an extra charge of 50 cents was made if a customer demanded an LA-404-A or a LA-409-A limit control instead of the standard.

Q. Back in 1936 when you began to use Perfex primaries and at the same time used Minneapolis-Honeywell primaries, was there any difference in price when the

burner went out with a set of controls made by Perfex and when the same burner went out with a set of controls made by Honeywell?

A. I have no reference data, but my recollection is
616 definitely no.

Trial Examiner Sheppard: What is that?

The Witness: I have no reference data, but my recollection is definitely no.

Trial Examiner Sheppard: In other words, a burner that you sold with the Respondent's control on it at that time, there was no difference in price from a burner equipped with Perfex?

The Witness: That is my recollection, sir.

Trial Examiner Sheppard: I understand it now.

By Mr. Freeman:

Q. And then later when you began to standardize on Perfex controls, when a customer orders an oil burner and wanted a set of Minneapolis-Honeywell controls, there was an additional charge?

A. That is correct.

Trial Examiner Sheppard: Did that difference in charge represent the difference in price? You said that the Perfex sold at a lower price than the Respondent's controls. Did that make a differential there, that you just talked about?

The Witness: I don't believe so, sir. My recollection is that this differential in price to our dealers, during the period Mr. Haycraft and Mr. Freeman are asking about is made up almost entirely of the cost and inconven-
617 ience and the trouble of making a special control selection and special packaging and so on, and special inventorying.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. So that the actual charge that you made to your customer or dealer who wanted the Minneapolis controls was an amount in excess of the actual difference in cost of the Perfex controls and the Minneapolis-Honeywell controls?

Mr. Haycraft: I object to that question. It is not in accordance with the witness' testimony.

Trial Examiner Sheppard: If he understands it, I will let him answer it. I think it is already answered.

Mr. Freeman: I think part of it was answered in response to your Honor's question, but I wanted him to clarify it.

Trial Examiner Sheppard: Mr. Crawford, you just go on and state anything in addition to that that you want to.

The Witness: Will you restate the question?

By Mr. Freeman:

Q. Let me ask you another question.

You actually charged the dealer who wanted a Minneapolis-Honeywell control an amount in excess of the amount that you paid for Minneapolis-Honeywell controls over and above what you could have purchased controls for
618 from Perfex, is that correct?

A. Yes, sir.

Q. So that the differential in price between the Perfex controls and Minneapolis-Honeywell controls was not alone the factor as to what difference you would obtain by way of additional money from the purchaser?

A. Not the sole factor, no.

Q. Of course, when you paid more money you wanted more money?

A. Obviously.

Q. Did you find that the differential deterred certain of your customers from asking for Minneapolis-Honeywell controls?

A. I probably tried pretty hard not to find that out, Mr. Freeman.

Q. As a matter of fact, what is your experience? What actually happened in the field? That is what we want to know.

A. What happened in the field is, of course, a composite result of hundreds of people's reactions, which will be different from time to time. I think undoubtedly that difference in price did influence them to take the one that we had selected as standard.

Q. Of course, when Timken selects something as standard, that means that it is just as good, is that not so?
619 A. In our opinion it was good, and we stand back of it, without reference to just as or better than.

Q. By the way, how does your price on an oil burner with controls all included compare with other oil burners—oil burners manufacturers selling oil burners of substantially the same type?

A. It is higher.

Q. Can you give us just rather briefly how your price structure in 1936 compared with the companies that you were directly competing with?

A. Practically we didn't have any direct competition with the wall flame burner, because it is a different type of burner, and there were only two other manufacturers of it. The Model C sold from $135.00 down to $107.50, depending on the quantity. The Model G. C., which was our standard pressure type burner in those days—

Q. (Interposing.) Gun type?

A. Gun type, $105.00 to $87.50 in the year 1936.

Q. You had more competition on the gun type than you did on the other type?

A. The competition was on the gun type directly.

Q. Do you have any data here which might show what your competition was, that is what you had to meet competitively?

A. It was considerably below that. I think I did put in my file one memorandum that referred to it, if I can find it.

620 (Examining papers.)

This is dated March 2, 1937. Will that serve your purpose?

Q. Go right ahead.

A. Mr. Holman, the manager of our Boston branch at that time, wrote me saying N. S. Oil Burner Corporation, Hartford, Connecticut, quoted him a price of $60.00, including Minneapolis controls, for their new pressure type burner.

Mr. Kirby also had a quotation of $66.50 for Williams Oil-O-Matic on their new pressure burner, including Minneapolis controls.

I could quote you our price for 1937.

Q. Would you do that, as long as we are talking of 1937, so we have it all complete?

A. I find no change in the 1937 schedule.

Q. So that your 1937 price was about the same as your 1936 price?

A. The record I have here as to those two models, shows it exactly the same.

Q. I believe you said something about wanting a second source of supply for controls. Was that a matter of policy of the Company?

A. Quite definitely.

Q. Who was instrumental in putting into effect such a policy, as to a second source of supply of controls?

621 A. Initiated that policy?

Q. Yes.

A. Or executed it?

Q. Well, give us both, if you can.

A. Such policy would be initiated by Mr. Rockwell. It would be executed by a man like Mr. Shafer, myself, or Mr. Powers, our chief engineer.

Q. Can you tell us now whether or not, when Mr. Rockwell came with the Timken Company in 1933, he then put into effect the policy of obtaining for Timken a second source of supply for controls?

A. Well, I know that it was not long after that that we has a second source of supply.

Q. You know that Mr. Rockwell was responsible for putting into effect the obtaining of a second source of supply?

A. I don't think I could testify to that from my knowledge, Mr. Freeman. I would assume that to be the case.

Q. All I want of you are the facts. Do you know whether or not your company was, in the years 1935 and '36 and '37, negotiating with companies other than Minneapolis-Honeywell for supplying your company with oil burner controls?

A. Yes.

Q. And you know that in 1935 negotiations were carried on with the Penn Electric Switch Company, do you not?

A. Yes.

622 Q. Did M-H, that is, Minneapolis-Honeywell know then that you were negotiating with Penn for the purchase of controls?

Mr. Haycraft: I am objecting to that, what Minneapolis-Honeywell may have known, Mr. Examiner.

Mr. Freeman: I will withdraw that question.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. Did you let Minneapolis-Honeywell know that you were dealing with competitors for the purchase of controls in 1935, 1936 and 1937?

A. Definitely, within that period. I cannot tell you this in 1935. I can tell you we delivered a lot of burners in 1935 equipped with Penn controls, and I feel they would have found out about it even if we didn't tell them.

Q. And likewise you delivered oil burners in 1936, with controls made by someone else, other than the Minneapolis-Honeywell, is that correct?

A. Yes, sir.

Q. Of course, the same is true for the year 1937?

A. Yes, sir.

Q. Mr. Crawford, Mr. Haycraft asked you with reference to the types of oil burners manufactured by your company, and I am correct in my understanding that you make a small rotary type of burner that is sold in the
623 domestic oil heating market, where the primary safety is not of the heating responsive type, is that right?

A. Yes, sir.

Q. And is that burner of the rotary type which you have just identified, used in the domestic heating field, that is, for heating homes?

A. Yes, within its capacity limits.

Q. That is, it is a small—

A. (Interposing.) It is a small burner.

Q. And it will work efficiently for heating a small space, that is, a small home, is that correct?

A. Yes.

Q. You have sold such oil burners, complete with a furnace, is that correct?

A. Yes.

Q. And have you sold such type of oil burners for use with a complete boiler?

A. Yes.

Q. And in both cases of those units, that is, the boiler type heater and the furnace type heater, for use in connection with heating small domestic homes?

A. Yes.

Q. In each of those cases there is provided a primary control, is that correct, a safety control?

A. If you do not give any special significance to
624 primary control, the answer is yes.

Q. Is it true that in such type of oil burner, three different controls are used, in order to bring about the proper operation of the burner?

A. Yes.

Q. One of those controls is a thermostat?

A. Yes, sir.

Q. And another is—another of such controls is a limit control?

A. Yes.

Q. There is still a third control that serves as a safety device, is that correct?

A. That is one of the functions, yes.

Q. That likewise is one of the functions of the primary control, known as the R-116-A, manufactured by Minneapolis-Honeywell, is that correct?

A. Yes.

Q. So that in the type of device that we are now referring to, you have three controls?

A. Yes.

Q. The control, other than the thermostat, and the limit control, serves the same function as the primary or control that you purchased from Perfex, or the control that you purchased from Minneapolis-Honeywell, its type R-116-A, is that correct?

625 Mr. Haycraft: Read that question again.

(The question above referred to was read by the Reporter.)

The Witness: If you mean by the "function", that it is designed to stop, prevent the burner from being unsafe, in the event of abnormal operation, the answer is yes.

By Mr. Freeman:

Q. In other words, the R-116 prevents the abnormal discharge of oil if something goes wrong, is that correct, shuts down the burner?

A. Shuts down the burner.

Q. And likewise in this type we are now referring to, the burner is shut down in the event that something goes wrong. In other words, it too prevents the abnormal discharge of fuel or oil?

Mr. Haycraft: I object to that, unless it is made a little more clear what he is talking about. I want to know, and I think the record should know what we are talking about. I do not understand the question. I don't think the record is clear what we are talking about.

Mr. Freeman: I will reframe the question.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. What is the function of the control that we are
626 now referring to, which you use in connection with your rotary type burner, of the kind that we are now discussing?

Mr. Haycraft: What is the type we are now discussing? What is the burner we are now discussing? What is the control we are now discussing? I think he should be definite in this question.

Mr. Freeman: This witness already said the rotary type burner.

Mr. Haycraft: But what control is it we are talking about?

Mr. Freeman: The primary control or trip bucket control.

Mr. Haycraft: The record does not show that.

Trial Examiner Sheppard: All right, Mr. Crawford, if you understand the question.

The Witness: I do.

By Mr. Freeman:

Q. What are its functions?

Trial Examiner Sheppard: Go ahead.

The Witness: In general terms, as long as I don't have to be too technical about it.

Trial Examiner Sheppard: All right.

The Witness: It opens the oil valves and permits oil to flow when the burner is starting. If the oil fails to ignite, the oil is drained down through a channel, 627 conveyed to a trip bucket. The trip bucket folds and stops the flow of oil. That control also regulates the amount of oil fed to the burner, and if any obstruction prevents the needles valve controlling the flow of oil from seating properly, the oil will overflow to the same trip bucket and close the valve completely.

Trial Examiner Sheppard: Is all that automatic?

The Witness: That is all automatic.

Mr. Haycraft: What is the name of this control we are talking about?

Trial Examiner Sheppard: That is the primary control, represented by the patent you gentlemen sell, isn't it?

The Witness: We call it an oil control valve. They call it a trip bucket control. We buy them from Detroit Lubricator Company, and Automatic Products Company, and can I ask Mr. Shafer? I think that is correct.

Mr. Haycraft: Do you buy any from Respondent?

The Witness: No.

Mr. Haycraft: I object to it as not relevant or material.

Mr. Freeman: I think it is. He is asked on direct examination what type of oil burners they sold.

Mr. Haycraft: On my direct examination it was all directed against the thing involved in this case.

628 Trial Examiner Sheppard: I though you had some special question.

Mr. Freeman: It certainly is involved. We are trying to find out what type of oil burner this company sells, and he asked for that.

Trial Examiner Sheppard: I do not care what kind of oil burners they sold, insofar as they sell the same general type that is in competition.

Mr. Freeman: The whole case is predicated, your Honor, upon domestic oil heating, and if this company makes a domestic oil burner and sells it to the trade in competition with other domestic oil burners, we are entitled to bring that out.

Trial Examiner Sheppard: That is all I want to know.

Mr. Freeman: That is all I want to know.

Mr. Haycraft: Mr. Examiner, the reason for my motion is that in the operation of this oil burner it has been developed now this witness does not buy the controls from either the Respondent or the Perfex Company. They manufacture it themselves.

Mr. Freeman: I do not think it makes any difference.

Mr. Haycraft: It has nothing to do with this case, then. We are determining the question of competition be-

629 tween Minneapolis-Honeywell and its competitors. Certainly this is not a competitor of the Respondent. I move to strike it.

Trial Examiner Sheppard: I will let it stay in for what it is worth.

Mr. Freeman: All right.

By Mr. Freeman:

Q. Who do you buy your thermostats from that are used in connection with the type of oil burner we are now discussing?

Mr. Haycraft: What is that type of oil burner we are now discussing?

Mr. Gilpatric: The rotary type, for use in domestic heating plants, ours.

Mr. Haycraft: Is that the type, this special oil burner?

Mr. Gilpatric: Yes, sir.

Mr. Haycraft: I object to the question.

Trial Examiner Sheppard: I presume it is the type this gentleman has been talking about, that they make themselves.

Mr. Freeman: They buy the controls from somebody else. It is a rotary type burner.

Trial Examiner Sheppard: Yes.

Mr. Haycraft: I object to the question.

Trial Examiner Sheppard: I will let you answer,
630 if you know.

By Mr. Freeman:

Q. Who do you buy your thermostats from?

A. The specification sheet that I have here specifies on P. A. Air Model Oil Boiler, the use of Perfex Model 101-D thermostat, and Perfex Model 700-D steam control, 500-D-10 rotary control, or 700-D-10 vapor control.

Q. Manufactured by Perfex?

A. Yes.

Mr. Freeman: That certainly shows all of this is competent, because those are the very items we are in competition with, and I think it is absolutely material.

Trial Examiner Sheppard: For that purpose I will leave it in.

The Witness: It shows on our Model F. E. R. oil furnace we use Perfex Model 101-D thermostat, and Perfex Model 475-D combination fan limit control.

Model F. C. R. oil furnace we use Perfex 151-A thermostat, and Perfex No. 5000-D-4 relay, and Perfex No. 475-D combination fan limit control.

Trial Examiner Sheppard: That will be enough on that question.

The Witness: Those are the types of burners Mr. Haycraft, you asked for.

631 By Mr. Freeman:

Q. Mr. Crawford, I have just another question or two; and when you sell such an oil burner, equipped with some of the Perfex controls and some of the controls purchased from Detroit Lubricator, or Automatic Products, that oil burner that you then make and sell is in direct competition with other rotary type burners manufactured and sold by others for domestic oil heating, is that correct?

A. Yes, sir, or any other oil burners of like capacity.

Mr. Freeman: That is all.

Trial Examiner Sheppard: Anything else, Mr. Haycraft?

Mr. Haycraft: Yes.

Redirect Examination by Mr. Haycraft.

Q. Did the Minneapolis-Honeywell Regulator Company ever attempt to sell you other controls for use on this particular type of burner you have been asked about, that you manufacture yourself?

A. Oh, I don't doubt that they did, Mr. Haycraft. I don't find, on these specification sheets, we ever specified their controls for them. I know we have used some of their controls when the special type was required, such as a chronotherm or acratherm, a special type thermostat.

Q. Did they make any attempt to sell you thermo-
632 stats and limit controls and primary controls?

A. Not primary controls, because the control is designed right in the burner. It would be pretty hard to use a primary control with it.

Q. The thermostats or the limit controls?

A. No doubt they did.

Q. You say "No doubt they did". I want a positive answer on that. Do you know that they did?

A. No, I can't say specifically.

Q. Do you know what their policy is with respect to selling less than sets? By "sets" I mean of primary controls, limit controls and thermostats?

Trial Examiner Sheppard: All three of them. He understands that.

The Witness: Yes, I understand, but I don't believe that would be pertinent in this case.

By Mr. Haycraft:

Q. I am asking you whether or not you got any bids, or whether or not there was any negotiation for the purchase, or they offered to sell you a limit control and a thermostat separate from your sets, for use on this particular burner? I want an accurate answer on that. I do not want any guesswork or assumption.

A. I cannot answer.

Mr. Haycraft: All right.

633 By Mr. Haycraft:

Q. What proportion of your business now consists of this special type of burner you referred to?

A. I think, sir, with reference to this chart you have, I believe it is what you have before you.

Respondent's Exhibit No. 2, will indicate the difference

between 785 master controls, and 1,000 burners is made up of these types which do not use the conventional type primary control we have been talking about. You find them identified here as Model B. A. R., F. E. R., F. C. R., which show blank, on the master control.

By Mr. Haycraft:

Q. When did you start manufacturing those?

A. I can tell you from the price record, when we started quoting a price, which will give it to you fairly accurately by years. Will that suffice?

Q. Yes.

A. I find F. C. R. furnace on here appearing in 1938, October 1st, 1938.

I find F. E. R. appearing in March, 1940.

I find B. A. R. appearing in October, 1938.

Q. Now then, of the models that do not include that type of burner, do you know what proportion used Minneapolis-Honeywell controls, and what proportion used Perfex controls?

634 A. That was at our election, sir.

Q. How did they run? What was the proportion subsequent to 1937? Do you have any way of knowing that?

A. Only as these purchase records indicate it, because we regulated that by the number we had in inventory in a given time, the number we elected to buy.

Q. What determined the number that you would elect to buy from one or the other?

A. Well, one, the question of price would be quite an important factor. Two, we were attempting to get enough business in Perfex so they would be a good competitor, and a good second source of supply, in case anything happened to our Minneapolis source.

Q. Was any other factor taken into consideration?

A. Well, I think this might be a little bit distasteful to Mr. Pauling, but I think it was Perfex who first cooperated with us by putting our name on our thermostats, and identifying them distinctly as Timken equipment, and making a distinctive Timken design, and I thought they were entitled to a little compensation for that.

Q. Were the Minneapolis-Honeywell Regulator people willing to do that for you, too?

A. Reluctantly willing.

Q. They have done it since that time?

A. Since that time, yes.

635 Mr. Haycraft: I think that is all.

Recross Examination by Mr. Freeman.

Q. These thermostats that you say you bought from Perfex and used on the last mentioned type of domestic oil burner, could likewise be used on an oil burner employing a primary of the kind you bought from Perfex, or the kind you bought from Minneapolis-Honeywell, is that correct?

A. Can I refer to my schedule and find out which kind we are talking about? You mean the Perfex 101-B?

Q. Yes.

A. Perfex 151-A?

Q. Yes.

A. Yes.

Q. Likewise, I take it, the Minneapolis-Honeywell thermostat, which has here been pointed out as comparable to Perfex as No. 151-A, it too could have been used in the last type, domestic oil burner, is that correct?

A. Just as well, equally well.

Q. You bought from Perfex, at a little less money than you bought from Minneapolis-Honeywell, is that correct?

A. I believe that would be the case.

Q. That would be applicable to the controls that you bought from Perfex and used in this last type of oil burner?

A. I think that would be true.

636 Mr. Freeman: That is all.

Redirect Examination by Mr. Haycraft.

Q. By "last type of oil burner", you refer to what? What do you mean by the last type of oil burner?

A. Models B. A. R. oil boiler, F. E. R. oil furnace, F. C. R. oil furnace.

Q. Is it your testimony that the thermostat, and I want to get this clear so there is no misunderstanding, which you could have bought from Minneapolis-Honeywell, would work equally as well with the Perfex primary?

A. No, sir.

Q. Or the primary that you bought from Detroit Lubricator, or, what was this other one, your B. A. R. boiler, and F. E. R. and F. C. R. furnaces?

A. The Minneapolis-Honeywell T-11 thermostat which we were currently buying, could have been used where we used the 151-A Perfex thermostat.

Q. Where was that?

A. It was on the F. C. R. furnace.

Q. What primary did you use on the F. C. R. furnace?

A. It was the oil valve control which was purchased from either Detroit Lubricator Company, or Automatic Products, I don't know which.

Q. Could you have used the T-11 thermostat on your
637 B. A. R. furnace or F. C. R. furnace?

A. No. You could use another model of Minneapolis-Honeywell thermostat, designed to carry high voltage. I can't tell you the number, but another model to carry that line voltage.

Q. Have you used them?

A. Yes.

Q. When did you buy those?

A. Your exhibit may show.

Q. Look at 91-A, B, C, and D.

(Handing document to the witness.)

A. T-44-A, Minneapolis-Honeywell is one of the types which could have been used. We bought some of those in 1938. We bought some in 1939. We bought some in '40. I don't find any in '41.

Q. Do you know that they were used? You say they could have been used.

A. No, I do not.

Q. What was the Perfex type of thermostat that was used on B. A. R. and FCR?

A. On B. A. R. I have just detailed it all. On B. A. R. we used Perfex 101-D. On F. E. R. we used Perfex 101-B. On F. C. R. we used Perfex 151-A. Previously we used 101-B on F. C. R.

Q. But the only one you could use Minneapolis-
638 Honeywell thermostat on, T-11, was F. E. R., is that right?

A. We used the Perfex 151-A in combination with intermediate thermostat,— with an intermediate relay. That relay made it possible for us to use a low voltage thermostat. With that relay we could use Minneapolis-Honeywell T-11 thermostat with equal ease and equal results.

Q. That is F.E.R.

A. F.C.R. We put that on standard equipment. We could have used that relay, that intermediate relay, which is not the primary control we have been talking about, on any of those models, and then we could have used any Minneapolis-Honeywell low voltage thermostat, or any Perfex low voltage thermostat.

Q. Did you do that? You say you could have done it.

A. We did not do it as standard equipment. I know we did do it in isolated cases.

Q. What is this relay you have referred to that you put on there, that reduced it from high voltage to low voltage?

A. The 151-A and T-11 thermostats carrying low voltage circuit. The low voltage circuit to the relay closed the circuit. The relay closed, then we thereby closed the line voltage circuit, which carried the burner.

Q. What was the model of this relay that you are talking about, Perfex?

A. The particular one we had specified here was
639 Perfex No. 5000-D-4.

Q. That is called a primary control?

A. No.

Q. What is the name for it?

A. We just called them intermediate relays, or auxiliary relays.

Q. But without that auxiliary relay, the thermostat on the Minneapolis-Honeywell could not have been used?

A. The T-11 Minneapolis could not have been used, nor could the Perfex 151-A.

Q. You would have used 101?

A. We had to use a 110 volt thermostat.

Mr. Haycraft: That is all.

Recross Examination by Mr. Freeman.

Q. Likewise, if you used a Perfex high voltage thermostat, you could have used, in connection with the oil burner of the type we are now discussing, a Minneapolis-Honeywell line voltage thermostat, is that correct?

A. Yes, sir.

Q. And if you used a low voltage Perfex thermostat, by using a relay, you likewise could have used a Minneapolis-Honeywell low voltage thermostat with the relay, in place of the Perfex thermostat, is that correct?

A. Yes, sir.

640 Mr. Freeman: That is all.

Trial Examiner Sheppard: Thank you, Mr. Crawford.

(Witness excused.)

Trial Examiner Sheppard: Miss Reporter, take an adjournment until ten o'clock in the morning in this room.

(Whereupon, at 5:45 o'clock p. m. of Monday, August 23, 1943, the hearing in the above-entitled matter was adjourned.)

641

Room 715,
United States Post Office,
Detroit, Michigan,
Tuesday, August 24, 1945.

Met, pursuant to adjournment at 10:00 a. m. E. W. T.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Esq., Attorney for the Federal Trade Commission.

Cravath, de Gersdorff, Swaine & Wood, by R. L. Gilpatric, Esq., and B. R. Shute, Esq., 15 Broad Street, New York, N. Y., and Bair & Freeman, by Will Freeman, Esq., 135 South La Salle Street, Chicago, Illinois, appeared for the Respondent.

642

Proceedings.

Trial Examiner Sheppard: All right, gentlemen, we will proceed.

Mr. Reporter, this gentleman is Charles H. Hodges, Jr., president of Detroit Lubricator Company, 5900 Trumbull Avenue, Detroit, Michigan.

CHARLES H. HODGES, JR., was thereupon called as a witness for the Commission and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Haycraft.

Q. What is your occupation, Mr. Hodges?

A. My occupation, president of the Detroit Lubricator Company, sir.

Q. In what business is the Detroit Lubricator Company engaged?

A. Its general business is the making of controls for the heating industry, including gas and oil; and under oil, both vaporizing and pressure type of burners, and stokers, coal fired stokers; also refrigeration controls for the refrig-

eration industry; expansion valves for the air conditioning and refrigeration industry; mechanical forced feed lubricators for railroads; air valves and radiator valves, both packless and packed, for the heating industry; the old
643 line of stationary lubricators for steam engines, both while they are still used on railroads and stationary engines. I think, sir, that covers our general line.

Q. How long have you been engaged in the manufacture and sale of automatic temperature controls for use on oil burners?

Mr. Freeman: Of the domestic type.

Mr. Haycraft: Of the domestic type.

The Witness: I should say for the past two years.

By Mr. Haycraft:

Q. How are your temperature controls sold? That is, what is your method of sale; and who are your principal customers?

A. We sell them to manufacturers, and jobbers. Those are our two main outlets.

Q. Oil burner manufacturers?

A. Yes, sir.

Q. Who are your principal customers in the way of oil burner manufacturers?

A. Well, the American Radiator and Standard Sanitary Corporation, Timken, Anchor Post Fence, Gilbert and Barker, American Gas Machine. I think there is a concern —you gentlemen are more familiar with the names of these companies than I am, the Silent—

644 Q. (Interposing. I show you Commission's Exhibit No. 1, beginning on page 10, and ask you to look over a list of manufacturers there and see if you have made sales of temperature controls to any of those manufacturers, and if so, when?

(Handing document to the witness.)

A. I believe, and this would have to be checked up, so I am going by my memory, because I am not in charge of our selling; I believe we sold to Gar Wood. We have sold to Lynn Products. We have made some sales to Hart, I believe. We have made some sales to the Petroleum Heat and Power. We have made sales to York Oil Burner. And then, of course, we have made sales to a number of companies that are not listed here.

Q. What type of temperature controls do you sell for use on an oil burner?

A. What type?

Q. Yes. Do you sell primary controls and thermostats?

A. We sell a primary control, a room thermostat, both low and high voltage, a room thermostat with what is known as night turn-down. We sell both pressure and temperature operated limit switches. We sell the immersion type of switch for use in certain combinations where they hook up a burner in connection with domestic water. We sell a primary. Well, I don't know whether I have covered the
645 complete line, but those are the main items offhand; and we think we have a complete line to offer.

Q. What percentage of your sales would you say were made to your principal accounts, American Radiator and Standard Sanitary; is that it?

A. Yes, sir.

Q. And your other accounts?

A. Well, I should say that we made—in 1941, probably in 1940, the sales ran, I believe, about 50 per cent to the corporation and 50 per cent outside the corporation. Prior to 1940 the percentage would probably be a little higher; it might run in 1937 and 1938 a little higher than 50 per cent.

Q. Higher than 50 per cent which way?

A. Higher outside.

646 Q. How about 1937?

A. I don't remember, sir. I don't know.

Q. On the outside, that would include sales to oil burner manufacturers, and jobbers as well?

A. Yes, that is our total sales.

Q. Do you travel salesmen all over the country?

A. Yes, sir, we have territory men, and we travel men all over the country.

Q. What class of trade do they call on?

A. They call on both the manufacturer and the jobber.

Q. Could you give us the volume of sales for the years 1937, 1938 and 1939, of thermostats, limit switches and operating switches?

Mr. Freeman: Operating switches?

Mr. Haycraft: Or primary switches.

The Witness: You say, could I?

Mr. Haycraft: Yes.

The Witness: I don't remember those sales offhand.

Mr. Haycraft: I will let you refresh your recollection from this paper which I hand you.

(Handing document to the witness.)

Mr. Freeman: May we look at that paper?

Mr. Haycraft: If it refreshes his recollection, you may.

647 By Mr. Haycraft:

Q. Does that refresh your recollection?

A. I can simply quote from this letter which was apparently accurate at that time.

Q. You may let Mr. Freeman see the latter if you wish.

A. Yes.

(Handing document to counsel.)

Q. Will you tell us now, after looking at it?

A. We sold in thermostats, in 1937, 31,252; limit switches the same year, 4,585, operating switches, 32,123.

Q. What do you mean by "operating switches"?

A. I should say those were all kinds of switches. In other words, that was a catch-all.

Q. Includes primary, as well?

A. Including primary and switches of various character.

Q. Go ahead. 1938?

A. 1938, 20,675, limit switches, 2,620.

Q. What is that first figure?

A. 20,675.

Q. What, thermostats?

A. Thermostats. I beg your pardon. Limit switches, 2,620; operating switches, 14,560.

1939, thermostats, 29,131; limit switches, 13,004; operating switches, 25,455.

Q. How do you account for the fact you sold so

648 many more thermostats than you did limit switches during those years?

A. For the reason, a very good reason, that it was not until 1939 that we had ingenuity at our place to design an immersion type of limit switch, that would meet the general competition, both as to performance and as to size. Our history of our development shows that for some reason or other we started out with controls that were too big. In other words, we made them too roomy, and we immediately found in most every case that we were off on the wrong foot, because when we tried to sell them, they wouldn't go in the space the manufacturer had made available, or they looked too big, and we had to draw in our horns and start over again.

Q. What did your customers do for limit switches, that bought your thermostats?

A. What did they do?

Q. Yes.
A. I don't know.
Q. You don't know?
A. I don't know what they did.
Q. Do you know what the American Radiator Company did?
A. The American Radiator Company business, sir, we got mainly in 1940.
Q. Did you sell them thermostats in 1937, 1938 and 1939?
A. Yes, sir, we did.
649 Q. Do you know what they did for limit switches during those years?
A. I believe they bought limit switches on the open market.
Q. Do you know where they got their primaries?
A. They got their primaries, I believe, from Minneapolis-Honeywell Company.
Mr. Gilpatric: In what year was that?
The Witness: I think that was in 1939.

By Mr. Hayeraft:

Q. What about the preceding years, 1937 and 1938?
A. They were not in the oil burner business.
Q. They were not?
A. No.
Q. Was the Fox Furnace in the oil burner business in 1937 and '38?
A. Fox Furnace was in the oil burner business, from the furnace angle, yes.
Q. Did you sell them thermostats?
A. We sold them thermostats at the time they started.
Q. Do you remember when that was?
A. I don't know, sir.
Q. Do you remember whether you sold them during 1937 or '38?
A. I believe it was because they were in that type of
650 furnace business, before the corporation went into a general line of steam and water jobs, fired by oil.
Q. Do you remember where the Fox Furnace Company bought their limit switches and primary switches?
A. They bought them from us on a special design.
Q. All during that time?
A. They didn't work, so they dropped us.
Q. Who else did they buy from?

A. I don't know who they bought from. In other words, you are touching on a very touchy engineering history of our company, gentlemen, and I don't like to recall it, frankly.

Q. What did you sell Timken, and when?

A. We sold Timken a safety or a primary control, which is of special design, which controlled mechanically, the level of the fuel in their rotary burner. We sold that to Timken for a number of years.

Q. Is that that special type burner they put out?

A. Well, I wouldn't know. I know it was a rotary type burner.

Q. A small burner?

A. It had a pretty good capacity.

Q. Was it controlled through the fuel?

A. Well, I am no engineer, but it is my understanding it required a float mechanism in there as an additional safety factor.

651 Q. When was it you say you sold that to Timken?

A. We sold that to Timken for a number of years. I don't recollect exactly when we started.

Q. Do you remember what you sold to the York Oil Burner Company?

A. I don't know. I don't remember, sir.

Q. Do you know what you sold to Lynn Products?

A. Lynn Products, we sold a float safety trip device which, for gravity fed burners, takes the place of the primary control.

Q. Do you remember when it was you made those sales?

A. I don't remember. Lynn Products has been on our product list for quite a while, on our customers list.

Q. What did you sell Petroleum Heat and Power?

A. We sold Petroleum Heat and Power a few sets of primaries, limit switches and float valves in 1941.

Q. What did you sell Gar Wood Industries?

A. Gar Wood Industries, we have sold a number of miscellaneous controls, too.

Q. Do you manufacture, or have you manufactured what is known as a combustion fan and limit control?

A. Yes, sir.

Q. What use is made of that control? How was that used? What function does it perform?

A. Well, it performs the function of acting as a
652 high temperature limit, as one part of its functions, and the other is a control on the fan.

Q. What type furnace is that used on, what burner?

A. I imagine it can be used on any type furnace where you need mechanical draft.

Q. Is it used for a warm air furnace principally?

A. That is the usual type furnace that has mechanical drafts.

Q. How long have you been manufacturing and selling such a type of temperature control?

A. I don't know that I am very accurate on when we started, but it was along in 1933 that we started, and perhaps prior to that.

Q. Have you continued to manufacture and sell that control down to 1941?

A. Various designs, all incorporating the same features or use.

Q. At what price did you sell that control when you first brought it on the market?

A. I have gone back to 1936, and we started at a price that was sold at $6.70. That was on a two switch, or a combination switch in our 243 and 253 series. We identified these controls by series numbers, and that price went down, the last price that I have a record of, is $6.20 on that control. It was much too expensive, and in 1939,
653 the latter part of 1939, we redesigned the job and eventually came out with what is known as our CA-815, which is the combination fan and limit switch, and that we sold at $5.25 when we had it ready for the market.

654 Q. That was beginning in 1939?

A. That was beginning in—it did not go on the market until 1940.

Q. And you continued selling at that price during 1940 and 1941?

A. Yes, sir.

Q. Were you ever told or advised by the Minneapolis-Honeywell Regulator Company that your device was infringing a device which they made covered by a patent known as the Freeman patent?

A. Yes, sir.

Q. When were you first advised to that effect?

A. I believe there was some early correspondence in 1933. That did not involve the CA-815, but involved a control which we started to make for Fox Furnace. Then it did not work, and we took it off the market. We went into the general market at a later date, and I believe in 1938 we received information from the Minneapolis-Honey-

well Company that we were infringing the Freeman patent.

Q. Was that by word of mouth or did you have a letter?

A. A letter.

Q. A letter to that effect?

A. Yes, sir.

Q. Do you have that with you?

A. Yes, sir, a letter dated February 24, 1938.

655 Q. Have you produced this pile of correspondence pursuant to a subpoena served upon you by the Federal Trade Commission?

A. I have, sir.

Mr. Haycraft: Mark that for identification.

(The document referred to was marked Commission's Exhibit No. 92, for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit No. 92 for identification, which is a letter from the Minneapolis-Honeywell Regulator Company, signed by Harold Sweatt, and addressed to Mr. C. J. Swan, dated February 24, 1938, and ask you if that is the letter that you referred to?

(Handing document to the witness.)

A. Yes, sir.

Mr. Haycraft: I offer it in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Freeman: Let us take a look at it.

(Document handed to counsel.)

Mr. Freeman: In fact, you can put in anything that bears the signature of the Minneapolis-Honeywell Regulator Company. There is no question about that.

Trial Examiner Sheppard: It may be admitted as Commission's Exhibit No. 92.

656 (The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT NO. 92 was received in evidence.)

By Mr. Haycraft:

Q. Who is the Harold who signed this letter?

A. Harold Sweatt.

Q. Who is Mr. C. J. Swan?

A. Mr. C. J. Swan was our sales manager. He died in the early part of 1941.

Q. Did Mr. Swan bring this matter to your attention about that time?

A. Yes.

Q. And what happened as a result of that letter?

A. We started a patent investigation, and decided the patent was not any good. That was number one—

Trial Examiner Sheppard: (Interposing.) What patent do you refer to?

The Witness: The Freeman patent. And we so advised the Minneapolis-Honeywell Regulator Company; and there was correspondence in the file between our patent counsel arguing between themselves.

By Mr. Haycraft:

Q. Well, did there ever come a time when they submitted to you a license?

A. I believe they submitted a form of a license
657 agreement.

Q. A form of a license agreement?

A. Yes.

Q. Have you that there?

A. I believe that is it.

(Handing document to counsel.)

Mr. Haycraft: Mark this the next number.

(The document referred to was marked Commission's Exhibit No. 93, for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit No. 93 for identification, and ask you whether or not that is the license agreement, the form of which was submitted to you by the Minneapolis-Honeywell Regulator Company?

(Handing document to the witness.)

A. Yes, sir.

Q. What date was that submitted to you?

A. The only date that I have is a pencil memorandum, which is not my handwriting, but I believe it is Mr. Swan's, which indicates it was received on May 3, 1940.

Q. In the meantime, Mr. Hodges, had you had some correspondence with the officials of the Minneapolis-Honeywell Regulator Company with reference to this patent?

A. In the meantime, sir, what do you mean?

Q. Between 1938 and May, 1940?

658 A. Yes, sir.

Q. And had you also had some discussion from time to time with the officials of the Minneapolis-Honeywell Regulator Company with respect to the provisions of this proposed agreement, or the patent?

A. When I say, "Yes, sir", I mean that the Detroit Lubricator Company, our people in it, had conversations; not myself personally.

Mr. Haycraft: Mark that the next number.

(The document referred to was marked Commission's Exhibit No. 94, for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit No. 94, which purports to be an original letter from Mr. Harold Sweatt to Mr. C. J. Swan, under date of May 26, 1939, and ask you if that is a letter which your firm received?

(Handing exhibit to the witness.)

A. Yes, sir.

Mr. Haycraft: I offer that in evidence.

Mr. Freeman: No objection.

Trial Examiner Sheppard: It may be received; and also 93.

(The documents referred to heretofore marked for identification COMMISSION'S EXHIBITS NOS. 93, and 94, were received in evidence.)

659 Mr. Haycraft: Mark this the next number.

(The document referred to was marked Commission's Exhibit No. 95 for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit No. 95 for identification, which purports to be a carbon copy of a letter from your Mr. C. J. Swan to Mr. Harold Sweatt, dated June 14th, 1939, and purports to be a reply to Mr. Sweatt's letter of May 26, 1939, which has just been received in evidence, and ask you whether or not that carbon copy was taken from your files and you are satisfied that the original letter was sent to Mr. Sweatt?

A. I am, sir.

Mr. Haycraft: I offer that in evidence.

Mr. Freeman: No objection.

Trial Examiner Sheppard: It may be accepted as Commission's Exhibit No. 95.

(The document referred to heretofore marked for identification COMMISSION'S EXHIBIT NO. 95, was received in evidence.)

Mr. Haycraft: Mark this the next number.

(The document referred to was marked Commission's Exhibit No. 96, for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit No. 96 for
660 identification, which is an original letter from Mr. Sweatt to Mr. Swan under date of June 30, 1939, and ask if that was received by your firm?

(Handing document to the witness.)

A. Yes, sir.

Mr. Haycraft: I offer that in evidence.

Mr. Freeman: No objection.

Trial Examiner Sheppard: It may be received.

(The document referred to heretofore marked for identification COMMISSION'S EXHIBIT NO. 96, was received in evidence.)

Mr. Haycraft: Mark this the next number.

(The document referred to was marked Commission's Exhibit No. 97, for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit No. 97 for identification, which purports to be a carbon copy of a letter from Mr. Swan to Mr. W. L. Huff, of the Minneapolis-Honeywell Regulator Company, under date of June 23, 1939, and ask you whether or not this was taken from your files and you are satisfied that in the ordinary course of business the original was sent to Mr. Huff?

(Handing exhibit to the witness.)

A. I am.

Mr. Haycraft: I offer that in evidence.

661 Mr. Freeman: No objection.

Trial Examiner Sheppard: It may be accepted.

(The document referred to heretofore marked for identification COMMISSION'S EXHIBIT NO. 97, was received in evidence.)

By Mr. Haycraft:

Q. I notice in the upper right-hand corner it says: "Copy to A. K. Folds." Who is Mr. A. K. Folds?

A. Mr. A. K. Folds is our patent counsel, sir. You will find in that file his opinion at various times.

Mr. Freeman: With respect to the Freeman patent?

The Witness: With respect to the Freeman patent.

Mr. Haycraft: Mark this.

(The document referred to was marked Commission's Exhibit No. 98, for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit No. 98, which is an original letter from Mr. Huff to Mr. Swan under date of June 26, 1939, and ask you if that was received by your office?

(Handing document to the witness.)

A. Yes, sir.

Mr. Haycraft: I offer that in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Freeman: No.

662 Trial Examiner Sheppard: It may be accepted.

(The document referred to heretofore marked for identification COMMISSION'S EXHIBIT NO. 98, was received in evidence.)

By Mr. Haycraft:

Q. Did you ever attend any meetings in Chicago with Mr. Huff or Mr. Sweatt where you discussed this matter, in 1939 or early in 1940?

A. I believe I was present in Chicago—I know I was in Chicago and I believe I was present for a very short time with those gentlemen, but I don't remember specifically discussing the matter of the Freeman patent. That is, myself personally.

Mr. Haycraft: Mark this.

(The document referred to was marked Commission's Exhibit No. 99-A, 99-B and 99-C, for identification.)

By Mr. Haycraft:

Q. Referring to Commission's Exhibit No. 95, which is a carbon copy of a letter from Mr. Swan to Mr. Sweatt, dated June 14, 1939, it is stated, "You are correct, of course, that our New York people will not take out a license with a price maintenance clause therein. On the other hand we don't want to be an outsider or take any action that might 'mess up' the situation. Perhaps,

663 if we could get together, we might work out something that might satisfy everybody."

Who do you refer to as "our New York people"? (Handing exhibit to the witness.)

A. That was our New York patent counsel, Mr. C. J. Heilman, to whom we referred patent matters, in addition to our own counsel in our plant.

Q. And he is the one that advised you not to take out a license with a price maintenance clause, is that it?

A. They both told us that the patent was not valid, and that was the reason that we objected to the license.

Q. When this license was submitted to you, this form in May, 1940, Commission's Exhibit No. 93, in Paragraph 7 on page 5, reference is made to the "Prices, terms and conditions of sale set forth in a schedule to be known as price schedule to be issued from time to time from the licensor and made a part of this agreement."

I will ask you whether or not Commission's Exhibit No. 99-A, B and C for identification constitutes the price schedule attached to the license agreement, Commission's Exhibit No. 93?

(Handing document to the witness.)

A. There is a price schedule—

Q. (Interposing) Perhaps this will refresh your recollection?

664 A. Excuse me. This is a price schedule talking about the heat controls that came under the Freeman patent. Whether it is the exact price schedule referred to in that printed agreement, I don't know. I believe that it is, sir, but I am not absolutely certain.

Q. Did your Mr. Swan tell you that that is what it was at the time that he gave you the paper?

A. I believe that is what it is.

Mr. Haycraft: I offer the document in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Freeman: No objection. It is already in the printed record.

Trial Examiner Sheppard: All right, it may be accepted.

(The document referred to heretofore marked for identification COMMISSION'S EXHIBIT 99-A, 99-B and 99-C was received in evidence.)

Mr. Haycraft: I think I will ask that these be marked as one Exhibit, numbered with letters, because it is all fastened together.

(The document referred to was marked Commission's Exhibit No. 100-A, 100-B, 100-C and 100-D for identification.)

By Mr. Haycraft:

Q. Showing you Commission's Exhibit No. 100-A,
665 B, C and D, for identification; 100-A being a carbon copy of a letter from Mr. Swan to Mr. Huff, vice-

president of the Minneapolis-Honeywell Regulator Company, dated May 6, 1940; 100-B being an original letter from Mr. Huff to Mr. Swan under date of May 1, 1940;— that is 100-B and C— and 100-D being an original letter from Mr. Huff, dated May 5, 1940; and ask you if that sheaf of papers was taken from your files?

(Handing exhibit to the witness.)

A. Yes, sir.

Mr. Haycraft: I offer it in evidence.

Mr. Freeman: No objection.

Trial Examiner Sheppard: It may be accepted.

(The document referred to heretofore marked for identification COMMISSION'S EXHIBIT NO. 100-A, 100-B, 100-C and 100-D, was received in evidence.)

Mr. Haycraft: Mark these.

(The document referred to was marked Commission's Exhibit No. 101-A, 101-B and 101-C for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit No. 101-A, B and C, 101-A being an original letter from Mr. Huff to Mr. Swan, addressed to Mr. C. J. Swan of the Detroit Lubricator Company, and Mr. Ira E. McCabe of the Mercoid Corporation, dated May 7, 1940, 101-B, being a form of a letter referred to in 101-A; and 101-C, being a form of
666 a letter referred to in 101-A; and ask you whether or not you received this original letter and the attached forms?

(Handing document to the witness.)

A. Yes, sir; I did.

Mr. Haycraft: I offer it in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Freeman: No objection.

Trial Examiner Sheppard: Let Exhibit 101-A, B and C, be accepted.

(The document referred to heretofore marked for identification COMMISSION'S EXHIBIT 101-A, 101-B and 101-C, was received in evidence.)

667 Trial Examiner Sheppard: We will take a short recess.

(A short recess was taken.)

Trial Examiner Sheppard: All right, gentlemen, we will proceed.

All this is correspondence between you and the Respondent Company about that patent, isn't it?

Mr. Freeman: Between his Company and the Respondent.

The Witness: Between the Detroit Lubricator Company and Minneapolis-Honeywell.

Trial Examiner Sheppard: That is right.

Mr. Haycraft: Mark this Commission's Exhibit No. 102-A, B, C and D for identification.

(The document referred to was marked Commission's Exhibit No. 102-A, 102-B, 102-C and 102-D, for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit No. 102-A, B, C and D for identification, 102-A being a carbon copy of a letter from Mr. Swan to Mr. Huff, dated May 17, 1940, and 102-B and C, being an original letter from Mr. Huff to Mr. Swan, dated May 15, 1940, and 102-D, being a carbon copy of a letter from Mr. Swan to Mr. Huff, dated May 13, 1940, and ask you whether or not that correspondence came from your files? (Handing exhibit to the witness.)

A. It did, sir.

Mr. Haycraft: I offer it in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Freeman: No objection.

Trial Examiner Sheppard: Let the exhibit be accepted, Commission's Exhibit No. 102-A, B, C and D.

(The documents referred to, heretofore marked for identification COMMISSION'S EXHIBIT NO. 102-A, 102-B and 102-C and 102-D, were received in evidence.)

By Mr. Haycraft:

Q. Mr. Hodges, did Detroit Lubricator Company ever take out a license from the Minneapolis-Honeywell on the Freeman patent?

A. No, sir.

Q. Did you ever agree, at any time, to pay a royalty of 25 cents on each instrument sold by the Detroit Lubricator Company, that is known as your combination fan and limit control, which they claim to be an infringement of their Freeman patent?

A. I never agreed to anything.

Q. Do you know whether Mr. Swan ever did?

A. I don't believe so.

Q. To refresh your recollection on that, I hand you
669 this paper.

(Handing document to the witness.)

A. Yes, sir, I remember that letter.

Q. Does that refresh your recollection?

A. It does not change my previous statement, sir.

Q. Did Mr. Swan ever tell you he had agreed?

A. Not to my knowledge, sir. Of course, any statement Mr. Swan might have made at any time was subject to my final approval.

Q. I understand. That is the reason I asked if he ever told you he had made such an agreement and submitted it to you for your approval?

A. He never told me he made a final agreement that satisfied him, or any agreement at all. His discussions were simply talking about the subject, to see what could be arrived at.

Mr. Haycraft: That is all, Mr. Examiner.

Mr. Freeman: Might we have a recess for about four minutes?

Trial Examiner Sheppard: Yes, take a five minute recess.

Mr. Freeman: Before you leave, Mr. Examiner, I would like to ask Mr. Hodges if he has any objection, or whether Mr. Haycraft has any objection to our seeing the entire file from which these papers were taken, so we can
670 at least have the continuity.

Mr. Haycraft: I have no objection. It is up to the witness.

The Witness: I have no objection whatsoever.

Mr. Freeman: Thank you, sir.

Trial Examiner Sheppard: All right.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record. Then I am going to give you ten minutes. Take your time.

(A short recess was taken.)

Trial Examiner Sheppard: All right. On the record. You gentlemen can proceed whenever you get ready.

Mr. Freeman: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

671 *Cross-Examination by Mr. Freeman.*

Q. Mr. Hodges, you stated on direct examination by Mr. Haycraft on behalf of the Commission that your Company made a complete line of oil burner controls. That is correct, is it not?

A. Yes, sir.

Q. And that your company made and sold—

A. (Interposing.) May I qualify that first statement, "made and sold", Mr. Freeman?

Q. Go ahead.

A. You said that we made a complete line of controls. We either manufacture, or have manufactured for us, so that we sell a complete line of controls.

Q. And in the complete line of controls which you sell, do you include a temperature responsive, or rather, a temperature operated primary control?

A. Yes, sir.

Q. Is that temperature responsive primary control competitive with the master or primary control sold by the Perfex Company?

A. Yes, sir.

Q. And is it competitive to the primary control made and sold by the Respondent here, Minneapolis-Honeywell Regulator Company?

672 A. Yes, sir.

Q. And it is likewise competitive to the primary controls made and sold by the Mercoid Corporation?

A. Yes, sir.

Q. And is it competitive to the primary controls made and sold by the Penn Electric Switch Company?

A. Yes, sir.

Q. How about your room thermostats and limit controls? Do you make a complete line for use in connection with your primaries, and sold, or offered for sale to the oil burner trade generally?

A. Yes, sir.

Q. And are you likewise in the sale of these items, that is the primaries, the thermostats and limit controls, in competition with the Respondent here?

A. Yes, sir.

Q. And likewise are you in competition with respect to these three last controls that I have mentioned with Penn Electric Switch Company?

A. Yes, sir.

Q. And is the same true in connection with the Mercoid Corporation?

A. Yes, sir.

Q. And likewise with respect to Perfex of Milwaukee?

A. Yes, sir.

673 Q. And I believe that you said that your company is a rather old company, well established?

A. Yes, sir.

Q. You are a division or subsidiary of the American Radiator and Standard Sanitary Corporation?

A. That is correct.

Q. How long have you been a division or subsidiary of that corporation?

A. Since 1922.

Q. I don't recall whether Mr. Haycraft asked you, but how long have you been with the Detroit Lubricator Company?

A. I started with the Detroit Lubricator Company in 1919.

Q. So you are rather well versed in the products made and sold or which your company has made for it and sells generally?

A. I believe so.

Q. I take it that you are rather generally familiar with respect to domestic oil heating?

A. I think so. I am no engineer, however.

Q. No, but you know generally what your sales problems are and what your competition is?

A. Yes, sir.

Q. In the years, I take it, that you have considered Minneapolis-Honeywell one of your competitors?

674 A. It is.

Q. And since Penn Electric Switch came along in business in 1929 and 1930, and made oil burner controls, you considered the Penn Company as competition?

A. Yes, sir.

Trial Examiner Sheppard: Where are they located?

Mr. Freeman: The Penn Electric Switch Company of Goshen, Indiana.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. And I take it back in 1931 and '32 you considered the Mercoid Corporation competition?

A. Yes, sir.

Q. And when Perfex came on the market with limit controls, primary controls and thermostats in 1935, 1936 and 1937, you likewise considered that company as competition?

A. Yes, sir.

Q. And I take it that you consider the same companies, to-wit, Penn Electric Switch Company, Perfex, Mercoid and the Respondent here, as competition today?

A. Yes, sir.

Q. And I take it that your salesmen call generally upon the oil burner trade throughout the United States?

A. They do.

Q. Do you maintain any branch offices or distribut-
675 ing points throughout the country?

A. Yes, sir. We have branch offices in New York, Chicago, and we have a connection in Canada. On the west coast we have a large distributor or a large representative outfit who has handled our product; and have offices; and those are the four places I believe where we have offices.

Q. Mr. Haycraft asked you particularly with respect to the type of controls made by your Company, made or which you may have made for you, and which you sold and offered for sale to the oil burner trade generally. Do you have a catalogue which might illustrate the various controls which your company makes or has made for it and sold under the name of Detroit Lubricator Company to the oil burner trade generally?

A. Yes, sir; we have such a catalogue. This is it; and they are all sold under the name of "Genuine Detroit".

Q. Upon any products which are made for you, who guarantees the products when sold?

A. We do.

Q. And whose name appears on them?

A. Ours.

Q. And the name of "Genuine Detroit" appears upon such products?

A. Yes, sir.

Q. By the way, "Genuine Detroit" I note is quoted
676 in the catalogue. Is that a sort of an identifying characteristic employed by your firm?

A. That is, sir.

Q. That is, a sort of a trade mark or trade name?

A. That appears on all of our name plates and with our advertising, that insignia, if you want to call it that.

Q. In other words, that is the identifying characteristic of any product manufactured by the Detroit Lubricator Company?

A. That is its purpose; yes, sir.

Mr. Freeman: We ask that the catalogue just referred to by the Witness Hodges be marked for identification Respondent's Exhibit No. 3.

Trial Examiner Sheppard: It may be so marked.

(The document referred to was marked Respondent's Exhibit No. 3, for identification.)

By Mr. Freeman:

Q. May I ask whether or not the catalogue is one of general circulation, one carried by your salesmen and one delivered by your salesmen to customers and prospective customers?

A. That is right.

Trial Examiner Sheppard: What year is it; can you tell us that, Mr. Hodges?

The Witness: I don't know that I can tell you that. 677 This is gotten out in loose leaf form, and it is the most recent catalogue.

Trial Examiner Sheppard: That is enough.

The Witness: But from time to time it is added to as new things may be developed; so its origin may be several years ago, but it is constantly kept up to date.

By Mr. Freeman:

Q. I notice that particular catalogue which has been marked for identification Respondent's Exhibit No. 3 does not illustrate any limit controls or thermostats. Do you actually make and sell and advertise limit controls and thermostats for use in connection with domestic oil burners?

A. We do.

Q. I now hand you another large catalogue and ask you to turn to the loose leaf bulletins therein, and refer by bulletin number to the thermostats and limit controls which your company makes and offers for sale to the oil burner trade generally.

(Handing document to the witness.)

A. Well, we have here our bulletin number—do you want me to read the bulletin numbers?

Q. Yes, give the bulletin numbers, please.

A. Bulletin Number 193, covering "Genuine Detroit No.

411 Series Thermostat With or Without Heat Compensation."

678 In that same bulletin is the 456 Time Switch, which is a box.

That is also covered by Bulletin No. 98, the Time Switch.

Also No. 411-TD, which is the Night Turn Down. And also in here is the C. A.-411, which is the high voltage Heat Compensated Room Thermostat.

Q. Your company then makes and sells thermostats of both the low voltage type as well as the high voltage type?

A. That is right, sir.

679 Q. Will you go on and refer to the pages or bulletins that illustrate your limit controls for use in connection with domestic oil heating?

A. In each one of these cases, Mr. Freeman, I can't give you the bulletin numbers, but they are all in the book here. Some of these are not numbered, because some are instructions for installing and adjusting.

Q. Might you give us your type number, then?

A. Yes, sir. There is a 655 immersion limit, CA-655, the purpose of which is to limit the boiler water temperature.

Q. That is to be used with a hot water heating system?

A. Oil fired hot water heating system.

Q. Oil fired hot water heating system?

A. Yes.

Q. Proceed.

A. The No. CA-655-R, which is a reverse acting control, the same as the 655, but you turn the switch around so it operates in the other direction. In other words, it will operate and shut off on a decreasing temperature, rather than acting as a high limit.

Q. In other words, it is a low limit control, as distinguished from a high limit control?

A. Yes. Here is 653 emergent control, which is an instrument that fits into the picture from the standpoint
680 of domestic summer and winter hot water hook up on oil-fired equipment.

Here is a No. 251 clamp on control.

Q. By "clamp on", is that sometimes referred to as a surface contact switch?

A. That is, you clamp it on to whatever heating surface you want to control. It is not immersion. It is the CA-805 and 806 warm air limit controls. They are made for either line or low voltage. They are immersion switches, bi-metal operated, also as differential adjustment. Those are used

as a safety device, as I understand it, in preventing the developing of a dangerous temperature in the plenum chambers of automatic oil fired heating equipment.

Q. In other words, it is put in the bonnet, or above?

A. That is right.

Q. In the outside shell of the furnace?

A. Above the combustion chamber.

Q. Above the combustion chamber?

A. There is another one which performs the same function, but has another number, the CAA-807. We have also the CA-810 and 811 blower controls, which are bi-metal operated. The purpose of those is to control the operation of the blower on your mechanical draft oil fired heating unit.

Here is another control, No. 269 stack fan switch. That is in there to regulate the operation of an air circulating fan.

681 Q. Of a furnace?

A. Yes, sir. Then we have the CA-815 combination blower and limit controls, and that is an instrument where in one instance it acts as a high temperature limit switch, and the other operating switch in the same housing and operating from the same power element, controls the fan.

Q. Is that the one Minneapolis-Honeywell charged you with infringement of its Freeman Patent No. 1813732?

A. That is the control that was developed, put on the market and developed in 1940. Prior to that we made another one, but that was obsolete, because as I mentioned in earlier testimony, it was too expensive to build, and this is the one we developed, came out and sold, and when we brought it out, our price came down over what the previous ones had been sold for.

Q. What was the lowest price you ever sold one of these controls at, that is, the combination fan and limit control?

A. $5.25.

Q. What brought about this price of $5.25?

A. Competition.

Q. All companies?

A. Of general competition.

Q. Was Minneapolis-Honeywell a part of that competition?

A. I should think so, yes.

Q. Penn Electric Switch?

682 A. Yes.

Q. Perfex?

A. Yes, sir.
Q. Mercoid?
A. Yes, sir.
Q. Do you know what Mercoid's price was on its combination fan and limit control, that is, an instrument doing a comparable job?
A. I believe—
Trial Examiner Sheppard: (Interposing.) The question is in reference to the Penn control?
Mr. Freeman: Yes, the combination.
Trial Examiner Sheppard: All right.
The Witness: I believe that they sold the fan and limit switches at $4.75.

By Mr. Freeman:

Q. How come that you came down in price, as you have just testified, in order to meet competition, and you stopped at $5.25 and did not go down to meet Mercoid's competition of $4.75?
A. For two reasons. Mercoid never hurt us, and the second reason was, being in probably the highest labor market in the country, our margin at $5.25 was a very small margin.
Q. So that you could not have sold at $4.75, unless you wanted to sell the product at a loss?
683 A. That is right.
Q. And your price prior to coming down to $5.25, I understand, was around $6.00, and some cents?
A. The lowest one I can find a record of was $6.20.
Q. When Minneapolis-Honeywell first began negotiating with your company for the purpose of taking out a license, your price was higher than the $5.25 price, is that correct?
A. That is right.
Q. While we are on this Freeman patent, I was correct in my understanding that your Company refused to take a license because of the opinions of the patent counsel, that the Freeman patent was invalid?
A. That is right.
Q. You knew, did you not, that there was certain litigation pending against Mercoid, involving the issue of the validity of the Freeman patent?
A. We did.
Q. By the way, did your Company follow that litigation, that is, keep itself informed as to what was taking place in the Courts in Chicago?

Mr. Haycraft: That is objected to as irrelevant and immaterial. I have refrained from objecting, Mr. Examiner, but it seems to me we have gone pretty far afield. We better get back to the issues in the case.

Mr. Freeman: I think what his opinion was, what
684 they were doing, is important, if they were charged with infringement.

Mr. Haycraft: What has that to do with this case, whether this witness followed it or not?

Trial Examiner Sheppard: I do not know, Mr. Haycraft. I don't know myself. I am trying to follow, but I think I will let this examination proceed. It may serve some purpose to you gentlemen, or to the Commission, or somebody.

Mr. Haycraft: I understood counsel for the Respondent was very anxious about the size of the record. The Commission is too, and we would like to keep the record down within some reasonable scope, so I am objecting on that ground as well.

Trial Examiner Sheppard: We want to keep the record as low as we can, but if you want to pursue this line, I think I will let you.

By Mr. Freeman:

Q. Will you answer?

A. Will you repeat it, please?

Mr. Freeman: Will you read the question?

(The question above referred to was read by the Reporter.)

The Witness: Yes.

685 By Mr. Freeman:

Q. Did you ever have occasion to see or read the opinion of the United States Circuit Court of Appeals for the Seventh Circuit, in the case of Marcoid *vs.* Minneapolis-Honeywell, involving the Freeman Patent, No. 1813732?

Mr. Haycraft: That is objected to.

The Witness: I have read it.

Mr. Haycraft: (Continuing.) On the same ground. I wish to have a general objection.

Trial Examiner Sheppard: Yes, a general objection.

Mr. Haycraft: (Continuing.) To all this form of examination.

The Witness: I have read it.

By Mr. Freeman:

Q. Did the decision of the United States Circuit Court of Appeals coincide with the decision, or with the opinion of the invalidity rendered to your Company by its patent counsel?

Mr. Haycraft: That certainly is going very far afield, particularly in view of the fact that that decision is now on appeal to the United States Supreme Court, and it may possibly be that the Supreme Court will agree with the opinion of counsel for this witness.

Mr. Freeman: Will the Commission agree with the
686 opinion of the Supreme Court?

Mr. Haycraft: It does not seem to me we are going to get anywhere. What difference does it make whether this witness believes the opinion of the Circuit Court agreed with his counsel on it?

This case is not settled by a long ways.

Mr. Freeman: I can agree with that last statement, but Mr. Haycraft is the one who is bringing out the matters with respect to the Freeman patent, and if the Commission is going to check as to the Respondent's activities in connection with the Freeman patent, I think the way to get the information to the Commission is to give it all the information.

Trial Examiner Sheppard: I think so.

Mr. Freeman: And that is all I want to do.

Mr. Haycraft: This is not information, Mr. Examiner. This is merely an opinion upon an opinion.

Mr. Freeman: I am asking him whether or not his opinion, or their counsel's opinion of validity, which was the reason this witness expressed for his company not taking a license, including the price control,—and I am now asking him whether or not the decision of the Circuit Court of Appeals coincided with his counsel's opinion.

Mr. Haycraft: Isn't that an opinion upon an opinion? What difference does it make?

687 Mr. Freeman: I am asking for facts.

Mr. Haycraft: It is not a fact. It is an opinion.

Trial Examiner Sheppard: We will clear it up by letting the witness answer, and I will give it whatever value I think it is worth.

It just occurred to me, Mr. Freeman, while this gentleman was talking with Mr. Haycraft, that whatever the opinion of his attorney may have been, it may have preceded the decision of the Court in this case.

Mr. Freeman: That is correct.

Trial Examiner Sheppard: Yes.

Mr. Freeman: It did precede it, frankly. I do not think his attorneys would have rendered the same kind of opinion had they had the weight and authority of the opinion of the United States Court of Appeals.

Trial Examiner Sheppard: In view of that fact, and in view of the fact further that the Supreme Court may or may not, as the case may be, allow the matter to stay in status quo in reference to the decision of the Court of Appeals, or they may change it, but the opinion of this gentleman does not amount to anything.

Mr. Freeman: This gentleman has testified the reason his company refused to take a license under the Minneapolis-Honeywell Freeman patent was because their attorneys thought the patent was invalid.

688 Trial Examiner Sheppard: That is right.

Mr. Freeman: And obviously, if it was invalid, then you cannot hang a price control upon an invalid patent. On the other hand, if the patent was valid, a different picture might be brought about.

Trial Examiner Sheppard: That is true.

Mr. Freeman: And I just want to bring out clearly what this man's opinion was, whether or not it coincided with that which was later determined by the Seventh Circuit Court of Appeals. It is just one more question.

The Witness: It did not coincide.

Trial Examiner Sheppard: It did not?

The Witness: No.

Trial Examiner Sheppard: All right.

689 By Mr. Freeman:

Q. You speak about primary controls or safety devices for oil burners of a pot type, on direct examination by Mr. Haycraft. Your company makes quite a line of such controls, does it not?

A. We do.

Q. How long have you been making primaries for use in connection with the pot type burners?

A. Ten or twelve years.

Q. Is your Company a substantial factor in that field?

A. Yes, sir.

Q. And you sell that type of control, or at least a primary that is not temperature responsive, for use in connection with rotary burners, and if so, to what company?

A. We sell for use on a rotary burner, to the Timken Company.

Q. The control that you sell to Timken for use on its rotary burner is to prevent operation of the burner when an abnormal condition arises, is that correct?

A. That is right. It is a safety control.

Q. And prevents the abnormal flow of oil when something goes wrong?

A. Yes.

Q. And it is automatic in that respect?

A. Yes, sir.

690 Q. And likewise, the primary controls of the temperature responsive type made, sold and offered for sale by your company,—when I say made, made for you,—likewise operates to prevent an abnormal flow of oil when something abnormal happens to the burner system?

A. That is right, sir.

Q. In both cases they are safety devices?

A. Yes.

Q. And in both cases, I take it, limit controls are used upon the installations?

A. That is correct.

Q. Now, tell us whether or not the devices wherein you control the level of the oil that is for use in connection with the pot type burner, are actually in competition with the other type of primary controls?

Mr. Haycraft: That is objected to, Mr. Examiner, as irrelevant and immaterial, in view of the stipulation which we entered into, Commission's Exhibit No. 1, which restricts this proceeding to the other type of controls, controls that refer,—or control, the pressure and rotary type, and exclude the so-called pot type.

Mr. Gilpatric: Your Honor, the stipulation does not restrict the proceeding. It restricts except where otherwise indicated.

Mr. Haycraft: That was the reason we put that
691 language in there, and I have been very careful in my examination of witnesses and restricted it to that type of controls, controls used on the pressure type and the gun type, and excluding the pot type.

692 Mr. Freeman: You will recall, Mr. Haycraft, that there is a certain portion of that stipulation which you objected to as immaterial. We did not agree with your objection, and we certainly have a right to bring it out with this witness.

Trial Examiner Sheppard: If you want, I will let you go into that.

Mr. Haycraft: I am certainly entitled to object.

The Witness: I wonder if I could have that question repeated.

Trial Examiner Sheppard: Yes.

Mr. Freeman: Let me reframe it.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. The oil burners employing the oil level control device or primary which your company makes and offers for sale are in competition with the other types of burners; that is, oil burners equipped with different types of controls are competing with each other.

A. Vey definitely.

Q. Have you any idea from your personal contact with this line of business about how many of such pot type burner controls, that is, the primary controls for pot type burners, are sold annually in the United States?

Mr. Haycraft: I object to that, Mr. Examiner, for 693 the reason stated, that we are going into a subject matter that is beyond the testimony that I expect to take and am taking in this case.

Trial Examiner Sheppard: I understand. You may go into that if you care to.

Mr. Freeman: It is not very much longer.

Trial Examiner Sheppard: All right.

The Witness: That is, for automatic oil fired jobs?

By Mr. Freeman:

Q. That is right.

A. Well—

Q. (Interposing.) For domestic house heating.

A. I should say 200 to 250 thousand.

Q. And while you are at it, do you know about how many of the oil burners of the rotary or gun type are sold annually?

Trial Examiner Sheppard: That is, by all the companies?

Mr. Freeman: Yes.

Trial Examiner Sheppard: That would be an etsimate, Mr. Hodges. You may do the best you can and I will take it as an estimate, unless you have some definite figures on it.

The Witness: I have no definite figures. I know
694 it would be more than the figure I gave for this other type of equipment, but how much more I don't know.

Trial Examiner Sheppard: All right. Didn't we have some definite figures on that the other day? I may have something else in mind.

Mr. Gilpatric: I don't think we had them, no.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. Now, your catalogue lists both temperature responsive type of primary controls and the float valve type of primary control—

Mr. Haycraft: (Interposing.) The same objection.

By Mr. Freeman:

Q. (Continuing.) —and I now ask you whether or not both devices serve the same purpose, to comply with the underwriter's requirements to prevent an abnormal or hazardous discharge of unburned oil?

A. That is correct; they do.

Q. They both meet the underwriter's requirements?

A. Yes.

Q. And they both serve the purpose of preventing a hazardous condition occurring in a domestic oil heating plant?

A. That is correct.

Mr. Haycraft: Mr. Examiner, I think perhaps I at this point should point out the reason for my objection
695 on that. If you would rather hear me off the record, that is all right with me.

Trial Examiner Sheppard: I think it is a very good idea to have it on the record.

Mr. Haycraft: The evidence, so far as we have been able to obtain it as to the contracts that are involved in this case, or agreements, as some people call them, containing either the restrictive agreements, or the brackets under the Robinson-Patman Act, are all on the gun type or rotary type burners; that is, for devices used in connection with that type of burner. So that is the reason I haven't gone into the market or into the other phase of the industry; so that if we get into that now, you can see that it is going to be a matter which has no bearing upon the issues in this case.

If these agreements were entered into in connection with

the sale of temperature controls for this pot type burner, to the manufacturers using those, then that would be a matter that would be relevant and material; but inasmuch as it not, it is just fanning windmills, or putting up a straw man and knocking him down.

Mr. Gilpatric: I want to answer that point, as long as it has been raised at this time, by saying that the complaint charges the Minneapolis-Honeywell Regulator Company restricted competition, and we want to show the entire
696 competitive picture in the domestic oil heating field; whether or not the Respondent has used contract which Mr. Haycraft calls restrictive, or which have restrictive provisions as to certain types. That is the reason we are going into this at this time.

Trial Examiner Sheppard: Does the complaint limit the question to the point you contend for, Mr. Haycraft?

Mr. Haycraft: The complaint definitely limits it.

Mr. Gilpatric: No, it does not.

Mr. Freeman: One of the questions is whether we do restrict competition, or lessen competition, or do away with competition, in the language of the Act. This complaint in Paragraph 7 talks about us having prevented competition in the sale of automatic temperature controls for us in domestic heating plants. It does not say anything about the pot type, the rotary type, or the vaporizing type; but it covers all domestic heating plants.

Mr. Haycraft: The allegations in the complaint which I referred to, Mr. Freeman, are on pages 3 and 4.

Mr. Freeman: Take them in their entirety. Mr. Gilpatric just talked about one paragraph from the complaint; and you don't take that into consideration apparently.

Mr. Gilpatric: It is not a question of selecting
697 certain portions of the complaint.

Mr. Haycraft: I submit that Paragraph 7 cannot be any broader than Paragraphs 2 and 3, and cannot be interpreted any broader, where the Commission has deliberately and specifically in its complaint confined its allegations to a certain phase of an industry; and so it seems to me that it is only fair to assume that the Order will go to that same thing.

Mr. Gilpatric: We cannot rely on Mr. Haycraft's interpretation of the Commission's complaint and order. How can we?

Trial Examiner Sheppard: I think this, gentlemen, if Mr. Haycraft will definitely say on this record that he just

intends to ask the Commission for action upon those two points, it would relieve you there of going into any things beyond those two.

Mr. Haycraft: I am not going beyond Paragraphs 2 and 3.

Mr. Gilpatric: Can you bind the Commission on that?

Trial Examiner Sheppard: I think he can.

Mr. Gilpatric: This is the Commission's complaint, not his.

Mr. Freeman: He is only attorney for the Commission. If we can get a statement from the Commission
698 to that effect, that will be o. k.

Mr. Haycraft: All I can do is to bind myself and the chief counsel as to what we will urge upon the Commission. I have no way of binding the Commission myself.

Trial Examiner Sheppard: I understand that.

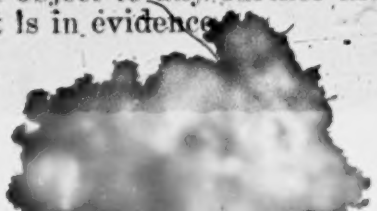
Mr. Haycraft: All I can say to counsel is this; this complaint is very specific in Paragraphs 2 and 3, and the other allegations in the Paragraphs with respect to the practices, and that paragraph 7 which he refers to, is necessarily narrowed to the allegations in Paragraphs 2 and 3.

Mr. Gilpatric: We sa that the competition in this business is not so narrowed; and for that reason we wanted to take in the entire field. To make the interpretation that Mr. Haycraft wants to make, is to make Minneapolis-Honeywell more of a dominating factor than it is if you use the whole picture. If we want to get at the real status of the Minneapolis-Honeywell Company, we have to look at the whole field.

Trial Examiner Sheppard: I am inclined to think, gentlemen, Mr. Haycraft is right about that, but inasmuch as there is a difference of opinion, I will let him answer the quesfion.

Mr. Gilpatric: I think in justice to our client we have to put our case in according to our lights.

699 Trial Examiner Sheppard: I will certainly let you go on as you desire.



Mr. Gilpatric: Unless the Commission wants to amend the complaint as to the meaning it gives to Paragraph 7.

Trial Examiner Sheppard: Proceed, gentlemen.

By Mr. Freeman:

Q. I notice in your catalogue, Respondent's Exhibit No. 3 for identification that you illustrate—

Mr. Haycraft: I object to any further interrogation on that exhibit until it is in evidence.

Trial Examiner Sheppard: Until it is what?

Mr. Haycraft: Until it is in evidence.

Mr. Freeman: We offer it in evidence, then.

Trial Examiner Sheppard: I meant to call your attention to that a while ago. That is Respondent's Exhibit No. 3, is it?

Mr. Freeman: Yes.

Trial Examiner Sheppard: Mr. Haycraft, do you have any objection to that?

Mr. Haycraft: No.

Trial Examiner Sheppard: Let it be accepted as Respondent's Exhibit No. 3.

(The document referred to heretofore marked for identification RESPONDENT'S EXHIBIT NO. 3 was received in evidence.)

700 Mr. Haycraft: I think probably I should object—

Mr. Freeman: Make the standard objection.

Mr. Haycraft: I do object to that portion of the exhibit which refers to the type of devices to be used on pot type burners, in order to be consistent with my position in that matter. I haven't seen the catalogue, but I assume from the question now being propounded that is what he is going to ask about.

Trial Examiner Sheppard: Do you want to look at it?

Mr. Haycraft: No, that is all right. I offer no objection to that portion of the exhibit which refers to the type of controls which can be used on gun type or rotary type, excluding the pot type. I do object to that portion which does refer to the other type of burners, which we consider not involved in this case.

Trial Examiner Sheppard: The record may show your objection.

Mr. Freeman: Your objection is going to go to all cross examination I am making with respect to that?

Mr. Haycraft: Yes, sir.

Mr. Freeman: Without necessarily being repeated each time.

Trial Examiner Sheppard: That is right.

701 By Mr. Freeman:

Q. Now, Mr. Hodges, I notice in your catalogue a device marked Type CRC-239, and that can be used as a control to make a manual safety control device into an automatic control, is that correct?

A. That is correct.

Q. And then you have an automatic burner operation, that is, an automatic safety device, which will operate automatically, without any human manipulation for bringing about a safe condition, should a hazardous condition arise?

A. That is correct.

Q. And that is designed, is it not, to convert it into an automatic oil burner control for domestic house heating?

A. That is correct.

Q. And there is a thermostat, I believe, also shown on that sheet?

A. Yes, sir.

Q. And that is for use with the primary there shown?

A. That is right.

Q. I note in your catalogue that the float valve type of primary safety control may be used up to 2½ gallons of fuel oil. That is correct, is it not, 2½ gallons of fuel oil an hour?

A. That is correct.

Q. About how large a residence will two and one-
702 half gallons of fuel oil an hour heat?

A. I should say about an eight room residence, depending on the size of the rooms, the cubical contents; but it would heat an average eight room house.

Q. And do a good job?

A. Yes, sir.

Mr. Haycraft: I object to that question and move to strike it, Mr. Examiner, as the witness has said that he was not an engineer. I think it does call for a scientific answer, and I move to strike it.

Trial Examiner Sheppard: You are asking him about his own knowledge?

Mr. Freeman: Yes.

By Mr. Freeman:

Q. I am asking, from your own knowledge in the use of these controls, as sold by your company, by your more than ten years' experience, whether or not you know the 2½ gallon capacity type, that is, burning 2½ gallons an hour, will heat an ordinary home of four, five or six rooms and do a good job?

A. Yes, sir.

Mr. Haycraft: The same objection for the reason that I previously stated, and no foundation for it.

Trial Examiner Sheppard: Note the objection and let the witness answer.

703 By Mr. Freeman:

Q. You know that from your personal knowledge?

A. Yes, sir.

Q. And I take it you have seen the devices in actual operation?

A. Yes.

Q. And you have been in homes heated by these devices?

A. Yes, sir.

Q. Many times?

A. Yes, sir.

Q. I don't know whether I asked you this question, so it may be repetition, but oil burners using the float valve type primary are in direct competition, are they not, with the other type of oil burners using primaries?

A. They are.

Q. And has that been true for the last several years?

A. Yes, sir.

Q. It has been true since 1935 and 1936?

A. Yes, sir.

Q. And true up to 1941?

A. Yes, sir.

Q. Your company is not now engaged in selling oil burner controls in any substantial volume, is it?

A. No, sir.

Q. And is that because of war restrictions?

704 A. War restrictions.

Q. And I take it that your company is likewise now engaged in the manufacture of items for the prosecution of the war effort?

A. We are.

Q. And that has been true since about 1942?

A. Since about the end of 1941.

Q. And when that started in 1941 the oil burner control end of your business immediately dwindled down?

A. That is correct.

Q. So all of your oil burner business now, whatever it may be, is for service or for other than civilian use?

A. That is correct.

Q. The thermostats and limit controls which you referred to a few minutes ago, are for use in connection with domestic oil heating?

A. That is correct.

Q. And do you sell or offer for sale the "Genuine Detroit" thermostats, limit controls and primaries of the temperature operated type for use in connection with either gun type burners or rotary type burners in complete sets?

A. We do, yes.

Q. Is there any reason for offering them in sets as distinguished from talking about these controls individually?

A. Yes, I think there is, particularly in connection
705 with the thermostat and the primary. As far as the three controls are concerned, there is a talking point, and that is, one responsibility. When you get down to the primary and the thermostat, it is my opinion that they go together, they are more or less designed together, they are tested together, and because the primary is the watch dog in the house to provide against an explosion or fire, and the operation of the thermostat can make or break the operation of the primary, I think that there is a very definite reason why those two controls should go together.

Q. And in connection with the service responsibility you mean the control makers' responsibility when the instruments get out in your home and my home and in the homes of the general public; is that correct?

A. That is right.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

Mr. Haycraft: I think the record should contain at this point my objection to the line of testimony just gone into with respect to the service and the workability of these various primary controls and thermostats. That is beyond the direct examination, and it goes to an issue about which
I haven't taken testimony, and have not examined this
706 witness on certainty; and it is improper cross examination and I move to strike it.

Trial Examiner Sheppard: Do you gentlemen insist upon going along that line?

Mr. Gilpatric: We are through with that. We certainly by our silence do not acquiesce in Mr. Haycraft's interpretation of what we have done.

Trial Examiner Sheppard: You mean you consider it important and a necessary part of your case?

Mr. Freeman: Yes.

Mr. Gilpatric: The issue raised by the complaint, and

our answer, together with the stipulation, contains certain facts bearing upon that.

Mr. Haycraft: I haven't made any mention of the stipulation in my remarks to the Examiner. I am putting my objection solely on the question of improper cross-examination. I did not enter into it at all on direct, and it is not proper cross-examination. Certainly it is an issue in this case, but there are a lot of issues in this case that I haven't examined this witness upon. For instance, the Robinson-Patman Act feature of this case. If you want to go into that, it would not be proper cross-examination. I move to strike the last two questions and answers with respect to the serviceability of primary controls and thermostats on the ground that it is not proper cross-
707 examination, and going into an issue not gone into on direct examination.

Mr. Gilpatric: Mr. Examiner, may I say in answer to that in the direct examination the products which this witness' company sold were gone into.

Furthermore, we are trying to achieve the very salutary objective we spoke of yesterday, to avoid calling back the president of this company, or coming back to Detroit for a further hearing. I think this is a tempest in a teapot, and I ask that the record stand as it is and given whatever weight it deserves.

Trial Examiner Sheppard: Yes.

Mr. Haycraft: The difficulty with that situation today and yesterday is that the Respondent is trying to put in their case before I have put in mine. That is exactly the situation here. I haven't put in any evidence on that issue. If that is going to be followed all the way around, we might as well tear up the stipulation.

Mr. Freeman: I just want to say in answer to that that my experience as to what constitutes proper cross-examination apparently differs from what Mr. Haycraft believes. When he asked this man with respect to those products on direct examination, and this man talked about primaries, thermostats and limit controls, we have a right to go into them. Mr. Haycraft asked whether or not they were used in connection with oil burners for domestic
708 heating, of the domestic heating type, and the witness said, "Yes." I think we are entitled to find out, therefore, how they work. I think it is proper cross-examination. Whether it happens that it may prove a point that Mr. Haycraft does not want us to make, or we may want to

make, or whether it disproves something which he wants to urge, is immaterial. We are entitled to know how they work. We can't throw a bunch of controls into the evidence and let Mr. Haycraft select what he wants.

Mr. Haycraft: We have stipulated on that point, and if this testimony is going in beyond the stipulation—

Mr. Freeman: We are about through on that score, anyway.

Mr. Haycraft: Let me say that you have some testimony in here which I think is improper, and I am moving to strike it.

Mr. Freeman: Do you mean improper or you don't like it?

Trial Examiner Sheppard: Well; gentlemen, I am going to let the record stay as it is. The Respondent believes it is an important part of their case. However, I do think that the examination of this gentleman with reference to the pot type, although you gentlemen seem to think it is a part of your case, it was not entered into on the direct examination.

709 Mr. Freeman: Oh, yes, it was. He asked with respect to what the Company made, and this witness testified to that. If Mr. Haycraft wanted to bring out the point that the answer was not responsive, he could have made that objection. You must remember that the objection that the answer is not responsive lies only in the mouth of examining counsel.

Mr. Haycraft said nothing, so when it goes in, it is a part of his case, whether he likes it or not, and we are entitled to cross-examine with reference to it.

Trial Examiner Sheppard: I don't remember anything about the pot type.

Mr. Haycraft: I did not say anything about that. He did go into his line of business, and said a lot of things about refrigeration, but I did not go into that.

Trial Examiner Sheppard: You did not follow it up.

Mr. Haycraft: I did not follow it up. I only directed my direct examination with reference to the things that I was talking about on direct. I can't prevent the witness from telling the nature of his business. It is only when I direct my direct examination to certain items, that I should be bound.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

710 Trial Examiner Sheppard: On the record.

By Mr. Freeman:

Q. Mr. Hodges, I understand that you produced this morning a file of correspondence, in response to a subpoena duces tecum issued to you by the Commission, and I have been given the liberty of looking through that file, with your consent, and I now ask you whether or not the letter of May 5th, 1939, that is, the carbon copy signed by Detroit Lubricator, its patent counsel, to Minneapolis-Honeywell Regulator Company, was mailed to the Minneapolis-Honeywell Regulator Company in the ordinary course of your Company's business?

A. I believe it was, sir.

Q. And the carbon copy that I have just handed you, which we will mark for identification Respondent's Exhibit No. 4-A and B, bears a notation thereon that a copy thereof was delivered to you?

A. I believe not, sir.

Q. I am sorry. That notation indicates that a copy was made or given to Mr. Swan?

A. That is right.

Q. You produced these from the files of your company?

A. That is correct.

Q. Kept in the ordinary course of the business of your company?

711 A. Yes.

Trial Examiner Sheppard: Do you want to offer that now?

Mr. Freeman: We offer in evidence, as Respondent's Exhibit No. 4-A and 4-B, the letter dated May 5, 1939, from Detroit Lubricator Company, its patent counsel, to Minneapolis-Honeywell Regulator Company, attention George H. Fisher, attorney, its patent counsel.

Trial Examiner Sheppard: All right. Any objection?

Mr. Haycraft: No objection, as long as the witness has no objection.

The Witness: I have no objection.

Trial Examiner Sheppard: Let it be accepted as Respondent's Exhibit No. 4-A and B.

(The document referred to was marked RESPONDENT'S EXHIBIT NO. 4-A and 4-B and received in evidence.)

By Mr. Freeman:

Q. I now hand you another letter dated May 15th, 1939, taken from the files which you have made available this

morning, from Detroit Lubricator Company, by its patent counsel, to C. G. Heylmun, patent counsel, American Radiator and Standard Sanitary Corporation, together with an attached copy of a letter from Minneapolis-Honey-
712 well Regulator Company, by its patent attorney, George H. Fisher, to Detroit Lubricator Company, dated May 11th, 1939; is that correct?

(Handing document to the witness.)

A. Yes, sir.

Mr. Freeman: We offer in evidence as Respondent's Exhibits 5-A and 5-B respectively, the letter dated May 15th, 1939 to C. G. Heylmun, and the letter of May 11th, 1939, to the Detroit Lubricator Company, by Minneapolis-Honeywell Company.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: No objection.

Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record. It may be admitted.

(The documents referred to marked RESPONDENT'S EXHIBITS 5-A and 5-B were received in evidence.)

By Mr. Freeman:

Q. Mr. Hodges, in your testimony this morning on direct examination, you stated it was the opinion of your patent counsel that the Freeman Patent was invalid, and you referred to some exchange of correspondence between your attorneys and Minneapolis-Honeywell Regulator
713 Company's attorney, and I now ask you whether or not the correspondence, Respondent's Exhibit 4-A and B and 5-A and B, refresh your recollection with respect to the statement that you made as to the invalidity of the Freeman patent.

A. Yes, sir.

Q. You mentioned a price of $6.20, at which you sold the combination fan and limit control, and I now call your attention to a notation made on a letter, and will ask you to state if that refreshes your recollection as to the price at which you sold combination fan and limit controls?

A. This refreshes my recollection. In checking through the work sheets, and inter-company work sheets at the plant, that is confirmed.

Q. So that you know definitely in 1938 or early 1939, you had a price of $6.20?

A. That is correct.

Trial Examiner Sheppard: Does that make any change in our record?

Mr. Freeman: No.

Trial Examiner Sheppard: I did not think so. That was his original testimony, isn't that right?

Mr. Haycraft: Yes.

By Mr. Freeman:

Q. I now call your attention to Commission's Exhibit No. 97 and I read from the letter:

714 "Our attorneys, both those here and Mr. Heylmun in New York, tell us that they are convinced that the Freeman patent will not stand up in Court."

Do you recall having received such information as to the invalidity of the Freeman patent from your local attorneys, as well as your New York counsel?

A. Yes, sir.

Q. Was that the reason that your company refused to enter into a license agreement with Minneapolis-Honeywell, that is, one of its license agreements in accordance with—

Trial Examiner Sheppard: (Interposing) 93.

By Mr. Freeman:

Q. (Continuing) Exhibit No. 93?

A. Yes, sir.

Mr. Freeman: That is all.

Trial Examiner Sheppard: Anything else?

Mr. Haycraft: Yes.

Redirect Examination by Mr. Haycraft.

Q. You testified in respect to these other items, other types of burners, for which you made temperature controls. Can you estimate as to the percentage of the sales of temperature controls that were used on pot type burners, as distinguished from the rotary and gun type?

A. That is a question. Can I estimate?

715 Q. Yes.

Trial Examiner Sheppard: In other words, was it a small percentage or large percentage or what? Was it something substantial? I mean, in comparison?

The Witness: Well, it was a substantial part of those sales.

By Mr. Haycraft:

Q. Was it a third or a fourth?

A. I should say it was better than a third.

Q. Better than a third?

A. Yes, sir.

Q. Would that be true all during the year 1937, '38 and '39, 1940 and '41?

A. Yes, sir.

Q. What did—or did it vary during that time?

A. If anything, it was increasing.

Q. As time went on?

A. Yes.

Q. Not so much in the earlier years?

A. No.

Q. What percentage of your total business, I mean, what is the temperature control? Is it a large or substantial portion of the business, or is it a minor part of your business?

A. You are talking in a normal year, sir?

716 Q. Yes, 1937 to 1941.

A. I should say it was between 25 and 30 per cent of our total business.

Q. What percentage, then, would you say, of the time of your salesmen that are calling on the trade, would be put in on calling on oil burner manufacturers or jobbers of oil burners?

A. My guess would be about the same percentage, sir. I wouldn't know.

Q. You gave an estimate of rather substantial quantities of pot type burners, as well as the gun type and rotary type burners and pressure type, compared with your total sales. You are not much of a factor in the industry, are you, in either industry, the pot type or the other type?

A. Oh, I believe we are.

Q. You testified here as to your volume of sales in 1938 and 1939, 1937, '38 and '39, as being around, or between twenty and thirty thousand thermostats, and one or two thousand to thirteen thousand limit switches, and fourteen to thirty thousand of other operating switches. Do you think that is a substantial portion of 250,000 or 500,000 units?

A. No, I don't think that that is.

Q. How do you, then, reconcile your estimate as being a substantial factor in the industry?

A. Well, we were a substantial factor in the indus-
717 try in 1941. In other words, picking out those three years, we got the redesign of our products, which I mentioned in early testimony, straightened out, and we were going to town. We were an increasing factor. Take our 1941 figures, and it would be an entirely different matter from that.

Q. Would that be particularly in the pot type burner?

A. In both fields.

Q. I say, did you make greater increases in the pot type, temperature controls for pot type burners than rotary and gun type?

A. I think the reverse was true. We made greater increases in the gun type business.

Q. Then your testimony is that during the year 1940 and 1941 you are much more of a factor than you were in 1937, 1938 and 1939?

A. That is right, sir.

Q. Did you know anything about the total sales of rotary and gun type burners, in 1937, 1938 and 1939?

A. In what years?

Q. 1937, '38 and '39.

A. I don't know.

Q. Well, who, in 1937, 1938 and 1939, was the principal manufacturer of thermostats, limit switches and primary switches for use on gun type and rotary type burners?

A. Automatic Products Corporation.

718 Q. Automatic Products Corporation?

A. Yes.

Q. I am talking now about for use on oil burners.

A. Maybe I misunderstood your question, sir.

Q. I said, what manufacturer of temperature controls was the principal factor, the largest manufacturer of thermostats, limit controls and primary controls for sale to oil burner manufacturers for domestic use, of the gun type or rotary type burner?

A. Why, Minneapolis-Honeywell was.

Q. There isn't any question about that?

A. No, sir.

Q. And who, in your opinion, was the second largest manufacturer?

A. I should say the Perfex Manufacturing Company and Penn Electric Switch Company.

Q. During 1937, 1938 and '39?

A. Yes, sir.

Q. And who was next?

A. I wouldn't know.

Q. During those years, do you think you sold more than Mercoid?

A. I think we sold more than Mercoid in 1939, or started in 1939. We passed them, I think.

Q. In 1937 and 1938, they may have been ahead of you?

719 A. We weren't right, from a design standpoint. Our product was not right.

Q. Do you have any opinion as to the proportion of the industry that the Minneapolis-Honeywell sold during those years 1937, 1938 and 1939?

A. I have no opinion, sir.

Mr. Haycraft: That is all.

Trial Examiner Sheppard: Anything else?

Mr. Freeman: Yes.

Recross Examination by Mr. Freeman.

Q. Mr. Hodges, you testified along about the end of 1939 and the beginning of 1940, you began going to town. That is correct, is it not?

A. Yes, sir.

Q. When you say "began going to town", does that have to do with thermostatic, primaries and limit controls for domestic oil burners of the rotary and gun type?

A. Yes, sir.

Q. And has Minneapolis-Honeywell in any way, in the conduct of its business, interfered with your going to town?

Mr. Haycraft: I object to that, Mr. Examiner.

Trial Examiner Sheppard: I think that is a question the Commission has to answer.

Mr. Haycraft: An opinion, pure and simple.

720 Trial Examiner Sheppard: I sustain the objection.

By Mr. Freeman:

Q. Do you know of any facts which in any way deterred your Company from going to town in the sale of automatic temperature controls for use in connection with gun type and rotary type burners, from 1939 on?

Mr. Haycraft: That is objected to for the same reason.
Mr. Freeman: I am asking for facts now.
Trial Examiner Sheppard: I will let you answer that one.
The Witness: No, sir.

By Mr. Freeman:
Q. And your business steadily increased from 1939 on up?
A. Through 1940.
Q. Is that correct?
A. Yes, sir.
Q. Was your 1941 business better than your 1939 business?
A. Yes, sir.
Q. Substantially?
A. Yes, sir.
Q. And in the sale of the controls that we are now talking about?
A. Yes.
721 Q. Mr. Hodges, when you were referring to your catalogue—
Mr. Haycraft: (Interposing) That catalogue is not in evidence. All that testimony will not look very illuminating.

By Mr. Freeman:
Q. I am going to ask you, Mr. Hodges, whether or not your company makes a stack control or stack primary safety device that it sells, or offers one for sale?
A. We offer one for sale.
Q. Will you refer to it by type number?
A. CA-701. I don't remember the other one. One is constant ignition and the other intermittent ignition. I know we have two.
Q. Will you look at your catalogue in order to refresh your memory?
A. Yes, it is the next number, 702.
Trial Examiner Sheppard: All right.

By Mr. Freeman:
Q. And does that primary control, sold by your company, that is, No. 701 and 702, serve to control the cycle of operation of the oil burner, so as to start and stop it when the heat is needed or no longer needed, as may be, governed by the thermostat, and to prevent a hazardous

condition from occurring when there is failure of combustion?

A. Yes, sir.

722 Mr. Freeman: That is all.

Trial Examiner Sheppard: Anything else, Mr. Haycraft?

Mr. Haycraft: I haven't anything further.

Trial Examiner Sheppard: All right. Thank you, Mr. Hodges.

Mr. Haycraft: I would like to ask Mr. Hodges this question with respect to the correspondence which he produced at the request of the Federal Trade Commission on the subpoena duces tecum.

By Mr. Haycraft:

Q. Do you wish the originals back, or will you be satisfied with photostatic copies of the originals?

Mr. Freeman: Why not give him the originals?

Mr. Haycraft: That is for the witness to decide, and what their attitude is, I don't know.

The Witness: We much prefer to have our originals, the original correspondence back.

By Mr. Haycraft:

Q. And have the photostatic copies substituted?

A. Yes, sir.

Mr. Haycraft: Mr. Examiner, I request that that be done, and if possible I understand the provision will be made for that.

Trial Examiner Sheppard: Yes, that can be done.

723 Mr. Hodges, we will see that you get your originals.

The Witness: O. K., sir.

(Witness excused.)

Trial Examiner Sheppard: Is there anything else?

Mr. Haycraft: I haven't anything further at this hearing, Mr. Examiner, and request that an adjournment be taken to reconvene in Cleveland on the morning of September 14th.

Trial Examiner Sheppard: All right, gentlemen. Mr. Haycraft says that is all he has to offer at this hearing, so I am going to adjourn the hearing at Detroit to reconvene in the city of Cleveland on the morning of the 14th of September, in a room which you will have notice of from me later.

(Whereupon, at 12:30 o'clock p. m. of Tuesday, August 24, 1943, the hearing in the above-entitled matter was adjourned.)

724

Room 432,
Federal Building,
Cleveland, Ohio.
Tuesday, September 14, 1943.

Met, pursuant to adjournment at 10:00 o'clock a. m. E. W. T.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Esq., Attorney for the Federal Trade Commission.

Cravath, de Gersdorff, Swaine & Wood, by R. L. Gilpatric, Esq., and B. R. Shute, Esq., 15 Broad Street, New York, New York, and

Bair & Freeman, by Will Freeman, Esq., 135 South LaSalle Street, Chicago, Illinois, appeared for the Respondent.

725

Proceedings.

Trial Examiner Sheppard: All right, gentlemen, come to order. Let's proceed. Mr. Reporter, you can convene this hearing in the Minneapolis-Honeywell Regulator Company, Docket 4920, ordered by the Examiner to convene in the City of Cleveland, Ohio, this, the 14th day of September, 1943, at ten o'clock in the morning.

Let the record show the appearances in this case, Mr. Haycraft, for the Commission, and the following firms representatives of the Respondent, Bair and Freeman, 135 South LaSalle Street, Chicago, Illinois, by Will Freeman, and the firm of Cravath, de Gersdorff, Swaine & Wood, 15 Broad Street, New York City, for the Respondent. Now off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record. All right, Mr. Reporter, this gentleman is Mr. J. L. O'Brien, General Manager of the Cleveland Steel Products Corporation, 7306 Madison Avenue, Cleveland, Ohio. Is that right, Mr. O'Brien?

The Witness: Correct.

Trial Examiner Sheppard: All right, Mr. O'Brien, will you stand and be sworn.

726 J. L. O'BRIEN was thereupon called as a witness for the Commission and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Haycraft.

Q. How long have you been General Manager of the Cleveland Steel Products Corporation?

A. Since 1931, that is General Manager of the Heating Division.

Q. Known as The Toridheet Division?

A. Toridheet Division, that's right.

Q. 1931?

A. That's right.

Q. That's as long as you had been with the firm or had you been with the firm in some other capacity?

A. No, I came with the firm at that time.

Q. At that time was the Cleveland Steel Products Corporation engaged in the manufacture of oil burners?

A. They were.

Q. And did they use or utilize in connection with the oil burner automatic temperature controls?

A. We did.

Q. What type of oil burner did they manufacture at that time?

A. Rotary wall flame.

727 Q. And where did they obtain their automatic temperature controls that they installed on the oil burner?

Mr. Freeman: What time are you speaking of?

By Mr. Haycraft:

Q. 1931.

A. I believe we used nothing but Minneapolis at that time, I think there was no other suitable control on the market for rotary wall flame burner at that time.

Q. Now during the succeeding years did your bring out what is known as a gun or pressure type of oil burner?

A. Yes, we did.

Q. When was it that you did that?

A. I believe 1935.

Q. What is the difference between the rotary type and the gun or pressure type of oil burner?

Trial Examiner Sheppard: Go into that a little bit. I want to get a good idea of that.

By Mr. Haycraft:

Q. Just give us a general idea?

A. Well the rotary wall flame type burner sprays the oil across the hearth and burns at the wall of the heater.

Q. In a circular flame?

A. Circular or rectangular, it doesn't matter, it follows the contour of the heating plant. You build a hearth to the contour of the heater and your flame follows the
728 contour of your hearth. There is no flame from the head of the burner at all. The oil is thrown across the hearth and is gasified to some extent, across the hearth and burns in a gaseous flame.

Q. How is it thrown, by the rotary motion?

A. It's thrown by centrifugal force from what we call distributor tubes. The oil is delivered up through a hollow shaft and thrown out from a—well a lawn sprayer, just the same principle as you see one of these lawn sprayers, it's the same identical thing.

Q. Now then explain how the gun or pressure type operates?

A. Well the pressure type, the gun type burner operates by delivering the oil under pressure through a fine atomizing nozzle which breaks the oil down to a fine spray or mist but takes fire right at the nozzle. It burns in suspension right from the nozzle. In other words, you could set a gun burner right up on this table and burn it right out in the open here because the oil is broken down under pressure and sprayed out through this very fine orifice, so that it's just a fog or a mist that we use there and it lights or ignites right off the nozzle.

Q. How do you get—I mean, just explain how the burner then functions inside the furnace; is the burner built inside the furnace or is it outside?

A. You build a combustion chamber inside the
729 furnace but not to the wall. You build a combustion chamber for the size fire that you're going to have. If you have a one gallon nozzle we'll say, you have a fire-pot of approximately a foot square or twelve or fourteen inches in diameter, depending on whether you're building it round or square, that doesn't make any great difference. Some people do it one way and some another, some use rotund, pear-shaped combustion chambers. There is a big difference of opinion as to what is the right type.

Q. The nozzle end of the burner then is inside the furnace?

A. The nozzle end projects just through into the furnace just at the head of the opening of this built-up combustion chamber. In other words, the nozzle is almost flush with the front face of the combustion chamber.

Q. What are the important parts of an oil burner that you use, built up, what are the important parts that go into the making of an oil burner?

Mr. Freeman: What oil burner are you talking about, gun type or rotary?

Mr. Haycraft: I'm trying to get both types.

Mr. Freeman: Let's get one at a time.

By Mr. Haycraft:

Q. Take the rotary type first. Do you have a motor?

A. Yes.

Q. What else do you have besides a motor? You
730 have a motor and what else? I'm talking about the rotary type?

A. Well the rotary type burner—we'll start back at the tank. You have a constant level valve at the tank, the purpose of which is to maintain a uniform pressure to the burner, regardless of the depth of oil in the tank. Now that oil is fed by gravity to the burner. Now the burner, this centrifugal head we're talking about is driven by a small motor.

Q. Is that usually right under the centrifugal head?

A. Yes, it's right under. Now the oil is regulated to the burner through oil valves, solenoid oil valves. There's a pair of solenoid oil valves in series that when the burner or the thermostat calls for heat, it energizes the oil valves and the motor simultaneously. The oil valves open up, allow the oil to be delivered to the motor and the motor picks it up, picks it up and delivers it out by centrifugal force.

Q. Then what function does the primary control and the limit control have? You have described what the thermostat did, the thermostat turns it on. Now what do the other two controls do?

A. Well the thermostat energizes the starting relay. You're talking now about the rotary burner only, are you?

Q. Yes, that's what we're talking about now.

A. With the rotary burner the half, we have a pre-
731 ignition period. No, it's not a pre-ignition period, that's out now, isn't it? When the thermostat calls for heat, it closes the No. 1 relay which energizes the

transformer, the motor and the oil valves. That gives you your electric ignition and starts up the motor and delivers oil to the burner. Now that's timed for about a minute and a half. At the end of that time there's a heater or a warp switch in the circuit which will cut out the circuit unless, then you would shut down normally if you didn't get fire, you'd shut down.

Q. That would be a change of thermostat temperature in the thermostat to control that?

A. Yes. There's a bimetallic element which operates under the heat in the stack that turns over the second relay, the hold relay. Now as you get heat in the stack, so that that is turned over and the No. 2 relay or the hold relay energized before your warp switch cuts you out, then you stay in a running position. That's a very bad description for anybody that's been as long in the business as I have, but do I make it clear to you at all?

Q. Then the switch that does that, what do you call that? You said the relay, is the Minneapolis-Honeywell known as a protecto-relay?

A. Yes.

Q. Where then does the limit control come in?

732 A. Well the limit control is right in the line, in the main line itself. The limit control functions quite independently of the burner in itself, I mean of the operating control in its regular function. The limit control operates to cut off the burner when the temperature limits, either pressure or hot water or hot air, whatever it may be, when the pressure limit, temperature limit, gets beyond a certain point or you stop at a certain point, it cuts your circuit completely, that is right in your main line.

Q. In the line electrically?

A. Yes.

Q. Now what is the function of the relay? I mean, the primary control in the gun type burner?

A. Precisely the same thing except that you don't have the timing for cutting off the spark. In the gun burner you operate with a constant spark.

Q. Or constant ignition?

A. Constant ignition. When the burner is turned on your spark comes on and it stays on, it's right in the line and stays on until the burner is shut down.

Q. Well now then in the rotary type you have what they call intermittent ignition, do you not?

A. Yes, intermittent ignition.

Q. Or what is the recycling device we have had mentioned here, what does that do?

733 A. Well the recycling device, recycles the burner, if it fails; for instance, if you had failure of current that would shut the burner down, a non-recycling burner would shut down and stay down, a recycling burner, when the current came back on, would go back through its cycle.

Q. And start up again?

A. And start up again, it would recycle itself.

Q. Is that used principally in the rotary type, that recycling device?

A. No, no, it's used in both.

Q. Well is there the necessity for it in the gun type that there is in the rotary type?

A. Well—

Q. If we have constant ignition?

A. Well seeing the necessity—I don't know what you mean by necessity.

Q. By that, in the rotary type you have intermittent ignition and in the gun type constant ignition?

A. Yes there's a necessity for intermittent ignition with the rotary type burner that doesn't exist with the pressure type burner. There's one particular reason why you have to have intermittent ignition with a rotary and that's radio interference. If we could get away from radio interference with a rotary burner, there'd be no more reason for eliminating it; I mean, for using the

734 intermittent ignition. It might be sometimes a little more difficult to hold your flame just as you want to, but it wouldn't be an objectionable thing. It's radio interference that makes it necessity.

Q. What does radio interference do to it?

A. Well radio interference just makes it impossible to run a radio when your burner is on in many cases. You see the way you build in the rotary burner, it's almost impossible to shield out the interference.

Q. Now when you came out with your gun type or pressure type burner, what temperature controls did you use on it?

A. When we first—

Q. Brought it out?

A. Built a gun burner.

Q. Did you use all three, that is the thermostat, limit control, and primary control of the Mercoid?

A. Well generally yes, I think, however, that we probably used very few of some of their limit controls. For instance, I think we have used practically no warm limit controls of Mercoid and I think probably very few hot water, I think we used their steam limit control quite regularly.

Q. Where did you get the other limit controls?

A. Minneapolis mostly. We have also used other limit controls. We bought some from Spencer and bought
735 some one time from Bishop Babcock here.

Q. On the rotary type when you were using Minneapolis controls, did you use their limit controls exclusively on that or did you use other limit controls?

A. No, I wouldn't say that we ever used anybody's limit controls exclusively.

Q. They can be used interchangeably, can they?

A. Yes. Limit controls can be used, a limit control, it's just a line switch, that's all, just makes and breaks the line.

Q. Well now how long did you use the Mercoid switches or temperature controls on your gun type burner? That is that you manufactured yourself?

A. How long did we use it?

Q. Well first I'll ask you this question, when you came out with the gun type burner and used Mercoid controls, did that mean that you used them when you received an order for a burner equipped with controls, or were there times that if a dealer asked for Minneapolis-Honeywell control on a burner, did you put it on?

A. Oh yes.

Q. Well did you say you standardized on the Mercoid burner, on the gun type burner, in 1935?

A. Well yes, if you take to mean standardizing, when I'd say that we used a particular type of control as
736 the control that would go with a burner if no type control was asked for, that is standardizing.

Q. Well in 1935 if you sold a gun type burner and the customer didn't designate any particular control you'd put Mercoid controls on?

A. That's right.

Q. And you sold the rotary type burner if no one designated any particular type of control, you'd put Minneapolis-Honeywell control on?

A. That's right.

Q. Now how long did that situation continue in your organization, how long did you follow that policy?

A. We've always followed that policy.

Q. Well today—take it year by year in 1936?

A. You're speaking of a policy now?

Q. Well 1936, if a customer—and by the way, to whom did you sell these oil burners, what class of trade?

A. Well we've sold to our own distribution, our own dealers, and distributors, and we've also, for a good many years, had one or more manufacturers' accounts, burners, I mean companies for whom we built burners to be sold under their trade names.

Q. Well now unless I indicate otherwise, I want my questions to refer to your own line, the Toridheet line put out by the Cleveland Steel Products, and we'll take up
737 the others later. During 1936, did you continue during that year to supply Mercoid controls when a customer did not indicate what type of control he wanted?

A. Yes we did.

Q. And you continued, that is on the gun type burner?

A. That's right.

Q. But if he had bought a rotary type burner you'd equip it with Minneapolis-Honeywell?

A. We wouldn't sell it with anything else, even if we had it. That's one place we make an exception, we would not agree to sell a rotary burner to be used with any control except Minneapolis.

Q. That was in 1936?

A. That was always true.

Q. Was that true in 1941 and '42?

A. That was true up to probably in 1941 Mercoid came out with a rotary control that I think we might have agreed to, things kind of got in such shape that we didn't go on to do much testing with it, but from what we did test, I think it's a satisfactory control, but up to that I, you might say as long as we were doing business on the rotary, we would not permit, we would not sell the rotary burner with any other control than the Minneapolis-Honeywell.

Q. Have you produced at this hearing, under subpoena, duces tecum correspondence you had with Minne-
738 apolis and Mercoid, with respect to the oil burnings, the use of temperature controls of various makes?

A. Yes I have done the best I could to interpret what you wanted and I have taken out of our files, I have the

whole file available, but I have taken and combed out of it what I felt were pertinent matters. I have them all here.

Mr. Haycraft: May we have a five-minute recess?

Trial Examiner Sheppard: We will have a ten-minute recess.

(Whereupon a short recess was taken.)

Mr. Haycraft: I will ask the Reporter to mark these letters as Commission's Exhibits.

(The papers referred to were marked Commission's Exhibits 103-A, 103-B, 103-C, 103-D, 103-E, 104, 105, 106, 107-A, 107-B, 107-C, 108, 109-A, 109-B, 110-A, 110-B, 110-C, 110-D, 110-E, 111, 112-A, 112-B, 113, 114-A, 114-B, 115, 116-A, 116-B, 117, 118-A, 118-B, all for identification.)

Trial Examiner Sheppard: All right gentlemen, you may proceed.

By Mr. Haycraft:

Q. I will show you Commission's Exhibit 17, which is apparently a letter from—a carbon copy of a letter from Mr. Lockrae of the Minneapolis-Honeywell Regulator Company to the Cleveland Steel Products Company, 739 Attention Mr. J. L. O'Brien, dated September 16, 1936, and ask you if you received the original of that letter.

A. Why I think I recall that letter.

Q. Now then, I show you Commission's Exhibit 18, and also 103-D and 103-E, for identification, and ask you if that 103-D and E is the same letter as Exhibit 18, and if you received that original letter from the Minneapolis-Honeywell, dated October 19, 1936.

A. You are asking me?

Q. That is the same letter?

A. You are asking if this is the same letter?

Q. Yes.

A. I would say yes.

Q. And you received it?

A. Yes.

Q. And showing you Commission's Exhibit 19, apparently two sheets, and Commission's Exhibit 103-A and 103-B, I will ask you if those two are the same, 103-A and B for identification.

A. Yes, that is the same letter.

Q. And you received that?

A. Yes, sir.

Q. That is, you mailed that to Minneapolis?
A. That's right.
Q. That is your letter?
740 A. My letter to Minneapolis.
Q. Now in this letter, Commission's Exhibit 18, it states in the third paragraph:

"The last time I saw you we talked briefly with reference to the Mercoid control situation, and you advised you were still using a balance of the order which you placed that year, and which, if I remember correctly, represented a balance of between 500 and 1000 sets of controls.

Inasmuch as we have shipped you about 1200 sets thus far, and the gun type burner is running three to one against the rotary, this would mean you have used between three and four thousand gun type controls, and we have not enjoyed this business as we were led to believe."

Do you have any recollection of discussing with Mr. Lockrae prior to October, 1936 the matter of the quantity of Mercoid controls that you were expecting to use that year?

A. No, I have no definite recollection of discussing Mercoid controls with him.

Q. Well did you discuss with him the question whether you were going to give him any of the gun type control business during 1936, the Minneapolis-Honeywell?

A. Oh yes.

Q. What was said on that point with respect to that?

741 A. Well there were many conversations on that subject. Mr. Lockrae called on us quite frequently, as did other members of the Minneapolis-Honeywell Company, and of course the subject was always "Can't we sell you our controls?" Always trying to sell us their controls.

Q. Well what, if anything, did you say with respect to whether you were going to give him any business on the gun type which you at that time, prior to that time, you had been equipping with Mercoid controls?

A. Well I suppose we always kidded them along a little bit; made them think we were going to give them some business, whether we were or not.

Q. Well did you increase your use of Minneapolis-Honeywell controls on the gun type burner during 1936 over 1935?

A. No, I don't think so, not to any extent.

Q. Was there a difference in the price of your burner equipped with Minneapolis-Honeywell and equipped with Mercoid controls, during that year?

A. Yes there was, and of course that probably was a subject that we discussed many times. They always thought that we were unfair to them.

Mr. Freeman: By "them", you mean Minneapolis-Honeywell?

The Witness: Minneapolis-Honeywell representa-
742 tives, whether it was John Pauling or I think it might even be Charley Sweatt, that thought it might be unfair when we charged five dollars more for our burner equipped with Minneapolis controls than equipped with Mercoid, when they knew we weren't getting a five dollar advantage in the buying. Naturally they objected to that.

Q. Now what was the difference in the purchase price of the temperature controls you bought from Mercoid and put on your gun type burner, and the Minneapolis control?

A. I think possibly two or three dollars.

Q. Let's see if we can't be accurate on that. Have you any records there on that?

A. Yes, I think so. Now we'll have to be specific. When do you want it?

Q. Yes, I want during the year 1935 first.

A. I haven't got that.

Q. Do you have any invoices?

A. 1935 we didn't—

Q. (Interposing.) Well 1936.

A. 1936 is when we started.

Q. All right, 1936.

A. Well let's see, maybe I've got the invoices here.

Mr. Freeman: Let's be sure, Mr. O'Brien when you give these prices that you give comparable units—
743 Mr. Haycraft: Oh yes.

Mr. Freeman: Of each company.

Mr. Haycraft: I intended my question to cover that.

Mr. Freeman: So when we talk about intermittent controls, we are not talking about constant.

Mr. Haycraft: We are talking about gun type burners entirely now, as I understand. He didn't buy any of the other.

Trial Examiner Sheppard: Gun type burners?

The Witness: $15.95 for the Minneapolis, and $14.05 for the Mercoid, that is for the primary and the thermo-

stat; we go all over the lot with limit controls, so you can't take that into account. At that time we were probably using a half dozen different limit controls, but the primary and the thermostat were always used in combination.

By Mr. Haycraft:

Q. Well now can you break that down?

A. $3.75 for the thermostat and $10.30 for the primary control, Mercoid. Now if you want that—

Mr. Freeman: (Interposing.) That is for 1936?

The Witness: That is for 1936.

By Mr. Haycraft:

Q. And Minneapolis-Honeywell?

744 A. $12.00 for the primary control, and $3.95 for the thermostat.

Q. Now during the year 1936—

A. (Interposing.) That's a difference of a dollar and ninety cents, and we charged $5.00 more.

Trial Examiner Sheppard: That's in favor of what?

The Witness: A dollar and ninety cents lower on the Mercoid.

Trial Examiner Sheppard: On the Mercoid?

The Witness: Yes.

By Mr. Haycraft:

Q. And you charged the customer $5.00 more if you equipped with Minneapolis-Honeywell?

A. Yes, that is where the objection came from Minneapolis. They thought we were unfair in penalizing them.

Q. Now how long did that continue, that variance? What were the prices in '37?

Trial Examiner Sheppard: You want '38 too, and '39, don't you?

Mr. Haycraft: Yes.

Trial Examiner Sheppard: Get them all out Mr. O'Brien so you'll have the whole thing.

By Mr. Haycraft:

Q. I call your attention to Commission's Exhibit

745 23, which is the agreement between the Minneapolis-Honeywell and Cleveland Steel Products, dated December 2, 1936, which I assume would cover your 1937 business, and ask you to look at that and see if the prices

set forth in there for the various items, were the prices that you paid that year. You can check against your invoices and see. It's $3.80.

A. It's $3.80, and this invoice I have just checked was $3.90.

Q. Was that '36 or '37?

A. No, that's '37, no, '36.

Q. Well let's check '36. We have an agreement to go by and see if the prices correspond.

Trial Examiner Sheppard: Get the '37.

A. R 116, no, wait a minute, $11.90. Here's a bill in December of $11.60.

By Mr. Haycraft:

Q. December of what year?

A. December '37.

Q. Look back earlier in the year, perhaps the price was changed during the year.

A. Something wrong with our bookkeeping department I guess, they don't seem to be alike.

Q. Are those the invoices put out by the Minneapolis-Honeywell?

746 A. Yes. However they should be checked by our Purchasing Department. Here's an invoice in May '37, R 116, four, $12.60. That's $11.90 on that contract.

Q. Well what did you pay for the thermostats during that year? $3.80 I notice the contract calls for.

A. $3.80.

Q. What would be the total then of those two, $3.80 and $11.60 would be $15.40 wouldn't it?

A. $3.80 and $11.90 is what is shown there.

Q. Yes, but I'm talking about your invoices, what you actually paid for them.

A. Invoice was $12.60.

Q. $12.60?

A. Yes.

Q. Instead of $11.90.

Mr. Gilpatric: Depends on which one you take.

By Mr. Haycraft:

Q. Well the R 116 I thought you said was $11.60.

Mr. Freeman: $12.60.

The Witness: $12.60, we paid $12.60 according to this invoice. Now let me go back earlier in the year to see if we were paying that right from the start of the year.

Mr. Freeman: We can help you out if you want. The prices on April 1, 1937 were increased.

747 The Witness: Oh, all right. That's it. I can probably check that back. I don't seem to have any invoice back to the early part of the year. I guess probably we didn't get any because I don't know why we'd have two folders in one year.

By Mr. Haycraft:

Q. Well you were paying a total of $12.60 plus $3.80, would be $16.40, wouldn't it?

A. That's right.

Q. What were you paying for comparable devices from Mercoid during that year?

A. 1937?

Q. Yes.

A. $11.85.

Q. For the primary?

A. No, no, $11.85, $8.35 for the primary and $3.00 for the thermostat.

Q. Did that apply all through the year?

A. Well there's April, February, November.

Q. So that there was more of an advantage, in other words more of a difference then in the price in 1937?

A. Apparently so, yes.

Q. And did you continue in 1937 this five-dollar differential in the burners that were equipped with Minneapolis-Honeywell?

748 A. Yes, that was arbitrary, that was never based on any particular difference at the time. I mean it was just arbitrary.

Q. How many burners of the gun type did you sell in 1935, '36 and '37, those years? Have you got the figures on that? I think you had them out here a moment ago.

A. In 19—

Q. (Interposing) 35 if you have it.

A. Oh you want gun burners?

Q. Yes.

A. I haven't got them broken down there. 1935 you want?

Q. If you have it.

A. Well I would say probably about 800. I can't tell you accurately because there are some units in here that are in here as to the type of unit, an air conditioning unit or a boiler unit. I don't know whether it is gun or not.

Trial Examiner Sheppard: Well take it as approximate.

By Mr. Haycraft:

Q. Now how many rotary type?

Mr. Freeman: What year?

Mr. Haycraft: 1935.

The Witness: 1935 the rotary was 1200.

By Mr. Haycraft:

749 Q. 1936 how many gun type?

A. About 1500.

Q. How many rotary?

A. About the same, about 1200, the same as the year before.

Q. 1937?

Trial Examiner Sheppard: Gun type first.

The Witness: 1400.

By Mr. Haycraft:

Q. Rotary type?

A. 2400.

Q. 1938?

A. Gun, 1100; Rotary, a thousand.

Q. 1939?

A. Gun, 2400, no, 2500.

Q. Rotary type?

A. Rotary, 1100.

Q. 1940?

A. Now you're getting into some figures here. That's the year we got into a big volume with our units so this is balled up here.

Q. Well give me an estimate if you can.

A. A fair guess on this, I mean it wouldn't be just a wild guess, but I can't, it wouldn't be as accurate as the other years.

750 Trial Examiner Sheppard: Gun type first.

The Witness: Have you been thinking only of Torridheet direct sales all the way through here?

Mr. Haycraft: Yes, that was my question, but if you want to qualify it, you can do so. I was going to get into the other by itself.

The Witness: Well the volume I have given is inclusive, manufacturers sales.

By Mr. Haycraft:

Q. Do you have any way of separating it?

A. Not here.

Trial Examiner Sheppard: Well with that explanation, we'll take it that way. I'm glad you made that though.

The Witness: About 3800 gun, and 1700 rotary.

By Mr. Haycraft:

Q. Have you got the same figures for '41? Can you give us the same figures for '41? That's the last figure I'm going to ask you.

Trial Examiner Sheppard: That was for '40?

Mr. Haycraft: '41.

Mr. Freeman: That's what he gave.

Mr. Haycraft: That was for '40.

The Witness: Yes, that was '40.

Trial Examiner Sheppard: Off the record.

751 (Discussion off the record.)

Mr. Haycraft: May I ask for a short recess?

Trial Examiner Sheppard: Mr. Haycraft wants to use the telephone, we'll have a short recess.

(Whereupon a short recess was taken.)

Trial Examiner Sheppard: All right, proceed.

The Witness: In 1941, 4100 gun, 1600 rotary.

By Mr. Haycraft:

Q. Now of that 4100 gun, have they all been delivered?

A. Oh yes, I have thrown those out entirely.

Q. I show you Commission's Exhibit 105 for identification, which is an original letter from Minneapolis-Honeywell Company to Cleveland Steel Products, Attention Mr. J. L. O'Brien, dated January 20, 1937, and ask you if you received that letter.

(Handing paper to witness.)

A. Yes, I believe so, it looks like my check mark on it.

Mr. Haycraft: I offer that letter in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Gilpatric: No.

Trial Examiner Sheppard: It may be accepted.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT No. 105 was received in evidence.)

752 By Mr. Haycraft:

Q. Now calling your attention to Commission's Exhibit 23, I'll ask you whether or not that is the agreement or contract mentioned in the letter which you have just identified, Commission's Exhibit 105?

A. It would appear to be, the dates check up.

Q. Now in the third paragraph of this letter of January 20th—first I call your attention to the fact that in Commission's Exhibit 23, the agreement, the contract, the quantity specified is 1000 sets. It appears to be that there had been an erasure in the original there. Can you tell by looking at it what has been erased?

A. Yes.

Q. What was it?

A. "Season's requirements."

Q. Now in this letter of January 20, 1937, mention is made of the fact, in the "third bracket"; 1000 sets of controls puts you in the "third bracket", and then the letter states:

"Now that the proper credit for the controls can be given you, I hope you can see your way clear to accepting our 4000 set proposition, and if so, please advise us and we'll be glad to get in touch with you promptly."

What was the "4000 set proposition" mentioned there?

753 A. I would imagine it was the credit that we were to get for the controls purchased by the American Radiator Company, Fox Furnace Division, for their Toridheet burners. We started building burners for Fox Furnace that year, and we of course wanted to sell the controls with the burner. But they have different combinations in connection with their zone controls, and so forth. They wanted to buy their own controls. So following the regular practice in the industry, Minneapolis agreed to sell them the controls, but to credit the volume to us, of burners to be used, I mean the controls to be used on our burners. I think that's quite definitely what Mr. Lockrae had in mind in that letter.

Q. So that you were then agreeing to buy 1000 sets of controls which would put you in the third bracket, and then there was a proposition of getting your quantity increased by the 4000 sets that your customers might buy?

A. Yes, that we would get credit for them.

Q. Were the Fox Furnace buying 4000 sets or anything like that?

A. Oh I would say yes.

Q. At that time?

A. Oh yes, I would say so.

Q. So you're pretty sure that is what that refers to?

A. I feel quite positive that it does, yes.

754 Q. Now in January, 1938—I show you Commission's Exhibit 10 and ask you whether or not that is the agreement between Minneapolis-Honeywell Regulator Company and the Cleveland Steel Products Corporation for the year 1938?

A. You want me to check that against mine?

Q. Any way so you can tell.

A. Yes, that's it.

Q. Now in this contract, it has what prices there indicated for the thermostat and controls?

A. $3.75 for the thermostat and $10.40 for the gun burner and $11.75 for the rotary burner control.

Q. What would it make the total then for your gun burner type?

A. $14.15.

Q. Now I notice that this contract calls for "seasonable requirements estimated at 3000"; would that include gun type as well as rotary type?

A. Yes, it would include our estimated requirements from Minneapolis-Honeywell for both, what we thought we would buy from them for both.

Q. Now as a matter of fact you had bought in 1937 how many rotary type and how many gun type from Minneapolis-Honeywell?

A. How many controls had we bought?

755 Q. Yes.

A. I couldn't tell you, that would be quite a little job to go back and check up.

Q. Well do you know how many burners you manufactured and sold?

A. Yes, but that wouldn't mean a thing; it wouldn't mean a thing. Some years we might sell twice as many burners and buy half as many controls. That happens when you have a year like, what was it, '37 or '38 that took a nose dive. '37 was a very good year, way up, and '38 took a nose dive. Well when we estimated our requirements for '38, we estimated on increasing our '37 business.

Q. Well in 1937, according to Commission's Exhibit 84, which is in evidence here, you purchased 1164 thermostats and 1292 primaries from the Minneapolis-Honeywell Regulator Company. Now those were used on what burners?

A. I would say probably almost exclusively on rotary type.

Q. Rotary?

A. We had a few accounts that never would accept any control other than Mercoid. We had a few accounts, the Carroll Independent Fuel Company at Baltimore, Maryland; they never would accept anything but Minneapolis. Did I say "Mercoid"?

Mr. Gilpatric: You say "Mercoid" there.

756 The Witness: I'm sorry, never would accept anything but Minneapolis.

By Mr. Haycraft:

Q. Well when you made that estimate of 3000 in January 1938, as your season's requirements, did you intend to include controls for gun type burners as well as the rotary type during that year?

A. What gun type burners or controls we thought we'd buy from Minneapolis, yes.

Q. And did you have any idea as to how many of those there would be? What were your plans on that?

A. Oh we never, were never very particular about hitting that estimate closely. We knew that we'd get the price that we, that was coming to us on what we bought, so we never—

Q. (Interposing) What were you paying Mercoid in 1938 for the primary thermostat?

A. Wasn't it in 1938?

Q. No, you had 1937.

A. 1938 Mercoid; I should have brought our bookkeeper along with me.

Trial Examiner Sheppard: I think you're doing very well. Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

757 Mr. Freeman: Let the record show that the witness is referring to a Mercoid contract for the year 1938 with respect to prices of controls purchased by the Cleveland Steel Products Company from Mercoid in 1938.

By Mr. Haycraft:

Q. First I will ask the witness if he was able to find any invoices from Mercoid in 1938.

A. No, I am not.

Q. All right. What you had then on hand, what you were equipping your burners with, were those devices that you already had on hand purchased in 1937?

A. I would think so.
Q. All right, go ahead.
A. There are some thermostats here that I could check against the contract to see whether the prices agreed. Do you want me to read you the prices now from the contract?
Q. For 1938, yes.
A. For 1938?
Trial Examiner Sheppard: That is, the Mercoid contract. Off the record.
(Discussion off the record.)
Trial Examiner Sheppard: On the record.
The Witness: $8.70 and $3.20; $8.70 for the primary 758 control and $3.20 for the thermostat.

By Mr. Haycraft:

Q. That would make a total of what?
A. $11.90.
Q. As compared with $14.50, is that right?
A. $11.90, $2.60 difference.
Q. $2.60 difference?
A. Yes.
Q. But those you bought in 1937 were a little cheaper than that; they were $11.35 I believe, were they not?
A. Prices I believe did go up in 1938. Let me see if I have a '38 contract.
Mr. Freeman: $11.35.

By Mr. Haycraft:

Q. $11.35. Now do you have with you your 1939 agreement?
A. With Mercoid?
Q. With Minneapolis-Honeywell?
A. Yes, I believe so. December 15, 1938, that would be it, yes.
Q. What prices do you have in that agreement—first the number of sets, then the prices.
A. 1000 sets; price on the thermostat $3.30 and on the gun burner $9.35.
Q. Gun burner primary?
A. Yes, gun burner primary was $9.35, and rotary 759 burner $10.50.
Q. That made a price of $12.65 for the gun type and $13.80 for the rotary type, the two together, is that right?
A. $12.65, that's right, that $13.80, that's right.
Q. Now that contract did not call for a season's requirements, did it?—It was a fixed number of sets, 1000 sets?

A. Yes.

Q. And was that based on your sales or your purchases of sets from the Minneapolis-Honeywell during 1938?

A. I don't think it was based on anything. I think it is just—

Q. (Interposing) Well what bracket were you in on that 1000 sets, do you remember?

A. Probably in the year before we had bought in that bracket and—

Q. (Interposing) Stayed in that bracket?

A. And they gave us the contract in that bracket for the next year.

Q. Well to refresh your recollection, to call your attention to the fact that you bought 1031 thermostats and 951 primaries in 1938 from Minneapolis-Honeywell.

Mr. Freeman: That's about a thousand sets.

The Witness: Yes, that would put us in, that is probably the reason this was written on that basis, and if we exceeded it, then we'd get the better price.

760 Q. Now did you have another agreement during that year? How long was that agreement in effect?

A. 1938.

Q. No, this was '39.

A. Yes, this was written, I believe there was a new contract written in April of 1939.

Q. Will you find that?

A. Yes, there was a new contract written in April for 5000 sets.

Q. 5000 sets?

A. Yes.

Q. Now what price did you have on that?

A. $2.95 on the thermostat and $9.15 on the gun primary and $10.25 on the rotary primary.

Q. Making a total of $12.10 for the gun type, and $13.20 for the rotary type, is that right?

A. That's right.

Q. Now what business did you have in mind in writing that contract?

A. We had just brought out a new pressure type burner, a low, what we call low-price pressure type burner to compete with the low-price gun type and pot type burners on the market, and we had great hopes of a tremendous volume of business. We thought 5000 was putting it very low at that time.

761 Q. Had there been, had you had any competition with low price burners with Minneapolis-Honeywell controls on them during 1938?

A. Oh, sure, we had lots of competition with low price burners, with all kinds of controls.

Q. Well do you remember the Quietheet Corporation?

A. That's Mr. Lapidus.

Q. Yes.

A. Oh yes.

Q. Had he been one of the sources of competition in that category?

A. Yes, I'd say quite definitely.

Q. Now what price—did you buy any controls from Mercoid, primary or thermostat, during 1939?

A. Here's an invoice for two thermostats. I don't know why, just two, at $3.00 each.

Q. That was five cents more than you were paying Minneapolis-Honeywell, was it not?

A. Yes it was. From that I would say that we probably were not buying many controls from them. Well yes, here's a July invoice, $10.70, $2.70 for the thermostat or Sensatherm, and $8.00 for the primary.

Q. That would make it $10.70 for the set?

A. That's right.

Q. Did you have a contract with them that year,
762 with Mercoid?

A. Oh I think so; I think we have had a contract every year. Just a moment, if I have it with me.

Q. 1939.

A. That was 1939, what price did I say that was? There are some pencilled figures here; I don't know what they mean. The contract itself shows $8.00 for the primary, and $2.70 for the thermostat.

Q. That's what you gave me.

A. Is that what I gave you? There are some pencilled figures in here; that's what we probably were trying to chisel on, and couldn't do it.

Q. What date was that contract?

A. February 18, 1939. It was approved by Owens on the 28th of March, 1939.

Q. All right.

Mr. Haycraft: Mark this letter.

(The document referred to was marked Commission's Exhibit 119 for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit 119 for identification, supposed to be an original letter from Mr. Owens on the letterhead of the Mercoid Corporation to yourself, dated March 29, 1939, and ask you if you received that letter.

A. Yes, that letter is familiar.

763 Q. This is a letter you received with the contract which you just referred to in your testimony for 1000; did you ever give the Mercoid Corporation an order for 1000 Sensatherms during 1939 for use on Westinghouse burners, burners made for Westinghouse?

A. No we did not; there never was any such order placed. I don't know whether the Westinghouse crowd did a little kidding with Mercoid's representative or not. They talked to me, this man Fisher who was the eastern representative for Mercoid, talked to me about having had an agreement with Mr. Hildreth of the Westinghouse Company that they would give him an order for a thousand thermostats and Mercoid would absorb the cost of the die or the screen, or whatever it was, to put their name on the thermostat. But they never placed the order.

Q. It never came out?

A. No, they never—I spoke to Hildreth two or three times about it, and asked him if he was actually giving them the business, or was he just kidding them, and I could never get anything out of him.

Q. Well you manufactured burners for Westinghouse during 1939?

A. Yes we did.

Q. Were those included in your statement as to your quantity of gun type burners that were manufactured

764 and sold that year?

A. They were, yes.

Q. Well did you get credit for those controls in the 5000, in making up the 5000 sets in 1939 agreement?

A. We bought all of the Westinghouse controls directly. We handled them.

Q. You handled them?

A. Yes.

Q. Did you do that from the beginning?

A. Always, yes.

Q. And can you tell us when it was that you first started burners for Westinghouse?

A. In December 1937.

Q. Do you know how many you manufactured during 1938 for Westinghouse?

A. Well I have what we made for the three or four years, but I haven't got it broken down. I would say in 1938 —if you care to accept a reasonably good guess—

Q. Yes.

A. I would say that it was probably in the neighborhood of 1000.

Q. And in 1939?

A. In 1939 probably around 1600.

Q. And it increased each year?

A. Yes.

765 Q. I show you Commission's Exhibit 106 for identification, which is an original letter from Minneapolis-Honeywell to Cleveland Steel Products Corporation, Attention Mr. W. J. Smith, dated April 13, 1939, and ask you if that came from your files and if you can identify it as received in your office.

Mr. Freeman: We'll concede it is a Minneapolis-Honeywell letter and we will concede it was sent to the Cleveland Steel Products Corporation, and we'll concede that they received it.

By Mr. Haycraft:

Q. And is that the letter then that also accompanied your agreement dated April 1939?

A. I would say yes.

Mr. Haycraft: I offer that letter in evidence as Commission's Exhibit 106.

Trial Examiner Sheppard: Under the agreement, we'll accept it.

Mr. Gilpatric: No objection.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT NO. 106 was received in evidence.)

By Mr. Haycraft:

Q. I show you paper marked for identification Commission's Exhibits 107-A, B, and C; A being a letter
766 from W. J. Smith to Mr. McGoldrick dated April 18, 1939, dictated April 17th, and 107-B and C being a carbon copy of a letter from Mr. Smith to Mr. J. W. Pauling, Vice President of Minneapolis-Honeywell, dated April 18, 1939, and dictated April 17th; and I will ask you whether

or not the original of this, to your knowledge, the original of this letter was mailed to Minneapolis-Honeywell, to the parties indicated on the carbon?

Mr. Gilpatric: We'll concede all these you know if you want to save time.

Mr. Haycraft: All right then, I'll offer that in evidence.

Mr. Freeman: It's all right.

Trial Examiner Sheppard: It may be accepted as Commission's Exhibits 107-A, B, and C.

(The documents referred to, heretofore marked for identification COMMISSION'S EXHIBITS 107-A, 107-B, and 107-C were received in evidence.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit 108 for identification, which is an original letter from Mr. Lockrae to W. J. Smith, dated April 24, 1939.

Mr. Freeman: Same concession.

Mr. Haycraft: Offer it in evidence.

Mr. Gilpatric: No objection.

767 Trial Examiner Sheppard: It may be accepted.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT NO. 108 was received in evidence.)

By Mr. Haycraft:

Q. I show you two letters marked for identification Commission's Exhibits 109-A and B, 109-A being a carbon copy of a letter from Mr. Smith of the Cleveland Steel Products to Mr. Harold W. Sweatt, of Minneapolis-Honeywell, dated May 1, 1939, dictated April 28th, and 109-B being an original letter from Harold W. Sweatt to W. J. Smith, dated April 21, 1939.

Mr. Freeman: Same concession.

Trial Examiner Sheppard: It may be admitted.

(The documents referred to, heretofore marked for identification COMMISSION'S EXHIBITS 109-A and 109-B were received in evidence.)

By Mr. Haycraft:

Q. I also show you a series of letters and papers—

Mr. Freeman: (Interposing.) We'll concede them all.

Mr. Haycraft: I then offer in evidence Commission's Exhibits 110-A to E, 110-A being a carbon copy of a letter from W. J. Smith to W. J. McGoldrick dated May 11,

1939; 110-B and C being an original letter from W. J.
768 McGoldrick dated May 11, 1939 to W. J. Smith, and D and E are sketches attached to the letters and mentioned in the letters.

Trial Examiner Sheppard: All right, they may be accepted.

(The documents referred to, heretofore marked for identification COMMISSION'S EXHIBITS 110-A, 110-B, 110-C, 110-D and 110-E were received in evidence.)

Mr. Haycraft: I also offer in evidence papers marked Commission's Exhibit 111 for identification, being a carbon copy of a letter from W. J. Smith to A. H. Lockrae, dated June 26, 1939.

Mr. Freeman: No objection.

Trial Examiner Sheppard: May be received.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT NO. 111 was received in evidence.)

Mr. Haycraft: Also offer in evidence Commission's Exhibits 112-A and 112-B, 112-A being a carbon copy of a letter from W. J. Smith to A. H. Lockrae, dated August 9, 1939, and 112-B being an original letter from Mr. Lockrae to W. J. Smith dated July 20, 1939.

Mr. Freeman: Same concession.

Trial Examiner Sheppard: They may be accepted.

769 (The documents referred to, heretofore marked for identification COMMISSION'S EXHIBITS NOS. 112-A and 112-B were received in evidence.)

Mr. Haycraft: Also offer in evidence letter marked for identification Commission's Exhibit 113, being a carbon copy of a letter from W. J. Smith to W. J. McGoldrick, dated September 1, 1939.

Mr. Freeman: No objection.

Trial Examiner Sheppard: It may be accepted.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT NO. 113 was received in evidence.)

Mr. Haycraft: Also offer in evidence papers marked for identification Commission's Exhibits 114-A and 114-B, 114-A being an original letter from Lockrae to W. J. Smith, dated September 5, 1939, and 114-B being a carbon copy, confirmation of a telegram from Lockrae to Smith dated September 5, 1939.

Mr. Freeman: Same concession.

Trial Examiner Sheppard: They may be accepted.

(The documents referred to, heretofore marked for identification COMMISSION'S EXHIBITS 114-A and 114-B were received in evidence.)

Mr. Haycraft: Also offer in evidence original telegram from Lockrae to W. J. Smith, dated September 5, 1939.

770

Mr. Freeman: No objection.

Trial Examiner Sheppard. May be accepted.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT NO. 115 was received in evidence.)

Mr. Haycraft: Also offer in evidence letters marked for identification Commission's Exhibits 116-A and B, 116-A being a carbon copy of a letter from J. L. O'Brien to Minneapolis-Honeywell, dated November 19, 1940, and 116-B being the original letter from Mr. Lockrae to Mr. O'Brien dated November 13, 1940.

Mr. Freeman: No objection.

Trial Examiner Sheppard: May be accepted.

(The documents referred to, heretofore marked for identification COMMISSION'S EXHIBITS 116-A and 116-B were received in evidence.)

Mr. Haycraft: Also offer in evidence letter marked for identification Commission's Exhibit 117, being the original of a letter from Mr. Lockrae to Mr. O'Brien, dated November 22, 1940.

Mr. Freeman: No objection.

Trial Examiner Sheppard: It may be accepted.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT 117 was received

771 in evidence.)

Mr. Haycraft: Also offer for evidence letters marked for identification Commission's Exhibits 118-A and 118-B, 118-A being a carbon copy of a letter from J. L. O'Brien to J. W. Pauling, dated March 5, 1942, and 118-B being the original of a letter from J. W. Pauling to W. J. Smith, dated February 25, 1942.

Mr. Freeman: No objection.

Trial Examiner Sheppard: They may be accepted.

(The documents referred to, heretofore marked for identification COMMISSION'S EXHIBITS 118-A and 118-B were received in evidence.)

Trial Examiner Sheppard: What about 119?

Mr. Haycraft: Didn't I offer it?

Mr. Freeman: You referred to it.

Mr. Haycraft: All right, I'll offer it in evidence. Letter marked Commission's Exhibit 119, being an original letter from J. W. Owens to J. L. O'Brien, dated March 29, 1939.

Mr. Freeman: No objection.

Trial Examiner Sheppard: May be accepted.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT 119, was received in evidence.)

Mr. Haycraft: There is one exhibit I didn't offer,
772 Commission's 103. I didn't offer it in evidence because they are duplicates, so 103 and letters are not offered.

Trial Examiner Sheppard: How about 104?

Mr. Freeman: That's the same situation.

Mr. Haycraft: Yes.

Trial Examiner Sheppard: Let the Examiner show those as unnecessary to be used because already in evidence by other exhibits, the exhibits marked for identification Commission's Exhibits 103 and letters, and 104.

By Mr. Haycraft:

Q. Now you have mentioned in your testimony two firms that you manufactured oil burners for, Fox Furnace Company, a subsidiary of the American Radiator Company?

A. Yes.

Q. And Westinghouse?

A. Yes.

Q. Now I don't believe I asked you—and if I have I'll run the risk of repetition here—now when did you start manufacturing burners for Fox?

A. 1936.

Q. Do you know how many you made during that year for them?

A. Not many, I would say probably not more than a hundred.

Q. And in 1937?

773 A. In 1937 we probably made five or six hundred.

Q. And 1938 and 9 did that increase?

A. No, I think '39 was—I don't think we made them in '39. In '38 it increased, but in '39 I think they were not using our burner.

Q. Well now did you manufacture for any other furnace manufacturer during those years?

A. Oh yes, in those particular years.

Q. Yes.

A. Or during the whole—

Q. (Interposing.) Yes, during those years, from 1935 to 1941?

A. Yes, we have manufactured for Kelvinator Corporation.

Q. When did you start manufacturing for Kelvinator?

A. 1936.

Q. About how many did you make during that year?

A. Well in 1936 likewise, not very many, probably not more than a hundred or so, and in 1937 we ran up close to 2000 I think. It would be something in between 1500 and 2000.

Q. And were these Kelvinator and Westinghouse all gun type?

A. The Kelvinator were all rotary.

Q. All rotary?

A. Yes. The Fox were mixed. The first year they 774 were almost eighty per cent., probably, gun, but in the next year and the last year, they were more rotary than guns.

Q. And the Westinghouse, what were they?

A. Westinghouse was always exclusively gun.

Q. Now—

A. (Interposing.) And we have several other small manufacturers, if you want to bring them in.

Q. Now the sales figures that you gave here included all of these for these outside accounts. For instance your rotary type figures in 1937 included the rotary burners for these outside companies?

A. Yes.

Q. Well those were the principal accounts; you say you had others?

A. Yes, we had some smaller accounts, Marshall Furnace Company of Marshall, Michigan.

Q. Was that gun type?

A. That was both; they used both rotary and gun.

Mr. Haycraft: That concludes the direct examination, Mr. Examiner.

Trial Examiner Sheppard: Cross-examination?

775 *Cross-Examination by Mr. Freeman.*

Q. Mr. O'Brien, you mentioned Quietheet as a competitor. You had other competitors during the same period of time that Quietheet was a competitor, is that right?

A. Oh many of them.

Q. Did you have the Aldrich Company of Wyoming, Illinois or Peoria, Illinois as a competitor?

A. Surely.

Q. And did you have any other competitors? Name some of the companies that you were out competing with.

A. Well we were out competing with practically all oil burner manufacturers in the country. There may be a few out on the Pacific Coast that didn't get into our bailiwick, but eighty per cent. of the oil burners that are sold in the United States were sold right in the territory that we were looking for sales in, and we hoped we were competitors with all of them.

Q. Well did you compete with Timken Company of Detroit?

A. Sure, sure.

Mr. Haycraft: Objected to as irrelevant and immaterial, and not proper cross-examination.

Trial Examiner Sheppard: I think we'll let him go on so we won't have to call him again.

Mr. Freeman: It isn't a question of calling him
776 again. I think when the Commission's attorney asked about who was a competitor and he names one, we certainly have a right to show there are other competitors, by this witness.

Q. How about Petroleum Heat and Power?

A. Yes.

Q. Gilbert and Barker?

A. Yes.

Q. Now how did your price of oil burners compare competitively with Petroleum Heat and Power, Timken, and Gilbert and Barker?

A. Well on the rotary burner, the prices were pretty much alike; they were quite uniform. There were only five or six manufacturers of rotary wall flame burners, and the prices were held quite uniform. On gun type burners they were all over the map. We had the cheap gun type burners, as we called them, that were down competitive with the pot type burner, and they went from there up to.

twice that. I mean the high price burner is twice the price of the low price burner. Well we were pretty much in the upper bracket. We would be classed in with Gilbert and Barker and Electro and Petroleum Heat and Power that you mentioned. We were in that group, and there's another group, the Aldrich group, including Quietheet and S.K. and—well a number of them. There were
777 probably ten or fifteen in that, what we call cheap class.

Q. Just give us say the range of prices for the gun type burner from the so-called cheap class to the so-called high price class.

A. Well of course you are covering a period of years here.

Q. Well give us—

A. (Interposing.) When there's quite a change of price.

Q. Well give us 1937 if you can.

A. Well in 1937 the pressure burners in our class were up around $75.00 or $76.00, and in the Lapidus, Aldrich class were down around $60.00.

Q. And that name, Lapidus, that is Quietheet, is it not?

A. Yes, it is Quietheet. It seems easier to refer to Lapidus because that is the way I have always known it.

Q. And these prices you are giving us, are given for the burners as you sell them, not installed?

A. Oh no, that is the burner to the dealer.

Q. To the dealer?

A. Yes.

Q. Now how about 1938 prices, the range?

A. Well I would say that this year is representative of the relative, comparative prices. We dropped in '38
778 and sold it then. They went clear down around fifty dollars, and we went down to sixty. Oh I think we went at one time as low as $62.50.

Q. Then over this period, say from say 1935 up to the end of 1941, the difference between high and low price burners was around $15.00.

A. Yes, I would say that, or a little more, probably between fifteen and twenty dollars was the difference between the burners that we liked to include in our class, and when I say that, I am not just picking a class out of the air, there is a group like Lapidus who make a burner

and say "there it is". They hold no responsibility for what happens to it afterward. I mean if the customer buys a Lapidus burner from somebody, and it doesn't function, Lapidus don't do a damn thing about it.

Mr. Haycraft: Mr. Examiner, is it understood that all of this is over my objection, because I am going to call Mr. Lapidus and he might have a different story, and I don't want to be bound by it.

The Witness: Inasmuch as you are going to call him, I will amplify that so there will be a basis for it. Companies in our class, Petroleum Company, and companies of that type have a field organization to take care of service of their burners, to know that the customer does get the performance that he has promised for him.
779 Now it is our belief that that has never been done by the low priced burners. I'd like to be shown if it ever has been, because that is the story our field men tell us of the kind of competition they have to buck.

Q. Now the testimony you are giving now in answer to the last few questions I have asked, is based upon your intimate knowledge of the oil burner industry, actual experience?

A. Oh actual experience, yes indeed.

Q. Now you mentioned the S. and K. or S. K. Company, do you know where they are located?

A. Camden, New Jersey.

Q. Is that a relatively large company or small company?

A. No, it is a small company, operated by two men and their families, I guess.

Q. And you had to meet that competition?

A. Yes.

Q. Or at least you met that competition?

A. Actually, yes. We have lost business and some of our good accounts to them.

Q. And you put the S. and K. when it comes to competition, in the same class as Aldrich and Lapidus, is that correct?

A. Well yes, I group them all; I think my own opinion is that the S. K. was a little better constructed burner.
780 I think it was a better burner. That is my opinion but insofar as the services that went with their burner are concerned, I don't think there was any difference. I

don't think that S. K. had any field organization that backed up their burner.

Q. And the selling price of the S. K. burner was about the same as the selling price of the Aldrich burner or the Lapidus burner, generally speaking?

A. Yes, generally speaking, pretty close, probably not quite as low as Lapidus went sometimes, but I think probably as low as Aldrich went.

Q. You recognize Lapidus or Quietheet today as a large producer of oil burners, and when I say "today", I mean prior to the war emergency of today?

A. Oh decidedly so.

Q. And I take it that you recognized the Aldrich Company likewise as a large manufacturer of oil burners in the years 1940 and 41?

A. Among the largest.

Trial Examiner Sheppard: Did he say the Lapidus were big people.

Mr. Freeman: Yes.

Q. Did you say that Aldrich was among the largest?

A. Yes, definitely.

Q. And ranged along in the same class as Quietheet?

781 Mr. Haycraft: Object to that; he didn't say that.

Mr. Freeman: Well I am asking that.

Trial Examiner Sheppard: Follow that up.

The Witness: I would say that Aldrich and Lapidus were definitely in the first ten. I'd say positively they were in the first ten, and I think probably in the first five.

By Mr. Freeman:

Q. Now you bought Minneapolis-Honeywell controls for your rotary burner in 1935, correct?

A. Yes.

Q. And you continued to buy Minneapolis-Honeywell controls for your rotary burner in 1936 and so on, is that correct?

A. Yes.

Q. Now you mentioned on direct examination that you would not put anybody else's controls, other than Minneapolis on a rotary burner, and Mr. Haycraft did not ask you why. I will.

A. Well I think I brought that in myself, that there was no suitable control on the market.

Mr. Haycraft: I didn't have to ask him; he told you.

By Mr. Freeman:

782 Q. You say there was no suitable control?

A. No control that we considered suitable for it.

Q. Did Mercoid make a control that you could have used on your rotary burner in 1935 and 36?

A. No, not one that we would accept, no.

Q. Did you ever talk to the Mercoid Corporation with respect to using its controls on your rotary burner?

A. Oh yes, indeed we did.

Q. They solicited that business, did they not?

A. They—

Q. (Interposing) The Mercoid Corporation?

A. Rotary business?

Q. Yes.

A. They didn't solicit because they didn't have a control. They asked us numerous times whether we would give them the rotary business if they had a suitable control, and we told them yes, we would, and they promised that they would have a control.

Q. That is, Mercoid promised they would have a control?

A. Yes, and they did bring out one in 1941; they brought out a control which I think is equally as good as Minneapolis.

Q. And with whom did you have the conversation about whether you would buy controls from Mercoid if they made one that would work on your rotary burner?

783 A. Well all the serious conversation I guess was with Jimmy Owens. I had some with "Doc" McCabe because he was the fellow that was supposed to bring the control out, and who had been telling me at various meetings where we came together in the oil burner conventions—

Q. (Interposing) That is Ira A. McCabe or Ira E. McCabe?

A. I don't know what his initials are, but I call him "Doc". He's the inventor, the head of the Mercoid Corporation.

Trial Examiner Sheppard: Yes.

Mr. Freeman: Head of the Research Department.

The Witness: He does all of that.

Trial Examiner Sheppard: Ira M.

The Witness: Oh Doc told me, oh I don't know, for five or six years, that he had it just at the end of his fingers,

all he'd have to do was reach a little bit further and he'd have it. But it never came. It got to be quite a joke with Jimmy. I felt very bad when Jimmy did come along; he came along afterwards we had gone all along with Minneapolis, because we had gotten them to make a special control for us for this quantity burner that we were bringing out, this model S, gun burner, burner-mounted control, instead of mounted in the stack, we built it right into
784 the burner at the factory.

Q. And who did you have make this special control for you, that was burner-mounted?

A. Minneapolis.

Q. I notice considerable correspondence here between W. J. Smith of your Company, and McGoldrick of Minneapolis-Honeywell Regulator Company. Will you tell us whether or not that correspondence relates to the special building of a burner-mounted control by Minneapolis-Honeywell for your company?

Mr. Haycraft: I'm going to object to that unless the correspondence is mentioned, because this speaks for itself.

Trial Examiner Sheppard: I'd like to know myself what all that correspondence is about.

Mr. Haycraft: We'll read it.

The Witness: That correspondence, if I might explain.

Trial Examiner Sheppard: Go ahead.

The Witness: That correspondence between McGoldrick and Mr. Smith definitely relates to that particular burner. That's how that correspondence took place between those two people. They were the two crackpots on one end, with the inventor of the burner on one end, and the inventor of the control on the other. That is, ordinarily the
785 correspondence would be carried on by myself, but Mr. Smith did all of the development work on this burner. It was his baby.

Trial Examiner Sheppard: He's your inventor, is he?

The Witness: Well he's the head of our—he's Vice President and head of our Company, but he's an inventor. At least he thinks he is, and he does a pretty good job at it too. He had this baby, this low-priced burner that he was going to knock these cheap burners in the head with. In other words we could go ahead and do all the things we had been doing, and still sell a burner at those prices and make a profit on it.

By Mr. Freeman:

Q. Now you said you or that he wanted to come out with a low-priced burner. Did you come out with a low-price burner?

A. Yes, and that was this stamp burner, Model S, steel stamp burner.

Q. Now—

A. (Interposing) With the control mounted right on it.

Q. And you got Minneapolis-Honeywell to build a special control for that burner?

A. Yes.

Q. And—

786 A. (Interposing) As near as I know I don't believe anybody else ever used that control. They hadn't during the year 1940.

Q. And that model S burner that you came on the market with, was to compete with what class of oil burner manufacturers?

A. Oh Marr, Lapidus, is that what you mean?

Q. Yes, price class.

A. Well the cheap gun type burner, and also the pot type burner. The pot type burner became quite a factor in the last few years.

Q. You referred to a model S oil burner made by your Company, and referred to it as a "stamp burner". I hand you a circular which we will ask the Reporter to mark for identification Respondent's Exhibit 6.

(The document referred to was marked Respondent's Exhibit No. 6 for identification.)

By Mr. Freeman:

Q. Showing you this paper, Respondent's Exhibit No. 6, I will ask you to merely look at it and tell us if that is the burner that you referred to when you stated the Model S burner was made as a cheap burner?

A. That's the burner.

Q. And can you tell us the price at which you sold your cheap burner, or Model S burner?

787 A. Well that price in 1939, 1940 was down around $62.50.

Trial Examiner Sheppard: When did it first come out, Mr. O'Brien?

The Witness: It came out in '39, I think.

Trial Examiner Sheppard: And that was the price then?

The Witness: It wasn't—just a minute, there were two prices in that year. We changed the price. It came out around $65.00 and then we reduced it to $62.50.

Mr. Freeman: We offer Respondent's Exhibit 6 in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: It may be accepted.

(The document referred to, heretofore marked for identification RESPONDENT'S EXHIBIT No. 6 was received in evidence.)

The Witness: Instead of $65.00, it should be $67.50.

By Mr. Freeman:

Q. And then it was lowered in price later on?

A. To $62.50.

Q. What about the lowering of the price, if you recall?

A. Well I think the fact that our field men still
788 felt that to get any of this volume that was going to these low-priced burners, that we'd have to come down. You see they had reduced their prices way down in the low $50.00 bracket at that time, and our field men felt that we still were not low enough to get that volume of business.

Q. How low did you ultimately go with the Model S burner?

A. Well $62.50 was as low as we went in our regular sales. We had a few special deals.

Q. At what price?

A. Where that price went down to, well about $58.00.

Trial Examiner Sheppard: But there were still some other manufacturers of low-price burners under that price?

The Witness: Oh yes, many.

Trial Examiner Sheppard: All right.

The Witness: We had some deals where we sold on a discount from the dealer list price, jobber accounts, that we gave twenty off, and that brought the price down below the regular distributor price of $62.50.

By Mr. Freeman:

Q. Now when you lowered your price from $67.50 on down, did you buy controls any cheaper from Minneapolis-Honeywell on account of the new burner, or the lower
789 priced burner that you were then selling?

A. No, we did not.

Q. How were you able to lower your price, or how were you able to effect a savings in manufacture that permitted you to lower your price five, six, or seven dollars? Did the lowering of the price have to do with burner design?

A. No, no, originally, yes, very definitely so. The lowering of the price, I mean the $62.50 price was definitely because of the low cost of the burner itself. In other words, the—well the castings in a gun type burner alone cost twice as much as the completed burner here. I mean the burner body itself. To just buy the castings, and you have your machining and all that kind of thing.

Q. So that by burner design, that is burner construction, you were able to make a much cheaper burner?

A. Yes.

Q. And the controls for the Model S burner cost you substantially the same price as the higher price burner that you had sold prior to that time, those controls that you bought from Minneapolis-Honeywell.

A. Substantially. There was a reduction in the price, I think that year. I think the R 116 was brought down in 1939, wasn't it?

790 Q. That is from one bracket to the next?

A. No, I mean wasn't there a general reduction in price?

Q. Let me ask this question. Was there any reduction in price of controls of itself, to justify the seven or eight dollar difference in your selling price of oil burners?

A. No.

Q. Now you mentioned when you brought out that burner, that you were going to compete with gun type burners and pot type burners, is that correct?

A. Yes, all the burners that went into our field, probably eighty per cent, of burner sales, particularly our burners, are in the small, five, six, seven-room homes. Now pot type burners go into those places. I mean they are competitors for that business, just as well as the cheap type burner.

Q. I notice in connection with your type S burner that the capacity is from one gallon per hour to three gallons per hour.

A. Yes.

Q. And I take it that where oil is consumed at the rate of about a gallon an hour, that is for use in an ordinary small home?

A. Yes, I'd say probably more than fifty per cent.
791 of all oil burners are below a gallon and a quarter.

Q. And the pot type likewise burns about the same amount, a gallon or so an hour?

A. Yes, the pot type will do a pretty good job up to probably a gallon and a half or 1.65, some place around there they do a pretty good job, up to that.

Q. When you say "they do a pretty good job", you also mean, do you not, that you have to compete with them when it comes to selling an oil burner for use in a small home?

A. Sure we do. Their price is way below us.

Q. So that—

A. (Interposing) The volume of sales will convince you that there are those manufacturers who are able to make people believe that they are all right, and they work, and they go on selling them year after year.

Q. And they sell them in large quantities, do they not?

A. Yes, we say they are no good, but we can't get the world to believe us.

Q. Well you say they are "no good", because you want to sell your gun type burner?

A. Maybe.

Q. Now you mentioned Westinghouse, as having manufactured oil burners for that company, and you also
792 mentioned that you bought, that Westinghouse had bought controls or bought burners from the Marr Oil Burner—

Mr. Haycraft: I think you have got that mixed up.

The Witness: I didn't say that they had, but that the Marr burner competed with us. I don't quite understand.

By Mr. Freeman:

Q. Well let me ask you this question so that we get it straight. You sold oil burners to Westinghouse?

A. Yes.

Q. And you started selling them along in 1937?

A. Yes.

Q. Do you know from whom Westinghouse bought their oil burners prior to the time you began selling them?

A. Yes.

Q. What company?

A. Marr Oil Burner.

Q. And what type of oil burner was it that the Marr Company sold to Westinghouse?

A. That's a pot type.

Q. Then you went in and solicited Westinghouse's business for your gun type burner in 1937, correct?

A. Oh you can put it that way if you want to. I don't know whether we went in, or whether they came in, but
793 at any rate we tried to sell them our gun type burner.

Q. In 1937?

A. Yes.

Q. And was that to take the place of the pot type burner that Westinghouse had bought prior to that time from the Marr Oil Burner Company?

A. Yes, it was. There's a little distinction in companies there. The Westinghouse Electric and Manufacturing Company—

Q. (Interposing) Of Mansfield, Ohio?

A. Well they were Mansfield then, Springfield now, is the company that we sold the burners to. The Marr burner was sold to the Westinghouse Electric and Supply Company, what they call "Wesco". The Manufacturing Company never bought a burner until they bought ours, but the Supply Company, the distributing company sold the burner, handled it on a jobber basis.

Q. Well did the Supply Company after you began selling Westinghouse Electric and Manufacturing Company, continue to handle the Marr Oil Burner, or did they then continue to handle your gun type?

A. No, they gave up the Marr burner completely, and the Westinghouse Electric and Manufacturing Company took over the burner business completely. In other words
Wesco no longer handled it, a burner, except as a
794 distributor for Westinghouse Electric and Manufacturing Company.

Q. And as a distributor, that company then handled oil burners manufactured by your Company, and sold to Westinghouse Electric and Manufacturing Company?

A. That's right, that is where our competition came in there, when we got out to Wesco's distributors and dealers, we had the job of getting them to give up the Marr burner because, of course, Marr immediately went to all these accounts to try to get them to hang on to their burner, and—it being a lot cheaper than ours—we had a job. Some places we couldn't do it. For instance they had a good account in Washington, D. C., the Loughborough Oil Company. They had to take the account,

Westinghouse took the account away from them because they refused to go along on our burner, on the new Westinghouse burner.

Q. When you say you "had a job", does that mean you had a job out in the field?

A. Yes, a job out in the field to go and convince these distributors that they should pay fifteen or twenty dollars more for this new Westinghouse burner.

Q. Wesco is a jobbing subsidiary of the Westinghouse Electric and Manufacturing Company, is it not?

A. Yes, it is a wholly-owned subsidiary.

795 Q. So your company went out and called upon the dealer trade in order to get them to take on your burner in lieu of the pot type burner.

A. Well let me put it this way, I went out personally with the—

Q. Westinghouse people?

A. —Westinghouse people, to help them to do a sale; that Hildreth who was manager of the heating division asked me to go out and help him sell some of these fellows that couldn't see paying 15 or $20. more for the new Westinghouse burner. They were satisfied that the old pot type burner was doing a good enough job. In other words, they thought it was good enough. They could get more volume.

Trial Examiner Sheppard: I think I get the picture there, Mr. Freeman.

Mr. Freeman: All right, that's a good place to stop.

Trial Examiner Sheppard: We'll take an adjournment until 1:30. Mr. Reporter, you lock the door and get the key for us.

(Whereupon, at 12:35 noon, a recess was taken until 1:30 p. m., this day.)

796 Afternoon Session.

1:30 p.m.

Trial Examiner Sheppard: All right, gentlemen, on the record. Proceed with the cross-examination, Mr. Freeman.

J. L. O'BRIEN resumed the stand and testified further as follows:

Cross-Examination (Continued) by Mr. Freeman.

Q. You referred on your direct examination to some contracts with the Mercoid Corporation, is that correct?

A. Yes, I have contracts here.

Q. And you had a contract with Mercoid for the year 1936?

A. Yes, I believe so.

Q. And for 1937?

A. Yes.

Q. And is it a fact that you had contracts year in and year out, starting with about 1936 up to and including 1941, with the Mercoid Corporation, for controls?

A. Yes, I believe we had contracts with them back for a good many years prior to that.

Trial Examiner Sheppard: Those are all that we'd be interested in, from 1935 on is what we're interested in.

The Witness: Yes, we had contracts with them.

797 By Mr. Freeman:

Q. May I see that?

A. Yes.

(Handing paper to counsel.)

Mr. Freeman: Mark this Respondent's Exhibit 7.

(The paper referred to was marked Respondent's Exhibit 7 for identification.)

By Mr. Freeman:

Q. Showing you paper marked for identification Respondent's Exhibit 7, the pen and ink prices after "Primary Controls" and "Thermostats", referred to in that contract are those prices which Mr. James W. Owens referred to in the Commission's Exhibit 119?

A. Well he doesn't refer specifically to the prices here.

Q. Does he refer to the pen and ink prices on the contract as distinguished from those that appear in printed form? Please note the "P. S." on the letter.

A. Yes, he does.

Mr. Freeman: We offer in evidence this agreement, Respondent's Exhibit 7, the Mercoid Corporation agreement with Cleveland Steel Products Company, for the year of 1939.

Trial Examiner Sheppard: I thought that was 1937.

The Witness: This is 1939.

Trial Examiner Sheppard: All right. Any ob-
798 jection?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: It may be accepted.

(The paper referred to, heretofore marked for identification RESPONDENT'S EXHIBIT 7, was received in evidence.)

By Mr. Freeman:

Q. And just for the purpose of the record how many units are specified in the 1939 contract?

A. 15,000.

Trial Examiner Sheppard: What do you mean "units," thermostats and primary controls?

A. No, when they refer to units they refer to the separate pieces, three pieces in a complete set.

Trial Examiner Sheppard: That's what I mean, thermostat, primary control, and limit control.

The Witness: Each piece is a group.

Trial Examiner Sheppard: That's right.

By Mr. Freeman:

Q. So that 15,000 units, translated into sets would mean 5,000 sets?

A. That's right.

Q. And for the year 1940 you had an agreement with Mercoid calling for 15,000 units, is that correct?

A. That's correct.

799 Trial Examiner Sheppard: In other words, that's 5,000 sets too, is that correct?

The Witness: Yes.

By Mr. Freeman:

Q. I understand that you bought very few controls from Mercoid in 1938, is that correct?

A. Apparently we bought practically none. I only see two thermostats in that year.

Q. Whose control did you use as standard on the gun type burner in 1938?

A. Oh Mercoid.

Q. Even though you didn't buy any controls from them that year?

A. Yes.

Q. How do you explain that?

A. Well it must have been a carryover, we bought enough controls in the previous year to carry us through '38.

Q. I note in one of the proposed agreements with Mercoid the notation "Perfex, 1939."

Mr. Haycraft: Object to that unless it's in evidence. He is examining the witness about a lot of things that are in evidence.

Mr. Freeman: It's one of the agreements he referred to this morning on direct examination.

Mr. Haycraft: Put it in evidence.

800 Trial Examiner Sheppard: If it is in evidence—

Mr. Haycraft: It's not in evidence.

Mr. Freeman: We'll put it in evidence.

Mr. Haycraft: Put it in evidence before you examine him on it.

Mr. Freeman: Let me do it my way.

Mr. Haycraft: I don't like it, I'm objecting.

Trial Examiner Sheppard: Go on and mark it Respondent's Exhibit 8.

(The paper referred to was marked Respondent's Exhibit 8 for identification.)

Mr. Haycraft: Yes. May the witness be instructed not to answer unless it is in evidence.

Mr. Freeman: We offer it in evidence.

Trial Examiner Sheppard: I will accept it. It is in evidence.

(The paper referred to, heretofore marked for identification RESPONDENT'S EXHIBIT 8, was received in evidence.)

By Mr. Freeman:

Q. Now go ahead and answer my question.

Trial Examiner Sheppard: Repeat the question.

(The reporter again read the question as follows:

"Q. I note in one of the proposed agreements with Mercoid the notation "Perfex, 1939").

801 A. You want to know what that notation means?

Q. Yes. What does that notation refer to?

A. Well it apparently refers to the prices quoted by Perfex on Perfex controls.

Q. Will you give us the prices quoted you by Perfex for the year 1939 in accordance with the notation appearing upon Respondent's Exhibit No. 8?

A. Thermostat $2.40, primary control $8.90, limit control $2.65, $13.95 for the set.

Q. Was Perfex soliciting your control business in the years 1936, 1937, and 1938?

A. I don't believe Perfex was soliciting our business back in 1936 and possibly not in '37. It was either in '37 or '38, I think that Perfex came out with their controls.

Q. And did they solicit your business?

A. Oh yes.

Q. And who called on you from that company?

A. Well we had field men call, I don't remember just who they were but in 1936 the President of the company, Mr. Julius Luthe, called on us personally.

Q. Did you buy any controls from the Mercoid, from the Perfex Corporation?

A. Yes we bought some; in fact we made a contract with them and I believe agreed to standardize on their controls.

802 We had a very favorable price and the test that we had made on their constant ignition controls, seemed quite satisfactory, I mean the tests we had made in our laboratory. So we made a contract with them and we bought some controls, I think possibly, oh not many more than a hundred, there may have been two hundred, but we ran into trouble in the field immediately and—

Q. What year was it that you were going to standardize on Perfex controls?

A. I think I have it here, the contract is here unless you have it. Well that would be in the year 1939, it was in 1938 that we had the negotiations, we bought some controls from them in '38 and it was in 1939 that we made the contract.

Q. Did you plan on standardizing on Perfex controls prior to the time that you standardized on Minneapolis-Honeywell controls for the gun type burner?

A. Prior to the time that we planned on standardizing?

Q. Prior to the time that you actually standardized on Minneapolis-Honeywell controls?

A. On the gun type burner?

Q. Yes.

A. Yes.

Q. So that in order to get this sequence of control companies straight, you first standardized on Mercoid controls, that is in about 1935 and 1936, correct, on the gun type
803 burner?

A. On the gun type burner, yes.

Q. And then you bought controls from Perfex and planned on standardizing Perfex controls?

A. Yes.

Q. Now why was it that you left Perfex and then standardized on Minneapolis-Honeywell controls?

A. Because of the trouble we had with the Perfex controls, we were quite sincere when we made the deal with Perfex and it was our intention to use those controls as standard. As a matter of fact, their control, if it had been satisfactory on one, would have been satisfactory on both. The trouble we had with it was apparent in both types, they had both an intermittent or rotary control and pressure type.

Q. So that when you left Mercoid you left Mercoid in favor of Perfex, correct?

A. On the gun type burner, yes.

Q. And you had trouble with Perfex and you then went to Minneapolis-Honeywell controls, correct, on the gun type burner?

A. Well we went to the Minneapolis, what you might call standard, the way we have been using that term, after we came out with our model S burner. Earlier in the year when we were using the Perfex controls we were using
804 them on our model G or model H burner, and when we left the Perfex there, we continued on with Mercoid until we switched over to Minneapolis when the model S burner came out.

Q. Well the reason for not continuing with Perfex was because of the troubles that you had in the field, is that correct?

A. Yes we had to. I think, as near as I know, there was one hundred per cent of them replaced in the field.

Q. And your controls that you purchased from Perfex were much cheaper than those that you bought from Minneapolis-Honeywell?

A. They were cheaper than any of them.

Mr. Haycraft: That we were—

The Witness: They were the cheapest control we bought, cheaper than Mercoid.

By Mr. Freeman:

Q. And you wanted to buy Perfex if they did the job because of the savings your company could effect?

A. Yes, and we had confidence in them. It was a new company and new control but the man who designed it, we had dealt with him for years, Mr. Cunningham was an engineer for Minneapolis Company and had designed the other controls, so we probably had a little more confidence than we would have had in somebody that we didn't know.

805 Q. And the price was right?

A. The price was low so we thought the control probably was all right.

Q. And when you did standardize on Minneapolis-Honeywell controls afterwards, you paid Minneapolis-Honeywell a higher price than you paid for the Mercoid controls, and likewise a higher price than you paid for Perfex controls, is that right?

A. Oh we have always paid more for Minneapolis controls.

Q. Well why does your company pay more for Minneapolis-Honeywell controls than it had to pay for other controls?

A. Well probably the easiest answer I can give you is to say that we have always sought to have one type of control to be used all the way through and Minneapolis was the only place that you could get one control that would handle all of our burners.

Q. When you say "one type of control," you mean satisfactory control?

A. Yes I mean one company that made a control suitable for each of our burners.

Q. And Mercoid didn't have a suitable control for your rotary burner?

A. That's right.

Q. Up until about 1941?

A. That's right. I think that Minneapolis would

806 have had a hard time getting in at that time if Mercoid had brought their control out a year before.

Q. Minneapolis-Honeywell does make a good control, does it not?

A. Yes I think they do. I might add to that that so do Mercoid.

Q. I notice in one of the agreements that you had with Minneapolis-Honeywell there is some reference to season's requirements, did that mean to you that you couldn't buy controls from any other company?

A. No I don't think so.

Trial Examiner Sheppard: Tell us what you think that meant?

The Witness: We used to make contracts that—way back some years ago, all our contracts were written that way. It simply meant that probably there was agent's agreements between the company and the salesman that we were going to use those controls and standard, as we have been using the term standard here. That is, that we would put those controls on our burners as the standard controls unless the buyer specified another make. We never have refused to furnish other standard makes of controls. I don't mean standard, I mean recognized makes of controls. For instance, such as Mercoid, or Penn, or Perfex. We would have furnished people, any of those controls, if
807 the customer insisted on them we'd furnish them.

Q. Your 1938 Minneapolis-Honeywell agreement referred to season's requirements, but as a matter of fact you standardized on Mercoid controls on the gun type burner that year, is that correct?

A. Yes, as far as we're concerned, the sense of that, the meaning of that was merely what we need from you, that's what it meant to us.

Q. So that I definitely understand that—

A. Here's what we'll pay for what we buy from you, what we need of your stuff this year.

Q. So that "season's requirements" meant to you and your company that you would buy Minneapolis-Honeywell controls from the Minneapolis-Honeywell Company?

A. At these prices.

Q. And that meant further, whatever controls you needed of Minneapolis-Honeywell manufacture, you'd buy from Minneapolis-Honeywell?

A. I don't quite—

Q. Let me ask that over again, whatever Minneapolis-Honeywell controls you required, you'd buy from the Minneapolis-Honeywell Company?

A. Surely.

Trial Examiner Sheppard: Here's what I want you to

answer for me, Mr. O'Brien, in a contract containing
808 those words, would you feel free to buy controls from other concerns?

The Witness: Quite, and feel that we were entirely living up to our understanding. That it was the perfectly proper thing to do. I don't think that Minneapolis ever kidded themselves or Mercoid either, that when we made a contract of that kind that they were getting all of our business to the exclusion of everything else, never.

Trial Examiner Sheppard: In other words, those words mean to you or rather don't mean to you that you bought a hundred per cent of your requirements from them?

The Witness: No.

Trial Examiner Sheppard: You felt free to go outside in the market if you wanted to and buy controls from Perfex or any of these other makes?

The Witness: We did, we felt free to, and we did.

Trial Examiner Sheppard: As a matter of fact, did you do that?

The Witness: We did, yes.

Trial Examiner Sheppard: What year did you do that?

The Witness: All years.

Trial Examiner Sheppard: Nothwithstanding the
809 fact that those words were in your contract with the Minneapolis-Honeywell?

The Witness: Yes, all years. The fact of the matter is that that's been my experience over a period of twenty years in the business, with the Silent Automatic Corporation in Detroit. They were one of the largest manufacturers in the business at that time. We made contracts like this but we never interpreted them any differently. We used Mercoid over there on a certain number of our burners, even at a time when we considered that Minneapolis was standard.

By Mr. Freeman:

Q. Do you know whether or not the Mercoid Corporation knew that if anyone ordered a burner with Mercoid controls on, that you would furnish that burner with Mercoid controls on it?

A. Do they know that?

Q. Did they know that?

A. Oh yes, they knew it and it's been confirmed. I have some letters here that confirmed that. I wrote to them and told them just that. They have reports different times.

from their field men to the effect that certain customers wanted to use their controls but Cleveland wouldn't give them to them and Jimmy Owens has written to us on that subject, and we have told him every time that there's
810 no such case, any time your customer wants Mercoid controls he can have them.

Q. You refer to some correspondence, do you have that here?

Mr. Haycraft: Object to it, Mr. Commissioner, and improper cross-examination.

Trial Examiner Sheppard: Mr. Freeman, I think the witness has made that plain enough, I'm not interested enough in the special correspondence on that.

Mr. Freeman: Well might I see the correspondence anyway?

Trial Examiner Sheppard: Yes you can look at it. I'm trying to keep the Exhibits down.

Mr. Freeman: I won't put it in, I'd like to see it.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

Mr. Freeman: Mark this letter Respondent's Exhibit 9-A, and this letter as 9-B.

(The papers referred to were marked Respondent's Exhibits 9-A and 9-B for identification.)

Mr. Freeman: We offer these in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: Objected to as irrelevant and immaterial and not proper cross-examination.
811

Trial Examiner Sheppard: Well we'll let them go in for the information contained in them.

Mr. Freeman: Respondent's Exhibit 9-B is the letter from Mercoid dated December 8th, 1939, to J. L. O'Brien of the Cleveland Products Company, and Exhibit 9-A is the letter from J. L. O'Brien to J. W. Owens of the Mercoid Corporation dated December 14th, 1939.

(The papers referred to, heretofore marked for identification RESPONDENT'S EXHIBITS 9-A and 9-B, were received in evidence.)

By Mr. Freeman:

Q. You sold gun type burners to Westinghouse, and I now ask you whose controls did you use on those burners as standard?

A. Minneapolis.

Q. Did Westinghouse have anything to do with designating the particular control or controls to be used on the burners that it bought from you?

A. They indicated the controls they wanted.

Q. And whose controls did they indicate?

A. Minneapolis.

Q. Did you offer to sell Westinghouse oil burners with Mercoid controls on at less money than what you would sell oil burners to Westinghouse with Minneapolis-Honey-
812 well control on?

A. Yes we did.

Q. And Westinghouse still insisted on Minneapolis-Honeywell controls even though you were going to charge more for the burners?

A. Yes.

Q. And do you remember how much more you were going to charge Westinghouse for your oil burner equipped with Minneapolis-Honeywell controls?

A. Well I think that we agreed to handle either type of control or either make of control on the same basis and that was ten per cent markup on our cost. In other words, we would charge them ten per cent more in either case so that the cost to Minneapolis—I mean to Westinghouse, would be $3.00, or whatever the difference was that we paid, plus ten per cent.

Q. And in each case I understand Minneapolis-Honeywell's prices were higher?

A. Yes that's correct.

Trial Examiner Sheppard: Mr. O'Brien, you are doing war work now?

The Witness: Yes, a hundred per cent.

Trial Examiner Sheppard: Well that's the reason I have told these gentlemen that I'm letting certain matters come out with you now that would rightly come out on the
813 other side of the case, just so we won't have to bother you any more. I know how busy you are now.

The Witness: Yes, I appreciate that, now it would be a hardship to have to go again.

By Mr. Freeman:

Q. Do you happen to have the answer received from Minneapolis-Honeywell, in reply to the Commissioner's Exhibit 107-C or is that Commissioner's Exhibit 108, is that the answer?

A. Yes that's the answer. We had a little controversy,

a little understanding between John Pauling and Mr. Smith on price. This was a special control that they made for us as I told you, it was a burner-mounted control and they had to make a special case for it for us and we had the die for making that case, you see this is the transformer and this is the control (indicating).

Q. Referring to Respondent's Exhibit 6?

A. One side is the transformer, the other side is the control and we wanted to match that up for balance, symmetrical balance of the burner. So we made this cover for them and it was Mr. Smith's understanding that they were going to buy that from us and pay us for it but it was John Pauling's understanding that we were going to make it and pay for it ourselves. So Art Lockroe was the referee and he decided in favor of Mr. Pauling so we paid for it.

814 Q. So as a matter of fact, Minneapolis-Honeywell gave you no concession because of that particular part which your company made?

A. I wouldn't think so.

Q. Since the Perfex Company came into the control business have you been solicited regularly by that company? That is each year for your business?

A. No, they dropped us like a hot potato since this thing. Oh they came in a few times right shortly after we stopped buying from them, but since then they haven't, I don't think they have anything to sell us in fact.

Q. And have you been solicited regularly since you have been connected with Cleveland Steel Products Company by the Mercoid Corporation?

A. Oh, yes, they call on us regularly.

Q. And have you been solicited by the Penn Electric Switch Company for your control business?

A. Yes, they call on us, not very often. They don't push it very hard; they haven't got much to sell us either. They know we're not at all favorable to their particular design of control, and that I'm not particularly, and I think they feel the same way about Mr. Smith. It's courtesy calls, occasionally they come in.

Q. And you bought some limit controls from the Spencer Thermostat people, correct?

815 A. Yes, back some years ago, six or eight years ago we bought them from Spencer.

Q. And you likewise bought some limit controls from the Bishop and Babcock Company of Cleveland, correct?

A. Yes, bought lots of them.

Q. Did you say you bought a lot of them?

A. We bought a lot of them, this same smart salesmen that sold these last contracts, McGoldrick, he was in both places, he's a pretty good salesman I guess.

Q. Did you ever have Spencer thermostat solicit your business for thermostats?

A. Oh yes, yes, McGoldrick tried very, very hard to get us to use the thermostat, and we looked quite favorably on it too, eye appeal particularly, Mr. Smith is very long on the eye appeal, the artistic touch, and he felt that that thermostat, and we came pretty close to using it. I don't know just how it did get sidetracked but there was a time it looked as though we were going to use it.

Q. Were you faced with competition from the Timken people on its rotary burner wherein it used a constant level control?

A. Well they use a constant level control on all burners.

Q. Well in the form of a safety device?

A. Oh you're referring to the control with the constant level built right in?

Q. That's right.

816 A. The control burner mounted, the constant level valve the same as they use on the pot type burners.

Q. Yes.

A. Oh yes, sure.

Q. And in the Timken case, that particular oil level device was used to prevent the abnormal flow of oil when something went wrong with the burner, is that correct?

A. Yes.

Q. And used in substantially the same way as a primary control used on your gun type burner?

A. Yes, has a trip-bucket safety, if the oil isn't consumed, it comes back and operates a trip bucket.

Q. So that if no combustion occurs in both cases, the burner goes to safety?

A. Yes, that's right, yes.

Q. And did you have to compete with that type of device as made and sold by Timken?

A. Sure did.

Q. And what did you do to meet that kind of competition, did you do anything special? Did you ever consider using an oil level safety device yourself?

A. Yes.

Q. What did you actually do to meet that kind of competition?

A. Well when you say "what did we actually do," you mean what did we ever get into production and sell the field?

817 Q. Yes.

A. No, we never did, we worked on that type of control. The fact of the matter is, we're still working on it.

Q. Wasn't the S type of burner directed to help meet that kind of general competition?

A. Well now you're going back to the—you were talking about the—

Q. Gun type?

A. You were talking about the rotary wall flame previously. On the gun type burner we used a burner mounted control but it doesn't operate at all on the principle of the trip-bucket.

Q. Well sofar as—

A. It's the same principle as the old stack mounted control, I mean it's the same general principle of operation.

Q. But so far as providing heat, they operated substantially the same to produce heat?

Mr. Haycraft: Object to that, Mr. Examiner, as going too far afield. There are a lot of things furnish heat.

Trial Examiner Sheppard: I'll let you finish that answer but I don't want that pursued. I think it's sort of intangible and we're not interested in it. You complete your answer on that.

The Witness: The answer was yes.

818 Mr. Freeman: I think he said yes.

By Mr. Freeman:

Q. In your experience do you ever use a Minneapolis-Honeywell primary with someone else's thermostat?

A. Yes, I have seen it done with our equipment. We have also objected to it and it's never done with our consent. We won't ship that way.

Q. Why not?

A. Well we don't feel that the Minneapolis circuit should be mixed up with the other types of thermostat, the Minneapolis thermostat has a special cooperative coordinating function with primary control, whereas the other types of thermostats are just a make and break and

it doesn't fit in, doesn't coordinate with the Minneapolis series 10 circuit.

Q. Now do you consider the Minneapolis,Honeywell thermostat and Minneapolis-Honeywell primary as coordinating one with the other?

Mr. Haycraft: I'm objecting to all these things as leading questions, Mr. Examiner, it's entirely outside of the direct examination and has nothing to do with it, and if he's making him his witness that's objected to as leading. Let the witness do the testifying.

Trial Examiner Sheppard: Well they're leading questions, but as I told you in the beginning of this case
819 I don't always object to leading questions, you get a direct answer, so I don't mind that.

A. Did I consider that the thermostat had a coordinating function?

Q. With the primary control?

A. With the Minneapolis series?

Q. Yes.

A. Decidedly so.

Q. And in order to get functional operation of the Minneapolis-Honeywell primary, it is necessary to use Minneapolis-Honeywell thermostat, is that correct?

A. Yes, I believe so. In the hands of the average fellow in the field I don't think it's safe. A serviceman or an installer who has had good experience may hook them up and make them operate perfectly but when we sell stuff, when we match up controls and send it out of our place we have to figure that it's going to work in the hands of the dumbest fellow that's ever going to get it. If it works in the hands of the dumbest fellow then we know it's going to work all right for the other fellows sake.

Q. And you do that for safety's sake?

A. For safety, and to cut our own cost because it keeps backing up to us if we have trouble in the field, especially in the case of these dumb dealers, the service comes back in our laps.

820 Q. And when you connect up proper controls, proper thermostat with proper primary, the chances of being called upon to render service are reduced to a minimum, is that correct?

A. Yes, and there's another side to it, if we have trouble in the field we're mixing up controls, there may

be something wrong with the primary control, maybe something wrong with the thermostat, but if we went to Minneapolis or went to Mercoid or any of them and mixed up their controls, that's not our system, that's a system of our own. In other words, Minneapolis are not going to take responsibility for the proper operation of a control set that's split up in two or three pieces, neither are Mercoid. So we believe that aside—with the limit control I don't think so much of it because, as I said earlier today, that's merely a switch in the line, it's a safety switch in the line that makes and breaks the line. It hasn't any direct connection with the on and off operation of the burner, it simply says that if there's too much pressure, too much heat, then Mr. thermostat "you can't function. I'm going to cut you out for awhile." So we never were concerned about limit controls, but we have always been particular about—

Q. The thermostats and primaries?

A. Yes.

Trial Examiner Sheppard: That's the important 821 thing in the lineup.

The Witness: That's the very important thing, yes.

Trial Examiner Sheppard: All right, go ahead, Mr. Haycraft:

Redirect Examination by Mr. Haycraft.

Q. You have been asked a great many questions about the so-called pot type burner. A pot type burner does not utilize the temperature controls, such as you use on your gun type burner or your rotary type burners, does it?

A. Precisely the same.

Q. Well for instance, do you use a limit control?

A. Oh yes.

Q. Do you use a primary control?

A. Yes indeed.

Q. Well what is the difference then? You have testified that there was a difference, that they were not handled the same. What is the difference between the two in the control?

A. No difference.

Q. Between the pot type burner and your gun type burner?

A. Well now wait a minute. He was referring to a spe-

cial application of Timken but if you're referring now to pot types in general, as I understand it, we have talked
822 about pot types in general. Now the controls used with the general pot type burner such as the Marr that was specifically referred to, that's precisely the same control, adopted in exactly the same way, functions in exactly the same way.

Q. Well what's the difference then between the two controls, between the two burners; what is a pot type burner?

A. Well, a pot type burner is just what the name says, the burner in a pot, there's a cast iron pot and the flame goes down and burns out of that cast iron pot.

Trial Examiner Sheppard: I get the idea, it's a cheaper thing.

The Witness: Yes, yes it's a cheaper burner. There are different types of pot type burners. For instance, go back to the oldest burner, domestic burner, we have a no-coal pot type burner; now that's not at all like the pot type burner of the Marr. The no-coal pot type burner was in principle more like a gun type burner but it operated, in fact, like one of these nebulizers or atomizers.

By Mr. Haycraft:

Q. Well what is it that makes the—breaks the oil up and sprays it so it can burn in the pot type?

A. Well in the one case, if you go back to the no-coal—

Q. No, I'm talking about in your cross-examination—

823 Mr. Freeman (interposing): Modern type.

The Witness: Modern type? It's atomization—I mean vaporization by heat.

By Mr. Haycraft:

Q. Well where is the oil that's heated?

A. The hot—I mean the oil is dripped in to the pot and it starts—it's a regular smudgepot until it heats up and as it heats up it gasifies the oil so that there isn't enough oxygen down in that pot to burn down there any more and it lifts up and burns up off the top of the pot from vaporization.

Q. Well as I understand your testimony, the same protector relay, a Minneapolis-Honeywell protector relay is used in a pot type burner?

A. Precisely.

Q. And the same way with thermostat and limit control?

A. Precisely. The thermostat is up on the wall to turn on the burner and your relay is up in the stack to control the operation of that burner and your limit control is on the boiler or the heater to control the temperature and pressure just exactly the same.

Q. What is it that controls the oil that goes to the burner?

A. With the pot type burner.

Q. Yes. Solenoid valve like that which would be used on a rotary wall flame burner. When the thermostat
824 calls for heat it opens up this solenoid valve and allows the oil to drip in there by gravity, drips in to the floor of this pot. There's a little pilot in there and that lights this oil down on the floor of the pot and it burns with a smudgy smoky fire for a little while until it builds up enough temperature to gasify that oil, then you get what they call hydroxilation, you get a mixture that's too rich to burn down so it lifts up and burns off the top or from the top of the pot. It's vaporizing, that is the theory of it, it's vaporizing, the same principle as the other old hot plate burner where they drip the oil off on to a big plate and it heated the plate up. It's vaporization.

Q. What type of burner does the A. B. C. put out?

A. The A. B. C. build a high-speed rotary and a gun or pressure type. Their high-speed rotary differs from the wall flame type in that the speed of the head is so great that it breaks the oil down so that it leaves the lip of the cup in about the same state that the oil would be when it's pushed through a nozzle by pressure. In other words, if you start an A. B. C. burner up and you don't have any pilot to light it, you'd see that oil, instead of going out here and hitting the wall like it does with a wall flame, it will float, there will be a regular fog in the air. Well that burns right from the head. In other words, it's a sus-
pension flame again, the difference between a wall
825 flame and gun type is one is a suspension flame and the other is a gaseous flame.

Q. Now you were asked on cross-examination about these contracts that have the phrase "Seasonable requirements" that you had by seasonable requirements from Minneapolis-Honeywell controls other than from the manufacturers?

A. You couldn't buy them anywhere that I know of, at least we wouldn't.

Q. Well is there any place on the market that they are for sale?

A. Oh they have jobbers, I guess, if we wanted to go and pay a jobbers price for them I suppose we could buy them from a jobber but I don't know any reason why we'd do it.

Q. Cost you a lot more?

A. Cost us a lot more money. That doesn't necessarily mean that, it merely means that for our seasons requirements we're going to pay that much.

Q. Do you recall that in 1937 that the "seasons requirements" were stricken out and "a thousand sets" were inserted, do you know why?

A. I saw that and I haven't the slighest idea why it was changed unless it may have been along about that time that they started the bracket business, I wouldn't be sure about that.

Q. Well during 1939 and 1940 and 1941 you standardized on Minneapolis-Honeywell controls for all your burners, did you not? 826

A. Yes.

Q. Gun type and rotary type?

A. Yes we standardized on them.

Q. And during those three years did you buy Mercoid controls for any of your burners that were not specified by the dealer that he wanted Mercoid controls?

A. Did we use any?

Q. Yes, did you buy from Mercoid and install on your burners any Mercoid controls that were not specified by the purchasers?

A. Well that's rather an involved question. You say did we buy them?

Q. Well take out the "buy", did you use—

A. Yes I'd rather say use. We may have had them in stock and shipped out, I wouldn't think so unless it may have been that we were out of controls at sometime. But when we set up our standard burner, it's set up for specific controls on our sheets and we order out one G-60 burner for instance, that calls for certain equipment.

Q. Well the only way that you would use a Mercoid control after April, 1939, was to be where a dealer specified that?

A. Yes that's generally so.

Q. And the only time that you would buy a Mercoid
827 control would be to install it under the same situation, that is where a dealer requested it and you didn't have any other on hand?

A. Yes, your'e saying that was our practice?

Q. Yes.

A. There was nothing, no reason why we had to do that, but that's what we did, is that what you mean?

Q. I'm asking you what you did during those three years, 1939, 1940, and 1941.

A. Yes that's what we did, by choice we did.

Mr. Haycraft: That's all.

828 Trial Examiner Sheppard: Any recross examination?

Mr. Freeman: Yes.

Recross Examination by Mr. Freeman.

Q. Did Minneapolis-Honeywell in any way insist on your using, that is on your company using Minneapolis-Honeywell controls as standard?

A. Insist?

Q. Yes.

A. I'd like to know how they could insist on what we use standard. No, they never did. How could they insist on what we used?

Trial Examiner Sheppard: Don't ask the attorney questions, just answer his questions. You are here to answer his questions.

The Witness: All right. No, they did not.

By Mr. Freeman:

Q. And your choice of Minneapolis-Honeywell controls was of your own volition? That is you did that voluntarily?

A. Yes, yes, I should say so.

Mr. Freeman: That's all.

829 *Redirect Examination by Mr. Haycraft.*

Q. Did you know at the time that the price that Minneapolis-Honeywell made you in April 1939, when you standardized on Minneapolis-Honeywell controls, was lower than competitors buying in equal quantities could buy?

A. I don't know how I could compare them, because there wasn't anybody else buying the same controls. We were the only company that was buying that control from them. They didn't make the control for anybody else, so how could I compare them?

Q. You mean that control couldn't be used on any other burner?

A. No.

Q. How could you use a Mercoid on that burner then?

A. We didn't use a Mercoid on it; we never used anything but—when we started over, what we call standard again with the Minneapolis is when we came out with the Model S burner, and that's when they brought out the special control for us.

Q. Is that the only burner you made from that time on?

A. No, oh no.

Q. Well what percentage of your business was the Model S as compared with other types, rotary or gun type burners?

830 A. Oh it was way in the majority. The fact is—

Q. (Interposing) On those others?

A. The others were on their way out; when we made the Model S our intention was, and still is, to wipe out the other completely and to make just the one burner.

Q. Well could you use a Mercoid control on your Model S?

A. No.

Q. So that a customer couldn't get a Mercoid control on a Model S if he wanted it?

A. No; well no, I wouldn't say that; he could, he'd have to mount it himself, the same as they used to; he'd have to mount it up in the stack. There's nothing to prevent him from taking a Mercoid control and mounting it in the stack.

Q. Well let's see; what did you do; did you ever sell a Model S burner with a Mercoid control?

A. No, no.

Q. So that after April, 1939, the great bulk of your business was on Model S controls?

Mr. Freeman: Burners.

By Mr. Haycraft:

Q. Yes, burners, and equipped with Minneapolis-Honeywell controls?

A. That's right.

Q. You couldn't use a Perfex control on that burn-
831 er, could you?

A. No, no, that was designed for that particular application.

Q. Well on those burners that were not Model S one of your old G type burners, was it?

A. Yes.

Q. After April, 1939, did you continue to use Mercoid controls standard, or did you standardize on Minneapolis-Honeywell on those controls?

A. We standardized on Minneapolis; used them on everything.

Q. So that if the customer or dealer wanted a G type burner, he could; you would equip that Mercoid control?

A. Oh yes, sure.

Q. And if—

A. (Interposing) And as I said, we'd give him the other if he wanted to pay the price for it, we'd give it to him.

Q. What do you mean "wanted to pay the price"?

A. Well we have got the control, one control already on the burner, and if he wanted to use a Mercoid and put it up in the stack, this would be just excess baggage.

Q. He wouldn't need it, in other words?

A. No, it wouldn't have any function at all.

Q. Wouldn't be practical?

A. He'd just have to go around it, that's all.

832 Q. What price did you sell your old G type? Did you sell it at the same price as the Model S or higher price?

A. Oh higher price.

Q. What price did you get for your G type?

A. What year?

Q. 1939, 40, and 41?

A. 1939 I think the G was $72.50, wasn't it, or higher.

Q. Do you have anything you can refer to there?

A. No I haven't got any price list with me.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

The Witness: Well of course there again you mean the sheet price which was $79.50. Well $72.50 is probably as close as we could come to the price.

By Mr. Haycraft:

Q. In 19— well do you have any figures or can you tell from the figures you have there, the percentage or the proportion of your sales in '39 that were the G type and the percentage which were the S type?

A. No I can't.

Q. Either '39, '40, or '41?

A. No, I can't, they are all together.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

833 Trial Examiner Sheppard: On the record. Mr. Haycraft, if you want that, you can have him look it up and give it to us.

Mr. Haycraft: Will you look that up and give it to us?

A. Yes, and G and H.

Trial Examiner Sheppard: You write me a letter Mr. O'Brien and I'll put it in the record as an exhibit, and either one of these gentlemen can use it.

Recross Examination by Mr. Freeman.

Q. I think maybe I can straighten it out. Mr. O'Brien, isn't it a fact that when you came out with your Model S burner, your Model G burner was then going to become obsolete?

A. That's right.

Q. So that then any overlap of the sales of the Model S with the Model G was only the ending of the Model G and the beginning of the Model S business?

A. Yes, that would be particularly true with Westinghouse. You see Westinghouse decided to go out of the oil burner business. They were using the Model G and there was some question in their mind as to whether they would switch over. They liked the Model G burner as to its performance. Dealers liked it, and they thought that 834 probably there'd be an advantage in their not having a burner that was a Chinese copy of ours; that every time somebody saw that, they said "that's a Toridheet," and so we may have continued, but as it worked out, they quit the business, so the Model G burner was definitely on the way out.

Q. And as the Model G went out with its price of around seventy or $72.00 and a half, you came on the market with a lower price burner, which is now illustrated in Respondent's Exhibit 6, your burner, Model S, is that correct?

A. Yes. That was definitely Mr. Smith's idea when we made this burner, that there wasn't any excuse for any other burner. This is the best burner we know how to build, so why build another one.

Q. And it was the cheapest burner you ever sold?

A. It's the cheapest burner we ever made before, and it is the best burner, and he didn't want to have the thing standing out as a cheap model of Toridheet. It was the best Toridheet there is.

Q. And it became your standard burner?

A. That's right.

Q. All right.

Trial Examiner Sheppard: And that is on the increase, as I understand it, and the Model G is on the decrease?

The Witness: G is out. We won't build any more
835 Model G until we get rid of the G's we have in stock.

Mr. Freeman: I wonder if you still want that letter with this explanation?

Mr. Haycraft: I do, yes.

Trial Examiner Sheppard: All right, then send it to me.

Mr. Freeman: When you put it in, put it in in our presence so we have the right to object to it.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record. Mr. O'Brien, I want to state to you that the Exhibits that Mr. Haycraft has introduced into the record today, which are your originals, he will have them photostated and returned to you, the originals which he has used this morning.

The Witness: All right.

Trial Examiner Sheppard: All right; thank you very much for coming out.

Mr. Gilpatric: The Respondent would like to have two photostatic copies of each of the exhibits to which the Examiner has made reference, and the exhibits offered by the Respondent, except Respondent's Exhibit 6, as introduced today.

Trial Examiner Sheppard: Off the record.

836 (Discussion off the record.)

Trial Examiner Sheppard: On the record. Gentlemen, just come to order a minute.

Mr. Haycraft: That concludes the taking of the testimony in Cleveland, Mr. Examiner, and I ask that we take an adjournment to convene in New York City on the 16th at 10 A. M.

Trial Examiner Sheppard: All right. In view of what Mr. Haycraft says, the Examiner thought we were going to have another witness here, but if not, okay, and we will adjourn to meet in Room 500, 45 Broadway, New York City, September 16th, 1943, at 10 o'clock in the morning. We stand adjourned.

(Whereupon, at 2:50 o'clock p. m. of Tuesday, September 14, 1943, the hearing in the above-entitled matter was adjourned.)

837

Room 505,
45 Broadway,
New York, N. Y.,
Thursday, September 16, 1943.

Met, pursuant to adjournment at 10:00 a. m. E. W. T.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Esq., Attorney for the Federal Trade Commission.

Cravath, de Gersdorff, Swaine & Wood, by R. L. Gilpatric, Esq., and B. R. Shute, Esq., 15 Broad Street, New York, N. Y., and Bair & Freeman, by Will Freeman, Esq., 135 South LaSalle Street, Chicago, Illinois, appearing for the Respondent.

838

Proceedings.

Trial Examiner Sheppard: We will convene the hearing in the Minneapolis-Honeywell Case, Docket No. 4920.

Let the record show the appearances of counsel for the Federal Trade Commission and for the Respondent.

Mr. Haycraft: I will call Mr. Max.

CHARLES A. MAX was thereupon called as a witness for the Commission, and having been first duly sworn, testified as follows:

Trial Examiner Sheppard: Give me your name, please, Mr. Max.

The Witness: Charles A. Max.

Trial Examiner Sheppard: And your address?
The Witness: 54 Webster Street, Irvington, N. J.
Trial Examiner Sheppard: All right, Mr. Haycraft.

Direct Examination by Mr. Haycraft.

Q. What is your occupation, Mr. Max?
A. Petroleum distributor and oil burner installation work.
Q. How long have you been in that business?
A. 13 years.
Q. Where do you conduct your business?
A. 178 Coyt Street, Irvington.
Q. And before that you were in Newark?
839 A. That is right, Jellief Avenue, Newark.
Q. How far do you do business? Where are your customers?
A. Mainly in Essex County, Hudson County and the immediate counties surrounding Essex and Hudson.
Mr. Freeman: What state?
The Witness: New Jersey.

By Mr. Haycraft:

Q. How long have you been handling oil burners?
A. A matter of seven or eight years.
Q. And when you first started to handle oil burners what make of oil burners did you handle?
A. The Herco Burner.
Q. Where was that manufactured?
A. In Lancaster, Pa.
Q. What is the name of the company that manufactured it?
A. The Herco Company.
Q. Did the burners that you bought at that time come equipped with temperature controls as a part of the equipment of the burner?
A. It came equipped with three controls.
Q. What were the controls?
A. The relay, thermostat and pressure control.
Q. The relay you refer to is the relay sometimes known as a primary control?
A. I think you can refer to it as that.
840 Q. And the pressure control?
A. Pressure control and rheostat.
Q. Is that known as the limit control?

A. I don't know what you call it.
Q. What you call it is a pressure control?
A. Pressure control.
Q. Where was it attached? What function did it perform?
A. To regulate the pressure of the burner. When the pressure hit what the burner was set for the pressure was cut off, otherwise the thing would climb up indefinitely.
Q. The relay control where was it attached to the burner?
A. Usually on the stack, smokepipe.
Q. And the thermostat in the room?
A. That is right.
Q. Did you install those burners with furnaces?
A. Yes, sir.
Q. What make or what manufacture of temperature controls were attached to the burners which you bought from the Herco Company?
A. Minneapolis Honeywell was what I always called for.
Q. And you always got what you asked for?
A. I always got what I asked for.
Q. Did they sell any other types?
Mr. Freeman: To whom do you refer to when you say they?
841 Mr. Haycraft: The Herco.
A. Yes, they did.
Q. What other type did they handle?
A. They handled the Mercoid.
Q. You could have either one but you preferred the Minneapolis Honeywell?
A. That is right.
Q. How long did you buy burners and temperature controls from the Herco Company?
A. A couple years, two years.
Q. Do you remember what price you paid for the burners equipped with the controls?
A. It was around $71 or $72 and then there is a freight item of about $3.00 etc. on a burner, which brought it up around $75.
Q. Then you started to buy from Quiet Heet Mfg. Co. Do you remember when it was that you started to buy from Quiet Heet Manufacturing Company?
A. About five years ago.
Q. That would be about 1936? About then?
A. 1938, 1939.

Q. Do you remember what you paid for the Quiet Heet oil burner equipped with Minneapolis-Honeywell Temperature Control?

A. I would say approximately $65.00.

842 Q. Did you buy them for any less since that period of time from 1939 or 1938?

A. Buy them for any less than that?

Q. In the Quiet Heet?

A. About that price, probably about that price.

Q. Would that include standard temperature controls?

A. The same controls, the same three controls.

Mr. Haycraft: Will you mark these for identification?

(The documents referred to were marked Commission's Exhibits 120, 121, 122, and 123 for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit 120 for identification which purports to be an original invoice of the Quiet-Heet Mfg. Corp., dated January 30, 1942, to the Power-Oil Refining Company, and ask if you identify that as an invoice of a Quiet-Heet oil burner?

A. Yes.

Mr. Gilpatric: We concede that as to its authenticity.

A. (Continued) This is a receipt of the Quiet Heet Oil Burner.

Q. I show you Commission's Exhibit 121, which purports to be an invoice of the Quiet-Heet Mfg. Corp., dated August 6, 1942, and ask if that covers the purchase of

843 two Quiet-Heet oil burners?

A. Yes.

Q. I show you Commission's Exhibit 122 for identification purporting to be an invoice of the Quiet-Heet Mfg. Corp., dated September 8, 1942, covering 3 T111's and ask you whether or not that is an invoice for three clock thermostats?

A. That is right.

Q. I show you Commission's Exhibit 123 for identification purporting to be an invoice of the Quiet-Heet Mfg. Corp., dated October 7, 1942, which contains two items of T111, and ask you whether or not that is an invoice of two clock thermostats?

A. That is right.

Mr. Haycraft: I offer these invoices in evidence.

Trial Examiner Sheppard: Is there any objection?

Mr. Gilpatric: No objection.

Trial Examiner Sheppard: Let Exhibits 120 to 123 inclusive be accepted.

(The documents referred to heretofore marked for identification COMMISSION'S EXHIBITS 120, 121, 122 and 123, were received in evidence.)

By Mr. Haycraft:

Q. Now referring to Commission's Exhibit 120, I notice that the item is "G" with a number following, "pump
844 1 R117, 1 T 111, 1 P 404, and 1 C 402". Can you tell us what those various items are?

A. Well that was one of the biggest jobs that Quiet-Heet made and the 117 is the relay, the T111 is the chronotherm, and the 404 is the pressuretrol, and the 402 was the low water cut off, I believe, if I am not mistaken.

Q. What was the price of the burner separate from the control, do you recall?

A. Well, that is all one. They have a fixed price now of $146.

Q. You don't know how to break that down?

A. No, I would not know.

Q. Commission's Exhibit 121 calls for two items of BD, then some figure after it, a pump and 2 R117, 2T 111, and 2 P404, and the price is $65.15. Will you describe the equipment on the burner and the type of burner?

A. Well there are two burners there.

Q. What type of burner were they? Were they large, small or what?

A. They would be the smaller size probably with a special motor on, a special pump on there and 2 117 relays and 2 111 thermostats and 2 pressuretrols.

Q. What was the special pump which you had on there?

A. I usually get a two-stage instead of one-stage. I think there was a dollar or two dollar charge on it more. It is a little stronger pump.

845 Q. Now referring to Commission's Exhibit 122, that calls for three T 111. That is the clock thermostat?

A. That is right.

Q. And the price is $43.95, is that what you paid for the three?

A. Yes.

Q. And the same on Commission's Exhibit 123, there are two T111 and the rate there is $19.50 or a total of $39.00, is that correct?

A. Correct.

Q. These invoices are for 1942. About how many burners did you handle in previous years, say beginning with 1938-9?

A. I used to average about 40 or 50 a year.

Q. And that was about what you were averaging when you were buying from Herco also?

A. Yes.

Q. Did you go to the Quiet-Heet plant and get the burners and the controls, or did they deliver them to you?

A. No, we picked everything up at the Quiet-Heet plant. It was convenient.

Q. What sort of service did you get from the Quiet-Heet Mfg. Company on them?

A. We did not require any service. We bought and paid for burners and that was the end of the deal, but if there is ever any question of a control not being right, Min-
846 neapolis made good for their controls for a period of a year, and if there was any question on the burner itself Quiet-Heet would always make good for it.

Q. What other parts did the burner have besides controls?

A. It had a Webster pump on it, or a pump on it, or transformer on it, and those could, would—

Q. Who made the adjustments on them?

A. Either Quiet-Heet would make good for the pump or I would take it over to Certified Fuel. They are an agent for the Webster people and they corrected it there. It was within the first year.

Q. How about the transformer?

A. The transformer, I never had one go bad, so I would never know.

Q. Do you know who made them?

A. Jefferson or Webster.

Q. Was that Quiet-Heet burner an assembly job as it is known?

A. An assembled job.

Trial Examiner Sheppard: Just what do you mean by "assembly"?

The Witness: In other words, the parts were bought from other companies. I think the only thing belonging to the Quiet-Heet was the housings, the casing.

Trial Examiner Sheppard: You say you bought the thermostat from one concern?

847 The Witness: All controls are Minneapolis controls.

Trial Examiner Sheppard: All controls are Minneapolis controls?

The Witness: Yes.

By Mr. Haycraft:

Q. And they came with the burner?

A. They came with the burner.

Trial Examiner Sheppard: I see.

Mr. Haycraft: That is all.

Trial Examiner Sheppard: Cross-examine.

Cross-Examination by Mr. Gilpatric.

Q. Why did you prefer the Minneapolis controls to Mercoid controls when you were buying burners from Herco?

A. Why? Somehow I always liked Minneapolis. I don't know why, but in doing business with the Minneapolis Control Company I could always call upon their field man, Mr. Jensen. He always came out and assisted me in getting the proper controls for jobs if I ever had any trouble on a job there. My service men and other service men could not find the trouble if it was one of the controls. Mr. Jensen would come out and somehow in jig time he always remedied the condition, so I always favored Minneapolis. Also for servicing parts they were convenient. I would mail a package over in New York and in several days had the control back.

848 If the control was bought within a year they always sent another control and made good for it. They were very reliable and I always favored them for this reason.

Q. Had you ever had experience in other burners equipped with other controls?

A. I never take them.

Q. You spoke of a clock thermostat with which some of your burners, that is, Quiet-Heet's, became equipped with. The clock part is not a standard item, is it?

A. That is part of the chronotherm.

Q. You pay extra for the clock on the thermostat?

A. The clock is part of the thermostat. They call that the chronotherm.

Q. But you paid more for that than you did for the ordinary thermostat?

A. Yes.

Q. That clock is an additional feature of convenience for the users, is it not?

A. Right.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

You call yourself a dealer, don't you?

The Witness: Yes, sir.

By Mr. Gilpatric:

849 Q. Just to clear up this point that Mr. Peters has mentioned to me off the record, the standard form of thermostat was a T11?

A. It was a chronotherm or T11.

Q. And the other item, the chronotherm was not the standard type; you could order that if you wanted that?

A. That is right.

Q. Mr. Max, why did you shift in purchasing oil burners from Herco to Quiet-Heet in 1938 or '39?

A. About that time they had a strike. The truckmen had a strike. All the parts from Herco were brought in by truck and it was in the fall of the year I needed some controls. I chased out once. It is a matter of about a return trip of 250 miles. I brought in six controls.

The strike lasted for several weeks and I realized the inconvenience of going out of town for burners. I realized Quiet-Heet was local and any time I needed anything I could go right down there. So I decided I would change. It was like a stockroom, Quiet-Heet. You can go down there to get anything at any time, to get anything you needed.

Mr. Gilpatric: That is all.

Redirect Examination by Mr. Haycraft.

Q. You could get a lower price?

A. I was not so much concerned with that.

850 Q. Answer my question?

A. The price on the burner was lower, yes.

Mr. Haycraft: That is all.

Trial Examiner Sheppard: Thank you, Mr. Max.

(Witness excused.)

Trial Examiner Sheppard: Show a recess for ten minutes, Mr. Reporter.

(A ten-minute recess was taken.)

Trial Examiner Sheppard: On the record.

Mr. Haycraft: I will call Mr. Peters.

SAMUEL LOUIS PETERS was thereupon called as a witness for the Commission and, having been first duly sworn testified as follows:

Trial Examiner Sheppard: The witness's name is Samuel Louis Peters, 135 New Jersey Railroad Avenue, Newark, N. J.

Direct Examination by Mr. Haycraft.

Q. What is your occupation, Mr. Peters?
A. Manufacturer of oil burners.
Q. How long have you been engaged in the manufacture of oil burners?
A. Since 1936.
Q. What name do you give to your burner?
851 A. Quiet-Heet.
Q. Before that what did you do?
A. I was an oil burner dealer and refrigeration dealer.
Q. Located where?
A. I was located in Newark for about a year and one-half to two years prior to 1936 and in Baltimore, Maryland, for about four or five years prior to that.
Q. Engaged in that same business in Baltimore?
A. Engaged in the same business.
Q. What line of oil burners did you handle when you were a dealer?
A. Williams Oilomatic, Carter Korth, but our business then was predominantly refrigeration. Oil burners played a small part.
Q. This Quiet-Heet name was it one that originated with you in 1936 or was it one that was used before?
A. No, I originated it.
Q. When you first engaged in the business of manufacturing oil burners did you manufacture them yourself or did you have them manufactured for you by someone else?
A. Well, for a short while I purchased oil burners that carried my label from other manufacturers.
Q. And from whom did you purchase them?
A. They called themselves the Korth Oil Burner Corporation, and in fact there were others; Mohawk Oil
852 Burner I think was the other name.
That was before I became a manufacturer.
Q. In other words, they manufactured them for you?

A. That is right.

Q. Was that in 1935 or 1936?

A. It would be around that time, prior to 1936 I believe.

Q. In manufacturing your oil burner, Quiet-Heet, what are the various parts that go into it to make up an oil burner and where do you get them?

A. Well, there are pumps that we purchase from either Webster, Sunstrand, Tuttle. Fred Tuttle is another name, and there are various other makes. Then the motors, those we get either from G. E., Westinghouse, Delco, Wagner, a number of other manufacturers. I have so many that it is too numerous to mention.

The transformers we get from Webster, Super or other sources and the automatic controls from the Minneapolis-Honeywell, or Mercoid. We use very few of any other make.

Q. When you first started out in 1936 what controls did you put on your oil burners?

A. The first purchase that I made was from Mercoid, a very small quantity. I think it was about a dozen sets or so, and I followed it very shortly thereafter by a purchase from Minneapolis-Honeywell of about an equal amount.

Q. Did you standardize on either one of those?

853 A. No, we never did.

Q. During, say the year 1937, from whom did you purchase most of the controls that you put on your burners?

A. Minneapolis-Honeywell.

Q. How many burners did you manufacture and sell during that year 1937?

A. I think the figure was 7500.

Q. That is your recollection?

A. That is my recollection.

Q. How many did you manufacture and sell in 1938?

A. About 10,000.

Q. 1939?

A. 15,000.

Mr. Freeman: 15,000?

The Witness: Yes.

Q. 1940?

A. About 24,000.

Q. 1941?

A. About 25,000.

Q. At the time that you started buying Mercoid controls and from Minneapolis-Honeywell, was there any difference in the price of temperature controls?

A. Very little.

Q. Do you have any invoices for those earlier years that you referred to that will give us the exact prices?

854 A. I have all the invoices but not with me. I have the last several years with me.

Q. What is the earliest year that you have?

A. I have 1941 and 1942 here.

Q. Well, what were you paying for thermostats, limit controls and primary controls purchased from Mercoid in 1941?

A. I have to refer to the invoices.

Q. Will you refer to them?

A. Here is a file of typical prices. I will vouch for the contents of those. They are exactly—

Mr. Freeman: Mr. Peters, you have no objection to our likewise looking at the files?

The Witness: Not in the slightest.

Mr. Freeman: At these documents you just handed the Commission's attorney?

The Witness: No.

Mr. Haycraft: You had better get your 1942 out for Mercoid.

The Witness: 1942 Mercoid, yes. (Witness examines a box of papers.) You don't have the '42 in there, Mr. Haycraft, do you? I don't see them here.

Mr. Haycraft: That may be in here. We have not looked through all of them.

By Mr. Haycraft:

Q. I will ask you to refresh your recollection from 855 these invoices which you produced here, and testify as to the prices paid for the various items that you purchased and put on your burners, describing the items and their use, as you go along.

Trial Examiner Sheppard: Take them up one at a time.

A. Yes.

Q. What month is that?

A. I have an invoice dated January 10, 1941, numbered 1948, that refers to 25 JM Pyratherms, 115 volts, 60 cycle, each at $7.75, total amount $193.75; 27 Type H Sensatherms, range 55-85 degrees, $2.50 each.

Q. That is a thermostat, is it not?

A. That is a thermostat.

Q. The first one you mentioned, the Pyratherm, is the primary control?

A. Right.

Q. Go ahead.

A. 5 DA 31 Steam Controls, range No. 1 0-14 pounds, $2.75 each, total $13.75; 20 M 51 Warm Air Controls, range 50-500, degree limit, $3.25, $65 total; total amount of invoice $340.

So far as I know this is exactly the price we paid for this and this invoice is correct.

Q. And the DA 31 and M51 are limit controls, two different types of limit controls?

856 A. Yes.

Q. What is the DA 31?

A. The DA 31 is marked "Steam Control" so obviously it is a steam limit control, and the M 51 is marked "Warm Air Control", so it is a warm air control.

Q. Will you glance through the other invoices and see if there are any changes for the various items or other items?

A. There are other items.

Q. Just hit the other items. If the same price prevailed throughout the year there is no use repeating it. If there is any change in the price or other items, just indicate it?

A. Here is an item marked M 80 Com. F and L control, range 50 to 300 degree, with summer switch and flat flange 61-85. Those were $14.70 a set. This appears on the invoice—

Q. What is included in the set?

A. Well, I think they are controls as a set. Oh, there is on here a flange for mounting it, just mounting attachments.

Q. I see.

A. Mounting attachments come with every control.

Q. Go ahead.

A. The invoice is No. 21209 and the date is July 16, 1941.

Q. Those are the prices for Mercoid. Will you refer to your invoices with Minneapolis-Honeywell during 1941 for comparable controls?

Trial Examiner Sheppard: I suppose the record 857 shows that those are Mercoid?

Mr. Haycraft: Those are Mercoid, and they were in large quantities; there were 25, etc., as he indicated.

Trial Examiner Sheppard: All right.

A. Here is an invoice from the Minneapolis-Honeywell, No. 20747-1, dated 5/13/41, showing the following prices: R 132, A 1K relays, $455; T44, $270; T45, $270; T42, $425; D11, $9.25; T109, $6.35.

Q. You have not indicated what these various things are? What is that 1 T 109?

A. If you wish it, T indicates thermostats, the letter "L" indicates limit controls and the "R's" indicate primary controls.

Q. Relays are the same as primary controls?

A. That is right.

Q. R 132 that you just mentioned in there, is that a primary control?

A. It is a primary but only half a primary. You have got to get something to add to it to make a whole control out of it. LA 401, $5.25.

Q. That is a limit control?

A. Yes; L 147A-1, $6.95; L428, $5.85.

Trial Examiner Sheppard: Those are all in 1941?

The Witness: The date was 1941.

By Mr. Haycraft:

Q. See if there are any other items or changes of 858 price during the year?

A. This is invoice 22414, dated 4/23/41. L 408, $5.50; RA 117, $8.55.

Q. R 117?

A. RA 117; R 19, $3.80; R 132, $4.55; T 11, $2.70; T 44, $2.70; T 45, $2.70, T109, $6.35, P 404, $4.50.

I think these prices are typical. I might find an isolated price of some odd control.

Q. I notice you did not mention R 116. Did you buy any of them?

A. If we did I would have to go through all the invoices to find one of them.

Q. Do you have a copy of your contract here with you to see what your price would be?

A. Yes. What is that, '41?

Q. 1941.

A. Yes, $8.60; RA 116 protectorelay.

Q. That is five cents more than RA 117, is that right?

A. Yes.

Q. Will you indicate which one of the Mercoid controls

was comparable to the Minneapolis-Honeywell and used for the same purpose?

A. The RA 117 in Minneapolis-Honeywell and the JM Pyratherm in the Mercoid are both used for the same purpose, as a primary control.

859 The type H Sensatherm in Mercoid and the T111 Acratherm the T11 I mean, in Minneapolis-Honeywell are both thermostats that are used for practically the same purpose.

The P404 Pressuretrol of Minneapolis and the DA 31 Steam Controls in Mercoid are used for the same purpose.

This of course is a rough explanation because the electrical circuits on both sets of controls are different and their method of operation is different, but they serve the same purpose after the oil burner is installed.

Q. Do you have anything in the Minneapolis line that corresponds with the M 51?

A. Yes.

Q. What is it?

A. The M 51, that is their hot air control or hot water—

Q. Hot air?

A. Yes. The L-419 airstat in Minneapolis corresponds to M 51.

Q. Does Minneapolis have anything to correspond with M 80?

A. What is that?

Mr. Freeman: That is a combination limit switch.

A. (Continued) I don't remember Minneapolis' number on that. Did you call that a combination fan limit switch?

Mr. Freeman: Yes, Combination Fan Limit Switch.

A. (Continued) LA 401 in Minneapolis corresponds to M 80.

Q. What is the price of LA 401?

860 A. The price of the 401 is $5.25.

Q. In that M 80 set can you tell what is the price of the M 80, that is the switch and fan control? Combined you have $14.70 for the set. What is the separate price for the switch?

A. That corresponds to Minneapolis 401. From this invoice I can't tell but if I could find another invoice where they billed them separately, I then could tell. M 80, $4.75 each.

Q. The price of the M 80 switch and fan control, which

is comparable to Minneapolis LA 401 is priced at $4.70, is that right?

A. That is right, $4.75.

Q. Now I want to check again on M 51. The Mercoid 51 you have testified is $3.25 whereas the Minneapolis-Honeywell is $2.50 for the 419, is that right?

A. That is right, if that is what I testified to. It is right.

Q. What would be the comparable set price of your typical installation of a thermostat limit control and limit control on your oil burner, one purchased from Mercoid and the other from Minneapolis Honeywell?

A. I have to add it up, or the total of the three controls that I gave you.

Mr. Gilpatric: There are some invoices there.

Mr. Haycraft: I know there are various installations.

861 By Mr. Haycraft:

Q. Take your steam control, DA 1, or take one M 51 with the 409?

A. According to the Minneapolis-Honeywell Regulator contract dated December 15, 1941, the Acratherm is priced at $2.95.

Q. Those prices are for 1941. I want them for 1942.

A. As I said, that is for 1942.

Q. I want them comparable. Give us the 1941? I meant for the 1941.

A. Then this 1940 contract is for 1941. According to the Minneapolis-Honeywell Regulator contract dated December 10, 1940 and applying to 1941, the Acratherm is priced at $2.70; the Protectorelay at 8.55, and the Pressuretrol at $2.50, making a total of $13.75 for a set of controls.

Mercoid controls, according to invoice No. 6778, are priced at $7.75 for the Pyratherm; $2.70 for the Sensatherm. Those prices together were the price of their DA 31 steam control, which is $3.25, and totals—

Q. That is not the price you gave us before.

Mr. Freeman: The DA 31 was $2.75.

A. Oh, I am sorry. I got the wrong price. I looked at the wrong lines—$2.75—I looked at the M 51 here—as compared with the Mercoid price of $13.00.

Q. Will you make the same comparison using the hot air limit control instead of the steam?

862 A. How about me putting—

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

A. The Minneapolis-Honeywell Airstat 419B was $3.00. The Mercoid control for a similar application, called their M 51 Warm Air Control, was $3.25.

Q. So that would make comparable sets using $13.50 for the Mercoid and $14.25 for the Minneapolis-Honeywell?

A. That is correct.

Q. In your testimony a while ago you said that the L 419 was comparable to the M 51 of Mercoid? Do you want to correct that now and say that that was the long airstat T 419B? Is there a letter to it?

A. Yes, I guess I had better. You see the Mercoid line did not have comparable controls to the Minneapolis-Honeywell line all the way through.

Q. I know, but you did have 419B or long 419, which would correspond to Mercoid M 51?

A. That is true, but I did not recollect that at the time I said it.

Q. When did you first sign an agreement with the Minneapolis-Honeywell Regulator Company?

A. I would have to look up the date of the agreement in order to be able to tell. Unless I find the agreement
863 or Minneapolis-Honeywell will refresh my memory, I do not offhand remember what the first contract was, but I think it was some time in 1937.

Mr. Shute: January 1936.

By Mr. Haycraft:

Q. January 1936?

A. That was the date. Then you will accept that?

Mr. Freeman: We have not got the contract.

The Witness: I will accept that as probably so.

By Mr. Haycraft:

Q. And you have got a signed agreement or have you a signed agreement with them each year after that?

A. Yes, I have.

Q. And during that period of time have you also bought controls from the Mercoid Corporation?

A. That is correct.

Q. I show you Commission's Exhibit 3, which purports to be a photostatic copy of an agreement between Quiet-

Heet Mfg. Co. and Minneapolis-Honeywell dated January 27, 1938, and ask you if you recall that agreement?

A. Yes, I recall signing that agreement.

Q. That I notice is based on or rather it is an agreement to purchase during the life of the contract 7500 sets of the company's automatic temperature controls, each set consisting of one Thermostat, and one Limit Control and
864 one Primary Control. Do you know how that number of 7500 was determined?

A. Well, I think the 7500 sets were necessary to get into a certain bracket designation.

Q. Did it have anything to do with what you had sold in the previous year, 1937?

A. No, but we signed—

Q. I mean purchased.

A. (Continued) No, but we signed the contract and when I signed the contract they would only permit me to sign a contract for a reasonable amount based upon my sales of the previous year.

Q. And you testified, I think, that you sold about 7500 burners for 1937?

A. That is correct.

Q. So that was would you say then the basis of arriving at your 7500?

A. Well, I don't know how they arrived at the 7500 excepting that I thought I could sell that number of sets and that is the number I bought and that was the number that price bracket called for.

Q. And these represent the prices that you paid during that year?

A. That is true.

Q. During the year 1938 I think you testified that you sold approximately 10,000?

865 A. That is right.

Q. Did you get any retroactive reduction in your price for that year?

A. I don't recall the details but if the book records indicate it, I did. I don't remember.

Q. Was there any understanding if you obtained a different bracket during that year that you would be given a retroactive discount?

A. I think in that year something like that occurred, but then again I don't recall. Was it incorporated in the contract?

Q. There is nothing in the written contract.

A. Did I get a lower price later?

Trial Examiner Sheppard: Cannot you refresh his memory?

By Mr. Haycraft:

Q. The bracket that you were in in that year was Bracket 4, was it not, which extended from 7500 to 14999?

A. That was so.

Q. So that if you did not sell more than 10,000 you would not get any retroactive rebate?

A. That is right.

Q. Now in 1939, do you remember the quantity that you agreed to purchase that year?

A. If you will refresh my memory by letting me
866 look at the contract, I will certainly be able to answer you.

Q. I will refresh your recollection. Were you in Bracket 5, and was the quantity you agreed to purchase 10,000 and up?

A. Yes.

Q. In other words, there was a change in the bracket there?

Mr. Freeman: That is right. Commission's Exhibit 1, the stipulation, shows that change.

By Mr. Haycraft:

Q. Then in succeeding years, have you got your contract for 1941 with you? What does the agreement provide as to the quantity to be purchased?

A. The contract you mean dated '40?

Q. Yes.

A. January 4, 1941, that calls for 10,000 sets.

Q. And in 1941 you sold about 24,000. Was your bracket 5 the best bracket, or the lowest, of the largest discount that Minneapolis-Honeywell had to offer you?

A. That was the largest. I was not satisfied with it, but they claimed that they could not make a bracket for one customer regardless of how well entitled he was to it. I did not see the justice for this and I kept arguing with them for the last couple of years concerning that.

Q. At what price did you begin to sell your oil burners as they were equipped with Minneapolis-Honeywell
867 controls in the beginning of 1936-1937 and on down to the present time?

A. We started with a price of approximately $70. Of

course, that price varied with the type of equipment that went on it.

Q. Take the minimum equipment, that is, the ordinary one we have been talking about here with, we will say with R 117 and S11 and P404 or L419?

A. We started with about $70 and we tried to effect a reduction of approximately 10 per cent each year in the years that followed.

Q. Will you indicate what that would be in figures, from the $70 in 1936?

A. I will have to have my memory refreshed, what we actually did, to go over the details, but that is close.

Q. Do you have some invoices with you that you can refresh your recollection from?

A. Let me see if I can work it out with a pencil and paper.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

A. (Continued) As far as I can remember our prices were approximately $70 per burner in 1937; $65.00 in 1938; $60.00 in 1939; $55.00 in 1940; $50.00 in 1941, and about $45.00 in 1942.

Q. Well, to refresh your recollection a little bit—

Mr. Haycraft: Mark this for identification?

868 (The document referred to was marked Commission's Exhibit 124 for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit 124 for Identification and ask you whether or not you sent out that postal card to the trade?

A. I did.

Q. Does that indicate the price at which you were selling your burner at that time equipped with Minneapolis-Honeywell controls?

A. Our post cards which we sent out from time to time do not always reflect the standard price at which we sold merchandise. In some cases they referred to special models that we used to stimulate business.

Q. What does this particular one refer to, this particular card dated November 22, 1940?

A. That was our standard burner with standard equipment designed to stimulate business in an area where sales

were very low. It was addressed to the Topeka Oil Company, Topeka, Kansas.

You see, there were some areas in which we got practically no business. We would often have a special price in that area to see if we could open up an account.

Probably in this locality we never got anything to amount to anything but it was worthwhile to offer those dealers
869 that were there to induce them to get their business.

Q. And this price was for 1941?

A. No, our price was approximately—

Q. I say, on this special?

A. On this special card, yes. In other words, as I said, these cards don't necessarily reflect the actual price we got for merchandise for those years but to stimulate.

Q. What was that, a delivered price?

A. No price was delivered price and there were c. o. d. charges.

Mr. Haycraft: I offer this card in evidence.

Mr. Freeman: No objection.

Trial Examiner Sheppard: That will be received.

(The document referred to, heretofore, marked for identification COMMISSION'S EXHIBIT 124, was received in evidence.)

The Witness: This other card, this other one, I can make reference to. It was not a standard burner, just a special burner.

Mr. Haycraft: Just a minute.

Will you mark this for identification.

(The document referred to was marked Commission's Exhibit 125 for identification.)

By Mr. Haycraft:

Q. In your last answer you referred to, did you not,
870 Commission's Exhibit 125 for identification, which I now hand you?

A. Yes.

Q. You identify that as a circular sent out in the fall of 1937?

A. No, I can't identify that as a circular sent out unless it is addressed to a specific area with a postage stamp on it, so that I can tell whether it was actually sent out. You see it makes all the difference in the world where these things were sent to.

Q. You did send that out but you cannot tell when or where?

A. No, no, I can't tell you much about that unless there is an address and post mark. We printed it. It is our folder. I can't tell where it was sent to.

Q. Would you say that refreshes your recollection that during 1937 you made a special price on occasion in certain territory of $65 for a burner?

A. You don't know that this was printed. When did you say 1937?

Q. It was picked up in 1937.

A. And I say I don't either. I know we have not used this model in quite some time and I don't recollect any of the details connected with this particular one.

Q. Well, what is the lowest price at which you ever sold a burner equipped with Minneapolis-Honeywell stand-
871 ard controls during this period of time from 1937 to 1941?

A. About $40.

Q. And that was you say a special?

A. That was a special, designed to stimulate business under some conditions, or to meet a competitive condition where that existed.

Q. Was that price to a dealer or to a wholesaler?

A. No, well, sometimes a dealer could get a very low price by indicating that he could use a very large volume, but yet he would start out with samples. In other words, we could be misled into giving a dealer a low price.

The difference between a dealer and distributor was largely the amount of business they could do.

Q. What was your setup on that? What was your policy on that? What difference did you make in the price to your trade?

A. Well, there was about a 10 per cent difference in price between dealer and distributor, but since we had only one salesman on the road and he covered comparatively few of those accounts and most of our business was done by mail, it was very hard to determine the status of an account and to find out whether he did a strictly wholesale business or whether he did retail business, and often an out-of-town customer used to build us up to the extent
where we would be impressed with the volume he might
872 give us, and he turned out to be of very little consequence.

Q. What territory did your one salesman cover?

A. Well, he covered the entire country but of course you

can't cover it very intensively. He tried to hit the high spots.

Q. Who was your salesman?

A. My brother.

Q. Robert?

A. Robert.

Q. And did he travel by train or go by automobile?

A. Train, plane and car, and of course I insisted—

Q. Did he carry samples with him?

A. He had them shipped to the hotels in the various points generally and as a rule the dealers would come up or the distributors in the area would come up and view this exhibit and discuss prices, terms and the proposition with him, and he tried to pick the outstanding account in the area to make a deal with.

Of course, we were often mistaken. You know that is very hard to tell.

Q. Did you sell any to furnace manufacturers?

A. I suppose we had. Oh, yes, we had furnace manufacturers on our books.

Q. And how would their price compare with the price at which you sold dealers and wholesalers?

873 A. I don't know that we had any very successful furnace manufacturers or that we sold any very large volume to them. I could not answer that question without discussing the matter with my brother or someone that handled the sales, you know.

Q. You mean in detail?

A. In detail. I would just be guessing. I could give you a price but it would be just a guess.

Q. Do you remember whether you sold any to the Penn?

A. Yes, we did.

Q. Penn at Lancaster?

A. We sold them not a very large volume but I know we did business with them and if you can show me one of their invoices I will be glad to give you the price.

Mr. Haycraft: I offer Commission's Exhibit 125 for identification in evidence.

Mr. Freeman: No objection.

Trial Examiner Sheppard: Let Commission's Exhibit 125 be accepted.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT 125, was received in evidence.)

Mr. Haycraft: Will you mark these for identification?

(The documents referred to were marked Commission's Exhibits 126-A, 126-B, 126-C, 127-A, 127-B, 127-C, 874 127-D, 127-E, 127-F, 128-A, 128-B, 128-C, 128-D, 129-A, 129-B, 129-C, 130-A, 130-B, 130-C, 131-A, 131-B, 131-C, 131-D, for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit 126-A to C to 131-A to D, purporting to be invoices to the Penn Boiler and Mfg. Co., Lancaster, Pa., and ask you if you are able to refresh your recollection as to what price you received for your burners, the type of burners you sold?

A. These invoices are correct. Is that what you want?

Q. No, I want to know whether they refresh your recollection as to what price you received?

A. Well, they do in so far as the invoices are concerned.

Q. What prices did you receive?

A. I received $40 for a burner designated as a model C on February 17, 1940.

Q. Did it have any controls on it?

A. With three controls. This was not a standard burner.

Q. What was it, a smaller size?

A. Yes, a special.

On October 23, 1940, I sold the Penn Boiler and Mfg. Co., 2 BDQ, pump no test, 180, and 2 T45's at $41 each. There were only two controls with these burners instead of three.

Q. What one was left off?

A. The limit controls.

875 Q. How much more would it cost them to have a limit control on them?

A. On October 24, 1940, another invoice. This one with 3 controls, $43.50.

Q. That gives the answer.

A. I think our actual cost was deducted. Is that right we deducted our actual cost?

Here are 3 BDQ's on October 30, 1940 for $41 each.

Q. Was that about the price at which you usually sold to Penn?

A. No, this was considerably lower. This was one of the customers who gave us the impression it would be much larger than it actually did.

Q. Do you have any recollection what he actually did?

A. I can see from these invoices that he never was a sub-

stantial customer from the standpoint of volume. Of course we had the impression that his volume wase going to be much larger than it was in order to give him these prices. It never materialized.

Q. What was your policy with respect to the sale of controls separate from the burners?

A. Where the customer wanted controls for repair or replacement we always sold them to him.

Q. And at what price or what were the prices of the controls?

A. The existing prices on those items were 25 per
876 cent off to dealers and 25 and 25 off to jobbers but there were a great many controls where there was a very big difference between the list price and our net cost and in those cases competitive conditions made it necessary to sell the controls for better than the given discounts. On the other hand, there were some controls where if we gave the 25 and 25 discount to jobbers it might even be below our cost, so we had to alter that to meet general conditions.

Then every large account was under considerable pressure from our competitors to purchase and generally could buy controls at pretty close prices. Where we were reasonably certain that that was taking place we had to meet that price condition, so that we had a general policy but no specific one.

Q. Where a customer of yours, that is, one that bought burners from you, what did you usually charge him for extra controls?

A. At the very close to our cost price. We would add a little for our handling but as a rule we assumed that all controls that went with the burner were supplied the customer at practically cost.

Q. What about replacements?

A. Well, replacement parts were supposed to be governed by those discounts I just mentioned, but a customer was supplied or rather entitled to four controls with a burner. If he wanted them that was so, and in some
877 cases five, where he used an extra limit control. If he came in a few days later and wanted a control I could not very well charge him the regular discount because he could reason, "say, if I took that control last week I would have paid so much and so much so what difference does a week make?" Since that was generally reasonable and it only happened to the local customers incidentally who came

in themselves, we would probably give them the control at about the same price they would have paid for it if they had gotten it with the burner.

Mr. Haycraft: I think this will be a good place to take a recess.

Trial Examiner Sheppard: You are excused, Mr. Witness, until two o'clock, and we will now take a recess until that time.

(Whereupon, at 12:30 p. m., a recess was taken until 2 p. m. this day.)

878 Afternoon Session.

2:00 P. M.

Trial Examiner Sheppard: Get on the record and let us proceed.

SAMUEL LOUIS PETERS resumed the stand and testified further as follows:

Direct Examination (Continued) by Mr. Haycraft.

Q. Mr. Peters, are you in a position to testify as to the prices that you charged for oil burners and controls to the firm of Rubel and Jensen at Newark, N. J.?

A. Yes, that is one of the accounts you asked me to bring a file on and by looking at the file I think I can give it to you.

They were not a large customer and they did not buy very much, but I can give you what you want to know. Would you like a sample invoice or do you have some, or do you want to ask me some specific question?

Q. If you can refresh your recollection from what you have there that will save us putting the invoice in.

A. TL 111 they paid $19.50; A53 cost them $7.00 apiece.

Q. A53?

A. Yes.

Q. What is that?

879 A. It is a control that I have here. I am just reading from—

Q. What year is that?

A. In '42. I will have to get something older than that because they did not buy much in '42. Here is an invoice

dated 10/7/41 for 5 oil burners including all automatic controls plus extra controls plus chronotherms that they paid $302.20 for.

Q. How many controls?

A. This invoice called for five R117, only three T11, five P404, and 10 LI70 and two 111's with locking devices.

Q. And how many burners?

A. Five burners.

Q. Does the invoice itemize those?

A. No, the invoice totals the amount of $302.20, an average of about $60.00 a burner, but it included these extra controls.

Here are two Model E's we sold them that apparently only included six controls for $144.30, the invoice being dated 9/19/41.

Q. That was for a Model E?

A. It is a larger size. Here is one Model E $60.00, 8/21/41. I said E; I meant BD.

Q. Model BD, your standard model?

A. That is right. At the present it is but there were 880 times when it was not.

Here are five BD long hour stage pumps with 10 R117; four T11, 10 P404; 10 L170; six 11; six C402 for a total of $642.22.

Q. For how many burners?

A. Ten, but there were 34 nozzles on this which means they needed extra nozzles so that would change the price a little.

Q. That would run around $60?

A. Yes, but these were special controls and were not part of our regular setup. That is representative of the thing.

Q. Now will you also testify as to the sales of burners and controls to the Burns Supply Company, Long Island City?

A. The Burns Supply Company purchased from us on December 29, 1942, two L420AB at $6.47; two R132 at $5.07.

Q. What are those that you just mentioned?

A. Those are automatic controls. I don't really know their application myself.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

A. (Continued.) They were not much of a customer if I recall. They did very little business with us.

Q. Do you remember when you first started selling them?

A. We never did much with them. Their total business did not amount to anything.

881 Q. How about Rubel and Jensen? When did you start with them?

A. I gave you the '41 figures and the '42 figures.

Q. How far back have you got something?

A. I would just be guessing but probably we sold them for quite a number of years. They are also not a very big account.

Q. Will you testify as to the prices you received for burners and controls sold to the Petroleum Service Company, Providence, Rhode Island?

A. What was the name of that account that you mentioned?

Q. Petroleum Service.

A. That company I think was a customer of a distributor of ours. We did not handle them direct because there is no file on them, which means they were handled by the distributor.

Q. Southwark Plumbing and Heating and Supply Company, Philadelphia, Pa.?

A. Here is Southwark.

Q. What year?

A. This file starts with '41. Let us see where it runs to. This is the '41 file on Southwark. In an invoice dated December 23, 1941 I see eight burners complete with controls for $48.20.

Q. A piece?

A. A piece.

882 Q. Those were BD burners?

A. These are marked BA burners. During that period we had other burners that were special, something like that. They would have B basic as a designation but A to indicate something special. What the special about it was I don't recall now because it might have been something they specified.

Q. You say something about extra limit control there?

A. Yes, this seems to have immersion aquastats in it. Here is one BA at $51.50 on November 19, 1941.

Q. How was it equipped? What controls did it have?

A. It had a hot air control called L419, I don't know whether it was a long or short, a III and R 17. Now there

was some specials on that job with hot air draft and there was another special item on that.

Q. All included in the price?

A. All included in the price of $51.50.

Trial Examiner Sheppard: That was just one burner?

The Witness: Just one burner. That was fairly typical as I see here of those invoices.

By Mr. Haycraft:

Q. Was that a substantial customer? Did they buy substantial quantities?

A. You know of all the customers you asked me about there were no large ones included in your inquiries. When I talk about large customers I mean a customer that
883 buys a thousand burners a year or even 500.

These burner prices were all approximately the same as far as I can see.

Q. Were there any controls separate from the burners?

A. I am looking for that now. They bought additional controls but it was included in his burner bills. He bought them at the time he bought his burners mostly.

Q. Did you have any instances of that?

A. Here is an invoice dated January 9, 1941 in which he bought additional L170, ten of them.

Q. What is that, a relay?

A. No, that is an immersion aquastat.

Q. How much did he pay for it?

A. He paid 75 cents additional for them.

Q. Additional to what?

A. Additional cost instead of taking the regular limit control. That is about all I see in this file.

Q. The same question with respect to the Rackliffe Company, New Britain, Connecticut?

A. On March 18, 1941 he purchased three BD burners, got a quantity of extra nozzles in there I see. Oh, wait a minute. It is 132 classifications, 3 and 10, and he paid a total of $558.10 for them.

Q. Thirteen burners?

A. Yes.

884 Q. Were they all equipped with controls?

A. Yes. That seems to be his representative price for this stuff.

Q. Did you see any invoices of separate controls?

A. No, I don't have any invoices of separate controls there.

Q. The same question with respect to Metro Sales Company?

A. That is a customer that was handled in part by us and in part by the Boston distributor.

Q. Who was the Boston distributor?

A. That was this Winston that I was telling you about. When he left me as sales manager he became a distributor. He operated under the name of Quiet-Heet Company, Boston.

Trial Examiner Sheppard: He is not with you now?

The Witness: He is not. He is in a separate business. He left there when the oil burner business was finished.

Here is a shipment to him of burners with automatic controls. It consists of 41 oil burners and does not stipulate the controls, what he got with them, and totals $1508.

Here is a bill that might be controls though it does not say on the bills, 51 replacements for Quiet-Heet burners for $4.24 each. I don't know what items they were. They might be controls.

Here is another bill of a like character, replacement parts, that might be controls.

This is the '42 file I think because I know that cus-885 tomer was not handled by us prior to that period.

Q. You have not anything for 1941?

A. No. As a matter of fact, it was only after this fellow closed up shop, partially closed up shop, that we had this account.

Q. The same question with regard to the Tower Mfg. Company, Boston, Mass.?

A. For that customer the same thing holds true. We might have sold him a little stuff but he did practically all his business with our distributor in Boston. I have practically nothing in here except a little correspondence once in a while when he wrote us a letter.

Q. Have you any way of telling when you first sold these accounts that I have told you about?

A. Well, most of them we have sold over the last four or five years.

Q. The same question as to the Automatic Home Appliance Company, Jamaica, Long Island?

A. Here is an invoice 5/7/42 consisting of two burners with an assortment of automatic controls that are not stipulated, $109.80.

Here are five burners for $247.50, dated 5/18/42.

Q. Does it indicate what equipment it had, what the controls were?

A. Yes, it indicates 20 controls. In other words,
886 there were four controls to a burner. That is about all.

Q. Have you got any for 1941?

A. What is that?

Q. Do you have any information as to the sales in 1941? What you just gave are 1942.

A. I only have his '42 folder here.

Q. Is that all you have?

A. That is all I have, his '42 folder.

Q. All right. The same question with respect to the Bennett Oil Company in Brooklyn?

A. That was an account that was handled through our New York distributor. We did not handle that.

Q. Who was the New York distributor?

A. Silent Heat Company.

Q. Where are they located?

A. On Coney Island Avenue. They are still in business.

Q. The same question with respect to the West Hoboken Plumbing and Supply Company, Jersey City, N. J.?

A. He is our customer. On 12/6/41 he bought 1 oil burner with three automatic controls for $52.50, and 1 Model E for $75.45.

Q. The same year?

A. The same year, 9/18/41, and here are six T111 automatic controls that he paid $77.58 for.

Q. That is the chronotherm?

887 A. That is the chronotherm. The other bills are similar.

Q. You have other bills which are similar, with the same price?

A. The same price.

Q. The same question with regard to Paragon Oil Company, Brooklyn?

A. We never did business with that account. I don't know where you got the name. They are competing. We never had orders from them, never sold them anything. We never did any business with them.

Q. Neither you nor your supplier or distributors?

A. Well now, you are asking me something that I don't think I could answer very readily. I think it is very unlikely that any of my suppliers would do business with them because of the nature of their relations but they might have sent down to the Brooklyn distributor and got-

ten control parts now or then. We personally never did business with them.

Q. Where were the bulk of your sales made?

A. Our sales were made throughout the country. Our most successful areas consisted of Baltimore, Philadelphia, Boston, New York, New Jersey, the West Coast.

Q. You said you did some business on the Pacific Coast. Did you sell direct out there?

A. We sold direct out there.

Q. And was most of your business obtained through
888 the mail or by personal contact of your salesman?

A. I would say that most of our business was obtained through the adverse publicity that the trade papers gave us, emphasizing our very low prices which interested dealers to such an extent that their inquiries came in to see if it was actually possible that any manufacturer was selling at so low a price, and naturally that stimulated interest among all the dealers and we sent out considerable advertising and it probably amounted up to the same thing.

Q. About how much advertising budget did you have in the way of circulars and bulletins?

A. In dollars and cents it was very low actually. I could not give you the amount but if you send out 10,000 post cards the postage is easy to calculate and that includes the cards and the printing is a comparatively small item, so if you send them out every two months say, how much is 10,000 times one cent?

Q. What I am trying to get at is is that or was that the way you solicited?

A. Yes, that is the way.

Q. Sending out postal cards?

A. Of course, I and my brother contacted a large number of customers personally, especially the larger ones.

Q. And you did obtain some large accounts?

A. Yes.

889 Q. Will you name some of the larger accounts that you obtained?

A. Well, I would say the Hoffman Oil Company in Bridgeport, Connecticut; Hoffberger in Baltimore; Modern Oil Company of Philadelphia; Sunbeam Oil Burner Company in Seattle, Washington.

Trial Examiner Sheppard: Seattle?

The Witness: Seattle. Offhand I could not—

By Mr. Haycraft:

Q. Did you say you personally called on the trade yourself?

A. Yes, some part of it.

Q. Did you carry accounts with these people or were most of them c. o. d.?

A. All c. o. d.

Q. No open accounts?

A. None whatever.

Q. You named two distributors. Did you have any other distributors besides the ones that you named?

A. No, those were the two factory distributors that did the outstanding business. Of course there were a number of others but they were not in the same class. These people actually covered the entire areas mentioned, that is, the Boston area and vicinity, the New York area and vicinity.

Q. During the time, say from 1937 to 1941 or 1942, you did sell some burners equipped with Mercoid controls, is that true?

890 A. Yes.

Q. And where did you sell those?

A. The same areas, to anybody that wanted them or anybody that stipulated that they wanted Mercoid controls and to customers that Mercoid's representatives contacted and got requests from.

Q. Most of your advertising matter, however, featured the Minneapolis Honeywell controls as the equipment, did it not?

A. No, I would say that initially we started out complete with a set of controls. That was ambiguous and the dealers wanted to know what controls were being shipped and we decided most of our business was Minneapolis and that we furnished Minneapolis.

At one time our literature carried either Mercoid or Minneapolis, and most of the dealers knew they could get either one of the two makes because they were the two standard makes. The two pieces of literature you identified today, both of them indicate Minneapolis controls even to the type of control?

A. They were probably later pieces of literature when we found that the Mercoid control angle did not help there. Is that on there?

Q. Both of them feature the Minneapolis-Honeywell controls.

A. Well, we tried to sell Mercoid controls just as hard as we did the Minneapolis-Honeywell controls. As far
891 as we were concerned we would just as soon sell Mercoid as Minneapolis. The Mercoid is a very high class concern and nice people. I like to see them do business and do business with them, and I think I sold all the Mercoid controls I could whenever I possibly could.

Q. Well, did you feature any advertising matter such as Commission's Exhibits 124 and 125 in which you featured the Mercoid controls?

A. Yes, definitely.

Q. In what years did you do that?

A. I would have to look up some of my old literature and I think I could furnish it to you.

Q. Do you think you have some on hand?

A. I am sure I could find some that featured Mercoid controls.

Q. I noticed in—

A. (Continued.) I know definitely that we had one card out that we featured Mercoid controls exclusively and made no mention of Minneapolis.

Q. That is what I meant.

A. We had one card out that we made a special effort with to move Mercoid controls.

Q. Do you recall whether that was in 1939 or when?

A. I don't remember. I told them I wanted to give the largest possible volume and I wanted to do a 1,000 year.

892 Q. That was the year you did the thousand?

A. We were very anxious to move that thousand.

Q. The year 1939?

A. We always tried to fulfill our contracts. It looked a little difficult so we made a concerted effort to push Mercoid controls and we did manage to dispose of the thousand I think.

Mr. Haycraft: That is all, Mr. Examiner.

Trial Examiner Sheppard: Cross-examine.

Mr. Freeman: I would like to have a five-minute recess.

Trial Examiner Sheppard: Show a short recess.

(A short recess was taken.)

Trial Examiner Sheppard: On the record.

Mr. Haycraft: Mr. Examiner, I am asking at this time to withdraw Mr. Peters because I have a witness here from up in Connecticut and I would like to get through with him

this afternoon and let him get the train home. I don't think it will take very long.

Trial Examiner Sheppard: Mr. Peters can just stand aside for a while.

(Witness temporarily excused.)

Mr. Haycraft: I will call Mr. Gillis.

Trial Examiner Sheppard: Mr. Reporter and gentlemen, this is Mr. Herbert Gillis, Branford, Connecticut.

893 HERBERT GILLIS was thereupon called as a witness for the Commission and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Haycraft.

Q. What is your present occupation, Mr. Gillis?

A. I am with the War Production Board, Contract Specialist in the New Haven Office.

Q. How long have you been in that position?

A. Since December 2, 1942.

Q. Before that what did you do?

A. I was manager of the Oil Burner Department of the Malleable Iron Fittings Company in Branford, Connecticut.

Q. How long did you occupy that position?

A. Ten years.

Q. What business is that company engaged in?

A. Well, they had various businesses. The principal business was malleable iron fittings. They had a steel foundry where they make steel castings, malleable castings, brass and aluminum castings.

They had a pole hardware department in which they made hardware parts used on electric light poles, etc. and an oil burner department.

Q. How long have you been in the Oil Burner Department?

A. Ten years, I started with that.

894 Q. What were your duties there?

A. I had general control of the entire oil burner department, sales, manufacture, advertising, general manager of that department.

Q. Where did you sell your oil burners mostly?

A. Mostly in the New England and Middle Atlantic States.

Q. Under what brand name?

A. Branford Oil Burner.

Q. Where did you buy your controls, temperature controls used in the equipment on your oil burners?

A. Up until 1939 we bought them from Minneapolis-Honeywell Regulator Company exclusively. After that we bought them from Minneapolis-Honey and Mercoid.

Q. Can you testify as to the total number of oil burners you sold from the year 1937 through 1942?

A. I could not from memory but you have a memorandum there that I could testify to; to refresh my memory I had this report made out.

Mr. Freeman: You did not make the report yourself?

The Witness: No.

Mr. Freeman: And it was not made while you were with the company?

The Witness: No, that is right.

By Mr. Haycraft:

Q. Does it refresh your recollection?

895 A. Yes.

Q. All right, how many did you sell?

A. In 1937, 649; 1938, 517; 1939, 867; 1940, 1233; 1941, 1151 and in 1942, 396.

Q. While you were buying automatic temperature controls from the Minneapolis-Honeywell Regulator Company did you have a contract?

A. Yes, each year a contract was submitted which we signed.

Mr. Haycraft: Will you mark this for identification?

(The document referred to was marked Commission's Exhibit 132 for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit 132 for identification and ask you whether or not that is the contract which represents the agreement between the Minneapolis-Honeywell Regulator Company and the Malleable Iron Fittings Company for the year 1937, the contract being dated December 22, 1936?

A. That is right.

Q. Is that your signature?

A. That is my signature to the contract covering the 1937 requirements.

Mr. Haycraft: I offer that in evidence.

Trial Examiner Sheppard: Is there any objection?

Mr. Freeman: None.

896 Trial Examiner Sheppard: Let it be accepted.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT 132, was received in evidence.)

By Mr. Haycraft:

Q. I notice in Commission's Exhibit 132 that the fourth paragraph begins, "The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract Season's Requirements sets of the Company's automatic temperature controls, each set consisting of one Thermostat, and one Limit Control, and one Primary Control."

What is your interpretation of that phrase "Season's Requirements"?

A. Whatever we needed to supply all the oil burners we sold with Minneapolis-Honeywell controls. That means all oil burners were sold with controls. If we sold a thousand oil burners that meant we would use a thousand sets of controls.

Q. Did you buy them from Minneapolis-Honeywell?

A. Always up until 1939 we bought no other controls excepting Minneapolis-Honeywell.

Q. In other words, you carried out this agreement?

A. Yes, sir.

Q. This agreement also, as a part of this same paragraph, stated, "Because the Company's costs are

897-8 figured to cover a complete set of controls, and the following breakdown prices are purely for invoicing purposes, it is agreed that the Purchaser's yearly purchases will consist of at least 90% as many Room Thermostats and 100% (but at the Company's option not more than 125%) as many Limit Controls as Primary Controls."

Did you carry out that provision also?

A. Yes, we didn't sell them out of balance at all. We sold them as complete sets so that approximately the same number of each item was purchased.

Q. Did you purchase temperature controls from the Minneapolis-Honeywell Regulator Company during the year 1937 for the Malleable Iron Fittings Company at the prices indicated in this contract?

A. Yes, these were the prices and the invoices as they were received were always checked with the prices shown

on the contract and always agreed before the bill was passed.

Q. I notice at the bottom on the first sheet of this contract where there is reference to B6510 Immersion Aquastat and L416 Immersion Aquastat that some typewritten prices are blocked out and prices written in in pen and ink. Who wrote those prices?

A. They were written in by the Minneapolis-Honeywell. We didn't change anything on the contract after it was signed.

Q. During 1937 did you experience anything peculiar or out of the way in the way the competition in the sale
899 of oil burners in the territory in which you were selling oil burners?

A. Well—

Mr. Gilpatric: What year?

Mr. Haycraft: 1937.

A. (Continued.) There began to be a decrease in market prices that was very noticeable.

Q. Did you call that matter to the attention of the Minneapolis Honeywell Regulator Company in correspondence?

A. I don't think I did as early as 1937. I think I did in 1938.

Mr. Haycraft: Mark these for identification?

(The papers referred to were marked Commission's Exhibits 133, 134, 135, and 136 for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit 133, which purports to be a copy of a letter by Herbert Gillis, Manager Sales Promotion, Oil Burner Division, Malleable Iron Fittings Company, addressed to Minneapolis-Honeywell Regulator Company, New York City, attention Mr. Chapler, dated June 8, 1937, also Commission's Exhibit 134 for identification, purporting to be a carbon copy of a letter from yourself to Minneapolis-Honeywell, attention Mr. Chapler, dated June 23, 1937, Commission's Exhibit 135 for identification, purporting to be a carbon copy of a letter from yourself to Mr. Chapler, under date of December 22, 1937, and ask if you can identify those as carbon copies of original letters sent to Mr. Chapler on or about the
900 dates in those letters?

A. Yes, they are carbon copies of letters that I wrote the Minneapolis-Honeywell.

Q. And I show you Commission's Exhibit 136 for identification, which purports to be an original letter from Mr. Chapler to yourself under date of December 30, 1937, and ask if you received that in reply to your letter under date of December 22, 1937?

A. That is right. I received those letters.

Mr. Haycraft: I offer these in evidence.

Trial Examiner Shappard: Any objection?

Mr. Gilpatric: We want to look at them, Mr. Examiner.

Mr. Examiner, I would like to ask a question or two on voir dire examination.

Trial Examiner Sheppard: All right.

Voir Dire Examination by Mr. Gilpatric.

Q. Mr. Gillis, did you yourself take these letters from the files of the Malleable Iron Fittings Company?

A. No, I have not been there for six months.

Q. Where did these letters come from?

A. The man who was purchasing agent of Malleable Fittings Company took them from the files.

Mr. Haycraft: He is present in the Court Room and
901 if any further identification is necessary he can be interrogated.

By Mr. Gilpatric:

Q. I want to know who did the selecting and whether the files are here?

A. The complete files are here.

Q. Have you looked over the complete files yourself?

A. No, there is too much of it.

Q. Will the complete file be available to us to see the letters that fit in between the letters that have been offered?

A. Oh, yes.

Mr. Haycraft: They all fit in. They are all there on that subject. I will let you see them if you want to.

I might say, Mr. Examiner, that the correspondence of this firm was produced. Mr. Lang from the firm is here in the Court Room at this time and he produced them.

Mr. Gilpatric: On the understanding that we can see the other correspondence, we have no objection to Commission's Exhibits 133, 134 and 135. Of course we have no objection to the Minneapolis-Honeywell letter, Commission's Exhibit 136.

Mr. Haycraft: All this correspondence is between the

witness and the respondent, and certainly if there is anything else that bears on this subject that has not been
902 available now I will have no objection to that being offered in evidence, but that it all there is on this subject and available to me.

Mr. Gilpatric: The witness has testified that I can look at the other.

Mr. Haycraft: You have the other side of it in your possession.

Trial Examiner Sheppard: Let Exhibits 133 to 136 be accepted.

(The papers referred to, heretofore marked for identification COMMISSION'S EXHBITS 133, 134, 135 and 136, were received in evidence.)

Direct Examination (Continued) by Mr. Haycraft.

Q. Did you discuss the correspondence matter with Mr. Chapler in addition to the letters that you have written?

A. Yes, I discussed it with Mr. Chapler, Mr. Sweatt, Mr. Pawling—

Mr. Freeman: Which Mr. Sweatt?

The Witness: There is a letter I wrote to him. Do you want him by initials or description?

Mr. Freeman: Just so we know.

The Witness: H. W., that was the one. His initials slipped my memory. H. W. Sweatt, and John Feigenbaum, their Hartford representative, I discussed it
903 verbally with all of those gentlemen.

Mr. Haycraft: Mark these for identification?

(The papers referred to were marked Commission's Exhibits 137-A, 137-B, 138, 139, 140-A, 140-B, 140-C, 141 and 142 for identification.)

By Mr. Haycraft:

Q. Mr. Gillis, I show you Commission's Exhibits 137-A and B purporting to be a carbon copy of a letter from yourself to Mr. H. W. Sweatt, dated January 14, 1938, and ask you if you mailed the original of that letter to Mr. Sweatt on or about that date?

A. That is right. I wrote that letter.

Mr. Haycraft: I offer it in evidence.

By Mr. Haycraft:

Q. Did you mail it?

A. Oh, yes, it was mailed.

Q. I show you Commission's Exhibit 138 for identification which purports to be an original letter from Minneapolis-Honeywell to Malleable Iron dated February 24, 1938, and ask you if you can identify that letter?

A. Yes, that is right. That is an original letter which I received.

Q. I show you Commission's Exhibit 139 for identification purporting to be an original letter from Minneapolis-Honeywell signed by H. E. Chapler, addressed
904 to Malleable, to Mr. Gillis, dated June 11, 1937, apparently in response to your letter of June 8, 1938, Commission's Exhibit 133, and ask you if you received that original letter on or about that date?

A. That is right. This is a copy of a letter which I wrote and the original which I received.

Q. I show you Commission's Exhibit 140 for identification A, B and C, and ask you to identify it as a carbon copy of a letter you sent to Mr. Sweatt under date of October 28, 1938?

A. That is right, that is a carbon copy of a letter I wrote.

Q. I show you Commission's Exhibit 141 for identification and ask you if you can identify that as an original of a letter from Mr. W. L. Huff, Vice-President and Treasurer of Minneapolis-Honeywell, addressed to yourself and dated November 3, 1938, in response to your letter of October 28, 1938, Commission's Exhibits 140-A to C for identification?

A. That is right. I received that.

Q. I show you Commission's Exhibit 142 for identification and ask you if you can identify that as a carbon copy of a letter you sent and mailed to Mr. H. W. Sweatt, under date of November 4, 1938?

A. Yes, that is a copy of a letter I wrote.

Mr. Haycraft: I offer this correspondence in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Gilpatric: I have no objection to these letters.

905 Trial Examiner Sheppard: They will be admitted in the record as Commission's Exhibits 137 to 142 inclusive.

(The papers referred to, heretofore marked for identification COMMISSION'S EXHIBITS 137-A 137-B, 138, 139, 140-A, 140-B, 140-C, 141 and 142, were received in evidence.)

By Mr. Haycraft:

Q. I notice that this letter of November 4, 1938, in that letter you refer to a conversation of last night with Mr. H. W. Sweatt. Do you have a recollection of that conversation?

A. Yes. Mr. Sweatt and Mr. Chapler called in our office one evening just about closing time, about five o'clock, and I remember I stayed until six with them.

Mr. Sweatt, he had been making the rounds of manufacturers in New England and ours was the last one of the day and he kept me overtime.

Q. And what did you discuss at that time?

A. We discussed the subjects that were covered by the letter, the fact that our dealers can buy Minneapolis-Honeywell controls as cheaply as we can buy them from Minneapolis-Honeywell Company. We wanted that situation corrected.

Q. Did you make the suggestion to him verbally that you make in this letter on the last part of the letter in the third from the last paragraph?

A. Yes, I did.

906 Q. Did Mr. Sweatt have any comment with respect to that?

A. No, he was non-committal except, if, he said, there were any unethical practices going on he would see that they were stopped.

Q. Was there any further discussion with respect to this matter before 1939 when the new contract was entered into?

A. Well, all the discussion was in 1938 and before the time for the 1939 contract to be signed we notified them that, verbally, we would not commit ourselves to handling Minneapolis-Honeywell controls exclusively.

Q. When did you make that statement to them and to whom did you make it?

A. Feigenbaum and Chapler along around November 1938.

Mr. Haycraft: Mark this for identification?

(The paper referred to was marked Commission's Exhibit 148 for identification.)

The Witness: They were regular contact men of Minneapolis with us. Any other contacts we had with men like Mr. Sweatt or Mr. Pawling were on special matters.

By Mr. Haycraft:

Q. I show you Commission's Exhibit 143 for identification and ask you if that is the contract between Minneapolis-Honeywell and Malleable Iron Fittings Company for the year 1938, signed February 1, 1938?

A. Yes, that is the contract that I signed to cover 907 the 1938 requirements.

Q. And were the prices indicated on there, the typewritten ones, the prices which you paid for the controls purchased from Minneapolis-Honeywell Company during 1938?

A. Yes, all bills were checked against this contract we received.

Q. I notice pencil notations in the right hand column of the exhibit. Who put those on there?

A. I did. That was a comparison between the prices of this contract and the prices in the previous year's contract.

Q. The previous year's or succeeding year?

A. Succeeding year. Excuse me.

Q. They were not on the agreement when it was submitted to you for signature?

A. Oh, no, that is a lead pencil notation I put on the exhibit.

Mr. Haycraft: I offer the exhibit without the pencil notation.

Trial Examiner Sheppard: Any objection?

Mr. Gilpatric: No objection.

Trial Examiner Sheppard: Commission's Exhibit 143 is accepted.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT 143, was received in evidence.)

908 Mr. Haycraft: Mark this the next number?

(The document referred to was marked Commission's Exhibit 144 for identification.)

By Mr. Haycraft:

Q. Do you know what price brackets you were in in accordance with this?

A. In the third price bracket we were in.

Q. I show you Commission's Exhibit 144 for identification and ask you if you can identify that as a price list of the Malleable Iron Fittings Company of Branford, Connecticut, for the year 1938?

A. Yes, that is the price list we issued for 1938 on oil burners, parts and controls.

Q. The control prices being on the back sheet of the exhibit?

A. That is right.

Mr. Haycraft: I offer that in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Gilpatric: Mr. Gillis, on the back side of this Commission's Exhibit 144 there are some typewritten figures which have been typed in after the list of controls. Was that on the list as sent out to the trade?

The Witness: Yes, that same price list was used the previous year, but the price of controls had changed and the revised control prices were typed in in 1938.

Mr. Gilpatric: So that the—

909 The Witness: I don't recall offhand whether the prices were increased or decreased, but we sold the controls at the lists published by the control manufacturers.

Mr. Gilpatric: So that this price list was used for two years then, '37 and '38?

The Witness: That is right.

Mr. Gilpatric: No objection.

Trial Examiner Sheppard: Let Exhibit 144 be accepted.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT 144, was received in evidence.)

Mr. Haycraft: Mark these for identification?

(The documents referred to were marked Commission's Exhibits 145 and 146 for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit 145 for identification and ask you if you can identify that as a contract between the Minneapolis-Honeywell and the Malleable Iron Fittings Company for the year 1939, being signed by yourself on January 5, 1939?

A. Yes, that is my signature on that contract for 1939.

Q. I show you Commission's Exhibit 146 for identification and ask you if you received that original letter from Minneapolis-Honeywell Regulator Company, dated

910 January 9, 1939, and whether that accompanied the agreement which you just identified?

A. That is right.

Q. This is dated January 9, 1939, signed by Charles S. Hoyt of the Minneapolis-Honeywell Regulator Company.

Mr. Haycraft: I offer these in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Gilpatric: No objection.

Trial Examiner Sheppard: Let them be accepted.

(The documents referred to, heretofore marked for identification COMMISSION'S EXHIBITS 145 and 146, were received in evidence.)

By Mr. Haycraft:

Q. I notice in Commission's Exhibit 143, your 1938 agreement, that your contract provides for 1200 sets, whereas in the 1939 agreement, which you just identified as Commission's Exhibit 145, it only refers to 350 sets. What explanation do you have of that variation in the quantities?

A. Well, we had notified Minneapolis-Honeywell in the meantime that we did not intend to furnish their controls exclusively and that was the first contract that was offered to us after we had notified them to that effect.

The quantity was smaller and the discount was proportionately smaller.

Mr. Haycraft: Mark this the next number?

911 (The document referred to was marked Commission's Exhibit 147 for identification.)

By Mr. Haycraft:

Q. What bracket did this agreement put you in?

A. That would put us in the highest bracket.

Q. Bracket One?

A. Bracket No. 1.

Q. I now show you Commission's Exhibit 147 for identification and ask if you can identify that in any way?

A. Yes, that is a bulletin I sent to our dealer organization in 1939.

Mr. Gilpatric: What month?

The Witness: I don't recall exactly but I think it was October or November of 1939.

Mr. Haycraft: Mr. Examiner, this exhibit is the same as Commission's Exhibit 32 already in evidence.

To refresh the witness's recollection as to the time this was issued I call his attention to Commission's Exhibit 32-B and C.

By Mr. Haycraft:

Q. I call your attention to the fact that it was picked up by Minneapolis-Honeywell's man in March 1939. Would that refresh your recollection?

A. It was picked up very shortly after it was issued.

Q. So it was some time in March 1939?

912 A. February or March of 1939.

Mr. Haycraft: I will not offer that in evidence.

By Mr. Haycraft:

Q. What prompted you to write this bulletin, Mr. Gillis?

A. Well, our repeated endeavors to have Minneapolis-Honeywell correct the situation, which was to our disadvantage. They failed to do it after repeated requests and we decided that we would not handle their controls exclusively any more because when we tried to sell controls to our dealers they would tell us they could buy them as cheaply as we could and we notified Minneapolis-Honeywell that we were going to give our dealers the option of specifying Minneapolis-Honeywell or Mercoid. They could specify whichever they preferred.

Mr. Haycraft: Will you mark this the next number?

(The document referred to was marked Commission's Exhibit 148 for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit 148 for identification and ask you if you will identify that and ask you to tell us what, if anything, was done with it, and what you know about it?

A. That is our trade price list that was effective November 1, 1941, and superseded the one which I just a short time ago identified. It succeeded that one. It is a price list on oil burners, on oil burner parts and on oil burner controls.

913 Trial Examiner Sheppard: You circulated that to your dealers?

The Witness: To our dealers.

Mr. Haycraft: I offer that in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Freeman: No objection.

Trial Examiner Sheppard: Let it be accepted.

(The document referred to, heretofore marked for iden-

tification COMMISSION'S EXHIBIT 148, was received in evidence.)

Mr. Haycraft: Mark these the next numbers?

(The documents referred to were marked Commission's Exhibits 149 and 150 for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit 149 for identification and ask you whether you can identify that in any way, and what was ever done with it?

A. That was a contract which was submitted to us for signature in 1939 for 1940 controls' purchases which was never signed by us. Nothing was done with it.

Q. Did you discuss it with anyone in connection with Minneapolis-Honeywell?

A. Yes, I discussed it with Feigenbaum, the representative who contacted us, and told him that we would not sign a contract for controls in the first bracket.

914 Q. And was he the man that submitted the contract to you?

A. He used to deliver them personally to us and he did on that occasion.

Q. I show you Commission's Exhibit 150 for identification and ask you if you can identify that?

A. That is one that was submitted; when we told him we would not accept that proposition he submitted another one which gave us prices in the third bracket covering a larger quantity.

Mr. Haycraft: I offer the two exhibits in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Gilpatric: No objection.

Trial Examiner Sheppard: Let Exhibits 149 and 150 be accepted.

(The documents referred to, heretofore marked for identification COMMISSION'S EXHIBITS 149 and 150, were received in evidence.)

By Mr. Haycraft:

Q. Did you make any claim on the occasion of the signing of this agreement that you had sold as a matter of fact a thousand sets during the previous year or that you had a hold-over from the previous year?

A. I made no claims or no commitments.

Q. This Exhibit 150 puts you back in Bracket No. 3 basis, did it not?

915 A. That is right.

Q. And to correct your recollection on Exhibit 149, would that put you in Bracket No. 2 rather than No. 1 that you testified to?

A. Bracket No. 2, that put us in.

Q. That would also be true with respect to the other contract, Exhibit 145 for the 1939, that is, 350 sets also?

A. That would be in Bracket No. 2.

Q. I think you said Bracket No. 1 in your testimony a moment ago?

A. No. 2.

Mr. Haycraft: Mark this the next number?

(The document referred to was marked Commission's Exhibit 151 for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit 151 for identification and ask you if you can identify that as the Minneapolis-Honeywell agreement for the year 1941 with the Malleable Iron Fittings Company?

A. That is right.

Q. What are the pen notations on the first page, the first and third columns, those two columns?

A. On November 15 of 1941 Minneapolis-Honeywell changed their price list. The pen notations are the new list prices and the new net prices at the same discounts.

916 Q. Did you put those on there?

A. That is my handwriting.

Mr. Haycraft: I offer that in evidence subject to correction.

Trial Examiner Sheppard: Any objection?

Mr. Freeman: No objection.

Trial Examiner Sheppard: Let it be accepted as Exhibit 151.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT 151, was received in evidence.)

By Mr. Haycraft:

Q. Since February 1939 have you been selling your burners equipped with Mercoid and Minneapolis-Honeywell controls?

A. At the option of the dealer, yes.

Q. At the option of your customers?

A. That is right.

Q. And how have those controls been sold? Have you sold more with Minneapolis-Honeywell or more with Mercoid?

A. I think we sold more Mercoid than we did Minneapolis-Honeywell. There was a $2.00 price difference to us in cost and we passed that $2.00 difference along to the customer. For instance, he could buy a burner with Mercoid controls $2.00 cheaper than with Minneapolis-Honeywell controls.

Q. How long have you done that?

917 A. For 1939, 1940 and 1941.

Q. In your experience were you able to use the Mercoid controls on the same burners that already had Minneapolis-Honeywell controls on them?

A. No, it required an alteration in the wiring if they had previously had Minneapolis-Honeywell controls. It required a rewiring to adapt the Mercoid controls.

Q. Was that ever done in your experience?

A. In a small number of cases, not many, because that would be necessary only where controls had to be replaced because of wearing out or some other cause which necessitated replacement.

No different treatment was necessary when they were installed new with a new burner.

Mr. Haycraft: You may cross-examine.

Cross-Examination by Mr. Gilpatric.

Q. Mr. Gillis, you testified I believe that you started in as manager of the oil burner sales for Malleable Iron Fittings about 1932?

A. That is right, 1932 or '33.

Q. Was your company then buying controls from Minneapolis-Honeywell?

A. They were.

Q. And it continued through the period up until 1939?

918 A. They never used any other from the time they started which was, oh, probably 1925, somewhere along in there, and they purchased Minneapolis-Honeywell controls exclusively until 1939.

Q. Do you know what led to that preference for Minneapolis-Honeywell controls in those years?

A. When they started in the oil burner business they had no choice. There wasn't any other.

Q. Why did you continue that policy after you became oil burner manager?

A. Because there was no reason to discontinue it. The Minneapolis-Honeywell controls were good controls and we liked the controls. We liked the people that handled them and the others were comparatively new. Minneapolis-Honeywell had an established reputation.

Q. Did you have many service difficulties with Minneapolis-Honeywell controls from the customers? Did they?

A. No, we had more in 1938 than we did at any time.

Q. Your principal difference with Minneapolis-Honeywell was over prices I take it?

A. That is right.

Q. And you objected to the fact that other cheaper oil burners were equipped with Minneapolis-Honeywell controls, the same controls that your higher priced burner was equipped with?

919 A. No, there was no objection to equipping them with Minneapolis-Honeywell controls if they wanted them to. I objected to them being given the price preference over us who had been buying their controls for 15 years or more, so that it made it more difficult for us to compete with the other burners because our prices were higher.

Q. And what did you do about meeting that competition?

A. We lowered our prices from time to time as far as we were able to.

Mr. Gilpatric: May I have Commission's Exhibit 144, please?

By Mr. Gilpatric:

Q. Mr. Gillis, now let us see when did you reduce your prices. Commission's Exhibit 144 was in effect for how many years?

A. I believe this was in effect about three years.

Q. What years?

A. The three years prior to the date on that one. That is November 1, 1940, isn't it?

Q. 1941.

Mr. Haycraft: 1941.

The Witness: The three years prior to that.

By Mr. Gilpatric:

Q. Didn't you testify on direct examination that that was your 1937 price list with changes on the control prices to indicate changes in those prices in 1938?

920 A. Yes, I believe this was the 1937. I believe, that is the best of my recollection. I only have my memory to depend on there though, but I think it was in 1937.

Q. Is it your recollection that your Model F Branford Oil Burner sold at $95 from 1937 to 1941?

A. I believe that is right, yes.

Q. During that period wasn't there a reduction in the price of controls that you received from Minneapolis-Honeywell as shown by these contracts in evidence?

A. Well, I would have to look at the contracts to see that. I don't remember. Well, there is no change in prices in the 1940 and the 1939 contract. The prices on these two contracts are the same but they were increased in November of 1941.

Q. Compare your 1937 and 1938 prices and see what you find?

A. There was an increase in price in 1938 over 1937.

Q. Well now, how do you explain these price reductions on the back of Commission's Exhibit 144, on your price list, your own price list?

A. Well, these are supposed to be the list prices of the Minneapolis-Honeywell Company. We always sold them to our dealers at the manufacturer's list with no discount except to jobbers who sold wholesale to dealers.

Q. Doesn't that exhibit which I handed you, Exhibit 144, show a reduction in the list prices for controls for the year 1938 over the year 1937?

921 A. This is not dated and I cannot say from memory. That is four years ago and I cannot say from memory between what two years these changes were made. I have nothing but memory to guide me, but I know that the prices given on these price lists were invariably the list price of the manufacturer.

Q. Is that also true with the M.H. prices shown on the fourth page of Commission's Exhibit 148?

A. That is right.

Q. Mr. Gillis, what is your general recollection about the trend of the cost of your other burner parts, transformers, and motors, during the years 1937 through 1941? Were they increasing or remaining the same?

A. They were remaining very much the same. I believe there was a slight reduction in the price of transformers, maybe 5 per cent, not more than that. The cost of motors and pumps to my recollection was the same and it remained constant for at least five or six years.

Q. And does that explain why you kept your burner prices the same during that period?

A. That is right.

Q. What about your competitors' prices during that period?

A. They were getting lower.

Q. But nevertheless you did not reduce your prices?

A. Not until we had to do it to stay in business at all.

Q. This difference in the policy which you had with
922 Minneapolis-Honeywell in 1938 and 1939 led to a dispute as the record shows here?

A. Well, I don't know that you can call it a dispute. It is a difference of opinion.

Q. Isn't it a fact that you were trying to get other manufacturers to join with you in your side of that?

Mr. Haycraft: That is objected to as immaterial, irrelevant and not proper cross-examination.

Trial Examiner Sheppard: I am going to let him answer. I want the whole story.

A. No, I did not.

Q. Well, how do you account for the fact then that copies of your letter of January 14, 1938 to Mr. H. W. Sweatt, President of the Minneapolis-Honeywell, Commission's Exhibit 137, were sent to the following companies: Silent Glow Oil Burner Company, Petroleum Heat & Power Company, and Harvey Whipple, Inc.?

A. Because the Minneapolis-Honeywell policy was always a very live topic of discussion wherever a group of oil burner manufacturers assembled, and shortly before that these men were present at a meeting that I had attended in Hartford, and I sent that to them to keep them informed as to what we were doing.

No attempt was made to get them to join anybody's side.

There was not any side as far as I was concerned,
923 only Malleable Iron Fittings Company and the Minneapolis-Honeywell Company. What others did was their own affair.

Q. How did you happen to have this meeting in Hartford then if you were not interested in what they were doing?

A. It was a meeting for another purpose entirely.

Q. Why were they interested in your quarrel with Minneapolis-Honeywell over prices?

Mr. Haycraft: That is objected to. This witness has not said that they were interested. Furthermore, he is not a mind reader. He does not know why they were interested. I object.

Mr. Gilpatric: I will withdraw that question.

By Mr. Gilpatric:

Q. What was your reason then for sending this letter to them on this subject?

A. To keep them informed as to what we were doing about it.

Q. About what?

A. About objecting, or questioning the policy of the Minneapolis-Honeywell Company.

Q. Well, did you know they were interested in what you were doing about that?

A. Certainly I knew.

Q. How did you know?

A. From a half dozen discussions I had with them.

Q. How?

924 A. Every place, every time a group of oil burner manufacturers would gather for any purposes the conversation would drift to that subject before the meeting was over.

Q. Just what subject?

A. The subject of the price policy of the Minneapolis-Honeywell Company.

Q. Just to get this straight, just what was your objection in your own words, as you recall it now, to Minneapolis-Honeywell's policy?

A. You want my opinion?

Q. I want to know what your best recollection is of your objection to the price policy?

Mr. Haycraft: It is stated in this correspondence. Of course if he wants to examine—

Trial Examiner Sheppard: I want to hear it from Mr. Gillis. Go on.

A. My objection was this: Minneapolis-Honeywell never manufactured oil burner controls until oil burners were manufactured and the pioneers in that field cooperated with the Minneapolis-Honeywell Company to de-

velop controls for oil burners, to make them safe, and it was they that built up the oil burner control business for the Minneapolis-Honeywell Company and then when oil burners became popular and there was a very large sale of them and consequently a large sale of controls, the pioneers didn't increase in volume as rapidly as some
925 of the newcomers in the field who sold on a price basis.

But the price policy of the Minneapolis-Honeywell Company, basing their prices in volume, gave some of the pioneers who had helped build their business up a decided disadvantage in trying to compete with some of the cheaper ones because of the larger volume.

Q. In other words, you wanted the pioneer companies, of which you numbered your company one I take it, to be able to maintain their prices and not have to meet the cheaper makes?

A. No, we knew we would have to meet prices, lower prices.

Q. You did not do it, did you, during the period from 1937 to 1940?

A. No.

Q. Based on volume production it is always cheaper to produce on a large volume?

Wasn't the nub of it that you wanted to be able to continue to sell your burners at the prices that you had been selling them at?

A. No, that was not it.

Q. What was it?

A. We wanted to be able to sell controls to our own dealers at the prices established by the manufacturer of the controls and not have someone else come in and sell them to our dealers at prices as low as we could get them from Minneapolis-Honeywell Company ourselves.

926 Q. You did not want the dealers to have burners for sale at lower prices than your burners were available?

A. I am not talking about burners now. I am talking about controls.

Q. I am talking about burners equipped with Minneapolis-Honeywell controls. That is what your dealers carried, wasn't that what your dealers were selling, the whole burner equipped with controls?

A. Yes, most burner manufacturers sold them with controls.

Q. So it was the price that the dealers were selling their burners at that you were interested in, wasn't it?

A. No, I could not quarrel with them over that. They could sell burners at any price they wanted to.

Q. But when the burners were equipped with Minneapolis-Honeywell controls then you were interested in the price of the complete control unit?

A. Even then I cannot object to it. I objected to selling controls alone to our dealers as cheaply as we could buy them.

Q. And you were not at all interested in the fact that the Quiet-Heet Company, for example, sold in 1937, 1938, burners equipped with Minneapolis-Honeywell controls for say $60?

A. Interested, certainly because in that business I could not help but be interested.

Q. Wasn't that your real quarrel with Minneapolis-Honeywell, they were selling controls to companies 927 like Quiet-Heet Mfg. Company?

A. No.

Q. You never complained about that to Minneapolis-Honeywell?

A. No, I cannot tell them who to sell controls to. I never presumed to.

Q. You mean to tell us you want us to believe that you never at any time complained to any Minneapolis-Honeywell representative of their sales of controls to the Quiet-Heet Mfg. Company?

A. I don't know what you believe but I can tell you that I never did complain if their selling controls to anybody. That would be silly.

Q. Did you ever make any complaints about the Quiet-Heet Company on the subject of controls to the Minneapolis-Honeywell Company?

A. Except that I had reason to believe that they were the ones that were selling Minneapolis-Honeywell controls to our dealers as cheaply as we could buy the controls from the Minneapolis-Honeywell. Yes, I made that complaint.

Q. What did you do about it?

A. I wrote that letter to Mr. Sweatt.

Q. Mr. Gillis, you were asked some questions by Mr. Haycraft on direct examination about your 1937 contract with the Minneapolis-Honeywell Company, that is, Commission's Exhibit 132. I don't think the record is left

quite clear as to your interpretation of the phrase,
928 "Season's Requirements sets of the Company's automatic temperature controls."

You first testified that that meant to you that you were required to buy your season's requirements of Minneapolis-Honeywell controls and later you made an answer which left the impression that this contract required you to buy all your controls, no matter what make, exclusively from Minneapolis-Honeywell?

A. My understanding of that contract each year as it was submitted was that when it stated it covered our requirements it meant it covered our requirements of all controls, which meant that we would buy exclusively from the Minneapolis-Honeywell Company. That was my interpretation of those contracts.

Q. How do you arrive at that interpretation when you read the language which says, "Season's Requirements of the Company's automatic temperature controls"?

A. That contract was probably written by an attorney and attorneys writings are very often difficult to understand, and that was my understanding of it.

Q. Do you know how that language, "Season's requirements", came into that contract? Do you have any recollection of that?

A. I don't recall that. Frankly, I don't remember the occasion for that at all, but I know though it specified a given number on those contracts. When we signed
929 a contract, it was my interpretation of the contract that it meant we should buy all of our requirements for controls from Minneapolis-Honeywell. That is the way I understood it.

Q. Regardless of the number inserted?

A. That is right. I understood the number inserted was simply a basis on which to establish the bracket in which we were to be billed.

Q. So that if you needed a thousand control sets for the burners which you were selling in a particular year, you had to buy them all from Minneapolis-Honeywell?

A. That is what I interpreted those contracts and that is the way we acted on them.

Q. Take for example Commission's Exhibit 151, your 1941 contract. It specifies a thousand sets. Did you interpret that to mean that you had to buy all your controls in that year from Minneapolis-Honeywell?

A. Not for that year because we notified them in advance we did not intend to do it.

Q. So, I see, it depended upon your state of mind and not on the language of the contract at all?

A. Well, the language of the contract might be qualified by a written statement of our own.

Q. Just show us the written statement that qualified the 1941 contract?

A. I don't have it. I have not been there.

930 Q. Do you know that there was such a written contract?

A. I don't know positive. I can't swear that there was. I think there was but I can't state that as a fact.

Mr. Gilpatric: Then I ask that he produce that, Mr. Examiner, in view of his statements that these contracts which the Commission has offered in evidence are qualified by written statements that his company made.

I think it is important that we have that for the record.

Trial Examiner Sheppard: If you have not got it, you will just have to give us your best judgment on it.

The Witness: That is my best recollection. I can't say definitely.

Trial Examiner Sheppard: The record is plain on that anyway.

Mr. Gilpatric: I want to know what this statement said because Mr. Gillis has made testimony here.

Mr. Haycraft: He said he was not sure whether it was in writing or verbal.

The Witness: Of course, the fact—

Mr. Freeman: You don't want a written contract but some written statement.

The Witness: The fact that this price list was effective in 1941 and lists both kinds of controls, Mercoid and

931 Minneapolis-Honeywell, establishes the fact that we had no intention.

By Mr. Gilpatric:

Q. As far as Minneapolis-Honeywell is concerned, your contracts with it were the same all through these years. It was just your interpretation?

A. I believe the contracts were the same.

Q. It is just your interpretation that was different during these years?

A. That is right.

Q. And you decided to buy from Mercoid after you had this difference of view over the pricing policy?

A. That is correct.

Q. Did you ever make a contract with the Mercoid Company?

A. Yes.

Q. Have you got it with you?

A. It is here I believe.

Q. Will you produce it please?

Mr. Haycraft: I object to that as irrelevant and immaterial. Mercoid is not on trial here.

Mr. Gilpatric: It certainly bears on this question of interpretation of the Minneapolis-Honeywell contract, whether this witness entered into contracts with other companies in other years which he felt exclusive.

Trial Examiner Sheppard: Mr. Gillis, I will let you use these contracts simply to refresh your mind.

932 Mr. Haycraft: That is not the purpose. They are getting the Mercoid contracts for some other reason than that.

Trial Examiner Sheppard: I don't know what they are going to use them for.

Mr. Haycraft: I don't know now but I don't see why they should drag them into this case.

By Mr. Gilpatric:

Q. During 1938 were you still selling your burners equipped exclusively with Minneapolis-Honeywell controls?

A. Yes.

Q. And was your interpretation of your contract with Minneapolis-Honeywell that year as you testified, namely, as requiring you to buy all your controls from Minneapolis-Honeywell?

A. I did buy them all anyhow.

Q. How did you happen to sign a contract with the Mercoid Corporation to buy its controls on April 29, 1938?

A. For how many?

Mr. Gilpatric: Will you read the question?

(The last question and answer read.)

By Mr. Gilpatric:

Q. I want an answer to my question first.

Mr. Haycraft: I submit that is not fair.

Mr. Gilpatric: I asked the question if he signed.

A. The answer is I don't know why. I don't remember what the contract was.

933 Trial Examiner Sheppard: That is the reason why I wanted you to refresh your mind on that. It has been some years since you saw them.

Mr. Gilpatrick: Mark this for identification as Respondent's Exhibit 10.

(The document referred to was marked Respondent's Exhibit 10 for identification.)

By Mr. Gilpatric:

Q. I show you Respondent's Exhibit 10 for identification and ask you whether or not your signature is affixed to the fourth page?

A. Yes, that is my signature.

Q. Does that refresh your recollection as to how you happened to sign that contract with the Mercoid Corporation in 1938 when you testified that you had interpreted your contract with Minneapolis-Honeywell as obligating you to buy exclusively from it all your control requirements?

A. Yes, I can tell you why. I signed it. It was in order to establish those prices to us in case we did want to buy any. We have not agreed to buy any specific number of controls.

Q. In other words, you don't consider yourself obligated, or you didn't consider yourself obligated to buy controls from Mercoid under this contract?

A. (Witness does not answer.)

934 Q. Did you consider yourself obligated to buy 1,000 sets from Minneapolis-Honeywell under its contract for 1938, Commission's Exhibit 143?

A. Yes, I considered it an obligation to buy as near that number as we required or as we could.

Mr. Haycraft: Show him the document, the agreement. I think he should be shown the agreement.

Trial Examiner Sheppard: He will.

Mr. Gilpatric: Which document?

Mr. Haycraft: The 1938 agreement with Minneapolis-Honeywell.

By Mr. Gilpatric:

Q. I will show you the document, Mr. Gillis, and ask you whether you want to change your answer in the light of having seen it?

A. What was my answer?

Trial Examiner Sheppard: Read the last question and his answer.

(The last question and answer were read.)

By Mr. Gilpatric:

Q. Is that what you wanted to say, Mr. Gillis?

A. Yes, I won't change that answer.

Q. May we see, Mr. Gillis, your 1939 and 1940 contracts with Mercoid?

A. Beg pardon?

935 Q. I asked if we could see your 1939-1940 contract.

Mr. Haycraft: I have the same objection to that as I have to the previous.

Mr. Gilpatric: Mark this for identification as Respondent's Exhibit 11.

(The document referred to was marked Respondent's Exhibit 11 for identification.)

Mr. Haycraft: Mr. Examiner, I wish to point out in connection with my objection that the language of the Mercoid may be and probably is different than that of the Minneapolis-Honeywell.

As to how he interprets the Mercoid with the different language has no bearing on how he interprets the Minneapolis-Honeywell. We are fanning at windmills.

Mr. Gilpatric: The contract with Minneapolis-Honeywell says one thing. The witness's interpretation is something else. It seems to me it is extremely relevant and material in this proceeding to see how the witness's interpretation of the other contract is made which is as of the same time.

Mr. Haycraft: The interpretation of the other language will have no bearing.

Mr. Gilpatric: Just don't get excited and see what happens here.

Mr. Haycraft: I am not excited.

Trial Examiner Sheppard: Mr. Gillis, I just want 936 you to have a chance to explain everything.

A. I think we can enlighten the gentlemen on that. In 1938 we began the development of a new type of heating system which we called the Colby system of hot water heating, which required different controls from the oil burners and we equipped the Colby system with Mercoid controls.

Q. What year did you say?

A. In 1938 we began that development.

Q. Did you buy any Mercoid controls in that year?

A. Yes, new controls and new types of controls were necessary for that unit and the Mercoid Corporation developed them for that particular type of heating system.

Q. So even though your contract with Mercoid Corporation, Respondent's Exhibit 10 for identification did not specify the number of units you did buy under the contract?

A. Oh, yes, we bought some but not for our oil burners.

Q. Were they automatic temperature controls?

A. They were automatic temperature controls.

Q. Could they have been used on oil burners?

A. Oh, yes, they could have.

Q. I show you, Mr. Gillis, Respondent's Exhibit 11 for identification and ask you if you can identify that for the record?

A. Yes, this is a contract for controls for the year 1940.

Q. And what did that contract obligate you to buy 937 from the Mercoid?

Mr. Haycraft: I object to that as calling for a legal conclusion of a document which is not subject to a layman's construction, that he is obligated to buy.

Mr. Gilpatric: I will withdraw the question.

By Mr. Gilpatric:

Q. What number of units did the contract specify for 1940?

A. What do you mean by specify?

Trial Examiner Sheppard: The number set forth in the document.

The Witness: It says the special net prices set forth here which are based on 1940 control requirements estimated to be 10,000 control units.

By Mr. Gilpatric:

Q. Was that in fact your estimate of your control requirements for that year?

A. We had no estimate. We were developing a new device entirely. We had no definite figures to base an accurate estimate on.

Q. In that same paragraph, Mr. Gillis, the phrase occurs, "the company agrees to sell and the purchaser agrees to purchase during the term of this agreement their re-

quirements of the company's automatic controls." How did you interpret that language?

A. Well, I guess I interpreted that as meaning that
938 we would purchase as many of their controls as our dealer organization called for.

Q. A little different interpretation then, wasn't it, than the interpretation of the language in the Minneapolis-Honeywell contract for 1937?

Mr. Haycraft: About the same language.

Mr. Gilpatric: About the same.

Mr. Haycraft: But it is not the same language.

A. No, I think the interpretation of the wording of the contract was the same, the same as I think the interpretation of the Minneapolis-Honeywell was correct. That is based, it states, "Based on the number which is the estimated quantity consumed." In the Minneapolis-Honeywell contract it says, "The company agrees to sell, and the purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract 1,000 sets or more, which is a definite number."

Q. Go on, read the rest of it?

A. "Of the company's automatic temperature controls."

Q. You thought that meant not merely the company's, the Minneapolis-Honeywell, but any control, is that correct?

A. That is right.

Q. Will you explain to us the difference in your mind between the phrases, "estimated at 1200 sets of the company's automatic temperature controls" in Commission's Exhibit 143, and "estimated to be 10,000 units,"
939 in Respondent's Exhibit 11 for identification?

Mr. Haycraft: Just a moment, before that question is answered. He is not referring to the 1937 agreement, which was the agreement which I asked him about in the first place, which said "estimated requirements" without any number it. Now he has submitted to him another year's contract.

Mr. Gilpatric: Mr. Examiner——

Mr. Haycraft: The question is 1937 and that is his question. He propounded to him with regard to 1937 and I think it is wrong to submit some other agreement to him.

In answer to that question I submit he should have the 1937 agreement before him before he is required to compare them.

Mr. Gilpatric: I will certainly give him the 1937 agreement.

Mr. Haycraft: It is not the same.

Trial Examiner Sheppard: Just refer to that and see if you can give us an answer.

A. I would just like to know what the gentleman would like to know.

Mr. Gilpatric: Read the question.

(The pending question was read.)

A. (Continued.) All the Minneapolis-Honeywell contracts prior to 1938, and I believe later than 1938, named a specific number of controls that the contract covered.

940 This one dated January 13, 1938 states, "The company agrees to sell and the purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract Est. at 1200 sets of the Company's automatic temperature controls, each set consisting of one Thermostat, and one Limit Control, and one Primary Control."

That is the only one that gave an estimate at all. The rest were specific for the year's requirements.

Q. You still have not explained whether in your view the word "estimate" used in the Mercoid contract had any different meaning that the "estimate" in the Minneapolis-Honeywell contract?

A. That is a difference in this way: this statement in the Mercoid contract says, "the special net prices extended herewith by the company are based on the purchaser's 1940 control requirements estimated to be 10,000 units."

Q. Now read the preceding sentence. That is what I am directing my question to.

A. "Subject to the terms and provisions hereinafter contained the company agrees to sell and the purchaser agrees to purchase during the term of this agreement their requirements of the company's automatic controls."

Q. Now read those two together in comparison with the Minneapolis-Honeywell form? That is all I am asking

941 you to do.

A. "The company agrees to sell and the purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of the contract Est. 1200 sets of the company's automatic temperature controls, each set consisting of one thermostat and one limit control and one primary control."

Q. Outside of the differences in the number of units or sets as the case may be, what difference in meaning did those two provisions have to you?

A. They are worded almost identically. Well, I should take it from this that it would mean that we would purchase as many Minneapolis-Honeywell controls as we needed and on the other as many Mercoid controls as we needed.

Trial Examiner Sheppard: As a matter of fact, is that what you did on both?

The Witness: Prior to 1938 we did not purchase any but Minneapolis-Honeywell controls. After 1938 we did.

Trial Examiner Sheppard: All right, gentlemen, there is the story.

By Mr. Gilpatric:

Q. All right, now Mr.—

Trial Examiner Sheppard: I don't need a thing else from either side. I will take the whole record and study it from that point.

Mr. Gilpatric: I am through with that subject, 942 Your Honor, but I have one more question.

Trial Examiner Sheppard: Go right ahead.

By Mr. Gilpatric:

Q. Who are your competitors, Mr. Gillis, in the sale of oil burners, or rather who were they during the period that you were manager of that division for the Malleable Iron Fittings Company?

A. That is quite a long list.

Q. Give your principal list. I will stop you when I have enough.

A. Williams Oilomatic, Silent Glow, Harvey-Whipple, Reif-Rex-Oil, May Oil Burner Corp., latterly of course there is Quiet-Heet.

Q. Aldrich?

A. We never had much competition with Aldrich.

Q. Did you have any competition with Sears-Roebuck?

A. No, never felt them.

Q. You mentioned Petroleum Light and Power, didn't you?

A. No, I didn't but Petroleum Heat and Power was one. Delco of course and later Chrysler. The list continued to lengthen the last four or five years.

Q. And the price trend went downward in the last four or five years?

A. That is right.

Q. Have you any invoices covering your purchases
943 of Mercoid controls during the year 1938 about which you testified?

A. I believe we have. Here are some invoices for purchases in 1939 of Mercoid controls.

Q. Are those all your invoices from Mercoid?

A. Those are all for 1938.

Q. Did you use any of the limit controls purchased from the Mercoid in 1938 on oil burners Mercoid type 115 immersion, range 50-250 degrees, style No. 1?

A. Yes, we used that in the Colby system that we were working on.

Q. That was an oil burner, was it?

A. It was oil heated. It was an entire heating system of a new type that we were working on. That immersotherm did not control the oil burner. It controlled a circulator.

Q. Was that oil burner unit of yours sold in the general market of 1938?

A. No, it was a different type. It was one designed especially for that unit and not sold as a separate oil burner at all. It was a flange-mounted oil burner on the unit.

Q. Your business in the oil burner field was primarily selling oil burners complete with controls, was it not?

A. Oh, yes, we sold nearly practically all of them complete with controls.

Q. And your sale of controls separately was simply for repair and replacement purposes, wasn't it?

944 A. That is correct.

Q. You never sold oil burners, did you, without a set of controls going with it?

A. Yes, we have. I would not say we never did but it was a very rare occasion. If the oil burner was sold to replace another one and we felt that the controls were still good enough to insure continuous operation, we would sell a burner without the controls, but we would first satisfy ourselves that the controls that were in were all right.

Q. That was not your general practice? That was a rarity?

A. Our general practice was not that, maybe two or three a year. Generally our practice was to sell the burner complete.

Q. You were not competitively engaged in the sale of controls themselves apart from oil burners?

A. Not to a very large extent but of course our dealers who did service work purchased quite a number of controls to replace others of their customers and we did a fair volume business along there in the proportion of the number of burners we sold.

Q. The controls you purchased from Minneapolis-Honeywell were to be used with your burner, weren't they, as original equipment.

A. Oh, yes.

Q. And this other business in controls for service
945 purposes was more of an accommodation than your main line?

A. Well, I would not say it was altogether an accommodation. There was a selfish interest in selling it. We made a profit on it and it was a satisfactory profit.

Mr. Gilpatric: I think that is all we have, Mr. Examiner.

Trial Examiner Sheppard: Anything else, Mr. Haycraft?

Mr. Haycraft: No.

(Witness excused.)

Mr. Haycraft: I think I would like to call Mr. Lang and have him testify just a moment with regard to the documents we have been using here to show where they came from, etc.

Mr. Lang, will you take the witness stand.

HARRISON M. LANG was thereupon called as a witness for the Commission, and having been duly sworn, testified as follows:

Direct Examination by Mr. Haycraft.

Q. Will you state your full name and address for the record?

A. Harrison M. Lang, Pine Orchard, Connecticut.

Q. What is your business address?

A. Branford, Conn.

Q. What is your occupation there?

946 A. Why I am taking Mr. Gillis's place as manager of the Oil Burner Department, what is left of it, and

in addition to that I am director of priorities and also purchasing agent for the company.

Q. Did you produce, pursuant to your subpoena or in answer to Mr. Gillis's, correspondence, invoices, contracts, etc., which we have been referring to and which were referred to in Mr. Gillis's testimony?

A. I produced them out of the files of the Malleable.

Q. Did you hear Mr. Gillis testify?

A. I did.

Q. Did you hear him identify certain correspondence and contracts?

A. I did.

Q. And did you furnish those to Mr. Gillis from the files of the Malleable Iron Fittings Company?

A. I did.

Q. And are those invoices, contracts and correspondence present in the Court Room today so that they may be inspected by counsel for the respondent?

A. Which ones do you mean, the invoices of Minneapolis-Honeywell and Mercoid?

Q. And the contracts and correspondence.

947 A. Yes, they are here.

Mr. Haycraft: That is all.

Mr. Gilpatric: That is all.

(Witness excused.)

Trial Examiner Sheppard: We will have a five-minute recess.

(A five-minute recess was taken.)

Trial Examiner Sheppard: On the record.

In view of the fact that we cannot finish the cross-examination of Mr. Peters, I am going to ask Mr. Peters to come back tomorrow at 9:30 so we can go ahead with his examination and then take up whatever witnesses we may have.

We will now adjourn until 9:30 tomorrow morning in this room, Room 505.

(Whereupon, at 5:05 o'clock p. m. Thursday, September 16, 1943, the hearing in the above-entitled matter was adjourned.)

948

Room 505,
45 Broadway,
New York, N. Y.,
Friday, September 17, 1943.

Met, pursuant to adjournment at 9:30 a. m. E.W.T.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Esq., Attorney for the Federal Trade Commission.

Cravath, de Gersdorff, Swaine & Wood, by B. R. Shute, Esq., 15 Broad Street, New York, N. Y., and

Bair & Freeman, Esqs., by Will Freeman, Esq., 135 South La Salle Street, Chicago, Illinois, attorneys for the Respondent.

949

Proceedings.

Trial Examiner Sheppard: Mr. Reporter, you can convene the hearing pursuant to our adjournment taken yesterday, in the Minneapolis-Honeywell Case, Docket No. 4920, and show Mr. Samuel Louis Peters on the stand for cross-examination.

SAMUEL LOUIS PETERS resumed the stand and testified further as follows:

Trial Examiner Sheppard: Mr. Freeman, when you are ready you can proceed, sir.

Cross-Examination by Mr. Freeman.

Q. Mr. Peters, you started buying controls from the Mercoid Corporation in 1936, is that correct?

A. That is correct.

Q. And you likewise started buying controls for oil burners from Minneapolis-Honeywell in 1936?

A. Correct.

Q. And your first controls were purchased from the Mercoid Corporation?

A. Correct.

Q. Do you recall in what quantities you first purchased controls from Mercoid?

A. In lots of 10 or 12.

950 Q. And in what quantities did you first purchase controls from Minneapolis-Honeywell?

A. Similar quantities.

Q. And you had a contract with Minneapolis-Honeywell in 1936, did you not?

A. I think so.

Q. And do you recall in what bracket or what price range you purchased controls from Minneapolis-Honeywell in 1936?

A. Not exactly but it must have been a very low bracket, the lowest possible that they had.

Q. And by "lowest bracket" you mean the one where the quantity is smallest and the price highest?

A. That is right.

Q. And when you started selling oil burners in 1936 at around $70 or under you were then paying relatively speaking high prices for controls, is that correct?

A. That is correct.

Q. And how did your price compare for the sale of oil burners, including the three controls, with other oil burners then on the market, and I am referring specifically to the year 1936 or the time when you first started?

A. Mine was the lowest-price burner on the market.

Q. And at that time, that particular time, were you paying Minneapolis-Honeywell's high price for controls?

A. That is right.

951 Q. And notwithstanding the payment of the Minneapolis-Honeywell's high price or Bracket 1 price for oil burner controls you were still able to undersell other oil burner manufacturers, that is, the so-called old line or pioneer manufacturers?

A. That is correct.

Q. You heard Mr. Gillis testify yesterday that he was connected—

Mr. Haycraft: I object to any questions of this witness with regard to Mr. Gillis as not proper cross-examination by Mr. Freeman.

Mr. Freeman: Let the record show that the witness now on the stand was present during the taking of the

testimony in behalf of the Commission of the Witness Gillis.

I will withdraw the question.

By Mr. Freeman:

Q. Mr. Peters, the statement I just made on the record is correct, is it not?

A. That is right.

Q. Mr. Peters, did you hear Mr.—

Mr. Haycraft: Mr. Examiner, I must object.

Mr. Freeman: Wait until I get through. I am going to do this all day.

Mr. Haycraft: I know what your question is going to be.

952 Mr. Freeman: Oh, you do? You must have been reading my notes.

Mr. Haycraft: You have already stated enough to show what the question is going to be.

I object to any interrogation of this witness as to what Mr. Gillis said as not proper cross-examination.

Trial Examiner Sheppard: We will let the usual procedure with reference to the cross-examining go on, that is, Mr. Freeman, you bring out anything you please by this witness in reference to what was brought out by Mr. Haycraft on direct.

Mr. Freeman: Then do I understand, Mr. Examiner, that I cannot ask any questions with respect to the so-called pioneer manufacturers?

Trial Examiner Sheppard: If it was brought out on direct. I don't remember.

Mr. Freeman: Well, the particular price lists of Mr. Peters' company, Quiet-Heet, were brought out on direct examination by the Commission.

Trial Examiner Sheppard: That is all right, if you want to refute, and I no doubt think you will, in time, what Mr. Gillis testified to, put on your witnesses in the usual way. Don't try to do it by cross-examination of another man who probably heard the testimony but had no right to comment on that.

953 By Mr. Freeman:

Q. Mr. Peters, you were in direct competition when you entered the field with the Malleable Iron Fittings Company, manufacturers of the Branford oil burner, is that correct?

A. To the extent that we were both in business. We did not know they were in.

Q. And—

Mr. Haycraft: I move to strike the question and answer.

Trial Examiner Sheppard: I didn't get that. Read it to me, Mr. Reporter.

(The last question and answer were read.)

Trial Examiner Sheppard: I will let that stay in for what it is worth.

By Mr. Freeman:

Q. And you were in competition with oil burner manufacturers who were selling oil burners at around $95 and up for a burner with controls, is that correct?

A. That is right.

Q. And your price was around $70 at the outset of your business career in the oil burner manufacturing business, is that correct?

A. That is right.

Q. How do you attribute, or rather state what the facts are with respect to your ability to manufacture oil
954 burners and equip them complete with a set of controls and sell them at a price of about $70?

A. I think that was largely due to the fact that my competitors misunderstood the trend of the industry at that time, which was into volume production because the F.H.A. and a large volume building construction program had entered the picture. They still stuck to the old policy of trying to get as much as the traffic would bear out of the commodity, whereas I started out to merchandise it on a volume basis, effecting certain economies, making a few shortcuts here and there and trimming down my overhead and operating costs to the minimum.

Q. When you started selling oil burners in '36 at a price of $70 did your company then operate upon a profitable basis?

A. Yes, we always made a profit since we started in business.

Q. And has that continued throughout 1941, that is, you made a profit each year?

A. Yes.

Trial Examiner Sheppard: When did you start business, Mr. Peters?

The Witness: We started the actual manufacture of oil burners in 1936.

Trial Examiner Sheppard: 1936?

955 The Witness: That is right.

Trial Examiner Sheppard: At that time there were a whole lot of other people engaged in that line of business, already established at that time?

The Witness: There were a great many manufacturers in the business.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. And when you say there were a great many manufacturers in business do you have reference to companies of long standing such as General Motors, Delco Division, Petroleum Heat and Power, Silent Oilomatic, Timken, etc.?

A. Well, there were really no companies in the oil burner business of long standing because the entire industry was relatively new, but I would say that there were a great many companies that had been in business for eight and ten years prior to the time I entered the business.

Q. And the general price range of such companies at the time you entered the business was around $90 or upwards for oil burners?

A. That is correct.

Trial Examiner Sheppard: Did that include the controls?

The Witness: That did include the controls.

Trial Examiner Sheppard: All right.

956 By Mr. Freeman:

Q. And you started out on a $70 basis?

A. That is right.

Q. And during the last seven years, that is, from 1936 up to 1941, prior to the present war emergency, your prices dropped each year to the extent of about 10 per cent, is that correct?

A. That is correct.

Q. And your approximate low price for oil burners during the latter part of 1941 or the very early part of 1942 was around $40, correct?

A. That is right.

Q. Do you have any records or any data that was prepared by you at the request of the Commission that will give you the purchases that you made from the Mercoid Corporation in the year 1936?

A. I don't have that data with me.

Q. Didn't you as a matter of fact then in the year 1937 buy approximately $1300 worth of controls from the Mercoid Corporation?

A. I would say that is probably true.

Q. And isn't it true that you have purchased as much as approximately $16,000 worth of controls from the Mercoid Corporation in a single year?

A. From memory I would say that is probably true.

957 Q. And you bought controls from the Mercoid Corporation in sets, did you not?

A. That is right.

Q. And you bought them in a volume of 100 sets or so at a time?

A. Yes, but I also bought them individually.

Q. Yesterday you stated on direct examination that the cost of a set of controls, keeping in mind that when we talk about a set we are talking about a stack switch or primary, an ordinary limit switch and the ordinary thermostat as distinguished from specials, was $13 for Mercoid, and I now ask you to look at a Mercoid invoice dated September 9, 1941, Mercoid Company's invoice No. 26728—

Trial Examiner Sheppard: Has that an exhibit number?

By Mr. Freeman:

Q. Which we will mark for identification Respondent's Exhibit 12. Do you not there find that for a stack switch, a thermostat and a steam control or hot water control the price per set was $12.70?

(The document referred to was marked Respondent's Exhibit 12 for identification.)

Mr. Haycraft: Why don't you offer it in evidence?

Mr. Freeman: It is in.

Trial Examiner Sheppard: It is accepted.

958 (The document referred to, heretofore marked for identification RESPONDENT'S EXHIBIT 12, was received in evidence.)

By Mr. Freeman:

Q. Have you answered my question?

A. I will answer your question: I see the invoice and I see the figures and as far as I know it is a correct copy of the invoice.

Q. And from the invoice you are willing to testify that

the cost of a set of controls which was sold to you by Mercoid was as low as $12.70?

A. That is so.

Trial Examiner Sheppard: What is the date of that?

The Witness: The date of the invoice is September 9, 1941.

By Mr. Freeman:

Q. Did you ever buy a set of comparable controls from Minneapolis-Honeywell for as low as $12.70?

A. No, I never did.

Q. As a matter of fact, your company paid Minneapolis-Honeywell a premium or at least a higher price for comparable controls, is that correct?

A. That is right.

Q. And that has been your experience from your outset in business up to date, is that correct?

959 A. That is correct.

Q. You testified yesterday that a DA steam control, range 10 pounds to 14 pounds was purchased by you from Mercoid at $2.75. Do you so recall?

A. I read it from the invoice, so I must have.

Q. And that is a limit control, is it not?

A. That is right.

Q. With the cost of controls per set at $12.70, tell me what the cost was for the thermostat and primary control?

A. I can't unless you let me refresh my memory from an invoice.

Q. What I am asking, Mr. Peters, is, take the $12.70 set price and deduct the $2.75 and you get $9.95, is that correct?

Mr. Haycraft: Mr. Examiner, before he answers the question, the invoice does not indicate that the $12.70 price includes a thermostat; only it indicates it includes two controls which do not include the thermostat. So I object to the form of the question. It is misleading.

Mr. Freeman: Mr. Haycraft, you are just so wrong that you are pitiful.

Mr. Haycraft: The exhibit speaks for itself.

By Mr. Freeman:

Q. Mr. Witness, is Mr. Haycraft's statement correct?

A. I see an item here called 200 type H Sensatherm, 960 so evidently it includes the thermostat.

Q. So Mr. Haycraft is wrong, Mr. Peters?

A. It would seem so because here is the invoice. 200 JM Pyratherm, 200 Sensatherm, 100 M80 combination fan and limit controls and 50 steam controls and 50 Risatherms, making a total of 200 sets.

Mr. Haycraft: You have two different prices there, don't you?

The Witness: Yes, evidently 100 of the sets which came equipped with fan and limit controls are higher in price. They total $14.70. The others were the regular controls and total only $12.70.

By Mr. Freeman:

Q. When you say "regular controls," you mean limit controls?

A. Yes.

Trial Examiner Sheppard: You are referring in your testimony, Mr. Peters, now to Respondent's Exhibit 12?

The Witness: Yes. I personally do not remember the prices that this company charged me at this particular period. I am merely taking this invoice and I am assuming that the invoice is correct as rendered to me and I am merely reading it because price controls over the period of time that I have been doing business, I mean the price of controls has varied so much that I absolutely could not testify from memory as to what I paid on any certain specific period.

961

Trial Examiner Sheppard: All right.

The Witness: And if the invoice is in error I want you to know that my testimony is also in error. That is the only thing I can say about it.

By Mr. Freeman:

Q. You are testifying now from the records which you have before you?

A. This is our invoice. We paid this invoice and the invoice apparently appears to be correct but I don't remember purchasing sets at those prices.

Q. Other than from the invoice?

A. From the invoice.

Q. Anymore than you remember purchasing controls at any given price from Minneapolis-Honeywell from memory?

A. That's right.

Q. Will you then answer my question, following the invoice, Respondent's Exhibit 12, as to the cost of the thermostat and primary control?

A. Well, there is no indication on this bill as to what the cost of the thermostat or primary control is as far as I can see unless—

Q. Will you look?

A. What?

Q. Will you look at your other invoices and see
962 what you paid for a DA 31 Limit Control?

A. $2.75 according to invoice No. 1918.

Trial Examiner Sheppard: Dated?

The Witness: Dated January 10, 1941.

By Mr. Freeman:

Q. So that the cost of your thermostat and primary was $9.95?

A. If that is what it totals.

Q. That is, the difference between the cost to you of the DA 31 and the set of controls amounted to $9.95, correct?

A. That is correct.

Q. And I noticed yesterday in your sales to some of these companies, which Mr. Haycraft referred to, that when you omitted a limit control you deducted $2.75, is that correct?

A. Yes.

Q. So that if you sold an oil burner equipped only with a thermostat and a primary the cost to you of such Mercoid controls was $9.95, correct?

A. That is right.

Trial Examiner Sheppard: And what would be the cost if you added the final?

The Witness: The what?

Trial Examiner Sheppard: The other control.

Mr. Freeman: $12.70. We are speaking now, Mr. Examiner, of Mercoid controls.

963 Trial Examiner Sheppard: I understand.

By Mr. Freeman:

Q. Mr. Peters, on the same invoice, which designates 100 combination fan and limit controls or the type M80 Mercoid Control, you have as a set price the sum of $14.70, correct?

A. That is correct.

Q. And you have on invoice No. 28868 of the Mercoid, dated September 26, 1941, which we will mark for identification Respondent's Exhibit 13, the price for such a unit as $4.75, is that correct?

(The document referred to was marked Respondent's Exhibit 13 for identification.)

Mr. Haycraft: I object to that unless it is in evidence.

Mr. Freeman: All right, it is in evidence.

Mr. Haycraft: I have no objection to the exhibit.

Trial Examiner Sheppard: Received as Respondent's Exhibit 13.

(The document referred to, heretofore marked for identification RESPONDENT'S EXHIBIT 13, was received in evidence.)

A. Yes, that is true.

Q. So for the 100 sets of controls referred to in Respondent's Exhibit 12, where you have the M 80, the cost of the thermostat and primary to you was likewise 964 $9.95, is that correct?

A. That is right.

Q. When you dealt with Mercoid for the purchase of the controls in accordance with Respondent's Exhibit 12 you dealt on a set basis as distinguished from individual controls, is that correct?

A. I can't recall that.

Q. But do you recall getting any individual prices for the controls, for controls themselves that go to make up the sets wherein the price is $14.70 in one case and $12.70 in another case?

A. I cannot recall how they handled their contract or their sales.

Trial Examiner Sheppard: I thought the price of sets was set irrespective of the price of the individual parts in it.

The Witness: Yes, there was the price of sets but I cannot recall at this time whether their piece price totalled to more than the set price if sold individually. In other words, I can't testify to any conversation covering a contract that I entered into with Mercoid. It is so long ago. My memory would not support any statements that I could make but I can testify from these invoices the prices I paid for certain specific controls on certain dates.

Trial Examiner Sheppard: All right.

965 By Mr. Freeman:

Q. You can't take any of the invoices that you have from the Mercoid Corporation for individual controls such as the thermostat, primary control and limit control and get any total of $12.70, can you?

A. No, I can't.

Q. In other words, any of the individual units that you bought irrespective of quantity brings about a price higher than $12.70 for three controls?

A. So I see from totalling up these invoices.

Q. And the same is true in connection with the M 80 or combinaton fan and limit control along with a primary and thermostat, you cannot total those three items and get a price as low as $14.70, is that correct?

A. No.

Q. Did you sign a contract with the Mercoid Corporation as you did with Minneapolis-Honeywell?

Mr. Haycraft: That is objected to, Mr. Examiner, as irrelevant and immaterial.

Trial Examiner Sheppard: I think I will let you answer that. That seems to be in the picture here.

A. Well, I can't recall whether I signed a contract or not. Probably some years they offered it and some years it was a mere formality.

Mr. Haycraft: I want to point out, Mr. Examiner, 966 I have an objection to this line of cross-examination with respect to the Mercoid Company, which is not on trial here.

I understand that Minneapolis-Honeywell's activities are on trial.

Trial Examiner Sheppard: That is true.

By Mr. Freeman:

Q. Were you solicited by Mercoid each year?

A. Well, their local representative called continually just as yours did. I mean every week or so we got a call from their representative. It was a continuous service that lasted from the time we started in business.

Q. And those calls were to get your business?

A. Well, naturally, they wanted my business.

Q. And have you ever been solicited by the Perfex Company of Milwaukee, Wisconsin?

A. If by solicited you mean if we ever bought any merchandise, did the salesman call on us and we did buy merchandise, the answer is yes.

Q. The salesman called on you?

A. Called on us and we purchased merchandise.

Q. From Perfex?

A. Yes, but not in large quantities.

Q. And did you buy from the Penn Electric Switch Company?

A. We placed one order with them but finally returned the merchandise involved in that particular order.

967 Q. Have you had several calls by that company soliciting your business?

A. I can't recall how many, but I know enough to warrant our purchasing one lot of merchandise.

Q. Then, as a matter of fact, since you started in business you had at least four different companies soliciting you for the control business, is that correct?

A. Well, I would say there were at least that number.

Q. The Mercoid controls that you bought in 1941, as evidenced by Respondent's Exhibit 12, were sold by you in connection with oil burners?

A. That is right.

Q. And those controls worked satisfactorily, did they not, for the purpose intended?

A. Yes.

Q. With respect to the handling of Mercoid controls, either with your burner or apart from your burner, did you have any different policy as to how you sold Mercoid controls than the policy you had for the sale of Minneapolis-Honeywell?

A. No.

Mr. Haycraft: That is objected to as immaterial and irrelevant whether he had any different policy. The issues are in what were the policies with respect to Minneapolis-Honeywell.

Trial Examiner Sheppard: I will let the witness 968 answer that if you think it is important.

Mr. Freeman: I think it is all important. Here we have Mr. Gillis come down here yesterday, squawking with respect to what the Quiet-Heet Company did. There are a number of exhibits that have been introduced here that refer to the sale of controls.

Trial Examiner Sheppard: There is nothing about the Mercoid Company though except that he switched to it. It was all the correspondence entirely.

Mr. Freeman: And I want this witness to tell me whether he had any different policy and it is material.

Mr. Haycraft: What of it?

Trial Examiner Sheppard: The question here is the sales of the respondent's controls and not the Mercoid's.

In making up my mind on this case, Mr. Freeman, I

might tell you right straight and it may save you a lot of time, I will have very little to say about the Mercoid.

Mr. Haycraft: They are not on trial here.

Mr. Freeman: It is not a question of being on trial here. It is a question of competition and we have the right to find out whether or not the respondent had competition and whether Mercoid was a factor.

Trial Examiner Sheppard: There is no question about it.

Mr. Freeman: That is all I want to find out.

969 Trial Examiner Sheppard: That is right.

Mr. Freeman: Mercoid is not on trial yet.

Trial Examiner Sheppard: Go back and read the question.

(The question was read as follows: "Q. With respect to the handling of Mercoid controls, either with your burner or apart from your burner, did you have any different policy as to how you sold Mercoid controls than the policy you had for the sale of Minneapolis-Honeywell?")

The Witness: I answered that, no.

By Mr. Freeman:

Q. You bought controls from Mercoid each year starting with 1937 up to and including the year 1943, is that correct?

A. Correct.

Q. And you sold oil burners with Mercoid controls from there on? Is that correct?

A. That is correct.

Q. And you advertised Mercoid controls on your oil burners just as you did the Minneapolis-Honeywell controls, is that correct?

A. That is correct.

Q. In connection with your purchase of Minneapolis-Honeywell's controls did that company as far as you
970 know ever give you any special concession because of your purchase of large quantities of controls?

A. None excepting their standard discount brackets as far as I know.

Q. In other words, if your quantity put you in bracket five you got bracket five prices, correct?

A. That is what I assumed.

Q. Isn't it a fact that you actually registered some complaint with Minneapolis-Honeywell because you were

using so many more controls than what their bracket five called for?

A. That is true.

Mr. Haycraft: I object to that as immaterial and irrelevant.

The Witness: I think it is very important to me. If I might mention it, I don't think Minneapolis-Honeywell treated me very fairly in giving me only bracket five when I was entitled to discounts to something far in excess to what they gave me.

In other words, competitors of mine did one-third the business that I did and they got a price that was equally as low and it appears that simply because I did establish this large volume it was never taken into consideration. Minneapolis' contention always was as long as there was only one customer in that bracket they would not make
971 a new bracket for it. Someone has to start it.

Trial Examiner Sheppard: Let me see, Mr. Peters, there were seven brackets?

The Witness: Five, I think. It ran up to 10,000 sets.

Trial Examiner Sheppard: They started at the lowest Number One, which had a discount?

The Witness: That is right.

Trial Examiner Sheppard: And went up to the fifth, which was the lowest discount?

Mr. Freeman: The lowest price and the highest discount.

Trial Examiner Sheppard: The lowest price and the highest discount?

The Witness: Right.

Trial Examiner Sheppard: And you were in I believe you said the third?

The Witness: The fifth, the largest.

Trial Examiner Sheppard: The largest?

The Witness: Yes.

Trial Examiner Sheppard: You wanted what?

The Witness: A still better price for my controls because my purchases were far greater than anybody else's in Bracket Five. In other words, Bracket Five was established and these brackets apparently were established
972 in a period when volume didn't begin to approximate the volume that was later attained by the whole industry. In other words, the whole setup was obsolete and something should have been done to change it to take into consideration the volume that became possible under the

conditions where the total sales of the industry were far greater.

Trial Examiner Sheppard: That is what made the respondents create, if I understood you right, a new bracket something over ten thousand?

The Witness: That is right.

Mr. Freeman: Mr. Examiner, 10,000 sets entitled a purchaser to go to Bracket No. Five and Mr. Peters complained, as I understand it, that he bought nearly three times that amount or at least two and one-half times 10,000 sets of controls.

Trial Examiner Sheppard: And only got the same.

Mr. Freeman: And only got the same discount that a dealer got who bought 10,000.

Trial Examiner Sheppard: I see.

Mr. Freeman: And what Mr. Peters further said was that Minneapolis-Honeywell said, "We can't make a special bracket for you."

Trial Examiner Sheppard: I see. We will let you and the Minneapolis-Honeywell Company fight that out. We have nothing to do with that specially.

973 The Witness: Well, if the Federal Trade Commission is interested in seeing that some other manufacturers get a fair deal, how about looking after my interests? I have a legitimate complaint here too.

Trial Examiner Sheppard: You have got the right to register it here.

The Witness: It is registered.

Trial Examiner Sheppard: All right.

The Witness: I have been waiting a long time to say this.

By Mr. Freeman:

Q. Isn't it true that your first contract entered into with Minneapolis-Honeywell on January 11, 1936, called for 350 sets?

A. Yes, probably.

Trial Examiner Sheppard: That is a small order, isn't it?

The Witness: That is right.

By Mr. Freeman:

Q. You were a small manufacturer in the beginning, is that correct?

A. That is correct.

Q. And you then paid Minneapolis-Honeywell's price for that particular bracket, correct?

A. Right.

974 Q. And then on July 20, 1936 the same year you got a new contract for 1,000 sets?

A. That is correct.

Trial Examiner Sheppard: That put him in a new bracket, didn't it?

Mr. Freeman: Yes.

By Mr. Freeman:

Q. And that put you in a more favorable price bracket because your quantities of purchases had increased, is that correct?

A. That is correct.

Q. And then on January 4, 1937 you entered into a contract for 4,000 sets, which put you in a still more favorable bracket, that is correct?

A. That is correct.

Q. Of course, your price went down as your bracket went up?

A. That is right.

Q. Then on January 27, 1938 you were put in the 7500 bracket, correct?

A. Correct.

Q. And on May 4, 1939 you were put in the 10,000 bracket, is that correct?

A. That is correct.

Q. And from then on you have remained in that particular bracket notwithstanding you have purchased

975 two or three times the amount of controls called for by the bracket?

A. That is correct.

Trial Examiner Sheppard: I think that is very plain now. I get that now. I understand that.

By Mr. Freeman:

Q. I may have asked this but even at the sake of repetition, when you were paying the price called for by the 350 set bracket you were still under the general market to the extent of about $20 per oil burner, is that correct?

A. Yes, at least that.

Q. Do you do any overall advertising?

A. A limited amount.

Q. Would you say that your advertising cost you $5.00 per burner?

A. Oh, no. I would say that my total direct overhead doesn't cost me a fraction of that.

Q. How about your advertising; do you do any trade paper advertising?

A. We do occasionally. We buy a page in the trade paper at a couple hundred dollars a page but it is a very small percentage of our gross income.

Q. Do you have any service stations where service is rendered your dealers?

A. No.

Q. That policy of yours with respect to rendering
976 service to the oil burner dealers was different, was it not, than what the old line companies had adopted?

A. We made up our mind that we would sell only to the competent organizations who knew enough to maintain their own service and knew how to install our equipment, so that we could eliminate entirely the item of field service which was a very costly item that was being furnished by other manufacturers who were getting much more money for the equipment.

Q. And you gave that savings to the purchasing public who bought oil burners from you?

A. And the reason we felt we should do that was because there was no way of determining how much service a dealer would require after he bought the burner. In other words, a dealer would require so much that you took a loss on the equipment regardless of how much you sold him.

The next was if he knew enough he would require none, and the competent dealers required none, and we determined to eliminate altogether that unnecessary item. Burners were becoming dependable and stable and there were enough competent dealers so we would not have to do business with the others.

Q. And of course that effected an economy in your manufacturing costs?

A. That is right.

977 Q. And now with respect to these advertising post cards that Mr. Haycraft introduced yesterday in evidence in behalf of the Commission, did you furnish those to your dealers free of charge?

A. Well, we mailed them direct and where we had distribution in the area we gave the dealer the leads or the inquiries that came out of them.

Q. And if a dealer wanted to have his name imprinted

on your piece of advertising did the dealer get that for nothing?

A. Oh, no, all advertising was paid for by the dealer. I think we had a rate of $12 a thousand for a very attractively illustrated piece of literature together with a slight additional charge for the imprinting of his name if he chose to do it.

Literature was another business in our business. The dealer would have a habit of taking it in the car and it would become a bunch of garbage after a while and they spent a bunch of money to advertise and never did anything with it. So we decided the only dealers that would get the advertising were those who paid for it.

We had a set of master cuts made up and had a printer who would really work on volume basis by taking the various colors and running them off in large quantity and then do the third imprint and the dealer would ultimately pay for the total cost but of course we would buy in 978 quantity and give him the benefit of the lower price.

Q. So that the dealer solicitation on the post cards calling for Quiet-Heet burners was not paid for by your company at all?

A. The dealer did not send out post cards. We sent out post cards. That was our advertising; the folders or the advertising material the dealer used was of a different nature. It was designed for the customer, the ultimate user and not for other dealers.

Q. And such literature that was designed for the ultimate customer was paid for by your dealers?

A. That is right.

Q. So that you effected an economy in that you did not provide your dealers with a lot of literature?

A. That is right, or any.

Q. You say you didn't provide them with any?

A. Any literature to the dealers. We provided and they paid for it.

Q. You just gave them the benefit of your quantity purchase price?

A. That is all.

Q. Did you furnish your dealers with service manuals with respect to the installation of your Quiet-Heet oil burner?

A. We furnished them with service manuals but we charged them I think $2.00 apiece. They were also a very

attractively gotten up and very well thought out service manual.

979 We always used to call it practically an installation school; if they read that book and read it thoroughly they could install the average oil burner. But again we were up against a costly proposition to just give it to thousands of dealers, so we sold it to them.

Q. And you charged $2.00 apiece?

A. Yes.

Q. For the service manual you gave your dealers who purchased oil burners from you?

A. That is right.

Q. And I take it your sales to oil burner dealers were on a substantially large volume, correct?

A. That is right. We sold approximately 25,000 a year just before oil burners were banned by the O.P.A. originally.

Q. The period we are talking about primarily, Mr. Peters, is that period prior to any of the present war emergency rules and regulations.

A. Yes.

Q. Did you in getting up your burner save any money in connection with the cartons in which you packed the burner?

A. Well, we made a very complete study of the whole item in order to put it on a mass production basis. We had special dies made and special experimental cartons designed that were finally brought into active use which brought the packing cost down one-quarter.

980 We were the first and probably still are the only manufacturer in the country using corrugated cartons with spaces to pack items.

The result of the corrugated item is it eliminates lots of space in the plant. It speeds up production. It speeds up shipment and it enables you to handle three times the volume in about one-third of floor space that you would have to have if you used crates. In addition to that a burner which is attractively finished in our case comes to the customer in an immaculate condition with no scratches or marks, and we think we have the finest looking and the best operating oil burner on the market.

Q. Isn't it true that in connection with your advertising of Minneapolis-Honeywell controls you likewise advertise that the motor was a General Electric motor and

that the pump was made by one of the large manufacturers, etc.?

A. That is true. The dealer was interested in the type of parts he got. Dealers are part-wise. In other words, they have had certain experience with certain types of equipment and they are highly opinionated as to what they want and if you deviate in certain, even minor, details you have a very tough time convincing them they ought to take it.

Q. So you just followed the lines of least resistance customer-wise, is that correct?

A. So far as we could.

981 Q. And so far as you could give them a good product at the same time?

A. Yes.

Q. You never had any hesitancy with respect to the controls or parts that you put on your oil burner as to their operation?

A. No, the parts that we put on oil burners were the highest priced parts money could buy. Our method of making the castings is the highest priced and the best method there is. In other words, in spite of the low price our equipment is an outstanding piece of engineering and design.

Q. And as a result of that outstanding engineering and design and using what you say the high priced parts you were able to have your overall selling price relatively low, is that correct?

A. That is right.

Q. In other words, you merely passed on to the purchasing public the benefits of your savings in manufacturing, etc., is that true?

A. That is right, manufacturing and sales policy and sales method.

Q. When it comes to sales policy did you sell your oil burners on a credit basis?

A. No, we had no open accounts. Every shipment went out c.o.d. or collect with order.

982 Q. Am I correct in my understanding then that you either had the burners and the parts that go to make up the burner in your factory or you had the cash in your bank or drawer?

A. That is right.

Trial Examiner Sheppard: Don't they all do business on that basis?

The Witness: No, I initiated that policy.

Trial Examiner Sheppard: You mean you initiated the cash basis?

The Witness: That is right.

By Mr. Freeman:

Q. In the oil burner business?

A. In the oil burner business.

Trial Examiner: Doesn't the respondent, or don't you know how they do business?

Mr. Freeman: I will be glad to answer.

Trial Examiner Sheppard: I want that on the record.

Mr. Haycraft: You can't unless you are under oath.

Mr. Freeman: Oh, as an attorney anything I say on the record goes.

Trial Examiner Sheppard: You know how?

Mr. Haycraft: Not if I object to it it doesn't.

Trial Examiner Sheppard: Do you know how the respondent does?

983 The Witness: Minneapolis-Honeywell, initially we did some business with them on a cash basis but when your credit standing is established they will ship you on open account basis.

Trial Examiner Sheppard: I get the difference. Go on, Mr. Freeman.

By Mr. Freeman:

Q. Now as long as that question has been asked, how about the other oil burner manufacturers with whom you were competing, do you know whether or not they operated on a cash basis when they sold an oil burner?

A. Well, I won't vouch for the individual policy of each of them but as a general thing they used other methods at the time I entered the business, in other words, consignment, open account, and various other costly methods of selling.

Q. And they had credit risks?

A. Naturally and losses.

Q. Did you lose any money creditwise?

A. Other than a very nominal amount of bad checks that we might have gotten we had no losses.

Trial Examiner Sheppard: Do I understand you, Mr. Peters, to say—I want to be sure about that—that you were the only man in the burner field that conducts your business on a c.o.d. basis?

The Witness: Not today. As a matter of fact, most
984 manufacturers followed my merchandising and price methods after they found that they were successful. The only manufacturers today that are really doing the job are doing it the way I started doing it.

Trial Examiner Sheppard: All right, I think I get the point there.

Mr. Freeman: Just a moment or two.

That is all.

Redirect Examination by Mr. Haycraft.

Q. What other manufacturers, Mr. Peters, follow your example in manufacturing and policy?

A. For instance, one of the successful examples of manufacturers who followed my policy is a dealer of mine who was here yesterday, a Mr. Toker. You will probably hear from him.

He decided instead of buying burners from me he would follow suit and as a result in the last three years he has been in business he has become one of the most successful manufacturers following the identical methods of doing business that I have been following and his volume has doubled and tripled each year now I think for three years that he has been in that business.

Of course there are a great many others such as Korth.
They attempted to follow my footsteps and as a result
985 they have been very successful themselves as myself, much more so than they were when they started out first. They spent about a year or two knocking my policies. Then decided to go along with them and they did very well.

One of the most outstanding examples of a manufacturer who worked along the lines that I did was Aldrich in Peoria, Illinois, and he probably next to myself d[illegible] the largest business in the industry.

It appears to me by studying the manufacturers in the business that there is a clearly defined line between those who made the grade and those who did not. The ones who made the grade worked along the lines that I indicated and the others just stayed where they were or folded up, or went out of the picture.

Mr. Haycraft: That is all.

The Witness: At the time that I got in the picture a certain change was taking place in the industry. Formerly

oil burners were a pretty hazardous piece of business to install. You went to the finance company. They had a 10 per cent hold-back at least, or maybe more, and you always found yourself behind the eight ball. After a few months the customer would complain; the finance company would adjust the complaint, deduct it from your hold-back and finally you found that you owed the finance company money so you could never get anywheres in the oil
986 burner business principally on account of the finance companies' attitude and the necessity for using their services, but as soon as the F.H.A. went in the picture, first of all there was Title One, which created the construction of a tremendous amount of new homes and these homes were built by builders who didn't care what the trade name on the burner was, just as long as the quality of the burner was there. They bought in mass and quantity, and so immediately opened up a volume market.

Secondly, the individual home owner could go out and buy oil burners at strictly low rates. The manufacturer could sell to the dealer and the dealer sell to the customer on a non-recourse basis and those two words "non-recourse" made all the difference in the world in the oil burner industry.

A lot of oldtimers did not recognize what was taking place. They considered that the oil burner was still a specialty that needed a lot of high pressure selling and an extremely high margin of profit, a tremendous amount of service. They didn't see what was going on.

Now the ones that did, made the grade. The ones that didn't, started hollering that their competitors were getting special price concessions, their competitors were selling controls at low prices. A lot of that was not justified. Of course, a certain amount of it was done. There was a big margin at that time in Minneapolis-Honeywell
987 controls, a big difference between the list and your net cost.

Nothing in the world could justify making 100 per cent for instance on an item simply because that was the difference between the list and your net cost, so you sold at what you considered a reasonable price.

If a customer wanted a control and he was buying burners from you and if he had originally paid a little less to a competitor of yours for the extra control, why you sold it to him. You had a reasonable profit. There was no use in trying to get everything out of the picture.

The average small manufacturer incidentally could get along and buy in Bracket One or Two and still could do very well because the majority of them did their own installation so they got the benefit of a wholesale price on controls and a wholesale purchaser in other fields and still carried on. That is why there are still a tremendous large amount of small manufacturers in business when there should be every reason for them stepping out of the picture. They had the easiest time of it.

Trial Examiner Sheppard: All right. Is there anything further from this gentleman?

Mr. Haycraft: No.

Mr. Freeman: Just one moment.

Nothing further.

Trial Examiner Sheppard: You are excused.

988 (Witness excused.)

Mr. Haycraft: May we have a five-minute recess?

Trial Examiner Sheppard: Take a ten-minute recess.

(A ten-minute recess was taken.)

Mr. Haycraft: I will call Mr. Rodler.

H. F. RODLER was thereupon called as a witness for the Commission and, having been first duly sworn, testified as follows:

Trial Examiner Sheppard: Mr. Reporter and gentlemen, this is Mr. H. F. Rodler, 334 Plymouth Road, Union, New Jersey. Is that right, Mr. Rodler?

The Witness: That is right.

Direct Examination by Mr. Haycraft.

Q. What is your occupation, Mr. Rodler?

A. Why, I am general manager of the Linden Plant of Hubeny Brothers.

Q. They are engaged in what business?

A. Originally, prior to the war, sheet metal products manufactured to specifications.

Q. Are they engaged in war work?

A. Entirely in war work.

Q. How long have you been with that firm?

989 A. Oh, about three to four years.

Q. Before that what did you do?

A. I was in the manufacture of oil burners.
Q. Under what firm were you established?
A. Oil Equipment Laboratories, Inc.
Q. Where was it located?
A. Elizabeth, N. J.
Q. And what type of burner did that company manufacture?
A. It originally manufactured a rotary, gaseous rotary and atomizer rotary type burner, and then we got into the high pressure type burner manufacture.
Q. What position did you hold in connection with that firm?
A. General manager and chief engineer.
Q. Where did you sell your products?
A. In the Eastern Seaboard primarily.
Q. To dealers?
A. Yes, sir, to dealers and distributors.
Q. What was the name under which that was sold?
A. Rotaflame, Silent Gem Spotlight.
Q. Over what period of years was it engaged in the sale of oil burners?
A. Approximately seven to eight years as Oil Equipment Laboratories.
Q. What controls did you use in the burners?
A. Minneapolis-Honeywell, Mercoid, Perfex, United States.
990 Q. Did you use them all at the same time or over different periods of time?
A. Mercoid, Minneapolis and Perfex we used pretty consistently throughout. United States controls we tried and did not like very well, so we discontinued their use.
Q. Did you have a contract with the Minneapolis-Honeywell?
A. Yes, sir.
Q. Do you know what bracket you were in?
A. The brackets varied according to our purchases as the years went by. They were increasing steadily each year and I believe our last contract was in the third bracket if I am not mistaken.
Q. What year was that?
A. That was in '40 or '41. I would not want you to pin me down on that.
Q. About how many burners did you sell at that time?
A. Our best year was about 1400 burners, 14- to 1500 burners.

Q. How would you say the equipment, the controls were divided, more to Minneapolis-Honeywell, Mercoid and Perfex, what percentages?

A. The majority was Minneapolis controls.

Trial Examiner Sheppard: You mean by that that you did buy from others?

Mr. Freeman: Yes, he testified that he bought from
991 Perfex, Mercoid and also some controls from United States Controls.

The Witness: 95 per cent of the controls was Minneapolis and Mercoid, 5 per cent was Perfex. Perfex were trying to introduce their controls and their limit controls were all right but in the primary controls there were some defects and it did not warrant us to use them.

By Mr. Haycraft:

Q. Did you ordinarily sell your burners equipped with controls?

A. Yes, sir, in every case we endeavored to sell them where we could equipped completely with controls.

Q. Did you ever have any instances in your experience where the dealers tried to buy the burners without controls?

A. Yes. There is two categories there. One is where you had a replacement, that is, of the burner proper. It is where the controls were good and already were on the job; both primary and limit controls that were on the job were in good shape but the burner was in bad shape. The burner was sold for replacement purposes.

That is the only consideration the Underwriters' Laboratories would take as to a manufacturer. If he played the game on the square they would recognize the fact that a manufacturer did have the replacement program with
the primary control where it could not be sold with
992 the burner, and they recognized those facts and you had to have proof of any burner that you sold without a primary control if they cared to investigate you because it was the Underwriters' insistence that the primary control be sold with each burner. But they did recognize the fact that on replacement bases it was necessary to sell the burner less the complete set of controls.

Then the other category falls in where there could be a lot of sales that could be made without controls.

Q. What was the cause of that?

A. The major cause as far as I know is that we had to ask too much for the controls that we sold with the burner

and that they liked our burner better, but could buy the controls in the market cheaper than we could sell them to them.

Q. Where could you buy these controls cheaper than you could sell them to them?

A. Well, that is what I tried to find out in seven years of business where that source of supply was coming from but I could never get any written proof to that.

Q. The dealers, did they—

A. (Continued.) But they were buying them.

Q. Did the dealers ever tell you where they got them?

A. They mentioned names but there is no written proof that I have of anything of that nature that went on. The only fact that I know is that the controls were pur-
993 chased for less money than I could sell them for and handle controls.

Q. What was the source of that that was told you by the dealers?

A. A certain Mr. La Pidus in Newark, N. J. That is known as Quiet-Make.

Mr. Freeman: Quiet-Heet.

The Witness: That is right, Quiet-Heet.

By Mr. Haycraft:

Q. During what period of time did you find that, or experience that?

A. I believe the gentleman in question there came into business in about 1939, if I remember right or '38, somewhere around in there. Up to that time us old fellows never ran into that type of business.

Q. What effect, if any, did it have on your business?

A. Well, the first six months it drove the dealer price of oil burners down at least $25.00. The second six months it drove the average price in the country down another $25.00, that is, I am speaking of wholesale prices from manufacturer to dealer.

Mr. Haycraft: That is all. You may cross-examine.

Trial Examiner Sheppard: Cross-examine.

Cross-Examination by Mr. Freeman.

Q. What did you personally do to get the so-called
994 lowdown basic facts with respect to Quiet-Heet in its sale of controls?

A. Well, I will put this in the record: the boys of Min-

neapolis-Honeywell and the boys of Mercoid and myself, we all came up together. I have been in this game since the inception of the control business in the oil burner business.

I never registered any complaints against either a control company or any control company, or any motor manufacturer or any pump manufacturer as far as that is concerned, regarding practices that was evident that was going on. Whatever it was I don't know.

However, I did to the representatives of both control companies.

Q. That is Mercoid and Minneapolis-Honeywell?

A. Mercoid and Minneapolis-Honeywell in this on this basis: how in the world, if these are your brackets and that is your lowest possible price, can these items be sold at the prices they are being sold at, and the reply to that was, "Get me some written proof that that occurrence is going on and we will immediately put any kind of a stop to it", and that written evidence I was never able to obtain.

Q. And those were the requests made to you by both Mercoid and Minneapolis-Honeywell?

A. That is right, sir.

Q. And so far as these practices or the troubles that you had were not only with Minneapolis-Honeywell controls 995 but also with Mercoid Controls, that is, the selling at low prices as you testified?

A. Well, let me put it this way, taking out a pencil, we so-called manufacturers of oil burners of the high pressure type actually were not manufacturers. We were assemblers because we bought 95 per cent of all the equipment that went on the burners, pumps, controls, motors, couplings, etc., so it was a matter of purchasing.

Trial Examiner Sheppard: You were a big manufacturer?

The Witness: We were a small manufacturer.

Trial Examiner Sheppard: A small manufacturer?

The Witness: Yes, sir; a high pressure type burner from the standpoint of engineering, as 95 per cent of us made that type of burner, one could interchange all the parts from one to the other and you would have identically the same thing. It was an assembly proposition.

When you buy 95 per cent of the equipment that is engineered and manufactured by your suppliers and put

it together, it comes down to your cost analysis on the basis of what you buy that equipment for.

Now you take your five major items, your set of controls, your motor, your fuel unit, your transformer, your blower wheel, and your coupling thereto is the major part of the burner. Put those all together at the prices
996 that were quoted to us, maximum prices, and not adding one dime for labor, overhead, cost selling and service, it proved on paper to us that the burners that were being sold with controls could not be sold at that price and the man stay in business.

That is why we always suspected that there were lower prices than what were being quoted to us as general by all manufacturers in the trade.

Trial Examiner Sheppard: That in your judgment; was that because of any change in the prices of the controls but in the burner itself?

The Witness: All items we bought put together, on the maximum quantities that we asked for in quotations could never give us a cost item, leaving all other items out, or price where we could sell a burner at $39.50 to the trade.

Trial Examiner Sheppard: That is what I am talking about. Your trouble seems to be with the burners and we are interested in this case with the controls, and I have not been impressed that there is any change much in the price of controls during these years by any of these companies.

The Witness: Well, I put all the rest of it in because that is your basis of cost analysis.

Trial Examiner Sheppard: All right. Go ahead, Mr. Freeman.

997 By Mr. Freeman:

Q. Following up what the Examiner just asked, in other words, the troubles were not alone with the control prices but also with the prices of pumps and motors and transformers and all of the component parts that went in to make up the burner, correct?

A. Yes, I would say that, putting everything together we could not arrive at a cost item that we could add overhead and profit to and sell in competition with our neighbor in Newark, at the very best prices that were quoted by Minneapolis-Honeywell in their top brackets as listed in their sheets.

Q. In other words, the best prices that you could have

gotten from Minneapolis-Honeywell assuming that you were one of the largest users of Minneapolis-Honeywell controls would still have not enabled you to compete with a $39.50 burner?

A. That is right, sir.

Q. As a matter of fact, you never paid any more than $25 ever for a set of controls? I mean as a manufacturer or as an assembler starting with 1936?

A. You are asking me to remember complete figures of four years ago. Whatever our contract bracket called for that is what we paid for controls.

Q. Well—

A. (Continued) I don't know what our contract 998 called for offhand.

Q. In 1940, if you will take the Minneapolis-Honeywell statement for it, your company was in Bracket Two.

Trial Examiner Sheppard: Referring to what exhibit?

Mr. Freeman: I am referring to the stipulation.

Trial Examiner Sheppard: Exhibit 1?

Mr. Freeman: Exhibit 1.

By Mr. Freeman:

Q. And your net price for a set of controls that year was $17.25, and when I say a set of controls I am talking about the primary, the thermostat and the limit of the standard kind. I am not talking about chronotherm or any of the special.

A. Standard control, plain thermostat, limit and primary.

Q. And the lowest price that year to the largest user was $14.65. Now that difference of $2.65, even if you would have gotten $2.65 off of your price would not have enabled you to meet Quiet-Heet competition, correct?

A. Yes, I will say that is correct. $2.65 would not have made the difference necessary. It would have made part of the difference but not enough.

Q. But not enough to go out and really compete, correct?

A. That is right, sir.

Q. I understood you to say that the prices of burners were dropped or down the first six months about $25.00?

A. That is right.

999 Q. And—

A. (Continued) It began with Eveready.

Q. Eveready?

A. The Eveready burner was the first one to break the market. Who made it at that time I don't know.

Q. You mean they were the first to lower their price?

A. To lower the market price at that particular time. They sold the burner there for $75 complete with Minneapolis-Honeywell controls. I believe that was made by Braden Associates in Rock Island, if I am not mistaken, in that period of time.

Q. He was a large manufacturer, Mike Braden, correct?

A. Yes, Mike Braden, I would say he was comparatively a large manufacturer.

Q. And I take it you have been in the oil burner business for the last twenty years or so, you have been associated with that business?

A. That is right, sir.

Q. And Mike Braden, the gentleman you spoke of, likewise was in the oil burner business?

A. He was from the inception. He was originally in Oilomatic. He cut off there and started his own burner.

Q. And Mike Braden you say came on the market first, you say with a $75 burner?

A. I believe with a company known as Oil Heat
1000 Utilities, and marketed a burner at $75 that year and that year we were getting $96 to $105.

Q. As a matter of fact, if your company had gotten Minneapolis-Honeywell controls for nothing you still would not have been able to compete with the $39.50 price of the Quiet-Heet Company? It might have helped but it would not have enabled you to actually compete, is that correct?

A. You are taking $14.65 in there. I believe that is rather a broad statement because if you got them for nothing on a $14.50, it would be possible on that basis, but not possible on a 2.65 differential.

Q. In other words, you added your overhead to the $17.25, the price you paid?

A. We always tried to endeavor to make a profit on the controls that we sold. Before we sold out the business we were giving controls away with the burner in order to try to meet competition. What I mean by giving away I mean we did not have any mark-up on the controls themselves.

Q. You say you did not have any mark-up on controls?

A. Not when it went with the burner.

Q. So that when the mark-up or the addition of your burner, whatever it cost you—

A. Was on the burner proper.

Q. (Continued) Was on the burner proper, so that $17.25, since that was the only amount that was
1001 added because it was the cost of controls to you, would not have of itself enabled you to meet competition where the burner price went down $25 and then another $25, correct?

A. That is right, at that period of time.

Q. So that my statement that if you got the controls for nothing you would still have had tough going is correct?

A. You are confusing two facts. The $39.50 burner was not available at the time the $75 burner was being sold. It came two years later.

Q. There was a drop down of $25 you said in the first six months?

A. That is right.

Q. From $95 to $70, correct?

A. That is right.

Q. And at that time you were paying $17.25 for controls?

Mr. Haycraft: Wait a minute. I object to that. What year was that.

Mr. Freeman: 1940, that is what we are talking about.

Mr. Haycraft: That is not the year. He said the drop came in 1937.

The Witness: This is before. This is before the advent of La Pidus in the business. The first break was made by Eveready.

By Mr. Freeman:

1002 Q. I now understand it was not Quiet-Heet that first brought the break in the market, that it was Mike Braden?

A. Mike Braden was the first one.

Trial Examiner Sheppard: That was in what year?

The Witness: I could not give you it.

Trial Examiner Sheppard: Was it before 1938?

The Witness: It was before La Pidus's manufacture.

By Mr. Freeman:

Q. And Mike Braden used Mercoid Controls as standard equipment, is that correct?

A. I could not say. They were available, both Mercoid and Minneapolis-Honeywell.

Q. And in 1937, if you were in the second bracket, the price of controls was $22.60 to you?

Mr. Haycraft: It does not show that he was in the second bracket at that time.

By Mr. Freeman:

Q. I will ask you what bracket you were in at that time?

A. I could not give you that, sir. You should have that information as to what brackets we were in.

Q. I will tell you in a minute if you will accept that as a fact?

A. I will say this, as far as your brackets are concerned and our company is concerned, you never deviated from the brackets. In other words, if we bought
1003 whatever the bracket value shows we were never in the second bracket unless we got there.

Q. And you got what was coming to you always business wise from Minneapolis-Honeywell, correct?

A. I will say that, sir.

Q. And you got a good control always?

A. Correct, you always had a good control.

As I put this plea up, I will add this: that I put this plea up, owing to the facts that we were and that I personally was a very old contact with the Minneapolis-Honeywell Company, that not from the standpoint of my lower purchasing power but from the standpoint of old friendship, and the fact that I believed it was myself and a few others like us that materially assisted Minneapolis-Honeywell in developing a control from our field experience, and in their reports, why we should be entitled to an equivalent break in prices but I never got it.

Q. According to our records in 1937 you were in the third bracket and that is, you bought more than 350 sets of controls.

A. Yes.

Q. So that your price was $21.30.

A. Your records are accurate there. They can be substantiated by the contracts that may still be in the files of the Oil Equipment Laboratories. I can't re-
1004 member the details off-hand.

Q. As a matter of fact, you do not attribute the real dropping in price of the overall oil burner complete,

that is with controls, castings, burner, nozzles, transformers, pumps, fans, etc., all to the Minneapolis-Honeywell's price structure in connection with controls, do you?

A. You want my own honest personal statement in regards to this?

Q. Oh, certainly. All we want are facts here and that is all I have ever asked for.

A. There is Mr. Jensen over there, who called on me many a time and he can bear out the fact that we sat down at our desk there and argued from morning to night how it is possible for a man like La Pidus to sell burners.

Q. I was talking about 1937, which is prior. Now if you want to get over to another year, I will move over and put you in that bracket where you belong for that year.

A. We did not have these discussions in 1937 because it wasn't detrimental a fact at that time. In other words, a $75 proposition, you could make oil burners and sell them at that price and make some money.

Q. At $75?

A. That is right.

Q. But that was still a lowering of price over what the old line manufacturers prior to Mike Braden had been charging?

1005 A. That is right, sir.

Q. In other words, you could absorb, take out or squeeze out some of your profit back there in the 1937 period?

A. That is right.

Q. And still meet Mike Braden's price of $75.00?

A. That is right.

Q. So that your company then I take it just followed the usual practice, you squeezed out a little profit and continued to sell burners?

A. Continued to manufacture burners.

Q. When did you have this conversation with Mr. Jensen because what I want to do is put you in the proper year because as prices change conditions change and I want to be talking to you on the basis that we each understand each other as to years?

A. These discussions with Mr. Jensen came about six to seven months after Mr. La Pidus went into the oil burner business and it became quite argumentative in the following twelve months because the situation became steadily worse. What I mean by that is that the burners

sold by La Pidus were steadily dropping in price, continually, and they were still being sold with the best equipment available that was on the market as the controls and the fuel units.

Q. Would you say that these conversations that you had with Mr. Jensen about Quiet-Heet, about the
1006 Quiet-Heet situation occurred within six months or within a year after Quiet-Heet came on the market?

A. It continued to occur every time I saw Mr. Jensen.

Q. But it started about the time that Quiet-Heet—

A. Six to eight months after Quiet-Heet came on the market.

Q. Quiet-Heet came on the market in the early part of 1936?

Mr. Haycraft: The latter part of 1937.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

Mr. Freeman: I happen to have here a record and my memory tells me that when Mr. Peters testified yesterday that he started in business in the early part of 1936; he signed the contract with Minneapolis-Honeywell on January 11, 1936 for 350 sets, and then on July 20th of that year he, having attained enough controls to get him in the next bracket, signed a contract for a thousand sets and that is the—

By Mr. Freeman:

Q. And that is the time that you had these conversations with Mr. Jensen?

A. That is right.

Q. And at that time Mr. Peters of Quiet-Heet was selling his burner at around $65 to $70, correct?

A. No, it was $65 or less.

Q. And it was the $65—

1007 A. And the bigger ones. It was considerably less than $60, even at that time within twelve months after he was in business.

Q. So that this $60 or $65 price that you have referred to that gave you this trouble that you relayed on to Mr. Jensen?

A. That took the account away from us.

Q. As a matter of fact, your company during the first half of 1936 was in the same bracket price-wise with the Quiet-Heet Company, that is, you were in Bracket Three,

having bought more than 350 sets and Mr. Peters of the, Quiet-Heet up to July 1936 was likewise in Bracket Three?

A. Yes, I don't know what he was in. That information was never given to me.

Q. So that when Mr. Peters came on the market, that is, Quiet-Heet, you were confronted with competition in connection with the sale of your oil burner complete, correct?

A. That is right, sir.

Q. That that competition continued?

A. That is right.

Q. And then you testified that there was a general drop of $25 by the overall industry following this initial drop of $25 during the first six months of the Mike Braden?

A. It was a steadily decreasing price of the burners wholesale.

1008 Q. And that steadily—

A. (Continued.) Also retail.

Q. And that steady decrease in the price of burners, both wholesale and to jobbers and to retail continued from 1937 on down?

A. That is right.

Q. And—

A. (Continued.) Till burners reached the unheard of figure of $122 completely installed, by one La Pidus.

Q. Also the low price for the oil burners complete with controls to dealers as low as around $40?

A. Or less.

Q. Well, at least as low as $40?

Trial Examiner Sheppard: Was there a corresponding decline in controls, Mr. Rodler? I want you to put me straight there. I am interested in controls and not so much in burners. Most of the testimony this morning has been in reference to burners.

Mr. Freeman: That is because they sell their burners complete with controls and they do not sell their controls apart from burners.

Trial Examiner Sheppard: I understand that too, but was there a decrease in the price of these controls during these years?

The Witness: Sir?

1009 Trial Examiner Sheppard: Read that?

(The last question by the Trial Examiner was read.)

The Witness: Well, I believe if I remember correctly there was a decrease and then an increase due to increased manufacturing costs but in what particular years that occurred I don't know. The bracket came down and then came up again. All brackets went up and down in proportion.

Trial Examiner Sheppard: You don't make any complaint in reference to the prices of controls?

The Witness: No, I have never registered a complaint outside of my discussions here with Mr. Jensen where we argued it pro and con and as I asked the attorney here whether he wanted to have me give my personal opinion of my discussions had with Mr. Jensen.

Trial Examiner Sheppard: You are all interested and I gather it from the testimony this morning, in the low price of burners which made it impossible for you to do business along that line?

The Witness: That is right. We could never get down to that basis.

By Mr. Freeman:

Q. But you did not blame Minneapolis-Honeywell for that?

A. Well, the thing that, as I said to you before—

Mr. Haycraft: Let the witness finish.

Mr. Freeman: I am not stopping him.

1010 Mr. Haycraft: You stopped him twice.

A. (Continued.) My discussions here with Mr. Jensen were exactly these—and he will verify that—I said to Chris, "You know and I know that controls are being sold by La Pidus by the barrel fulls and it is ruining your distributing organization that you spent many years here to set up in this territory. Your distributors cannot sell your controls at retail to their dealers because they can go and buy them from Quiet-Heet irrespective of whether they buy a burner or not and the whole structure is changing. We used to have a beautiful business on clock thermostats, aquastats and all the rest of the control business as a separate item. Today we have not got it and the reason we have not got it is because that stuff is being bought from La Pidus, and I know it is but I can't prove it." I said, "The men are coming in to me" and I even had a dealer there one day when Chris was there admit that he bought them there but he would not

sign his name to the fact that he did buy them from him and what he paid for them.

Q. Do you know as a matter of fact that once Minneapolis-Honeywell sells controls and parts with the title to them that it has no way legally to control what the resale price of that control is going to be, what it is sold at? You know that, do you not?

Mr. Haycraft: I object to that.

1011 Trial Examiner Sheppard: That can go out. That is asking for an opinion of this witness of something he does not know about.

All right, is there anything else?

Mr. Freeman: Yes, I am not through.

Trial Examiner Sheppard: Go ahead.

By Mr. Freeman:

Q. You talked with Mr. Jensen. Did you ever talk with the representative of Mercoid about the same thing?

A. About the same thing.

Q. And did you ever talk to the representative of any of the motor manufacturers about the same thing?

A. Identically the same thing.

Q. And did you talk to the blower manufacturers and the transformer manufacturers?

A. Blower manufacturers, no, because we made our own wheels.

Q. And by the way—

A. (Continued.) The manufacturers of transformers, the identical same thing.

Q. In other words, you had the same problem?

A. The same problem outside of fans with everything we put on the burner.

Q. And I take it, as you said, about 95 per cent of what went into the burner you bought from other companies?

A. That is right.

1012 Q. And of course you recognized that you paid the overhead of each of those companies and that had to be included in the overall price?

A. So did this Quiet-Heet.

Trial Examiner Sheppard: You bought everything except the burner, didn't you?

The Witness: No, sir, everything that went into the burner was purchased in the open market, 95 per cent of

the burner we made and also the burner Quiet-Heet made as manufacturers. That is the name that is given to us. We were actually assemblers of that piece of equipment.

Trial Examiner Sheppard: I see.

The Witness: In other words, the castings were purchased whether die castings or cast iron casting. We did not have foundries.

By Mr. Freeman:

Q. You know as a matter of fact that Quiet-Heet make their own die castings?

A. Quiet-Heet make their own die casting? I don't know.

Q. Did you ever check in to find out?

A. Yes.

Q. That Quiet-Heet made their own castings?

A. No, I was not interested.

Q. If Quiet-Heet made their own castings or cases they would save that amount of overhead?

Mr. Haycraft: I think that is assuming. There is 1013 nothing in the record.

By Mr. Freeman:

Q. Just tell me whether you ever went to the trouble to find out what Quiet-Heet was doing that enabled Quiet-Heet to sell at a lower price?

Trial Examiner Sheppard: I would like him to answer that.

A. No, I did not make any personal investigation into his method of doing business outside of what I came in contact with out in the field. However, I did know that he purchased. I don't know about his die castings at all.

I do know about his cast iron castings. Those were purchased outside the same as ours were with the only difference between his and ours that we machined ours down to plus or minus five and he didn't machine his at all. That is the only difference.

Q. You made a better job?

A. Not to hear him tell it.

Q. But, as a matter of fact, if he didn't do any machine work on his and you did you were working to closer tolerances, is that right?

A. That is right, but we had only $3 direct labor to our burner. We could not take a hell of a lot off there and could not get to first base on the price he was selling at.

Q. In other words, a $3.00 saving would not help you any.

1014 A. Not that one $3.00.

Q. So that $3.00 would be no different than the price at which you bought controls in 1940 and the price which Quiet-Heet paid for controls in 1940?

A. Well, you see gentlemen, I don't know what Quiet-Heet paid for their controls.

Q. Assuming now that—and I will state this as a fact as a lawyer—

Mr. Haycraft: I don't accept that on the record.

Mr. Freeman: I would have that much courtesy if I were you.

Mr. Haycraft: Not on the record. We can't do that.

Mr. Freeman: I took my oath a good many years ago as a lawyer and I am still living up to it, and I will present the facts as conscientiously as I can to the Commission, and that is what I am doing now.

Mr. Haycraft: Then we would not need any witnesses at all. All we would need to do would be to call the attorneys.

Trial Examiner Sheppard: Go ahead, gentlemen. It is too small a matter to argue about.

By Mr. Freeman:

Q. I am asking you if you got Bracket Five, which price in 1940 was $14—

Mr. Haycraft: Let us take 1941 where we have evi-
1015 dence in the record. For 1941 there is plenty of evidence in the record what Quiet-Heet paid.

By Mr. Freeman:

Q. In 1940—

Mr. Haycraft: I object to 1940.

By Mr. Freeman:

Q. In 1941 the best price that Minneapolis-Honeywell had for its Bracket Five account was $13.75 per set, and I now ask you if you recall what Bracket you were in in 1941?

A. No, sir, I can't give you that.

Q. According to the Minneapolis-Honeywell records your company was in Bracket Two in 1941, and your price for a set of controls was $16.45 or a difference of $2.70, and I take it that if you could have knocked the hell out

of that difference, as you said, with respect to the cost of the machine work on your product it would not have spelled the answer that you could have competed with a $39.50 oil burner made by Quiet-Heet, correct?

A. Well, you put $2.75, $2.69—

Q. $2.70 is the difference.

A. $2.70, if you put $2.70 plus a few other items down the line you would have the collective difference.

Q. I wish you would just answer the question: if you could just reduce that $2.70 to nothing that would not have been the answer?

1016 A. Not the complete answer.

Q. That is all I want.

Redirect Examination by Mr. Haycraft.

Q. Would it have helped?

Mr. Freeman: We concede it would of course.

A. It would have.

Mr. Haycraft: That is all.

(Witness excused.)

Trial Examiner Sheppard: Take a little recess.

(A short recess was taken.)

Trial Examiner Sheppard: Come to order.

Mr. Haycraft: I will call Mr. Brown.

HARRY BROWN was thereupon called as a witness for the Commission and, having been first duly sworn, testified as follows:

Trial Examiner Sheppard: Mr. Reporter and gentlemen, this is Mr. Harry Brown of Electrical Oil Burners, Inc., 433 Kingsland Road, Nutley, New Jersey.

Direct Examination by Mr. Haycraft.

Q. What is your occupation, Mr. Brown.

A. I operate a retail installation and service organization on oil burners and heating equipment as an

1017, authorized dealer for Electrol, Inc.

1018, Q. How long have you been in that business?

1019 A. I have been in business for myself since May of

1941, but I have been associated with the oil burner business since 1926.

Trial Examiner Sheppard: Are you a dealer?

The Witness: I am a dealer.

By Mr. Haycraft:

Q. Do you make installations of oil burners?

A. Yes, just Electrol burners, being an authorized agent for that one piece of equipment.

Q. How long have you done that?

A. For myself since May of 1941, and prior to that, starting as of 1930, I had charge of installation and service for the Electrol, Inc., in the metropolitan area. That varied at times with their dealers.

For example, if a dealer that happened to be in New York City went out of business for one reason or another, the factory took over that operation to take care of the maintenance and see that the customers in that area were taken care of.

Q. You say since 1930 you have had experience in the installation of Electrol oil burners?

A. That is right.

Q. What type of a burner is the Electrol?

A. The Electrol is a pressure atomizing type 1020 burner, not a straight gun burner, modified burner.

The flame principle is the ball type of fire. The oil is all burned in suspension. It is not just a straight shotgun burner. We term it as a modified burner. It is a pressure atomizer, the same as the run of the mine, straight shotgun burners, but the methods of mixing air and oil are different from the mixing of any of your other gun burners on the market.

Q. How much of that burner does the Electrol make and sell?

Mr. Freeman: That is objected to unless this man has said he was a manufacturer. This man stated I understand he is a dealer. He has not said he is a manufacturer.

Mr. Haycraft: He said for ten years he worked for the company in installing.

Trial Examiner Sheppard: Clear up first what the facts are on that.

A. Well, to the best of my knowledge the castings of the oil burner are made outside and brought into Electrol's factory and there they are machined by Electrol

and also painted by Electrol. The motor is purchased outside from either Emerson or Ohio.

The blower wheel is also purchased outside. The pump and pressure regulating valve is built by Electrol. The ignition transformer is purchased outside. The firing head and the cutoff valve is made by Electrol.

The safety mechanism, the wheel itself, made up
1021 of air tubes, air carrying tubes known as side tubes and a heat loop to the best of my knowledge the material is purchased outside and the machining is done by Electrol.

The panel part is purchased from Penn Electric Switch, and the Mercoid tube in it is purchased from the Mercoid Corporation and the balance of the control, that is, all the parts that go to make up the assembly other than those that I mentioned are made by Electrol.

Put the whole thing together and that is your oil burner.

Trial Examiner Sheppard: Do they get anything from the respondent company?

The Witness: From who?

Mr. Haycraft: Minneapolis-Honeywell.

Trial Examiner Sheppard: Do they get anything from the Minneapolis-Honeywell?

The Witness: The controls are purchased from control manufacturers.

Trial Examiner Sheppard: I thought you said the Mercoid. They are purchased from both?

The Witness: They are purchased from both? No, let me get it straight there. Their primary control, their safety control that shuts the burner down in the event of ignition failure is made by them and the parts that go to make that up are purchased outside as those that I mentioned.

In other words, the mercury tube in that safety
1022 tube is purchased from Mercoid Corporation. The panel that absolutely shuts the burner down and has a switching mechanism on is purchased from Penn Electric Switch. That is assembled onto a frame or bracket and cover, and the necessary screws and what not, those are made at the Electrol factory, assembled and tested there.

By Mr. Haycraft:

Q. In other words, the built-in primary control?

A. That is right.

Q. Where do you purchase thermostat and limit controls?

A. As a dealer purchasing from Electrol where we could purchase?

Q. I am asking where does Electrol purchase?

A. We could purchase any control from them. It might be Minneapolis-Honeywell. It might be Perfex. It might be Penn. It might be Mercoid.

Q. Did they equip their burners with all four devices if the dealers asked for it?

A. The dealer could purchase any controls he wanted. That was up to the dealer.

Mr. Freeman: As to kind?

The Witness: Yes.

By Mr. Haycraft:

Q. In your experience since 1930 to what extent have you interchanged or installed different makes of 1023 thermostats and limit controls to perform the same job?

A. Well, for example, from time to time Electrol, of the standard burners shipped through, would box the equipment one time with Mercoid 110 thermostat. Another time it might be equipped with a Penn Electric Switch 110 electric thermostat. Another time it might be equipped with a Mercoid 110 volt thermostat.

Mr. Freeman: You have already answered that.

By Mr. Haycraft:

Q. You said Mercoid once. Do you mean Minneapolis-Honeywell?

A. No, because to the best of my knowledge Minneapolis-Honeywell did not manufacture a 110 volt thermostat.

Now I correct that because I do remember the T42 Minneapolis thermostat could be used with that. In other words, the tube rating with the two-ampere tube.

The standard 110 volt thermostat that Minneapolis-Honeywell made to work with circulators, etc., was not quite heavy enough electrically to work on Electrol's burner and as a result it was not used there but the standard article that would come through in the packing case with their equipment it could be any one of those four instruments that I mentioned, in other words, Minne-

apolis T 42, Mercoid 855T, Penn Electric Switch 802C70 or Perfex 200D.

Q. Those are thermostats. How about limit controls?

1024 A. Limit controls could be also the same. For Minneapolis it could be 404 or Perfex I think 700D or Penn Electric Switch, the number of which I don't recall.

Mr. Freeman: 607.

The Witness: I don't recall the number to be quite honest with you because Electrol had not used Penn Electric pressure controls for quite some time.

By Mr. Haycraft:

Q. What was the Mercoid?

A. I believe that was the Figure 31.

Q. Have you ever had occasion, or have you in your experience ever interchanged these thermostats on the same burner as it is installed or after it has been installed, or on a repair job?

A. You mean have I ever used any one of those four thermostats on the Electrol burner?

Q. Where some other had been used before.

A. On Electrol's burner, yes.

Mr. Freeman: You are talking high voltage now?

The Witness: That is right.

By Mr. Haycraft:

Q. What about the low voltage? Could you use the Minneapolis-Honeywell low voltage thermostat?

Mr. Freeman: The T 11.

A. On a burner?

1025 Q. Yes.

A. Not without relay.

Q. Was the relay necessary and what is the relay?

A. The electrical primary control system is 110 volt, the T11A. The thermostat is a low voltage thermostat. In order to control the 110 volt circuit from a low voltage station you must have an intermediate device known as a relay which permits that step-up in current through the relay device itself. In other words, the low voltage part is to the secondary of the transformer pulling in a clapper which pulls in a pair of 110 volt contacts; through that intermediate device you start the burner.

Q. Does Minneapolis-Honeywell furnish such a relay for such a burner?

A. Yes, they do.

Q. What is the number of that?

A. R19A, I believe.

Q. Have you had occasion to use it and install it for that purpose?

A. Yes, I have.

Q. What has been your experience in the repair or installation of burners other than the Electrol where such control devices were used?

A. Prior to my going into business for myself?

Trial Examiner Sheppard: When was that?

1026 The Witness: Which was May of 1941. In working for Electrol we serviced nothing but Electrol equipment.

Since I have been in business for myself and also since the war has started we have had calls on many other make burners due to the fact that their service men either have been called in the Army or gone into war work.

We more or less felt it was our duty to help out and we answered the call. That could be any make of burner

By Mr. Haycraft:

Q. And what has been your experience then in interchanging of thermostats, limit controls and primary controls of other makes of burners?

Trial Examiner Sheppard: Tell me all about that. I am interested in that subject. Tell me your experience.

A. Here is the only way I can answer that: Supposing I got a call at your home and there was no heat and we will just assume that. We will say the thermostat had been stolen from the job. Well, I could for example —well to go further—say it was a three-wire Minneapolis-Honeywell control and you needed heat right away.

What you mean by your question is what could I use to make that work, is that the idea?

Q. That is right.

A. Well, I could use the T11A Minneapolis-Honeywell thermostat—

1027 Mr. Freeman: The three-wire job?

A. (Continued.) Three-wire job, or I could use any electrical thermostat that would close the white and blue wires.

Trial Examiner Sheppard: All right, how would that work? Suppose on that same outfit there was a Mercoid primary and limit control?

The Witness: If there were a Mercoid primary and Mercoid Limit Control what type of thermostat would I have to put on?

Trial Examiner Sheppard: That is right.

The Witness: Any two-wire thermostat would work on that.

Mr. Freeman: I think, Mr. Examiner, you would not start there. Your assumption was a little erroneous because he was talking about taking off the three wire. You would never start with Mercoid limit and Mercoid Primary with a two-wire in the room. Your assumption was a little erroneous, if you will pardon me.

Trial Examiner Sheppard: All right, go ahead.

Mr. Freeman: I just wanted to straighten you out.

Trial Examiner Sheppard: I wanted to see if this gentleman was experienced. From your experience you could tell me how the use of one of these controls with the make of another control would work?

We have had something to do with that in this 1028 case. Some people said something about the sets that they ought to use the same make for each of the same installations.

The Witness: To answer that question honestly and correctly, if you take that from the standpoint of the original installation, which is what I assume you mean now—

Trial Examiner Sheppard: That is what I mean now.

The Witness: That would mean if you put on a Minneapolis-Honeywell stack switch you would use a Minneapolis-Honeywell three-wire thermostat. I know I would. That does not necessarily mean though that if you got stuck on a cold winter's day and I didn't happen to have the three-wire thermostat there that I could not give you heat. In other words, if your Minneapolis-Honeywell thermostat broke for some reason and I was called in there and I didn't happen to have a Minneapolis-Honeywell thermostat to start I would take your Minneapolis-Honeywell thermostat and return it to be repaired and fixed up like new, on which they do a good job, and I might take a shop thermostat, a two-wire. It would work. You would have heat but I would put your thermostat back on when it would come back.

By Mr. Haycraft:

Q. How about the limit controls?

A. The limit control can be, that is, a 110 volt proposi-

tion and it is line-break on live wire and anything would work there. That as I see it would not make any material difference.

1029 Q. You could use any make of limit control?

A. I would say yes. As far as safety is concerned and proper operation any two-wire 110 volt limit control would work satisfactorily, yes.

Q. Where you had a Minneapolis-Honeywell thermostat and Minneapolis-Honeywell primary?

A. Yes, because the 110 volt pressure or limit control, that might be either hot air furnace, hot air control or aquastat for hot water heating system, or steam control for steam system, breaks the live line before it gets to the primary control.

Q. That is its function?

A. That is its function, yes. It is set at a predetermined setting to cut the plant down in cold weather operation when steam or excessive temperatures are generated in water or the warm air system prior to the thermostat being satisfied.

Q. Have you as a matter of fact ever installed a different make of limit control with a thermostat and primary?

A. Will you ask me that again?

Q. For instance, suppose you had a Minneapolis-Honeywell thermostat and Minneapolis-Honeywell primary control?

A. Yes.

Q. Have you ever installed a different limit under those circumstances?

A. Yes, I have.

1030 Q. Was it satisfactory, do you know?

A. Yes, it will work satisfactorily, yes.

Mr. Haycraft: You may cross-examine.

Cross-Examination by Mr. Freeman.

Q. This example that you gave about getting heat, in other words, when you had a three-wire thermostat, a Minneapolis-Honeywell cooperating with a three-wire primary and then due to some unforeseen accident the thermostat went wrong, you could get heat as you say by operating from a two-wire thermostat?

A. That is right.

Q. That is very much like taking care of an emergency which might arise when a fuse blows out and you do not

have another fuse. You merely take a penny and insert it in lieu of the normal fuse, right?

A. Well, I would put the penny in but that is the same thing. In other words, the idea is to get the job running.

Q. Temporarily?

A. Right.

Q. And not as a permanent proposition?

A. I would not leave it there as a permanent proposition, and primarily because I know for example from a standpoint of temperature control in the rooms, take a Minneapolis-Honeywell three-wire thermostat. You
1031 have adjustable differential. You have a fixed heater element that works in conjunction with the primary control itself and that heater element varies with the different primary controls or the different intermediate controls where there would be a relay or what have you.

We will assume something about that instrument broke down which meant I could not fix it on the job right there, which meant it had to come off and go back to the Minneapolis-Honeywell plant to be repaired. Well then it could be supplanted by any control that would close the white and blue circuit to the primary switch.

Q. But you would not get the proper functioning, that is, you would not get that fine degree of temperature differential between the on and off that you would get with the normal thermostat that is made to cooperate with the electrical characteristics of the primary, correct?

A. Well, the heater element function and the adjustable differential in the three-wire thermostat make it possible to give you finer regulation, that is, you can satisfy the customer a closer differential setting than you can with a two-wire setting which has a built-in differential which is usually not adjustable.

Q. So, as a matter of fact, the three-wire primary and the three-wire thermostat known as Minneapolis-Honeywell's series 10 serves a function in obtaining close differential?

1032 A. That is true.

Q. Of temperature in the room?

A. That is right.

Q. And that eliminates the so-called cold 70?

A. Well—

Q. It eliminates the over-run to a certain extent?

A. It enables you to get finer adjustment. That cold

70 is something we have still got to lick, to be quite honest with you.

Q. As a matter of fact, you can get more even or uniform heat in the house when you have that?

A. You can satisfy your customer because you do have adjustable differential where you can satisfy whims and do a better adjusting job, yes.

Q. That is brought about by the three-wire?

A. By the combination of two, by the fact you have the combination working and the heater element built in you can pretty much adjust that yourself.

Q. So the electrical characteristics of the make-up of the thermostat are that it cooperates with the electrical characteristics or structural makeup of the primary in the Minneapolis-Honeywell situation, is that correct?

A. Yes.

Q. And usually thermostats of the same manufacturer go on an oil burner with the primary?

1033 A. When you install the job originally, yes.

Q. Electrol makes their own primary?

A. Yes.

Q. And that is a special primary different from the one that you can buy from Perfex or Penn Electric Switch or Mercoid, or M. H.?

A. You can't purchase it anywhere but from Electrol.

Trial Examiner Sheppard: Is that patented?

The Witness: To the best of my knowledge I really don't know, sir.

By Mr. Freeman:

Q. That is an Electrol job?

A. Right.

Q. And when Electrol sent out a thermostat to go out with that job I take it they have tested their particular primary to know that the particular thermostat that goes with the burner when it is sold as original equipment will work properly?

A. They furnish, as I said before, any 110 volt thermostat that would pass their laboratory test because I do know—

Q. When you say any 110 volt thermostat, it has to have even then the electrical characteristics sufficient to take care of the load?

A. That is right.

Q. So that every—

1034 A. (Continued.) In other words, you could not use a three-ampere.

Q. Thermostat.

A. (Continued.) On a thermostat on an Electrol because it is a 10 ampere load.

Q. So we have to qualify what Mr. Haycraft endeavored to show.

Mr. Haycraft: I object to that.

Mr. Freeman: All right, I will withdraw that.

By Mr. Freeman:

Q. So you can't just answer the question point blank that any 110 thermostat would work with the 110 volt Electrol Stack Switch or Electrol Safety?

A. Provided it is or has the proper electrical characteristics.

Q. The question I asked you is you cannot just use it because it is 110 volts, it does not spell success between the thermostat and the primary of the Electrol?

A. No, it must have a 10 ampere rating. It must have that otherwise the tube just won't take the gaff. You will start about 50 times and the contacts are gone.

Q. In other words, the contacts will weld or burn out?

A. Yes, because—

Q. The electrical load is too much at the start?

A. That is right.

1035 Yes, the starting load it won't take the gaff.

Q. And when you say "take the gaff" electrically speaking that means that the electrical current that passes through the wires at the initiating of the operation of the burner is much more than what it would be after we get into a running condition?

A. That is right, yes.

Q. So that you have to have a thermostat that is able to take that additional load which we sometimes refer to as a starting load, is that correct?

A. That is right.

Q. So that if you were buying a Penn thermostat of the high voltage type you have to be sure that the electrical characteristics of that particular thermostat are sufficient to meet the load when the burner is first started, correct?

A. That is correct.

Q. So that my statement is correct that you just cannot use any 110 volt thermostat?

A. When you put it that way, no.

Mr. Haycraft: That was not the question.

By Mr. Freeman:

Q. How many other oil burner manufacturers that you know of use 110 volt thermostats in oil burners for domestic household heating?

A. That is kind of a hard question to answer right
1036 offhand. When you mention it just like that I can't think of any.

Q. As a matter of fact, you don't know of any other company that now or during the last three or four years use as standard equipment 110 volt thermostats other than Electrol?

A. I can't think of any right at this minute, but I will answer your question this way: there must be others or otherwise the control manufacturers would not just make thermostats for Electrol.

Q. That is only a supposition on your part?

A. That is right.

Q. You don't know that as a matter of fact?

A. That is right.

Q. You do know that Mercoid will sell certain parts of its equipment to go into the Electrol safety control?

A. Mercoid tubes can be purchased.

Q. And you know that the Penn. Company is making a panel that becomes a component part of the Electrol safety device?

A. That is right.

Q. So that there are control companies that will make something special for Electrol?

A. I presume so otherwise they would not be able to procure the parts.

Q. You know, as a matter of fact, that there are thermostats of the 110 volt type used in controlling unit heaters and the like?

1037 A. That is right.

1038 Q. So that the same 110 volt thermostat used in controlling unit heaters could be used in connection with Electrol's specialized burner?

A. Provided the electrical characteristics were correct, yes.

Q. Now as a matter of fact, you don't know of any company in the domestic oil heating field outside of Electrol that uses 110 volt thermostats?

Mr. Haycraft: That is objected to as it has been answered once. The witness has not to my mind qualified to answer that whether they are.

Mr. Freeman: I think he is.

Trial Examiner Sheppard: I will leave it to you.

Mr. Haycraft: If counsel for the respondent wants to prove that as a fact, not by cross-examination of this witness who has a limited knowledge of all the manufacturers.

Mr. Freeman: Are you willing to say this man has limited knowledge? You yourself qualified him as an expert.

Mr. Haycraft: He is an expert.

Mr. Freeman: And he has done a swell job.

Mr. Haycraft: You are trying to make him an expert in another line.

Mr. Freeman: I am asking what he knows.

Mr. Haycraft: He should not be on the witness stand.

1039 Trial Examiner Sheppard: Answer that question, if you can.

The Witness: What was the question?

Mr. Haycraft: He asked him once and it has already been answered.

Trial Examiner Sheppard: I think it has been answered but I will let you go back and repeat it.

Mr. Freeman: If you will recall, Mr. Examiner, he answered that it must be because they would not make it especially for Electrol and I called his attention to the fact that these same thermostats are used with unit heaters, and that refreshed his memory.

Now I am asking him whether or not he knows of any domestic oil burner that uses a high voltage.

A. I can't think of any right at this moment, no, sir.

Q. That is the answer.

A. But there may be some. I would not want to be quoted as there being none.

Q. You know of none?

A. I don't know of any at the moment.

Q. You have been in this oil burner business since 1926?

A. That is right.

Q. You have not run into any that you can recall right now?

A. Not that I can recall right now.

Q. You have been rather active in the metropoli-
1040 tan area in behalf of Electrol since 1936?

A. That is right.

Q. So your answer is predicated at least upon thirteen

or fourteen years of actual experience in the oil burner field?

A. That is right.

Q. This burner made by Electrol that is a sort of a specialized type of burner, it differs from the conventional gun type?

A. Well, their TCV and TVU, TM and their X1 and X2 are straight shot models as we call them, yes.

They actually make five model burners, the TCV and the TUV, which are the one that I described before, the ball flame type and then make the X1 and X2, which are the straight shot jobs, and incidentally which they don't use the master control with either one of the three.

Well, I am sorry the TM, the larger job, has again a different principle of safety but the X1 and X2 use a primary control such as yours or Perfex's; that is the only two that I have ever purchased them either with M. H. or Perfex.

Q. When you use M. H. primary you use M. H. thermostat?

A. Yes.

Q. When you used a Perfex primary they sent a Perfex thermostat?

A. That is right.

1041 Q. And again you are speaking from actual experience, your own personal experience?

A. That is what actually comes through in the packing case. You specify whether you want Minneapolis-Honeywell or whether you want Perfex controls.

Q. You could not use the Minneapolis T11 thermostat with the primary made by Electrol?

A. No.

Q. And as a matter of fact what would happen in this emergency case where you were trying to give the customer heat on a cold winter day when something went wrong with the Minneapolis-Honeywell T11 or three-wire thermostat? Could you then use a thermostat that had slow moving contacts, that is, the make and break would be of the walking on and off type of contacts?

A. You are referring now to model burners that have—

Q. Minneapolis-Honeywell primaries on them.

A. All right, now would you ask that question once more?

Q. Can you use a make and break type of thermostat

where the thermostat blade or the movable contact walks slowly on or off from the fixed contact?

Mr. Haycraft: I am going to object to that unless he indicates what thermostat he is talking about.

Mr. Freeman: I think he understands.

Mr. Haycraft: I want the record to show that. We
1042 certainly have got some different manufacturers here.

By Mr. Freeman:

Q. Can you use a thermostat other than the snap acting type?

Mr. Haycraft: I have the same objection. I think we should have for the record and for the Commission the name of the manufacturer he is talking about so that it will show.

Trial Examiner Sheppard: Can you give us such a name? Can you give us the manufacturer's name?

A. Well, offhand, is there—

Q. I am just asking what I would really like to know. This is not a trick question, Mr. Brown.

A. Wait a minute. I will answer it.

Q. Could you use a thermostat where the contacts did not snap when they went on or off?

Mr. Haycraft: The same objection unless he indicates what thermostat he is talking about. Unless he does it will certainly have no probative value.

Trial Examiner Sheppard: Go ahead, I will let you answer.

A. The only way I can answer that as I interpret it in my own mind, if you had a Minneapolis-Honeywell R116 or 17 primary control and the thermostat went bad to a point where you could not do a thing with it, then I
1043 could give that customer heat by using any type of thermostat that would close the white and blue wire, the white and blue circuit to that relay.

Now I say further that as far as actually A No. 1 temperature control, to do your job the way it ought to be done, that won't give you as satisfactory results as the original thermostat that was on but it will work with either one.

Q. As a matter of fact you spoke about a relay and you spoke about a clapper on the relay?

A. That is right.

Q. And that is nothing more than when the solenoid is energized the clapper pulls in by the creating of the electromotive force, is that correct.

A. Yes.

Q. Isn't it desirable that when that clapper is pulled in that it be pulled in and held there as distinguished from merely touching it and chattering?

Mr. Haycraft: That is objected to as to the form of the question what is desired. If he wants what is required that is something else.

Trial Examiner Sheppard: This is technical stuff. I want to let it go on and get what I can out of it. I don't see much use to it though.

A. Well, for example, when you close the white and blue circuit that will hold the clapper in until the white
1044 wire is actually opened.

Q. What happens in the event that your thermostat which moves slowly in response to the temperature drop from its closed position?

Mr. Haycraft: I am going to object to that until the question indicates what thermostat we are talking about.

By Mr. Freeman:

Q. Could you use the Minneapolis series 20 to do the job?

A. No, because you have no differential. On series 20 equipment you must make a circuit to start the equipment and make a circuit to stop the equipment.

Q. And the series 20 thermostat has only two wires?

A. No, it has three wires.

Mr. Haycraft: I am going to object to that as it has absolutely no probative value because he is talking about another Minneapolis-Honeywell and we were talking about a competitive product.

Mr. Freeman: A little while ago I talked about the Mercoid and you objected. Now I am talking about our own and you object.

Mr. Haycraft: I am not.

Mr. Freeman: I can use the same yardstick both ways. I will withdraw that question.

By Mr. Freeman:

Q. You could take two wires of the series 20 ther-
1045 mostat of Minneapolis-Honeywell and get temporary operation, could you?

Mr. Haycraft: I object to that on the same grounds as my last objection to the last question. It is of no probative value. He is talking about or arguing one will work and one won't work. There is no probative value in that.

Mr. Freeman: I am saying it will work.

Trial Examiner Sheppard: Go ahead. Let the witness answer.

Mr. Haycraft: Suppose it does or does, what of it?

Trial Examiner Sheppard: I will give it whatever value it has.

A. Electrically a series 20 thermostat will close and open the blue and the white wires, but it would not be at all satisfactory because walking across the floor, any slight vibration would pull the clapper in and allow it to immediately fall out again. So I would not use one of them.

Q. That is exactly what I tried to bring out, that when the clapper moves to the closed circuit position, that is, when the relay is energized it is desirable that you have something that will eliminate vibration in order to eliminate chatter of the relay?

A. That is right. I see what you are driving at now, but see the point that I was trying to make before was a standard two-wire thermostat would—

1046 Q. Would have snap action?

A. Would have that built-in differential which gives you the lag. They accomplish the lag in a different manner by building it in mechanically while you with your red circuit actually do it electrically with a third contact.

Q. A wire?

A. That is right.

Q. So you would have—

A. (Continued.) But you could not take a series 20 thermostat, put it on R116 or 117 relay and get anything; you could not even give the customer decent heat.

Q. So you have to have something more than what merely makes or breaks the circuit?

A. You have got to have a thermostat that either has a built-in differential or a thermostat such as your T11, that as the temperature builds up the blue circuit opens, the red is held through an additional contact and your primary control gets the differential.

Q. So that a walking contact or slow moving—

A. Like the series 20.

Q. Would not work?

A. That is right, it would not work.

Q. You have to have some snap action?

A. Yes.

Q. Some snap action or built in action?
1047 A. That is right.

Redirect Examination by Mr. Haycraft.

Q. Does not Mercoid or the others have that?
A. They have built-in differentials.
Q. Those are the ones you used?
A. You can use them, yes, sir.
Q. I say you have used them?
A. As a temporary measure.

In other words, if I went to your home and the thermostat there was a three-wire thermostat and was not functioning properly and I could not make the necessary repair in the field then I would if I didn't have a T11 to replace it or one exactly like the one I removed, and it does not necessarily have to be a T11, I would make the replacement with whatever I knew would do the job satisfactorily.

Q. Do you have any idea as to the number of burner manufacturers that you are familiar with in your experience?

A. Well, offhand I would say probably, you mean that I have worked on?

Q. Yes.
A. Probably 75.
Mr. Freeman: Different manufacturers?
Mr. Haycraft: Different manufacturers.
The Witness: Yes.

1048 By Mr. Haycraft:

Q. All on low voltage?

A. As I can answer that question now I must say yes because I can't think of any offhand but Electrol that are straight 110 volt to the best of my knowledge. The rest of them are. They use a primary control either manufactured by Minneapolis-Honeywell or Mercoid, or Perfex, or Penn Electric Switch, depending on the different manufacturers.

As you put that question right to me I can't think of a machine that I worked on that has a straight 110 volt high voltage thermostat as we call it.

Q. Do the Mercoid make both for high and low?

A. Yes, they do. Their 855T is a high voltage 10 ampere rating thermostat at 110 volts.

Q. What is the low?

A. The low voltage is their Sensatherm and actually I don't know what the card rating is on that because I have never had occasion to.

Q. But they sell that for low?

A. Yes, they do.

Mr. Haycraft: That is all.

Recross Examination by Mr. Freeman.

Q. Just one question. In all your experiences in your field have you ever run into Winthrop's thermostat or 1049 control?

A. I have not. I have seen it advertised in the American Artisan and other trade papers but have never seen one of the instruments and put my hands on them.

Trial Examiner Sheppard: You are excused, Mr. Witness.

(Witness excused.)

Mr. Haycraft: Mr. Examiner, I want the record to show that I also have one other witness that I want to excuse this morning, a Mr. Ander.

Trial Examiner Sheppard: Is there anything further before we adjourn for lunch?

Mr. Haycraft: I move we adjourn for lunch.

Trial Examiner Sheppard: We will take an adjournment until two o'clock.

(Whereupon, at 12:30 a. m. a recess was taken until 2:00 o'clock p. m. this day.)

1050 Afternoon Session.

2:00 p. m.

Trial Examiner Sheppard: Come to order. You may proceed.

Mr. Haycraft: I will call Mr. Hart.

AL HART was thereupon called as a witness for the Commission, and, having been first duly sworn, testified as follows:

Trial Examiner Sheppard: Mr. Reporter and Gentlemen, this is Mr. Al Hart, 169-11 Jamaica Avenue, Jamaica, Long Island, New York. Is that correct, Mr. Witness?

The Witness: Yes, sir.

Direct Examination by Mr. Haycraft.

Q. What is your occupation, Mr. Hart?

A. Dealer in oil burners and in the fuel oil business.

Q. Under what name?

A. Oil burners under the name of Automatic Home Appliance Company; fuel oil under the name of Hartson Oil Company.

Q. How long have you been selling oil burners under the name of Automatic Home Appliance Company?

A. About 12 years.

Q. During that period of time were you engaged in any other business besides selling oil burners?

1051 A. We manufactured oil burners, not under the name of Automatic though.

Q. Under what name?

A. Mohawk Oil Burner Manufacturing Company.

Q. When was it that you manufactured oil burners?

A. I believe it was prior to '38. I think it was '37.

Q. For how long a period of time?

A. Three years.

Q. What type of oil burner did you manufacture?

A. Pressure gun type.

Q. During that time were you also a dealer?

A. Jamaica was opening up. Home Appliance was always there.

Q. Did you have anybody associated with you?
A. My son and a Mr. Harry Clark.
Q. Did you sell out or did the business discontinue?
A. I sold out; the business continued on for about a year or year and one-half and then folded up.
Q. To whom did you sell out?
A. To Jack Hart and Harry Clark. He is dead now by the way, Clark is.
Q. Did they continue under the name "Mohawk"?
A. Yes, sir.
Q. Did they fold up or sell out?
A. They did not sell out but folded up. It was later taken up by Mr. Toker.
1052 Q. How did he take it up?
A. Through bankruptcy or sale of assignee.
Mr. Freeman: But you don't know?
The Witness: I don't know. Mr. Toker took it up only for one reason. He came to us and sold us burners.

By Mr. Haycraft:
Q. When did Mr. Toker come to you?
A. I believe it was in 1940.
Q. While you were in the manufacturing business where did you buy your controls?
A. I didn't buy any of them. Harry Clark did all the buying but I do know he bought some from Minneapolis-Honeywell, some from Penn Controls and some from Mercoid. Just how much I can't say.
Q. While you were acting as a dealer what make of oil burner did you handle?
A. Well, we handled everything from the start. We handled Gold Star from the beginning. Originally, pardon me, it was the Marr Oil Burner through Westinghouse Electric.
Mr. Freeman: Marr?
The Witness: M-a-r-r, and following that we handled the Gold Star. After that came the Mohawk, and then we had a burner made for ourselves under the name of Mazda. When I say made for ourselves it was somebody's burner. We had the trade name. The Board of
1053 Standards and Appeals gave us permission to put our name on it.

By Mr. Haycraft:
Q. Is the Mazda the name?
A. Mazda was the name of the oil burner.

Q. Is that the name of the oil burner that you are now handling?

A. Yes, sir.

Q. Did you ever handle the Quiet-Heet Oil Burner?

A. Yes, sir, but not under the name of Quiet-Heet.

Q. Not under the name of Quiet-Heet?

A. Always under the name of Mazda. These burners were sent to us without any labels. We labelled them.

Q. Did you ever buy any burners from Toker without the Mazda label on them?

A. We certainly did, not many but a few.

Q. Did you ever buy any from the Herco Oil Burner Company out in Lancaster, Pa.?

A. If I remember correctly when Mohawk went out of business Mr. Herr got in touch with me from Herco and I went to Lancaster. We tried to come to some sort of a deal. Nothing came of it. He only shipped me if I remember two, three or four burners.

Q. Do you remember when about that was?

A. No, sir, I don't really remember.

1054 Mr. Haycraft: Will you mark this for identification?

(The document referred to was marked Commission's Exhibit 152 for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit 152 for identification and ask whether or not that refreshes your recollection as to when it was when you had any conversation with Mr. Herr with respect to purchasing oil burners?

A. Definitely.

Q. When was it?

A. August 24, 1937.

Trial Examiner Sheppard: Do you want to offer that?

Mr. Haycraft: Not yet.

Mr. Freeman: Don't examine him any more on that either.

Mr. Haycraft: I will take my instructions from the Trial Examiner.

Mr. Freeman: I object to any further examination until he offers it in evidence.

Mr. Haycraft: Won't you wait until I do it?

Mr. Freeman: That is tit for tat.

By Mr. Haycraft:

Q. At the time that you were negotiating with Mr. Herr had you gone into any negotiations with the Quiet-Heet?

1055 A. I don't remember if it was the same time or not. It may have been.

Q. Do you have any recollection when you first began to buy oil burners from the Quiet-Heet?

A. After Mohawk, or when Mohawk was in the process of going out of business, or when they were about to go out of business, or when they went out of business. It was in that vicinity and at that time we did a big builders' business.

I mean by that we supplied builders with these burners and we had to have quite a stock. Somebody had to sell to us, whether Herco, Tom Jones or Jack Smith; it was a question of price with us.

Q. Was it about that time around 1937 that you were looking for a source of supply?

A. It may have been. We were always looking for a source of supply.

Q. Have you produced here at the hearing at my request invoices of purchases of oil burners from Quiet-Heet?

A. These are not all of course but I brought a number of them from the years that you requested, '38 to '41.

Q. And they are typical?

A. They are typical.

Trial Examiner Sheppard: This Quiet-Heet that you are talking about, is that Mr. Peters?

The Witness: Yes, sir.

1056 Trial Examiner Sheppard: I just wanted to identify that.

Mr. Haycraft: Will you mark these for identification?

(The papers referred to were marked Commission's Exhibits 153, 154, 155, 156, 157, 158, 159, 160-A, 160-B, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194 for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibits 153 to 194 for identification and ask if you will identify these exhibits as invoices of the Quiet-Heet Manufacturing Corporation for oil burners and controls purchased during the years 1938, 1939, 1940 and 1941, that you produced at my request?

A. Yes, sir.

Q. And would you say that these are all the invoices covering all your purchases or just a portion of them?

A. No, sir, a portion of them.

Q. And would you say that they are a cross-section so that they indicate the difference in prices?

A. Practically all the same.

Mr. Haycraft: With that understanding, Mr. Examiner, I offer the exhibits in evidence.

1057 Trial Examiner Sheppard: Is there any objection?

Mr. Freeman: Just a minute.

Might I ask the witness just a couple of questions with respect to these?

Trial Examiner Sheppard: Yes.

Mr. Freeman: Are these invoices for burners known as Quiet-Heet burners or for burners which you bought and sold under the name Mazda as your own burner?

The Witness: They were bought and sold under the name of Mazda, bought from Quiet-Heet.

I want to make this clear so I don't do anything wrong. On each burner there is a tag which says "Quiet-Heet". We would take that tag off, destroy it.

Mr. Freeman: And you would put the name "Mazda" on?

The Witness: We would put a metal plate on.

Mr. Freeman: With the name "Mazda"?

The Witness: Yes.

Mr. Freeman: So the purchasing public would buy that as a Mazda burner?

The Witness: Strictly Mazda.

Mr. Freeman: The purchasing public did not know whether it came from the John Smith Company or Quiet-Heet?

The Witness: Yes.

Mr. Freeman: It was your responsibility if anything went wrong? It had your name on it?

1058 The Witness: Right.

Mr. Freeman: With the understanding these covered burners with the name "Mazda"—

Mr. Haycraft: But bought as Quiet-Heet.

The Witness: They were never bought as Quiet-Heet. There was a Quiet-Heet tag on them but they were never bought as Quiet-Heet.

Mr. Freeman: I have no objection.

By Mr. Haycraft:

Q. They had the Quiet-Heet tag?

A. We would not dare sell them as Quiet-Heet.

Trial Examiner Sheppard: I think the record is clear on them.

By Mr. Haycraft:

Q. I notice on these invoices, Mr. Hart, 6 BX for instance. To what does that refer?

A. I don't know.

Q. Is that your insignia?

A. No, sir.

Trial Examiner Sheppard: Commission's Exhibits 153 to 194 inclusive are admitted into the record.

(The papers referred to, heretofore marked for identification COMMISSION'S EXHIBITS 153, 154, 155, 156, 157, 158, 159, 160-A, 160-B, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179,
1059 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, were received in evidence.)

By Mr. Haycraft:

Q. Referring to Commission's Exhibit 153, which is invoice No. 3948, dated November 29, 1938, this calls for 6 BX and under the various controls descriptions, 6 R117, 4 T11, 6 L404, 1 T45, 1 T109. What do those last two refer to, the T45 and T 109?

A. We were entitled to four controls with each burner we purchased, a relay, a thermostat, an aquastat and a pressuretrol. In other words, we got four with each burner. If we bought six burners we were entitled to 24 controls in their place but as long as we took the four controls with each burner.

Q. You got 4 T 11's, the thermostats. What is T 45 and T 109?

A. That would also be a thermostat, a high voltage thermostat. They had those in one particular development and you needed a high voltage.

Q. T 109, is that the same?

A. A day-night thermostat.

Q. Those are higher priced?

A. T 109 is higher priced than plain T 11.

Q. The total $324, does that indicate the total amount?

A. We had no account with these people. Nobody

1060 did. We picked up the burners or they shipped the burners sight draft and paid immediately for them.

Q. That would be $54 each?

A. If that is what it reads.

Q. Fully equipped?

A. Fully equipped.

Q. Referring to Commission's Exhibit 154, which is invoice No. 3839, dated November 22, 1938, this calls for 6 BX burners, 6 R 117 controls, 6 T 11, 6 L404 controls. In addition to that there are 10 L165.

A. That was an aquastat at one time. How many of those are there?

Q. Ten.

A. Are any others there?

Q. No.

A. How many burners altogether?

Q. Six.

A. Six times four would be twenty-four.

Q. You have got three times six or eighteen, and you have got ten more than that. You have got 28.

A. We ~~may have purchased~~ four more controls if that is the case.

Q. In other words you purchased four limit controls?

A. If we needed them. I don't know.

Q. What is L165?

1061 A. We are entitled to 6, 6, 6. There are four controls over on this invoice, that is 10 L165. That means there were ten limit controls.

Q. And six is what you were entitled to. Do you know what 165 is?

A. Yes, sir, an aquastat.

Q. Referring to Commission's Exhibit 165, which is an invoice dated August 30, 1939, calling for six burners, 6 R117 controls, 6 T11, 6 L404, 6– what is the next to the last one?

A. That must be an aquastat.

Q. What is the last one?

A. That is a T105. That is a clock thermostat.

Q. I show you Commission's Exhibit No. 168, which is an invoice No. 5986, dated May 25, 1939. This calls for five burners, 5 R117, 5 T11, 5 L404, 5 L170, in addition 2 T105, 4 L444. Do you know what those last two items are?

A. The two T105's would be clock thermostats and the L444's would be four limit controls.

Q. Four extra ones?

A. Yes, sir.

Q. What particular use would those have?

A. I don't know what the 444 is. It is an immersion aquastat for line voltage. We probably needed it for some job.

Q. I show you Commission's Exhibit 173, which is
1062 an invoice dated November 16, 1939, which calls for five burners, 5 R117 controls, 4 T11, 5 P404, 5 L170, 1 T109, 1 T45 and 1 R19. What is the R19?

A. R19 is a small relay.

Q. What is the T45? Is that a high voltage thermostat?

A. A high voltage thermostat.

Q. T109, what is that, another high voltage?

A. Day-night thermostat.

Q. Commission's Exhibit 178, which is an invoice dated July 2, 1940, calls for three BA burners, 3 R117 controls, 3 T11, 3 P404, 3 L170, in addition 3 T111.

A. That is a chronotherm, three extra chronotherms.

Q. Commission's Exhibit 181, invoice No. 12370, dated December 18, 1940, calls for six BD-LH oil burners. What is that LH?

A. That was a larger series burner.

Q. And it calls for 6 R117 controls, 5 T11, 5 P404, 4 L170, 1 L444, 1 L428, 1 B T42, 1 R19. What is that L428?

A. I don't know. That is a combination high and low circulator control.

Q. L444, what is that?

A. Immersion aquastat.

Q. Did you ever buy any burners equipped with controls from Mr. Toker after he took over the Mohawk Oil burner business?

A. I did.

1063 Q. Do you remember how many you bought from him?

A. I do not.

Q. Do you remember how his prices compared with those that you were paying Quiet-Heet?

A. His prices were a little higher than what we paid Quiet-Heet. At one time he came down to their prices. In fact he came down a little lower than Quiet-Heet and I purchased some burners from them. He said he could not come down to that. I still bought burners from him, and finally from Newark. Finally he said he could not make any money, he was losing money, so I stopped and continued to buy in Newark.

Q. Do you remember when about that was?
A. I believe it was in 1940.
Mr. Haycraft: That is all.
Trial Examiner Sheppard: Cross-examine.

Cross-Examination by Mr. Freeman.

Q. This Marr oil burner that you first handled with the Westinghouse was that the gun type?
A. No, sir.
Q. The pot type?
A. Yes, sir.
Q. Did you sell that for house heating?
A. Yes, sir.
Q. And at the time you were selling the Marr oil
1064 burner of the pot type were you out competing with other gun type burners?
A. Definitely.
Q. The pot type burner serves the same purpose for heating a house as the gun type?
A. In a way.
Q. That is for a small house?
A. For a small house exactly the same.
Q. In other words, if you take a small capacity nozzle for a gun type burner it compares favorably with a pot type burner?
A. Yes, with the proper retort.
Q. I am assuming that the installations are proper?
A. All right, sir.
Q. They both serve to heat homes? They are both sold in the domestic heating field?
A. That is right.
Q. And they are sold in competition with each other?
A. Not any more. The Marr burner is not in competition with anybody that I know of.
Q. I am talking about when you were working with the Marr burner?
A. We were in direct competition with everybody.
Q. With the gun type?
A. Yes, sir.
Q. And serious competition?
1065 A. Yes, sir.
Q. Who made the Gold Star burner?
A. The Gold Star burner was made in Yonkers by an Italian, a party by the name of Esposito. It was sold to

us through Harry Clark. Harry Clark was working through Esposito. That is how we came to buy it.

Q. Then Harry Clark joined up with you in the Mohawk?

A. That is right.

Q. And later Harry Clark and your son took over the Mohawk and you continued in your Automatic Home Appliances as a dealer?

A. Automatic Home Appliance was always a dealer, all through the small field. It had nothing to do with Mohawk. It was still in Jamaica, you know.

Q. So far as the Automatic Home Appliance was concerned, you just changed burners from time to time and continued right on?

A. That is right.

Q. And then later you sold under the name Mazda?

A. That is right.

Q. Did you ever buy any burners from anybody other than Quiet-Heet that you put the name Mazda on?

A. Yes, sir, Mohawk.

Q. Mohawk?

A. That is right, but that didn't carry a Mohawk 1066 label either. The burners that we got from Mohawk came to us without any labels on them.

Q. And you put the Mazda on?

A. We put our own label on, that is correct.

Q. So that everything you sold under the name "Mazda" so far as the origin of that burner was concerned, it was immaterial to you?

A. That is correct.

Q. You were interested in price and quality?

A. We were interested in the name particularly because we had the sad experience with Westinghouse and we know of other people that had sad experiences with others in their lines. We didn't want to lose face, our name, so we created a name.

Q. And decided that you were going to sell under the name of Mazda?

A. That is right.

Q. And you were going to put your reputation as service dealers, as operators back of Mazda?

A. That is correct.

Q. When you sold a burner you did not tell the customer that this was a burner made by Quiet-Heet?

A. Definitely not.

Q. You did not tell them it was one made by Mohawk or anyone else?

A. No, sir.

1067 Q. I notice you bought a couple of burners from the Herco Company in Lancaster when you had a little trouble?

A. No, sir, there were just four burners sold by the name Herco. There was a metal plate, a label on that, that came right on that which we could not change.

Q. These burners that you sold under the name "Mazda" did you buy them from any other company besides Mohawk and Quiet-Heet?

A. Yes, sir, we did.

Q. And who were they?

A. We bought some from Michael & Goldberg. They made a Radiant oil burner. We bought them without any label. It was Mohawk made, made by Mohawk after they closed. Michael and Goldman sold them the idea of making burners.

Q. How did their price compare?

A. It was cheaper than Newark or I would not have bought it.

Q. Cheaper?

A. When they could not meet competition I stepped out and went back to Newark again.

Q. As far as you were concerned you were just interested in a burner that you could put your name on and sell it as your burner?

A. Yes, sir, that is right, at a price.

Q. And I take it from the invoices that you have here, Commission's Exhibits 153 to 194, that as a dealer

1068 you did a pretty good job in selling oil burners?

A. We think we did.

Q. And your dealers' shipments in the Jamaica territory, how would those compare with the other dealers in the territory?

A. I don't think it is necessary to bring this out, but in accordance with a poll taken by our trade paper—what is it, the News, what is that journal?

Q. Fuel Oil.

A. We were fourth, the fourth largest distributor of any oil burners in Kings, Queens and Nassau Counties, including Manhattan for certain years. They had a poll each year.

Q. And I take it in the sale of these burners under the name Mazda?

A. They listed it as Mazda. They never listed it as Quiet-Heet, of course.

Q. These burners that you sold under the name "Mazda", you sold them in competition with many other companies?

A. All other companies.

Q. About how many companies would you say you were in competition with?

A. Twenty, twenty-five.

Q. I am talking now about the territory that you covered?

A. Locally, that is right.

Trial Examiner Sheppard: What territory did you
1069 cover, Mr. Hart?

The Witness: Within the five boroughs. Never out of the five boroughs.

Trial Examiner Sheppard: Local?

The Witness: Strictly local.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. These prices that you have here for oil burners that you purchased from Quiet-Heet are not broken down so that you can tell just exactly what you paid for the burner?

A. They never were.

Q. In other words, if you got a burner with a T111 thermostat you paid a little more for it than you did for one with T11?

A. There would be a deduction made from T111 to T105. The T111 cost more than the T105.

Q. Was that true of the controls when you changed?

A. True of all controls.

Trial Examiner Sheppard: What makes that difference in price?

The Witness: Well, sir, we all, everybody in this business has a Minneapolis price sheet, a cost price sheet, and we go according to that sheet. In other words, if T105 has a list of $35 and T11 has a list of $6.75 we know there
is a difference and we are entitled to it the difference
1070. between the two thermostats. One can be $30, or there can very nearly some odd twenty dollars difference. One is a clock type and the other is a plain thermostat.

By Mr. Freeman:

Q. I might ask a few questions in order to straighten the Major out on that clock thermostat. Is that one that automatically sets back at night in order to conserve some of the fuel?

A. Yes, sir.

Q. It does it automatically?

A. Both do it automatically.

Q. As far as the set back?

A. The set-back is the clock thermostat.

Q. Of course in that case you have not only a clock but you also have the function by which you get night set back?

A. That is right.

Q. In other words, just by way of example and for the purpose of clarification, if you operate a temperature say of 70° during the day, say at 10 o'clock at night the clock thermostat automatically pushes the temperature down so that it holds the room say at 65° or 60° or whatever you want to set it at?

A. You can set it for a certain hour and also to come on again at a certain hour.

Q. So you thus economize in the use of fuel?

1071 A. Yes.

Trial examiner Sheppard: And the simple thermostats do not have the clock on them?

The Witness: No, sir.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. So that these variable prices that we find here in the invoices, Commission's Exhibits 153 to 194 are brought about by the variable controls that are used in connection with the burners?

A. That is correct.

Q. And did you likewise get the same kind of a variable price when you bought from the Mohawk, when you bought different controls?

A. I don't know, sir. We have the invoices.

Q. May I ask this—

A. (Continued) Maybe they are listed there. I don't know. I am not sure.

Q. I am not interested whether they are listed or not but if you bought a Mohawk with a clock thermostat you paid more than when you got it with T11?

A. Yes, of course. In proportion you paid about the same.

Q. So that the variable prices we find in the invoices, Commission's Exhibits 153 to 194, were likewise applicable to oil burners with different controls that you
1072 bought from your other companies?

A. That is right.

Q. Did you ever handle any Mercoid controls?

Mr. Haycraft: That is objected to as irrelevant and immaterial and not proper cross-examination.

Trial Examiner Sheppard: I don't remember whether he went into that or not. I don't know that it makes much difference.

I will support the objection. I don't want to go into anything that has not been brought out on direct.

By Mr. Freeman:

Q. Were all of your burners that you sold equipped with the respondent's controls, and by the respondent I have reference to the Minneapolis-Honeywell?

A. I understand some were not equipped with Minneapolis-Honeywell controls.

Q. Who did you buy them from?

Mr. Haycraft: That is objected to as irrelevant and immaterial.

Trial Examiner Sheppard: I will let you state that.

A. I bought some of them from Toker, that is Mohawk. I never bought any other controls from Newark, Quiet-Heet.

Q. And?

A. And we bought some Mercoid controls direct.

Q. And what did you do with these Mercoid con-
1073 trols that you bought direct?

Mr. Haycraft: I kept out and you ruled out that and I move this be stricken and this last question.

Trial Examiner Sheppard: I want to know what you mean by direct?

The Witness: I mean direct from the people. If we bought Mercoid controls we bought direct. We had an account with Minneapolis-Honeywell, so we could get controls direct from Minneapolis-Honeywell.

Trial Examiner Sheppard: It makes little difference. I will let that stand.

By Mr. Freeman:

Q. You bought some controls direct from Minneapolis-Honeywell?

A. That is right.

Q. And was that for the purpose of replacement or repairs?

A. For purposes of replacement and of repairs.

Q. But usually when you bought an oil burner it came equipped with the necessary controls?

A. With four controls, yes, sir.

Q. That is the way you bought them standard?

A. In every case.

Q. If a thermostat or primary went haywire in the field you then went out and picked up a repair or replacement part?

A. We had to because we could not get burners.
1074 Anything that went bad went to Minneapolis, Mercoid or Penn, or wherever else it may have been.

Q. And isn't it true that in some cases you used more than one limit control on the job?

A. Yes, sir.

Q. And did you ever make any installations where you used more than one thermostat?

A. Yes, sir.

Q. So that in buying your oil burner you took into consideration the particular installation that you might have to meet?

A. On a hot water system you had to have two hot water controls. In fact, in some three.

Q. Then I notice also that there is reference here to an R19 relay?

A. R19 is a relay which you change from high to low voltage.

Q. That is different than a primary control?

A. That is correct.

Q. That is merely to convert low voltage into high voltages?

A. Low into high. It has nothing whatsoever to do with the burner.

Q. When you bought that kind of control you likewise had to take that into consideration with respect to the burner you were buying with the job you had to do?

A. That is entirely separate from the four ordinary controls which you had to buy for the ordinary job.
1075 In some cases you had to have R17 or R19.

Q. R-19?

A. That is right.

Q. Did you ever have the situation where a customer bought an oil burner equipped with a T11 thermostat and then decided he wanted a little better refinement and then got a clock thermostat?

A. In many cases.

Q. And in that case you removed the T11?

A. In some cases we removed the T11 and in a great many they don't let us remove the T11. It remains with the customer.

Q. You simply added the other control?

A. Yes.

Q. And gave him the additional service which a T111 would give?

A. It is an entirely different hookup. You had a five-wire.

Q. When you put in then a T111 you just left the old control there?

A. Not in all cases.

Q. But in some cases?

A. In some cases the people want them to be left, to remain.

Trial Examiner Sheppard: That would make two thermostats in some setups?

The Witness: In some cases.

1076 By Mr. Freeman:

Q. Where would you pick up the additional clock thermostat?

A. In the same place or from the same people we purchased our thermostats as a rule.

Q. Did you ever take any of the burners that you bought from Quiet-Heet and remove the Minneapolis-Honeywell controls where a customer wanted perhaps Mercoid controls?

A. We had no occasion to.

Q. Did you ever have any objection from any of the purchasing public with respect to your using Minneapolis-Honeywell controls?

A. No.

Q. Did you have any customers who ever stated a preference for the use of controls?

A. Yes, definitely.

Q. And of course when a customer wanted a particular control you gave him that control?

A. In our particular field as we catered chiefly to builders, that you will understand it, we had to supply Minneapolis-Honeywell controls. They would not have anything else.

Q. Do you know why?

A. Well, I don't know.

Mr. Haycraft: That is objected to.

By Mr. Freeman:

Q. In some of these burners that you bought from
1077 Mohawk equipped with Mercoid controls did you ever have to take off a set of Mercoid controls and install a set of Minneapolis-Honeywell controls in order to sell a burner?

A. No, sir.

Q. And so far as you know service-wise the Mercoid controls did just as good a job as the Minneapolis-Honeywell?

A. As far as we were concerned, yes.

Q. Did you say that you sometimes used Penn controls?

A. We at one time used some Penn controls, not many. We used a few of them. We had a lot of difficulty with them and so stopped using them entirely.

Q. Did you ever use any Perfex controls?

A. Yes, sir, some.

Q. So insofar as controls were concerned you used practically all of the different types or different kinds that are on the market?

A. We did.

Mr. Freeman: That is all.

Mr. Haycraft: Nothing further.

Trial Examiner Sheppard: Thank you, Mr. Hart.

(Witness excused.)

Mr. Haycraft: May we have a short recess?

Trial Examiner Sheppard: Show a ten minute recess.

(A ten-minute recess was taken.)

Trial Examiner Sheppard: On the record.

1078 Mr. Haycraft: I will call Mr. Toker.

HARRY A. TOKER, was thereupon called as a witness for the Commission and, having been first duly sworn, testified as follows:

Trial Examiner Sheppard: Mr. Reporter, this is Mr. Harry A. Toker, American Mohawk Corporation, 580 Hudson Street, New York City.

Direct Examination by Mr. Haycraft.

Q. What is your occupation, Mr. Toker?

A. Why our principal business is the fuel business in Elizabeth, N. J. As a subsidiary we have the American Mohawk Company, and still have the American Mohawk in New York City.

Q. Where is the American Mohawk Company?

A. It is located at 580 Hudson Street, New York City.

Q. What does it do, what business is it engaged in?

A. We are engaged in the manufacturing of fuel oil burners.

Q. How long have you been associated with that company?

A. I took that company over in April of 1939.

Q. From whom did you purchase it?

A. It was purchased from Mr. Harry C. Clark.

Q. Is it a private enterprise, an individual enterprise or a corporation?

A. It is a private enterprise that was incorporated 1079 in 1939. The corporation was dissolved in 1940 because of the fact that it was simply the partnership of my brother and myself.

Q. And you have run it since then?

A. That is right.

Q. And during 1939, 1940 and 1941 did you manufacture and sell oil burners?

A. That is correct.

Q. Under what trade name, American Mohawk?

A. Under the trade name of American Mohawk.

Q. Where did you sell them principally?

A. All over the United States.

Q. Approximately how many did you sell during those years each year?

A. In 1929—

Mr. Freeman: 1939.

A. (Continued.) 1938 rather, Mr. Clark had a production of 245; in 1939 I took that over and we had a production of 780; 1940 we had a production of 2100 and in 1941 we had a production of 3900.

Q. Then the war came along?

A. Then the war came along and business stopped.

Q. What class of trade did you sell?

A. Distributors, builders and fuel oil dealers.

Q. Do you remember when you sold to Al Hart, the man who preceded you on the stand?

1080 A. We sold Al Hart under the name of Automatic Heating Company of Jamaica immediately upon our taking the company over.

We had very few sales at that time as indicated from the production record of Mr. Clark and Mr. Hart having been in that business before, came to me and volunteered the information that he would purchase burners from us.

We sold Mr. Hart burners for about four months of that year 1939.

Q. Then what happened?

A. Then we discontinued selling him.

Q. And why?

A. I could not meet the price competition of other companies.

Q. And what other companies do you have in mind?

A. As indicated to me, I was told by him that he was going to Quiet-Heet.

Q. And thereafter you did not sell him any more?

A. Thereafter I definitely discontinued selling him.

Q. Did you have any similar experience with any of your dealers that you were selling to in 1939 and 1940?

A. Similar in what respect, sir?

Q. That you were selling them and that you were told your price was too high and you discontinued selling?

A. I believe we had another experienc in 1940. If my memory serves me correctly I think it was in the Bos-

1081 ton area with Metro Supply Corporation. I believe it is Mr. Conchonsenti. I think it is 5 Henderson Street, Everett, Mass.

Q. Can you think of any others?

A. We sold another company up in Boston. I don't know whether the discontinuance was because of price. I was told it was. That was I believe even before these two incidents. That was in 1939.

Mr. Clark, who formerly was engaged by myself in this company, sold the Tower Manufacturing Company in Boston.

Mr. Freeman: Tower?

The Witness: Tower.

Trial Examiner Sheppard: That was after you took the company over?

The Witness: That was immediately after I took the company over and he was in our employ. There was a discontinuance of the business immediately after the second shipment. I presumed it was on the matter of price.

By Mr. Haycraft:

Q. Did you make any sales to Rackliffe Oil Company in New Britain, Conn.?

A. Never.

Q. Did you ever try to?

A. Yes, I think I solicited their business in 1940. I am not quite sure of that date. It might be '40. I think it was '40 that I solicited the Rackliffe Oil Co.

1082 Q. You did that personally?

A. That is right.

Q. Were you able to make a sale?

A. No.

Q. What was the reason?

A. Apparently our prices were out of line.

Q. From whom were they buying at that time?

A. I believe the Quiet-Heet Company.

Mr. Haycraft: You may cross-examine.

Cross-Examination by Mr. Freeman.

Q. Before you took over the American Mohawk you were an oil burner dealer selling oil burners?

A. That is correct.

Q. And whose oil burner did you handle just prior to your taking over the American Mohawk Company in April of 1939?

Mr. Haycraft: That is objected to as irrelevant, immaterial and not proper cross-examination.

Mr. Freeman: I think that is very proper. This man said he has been in the oil burner business and took over the company.

Mr. Haycraft: I very carefully kept my examination to a particular period and particular subject.

Trial Examiner Sheppard: I think you did and I don't

want to transgress my rules not to have any cross-
1083 examination on something which has not been brought out on the direct examination.

Over and above it all, gentlemen, I have been listening here to this testimony by this gentleman and these other people here this morning in reference to the sale of burners, etc., and I don't know, I may have a wrong slant on this thing here, but I don't think it has much to do with the issues. I think it is all extraneous to the issues in this case.

These people come in here and testify that they went out of business and all that sort of thing but the respondent company is not connected with it. Certainly this morning the testimony shows that competition of other people did it and I think we are just sort of wasting time here on this proposition.

I don't care if you do not cross-examine this witness at all.

Mr. Freeman: With that statement I will have no further cross-examination.

Trial Examiner Sheppard: I sat here all yesterday and all day today—

Mr. Haycraft: Mr. Examiner, I think it is only fair that I should make a statement for calling this testimony so that counsel for the respondent will not put themselves in a position that they may want to change their line
1084 of examination.

Trial Examiner Sheppard: I want some testimony connecting the respondent with these things.

Mr. Haycraft: The respondent is connected with these things by the testimony of all preceding witnesses certainly, if not by this witness, because this is one step farther down the line, but the previous witnesses I would like to point out have testified with respect to their particular.

If you heard the testimony of—

Mr. Freeman: You mean the old line manufacturers.

Mr. Haycraft: Will you please let me make my statement?

Mr. Freeman: I just want to—

Mr. Haycraft: You are about as helpful as the seven year itch.

Mr. Freeman: Except I am a damn sight faster than that.

Mr. Haycraft: Mr. Gillis testified yesterday.

Mr. Freeman: That is the man I referred to.

Mr. Haycraft: He testified as to their inability to pur-

chase controls from Minneapolis-Honeywell Regulator Company at prices which enabled them to compete with Quiet-Heet Manufacturing. There was definite testimony as to that. There is also testimony that they lost business as a result of that.

1085 There is the purpose of all this testimony. This business was an oil burner manufacturer.

Mr. Freeman: That is not even a fair statement of what Mr. Gillis testified to.

Mr. Haycraft: He testified as to his sales of oil burners equipped with Minneapolis-Honeywell.

Trial Examiner Sheppard: Mr. Haycraft, I may save you a little time. I am not considering Mr. Gillis at all. When I come to consider his testimony I will take that up in due course, but a gentleman like this, whose testimony, and like Mr. Hart—

Mr. Haycraft: Let me ask the witness two or three more questions?

Trial Examiner Sheppard: All right.

Mr. Haycraft: Perhaps I can bring it a little closer.

Redirect Examination by Mr. Haycraft.

Q. What temperature controls did you put on your oil burners that you sold under the American Mohawk in 1938 through 1941?

A. We have always sold—

Mr. Freeman: 1938 is one year earlier, which you very carefully endeavored to bring out on the first examination.

By Mr. Haycraft:

1086 Q. 1939?

A. We have always sold Minneapolis-Honeywell controls and Mercoid Corporation controls.

Q. During 1939, 1940 and 1941?

A. Ever since I have been in the business.

Q. In what bracket were you in 1939, 1940 and 1941 with respect to the purchase of temperature controls from Minneapolis-Honeywell?

A. I believe it was 3-A.

Q. Up to what time was it 3-A?

A. Beg pardon?

Q. At what time?

A. 1940 and 1941.

Q. What does the A mean, do you know?

A. I don't know how they regulate that.

Q. Do you know what bracket you were in in 1939?

A. It must have been two.

Mr. Freeman: I don't want you to pay any attention to what I said.

By Mr. Haycraft:

Q. Can you testify as to the proportion of the cost of an oil burner that is made up of the controls that are attached to it?

A. You are asking me whether the selling price is a certain proportion of the cost and what that cost proportion would be?

1087 Q. Yes.

A. I would say that the cost of controls that go with the sale of an oil burner is approximately one-third the selling price.

Q. And any advantages that your competitors might have in the purchase price of temperature controls would they have any effect upon your ability to compete?

A. If there were a wide discrepancy I guess there would.

Q. What was your price of oil burners? What were you getting for oil burners in 1939, 1940 and 1941?

A. In 1930 we sold our oil burners—

Q. What year, 19 what?

A. 1939 we sold our oil burners at a price of $55 per oil burner to the dealer. Naturally the quantity brackets got a better price and they may have ranged down to $50.

Q. In 1940?

A. In 1940 our prices were the same.

Q. 1941?

A. Definitely the same.

Mr. Haycraft: Now, Mr. Examiner, I think perhaps I have made it a little clearer as to the purpose of the examination.

Trial Examiner Sheppard: Is there any further cross-examination?

Mr. Freeman: No cross-examination.

1088 Trial Examiner Sheppard: All right, thank you, Mr. Toker.

(Witness excused.)

Trial Examiner Sheppard: We will take a ten-minute recess.

(A ten-minute recess was taken.)

Trial Examiner Sheppard: On the record.

Mr. Haycraft: I will call Mr. Gannon.

JOHN GANNON was thereupon called as a witness for the Commission and, having been first duly sworn, testified as follows:

Trial Examiner Sheppard: Mr. Reporter and Gentlemen, this is Mr. John Gannon, Clinton, Mass.

Is that right, Mr. Gannon?

The Witness: Right.

Direct Examination by Mr. Haycraft.

Q. What is your occupation, Mr. Gannon?

A. Now?

Q. Yes.

A. I am doing defense work. I have converted my shop to defense work.

Q. In what business were you engaged prior to the war?

A. Manufacturing oil burners.

1089 Q. How long were you engaged in the manufacture of oil burners?

A. Since 1929.

Q. Under what name did you manufacture?

A. Standard Products Company.

Q. At Clinton, Mass.?

A. Clinton, Mass.

Q. What type of oil burner did you manufacture?

A. We made both the range burner for household use, kitchen range and the power burner.

Q. The power burner, what is the power burner for?

A. Beg pardon?

Q. What use was made of the power burner?

A. Well, for heating homes.

Q. Was that a pressure type, gun type?

A. Gun type, pressure gun type.

Q. When you first manufactured oil burners where did you sell them?

A. Mostly in New England.

Q. Did you expand your business from time to time?

A. Yes, I did.

Q. How far did you expand it?

A. Well, I have sold a few export. I sold them probably in a dozen states in this country.

Q. Including New York?

1090 A. Yes.

Q. What make of control did you put on your oil burner when you first started?

A. When we started off we used Mercoid.

Q. How long did you use Mercoid?

A. Probably for three or four years.

Q. Then what did you use?

A. Then we used Perfex. I mean United Controls made in Boston.

Q. How long did you use those?

A. We used those the first four years. I don't know whether for the whole four years but we used United for probably two to three years. I would not dare to tell you the dates. I don't know just when we started using United. I have not got a record.

Q. Did you use Perfex?

A. Beg pardon?

Q. Do you remember whether you used Perfex or not?

A. Yes, we did use Perfex.

Q. When did you use Perfex?

A. I can't tell you the exact years I have used them.

Q. If I should suggest 1936, 1937 would that be correct?

A. That would sound correct.

Mr. Freeman: What are you making that suggestion for Mr. Haycraft so we get the record straight?

Mr. Haycraft: That is in your transcript.

1091 Mr. Freeman: You mean the testimony of some other witness?

Mr. Haycraft: Yes.

Mr. Freeman: All right, that is 1936?

Mr. Haycraft: '36, '37 and some in 1938.

Mr. Freeman: Let us get it accurate anyway.

By Mr. Haycraft:

Q. Did you ever use any Minneapolis-Honeywell controls?

A. Yes.

Q. When did you start using the Minneapolis-Honeywell?

A. You will have to suggest the years. I have no record of it. I did not bring any record.

Q. Well, were you using more than one control when you were using the Perfex control, do you remember?

A. No, I might have used some United with Perfex.

Q. Do you remember whether you used any Minneapolis-Honeywells at the same time?

A. Very few if I did.

Q. Do you have any way at all of refreshing your recollection as to when you started using Minneapolis-Honeywells?

A. No, I could not honestly say the date when I started using them.

Q. Do you have any recollection as to the number of oil burners you were manufacturing about that time?

A. Well, I believe the most we ever made, the
1092 biggest year I have a recollection of manufacturing about 3100, something to that effect.

Q. Do you remember what year that was?

A. No, I don't.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

The Witness: We did probably use a few Minneapolis-Honeywell controls previous in the early days because I remember paying as high at $36 for a set of them. That would signify that that was quite a few years ago.

By Mr. Haycraft:

Q. Do you remember the last year that you handled or used Minneapolis-Honeywell controls?

A. Probably '38.

Q. Did you make any contracts with them with respect to controls?

A. Yes, I believe I made contracts with them every year I sold them.

Q. Do you have any of those contracts with you?

A. I have one, yes.

Q. That is the last one?

A. Yes, it is January 25, 1939.

Mr. Haycraft: Will you mark that for identification?

1093 (The document referred to was marked Commission's Exhibit 195 for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit 195 for identification and ask if that is the contract you just referred to between Standard Products Company and the Minneapolis-Honeywell Regulator Company for the year 1939?

A. That is correct.

Q. Whose signatures are those? Who signed the contract?

A. Well, that is Mr. Jennings. He was resident vice-president I guess in the Boston district and Mike Ware. He was the treasurer.

Q. Jennings was connected with what firm?

A. Minneapolis-Honeywell.

Q. And Ware was connected with what firm?

A. Standard Products Company.

Q. What was your position in the firm?

A. President.

Q. Well, was it prior to this year 1939 that you sold as high as 3100?

A. Yes.

Mr. Haycraft: First I want to offer this in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Freeman: No objection.

1094 Trial Examiner Sheppard: Let Exhibit 195 be accepted.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT 195, was received in evidence.)

By Mr. Haycraft:

Q. You say it was prior to that?

A. Yes.

Q. How many years prior?

A. Probably two or three years.

Q. Do you have any recollection as to the quantity, the largest quantity, the number of sets of controls that you bought from Minneapolis-Honeywell?

A. No, I haven't.

Q. If I should refresh your recollection in that respect and suggest to you that in 1936 you bought approximately 1450 sets amounting to approximately $50,000, would that refresh your recollection?

A. Well, I could not tell by the amount but I believe we did do close to $50,000 or so in amount of money. I would not know how many sets of controls.

Q. Does that refresh your recollection as to the year?

A. Yes, I would say that was the year.

Q. Then in 1937, if I should suggest that you purchased about 550 sets, costing about $15,800, does that re-

1095 fresh your recollection? Would that be for that year?

A. It would sound reasonable, yes.

Q. And if I should suggest that in 1938 your purchases were approximately or were 147 sets at $4,330, would that refresh your recollection as to the purchases in that year?

A. I believe that would sound pretty near right. I have no records of it with me.

Q. In 1939, 142 sets at approximately $3,000?

A. Yes, I would say that sounds reasonable.

Q. How do you account for this sharp decline in the business of the firm beginning 1936, from 1937 on down to 1939?

A. I believe we lost two or three good big accounts on account of price propositions entering into the oil burner business and lost two or three good accounts.

Q. What were the accounts, if you recall, that you lost?

A. One was the Brooklyn account over here that went under the name of the Standard Iron Burner Company, but it had no connection. They used our burners.

Q. Did you have any information as to what burner they purchased after they discontinued buying yours?

A. I believe they bought the Quiet-Heet and the Kelley.

Q. Where is the Kelley?

A. That is the Boston burner. It was probably the Quiet-Heet when they started. They started under the name of Kelley and they built their own burner afterwards.

1096 Q. What price did you sell your burner at back in 1936, along in there? And in 1937?

A. Well, we did get $69 at the highest price for them and we got down to $55. Some may have been sold as low as $50, not under that.

Trial Examiner Sheppard: Including the controls?

The Witness: No, it did not include the controls.

By Mr. Haycraft:

Q. Did you sell your burners without controls?

A. We were not supposed to but we did in some cases for replacements where they had controls.

Q. What was your price that you got for burners with controls?

A. We sold a package unit for $98 with the tank, controls and the burner. I believe our tank cost was $11.50. We were getting $24.75 I believe for controls.

Q. That is the price that you figured them?

A. Yes.

Q. Did that—what did you get for your complete burner with controls when you sold the burner for $50?

A. When we sold we figured the burner at $50. That was without controls and we added the controls to that.

Q. What total would that bring it to?

A. That would bring it up to $89.

Q. I see. Do you have any recollection as to when
1097 your last sales of burners were made?

A. I don't.

Q. What year?

A. I think it was 1939.

Q. Since that time what did you do, between 1939 and the time that you went into war work?

A. I faded out of the picture. I had the Minneapolis-Honeywell cancel my contract and I got out of the business slowly, died a slow death and went into receivership and I bought out the assets and continued it under the name of the Standard Burner Company as an individual, John J. Gannon doing business as Standard Burner Company, and it still exists that way.

Q. What have you done, do you sell burners as a dealer then, do you?

A. No, I did not.

Q. What did you do?

A. After 1939 I ceased to sell burners.

Q. I see.

Mr. Haycraft: You may cross-examine.

Cross-Examination by Mr. Freeman.

Q. Do you remember why Minneapolis-Honeywell cancelled its agreement with you?

A. I think I do.

1098 Q. Go ahead and tell us?

Mr. Haycraft: Mr. Examiner, if there is anything to show that correspondence I will certainly be glad to have that put in evidence. I don't see how this witness can read Minneapolis-Honeywell's mind unless we have something or somebody told him.

Mr. Freeman: This witness said on direct examination it was cancelled. I asked if he knew why. He said he does.

Mr. Haycraft: He thinks he does.

Trial Examiner Sheppard: If you can enlighten us—

Mr. Haycraft: Did Minneapolis-Honeywell ever tell you either orally or in writing why they cancelled?

The Witness: No.

Mr. Haycraft: I object to any conjecture as to why it was.

By Mr. Freeman:

Q. Will you give me your best recollection or your opinion as to why it was cancelled?

Mr. Haycraft: I object to opinion or conjecture as to why it was cancelled.

Mr. Freeman: Half of your testimony is conjecture of the worst kind.

Trial Examiner Sheppard: I am not going to allow your testimony unless you know. If you tell me you don't
1099 know, then of course I can't let you testify to that. Do you know?

The Witness: I believe I know.

Mr. Freeman: That is all I want to know, Mr. Examiner.

Trial Examiner Sheppard: All right. It depends upon whether he had knowledge.

Mr. Freeman: He knows and I know he knows.

A. It was sort of an unwritten law that we were not supposed to sell burners to dealers, I mean sell controls to dealers without selling them burners. I sold controls to dealers without burners. I sold them with burners, but I sold them more controls than I did burners and for that reason my contract was cancelled. I believe that was so.

Mr. Haycraft: I move to strike the answer in as much as the witness states that purely as opinion. He has nothing in writing or orally from the respondent as to why it was cancelled. It was merely his opinion and conjecture.

Trial Examiner Sheppard: No, Mr. Haycraft, I am going to let that stay in. I asked the witness before I heard his testimony whether or not he knew and he said he believed he did and I think it is testimony from the witness which, to say the least, is due whatever weight I want to give it or the Commission. So I am going to take what you said and give it whatever weight I think it is worth.

By Mr. Freeman:

1100 Q. The Underwriters do not approve selling an oil burner without controls unless it is specifically going in as a replacement, is that correct?

A. I had a letter from the Underwriters that I can ship in burners without controls.

Q. For replacement?

A. No.

Q. Have you that letter with you?

A. No, I have that letter and it is a positive fact because you people could not ship controls fast enough at one time and it was holding up my shipments and I wrote the Underwriters Laboratories and told them that I had that difficulty and I wanted permission to sell burners without controls.

Q. During that emergency?

A. I told them the cause of it, why I was asking that and they sent me a letter to that effect that I could.

Q. That you could sell burners without controls all the time?

A. Ship burners without controls. I would not say that that stipulation was all the time.

Q. You still have that letter?

A. I don't have it. I want to tell you something about why I don't have these records, that I destroyed them of the firm of Standard Products Company when I took over. I destroyed most of the records.

1101 Q. You want to tell us here that you got special dispensation from the Underwriters Laboratories for the sale of oil burners without controls?

Mr. Haycraft: Mr. Examiner, I object to the form of that question. There is nothing in this record to show that that is necessary. This is just simply counsel's assumption and I object to it because it is not in the record.

Trial Examiner Sheppard: The objection is sustained there because this man does not have anything to back it up.

By Mr. Freeman:

Q. I will ask you this question: when you wrote to the Underwriters to get approval for the shipment of oil burners without controls you knew then that the Underwriters did not approve the sale of a burner without a primary thereon?

Mr. Haycraft: I object to that, Mr. Examiner, because that is something that is not on the record. If he wants to put in the question he had been told that the Underwriters said so, that is all right, but the Underwriters themselves have not testified in this case yet and there is nothing to show that there was such a rule.

Trial Examiner Sheppard: I think so. The objection is sustained on that.

By Mr. Freeman:

Q. You knew that the Underwriters did not approve the sale of an oil burner without a primary control?

1102 A. I don't know whether they did not approve but I knew that you should, that it was customary to ship controls with the burner and when they would come to visit the factory for inspection they would often have me open up burners being shipped to show that the controls were shipped with it, but I got this letter from them and it was through the inspector that I got the letter.

When I told him the case he advised me to do it and I had the letter to ship burners without controls.

Now whether that was a special, anything special and nobody else had it I don't know, but I had a letter to that effect.

Q. Well then, did you then sell more controls than you sold burners or did you merely outfit the burners that you sold with the proper set of controls later on?

A. I sold more controls than I did burners.

Q. And you represented to Minneapolis-Honeywell when you purchased its controls in accordance with its manufacturer's agreement that you were going to use Minneapolis-Honeywell controls as part of your original equipment, is that correct?

A. Yes, which I did.

Q. And you likewise sold those controls over and above your original equipment, correct?

A. Yes, I am allowed that.

Q. And what price did you get for a set of controls

1103 when you sold them apart from the burner?

A. In some cases, I would not dare say, swear to any exact but in some cases I sold them for $27 and $28, and in other cases I sold them as low as 25 per cent margin.

Trial Examiner Sheppard: Mr. Gannon, I will ask you a question right there. What constituted the controls that you referred to?

The Witness: A primary control, and a limit control and a thermostat.

By Mr. Freeman:

Q. Did you sell oil burner controls separately for use in connection with someone else's oil burner, that is an oil burner other than the one you yourself made?

A. I would not say. I would not say that. I did. In all

probability it found its way to be used on other burners in replacements.

Q. I take it that you are familiar with the phrase in the agreement, and I now read from Commission's Exhibit 195 the following: "The purchaser agrees to use the controls listed herein as part of or in conjunction with his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except for use in conjunction with such products"?

A. Yes, I am acquainted with that.

Q. And then as a matter of fact weren't you informed when the agreement was cancelled that it was cancelled because you did sell controls separately?

1104

A. No, the only letter I got that my contract was cancelled.

Q. Did you only talk to any representatives of Minneapolis-Honeywell with respect to your sale of controls separately and apart from products manufactured by your company?

A. If I did talk with them they were not talking from the Boston office. They were telling me on the side that I was selling controls; that is why it was cancelled but nobody officially told me.

Q. I am asking you now whether any representative of Minneapolis-Honeywell, whether in business hours or where, told you that you were selling controls apart from products of your manufacture and that is why the agreement was cancelled?

A. No, I don't believe they did.

Q. Who called on you from the Minneapolis-Honeywell Company?

A. Hoyt.

Q. And you want to say under oath that he never told you?

A. I would say under oath that I have no recollection, no recollection of him ever telling me because it would be in the letter I believe, the cancel letter which you have, cancelling the contract. You have a copy of it evidently.

Q. And we will have it.

A. That is all right.

Q. In 1936 I understand you bought some $50,000 worth of controls or about 1400 sets from Minneapolis-Honeywell. You actually manufactured about 3100 oil burners that year?

1105

A. That is right.

Q. And whose controls did you use on the other 1700 oil burners?

A. I used some Perfex. I also used a few United and some of those controls were sold in addition to the amount I should have sold with the burners.

Q. That is you sold them separately?

A. Yes. They were only sold to my dealers, understand.

Q. And the controls that you purchased from Mercoid you paid less for them per set than you did those that you purchased from Minneapolis-Honeywell?

A. No, I believe I paid more because I didn't use enough of them.

Q. Well now, you used some 1700 sets of controls from other companies in the year 1936. About how many did you use made by Mercoid?

A. I would not dare set a figure.

Q. Well, do you know how many you used from Perfex?

A. No, I don't know.

Q. And you said something about making the price of a burner with controls $69.50, is that correct?

A. I sold both retail and wholesale.

Q. Well, what was your wholesale price with controls?

1106 A. $69.50.

Q. And I understood you to say that you had a separate package for controls and that the price was $24.75?

A. I don't believe I ever got below $45 for a burner alone and the burners were in addition to that price.

Q. So when you said you sold as low as $50 for the burner alone you want to qualify that as low as $45?

A. Never did I sell the burner and controls for that price of $50.

Q. But you said earlier that you sold the burner alone for $50?

A. Yes.

Q. And you now want to say that you got as low as $45 for the burner?

A. Yes, I will say I got as low as $45 on burners.

Q. And what was this Kelley burner that you spoke about made in Boston?

A. Well, I understand that was a Quiet-Heet burner but they put their own name on it first when they first put it out.

Q. And you had competition with that burner?

A. Yes.

Q. And then I understand that the Kelley burner people began making their own burners?

A. Yes.

Q. And did that competition ease up when the
1107 Kelley Company began making its own burners?

A. I don't recall. I believe it did.

Q. Did the Kelley burner people charge more for their burner than the one that they bought from the Quiet-Heet?

A. I never bought any from them.

Q. As a matter of fact you don't know?

A. I don't know.

Q. It was just competition?

A. That is all.

Q. And did you have any other competition besides Quiet-Heet Company?

A. Yes, I did.

Q. Will you name some of this other competition that you had?

A. I can't name them offhand but they were New York burners.

Q. Well, do you have any idea of their names? We will be glad to help you out if we can.

A. If you mention them I may recall them.

Q. Did you ever have any competition from the Mohawk, the American Mohawk?

A. No.

Q. You did have competition from companies other than Quiet-Heet or Kelley Company?

A. Yes.

Q. And what did you do to meet that competition?
1108 A. Well, at the end I discontinued business. I could not meet the competition.

Trial Examiner Sheppard: You just sold your burners, Mr. Gannon, around New England there?

The Witness: Yes.

Trial Examiner Sheppard: Around in the States of Massachusetts and probably outside?

The Witness: Well, New York, from Maine to New York.

Trial Examiner Sheppard: Albany?

The Witness: Yes.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. Your starting price when you started in this business was $69.50?

A. Burner alone.

Q. When you used Mercoid controls for the first three or four years of your burner business what price did you get for burners?

A. I don't believe I could tell you that.

Q. I understood you to say that you thought you paid more for Mercoid controls than you did for Minneapolis-Honeywell controls?

A. At the first Mercoid controls was all the controls I used.

1109 Q. And how about these United Controls manufactured in Boston?

A. They were less expensive than Minneapolis-Honeywell.

Q. And you left the United controls and went over to the Minneapolis-Honeywell?

A. Yes.

Q. So you paid more money for Minneapolis-Honeywell controls than you did for United?

A. I believe I left United to go to Perfex and from Perfex to Minneapolis-Honeywell.

Q. Did the United control sell for less money than Perfex?

A. Yes.

Q. Just why didn't you continue with the cheaper control which would have helped you meet this competition?

A. They put out a faulty control.

Q. You wanted a better product so you went with Perfex?

A. Their product was all right until they came out with a new control. We had trouble with it and left it.

Q. And went to Perfex. When you went to Perfex you stayed with Perfex how long?

A. Two or three years.

Q. Did your burner business get as low as 100 burners in one year while you were in business with Perfex?

A. No.

Q. Were Perfex's prices higher or lower than
1110 Minneapolis-Honeywell's?

A. At one time they were higher. At the end we were buying in a lower bracket which made them lower than Perfex.

Q. When you started buying from Minneapolis-Honeywell did you buy at a price higher than what you had paid for Perfex?

A. Yes, because I used a few of them.

Q. And why did you pay the higher price? What brought about the necessity for going to a higher priced control?

A. If I had a customer that insisted on a Minneapolis-Honeywell control with the burner I had to buy Minneapolis-Honeywell controls.

Q. According to the testimony of Mr. Tate, and I want to refresh your memory, you bought about $2400 worth of Perfex controls in 1936, is that about right?

A. I would not say. It sounds reasonable.

Q. And you bought about $3300 worth of Perfex controls in 1937?

A. Yes.

Q. And in 1938 you bought about $500 worth of Perfex controls, is that about right?

A. I will have to say yes because I don't know.

Q. You said that you bought Minneapolis-Honeywell controls when a customer wanted Minneapolis-Honeywell controls, correct?

A. That would be at the first before I started using Minneapolis-Honeywell controls altogether.

1111 Q. You did not use any Perfex controls prior to 1936 because they were not in business. You used Perfex controls first as standard, correct?

A. I used United controls first.

Q. As standard equipment?

A. Yes.

Q. And then went over to Perfex as standard equipment?

A. Yes.

Q. And your business with Perfex grew in 1937 over 1936?

A. Yes.

Q. And in 1937 Perfex was standard?

A. Yes.

Q. Now I understand—will you correct me if I am wrong—that when someone wanted a Minneapolis-Honeywell control in 1937 even though Perfex was standard you gave that customer a Minneapolis-Honeywell set of controls, correct?

A. Yes, I would say yes to that.

Q. Did you make any differential in charge or charge more when there was a set of Minneapolis-Honeywell controls used?

A. By all means.

Q. You charged more? That is you paid more and you charged your customer more?

A. Yes.

Q. What brought about your leaving Perfex, because it sold to you a cheaper control at a good price?

1112 A. Your good salesmanship.

Q. As a matter of fact, in 1937 when you bought $3300 of Perfex controls you actually gave Minneapolis-Honeywell $15,894 worth of business, correct?

A. I will have to say yes.

Q. So that while you say that you gave a Minneapolis-Honeywell set of controls when someone wanted it, as a matter of fact—

A. Don't get me—

Q. (Continued.) Wait until I get through. As a matter of fact the majority of your business was done with Minneapolis-Honeywell controls in 1937?

A. I told you first that when I used Minneapolis-Honeywell controls and I charged more; it was when I started off I was using United or Perfex, starting off, and I even talked against using Minneapolis-Honeywell, but when they insisted I would buy Minneapolis. I had to pay a higher price so I charged them a higher price, but it was only in those instances starting off.

At the end when the price of controls were the same, practically the same, I didn't charge them any different.

Q. Now isn't it a fact that you used Minneapolis-Honeywell controls in large volume in 1936 prior to the time you began buying Perfex controls of any kind?

A. Prior to the time?

1113 Q. Yes.

A. I didn't say that I didn't use Minneapolis-Honeywell controls in excess of Perfex.

Q. Well, as a matter of fact, you did use Minneapolis-Honeywell controls in excess of Perfex in the year 1936?

A. Well, if the records are there it must be so.

Q. The records show that you bought $50,313 worth of Minneapolis-Honeywell controls in 1936 and you bought $2400 worth of Perfex so you must have used more M. H. controls, correct?

A. Yes.

Trial Examiner Sheppard: Will you accept those figures?

The Witness: Yes.

By Mr. Freeman:

Q. How does it happen that you have the 1939 agreement with Minneapolis-Honeywell and you do not have any of the preceding years?

Trial Examiner Sheppard: He said he destroyed a good deal.

The Witness: I will tell him why.

Trial Examiner Sheppard: All right, go ahead.

A. We paid 50 cents for each set of controls we used. We did not have a license from the Zoro Estate, so Minneapolis-Honeywell charged us 50 cents for every set of controls we used in addition to their regular price and
1114 they in turn I suppose paid the Zoro Estate, the Cleveland Trust.

I have got a letter from the Mercoid people telling me later on that that Zoro patent was not upheld in court and I figured that I paid a number of thousands of dollars in fees that I should have returned to me. So I gave this contract to my lawyer.

Mr. Freeman: The witness is referring to Commission's Exhibit 195.

A. (Continued) And the only record I have is that that the lawyer had and that is why the one contract. I got that before I left town.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. Well, when when you got this letter from Mercoid about the Zoro—

Mr. Haycraft: I am going to object to going into that matter. This matter was brought out on cross-examination. It relates to something not bearing on this case.

Mr. Freeman: I can trace this down as far as I want to go.

Mr. Haycraft: I object to that. Look what we are up against? The cross-examination goes into something which is foreign. Now he wants to cross-examine on that.

Mr. Freeman: I did not ask why he had this complaint but why he had this agreement and not the others.
1115 Mr. Haycraft: You are asking why he did that

and why he is doing this. Why drag all that in? I move to strike the answer. What difference does it make why he happened to have that agreement?

Trial Examiner Sheppard: The question was why he had that and not the others.

Mr. Freeman: And the man made an explanation.

Mr. Haycraft: It is in the hands of his lawyer.

Trial Examiner Sheppard: I think the record is straight now where it is, right this far, but I don't want to go any further into it because it is not important.

I am not interested in reference to that 1939 contract and you say you have not got the others?

The Witness: No.

Trial Examiner Sheppard: That settles it. I don't want anything along that line.

By Mr. Freeman:

Q. Did you bring any other documents or papers in response to the request of the Commission?

A. I did not have them.

Q. Commission's Exhibit 195 is the only document that you have?

A. The only one I have.

Q. Do you have any letters from Minneapolis-Honeywell or any others?

1116 A. Not one other than those that pertain to that.

Mr. Haycraft: He has a letter which refers to that exhibit transmitting the exhibit. Do you want to see it? Hand it to him.

By Mr. Freeman:

Q. Do I understand that these two letters that you have just handed me from Minneapolis-Honeywell to your company, one dated January 30, 1939 and another dated February 14, 1939, were in the hands of your attorney?

A. The attorney.

Q. What is the name of that attorney?

Mr. Haycraft: I object to that.

A. It is right on there, I believe, on one of those letters.

Q. No, it is not, and if you will give it to us.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

All right, gentlemen, let us get on.

Mr. Freeman: I didn't have an hour or two to prepare with this witness as Mr. Haycraft did.

Mr. Haycraft: An hour?

Mr. Freeman: Yes, you were with this witness an hour.

Mr. Haycraft: There is something wrong with your time.

1117 Mr. Freeman: No, there is not.

Trial Examiner Sheppard: I am going to give you all the time you want.

By Mr. Freeman:

Q. After Minneapolis-Honeywell cancelled its agreement with you from whom did you buy controls?

A. I bought very few. I bought them from Perfex.

Q. What is your best recollection?

A. Perfex.

Q. And that would be in the year 1939?

A. Yes, sir.

Q. Incidentally, Mr. Haycraft just showed me a record prepared by the Perfex to the effect that you bought $44 worth of controls from the Perfex Company in the year 1939, is that all the controls you used fter Minneapolis-Honeywell cancelled its agreement?

A. I stopped doing business.

Q. You told us that the two letters which I referred to were with the agreement of 1939, which was the one which was cancelled by Minneapolis-Honeywell?

A. They were not with it. I gave those two letters with that contract to the lawyer.

Q. The cancellation of the Minneapolis-Honeywell agreement took place in 1939, did it not?

A. I don t believe so. I believe it was cancelled in 1938.

1118 Q. The agreement was cancelled in 1938?

A. No, it could not have been with that contract there.

Q. Well, you were under contract in 1939 with Minneapolis-Honeywell in accordance with Commission's Exhibit 195?

A. It must have been in 1939.

Q. When you took the agreement to your attorney, Mr. Austin J. Kittredge of Clinton, Mass., you did not take along any notice of cancellation of the agreement?

A. No, sir.

Q. Although you did take to him with the agreement a couple of letters of transmittal?

A. That one was in all probability with the contract.

Q. And how about the second letter then of February 14, 1939?

Let me see it please? Well, those were in all probability the only mail I had at the time I gave it to him or he asked for it.

Q. You think the attorney asked for those letters?

A. No, I gave him those letters without him asking for it. They were I believe with the contract.

Q. Do you know how many oil burners you sold in the year 1939?

A. No.

Q. And when Minneapolis-Honeywell cancelled its contract you just folded up in business, is that correct?

1119 A. Yes, I would say I practically folded up.

Q. As a matter of fact you could have bought controls from the Penn Electric Switch Company, could you not?

A. Yes.

Q. And you could have bought controls from the Perfex Company?

A. Yes, but I had been advertising your controls in all my advertising and that cost me money to put your name on my literature.

Q. Well, you sold controls separately, did you not?

A. No, I did not other than to my own dealers. I sold them additional controls.

Q. How did the percentage of controls sets that you sold compare with the number of burners that you made?

A. When you ask that question it sounds as if I sold them to others than my own dealers.

Q. No, I am asking now how many you sold to your own dealers apart from oil burners?

A. I don't know. I could not say.

Q. Would you say about 50 per cent?

A. Oh, I don't know. I would not dare say.

Q. In rather large quantities?

A. Yes, I would say in fairly good quantities.

Q. And you didn't require your dealers to state whether it was for replacement or not, or what?

1120 A. No.

Q. In other words, a dealer could order as many controls as he wanted and would get them from you?

A. Yes, they could.

Q. What was that?

A. They could.

Q. Did any of your dealers handle other makes of oil burners?

A. No, I don't believe so.

Q. Who were some of your dealers in the time when you were at your peak in 1936?

A. Standard Iron over here in Brooklyn was probably the largest, Lowell Supply in Boston.

Q. The Standard Iron that was your largest dealer: What happened to that company? Why did it discontinue?

A. They bought more reasonable burners.

Q. At a lower price?

A. At a lower price.

Q. So you lost that business without regard to Minneapolis-Honeywell's cancellation of your agreement?

A. Yes, I would say that that is right.

Q. How about this other pretty good-sized company that you sold to in Boston that left you on account of price?

A. I don't believe that had anything to do with the controls, losing them. It was more of a question of the cost, the price of the controls and the burner together.

1121 They were buying them cheaper than I could sell them.

Q. As a matter of fact, your customers could buy oil burners from competitors of yours at lower prices than you sold to such customers?

A. That is right.

Q. And as a result of not meeting that kind of competition your business petered out?

A. Yes, that had a lot to do with it.

Mr. Freeman: That is all.

Redirect Examination by Mr. Haycraft.

Q. When you say oil burners do you mean oil burners with controls?

A. Yes, I will say oil burners and controls.

Mr. Haycraft: That is all.

Mr. Freeman: Thank you, sir.

Trial Examiner Sheppard: You are excused.

(Witness excused.)

Trial Examiner Sheppard: In order to have a witness who is coming from out-of-town, I will recess the hearing now to reconvene in this room at eleven o'clock in the morning on September 18, 1943.

(Whereupon, at 5:00 p. m. September 17, 1943, the hearing in the above entitled matter was adjourned.)

1122 Room 505,
45 Broadway,
New York, New York,
Saturday, September 18, 1943.

Met, pursuant to adjournment at 11:00 a. m. E. W. T.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Esq., Attorney for the Federal Trade Commission.

Cravath, de Gersdorff, Swaine & Wood, by R. L. Gilpatric, Esq., and B. R. Shute, Esq., 15 Broad Street, New York, New York, and Bair & Freeman, by Will Freeman, Esq., 135 South La Salle Street, Chicago, Illinois, attorneys for the Respondent.

1123 Proceedings.

Trial Examiner Sheppard: Mr. Reporter, you can convene the hearing in the Minneapolis-Honeywell Regulator Company Case, Docket No. 4920, pursuant to the adjournment taken yesterday.

Mr. Haycraft: I will call Mr. Bork.

GEORGE H. BORK, was thereupon called as a witness for the Commission and, having been first duly sworn, testified as follows:

Trial Examiner Sheppard: Mr. Reporter and Gentlemen, this is Mr. George H. Bork, 10 Lexington Avenue, Holyoke, Mass.

Direct Examination by Mr. Haycraft.

Q. What is your occupation, Mr. Bork?

A. I am War Manpower Commission, Assistant District Representative, District No. 1.

Q. Where do you live?

A. I live in Holyoke.

Q. How long have you been with the War Manpower Commission?

A. About 18 months.

Q. Before that what did you do?

A. I was with Harvey Whipple, Springfield.

Q. What business was that company engaged in?

1124 A. The oil burner manufacture.

Q. What was your position in the firm?

A. I was vice-president and chief engineer; for about ten years prior to that I had charge of service and installation.

Q. Did they manufacture and sell oil burners?

A. They did.

Q. Domestic oil burners?

A. That is right.

Q. When did you say they began to manufacture oil burners?

A. The latter part of '30.

Q. What type of control, what make of control did you sell on those early burners during those early years?

A. Well, we used some Mercoid but I would say the bulk of the controls were Minneapolis.

Q. Beginning with about 1936, approximately how many oil burners annually did you sell at that time?

A. 1936 I would say around 3,000.

Q. And you bought your controls for them?

A. Beg pardon?

Q. You bought your controls from Minneapolis-Honeywell?

A. Yes, that is right.

Q. At that time?

A. That is right.

Q. To refresh your recollection on that, if the records of the Minneapolis-Honeywell indicated that you

1125 bought about 3500 sets of controls in 1936, how many burners would you say that would require?

A. Well, about 3500 sets would represent about 3500. That does not mean the sets we bought.

Q. It would not mean that?

A. We might have more sets than burners at that time. That is a good estimate.

Q. You might have carried some over to next year?

A. That is right.

Q. Then in 1937, about how many burners did you sell that year?

A. Well, I would not think the figure changed a great deal. It might have increased 500, 300 or 400.

Q. In 1938?

A. 1936 you are talking about?

Q. 1936.

A. I would like to make a correction on 1936 if I may.

Q. Yes.

A. At that time we came out with the Bork control. We did a lot of advertising on that. We did have an increase. We might have increased 600 or 700 burners that year.

Q. 1936?

A. That is right.

Q. Now in 1937, what were your sales of oil burners?

A. Not over 4,000.

1126 Q. In 1938?

A. I think we dropped off a little in 1938.

Q. 1939?

A. Well, I would still think we were off a little. '38-'39, I think we dropped off a little during that period.

Q. In 1940?

A. 1940, my best recollection is that we probably came back a little in there because we went into some pretty heavy advertising in that period.

Q. In 1941?

A. I would say about the same.

Q. During this period of time did you continue to buy most of your controls from Minneapolis-Honeywell or did you pick up another line?

A. We had other controls. We bought Minneapolis-Honeywell and we bought Perfex and we used very few Mercoid. We used some but very, very few.

Q. When did you start buying Perfex controls?

A. My best recollection is—sorry I have not got some records on that so that I could give you the exact dates. If I had some I could.

Is it fair to ask for any records you fellows might have to show that. I would not like to guess. I would be. I have been out of this.

1127 Q. I might refresh your recollection, from testimony in this record by Mr. Tate of the Perfex Company it is indicated that in 1936 you purchased $28 worth and in 1937 $325 worth, in 1938, $891 worth, 1939 $6,394, 1940, $4,807, in 1941 $14,694.

A. That is about right.

Mr. Gilpatric: Were you giving, Mr. Haycraft, exact

figures from some other records in evidence? Mr. Tate's figures were round figures.

Mr. Haycraft: Will you correct me on that?

Mr. Freeman: $28 in 1936, $900 in 1938, $6400 in 1939.

The figures I have just given are those taken from the record.

Mr. Haycraft: I will ask the witness if that refreshes his—

Trial Examiner Sheppard: Will you accept those figures as approximately the right ones?

The Witness: I would say so, yes. Yes, I would.

By Mr. Haycraft:

Q. How did the price that you paid for the Perfex controls compare with the price that you paid for Minneapolis-Honeywell?

A. I think we paid slightly less for Perfex that we paid for Minneapolis.

Q. And did you buy complete sets from Minneapolis-Honeywell and complete sets from Perfex?

1128 A. Yes, that is right.

Q. Do you have any recollection of the number of sets that you bought annually from the Minneapolis-Honeywell during the years 1936 to 1941?

A. No, I am afraid I would be guessing at that.

Q. If I may refresh your recollection and the records of Minneapolis-Honeywell indicated that you bought about 3500 sets in 1936, about 3,000 in 1937, about 1700 in 1938, and about 1500 in 1939, and about 1500 in 1940, and about 2800 in 1941 would that refresh your recollection on that?

A. I would say that is about right.

Q. From your testimony and from the other information that I brought to your attention it appears that your volume of business declined, your burner business declined from 1936 until 1940 and then picked up again in 1941. How do you account for that business decline and then the increase again in 1941?

A. Well, that would be due to a number of things. I am inclined to think it was the competition.

Q. What price burners did you sell your oil burners back in 1936 and 1937?

A. We had our usual bracket price at that time what we call a small dealer was $110. That is wholesale.

Q. That included what in the way of equipment?

A. That included the three controls.

1129 Q. And how long did you maintain that price?

A. Well, we went along with that price around '39 and '40.

Q. And then what happened?

A. We had to revamp our price to try to stay in the market.

Q. What change did you make in your price?

A. We got down around $90. We got down I think as low as $80 in a great many instances.

Q. During that period of time did you meet any competition of Quiet-Heet Manufacturing Company from Newark, N. J. in your area?

A. Yes, they were all over like fleas.

Q. What is that.

A. They were all over.

Q. Where did you sell your burner principally?

A. We sold them all over this part of the country.

Q. In the Eastern Seaboard?

A. Yes, sir.

Q. When did you first notice the competition of Quiet-Heet Manufacturing Company?

A. I would say around '38 we felt it probably more.

Q. About what price were they selling their burners, do you remember?

A. Well, about would be the answer.

Q. What?

A. About anything, $54, $55, $58. We never could 1130 pin anybody down on any particular price they paid. I guess they got whatever price they could get at that particular time.

Mr. Haycraft: That is all. You may cross-examine.

By Mr. Haycraft:

Q. Oh, one more question. Excuse me. Do you remember what bracket you were in in the Minneapolis-Honeywell controls purchased from 1936 to 1941?

A. I am sorry I don't.

Q. Will it refresh your recollection if I should advise you that the records of the Minneapolis-Honeywell would indicate that you were in Bracket Four during 1939, 1940 and 1941?

A. That sounds reasonable but I would not be positive.

Q. Do you know anything about the price that you paid for control sets during that time?

A. No, I would be guessing again there.

Mr. Haycraft: All right, that is all.

Trial Examiner Sheppard: It has been several years since you have been there?

The Witness: Yes, sir.

Trial Examiner Sheppard: I understand how difficult it is.

Are there any further questions?

Cross-Examination by Mr. Gilpatric.

1131 Q. Was Quiet-Heet your only competitor in the oil burner business?

A. Let me think a minute now. Quiet-Heet was not the only competitor but I would say probably they were the worst offenders.

Q. Who were your other competitors, if you recall?

A. Well, there was an Eastern oil burner made somewhere up in Maine.

Trial Examiner Sheppard: How about the Mohawk, it was there near you?

The Witness: No, we did not have very much of Mohawk. I don't remember. It might have been.

Trial Examiner Sheppard: You had Mohawk up there.

Mr. Shute: It was in New York.

The Witness: Have you got a burner list?

By Mr. Gilpatric:

Q. There were a number of other companies selling burners?

A. You are talking about two years ago. Have you got a burner list there? Tell me something? I am not going to make any statements and guess at this.

Q. What about Petroleum Heat & Power?

A. Petroleum Heat and Power, no we did not have too much competition from Petroleum Heat and Power.

Q. What about Gilbert & Barker?

A. No, they were all right.

1132 Q. What do you mean by "all right"?

A. Their price was pretty universal as far as we are concerned.

Q. When I said competition I mean other people selling oil burners to the same people that you were?

A. If your question is directed to an answer if there was anybody comparable in competition to Quiet-Heet, the answer is no.

Q. No, I don't mean that. Were there other oil burner manufacturers who were offering their burners for sale regardless of price to the same customers, the same trade that you were offering your burners?

A. No, we felt a greater competition because of price at that particular time and I guess everybody else did too.

Q. Well, was Cleveland Steel Products making an oil burner at that time?

A. Yes.

Q. And selling to the same trade that you were?

A. I would say so, sure.

Q. And isn't that true of Petroleum Heat and Power?

A. Oh, there was a number of them, you can read a list, some 13, 14 or 1500; when you are talking about meeting competition and reasons for falling off I can go into that with you in intimate detail.

Q. You mean then the term "competition" means 1133 to you someone sold below your prices, that is what you are talking about?

A. That is right, and claimed to have everything everybody else had at half the price. That is what I call competition; fair or unfair, it was competition and we all felt it definitely.

Q. But besides that type of competition there were a number of other oil burner manufacturers selling in your general range?

A. Oh, certainly. Look at the number of burners that were sold compared to the number we sold. There would have to be a number of them.

Q. I just wanted to clear up that phase of it.

Mr. Gilpatric: That is all.

Mr. Haycraft: That is all.

Trial Examiner Sheppard: Thank you, Mr. Bork.

(Witness excused.)

Mr. Haycraft: Mr. Examiner, that concludes the taking of testimony in New York and I ask an adjournment be taken to be convened in Philadelphia, Pa., Room 300, Customs Building, at 10:30 in the morning, next Monday, September 20, 1943.

Trial Examiner Sheppard: Let the adjournment be taken to the time and place above mentioned. We stand adjourned here in New York City.

(Whereupon, at 11:45 a. m., September 18, 1943, the hearing in the above entitled matter was adjourned.)

1134 Room 300, Customs House Bldg.,
2nd and Chestnut Streets,
Philadelphia, Pennsylvania,
Monday, September 20, 1943.

Met, pursuant to adjournment, at 10 o'clock a. m., E.W.T.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Esq., Attorney for the Federal Trade Commission.

Cravath, de Gersdorff, Swaine & Wood, by R. L. Gilpatric, Esq., and B. R. Shute, Esq., 15 Broad Street, New York, New York, and Bair & Freeman, by Will Freeman, Esq., 135 South LaSalle Street, Chicago, Illinois, appearing for the Respondent.

1135 Proceedings.

Trial Examiner Sheppard: All right, gentlemen. Come to order.

Pursuant to adjournment we took in New York City on last Saturday, we will reconvene the hearing in the Minneapolis-Honeywell case, Docket No. 4920.

Let the record show the appearances of counsel for the Federal Trade Commission and for the Respondent.

Now, Mr. Haycraft, are you ready, sir, with anything you have to offer?

Mr. Haycraft: I will call Mr. Herr.

Trial Examiner Sheppard: Have you a subpoena?

Mr. Herr: Yes, sir.

Trial Examiner Sheppard: Let me have that please, sir.

Mr. Reporter and gentlemen, this is Mr. F. E. Herr, President of the Herco Oil Burner Corporation, Lancaster, Pennsylvania.

Mr. Herr, how far is Lancaster?

Mr. Herr: 68 miles.

Trial Examiner Sheppard: All right.

F. E. HERR was thereupon called as a witness for the Commission, and having been first duly sworn, testified as follows:

1136 *Direct Examination by Mr. Haycraft.*

Q. What is your occupation, Mr. Herr?
A. Manufacturer.
Q. Manufacturer of what?
A. Oil burners.
Q. Do you operate as an individual or corporation?
A. Corporation.
Q. What is the name of it?
A. Herco Oil Burner Corporation.
Q. H-e-r-c-o?
A. H-e-r-c-o.
Q. What name do you attach to the burner itself?
A. Herco.
Q. How long have you been in this business?
A. About 14 of 15 years—I will change that. It is longer. About—I started playing around about '25 with it.
Q. Do you have your factory at Lancaster?
A. Yes, sir.
Q. What is your territory, sales territory, where do you sell your burners, or where did you sell your burners when you were selling them?
A. California, and all over the United States.
Q. What type of burner was your burner, gun type or pressure type?
1137 A. Gun type.
Q. When you first began to sell your burners did you have automatic temperature control attached to it?
A. Yes, sir.
Q. Where did you obtain them?
A. Originally from Minneapolis-Honeywell.
Mr. Freeman: Who?
Mr. Haycraft: Minneapolis-Honeywell.
Mr. Freeman: In '25?
The Witness: Well, the first controls.
Mr. Freeman: I just wanted to get you straight. The Minneapolis-Honeywell Company was not in existence in '25.
The Witness: Well, the same company it is today, whatever it is.

By Mr. Haycraft:

Q. Was it Minneapolis?

A. I couldn't answer that. I don't know what they called themselves.

Q. Where did you get them?

A. Salesmen.

Q. I mean where was the factory?

A. I think the factory was the same place it is today.

Q. Minneapolis?

A. I think so.

1138 Q. How long did you buy it in the beginning then?

A. We first manufactured a low pressure burner. The burner was originally manufactured under the name of Gibby.

Q. How do you spell it?

A. I think it is G-i-b-b-y. Then we got in a man by the name of Johnson. We built a few during those years and the controls at that time, I am not quite positive, were Minneapolis controls I think.

Q. Well, did you buy the primary control and the thermostat and the limit control, all three?

A. Sets of three controls.

Q. Well how long did you continue to buy from Minneapolis-Honeywell, buy your controls?

A. I would say four or five years.

Q. Then where did you get your controls?

A. We started using some Mercoid.

Q. Can you give the approximate date that they began to use the Mercoid control?

A. No, I couldn't, with any degree of certainty.

Q. Well did you discontinue having the Minneapolis-Honeywell at the time you took on the Mercoid?

A. No, I wouldn't say we did.

Q. Well how did you divide your business, do you remember?

A. The business depended a little on what our customers wanted. Some customers, in some locations like

1139 New York City and around there, demanded Minneapolis-Honeywell. The other customers were satisfied with Mercoid.

Q. Well in your advertising did you advertise the type control that you would provide for your burner?

A. We advertised we would supply either control, because some customers demanded different controls.

Q. According to your recollection when did you buy most of your controls from Minneapolis-Honeywell, or was that through all the years?

A. You mean?

Q. Did you buy more of Minneapolis-Honeywell or did you buy from Mercoid?

A. It varied. Some years we bought more from Minneapolis and some years we bought more from Mercoid.

Q. Do you remember what bracket you were in in the purchases that you made from Minneapolis-Honeywell?

A. Indeed I do not.

Q. Do you remember the price you paid for the controls when you purchased them in sets?

A. Not with any degree of accuracy. I could guess at it but I couldn't accurately tell you.

Trial Examiner Sheppard: It is a long time, back in 1925 or '26.

By Mr. Haycraft:

Q. Well can you testify as to the quantity you
1140 bought during those years from Minneapolis-Honeywell?

A. The early years?

Q. Yes.

A. Very few.

Q. Beginning, say, 1935, 1936.

A. Well 1935 we didn't buy very many but we did buy a good many through '36. That came about through a contract. That required so many sets of controls.

Mr. Freeman: I would like to go off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Haycraft:

Q. Do you have a copy of the 1936 agreement, Mr. Herr?

A. With Minneapolis-Honeywell?

Q. Yes.

A. No, sir, I do not.

Q. Did you continue to make contracts since that time with the Minneapolis-Honeywell?

A. I think we have had a contract each year.

Q. I show you Commission's Exhibit 7 in this case, and see if that is the type of contract you have in mind. This seems to be a contract of January 3, 1938.

A. It looks like their form of contract.

Q. Did you use that type of form?

1141 A. I think that is the type of contract that we had. If this was '37 that is the type we had.

Q. This is '38.

A. '38.

Q. I show you the signature on the contract. I ask you if that is your signature?

A. Yes, that is my signature.

Q. To refresh your recollection as to the prices you paid in 1936 I will ask you to look at this contract and see if you can pick out the automatic control you were using in that year.

Mr. Freeman: You mean '38, don't you, instead of '36?

Mr. Haycraft: Yes.

By Mr. Haycraft:

Q. And testify as to the prices you paid during 1938 for automatic temperature controls purchased from Minneapolis-Honeywell Regulator Company?

A. We used three automatic controls, boiler, combustion, and thermostat. Now they change their numbers from time to time. The combustion control—what is that number supposed to be?

Mr. Freeman: You mean limit control?

The Witness: Limit. Pressure control (indicating) R-17.

1142 We used a stack switch, boiler control and thermostat.

By Mr. Haycraft:

Q. What is the price of the thermostat you used?

A. 4.25.

Q. What is the price of the stack switch or primary control?

A. What was your number on that?

Mr. Freeman: R-116 and R-117.

The Witness: R-117, 13.75.

By Mr. Haycraft:

Q. And your limit control?

A. I presume that was the L-404, 3.55.

Q. That would come to about $21.40 a set?

A. That sounds about right, $21 or $22.

Q. Now in making your sales of burners did you always

sell the burner with the controls or were there times when you were called on to sell burners without the controls?

A. There would be times when we would be asked to sell the burners without the controls.

Q. Do you recall any such instances in your experience?

A. Why I believe that has pretty well covered every account we had, at the time we would make replacements it would have a set of controls on hand and they would order the burner without the control.

1143 Q. Do you have any recollection of having any business dealings with the Automatic Home Appliance Company in Jamaica, New York, a man by the name of Al Hart?

A. We made several burners for them and submitted them. They asked for quotations on a quantity of 300 burners. We submitted several burners to them and they bought three or four, a small quantity.

Q. Did they solicit the burner with or without the controls?

A. They asked to be quoted both ways, with Mercoid, with Minneapolis-Honeywell.

Q. And did you quote both ways?

A. Yes.

Q. Do you remember what quotations you made to that firm for your burner equipped with Minneapolis-Honeywell and equipped with Mercoid?

A. I don't know whether we actually made any quotation with Minneapolis-Honeywell. I think we did with Mercoid.

Q. Do you remember what the quotation was?

A. Offhand no.

Q. I show you Commission's Exhibit 152 for identification, which purports to be a carbon copy of a letter from you to the Automatic Home Appliance Company under date of August 24, 1937, and ask you whether or not that refreshes your recollection?

1144 A. Yes, I would say yes, we made a quotation.

Q. Is that a copy of a letter that you sent to the Automatic Home Appliance Company?

A. I believe that it is.

Q. Do you know whether it is or not?

A. Well I would say it was.

Mr. Haveraft: I offer it in evidence.

Trial Examiner Sheppard: I thought that was already in.

Mr. Haycraft: No.

Mr. Freeman: That is the one he would not let me see, if you recall, Major.

Trial Examiner Sheppard: Oh: All right. Any objection to that one?

Mr. Freeman: No, this is not a copy. This is not even a carbon copy. Let us either get the carbon copy or the original. We had the Automatic Home Appliance Company man on the stand and there isn't any showing that he was asked to produce this, and this is objected to as incompetent and not the best evidence.

Mr. Gilpatric: This is original typing, not a copy at all.

Mr. Haycraft: I asked the witness if he knew it was a copy of a letter he sent to Mr. Hart, and he said it was.

1145 Mr. Freeman: No, he did not say that.

There has been no attempt to secure the original, and the original should be accounted for. This is a copy of some copy.

Trial Examiner Sheppard: Well the original is evidently in the hands of the Automatic Home Appliance Company.

Mr. Freeman: Well he was on the stand the other day and there was no showing that he looked for it.

The Witness: I would say this in regard to the letter. I think we wrote a letter. I think this is our quotation to Mr. Hart.

Mr. Haycraft: And where did you get this piece of paper?

The Witness: Did you get that from me?

Mr. Haycraft: Well, look at it.

Mr. Freeman: Why don't you answer the question, Mr. Haycraft?

Mr. Haycraft: I don't answer the witness' questions.

Mr. Freeman: Oh, you don't?

The Witness: I think that letter was verified in our office.

Mr. Haycraft: Did you verify that against the carbon copy that you had in your office, in my presence?

1146 The Witness: I can not say that I did or not. We went over some papers there making some comparisons. But I would say that is my quotation to Mr. Hart.

Trial Examiner Sheppard: I think that is sufficient. I will let that go in.

Mr. Freeman: Is that going to be the rule from now on with respect to documents?

Trial Examiner Sheppard: I will make it as easy as I can for you.

Mr. Reporter, let this Exhibit No. 152 be received.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT 152, was received in evidence.)

By Mr. Haycraft:

Q. Did you sell any more than the three or four to the Automatic Home Appliance Company?

A. They might have bought, oh, say five, three, four, five or six.

Q. They didn't buy any 300?

A. No, sir.

Q. Did you ever have any business dealings with the Southwark Plumbing and Heating Supply Company in Philadelphia?

A. Yes, sir.

1147 Q. What were your business dealings with that firm?

A. Sold to them a quantity of burners from time to time.

Q. And were these burners equipped with automatic temperature controls?

A. Not always. The rule was that they were equipped, I mean the majority of them were equipped, and they bought some burners that had no controls.

Mr. Haycraft: Will you mark these as exhibits for identification?

Trial Examiner Sheppard: Begin at 196 and mark those each with a separate number.

(The documents referred to were marked Commission's Exhibits 196, 197, 198 and 199, for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibits 196, 197, 198 and 199, and ask you if you can identify those in any way?

A. You received these from our office.

Q. What are they?

A. Copies of invoices, Southwark Plumbing and Heating Company.

Q. Who made the copies?

A. Our office.

Q. Do you know whether they are correct copies of the originals?

1148 A. I would say they are correct copies.

Q. Are your initials on them?

A. Yes, sir.

Q. Would you testify as to whether or not the merchandise described in those invoices was sold and shipped to Southwark Plumbing and Heating Supply Company on or about the dates indicated?

A. They were shipped according to the dates on the copies, yes.

Q. Do those invoices state correctly the prices received for the articles described?

A. Yes, sir.

Mr. Haycraft: I will offer these in evidence, Mr. Examiner, or have him refresh his recollection, it doesn't make any differenec to me which way.

Mr. Freeman: You are going to get an objection if you offer them, because these are copies of invoices that can very readily be produced here.

Mr. Haycraft: You mean you think they are easily produced.

Mr. Freeman: Well at least they ought to be available. This may be a copy. The question is whether it is a full copy.

By Mr. Haycraft:

Q. All right. I will ask the witness to refresh his
1149 recollection as to what items of merchandise he sold to Southwark Plumbing and Heating Supply Company, and the dates, and the articles they received.

Mr. Freeman: But they are improper as they only refresh his memory as to the dates he prepared these copies. If you want to refresh his memory get some copy that goes back to the date, not yesterday.

They are objected to if it is the purpose of refreshing this witness' memory for any time other than the time he prepared these particular papers, in the absence of our having an opportunity to see what he really is referring to.

The Commission has the power of subpoena duces tecum, doesn't it?

By Mr. Haycraft:

Q. What price did you receive for the oil burners sold to Southwark Plumbing and Heating Supply Company?

A. $45. With a little change in some. They vary a little bit. It depends on what they were, how they wanted them equipped, with what type of pump.

Q. Were these burners at that time equipped with automatic controls?

A. No, these invoices say no controls.

Mr. Freeman: We further object to that type of examination as to how this man—

1150 Trial Examiner Sheppard: They haven't been offered.

Mr. Freeman: No, I want to object to his testimony now with respect to how the Herco Company sold oil burners.

It is immaterial whether they sold them with or without the controls. This man has testified burners were sold without controls, and as long as they were sold without controls there isn't any connection at all of the transaction this witness is now referring to with respondent.

We object to that line of examination.

By Mr. Haycraft:

Q. Do you have any recollection as to the price you received for your oil burners equipped with the Minneapolis-Honeywell and Mercoid controls when sold to the Southwark Plumbing and Heating Supply Company?

A. I could not answer that question definitely. If I was to guess at it I would say it would be about 2.50 or $3 difference.

Q. That is the difference between what?

A. Between the Mercoid and the Minneapolis-Honeywell.

Q. Which class did you charge the most for?

A. Charged the most for the Minneapolis-Honeywell.

Q. How did the price which you paid for the Min-

1151 neapolis-Honeywell compare with the price you were paying for the Mercoid?

A. The Minneapolis-Honeywell price was higher.

Q. Now during the period of time 1937, 1938, 1939, along in those years, what experience, if any, did you have with competition of the Quiet-Heet Company, manufacturers of oil burners at Newark, New Jersey?

Mr. Freeman: That is objected to because it is immaterial what connection this company had with Quiet-Heet, and Quiet-Heet is not on trial in this case, the respondent is on trial.

What difference does it make what competition the Herco Company or any other company had with Quiet-Heet, or with any one of the other 95 or a hundred oil burner manufacturers?

Let us get down to temperature control.

Mr. Haycraft: Mr. Examiner, I think there is sufficient testimony in the record both oral and documentary, with respect to Quiet-Heet, and also the price at which Minneapolis-Honeywell sold to Quiet-Heet, to serve as a basis and make this question absolutely proper.

I agree if I had not put in testimony that I have put in with respect to the prices at which respondent sold to Quiet-Heet and Quiet-Heet sold to dealers, I would not have a proper foundation. With that foundation I
1152 submit it is a perfectly proper question.

Mr. Gilpatric: I want to point out Mr. Examiner no case alleges any lessening of competition. The competition referred to in the complaint is in the sale and distribution of temperature controls. Now we are getting into another line of competition here.

Mr. Haycraft: Well temperature controls are attached to oil burners and they are sold with oil burners.

Trial Examiner Sheppard: But it has not been shown here that this particular witness sold oil burners with your temperature controls. Did you?

The Witness: Yes, sir.

Mr. Haycraft: I think so.

Trial Examiner Sheppard: You did sell them?

The Witness: Yes, sir.

Trial Examiner Sheppard: Both Minneapolis and Mercoid?

The Witness: Both makes.

Mr. Gilpatric: Mr. Examiner, I want to point out Mr. Haycraft is broadening his case. It is going to introduce a lot of other lines of examination of this witness and other witnesses if we are going into competition on oil burners.

Trial Examiner Sheppard: I don't want to broaden the scope.

1153 Mr. Haycraft: This testimony is not different than was received by previous witnesses in New York, such as Mr. Gillis and other manufacturers on their experience.

Trial Examiner Sheppard: No, I don't see any difference either. We had the same kind of testimony in New York.

Mr. Freeman: You mean with respect to this competition on burner manufacturers?

Just following your suggestion that our objections should be few and far between. But it is building up that kind of evidence and it is clearly immaterial to the issues involved in this case.

Mr. Haycraft: Mr. Examiner, I don't want to burden the record with argument, but it seems like that is what we are doing this morning.

I submit with the stipulation as to these bracket prices, with the testimony of officials of respondent and of the Quiet-Heet Manufacturing Company and others that have gone before, that this is proper testimony to show the effects of the discriminatory prices, alleged discriminatory prices, upon the sale of temperature controls.

Those temperature controls naturally are sold attached to all burners. That is the way they are sold.

Mr. Freeman: You only have a couple more of those and I think we can save time just to let it go in.

1154 Trial Examiner Sheppard: I am going to let it go in. Will you read the question, please?

(The pending question was read as follows:)

"Q. Now during the period of time 1937, 1938, 1939, along in those years, what experience, if any, did you have with the competition of the Quiet-Heet Company, manufacturers of oil burners at Newark, New Jersey?"

The Witness: Quiet-Heet built a little different type of burner than we built. They built them cheaper. We considered we built them better.

When it comes down to price, Quiet-Heet got a better price to offer on controls than we could offer.

Trial Examiner Sheppard: And on burners too?

The Witness: Well, their burner was a cheaper burner.

Trial Examiner Sheppard: Well we are interested in the price of the control especially.

The Witness: Well on the price of the control—

Trial Examiner Sheppard: And they are attached to the burner?

The Witness: Yes. They could figure their controls at a lower price.

By Mr. Haycraft:

Q. What effect did that have on your business
1155 with controls attached, particularly the Minneapolis-Honeywell?

A. In the New York territory that made a big difference, because the New York territory is a strong user of the Minneapolis-Honeywell, and in some instances they refused to use other controls.

Q. Do you have any way of determining the effect in dollars and cents upon your sales in the territory?

A. No, I wouldn't. I wouldn't like to make a statement on that anyhow. Some business probably we could have secured but as to what volume or anything, I personally would not know.

Mr. Haycraft: That is all.

Trial Examiner Sheppard: Cross-examine.

Cross-Examination by Mr. Gilpatric.

Q. Mr. Herr, during the years that you used Mercoid controls, you have found the performance to be satisfactory, haven't you?

A. Mercoids?

Q. Yes.

A. Yes.

Q. The fact is that their visaflame primary is built right into your burner, isn't it?

A. Yes.

Q. And you have had contracts with the Mercoid 1156 Corporation for purchase of their controls?

A. I have always had contracts with both companies.

Q. Both companies at the same time?

A. Both companies at the same time.

Q. And you have bought whatever controls you required of Mercoid from Mercoid, and whatever you required of Minneapolis from Minneapolis under those contracts?

A. Yes, sir.

Q. Did you ever sell any controls separately from burners yourself?

A. Occasionally a man would come in and want a set of controls for replacement, yes. We sold a set of controls here, a set of controls there. No quantity of controls as a control sale.

Trial Examiner Sheppard: That applies to both?

The Witness: That would apply to both.

Trial Examiner Sheppard: Both.

By Mr. Gilpatric:

Q. In purchasing controls from Mercoid, did you buy them in sets of three controls, as a rule?

A. I don't think we purchased them from either company exactly in sets. We purchased what controls we wanted. I don't believe I purchased from either Mercoid or Minneapolis-Honeywell in matched sets of controls.

Q. In your sales of oil burners you didn't mix
1157 the controls of one manufacturer with the controls of another?

A. No, sir.

Q. Mr. Herr, in this letter addressed to you to Automatic Home Appliance Company, Commission's Exhibit 152, you quote a price of $59 including Mercoid controls. Was that the price at which you sold these few burners that you testified you sold to this company?

A. That is the price he paid for them, yes. He didn't take the 300. He paid for them at that price, on the basis. At least I think he paid for them.

Q. Do you know what Quiet-Heet's price was on a comparable burner at the same time?

A. I could not answer that definitely, no, I could not.

Q. Was this price about the same as your line of burners was carrying at this time?

A. That is the price we would have quoted to any company in quantity.

Q. I see. Were you solicited, Mr. Herr, by other control manufacturers such as Penn or Perfex to buy their controls?

A. Yes, sir. We were solicited by all of them.

Q. Throughout this period of '36 or '41?

A. I would say yes.

Q. Am I correct, Mr. Herr, that your own prices of oil burners varied according to quantities purchased by your customer?

1158 A. They varied some.

Mr. Gilpatric: All right. That is all on cross-examination.

Trial Examiner Sheppard: Anything else?

Mr. Freeman: Maybe. Just a second.

Trial Examiner Sheppard: Yes.

Mr. Gilpatric: May I ask one more question, Mr. Examiner?

Trial Examiner Sheppard: Yes.

By Mr. Gilpatric:

Q. It is true, isn't it, that a Minneapolis-Honeywell thermostat can not be used on a burner equipped with a Visaflame primary?

A. It can not be used.

Redirect Examination by Mr. Haycraft.

Q. How long have they been making this Visaflame?

A. I think Mercoid brought that out in '40, '40 or '41.

Q. Prior to that you could use controls that were manufactured by either the Minneapolis-Honeywell or Mercoid?

A. Prior to that we could use any make of controls.

Q. Did you ever discuss with the officials of Minneapolis-Honeywell this matter of prices of controls that you were paying compared with what Quiet-Heet were paying?

A. Well—not with Quiet-Heet.

1159 Q. What did you discuss with them?

A. I made the statement I thought the quantity of controls we were buying at that time were entitled to a better price.

Q. With whom did you discuss it?

A. Their sales representative.

Q. Who was that?

A. Mr. Dorsey and Mr. Lockrae.

Q. What did they say to you about it?

A. They said I was not entitled to it. They said I had never used a quantity of controls before that would justify that type of a contract.

Q. Did you mention to them anything about the competition you were encountering with the lower priced control?

A. Yes, I did. I said that we were forced to handle other controls because other manufacturers offered the price—a lower price—on controls than we could sell them for and make any money on it.

Q. And what explanation did they make of that?

A. They had none.

Mr. Haycraft: That's all.

Trial Examiner Sheppard: Anything else?

Mr. Freeman: No.

Trial Examiner Sheppard: All right, Mr. Herr. Sign your name right there just like I have got it referred to in the subpoena.

1159-A (Witness excused.)

Mr. Haycraft: May we have a five-minute recess.

Trial Examiner Sheppard: Yes, we will take a five-minute recess.

(There followed a short recess.)

Trial Examiner Sheppard: On the record.

Mr. Reporter, this gentleman is Mr. E. C. Stauffer, President of the Penn Boiler and Burner Manufacturing Company, Lancaster, Pennsylvania. All that is right, Mr. Stauffer?

Mr. Stauffer: Yes, sir.

E. C. STAUFFER was thereupon called as a witness by the Commission and, having been first duly sworn testified as follows:

Direct Examination by Mr. Haycraft.

Q. What is your occupation, Mr. Stauffer?

A. Manufacturer.

Q. What do you manufacture, and what did you manufacture prior to Pearl Harbor?

A. Well '32 to about '35 I manufactured oil burners. From '35 for about a year oil burners and boilers, oil burning boilers. From then on to the present oil burning boilers.

Q. By that you mean a furnace?

1160 A. Oil furnace.

Q. Fully equipped?

A. Fully equipped. Assembled.

Mr. Freeman: I wonder if I could have those answers re-read?

(Record read.)

By Mr. Haycraft:

Q. Since 1935 where did you get the automatic temperature control that you used in connection with your furnace, used in your furnace?

A. Mercoid and Minneapolis-Honeywell, Perfex and Penn.

Q. Where in the United States do you sell or did you sell your furnace?

A. Mostly on the Seaboard from Maine to South Carolina, and a few spots West as far as the West Coast.

Q. Where did you buy the temperature control that you used on your burner and on your furnace?

A. Well we dealt with traveling salesmen for Mercoid and Minneapolis, both out of Philadelphia.

Shipments were made to us from Minneapolis on Honeywell and Chicago and Philadelphia on Mercoid.

And Penn and Perfex came from their respective manufacturer. I think Perfex is in Milwaukee and Penn in—

Mr. Freeman: Goshen, Indiana.

The Witness: That's right.

1161 By Mr. Haycraft:

Q. Well during that period of time since 1935, what type of control have you principally used, used mostly?

A. Well our boilers were shipped out assembled and there were three different controls commonly known as a set of control, but we used on our equipment at least four.

Q. What were they?

A. Well, you mean the number of the control?

Q. The type of control.

A. Well the Minneapolis-Honeywell, it was a combustion relay, or—117 combustion relay, thermostat, and a limit switch.

When we used Minneapolis-Honeywell our fourth control, for instance on a hot water boiler, was used to operate a circulator, and it was used I would say on 90 per cent of the jobs we used to handle. That was high voltage.

On the Mercoid we used relay, thermostat and limit switch, and the fourth control remained Mercoid.

Sometimes the fourth control was Penn or Perfex.

Q. To what class of trade did you sell your furnaces thus equipped?

A. To the electrical trade, heating trade, oil burner distributors, and dealers, and heating supply houses or jobbers.

Q. Did you have a contract with the Minneapolis-
1162 Honeywell Regulator Company during any of that period of time?

A. Practically every year, yes. We had contracts with Minneapolis-Honeywell practically every year from 1932 to date—I mean until the war.

We didn't have any in '42 or '43.

Mr. Haycraft: Will you mark these please?

Trial Examiner Sheppard: Mark those exhibits beginning with 200, for identification, please?

(The documents referred to, were marked Commission's Exhibits 200, 201, 202 and 203 for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibits 200 and 201, and ask you if those are contracts that you had with Minneapolis-Honeywell Regulator Company?

A. Yes.

Q. What is the date of 200?

A. Is this 200?

Q. No, the other one.

A. The date it was signed?

Q. Yes.

A. January 4, 1939.

Q. You signed it?

A. Yes, sir.

Q. What is the date of 201?

1163 A. December 28, 1939.

Mr. Haycraft: Now I offer those two in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Freeman: No.

Mr. Gilpatric: No objection.

Trial Examiner Sheppard: Let the Exhibits No. 200 and 201 be accepted.

(The documents referred to, heretofore marked for identification COMMISSION'S EXHIBITS 200 and 201, were received in evidence.)

By Mr. Haycraft:

Q. I now show you Commission's Exhibit 202 for identification, which purports to be a letter from Minneapolis-Honeywell Regulator Company under date of January 3, 1940, and ask you whether or not that letter accompanied Commission's Exhibit 201, the contract signed in December, 1939?

A. Right.

Mr. Haycraft: I offer that in evidence.

Trial Examiner Sheppard: Any objection to that?

Mr. Gilpatric: No objection.

Trial Examiner Sheppard: Let it be accepted as Commission's Exhibit 202.

(The document referred to, heretofore marked for identification COMMISSION'S EXHIBIT 202 was received in evidence.)

1164 By Mr. Haycraft:

Q. Now I call your attention to the fact that the contract, Exhibit 200, calls for 50 sets or more at a price of 3.95 for T-11 Acratherm, T-44 or T-45 thermostat; at a price of 3.05 for L-404 Pressuretrol, L-409 Surface Aquastat, and L-419 Airstat; and $11.10 for an R-117 or R-123 Protectorelay.

Were those the prices which you paid for those items during the year 1939 when purchased from the Minneapolis-Honeywell?

A. I lost track of your statement. Is this the one (indicating)?

Q. Yes.

A. I bought a few, very few.

Q. At those prices?

A. Yes. I would be more familiar with them if I knew the total on the three pieces.

Q. $18.10.

A. Yes.

Q. And that was the price you paid during 1939?

A. Yes.

Q. Now again 1940, under Commission's Exhibit 201 where the contract provided for the purchase of 50 control units rather than sets, and the letter of January 3,

1165 1940, Commission's Exhibit 202, which calls attention to the prices that would exist if you bought in sets. I will ask you whether or not you as a matter of fact purchased any controls at higher prices during the year 1940 than you had been paying in '39, or whether you were able to make adjustment on your prices in 1940 to conform to the prices you paid in 1939?

A. I couldn't, except to make purchases outside.

Q. I show you Commission's Exhibit 203, and what identification you can make, if any, of that?

A. This was a price that was given to me, left with me, rather; this is a price that was wrote down that was given to me orally by Mr. Dorsey.

Q. Who is Mr. Dorsey?

A. Representative of the Minneapolis-Honeywell.

Q. What time did he give you these prices?

A. That was the time he took the previou contract back with him with my signature.

Q. What year was that?

A. Well that was for the—this covered the prices for 1940.

Q. What I am trying to get at is, what prices did you pay in 1940 for these particular—

A. I bought a very few controls from Minneapolis on this basis immediately after the execution of the contract, and then ceased buying from them.

1166 Q. What is the basis? Is that covered in this memorandum?

A. Yes.

Q. Refresh your recollection as to what they are?

A. R-117-A was 11.10, and T-11- —is that a thermostat?

Q. Yes.

A. That is 3.95. And the immersion Aquastat 3.50.

Q. That totaled $18.10.

A. That was $18.95.

Q. $18.95.

A. Wait a minute. 18—

Trial Examiner Sheppard: Add it up. Be sure about it.

The Witness: 18.55.

By Mr. Haycraft:

Q. Well now what was your reason for discontinuing buying at those prices in 1940?

A. Well, my competitors could quote their oil burners complete with controls at any price—I mean—my competitors offered a price lower and did not distinguish or have a price difference on account of a particular make of control.

In other words, they offered them at a certain price—the oil burner with Mercoid at a certain price or the oil burner with Minneapolis at the same price.

I could not do that at the prices I was paying for the Minneapolis-Honeywell. Under the depression con-

1167 ditions profits were very close and I could not cut into them and absorb that myself. So I had to differentiate in my wholesale price to my dealers between Mercoid and Minneapolis.

Then I discovered my dealers were buying the Quiet Heet oil burner, taking the control off of my oil burner and putting them on the Quiet, and taking them off the Quiet and putting them on mine, and recommending the other as a competitive job. That would be dealers that would be representing the Penn. They purported that the Penn burner was better than the Quiet-Heet. They could get the price on Quiet-Heet down further and divide the

cost difference over a Penn with the Minneapolis unit where the customer demanded it.

So I did that—I wrote to the Quiet-Heet manufacturer, and in the New York area and the Long Island area particularly there was quite a big volume of business going on through FHA. Everything was price. They didn't care what you had to offer or what you didn't have to offer so long as your price was lower than your competitors. And the burner that was underselling the market at the time was the Quiet-Heet, so I thought I would kill poison with poison. I bought Quiet-Heet oil burners and put them in stock. The Quiet-Heet oil burners were in a box and the controls were in a separate compartment. The same make with the other oil burner that we bought
1168 at the time, they went in a stock bin, and the Mercoid controls went into a stock bin.

Now when we sold them we didn't care whether we pulled out the Mercoid control and put them with the Quiet-Heet or a Penn.

Mr. Freeman: You say Penn?

The Witness: The one we had made for us. I designated it as Penn.

Mr. Freeman: Just so you are not referring to the Penn Electric Switch Company.

The Witness: No. They didn't enter into our picture at all.

In that manner we could cut the overall prices on both burners, on the Quiet-Heet burner and on our own burner, by using Quiet-Heet oil burners.

Trial Examiner Sheppard: It didn't make any difference what the controls cost, did it?

The Witness: That's right. Then we—I attempted to buy some controls from Quiet-Heet because I assumed—well, being a manufacturer, the price on a motor is about $7 if you buy 500, and it is about $7.11 if you buy a thousand—I mean, it would be $6.95 if you bought a thousand. And in a bracket of 500 to 1000 electric motors the difference is five to ten cents.

It was that way with the transformers. The dif-
1169 ference was four or five cents. A lot of items there was no difference.

Therefore any manufacturer familiar with his cost realizes the control governs his price. And when I know a manufacturer can offer an oil burner at less than the

market price I realize that it must come in their control. So went to Mr. Lapidus and bought his control. That is, the Quiet-Heet Manufacturing Company. He would not sell me controls separately unless I bought his burner. So I had to buy his burner to get the controls.

By Mr. Haycraft:

Q. What did you pay for the controls when you bought them that way from Quiet-Heet?

Mr. Freeman: He just got through saying he never bought the controls by themselves.

Mr. Haycraft: Until he bought the burners.

The Witness: I never bought controls separate.

By Mr. Haycraft:

Q. You never bought them separately?

A. No.

Q. When did you pay for them when you bought them with the burner?

Mr. Freeman: He didn't pay for the controls. Why don't you reframe your question?

Mr. Haycraft: Mr. Examiner, am I going to be 1170 interrupted—

Trial Examiner Sheppard: Let us not have any interruptions.

Mr. Freeman: Your Honor, I object to it as an unfair question and I would like a ruling on it.

Trial Examiner Sheppard: All we want is the facts here.

Mr. Freeman: That is all anyone wants.

Trial Examiner Sheppard: We just want to get the facts as quietly and peacefully as we can. Put your question to him again.

Mr. Haycraft: Will you read the question?

(The pending question was read as follows:)

"What did you pay for them when you bought them with the burner?"

Mr. Freeman: Why not ask a fair question? We object to the question as an unfair question. It sort of assumes that this gentleman bought controls without the burner.

Mr. Haycraft: I didn't say so and the question does not mean so.

Trial Examiner Sheppard: I don't know what you gentlemen are talking about, really I don't. Just put the entire question again.

The Witness: I paid $40 and $41 for the oil burner
1171 with three controls.

Trial Examiner Sheppard: All right.

By Mr. Haycraft:

Q. Well from your knowledge of the items that go into the manufacture of the oil burner, what did you pay for the controls?

Mr. Freeman: That is objected to because he bought these complete as a package, a burner and controls.

Now I don't see any justification for any question as "what did you pay for controls?" any more than asking someone "What did you pay for your pants?" when you buy a suit. And I think it is an unfair question.

Trial Examiner Sheppard: If you can give us the information I will let the answer in, if it is something you know; if you know what the controls cost outside of the connection with the burner.

The Witness: What the controls cost, you mean?

Mr. Freeman: No, what you paid for them. In other words, what you allocate.

The Witness: I don't know. I would not know.

By Mr. Haycraft:

Q. Well do you know what went in to make up the oil burner?

A. Yes, and I bought oil burners without controls, using practically the same components. That was the way I
1172 arrived at what I was paying for the oil burner.

Q. Where did you buy oil burners without controls?

A. York Oil Burner Company.

Mr. Freeman: Is that the York?

The Witness: York.

By Mr. Haycraft:

Q. What items went in to make up an oil burner aside from the controls?

A. Well a basic casting which is constructed to include a part of a tube and scroll for a blower, to which is attached a motor, a pump, transformer, nozzle, ignition wires and so forth.

Q. And what did you have to pay for a motor without controls?

Mr. Freeman: From what company?

Mr. Haycraft: From the York Company.
The Witness: $28.

By Mr. Haycraft:

Q. What were you having to pay for temperature controls from Minneapolis-Honeywell during the time?

A. 18.55.

Q. Did you buy an oil burner equipped with Minneapolis-Honeywell control for $40 from any other manufacturer of oil burners than Quiet Heat?

A. No, sir.

1173 Q. What was it you said you did with the oil burners and automatic temperature controls that you bought from the Quiet-Heet? What did you do with the temperature controls that were on the Quiet-Heet burner?

A. I kept them in stock for sale with my own burner to customers who demanded Minneapolis controls.

Q. How much did you receive for the controls when you sold them that way?

A. Well about $4 more. In other words, I absorbed—I am very sure that the difference in price of Minneapolis was about $6 more than I had to pay Mercoid, so in making that transfer I dropped $2 from the price and held my price to $4. I recall that distinctly. Instead of asking $6 more which is what I would have had to pay Minneapolis if I had bought them directly, in this manner I tried to get as much as I could, as much as the traffic would bear, to compensate me, which was about $4. I had trouble getting that.

Q. $4 above what?

A. Above my Mercoid prices. You see, if I may offer—there are certain items that are very highly advertised in periodical magazines that the general public becomes very greatly sold on.

There is a certain amount of trade that doesn't offer any selling resistance. You can sell the customer whatever the customer asks for.

1174 We had dealers that liked Mercoid better than Minneapolis, but they can not sell what they like, they have to sell what they have a demand for. We would tell them it was all right, but if he went down the street to call on some doctor or dentist that was influenced by the periodical magazines or newspapers and a doctor or dentist would demand Minneapolis-Honeywell controls, he could not resist the sale of that type of equipment.

Q. You mean the dealer couldn't?

A. That's right. Then he would come back to me and say over a period of years he hadn't sold any Minneapolis-Honeywells, and I would come along and tell him he has to pay 4.57, and I would get into an argument.

In addition to that fact, I was one of the few companies that had to distinguish in my price between Minneapolis and Mercoid, and they accused me of everything under the sun, told me it was gyp game, a racket, so that I lost a lot of business—I could not obtain it.

Q. You had to charge more?

A. I had to charge more. They thought it was some kind of a racket I had worked out.

I either had to mark my Mercoid prices up, which my prices would not permit; or either to mark my Minneapolis down, which my profit would not permit.

That was back in the depression days when we were 1175 very glad to get business.

Mr. Haycraft: Give each one of those a separate number, please.

Trial Examiner Sheppard: Beginning with Exhibit 204 for identification.

(The documents referred to were marked Commission's Exhibits 204-A, 204-B, 204-C, 204-D; 205, 206-A, 206-B, 206-C for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibit 204-A, B, C and D, and ask if you can identify that as correspondence which you had with Minneapolis-Honeywell?

A. They are copies from our files.

Mr. Haycraft: I offer these in evidence.

Trial Examiner Sheppard: Any objection, gentlemen? Take a look at them.

Mr. Gilpatrick: It is immaterial. We don't object.

Trial Examiner Sheppard: Let it be accepted, Exhibit 204.

(The documents referred to, heretofore marked for identification COMMISSION'S EXHIBITS 204-A, 204-B, 204-C and 204-D, were received in evidence.)

Mr. Haycraft: I should have described them, Mr. Examiner, so let the record show it is a carbon copy of a 1176 letter from Penn Boiler and Burner Manufacturing Corporation to Minneapolis-Honeywell Regulator Company under date of September 5, 1940, an original let-

ter of Minneapolis-Honeywell Regulator Company under date of September 9, 1940, 204-A, and 204-C.

204-C and 204-D are installation instructions for Series 10 and Series 30 relays and types L-144, L-244 and L-444 immersion Aquastats.

Trial Examiner Sheppard: All right. Let them be accepted.

By Mr. Haycraft:

Q. Mr. Stauffer, did you ever discuss with representatives of the Minneapolis-Honeywell Regulator Company those prices that you were paying for their controls as compared with the prices of other—that other burner manufacturers were paying?

A. That was a ten-year fight with Mr. Dorsey.

Q. Mr. Dorsey was the manager?

A. He wasn't all the time. He was the latter part, the last round he was.

Q. I show you Commission's Exhibit 205, which purports to be a carbon copy of letter from yourself to Mr. Dorsey dated January 10, 1940, and also 206-A, which is a carbon copy of letter from yourself to Mr. Dorsey dated May 10, 1940, 206-B an original letter from Mr. Dor-
1177 sey to yourself under date of May 14, 1940, and 206-C which is just an advertisement attached to the letter.

Mr. Freeman: Can't you put that first one in? It just clutters up the record.

Mr. Haycraft: I will leave 206-C off of that, Mr. Examiner.

Trial Examiner Sheppard: All right. The Examiner authorizes the cancellation of Exhibit 206-C.

The Witness: (Examining paper.) This is a bit of sarcasm of which Mr. Dorsey raises complaint.

By Mr. Haycraft:

Q. Is that an original letter?

A. It is a copy from my files.

Q. How about A and B, is that correspondence from Mr. Dorsey on the same subject?

A. More sarcasm. That is from my file also.

Mr. Haycraft: All right. I offer these in evidence.

Trial Examiner Sheppard: Any objection, gentlemen? Take your time and read them.

Mr. Gilpatric: No objection, Mr. Examiner.

Trial Examiner Sheppard: Let the Exhibits 205 and 206 be accepted.

(The documents referred to, heretofore marked for identification COMMISSION'S EXHIBITS 205, 206-A
1178 and 206-B, were received in evidence.)

By Mr. Haycraft:

Q. I notice you state in your letter Commission's Exhibit 205, letter to Mr. Dorsey:

"However, I found a source of supply for controls where I actually can buy a set of controls that you charge me $21 for at a price of $13."

What did you refer to there?

A. I am very sure I was referring to Mercoid.

Q. That is, the Mercoid controls?

A. At $13.

Q. $13.

A. What I meant by that was corresponding controls, type for type.

Q. And that was the controls they had on the burners when you made this deal with Quiet-Heet?

A. That's right.

Q. And substituted Minneapolis-Honeywell for the Mercoid?

A. That's right.

Q. Now in the third paragraph of your letter of May 10, 1940, you say:

"In checking over the prices quoted some dealers who handle our boilers and competitive burners, we find
1179 that they can buy oil burner controls cheaper than we can with the results that on this basis it would be practically hopeless for us to sell them controls. In fact comparing our dealers' prices with your prices to us, we could still purchase controls cheaper from our own dealers than from you."

Now what dealers did you have in mind there—or what competitive burner did you have in mind there?

A. We had a dealer in Providence, Rhode Island that told us that he would sell me controls at a certain price, and that price was less than I was paying Minneapolis-Honeywell, so I just told him he should just buy my product without controls if he wanted Minneapolis controls. There was no use making him buy something from me that he could buy elsewhere for a dollar less or half a dollar or whatever it was.

Q. You remember what firm that was in Providence?

A. That was Petroleum Fuel Service.

Q. Did you have any other accounts, dealer accounts?

A. Yes, I did.

Q. Where the same situation existed. Will you name some of them?

A. It is a little hard to recall. There was a case in Washington and a case I think in New York. I can't recall at the moment.

Q. Was that Burner Supply Company of New York? Does that refresh your recollection?

1180 A. The one in New York was in Brooklyn, it was called the Major Homes Appliance Corporation.

Q. Major Homes?

A. Yes. They are on Fourth Avenue, Brooklyn—well, it is in the 400 block, Fourth Avenue, Brooklyn.

There was an account in Washington but I can not recall it—oh, American Heating and Engineering Company, I think. They were on New York Avenue, Northwest, 1008.

I am so full of making war materials that I have practically forgotten about oil burners. It is a little hard to recall it.

Trial Examiner Sheppard: All right. Anything else?

Mr. Haycraft: No, that's all.

Trial Examiner Sheppard: Cross-examine.

Cross-Examination by Mr. Freeman.

Q. Mr. Stauffer, let us get your business straight. You became a boiler manufacturer, that is, a burner boiler manufacturer in 1936. Correct?

A. Approximately, yes.

Q. And from then on you sold the boilers, that is, burner boilers. Is that correct?

A. Not quite.

Q. Well, did you sell—

1181 A. For about a year after that—we didn't stop production on one item and start making another item. We added the boilers to our line of oil burner manufacture and gradually discarded the manufacture of oil burners by having them made for us.

Q. In other words then up to about 1935 you were in the oil burner business, then for the year 1936 you were both in the oil burner business and in the boiler business. Correct?

A. That's right.

Q. And then from about the latter part of '36 or the early part of 1937 down to pre-Pearl Harbor, you were in the boiler business. Correct? That is, oil-fired boilers?

A. Oil-fired boilers with the oil burners?

Q. Yes. And the oil burner from about 1936 to early '37 you purchased from others, from outside sources?

A. We had them made for us.

Q. But you didn't make them in your plant?

A. No.

Q. You made the boiler in your plant?

A. That's right.

Q. So that from 1936 or the latter part of 1936 you were really a boiler manufacturer and picked up your oil burners from some oil burner manufacturer. Isn't that correct?

A. We didn't pick them up, no, we had them made
1182 for us, the same as any manufacturer today has certain components made for him.

Q. Well, you had the whole oil burner made for you?

A. Excepting the controls, which Minneapolis claims represents a very large part of the oil burner.

Q. You bought oil burners, did you not, from Quiet-Heet, complete with controls thereon?

A. That's right. Just to get the controls.

Q. In other words, you bought the burners complete with controls, because Quiet-Heet would not sell you controls by themselves. Is that right?

A. Correct.

Q. And you were willing to pay his price of some $40 or $41 in order to get Minneapolis-Honeywell controls?

A. That's right.

Q. Of course you didn't discard or junk or obsolete the oil burner parts which you got from Quiet-Heet?

A. No.

Q. And did you take oil burners from Quiet-Heet indiscriminately, that is, whether they had Minneapolis-Honeywell controls or the Mercoid controls on?

A. They only operate them with Minneapolis.

Q. You knew that they handled Mercoid controls on oil burners?

A. But they were not interested in selling them
1183 with Mercoid controls.

Q. Isn't it a fact that you would not have taken an oil burner from Quiet-Heet if it had a Mercoid control on? That is a fact, is it not?

A. Positively.

Q. So that regardless of what Quiet-Heet was selling it was your business to see that whatever you got from Quiet-Heet had a set of Minneapolis-Honeywell controls on. Is that right?

A. Correct.

Q. And when you bought Quiet-Heet burners complete as the Quiet-Heet Company sold and advertised them, you knew at that time that you were not going to resell the Quiet-Heet burner with any Minneapolis-Honeywell controls on. Is that correct?

A. That's right.

Q. So that you took what Quiet-Heet sold and advertised and sold something less than what you bought from Quiet-Heet to the purchasing public?

A. Not less, no.

Q. Did you sell something that you considered the equivalent?

A. Better.

Q. In other words when you bought a set of Mercoid controls to control and operate the Quiet-Heet burner
1184 which you bought with Minneapolis-Honeywell controls on, did you then think that the burner with Mercoid controls operated better?

A. Mechanically, yes, sir.

Q. Was it your thought then that you were sort of a public benefactor in giving to the Quiet-Heet Burner a good set of controls by putting Mercoid controls on?

A. It wasn't a case of being benevolent at all. It was a case of bucking big business resistance that was trying to put the small oil burner business out of business, and it was the only course I had for self-preservation.

Q. Well, you weren't in the oil burner business at that time, were you?

A. Yes, sir. I sold 4,000 that year.

Q. But you sold them complete with boiler units. Correct?

A. I would say about 4,000 boiler burner units including oil burners, and about 400 oil burners just oil burners.

Q. Now when you sold just oil burners, what oil burners did you sell?

A. The one that we make.

Q. And what controls did you use on those that you made?

A. Mercoid, and some Minneapolis.

Q. And when you used Minneapolis-Honeywell controls where did you get them?

A. From Minneapolis-Honeywell.

1185 Q. All of them?

A. Most of them, yes.

Q. Do you happen to know how many controls you bought from Minneapoils-Honeywell in the year 1938?

A. No. Very few.

Q. And how did your 1939 business compare with your 1938 business?

A. I think that became less. At least if it did not become less it was proportionately less.

Q. How about 1940?

A. Still proportionately less. We were trying to get out of Minneapolis and stand on our own legs.

Q. So in starting with 1938, which was your big year, at least starting around 1938, compared with 1939 and 1940. Of those three years 1938 was your best year?

A. No.

Q. I mean of purchasing control from Minneapolis-Honeywell.

A. Oh, yes, that's right. Because we were able then not to have to depend on Minneapolis-Honeywell to exist any longer.

Q. In other words, I just want to get this straight even if it is sort of repetitious. In 1938 you bought more controls than you bought from Minneapolis-Honeywell in 1939. Correct?

1186 A. That's right.

Q. And in 1940—in 1940 you bought less from Minneapolis-Honeywell than you bought in 1939?

A. This figure is proportionate. I don't know just how many controls I bought—I don't know the relative amount of sales—or purchases—from us to Minneapolis—to us—from Minneapolis—in proportion to our business and the relationship of purchase to Minneapolis. We were buying less Minneapolis each year.

Q. The trend was downward?

A. Yes.

Q. And does it refresh your memory if I tell you you bought a total of 37 controls, not sets, but units, from Minneapolis-Honeywell in 1938?

A. I judge that's right.

Trial Examiner Sheppard: Have you the figures for 1940? You might as well put them in here.

Mr. Freeman: I haven't them here. That is why I brought out that they were less.

The Witness: You see, I couldn't buy them. I couldn't buy them and survive.

By Mr. Freeman:

Q. And 37 controls, using every control in every conceivable way, would not equip more than 12 oil burners?

A. Well, I didn't buy all my controls from Minneapolis.

1187 Q. No, I am talking about the business you did or received from Minneapolis-Honeywell.

A. That's right. I regret that there were that many.

Mr. Freeman: I move that that last answer be stricken as not responsive.

Trial Examiner Sheppard: That can go out.

By Mr. Freeman:

Q. Now you sold some 400 oil burners that year?

A. What year?

Q. 1940. And you said they were equipped with either Mercoid or Minneapolis-Honeywell.

A. That's right.

Q. And I understood you to say that of those 400 burners whatever you did equip with Minneapolis-Honeywell, you bought from Minneapolis-Honeywell?

A. No, no, I didn't.

Q. Let us get that straight. You bought them from some other company?

A. That's right.

Q. And you bought them with oil burners at $40 or $41 in order to get the complete set of Minneapolis-Honeywell controls. Correct?

A. That's right. I also bought them elsewhere.

Q. And from whom else did you buy?

A. The DeSoto Oil Burner Company in York, and
1188 the York Oil Burner Company in York.

Trial Examiner Sheppard: You bought those controls without buying the burner with them?

The Witness: Well we bought burners from them without controls and then when we wanted controls we had a coupon value, you might say, credit, but I could buy controls up to the amount of burners I had bought.

Trial Examiner Sheppard: Well in answer to a question of Mr. Freeman you said you bought Minneapolis-Honeywell controls of other people, and I want to know if that was Minneapolis control purchased without the burner with them.

The Witness: In a sense. But you see I would buy burners—I would buy perhaps a hundred burners—

By Mr. Freeman:

Q. From York?

A. Yes. But no control. Now, I needed five sets of controls, Minneapolis controls. Having bought the hundred burners would give me the right to buy a hundred sets of controls. I didn't want them at the time. And while they were perhaps in my inventory I would get an order, and then I would demand the fulfillment of the Minneapolis controls to the extent of five.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

1189 Q. Well, did you always use a Minneapolis-Honeywell control with the York oil burner that you bought?

A. No.

Q. Do you know whether the York Oil Burner people handled the Mercoid controls?

A. I think they did.

Q. Would you have taken York Oil burners with Mercoid controls on?

A. If the price would have been competitive, yes.

Q. Well you mean competitive with Minneapolis-Honeywell prices?

A. No, competitive with the Mercoid Company.

Q. You mean that if the price of the Mercoid equipped burner was the same as the price of the burner equipped with Minneapolis-Honeywell?

A. I don't mean that.

Q. You mean just the reverse of that?

A. I mean if I could buy these oil burners with Mercoid control and the cost to me would have been the same as if I had bought the burner separate and the Mercoid control separate, if that total was equal, then I would buy from York, but I would buy where I could buy the best bargain.

Mr. Haycraft: Will you let me ask a question right there?

Mr. Freeman: Yes.

1190 By Mr. Haycraft:

Q. You mean—when you say you bought Mercoid controls—you mean from the manufacturer?

A. Yes.

By Mr. Freeman:

Q. Well as a matter of fact you did buy Mercoid controls at around $13 a set. Is that right?

A. Yes.

Q. And you bought burners from the York people at $28?

A. That's right.

Q. So then you had a complete burner, so to speak, that is, controls from Mercoid direct, and the burners from York direct, making your total cost $41?

A. That's right, but the basis there is altogether different, in the first place. In other words, there was a time when oil burners retailed for $650. Pre-Pearl Harbor they retailed as low as $195.

Q. Quite a saving for the public.

A. I should say. There was a period there on a dropping market where at the time I purchased some Quiet-Heet at $41, I was likely paying $45 and $48 from York. I had them offered to me at considerably less than $41 after I quit buying, but I wasn't interested then.

Trial Examiner Sheppard: What year was that?

The Witness: I think 1940.

Trial Examiner Sheppard: I think it has come out
1191 in this record that in '39 or '40 they were at $49.

The Witness: I could have gotten them a dollar less if I had taken standard controls. 1940 their burners were considerably less than that.

By Mr. Freeman:

Q. Did I understand you to say this morning that your competitors, that is, people dealing in oil burners, made no differential or difference in price between burners equipped with Minneapolis-Honeywell controls and also equipped with Mercoid controls?

A. The larger ones. The larger manufacturers don't make any difference.

Q. How about Herco who was your next door neighbor?

A. Well I suppose he was in the same trouble I was. He didn't.

Q. You were in the room here this morning when he testified?

A. Yes, sir.

Q. You remember him saying there was about $2.50 or $3 difference in his selling price for oil burners when he equipped them with Minneapolis-Honeywell controls over those equipped with Mercoid controls?

A. I heard the figures $2.50 but I didn't catch all the conversation.

Q. Now did you ever take time enough to really
1192 check Herco's prices, that is, as to what it was when his burners were equipped with Mercoid controls and what it was when they were equipped with Minneapolis-Honeywell controls?

A. You bet I did.

Q. What did you find?

A. I found that his differential on his oil burner to the dealer trade was considerably less than my differential.

Q. No, now, just answer my question.

A. That is what you asked.

Q. I am asking you whether or not you know whether he charged the same price for a burner equipped with Mercoid controls as when the burner was equipped with Minneapolis-Honeywell controls?

A. No, I know that he didn't.

Q. He charged more?

A. He charged more for Minneapolis.

Q. About $2.50 or $3?

A. I judge that would be correct. I don't know.

Q. Well now did you check any of these other companies?

A. Automatic Burner Company in Chicago.

Q. What did they do, did they charge more for an oil burner equipped with Minneapolis controls?

A. No, they charged the same price.

Q. They charged the same price?

A. Yes.

1193 Q. How about some of these other companies that you checked, how about Williams, do you know?

A. I don't know.

Q. They were competitors of yours, were they not?

A. Yes, but if I am not mistaken they handle the Penn control. But I am very sure that Quiet May's price, and, incidentally, York, York's was the same with Minneapolis, one year. I don't know what year it was. I judge '37 or '38. Their price with Minneapolis was the same as any

control. They did not differentiate. In later years they didn't handle your control as a prime control, and I don't know what they charged.

Q. As a matter of fact you don't know of your own knowledge.

A. I don't know the specific amount.

Q. Well if I told you that Williams automatic charged $7.50 more for a Minneapolis-Honeywell equipped oil burner than when equipped with Mercoid or Penn control, does that refresh your memory?

Mr. Haycraft: I am going to object to that, Mr. Examiner, as including within it a statement that was not in the record.

Mr. Freeman: Well, it is done to refresh his mind.

Trial Examiner Sheppard: I will let you testify
1194 about it.

The Witness: I wouldn't know on Williams Automatic. The reason I wouldn't know is because they had a tight dealer organization and it didn't sell oil burners to the trade in general. For instance back in 1922—

By Mr. Freeman:

Q. Do you know whether Malleable Iron had a differential between Minneapolis-Honeywell equipped burners and Mercoid equipped burners or somebody else's control?

A. Who is Malleable Iron?

Q. The Bramford burner.

A. No, I don't know anything about Bramford.

Q. How about Cleveland Steel Products Company?

A. I don't know anything about that.

Q. You know they were in business?

A. Yes.

Q. And you know they handled Mercoid controls at the time and Minneapolis-Honeywell controls at the time?

A. Well practically any oil burner manufacturer could offer any make of controls.

Q. As a matter of fact you were solicited by all the control manufacturers?

A. Yes, sir.

Q. And did you ever buy any oil burners from any oil burner manufacturers in order to get Mercoid con-
1195 trols with the idea in mind that you could buy a burner and get a set of controls with it?

A. I didn't have to because I was classified as a manufacturer and therefore it was logical that the Mercoid

would sell me controls for less money than anyone else they had classified as a dealer.

Q. Well you were out of the manufacture of oil burners in 1936?

A. Well, that was an expediency. That was a temporary expediency, that was all. We still kept our same contract, we still had a burner called the Penn Oil Burner. It was not a discontinued item. The expediency or the fact that our finances were not sufficient to make both boilers and oil burners, and the competitive situation in the oil burner manufacturing, was so tough and the mark-up of oil burners was so low that we took our money and used it to build boilers, because every $50 would save us $15 by building our own boiler, whereas $50 would only save us about $5 by building our own oil burners.

The same $50 put through the jaws of our business would produce $15 instead of $5.

Q. In other words, you put your money to work where it could make the most?

A. That's right.

Q. Now when you bought these oil burners from
1196 Quiet-Heet, did you let them know you were removing the Minneapolis controls, or at least separating the controls?

A. Yes, sir. Mr. Lapitus saw that transaction with his own eyes.

Q. Of course when you bought them it was your property.

A. That's right.

Q. You paid and then you could do with your property whatever you wanted to.

A. That's right, but there is a rule with the Underwriters Laboratory that prohibits the changing of controls by group, so it was a general understanding in the oil burner trade that you could not change a brand or make of controls provided they were in the proper group, but if your transfer was an approved type by the Underwriters Laboratories, it was perfectly legitimate.

Q. Well now, did you sell those oil burners under the name Quiet-Heet?

A. No.

Q. So you bought just so much iron and material made up, fabricated, and used such materials as you saw fit in connection with your Penn burners?

Is that correct?

A. That is correct.

Q. And so far as standing back of the product by way of service or performance that was your own? In
1197 other words it was your reputation and not Quiet-Heet?

A. That's right.

Q. Did you tell your customers they were getting Quiet-Heet?

A. Yes, some of them.

Q. Did you tell them you were taking off the Minneapolis control and substituting Mercoid controls?

A. Some of them, yes.

Q. Would you give me the names of some of those companies?

A. Well every one of my companies knew it.

Q. Well give us just a few.

A. Pennsylvania Steel Boiler Company, 409 or 4808 Lancaster Avenue, Philadelphia.

Q. Another one or two, that is all I want.

A. There is an outfit in Washington. I can not think of that company's name.

Q. Let me ask you—

A. Wait a minute. I can think of more. Southwark bought them through the Pennsylvania Steel Boiler Company.

Q. Well you don't know whether Southwark men actually knew that you had gotten them with Minneapolis controls and had taken them off?

A. I did.

Q. Did you tell them that?

A. I was there when they were told. I was in
1198 their presence.

Q. And what would have happened if the Penn Steel Boiler wanted to get a set of Minneapolis-Honeywell controls on the burner you sold, including the Quiet-Heet chassis or frame?

A. They would simply specify they wanted it and it would cost them $7 more.

Q. That $7 more, was that your differential between Mercoid equipped burners—what did you sell the burner for?

A. Complete?

Q. Yes, complete.

A. Well, they range, depending on what size house they went into. An oil burner hasn't a very wide range. You can buy an oil burner that will heat a five-room house or a fifteen-room house all for the same price, but you can not do that with a boiler.

Q. Well let us take the average eight room house.

A. How much it would sell for wholesale or retail?

Q. What you got for it.

A. The boiler unit?

Q. Yes.

A. Hot water or steam?

Q. Well let us just take the steam then for a while.

A. About $165—wait a minute. Yes, about $165 to $185.

Q. That was the spread?

A. Yes.

1199 Q. For about an eight room house?

A. Yes.

Q. Now what brought about that differential?

A. Whether it was a hot tank—little things that are added.

Q. Did you give any quantity discount? When a company bought ten units did you give them a better price than when they bought one?

A. Yes.

Q. And what was the spread between the purchase of one and the purchase of ten?

A. One and ten?

Q. Yes.

A. About 5 per cent.

Q. So then you gave—at about $165 you gave about $8.25—in other words it was $8.25 cheaper if they bought ten units at one time?

A. That's right.

Q. Did you give them any additional discount if they got up to a quantity of 50 or a hundred?

A. They had to be designated as a distributor or dealer, and they had to be one and not just call themselves one.

Q. Well on this one to ten, that was 5 per cent?

A. Well, that was very rare.

Q. How about the one to 25?

1200 A. I would say at one to 25 we gave about 5 per cent.

Q. Now about a hot water installation, what was the price of that for a comparable house of about eight rooms?

A. That would cost about $304, including a circulator which we built into the boiler.

Q. Which would have made that price anywhere from $195 to $215?

A. That's right.

Q. And if they bought in quantities you were able to knock off 5 per cent?

A. That's right.

Q. Or about $10 per boiler burner, roughly speaking?

A. Yes.

Q. You found Mercoid controls satisfactory, did you not?

A. Generally, yes.

Q. And I understood you to say that you did purchase Mercoid controls at about $13 per set when you were paying about $18 or so for Minneapolis-Honeywell controls?

A. That's right. At that particular time.

Q. Yes. And you had a contract with Mercoid year in and year out just as you have with Minneapolis-Honeywell?

A. That's right.

Q. Did you have any contracts with Perfex?

A. Yes, we did.

Q. Did you have any contracts with Penn Electric
1201 Switch Company?

A. Yes.

Q. As a matter of fact you contracted for controls with all of the control companies, so that if you needed one company's controls you would buy that company's controls?

A. Well that was supposed to be our protection. The various manufacturers claimed that that was our protection against a set price for the season.

Q. In other words there were four control companies generally calling on you and you had four contracts?

A. When we dealt with them. One year perhaps we would not deal with Penn. The next year we would not deal perhaps with Perfex. We didn't have four contracts every year.

Q. But you dealt with those companies just occasionally?

A. Sporadically with two of them and regularly with two of them.

Q. Now did Mercoid specify the number of units that you might use in a season?

A. I don't think so. I am not sure.

Q. By the way, did you bring any of your Mercoids—did you bring it with you?

A. No. I don't like to answer that question because I want to be honest about it and I don't recall. I can telephone and find out. (Witness pauses.) Yes. They did.

Q. They specified the amounts?

1202 A. Yes.

Q. By the way, you are here in response to a subpoena duces tecum by the Commission.

A. That's right.

Q. They asked that you should produce books and records and so forth.

A. That's right.

Q. They asked you to produce books and records in connection with the Mercoid Corporation?

A. Yes.

Q. You didn't bring any of those records here today?

A. No, I didn't bring anything.

Q. You gave Mr. Haycraft these agreements when he was there a week or so ago?

A. I gave him the whole files.

Q. And he selected these. You had other Minneapolis-Honeywell contracts for other years?

A. Well I just told the bookkeeper to go out in the file for that time. It was a big file. And to pull out the Minneapolis file for '39 and '40.

Q. Do you recall those Mercoid agreements, what they specified up here for quantities?

A. Yes, I do. The brackets were something like—the first break in the price was at about 25 sets.

Q. That is Mercoid now?

1203 A. Yes.

Q. The first break was at 25 sets?

A. Yes.

Q. What about the second break?

A. That went up to perhaps 250, was the next break. The jump from 25 to 250 was very rapid. In fact the important jump was at 25.

Q. That was in sets?

A. Yes.

Q. Where did you fit into the Mercoid scheme?

A. It was about the same as it was with motor manufacturers and steel manufacturers and everybody else. When we could prove that we were a manufacturer we got a manufacturer's discount.

Q. And you also got a bracket discount?

A. Yes. Very little.

Q. In accordance with quantity?

A. That's right. For instance it might have been—the discount was 25 and 25 per cent with Mercoid—

Q. Anything under 25?

A. On anything under 25, and anything over that, providing we were in a category as a manufacturer, the discount would perhaps have run maybe 60, 55 or 60.

Q. As a matter of fact you had a contract with Mercoid that gave you good prices?

1204 A. That's right, but we knew what the discounts were.

Q. But you were still quoted net prices?

A. That's right.

Q. And you don't know whether the contracts they had with you included the form 11 or form 22 or form 33 or the form 55?

A. No, I don't.

Q. I take it that on the memo we find on Commission's Exhibit 200 for the K-M which is a Mercoid notation of one of its primary controls, it refreshes your memory as to the price you paid for Mercoid primaries at that time?

A. (Examining paper.) That's right.

Q. And what would you pay for a Minneapolis-Honeywell primary at the same time, looking at Commission's Exhibit 200?

A. What is 200?

Q. This is 200. (Indicating.)

A. I see. Well if I agreed, subject to a penalty, to taking that 50, I would have paid 11.10 plus 50 cents, or $11.60.

Q. Well the 50 cents was some royalties that was independent of any Minneapolis-Honeywell charge for the product?

A. Well, Minneapolis took it from me, that was all I was interested in. I don't know what they did with it. After they had it I didn't care.

Q. Well, taking it your way you would have paid

1205 $11.60 to Minneapolis-Honeywell, including the 50 cents Zoro royalty.

A. If I guaranteed to take that 50.

Q. Well you thought you were going to take that 50 when you signed that contract.

A. I did, but the Minneapolis-Honeywell would not accept that. That is what I had to pay until then.

Q. That is, you got a jobber's discount as long as you were in the jobber's classification and in the jobber's field. Is that right?

A. As long as they wanted to call me that, but I wasn't a jobber, I was a manufacturer.

Q. And you could have purchased controls all during this period regardless of what Minneapolis-Honeywell thought you were, for Mercoid, for $3 less; that is, a single control or stack switch, you could have brought that for $3 less.

A. That is approximately right.

Q. And I take it the set price of $14.35, which is the pencil notation on Commission's Exhibit 200, has to do with a set of Mercoid controls, which would include one primary, one limit, and one thermostat. Is that correct?

A. That is correct, but immediately after that date we had a drop in price with Mercoid.

Q. But as a matter of fact you could have bought from Mercoid for even less than $14.35 for a set of controls.

A. Yes. I think it was $13.85. I think it got down 1206 to $13.85—that is, 85 cents was thrown off.

Q. That is Mercoid threw off 85 cents?

A. That's right. That would make it $13.50.

Q. For a complete set of controls?

A. That's right.

Q. Now for a like set of controls purchased from Minneapolis-Honeywell at the same time that you purchased controls from Mercoid for $13.50, what did you pay Minneapolis-Honeywell?

A. $19.05.

Trial Examiner Sheppard: We will take a short recess.

(There followed a short recess.)

Trial Examiner Sheppard: On the record.

Proceed, Mr. Freeman.

By Mr. Freeman:

Q. Now on these burners that you bought from Quiet-Heet and removed or segregated the Minneapolis controls from, you then sold those with Mercoid controls?

A. If they were requested that way, if they were ordered that way.

Q. Well if they were not ordered that way, would you send them out with Minneapolis-Honeywell controls?

A. Well, those are always specified.

Q. What happened when the type of control was
1207 not specified, whose control did you send out?

Mr. Haycraft: I object to that. He said they were always specified.

Trial Sheppard: Have you any case where you would send out—

The Witness: Well we knew the inherent desires of our dealers. Sometimes we got a telegram to ship so many burners right away. We would know in the haste of a telegram he would not specify, and we would look back and see what he got regularly. You know a customer's requirements. That is business.

By Mr. Freeman:

Q. How about the first burner that a customer bought from you?

A. We would recommend Mercoid.

Q. You would recommend Mercoid?

A. That's right. Because this kept us in the rate competitively.

Q. Well Mercoid treated you as a manufacturer. Correct?

A. That's right.

Q Minneapolis-Honeywell treated you as a jobber, a dealer?

A. They never denied—that wasn't their excuse for raising the price on us. They just told us we were not in their bracket.

Q. You were informed by the Minneapolis-Honey-
1208 well representative that if you obtained their bracket structure you would get the bracket price you were entitled to get?

A. That's right. It would be even more than that, it would be retroactive. But I didn't want to give them my money to keep, I needed it myself.

Q. When you say you needed the money yourself, were you in any financial difficulties in the operation of your business, creditwise?

A. No. Other than a company that first starts in business without any capital doesn't have a world of credit.

Q. And you were one of those companies?

A. That's right.

Q. And as a matter of fact you have made pretty good progress from back there when you started, 1926, up to date, haven't you, business-wise?

A. Well we went into the thing as a distributor in '22 and then in '31 our bank failed and never did get back. It

wasn't one of those bank holidays, it was even worse; and we were completely liquidated financially; and then we started this business with $11.

Q. And you have continued to grow in spite of the small amount of capital you started with and in spite of the competition you had in the field?

A. That's right.

Trial Examiner Sheppard: You are in business, yet?

1209 The Witness: Yes.

By Mr. Freeman:

Q. And you have had a very nice growth, starting from '22 up to date?

A. Well, fairly. Of course right now our sales aren't very large.

Q. But you had a nice business pre-Pearl Harbor?

A. That's right.

Q. Would you give us your business in round figures?

A. About $300,000 a year.

Q. So that with practically nothing to start with you were able to build yourself up a nice figure of about $300,000 a year. Is that right?

A. That's right.

Q. And I take it you made a fair profit on that business?

A. Yes. Generally.

Mr. Freeman: That's all.

Trial Examiner Sheppard: Anything else?

Redirect Examination by Mr. Haycraft.

Q. I just want to ask the witness if the two contracts are identified as the contracts?

A. There is nothing to identify.

Q. What does it say at the top (indicating)?

A. Manufacturers control contract.

1210 Mr. Haycraft: That's all.

Mr. Freeman: That's all.

(Witness excused.)

Trial Examiner Sheppard: Mr. Haycraft, have you any more testimony?

Mr. Haycraft: Well I have one witness this afternoon at two o'clock.

Trial Examiner Sheppard: All right then, we will take an adjournment to reconvene in this room at two o'clock.

(Whereupon, at 12:50 o'clock p. m., a recess was taken until 2 o'clock p. m. this day.)

1211 Afternoon Session.

2:00 p. m.

Trial Examiner Sheppard: Come to order, gentlemen.

Mr. Reporter, this is Mr. M. H. Shapiro, Southwark Plumbing and Heating Supply Company.

M. H. SHAPIRO was thereupon called as a witness for the Commission, and, being first duly sworn, testified as follows:

Direct Examination by Mr. Haycraft.

Q. What is your occupation, Mr. Shapiro?

A. Vice President and Treasurer of the Southwark Plumbing Supply Company.

Q. Where does that company do business?

A. In Philadelphia and surrounding territory.

Q. What is its business?

A. Supplying plumbing and heating supplies to the various contractors.

Q. Among other things do you handle oil burners?

A. We have.

Q. For how many years have you handled oil burners?

A. Ever since we have been in business, ten years.

Q. And during that time what make or makes of 1212 oil burners have you handled?

A. We handled almost any make that is sold in this area, but principally Quiet-Heet, I would say, Herco and High Point.

Q. Where is the Quiet-Heet from?

A. Newark, New Jersey.

Q. Herco?

A. Lancaster, Pennsylvania.

Q. What was the third one?

A. The High Point. That was in Ohio, Bellaire, Ohio.

Q. Are they the pressure type or gun type burners?

A. Gun pressure type burners.

Q. Do you handle any rotary type burners?

A. We do on a brokerage basis but not as a stock item.

Q. You stock others though?

A. We stock in others.

Q. Were these burners equipped with automatic temperature controls?

A. In most cases they were bought that way.

Q. What make of temperature controls did you handle on the burners?

A. Well, we handled principally Minneapolis, some Mercoid, some Penn.

Of course today we handle anything we can get.

Q. Approximately what would you say was the
1213 volume of oil burners done in this area by your firm, either in units or dollars, beginning, say, around 1937?

A. I would say right before the war we sold an average of several hundred burners a year.

Q. That would be 1940, '41?

A. Yes, '40 and '41.

Q. How about 1937, 1938?

A. '37, it wasn't quite that large. I would say about 75 to a hundred.

Q. Now are you prepared to testify to the price that you paid for oil burners equipped with controls, Minneapolis controls or Mercoid?

A. Based on these invoices—

Q. Refreshing your memory from those invoices, will you testify what you paid for burners equipped with Minneapolis-Honeywell or Mercoid controls in '37, '38 and '39, along in there?

A. Yes, '37 invoices I don't have because of the shortness of the time.

Q. Well take '38.

A. Take '38 for example, one period, it would be $62.50.

Q. From whom?

A. From Herco Oil Burner Corporation of Lancaster.

Q. And equipped with what type of control?

A. Minneapolis controls. Here is the same type
1214 of a burner with a mixture there of some Mercoid, and these are even higher, but of course there may be an extra control in that (indicating).

Mr. Gilpatric: Why don't you give the price of that?

The Witness: $65.

By Mr. Haycraft:

Q. What does the $65 include?

A. Well, if you are familiar with these numbers there (indicating)—

Mr. Gilpatric: What quantities are you testifying to being purchased?

The Witness: At that particular time it may be three, five, at a time.

By Mr. Haycraft:

Q. The first time you testified to one burner, did you not?

Mr. Haycraft: I think, Mr. Examiner, I would like to—I asked that the witness indicate. He said Minneapolis-Honeywell, but I asked the witness to give the description of the controls that came with it, because I recognize by looking at the invoice it is not a Minneapolis-Honeywell control. We are going to have to correct the testimony to that extent.

By Mr. Haycraft:

1215 Q. Will you refer back to the invoice and then give us the date and the control?

A. $62.50.

Q. What is the date?

A. January 11, 1938. J-5 burner—(indicating).

Q. I recognize that as Mercoid.

A. Mercoid?

Mr. Freeman: We will agree to it.

The Witness: On the same date there is an order for two—on the same invoice rather—I guess that would not be Minneapolis either. DA-37.

Trial Examiner Sheppard: Now wait a minute, Mr. Shapiro. I think I had better get you to go through there and get something definite first so we can put it in a short space instead of so much talking.

Show a recess of ten minutes there to let Mr. Shapiro go through his invoices there and get something definite, so we won't have to put so much stuff on the record.

(There followed a short recess.)

Trial Examiner Sheppard: On the record.

The Witness: What was the question?

By Mr. Haycraft:

Q. The question was what price did you pay for burners equipped with controls purchased from Herco or

1216 Quiet-Heet, beginning in 1938?

A. I have an invoice here in January, 1938, where we purchased one burner with three Mercoid controls for

$62.50; and on the same invoice two burners with four Mercoid controls for $66.75.

We have an invoice of January 11, 1938, apparently the same date only a different shipment, three burners with Mercoid controls, four controls, at $65 each.

You are only concerned with burners with controls?

Q. That's right. Or controls separately.

A. Yes. I have an invoice here January 13, 1938, where Minneapolis controls were purchased from Herco.

Q. What controls were they?

A. Three L-165, three T-45, three R-117, three relays, and two R-19.

Q. Give the price.

A. At that time we had the list prices here net a discount. Do you want the prices?

Q. The prices listed on the invoice.

A. On the 165 $11, T-45, $9, R-117, $32.50, and the R-19-9, less a discount of 50 plus 5 per cent as a handling charge.

On February 8, 1938 we purchased from the Herco Oil Burner Company four J-5 burners at $45.50 less controls.

1217 Trial Examiner Sheppard: You mean there were no controls?

The Witness: No controls at all on these burners.

On March 26, 1938, we purchased from the Herco Company four J-5 burners at $62.50. They were equipped with a mixture of Mercoid and Minneapolis.

By Mr. Haycraft:

Q. Will you list them?

A. My error, my error, my error. They were equipped with Mercoid controls, but on the same invoice were purchased additional controls. And they were Minneapolis.

Q. What additional controls did you purchase, and at what price?

A. There were three T-44 listed at $11.50, three R-117 relays at $32.50, and three L-165-A at $9.50, less 50 per cent, plus 5 per cent.

On April 12, 1938, we purchased two P-15 boilers from the Herco Company at $62.50 with Mercoid controls.

You say you wanted invoices with controls separately?

Q. Yes.

A. On May 13, 1938, we purchased from the Herco Company—do you want the list price of all of these?

Q. Yes.

1218 A. Two 855 high voltage thermostats Mercoid, and two DA-36 Mercoid emergency controls. The 855 was 6.38; and DA-36 was 7.01.

On the same invoice there were three P-45 Minneapolis 5.31 net and four R-117 relays at 17.81 net, and three L-165-A Aquastats at 5.75 each net.

Now, on May 25, 1938, we purchased from the Herco Company four burners at $62.50 each with Mercoid controls.

On the same invoice there were three L-165-A, 4.99 Minneapolis control. Three R-19 at 4.73; and three 409 at 4.20 each.

Now we complained to the Herco Company of the prices charged on this May 13th invoice were too high in accordance with the price we had purchased from the Minneapolis direct, and they sent through a credit memorandum to adjust the differential.

Now the credits are dated May 21, 1938. for $7.03 and May 21, which is the same date, to adjust M-H—that is Minneapolis-Honeywell—prices on 4-26-38 invoice.

On April 26, 1938, we purchased six J-5 burners less all controls at $45.08, and some Minneapolis and Mercoid controls for these burners individually at the following prices:

Six R-19 at 5.38; three R-117 at 17.81; six

1219 B-6510 at 5.75; two L-409 at 4.44; two VA-36 Mercoid at 7.01; and two 115-W Mercoid at 5.10.

On June 27, 1938, we purchased from the Herco Company four J-5 burners at $62.50 each, equipped with Mercoid controls.

Q. Will you glance through the rest of the year and see if there is any change in the price?

A. You mean in the unit price?

Q. Yes.

A. Of the burner. Well, there is—on July 21, 1939—of course that is a year later—

Q. Go ahead.

A. We purchased from the Herco Corporation three J-5 burners equipped with Minneapolis controls, purchased by paying $60.

Q. See if you can find any sales in 1939 of J-5 burners equipped with Mercoid?

A. (Examining papers.) That is all there is.

Q. You don't have any purchases of J-5 burners with Mercoid control?

A. No. We didn't handle the Mercoid control after that.

Q. I see. Now will you refer to your Quiet-Heet invoices and see if you can testify the same way?

A. Well there we have no invoices here of any purchases made for additional automatic equipment.

1220 Q. I want your testimony as to the prices you paid for the Quiet-Heet burner equipped with Minneapolis-Honeywell control?

A. From July 1, 1938 to September 15, 1938, we were purchasing Quiet-Heet burners equipped with the three Minneapolis controls for $50 a unit, and on September 8, 1938—the same unit equipped with the same controls dropped down to $46.50.

Now whether that is a price that reflects the controls on the burners I wouldn't know.

Q. Do you have the numbers or designation of the controls with which they were equipped?

A. They have their own numbers on there.

Q. Will you read those numbers?

A. What they mean, I don't know. They didn't itemize the controls but what we have been receiving is the three conventional controls, the room thermostat, the relay, and the Aquastat. I don't see anywhere along here where they itemize—

Q. See if there is any other change in price?

A. (Examining papers.) The only change in price I see here is the difference between a two stage pump and a single stage pump, that's about all.

Q. If you bought a two stage pump, you paid a little more for it?

A. Yes. The price naturally was a little higher.

1221 I can't see any change—in other words here is an example—here is one here for 49.50, but you notice there it has a long extension on the blast tube.

Q. Don't these invoices indicate the type of control?

A. No, it doesn't indicate the type of control. I don't see any of them here.

Trial Examiner Sheppard: How do you know they are Honeywell controls then?

The Witness: Well, we—at the time we placed the order—here is one here (indicating). Here is an example here. We gave them an order for ten burners and we specified Protectorelay 344 and L-165, and that would indicate Honeywell. Here they are (indicating).

By Mr. Haycraft:

Q. Will you indicate now which ones they were?

A. On December 9, 1938, we received from the Quiet-Heet Manufacturing Company six burners at $48—or rather five at $48, and one at $48, and one at $48.75. The additional was for a two stage pump, with six R-117 controls, six T-11 and four L-409.

There was one L-419 and one L-170 in a shipment.

Q. And that would you say was typical?

A. Yes, that would be about typical. Well, in that case, from what you pointed out to me, what I notice here, what I failed to see, they were all shipped, in fact they had
1222 their billheads printed with the Minneapolis code number, and I can testify that all controls received from Quiet-Heet with the burners were Minneapolis controls.

Mr. Haycraft: That's all. Cross-examine.

Cross-Examination by Mr. Gilpatric.

Q. Mr. Shapiro, I take it that your company is a wholesaler?

A. That's right.

Q. You buy from manufacturers and sell to dealers?

A. That's right.

Q. During this period covered in your testimony, '38 down through '39, did you find that the price of oil burners was going down?

A. Yes. They were getting more competitive.

Q. You mean the higher priced fellows were coming down?

A. Coming down, yes—well, I would say the higher priced fellows were trying to compete with the smaller fellows, and naturally their price would come down a little bit.

Q. You mean the smaller fellows had lower prices?

A. Take a firm like the Quiet-Heet Manufacturing Company, I would say they were pretty low, and other firms had a pretty tough time competing with this type of merchandise.

Q. Did you buy these burners pretty much on a price basis?

A. From Quiet-Heet we did.

1223 Q. How about Herco?

A. Herco was in a little different class. They were a little bit dearer and a better advertised product and it was in better hands.

Q. You were willing to pay a little more for that type then in other words that were advertised?

A. Well, naturally like all jobbers we like to handle the best, and sometimes circumstances beyond our control make it necessary for us to handle all types of equipment in order to meet competition. We liked the Herco line and it was a very good line but the price of their burners—

You see, we sold it as a package, we did not do any installation, and with mechanics, you are familiar with this line, price makes quite a difference, and we used the Herco line for the better jobs and the Quiet Heet for the more competitive.

Q. This morning we had a witness from the Penn Boiler. Which class would you fit them into?

A. Well, about in between. You see the burner market in this area is to the point where it became very very highly competitive and one company was perhaps manufacturing for two, three or four different companies. They gave them a little different coat of paint, and you didn't know what you were buying.

Q. What about Penn?

1224 A. To me it looked like a Herco burner. And sometimes people come in and insist on a certain product. Well, it is our business to get it for them. Now we may have bought ten burners from Penn, for that matter we sold 50 to 75 ABC's that we never touched, strictly on a brokerage basis.

We handled Harvey-Whipple and Bettendorf. I would say we have handled ten or fifteen different makes.

Q. Is that Bettendorf of Bettendorf, Iowa?

A. That's right.

Q. And this competition was the result of lowering the prices all the way down the line?

A. That's right.

Q. Could you give us the names of some of the other companies whose burners you handled?

A. Mastercraft.

Q. Where is it made?

A. Somewhere in New York.

Q. Is it a Harvey-Whipple product?

A. Yes. We have handled those. We also handle the Aldridge.

Q. That is from Wyoming, Illinois?
A. Somewhere out there, yes.
Q. How did Aldrich's price compare?
A. They were also competitive too.
Q. With which type now, the Herco?
1225 A. Well, he manufactured three or four different types of burners, and he had one that was very competitive, and a few that were a little better.
Q. So you were handling burners at various prices?
A. Admittedly. Depending upon what the demand was. We at one time handled the Herco, as I say, and then the demand for Herco slackened down a bit and we naturally didn't handle Herco any more.
Q. Was there any relationship between the type of control, make of control, furnished, and the prices of the burners, that you found?
A. Will you clarify that?
Q. I mean did every example of higher priced burners carry always Minneapolis-Honeywell controls?
A. Most of the burners carried Minneapolis.
Q. You have testified to some, for example, the Herco.
A. Well, we have bought some with Mercoid. But I don't have any evidence here, that is from these records here, to tell you what the difference in price would be between the Minneapolis control with the Herco burner and the Mercoid.
Q. You said that Aldrich was a competitive price burner. Did you say competitive with Quiet-Heet, in that class?
A. I would say on the same basis. They had a competitive burner. They had some at a higher price that
1226 were pretty good burners, but they did make one that was competitive with Quiet-Heet.
Q. In other words, the better burners sold for more money?
A. Well, you can't prove it by me. The mechanic on the job is the judge of that, and when those manufacturers would come in and tell us they had a better product we would try to get more money for it, but if we couldn't we would go back to the more competitive field.
Q. You just bought one you could sell.
A. We are jobbers, we carry everything in any line that is within our bounds, and we may handle 15, even 20, different makes of burner, may have bought one of this, ten of that, and fifteen of that.

Sometimes they would come in and say, like "Well, I want such and such a burner." We would get them that burner, perhaps only buy one of that particular type from those people.

Q. You have bought burners with Minneapolis-Honeywell controls?

A. Yes.

Q. And from other manufacturers?

A. Yes, we have. From Herco.

Q. Fairfax?

A. A little bit.

Q. Did you ever enter into contracts with these
1227 control manufacturers?

A. No, we have not.

Q. That credit memorandum which you referred to as being given to you on May 21, 1938, was to adjust the Herco price of Minneapolis-Honeywell controls and the price you should have gotten then from them?

A. Yes. In other words our price, like most any other business, we buy from the man who represents a certain commodity, and if he is a nice fellow and has a pretty good product, well, we like to see him get the business.

So their representative would come in to us and he would say "Look, you are getting five burners down here. How about sending you a few controls?"

Well, if the price is the same we like to see him get the credit, and he would send it along, and then the price came through and it wasn't the same as Minneapolis, we called their attention to it and they credited it.

Q. And so you got in effect what was a regular jobber's price?

A. That's right.

Mr. Haycraft: That's all.

1228 Mr. Haycraft: I have another witness.

Trial Examiner Sheppard: Mr. Reporter, this gentleman is Mr. H. S. Johnson, 215 Hemingway Avenue, East Haven, Connecticut.

Where did you get this subpoena, Mr. Johnson?

Mr. Johnson: It was received by my wife in East Haven and I was notified in Pittsburgh.

Trial Examiner Sheppard: And the subpoena was forwarded to you from East Haven, Connecticut, to Pittsburgh?

Mr. Johnson: No, I came back to York on Saturday

and met my wife there, but the subpoena was in East Haven.

Mr. Haycraft: Then you went back to East Haven?

Mr. Johnson: Yes.

Trial Examiner Sheppard: You came from East Haven down here then to testify?

Mr. Johnson: That's right.

Trial Examiner Sheppard: And how far is East Haven from here?

Mr. Johnson: It is about 84 miles from New York, and whatever the mileage is from New York to Philadelphia.

Mr. Freeman: 90 miles.

Trial Examiner Sheppard: 174 miles. All right, Mr. Johnson.

1229 H. S. JOHNSON, was thereupon called as a witness for the Commission and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Haycraft.

Q. What is your occupation, Mr. Johnson?

A. No occupation.

Q. Did you ever work for the Goodrich Oil Burner Manufacturing Company in New Haven, Connecticut?

A. Yes.

Q. When?

A. 1929 to 1940.

Q. In what capacity were you employed?

A. When I left I was the manager of the company.

Mr. Freeman: What was that last answer?

Mr. Haycraft: "When I left I was the manager of the company".

By Mr. Haycraft:

Q. In what business were they engaged?

A. In the wholesale and retail distribution of Petroleum products, and the manufacture, wholesale and retail sale of oil burners.

Q. What were your duties while you were with them?

A. Purchasing, supervising the activities of the oil burner branch.

1230 Q. What brand or brands of temperature controls did you buy and use on your oil burners?

A. Minneapolis-Honeywell and Mercoid.

Q. When did you first begin to use Minneapolis-Honeywell?

A. I don't know.

Q. How long did you use them?

A. I would say until 1931, 1932, at which time we started using both Mercoid and Minneapolis-Honeywell.

Q. How long did you continue to use both?

A. Until I left the company in 1940.

Q. And over how big a trade area did you sell oil burners wholesale and retail?

A. Over a period of years New England states, northern New York state, Long Island. We came down as far as Baltimore in later years.

Q. Did you have a contract with either the Minneapolis-Honeywell or Mercoid for the purchase of temperature controls?

A. Had a contract with both companies.

Q. Each year?

A. Yes, sir.

Q. Do you recall what bracket you were in with the Minneapolis-Honeywell?

A. The last year I was with the company we were in the one hundred set bracket.

1231 Q. Before that what were you in?

A. I can't tell you. I don't remember.

Q. 100 per cent bracket. Would that be—

Mr. Freeman: Set. You mean sets. Not per cent.

By Mr. Haycraft:

Q. 100 set. Was that their highest?

A. I believe that was their lowest.

Q. Lowest bracket, bracket one?

A. Yes.

Q. Have you any recollection of the price you paid for the controls that you bought?

A. Not accurately. I would say they were in the neighborhood of $18 a set.

Q. How did that price compare with what you were paying Mercoid?

A. There was quite a difference.

Q. Approximately how much difference?

A. We were paying Mercoid if I remember correctly 14.65 a set.

Mr. Gilpatric: Was this 1940?

The Witness: 1939 and '40, yes.

By Mr. Haycraft:

Q. Well, did you make any difference in the price of the burner equipped with Minneapolis-Honeywell as compared with Mercoid?

1232 A. We made an additional charge for a burner equipped with Minneapolis-Honeywell controls.

Q. How much difference?

A. There was a $2.50 charge plus an additional charge for any other controls that were involved.

Q. What do you mean? Extra controls?

A. That's right. Limit controls or extra thermostats.

Q. What would be the circumstances that that would happen? How would that happen, what extra controls were sold?

A. It would depend on an additional relay control, perhaps an aquastat, or something of that nature.

Q. Who were your principal competitors during the years 1930 to 1940?

A. Well, from a wholesale point of view I don't believe we were competitive.

Q. You don't believe you were competitive?

A. We operated mainly throughout lower Connecticut on a retail basis. We had one account in Baltimore that were taking burners, something like 25 at a shot, or something of that nature, and we had a few small dealers scattered throughout New England, but the majority of the burners that we manufactured were consumed in a retail operation of our own, saving three or four bulk plants throughout the state.

Q. Were you familiar with the Quiet-Heet Oil Burners of Newark, New Jersey, during the time you were with Goodrich?

1233 A. Yes, sir.

Q. When did you first learn of that company?

A. About the time they first started wholesaling burners, I would say.

Q. About what year?

A. About '36, I would say.

Q. And are you familiar with their operations subsequent to that?

A. That's right.

Q. Did you have any personal contact with any of their representatives?

A. The only contact I had with the Quiet-Heet Manu-

facturing Company, one day I was approached by a man representing himself as a representative of Quiet Heat, and he tried to interest our company in a low priced burner.

Q. What do you mean by low priced burner?

A. Well, a burner that he said that we could sell to the retail trade cheaper than we could sell our own burner.

Q. Do you recall the price that he quoted on that occasion?

A. No, I don't.

Q. What price were you getting for your burners, equipped with controls?

A. You mean from a retail point of view?

Q. Retail and wholesale.

A. Towards the end they were flying around so
1234 fast that I hesitate to answer, but the last price that we had from a retail point of view was $175 installed. Wholesale prices were running around—I had one account that we sold at 52.50.

Q. Was that equipped with controls?

A. That's right.

Q. Do you remember whether or not the price that you got from Quiet-Heet was equipped with controls?

A. There was no quotation made from Quiet-Heet because we told them that we were not interested.

Q. Did he tell you what controls were on the burners that he attempted to sell you?

A. Yes. The burner was offered under the Minneapolis-Honeywell trade name. By that I mean this, there was more emphasis placed on the type of controls that the burner was furnished with than there was on the burner itself.

Trial Examiner Sheppard: Read the last answer of the witness please.

(Answer read.)

Trial Examiner Sheppard: All right.

By Mr. Haycraft.

Q. Do you recall when it was that this offer was made to you?

A. I would say it was about 1938. I cannot be any more specific than that.

1235 Mr. Haycraft: That's all. You may cross-examine.

Trial Examiner Sheppard: Any cross?

Mr. Freeman: Yes.

Cross-Examination by Mr. Freeman.

Q. You were predominantly engaged in the retail business?

A. I would say about 85 per cent of our activity was retail.

Q. And in this retail business of yours who were your competitors?

A. Well, you mean company names?

Q. Yes.

A. There was Power Equipment—

Q. Where were they located?

A. New Haven.

Q. And what burner were they selling?

A. Chrysler.

Q. How did their price compare with your price of $175?

A. Their price was higher.

Q. Their price was higher?

A. That's right.

Q. And do you know whose controls they had on their burner?

A. I can't say.

Q. Do you know whether they were Minneapolis-1236 Honeywell controls?

A. I would rather not say because I don't know.

Q. All right. Now, who else were you in competition with?

A. Connecticut Heat and Fuel Company handling Petrol burners.

Q. Is that Petroleum Heat and Power?

A. That's right.

Q. How did their price compare with your price?

A. Their price was slightly higher.

Q. Do you know whose controls they handled?

A. I believe they would furnish the burner equipped with Minneapolis-Honeywell or Mercoid.

Q. Do you know if they had any difference in price between the Minneapolis-Honeywell and the Mercoid equipped?

A. No.

Q. But you do know that their price was a little higher than your $175 price?

A. That's right.

Q. And who else were you in competition with?
A. I can't remember what what fellow called himself but he handled the Silent Glow Oil burner.
Q. And is that the Silent Glow Company up at Hartford?
A. That's right.
Q. And do you know how that price compared with your price?
1237 A. By the way, that name was Martin Heating and Engineering Company.
Q. That is, the dealer handling Silent Glow.
A. That's right.
Q. Where were they located?
A. They are out of business now.
Q. I mean when you were in competition with them.
A. They were located in New Haven.
Q. How did their price compare with your price?
A. It ran about the same.
Q. And whose controls did they have, if you know?
A. I am afraid I don't.
Q. Do you have any Sears, Roebuck stores around your territory?
A. Yes.
Q. And did you have any oil burner competition from Sears, Roebuck?
A. It wasn't too great.
Q. But they offered for sale oil burners?
A. That's right.
Q. And they also offered them for sale complete, that is, installed?
A. Yes.
Q. And do you know how that installed price compared with your installed price?
1238 A. It ran about the same.
Q. And do you know whose controls they used?
A. I think they were using Mercoid.
Q. Now, are there any other companies up there that you were out competing with?
A. There are a lot of small companies. Every plumber in town was handling an oil burner, and there was a number of different Quiet Heat dealers up there, either handling them under their own name or under the name of Quiet Heat.
Q. And these plumbers and others that were installing

oil burners at a variety of prices, there wasn't any fixed price?

A. There was no bottom.

Q. And they went up how high?

A. Well, they were always very careful to be under any quotation that any legitimate oil burner dealer would make.

I would say under no circumstances were their prices higher than $160.

We are speaking of base prices now.

Q. Now, how about these oil burner companies that sold at higher prices, how high up did they go?

A. There was one company that was selling as high as $275, the Ray Products.

Q. Ray Products?

A. Yes.

1239 Q. Whose products was that?

A. Ray Company.

Q. Is that the Ray oil burner?

A. Yes.

Q. And they went down as low as $160?

A. No, they didn't—this particular company?

Q. No, general competition.

A. They went down to about $125.

Q. So so far as retail price or price paid by the consumer or purchasing public in your own territory, the oil burner prices ranged from about $125 installed up to about $275?

A. That's right.

Q. And would you say that was for comparable heating, that is, for a five or six room house?

A. Yes.

Q. Did you ever run into any competition from an Aldrich made burner?

A. I know of the burner. There was no competition up there at the time.

Q. Would you say that there were fifteen or twenty dealers in oil burners in your own locality?

A. I would say so, yes.

Q. And around almost any range of price you were looking for?

A. Yes.

1240 Q. Now, in this wholesale business of yours at 32.50, that included controls?

A. That's right.

Q. And those were M-H controls?

A. Those were Mercoid controls.

Q. Did you have a different installed price when you were selling at retail for Minneapolis-Honeywell controls than when you used Mercoid controls?

A. Yes. We had an additional charge for Minneapolis-Honeywell controls.

Q. Well, on the retail price about how much additional did you get for Minneapolis-Honeywell controls?

A. If my memory is correct I think it was $15.

Q. In other words you were paying $18 per set for Minneapolis-Honeywell controls and about 14.65, or a difference of 3.35, between your Minneapolis cost and your Mercoid cost?

A. That's right.

Q. And then when it came to retail selling you added about $15 on?

A. Yes.

Trial Examiner Sheppard: Is that for installation?

Mr. Freeman: No, that is whenever the purchaser or consumer or purchasing public wanted a set of controls of Minneapolis-Honeywell make, the company included 1241 an additional $15.

Trial Examiner Sheppard: I see.

By Mr. Freeman:

Q. Now, I made a statement to the Examiner in answer to his question. That is a correct statement, is it not?

A. Yes.

Q. Now, as far as the physical work of installing, there would not be any additional expense?

A. No difference at all.

Q. So wherever you sold an oil burner with Mercoid controls at $175, so far as your cost of physically installing that burner you could have just as well have used Minneapolis-Honeywell controls?

A. That's right.

Q. And you were able to get in some cases the additional $15 for Minneapolis-Honeywell controls?

A. We got it in all cases.

Q. You got it in all cases?

A. That's right. If people wanted Minneapolis-Honeywell controls our additional charge of $15 was perfectly justified.

Mr. Haycraft: May I ask a question?

Mr. Freeman: Yes.

Mr. Haycraft: You don't mean by that answer that all of your controls were Minneapolis-Honeywell controls?

1242 The Witness: No.

By Mr. Freeman:

Q. Now, did you ever sell at wholesale with Minneapolis-Honeywell controls on?

A. Yes, sir.

Q. By the way, did you ever run into the Braden Engineering Company?

A. Yes. We were Braden dealers.

Q. Oh, you were handling the Braden burner?

A. That's right.

Q. In addition to making your own burner?

A. No, that was previous to making our own burner. Braden had a dealer set-up whereby he would sell you a dozen burners or twenty-four burners dissambled, then the dealer assembled them and sold them under his own trade name.

Q. Then when you began making your own burner you did that because you thought you could make them cheaper than from what you could buy them from Braden?

A. That's right.

Q. Then you were in competition thereafter with other dealers in your community with the Braden burner?

A. That's right.

Q. Now, how did Braden's price compare with your price?

A. They didn't have a dealer after we started making our own burner. We had a factory in Providence and

1243 Braden's factory was in Providence and our burner was in competition with about every burner that was ever manufactured in the country, I guess.

Q. Now, how about Providence where you had to meet Braden's competition? I would like to have you tell us how Braden compared price-wise with your price.

A. They were about the same.

Q. So your going into the oil burner manufacturing business was because you thought you could make them cheaper than you could buy them from somebody else?

A. It wasn't a manufacturing proposition. It was an

assembling proposition. We didn't make anything, we just bought a lot of parts and put them together.

Q. You bought standard parts like Mercoid controls or Minneapolis-Honeywell controls?

A. That's right. And we had our castings made for us in a foundry in Connecticut, and when we got everything, we put it together.

Q. Any oil burner you sold, however, went out under your own name?

A. That's right.

Q. And you gave it the service that was required?

A. That's right.

Q. You didn't look to anybody else for service?

A. That's right.

1244 Q. Do you have any idea how the controls purchased from Minneapolis-Honeywell compared percentage-wise with controls that you bought from Mercoid or any of the other companies?

Mr. Haycraft: Do you mean in volume?

Mr. Freeman: Yes.

The Witness: I cannot recall exactly.

By Mr. Freeman:

Q. Just your best estimate.

A. Our volume by far was with Mercoid rather than Minneapolis-Honeywell. I would say perhaps 75 per cent Mercoid.

Q. In other words, 75 per cent Mercoid and 25 per cent Minneapolis-Honeywell?

A. That's right.

Q. And is that true from about 1935 until about up to pre-Pearl Harbor?

A. That is true from about 1936 I would say.

Q. Well, during 1936 the percentage ran about that way?

A. Yes.

Q. And then for each year thereafter—

A. Until 1940.

Q. That is, 75 Mercoid—

A. Roughly 75.

Q. And 25 per cent—

A. That's right.

Q. You had contracts with Minneapolis-Honey-

1245 well. Is that correct?

A. Yes.

Q. You never looked upon that contract as keeping you from buying controls from anybody else?

A. Minneapolis-Honeywell made that point very clear. It was generally known in the trade that a company would contract with two or three control manufacturers. You were not obligated to take the number of controls that you contracted for.

Q. And the Minneapolis-Honeywell representative made that clear to you?

A. Yes.

Q. So when you signed up you knew that you were free to buy anywhere else?

A. That's right.

Q. And you followed that practice?

A. That's right. We contracted with both companies.

Q. You had contracts with both companies at the same time?

A. Yes.

Mr. Freeman: That's all.

Redirect Examination by Mr. Haycraft.

Q. Your contract with Minneapolis-Honeywell had provision as to the number of sets that you expected to take?

1246 A. We were asked to anticipate our control requirements.

Q. For instance, I show you Commission's Exhibit 200, which is a contract used by one burner manufacturer, and I ask if that is similar to the one you had?

A. That's right.

Q. And that blank space where the number of sets is inserted, is that the way with you?

A. There was a figure inserted in there.

Q. A figure?

A. In our case it was a hundred sets.

Q. There wasn't any language saying season's requirements or anything like that?

A. No.

Q. Now, with this Quiet-Heet how did the price wholesale and retail compare with yours?

A. You mean on the dealer's quotations?

Q. Yes.

A. They were always below us on Quiet-Heet.

Q. Substantially?

A. Substantially.

Q. Do you have any idea of the price quoted?
A. $125 retail.
Q. Were they equipped with Minneapolis-Honeywell controls?
A. I assume they were. I couldn't state concretely.
Q. That is what they offered you?
1247 A. Yes.
Q. How do you account for the fact that you were able to get $15 more for oil burners equipped with Minneapolis-Honeywell than with Mercoid?
A. Minneapolis-Honeywell is advertised in a number of publications that are very well circulated throughout the homes, and we took the position that if people insisted upon Minneapolis-Honeywell controls that they should pay for it.
Q. In other words, you figured there was a demand created by the advertising.
A. Sure. If we could make a few dollars due to a customer's insistence, why, we certainly were there to do it.
Q. Was there any time during the history of your business that you did not have a demand for a certain number of Minneapolis-Honeywell controls?
A. No, sir.
Q. There was that demand.
A. That's right. Some dealers would not take burners without Minneapolis-Honeywell controls.
Mr. Haycraft: That is all.

Recross Examination by Mr. Freeman.

Q. You never had any hesitancy about standing back of one of your burners equipped with Mercoid controls, from the standpoint of performance?
1248 A. Absolutely not.
Q. And from the standpoint of performance the Mercoid did just as good a job as the Minneapolis-Honeywell controls?
A. Under certain conditions they did a better job.
Q. That is your opinion now.
A. Absolutely. I will back that up by this statement, that all Mercoid controls are on an inclosed switch, and under certain conditions those seem to operate better than open contacts.
Q. Your company then as a matter of fact were really pushing or had standardized on Mercoid controls?

A. That's right.
Mr. Freeman: That's all.

Redirect Examination by Mr. Haycraft.

Q. Well, how about the guarantee of service or otherwise by your Quiet-Heet competitors? You guaranteed your burner for a year?
A. That's right.
Q. Did Quiet-Heet give that guarantee?
Mr. Freeman: We have already had that answer by Mr. Lapidus of Quiet-Heet.
Mr. Haycraft: This man is a dealer.
Mr. Freeman: You want to talk about what dealers guarantee here as distinguished from the Quiet-Heet
1249 guarantee?
The Witness: Anyone selling a Quiet-Heet burner had to give a one year guarantee, to be competitive.
Mr. Haycraft: That's all.
Trial Examiner Sheppard: Find your voucher right here (indicating).
I am giving you three days, Mr. Johnson, one coming, one down here, and one back.
The Witness: Yes.
Trial Examiner Sheppard: Anything further?
Mr. Haycraft: I have nothing further to offer at this time. I would like to reserve the right to go over the record and in case I do find anything I would like the privilege of adding it at the first hearing of Respondents if possible.
Subject to that I am ready to rest my case at this time.
Trial Examiner Sheppard: Well, if you have anything I will follow the same rule we have many times before. If you have anything further I will let you put it in on the day before the Respondents start their case.
Anything else?
Mr. Gilpatric: Mr. Examiner, shouldn't we have a little more time than that on anything he is going to offer further?
1250 Mr. Haycraft: Well, I think that is fair.
Mr. Gilpatric: I think we should have at least two weeks.
Mr. Haycraft: If I find there is anything I will be glad to give at least two weeks notice of the issue, and, where it is, Chicago, St. Louis, whatever it is. I don't think there is anything. I cannot think of anything now.

Mr. Gilpatric: Mr. Examiner, I believe we have explained to you off the record that Mr. Freeman is counsel for this Respondent in a consolidated case which is scheduled for argument, at least, the present indication is, before the Supreme Court, early in November, and since that case involves issues that are here present in this case and since Mr. Freeman is going to be engaged first in preparing his brief and then in arguing the case, up until the middle of November, we respectfully request that the time of reconvening to hear the Respondents' evidence be fixed not earlier than that time.

Trial Examiner Sheppard: All right, gentlemen, I will take that into consideration. It is my purpose in all these cases to set definite dates.

Mr. Gilpatric: May I say one thing off the record?

Trial Examiner Sheppard: Yes. Off the record.

(Discussion off the record.)

1251 Trial Examiner Sheppard: Will you read the last.

(Record read.)

Trial Examiner Sheppard: (Continuing.) And having in mind what you have just stated about the Argument before the Supreme Court on the matter of the Freeman patent and the Cross patent too—isn't it—I am going to set the resumption of the case on November 16, 1943, with the understanding if you need more time you will let me know by letter, and then if Mr. Haycraft by that time thinks he wants another hearing we will give you all two weeks notice, and I will set that date, and also communicate with you as to where you want to hold hearings in this case and I will arrange it for you.

Mr. Gilpatric: That is fine.

Mr. Freeman: So that if we do not hear from Mr. Haycraft by November 1st we can then assume that he has rested his case in behalf of the Commission.

Mr. Haycraft: Yes.

Trial Examiner Sheppard: I think so and then you can get up your schedule and I will, through the Chief Trial Examiner's office, make all arrangements.

And with that understanding, Mr. Reporter, we will adjorn the Hearing in Philadelphia.

(Whereupon, at 3:40 o'clock p. m. of Monday, Sep-
1252 tember 20, 1943, the hearing in the above-entitled matter was adjourned to November 16, 1943, as above noted.)

1253 Room 1123,
New Post Office Building,
Chicago, Illinois,
November 29, 1943.

Met, pursuant to notice, at 10 a. m.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Esq., Attorney for the Federal Trade Commission.

Messrs. Cravath, de Gersdorff, Swaine & Wood, by R. L. Gilpatric, Esq., and Paul J. Chase, Esq., 15 Broad Street, New York, New York, and Bair & Freeman, by Will Freeman, Esq., 135 South La Salle Street, Chicago, Illinois, Attorneys for respondent.

1254 PROCEEDINGS.

Trial Examiner Sheppard: Miss Reporter, we will convene the hearing in the matter of the Minneapolis-Honeywell case, Docket No. 4920, ordered by the Examiner to reconvene in the city of Chicago at the request of the respondents on this date, the 29th of November, 1943, at 10:00 o'clock in the morning.

Show the appearances as follows: Mr. Everett F. Haycraft appears for the Commission, and Mr. Will Freeman and Mr. R. L. Gilpatric and Mr. Chase for the respondents.

All right, gentlemen, are you ready to proceed with the case? Mr. Freeman, you may go ahead as you see fit.

Mr. Freeman: I will call Mr. Tate.

V. R. TATE, was thereupon called as a witness for the respondent and, having been first duly worn, testified as follows:

Direct Examination.

Trial Examiner Sheppard: Mr. Tate, you have been sworn in this case, have you?

The Witness: Yes.

Trial Examiner Sheppard: What is your address?

The Witness: 500 West Oklahoma, Milwaukee.

Trial Examiner Sheppard: Let the record show
1255 that Mr. V. R. Tate, having been previously sworn in this case, appears now at the request of the respondent. Proceed, Mr. Freeman.

By Mr. Freeman:

Q. Mr. Tate, you have already testified in response to a subpoena served upon you by the Commission; that is correct, is it not?

A. That is correct.

Q. And you are an officer of Perfex Corporation, a competitor of the respondent in this case, correct?

A. That is correct.

Q. You have had served upon you a subpoena requesting you to produce contracts, that is, sales agreements as between your company and some 88 identified oil burner manufacturers, that is, contracts with those companies, if you had a contract.

Now, have you produced and do you have here those contracts?

A. I have.

Q. Will you please make them available to me?

A. The photostatic copies are there.

Q. Now, you have given me photostatic copies and you have the originals in your possession, is that correct?

A. That is correct.

Q. And the originals, of course, are to be avail-
1256 able to Mr. Haycraft?

A. Yes.

Mr. Freeman: They will be available to you for the purpose of any cross-examination. We, however, will introduce photostatic copies, if that is agreeable with counsel for the Commission.

Mr. Haycraft: No objection to the photostatic copies.

By Mr. Freeman:

Q. Now, Mr. Tate, can you tell me, or give me the names of the companies that Perfex had an agreement with for the year 1937?

A. Do you want the full name?

Q. Yes, please.

A. Acme Tool & Gauge Company; Brown Oil Burner Equipment Company; Burner Parts & Service Corporation.

Q. Is that also known as the Pennsylvania Company?
A. I believe their name was changed in 1939 to Penn Oil.
Mr. Haycraft: Penn Oil & Burner Manufacturing Company.
Mr. Freeman: Boiler & Burner.
Mr. Haycraft: Boiler & Burner.

By Mr. Freeman:

Q. Proceed, Mr. Tate.
A. Citro Oil Burner Corporation; The Heil Company.
1257 Q. That is of Milwaukee, Wisconsin?
A. Correct. Hoban Manufacturing Company.
Mr. Haycraft: What is that last one?
The Witness: Hoban, H-o-b-a-n. Standard Products Company; Timken Detroit Axle Company; Wisconsin Oil Burner Company.
Mr. Freeman: We offer in evidence as Respondent's Exhibit 14 the agreement with Acme Tool & Gauge.
Trial Examiner Sheppard: Mark it for identification.
(The paper referred to was marked Respondent's Exhibit 14 for identification.)
Mr. Freeman: We are offering it now, if it is agreeable.
Trial Examiner Sheppard: All right, you may offer them as you go along.
Mr. Freeman: We offer in evidence as Respondent's Exhibit 15 the agreement with Brown Oil Burner Equipment Company.
Trial Examiner Sheppard: Mark that as Respondent's Exhibit 15.
(The paper referred to was marked Respondent's Exhibit 15 for identification.)
Mr. Freeman: We offer in evidence as Respondent's Exhibit 16 the agreement with Burner Parts & Service Corporation.
1258 Trial Examiner Sheppard: Mark that as Respondent's Exhibit 16.
(The paper referred to was marked Respondent's Exhibit 16 for identification.)
Mr. Freeman: We offer as Respondent's Exhibit 17 the agreement with Citro Oil Burner Corporation.
Trial Examiner Sheppard: Let it be marked.
(The paper referred to was marked Respondent's Exhibit 17 for identification.)

Mr. Freeman: We offer as Respondent's Exhibit 18 the agreement with The Heil Company.

Trial Examiner Sheppard: Let it be marked.

(The paper referred to was marked Respondent's Exhibit 18 for identification.)

Mr. Freeman: We offer as Exhibit 19 the agreement with Hoban Manufacturing Company.

Trial Examiner Sheppard: Let it be marked.

(The paper referred to was marked Respondent's Exhibit 19 for identification.)

Mr. Freeman: We offer as Exhibit 20 the agreement with Standard Products Company.

Trial Examiner Sheppard: Let it be marked.

(The paper referred to was marked Respondent's Exhibit 20 for identification.)

Mr. Freeman: We offer as Respondent's Exhibit
1259 21 the agreement with Timken-Silent Automatic Division of the Timken Detroit Axle Company; and as Respondent's Exhibit 22 the agreement with Wisconsin Oil Burner Company.

Trial Examiner Sheppard: Let them be marked.

(The papers referred to were marked Respondent's Exhibits 21 and 22 for identification.)

Trial Examiner Sheppard: All right, any objection, Mr. Haycraft, to the exhibits 14 to 22, inclusive?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let them be accepted into the record.

(The documents referred to, heretofore marked for identification RESPONDENT'S EXHIBITS 14, 15, 16, 17, 18, 19, 20, 21, and 22, were received in evidence.)

By Mr. Freeman:

Q. Now, in addition to the companies that you have just referred to, where your company had an agreement with respect to sales, did you, as a matter of fact, sell oil burner controls to other companies in the year 1937, and by "other companies", I limit myself to those companies enumerated in the subpoena?

A. We did.

Q. And would you mind giving me a list of the companies that you sold oil burner controls to, other than those that you had written contracts with?

1260 A. Campbell Machinery; Carlson Brothers Tool & Machine Company; Carter-Korth Oil Burner Com-

pany; Concord Oil Corporation; Electrol, Incorporated; Fairfield Oil Heating Company; General Oil Burner Corporation; General Oil Heating Corporation; Gold Star Oil Burner Manufacturing Company; Harvey-Whipple, Incorporated; Hyle, H-y-l-e, Oil Burner Company.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record. Proceed, Mr. Witness.

The Witness: La Grace, L-a-G-r-a-c-e Oil Burner Company, but in our records it appears as L-a-G-a-c-e; Liberty Research Lab., Incorporated; Mohawk Oil Burner Manufacturing Company; National Devices Company; Petroleum Heat & Power Company; Volcano Burner Corporation; Wayne Oil Burner Company; Westchester Home Equipment Company; York Oil Burner Company, Incorporated.

By Mr. Freeman:

Q. Now, have you prepared a schedule for the year 1937 with respect to those companies that you have contracts with and the other companies that you have just mentioned in your last answer, setting forth the prices at which you either sold oil burner controls to such companies or offered to sell controls to such companies?

1261 A. I have.

Q. And is that the paper that you have in front of you at the present moment?

A. That is correct.

Q. And I understand that that lists the companies that you have referred to here this morning and the particular type of thermostats, limit controls, and primaries, and the prices given to each of the companies set opposite each of their names, is that correct?

A. That is correct.

Trial Examiner Sheppard: Is that for 1937?

Mr. Freeman: For the year 1937, your Honor.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. Now, Mr. Tate, in 1937 it is a fact that your company sold controls in sets, that is, a primary, a room thermostat, and a limit control?

A. That is correct.

Q. And do I understand that in the year 1937 you gave an overall price for those three instruments?

A. That is correct.

Q. And in some instances—

Trial Examiner Sheppard: You mean an inclusive price, is that it?

Mr. Freeman: An inclusive price.

1262 Trial Examiner Sheppard: An inclusive price.

By Mr. Freeman:

Q. And in some instances that inclusive price was a little less than what the price would be for the three individual units, is that correct?

A. That is correct.

Q. And I note upon the paper that you have just referred to, which we will mark for identification as Respondent's Exhibit 23, that you have under the heading of "Sets", your No. 100 thermostat, a limit control, and your No. 5200 primary control, and a given set of figures. Do those figures disclose the prices at which your company sold or offered for sale sets of controls in the year 1937?

A. That is correct.

Q. And I take it that is likewise true with the next three columns, which have to do with other types of thermostats and intermittent ignition primaries, as distinguished from constant ignition primaries, is that correct?

A. That is correct.

Q. And I take it where there is a blank space in these columns, having to do with set prices, that the low price to any of such companies, where there was a blank space, was made up of the particular three controls purchased, is that correct?

A. Where there is a blank space it was because
1263 I did not find a quotation or any sales at that particular price.

Q. So that the composite picture that we have here for the year 1937 is the result of your checking recently your books and records with respect to the particular companies mentioned and contracts that you had with such companies as well as quotations and sales invoices, and the like, is that correct?

A. That is correct. I checked our office records and did some checking on the invoices, although that is a tremendous job, and I did not check them thoroughly.

Q. Well, the record that you have here for the year 1937 was made up in the usual and ordinary course of your business, or as you would make up any study of your busi-

ness for the year 1937, as the result of the subpoena issued to you?

A. That is correct.

Mr. Freeman: We offer in evidence as Respondent's Exhibit 23 the tabulation for the year 1937 as made by the witness Tate.

Trial Examiner Sheppard: Do you want time to examine on that?

Mr. Haycraft: Yes.

Trial Examiner Sheppard: All right. The Examiner won't rule on this now until Mr. Haycraft has studied it and has had a chance to examine on it.

Mr. Haycraft: May I ask the witness a couple of
1264 questions on the voir dire?

Trial Examiner Sheppard: Yes.

By Mr. Haycraft:

Q. Are all these items in this exhibit comparable to items sold by the Minneapolis-Honeywell Company, or competitive—comparable to or competitive with?

A. The list includes both constant and intermittent ignition oil burner primary controls, which are sold to the trade to accomplish the same purpose as those—

Q. That is, 5200 and 5500?

A. And 5500, yes. The limit controls are standard limit controls, and are sold, accomplishing the same purpose as the standard limit controls sold by our competitors.

Likewise, the room thermostats are for controlling the room temperature, and they are sold for the same purpose as those of our competitors.

By Mr. Freeman:

Q. By your competitors, you mean Minneapolis-Honeywell, the respondent in this case?

A. Minneapolis-Honeywell and others.

By Mr. Haycraft:

Q. Could these items be used in combination with Minneapolis-Honeywell controls? For instance, could the thermostats be used with the Minneapolis-Honeywell
1265 limit controls and primary controls?

Mr. Freeman: That is objected to as improper cross-examination, and for the further reason that this witness testified at length at Milwaukee with respect to the comingling of controls, some of which testimony was testified to over the objection of counsel for the Commission.

Mr. Haycraft: The purpose of this questioning is to see whether or not there is any objection to the exhibit. If the thermostats are as I anticipate they are, then I may not have any objection.

Mr. Freeman: Well, go right ahead.

Trial Examiner Sheppard: Go ahead and answer, Mr. Witness.

The Witness: The series 100 thermostat can be connected up to control the majority of Minneapolis-Honeywell primary controls. That involves a change in the wiring, and so forth, that I testified to in Milwaukee.

By Mr. Haycraft:

Q. What about the 150 listed in the second column?

A. The 150 is a heater type thermostat, which includes a resistance element, in series with the contacts, and has to be balanced against the relay coil that it controls, and would not control the Minneapolis-Honeywell primary controls properly without, you might say, factory recalibration.

1266 Q. So the 150 could not be very well used, then, with the Minneapolis-Honeywell?

A. That is correct, as manufactured and sold by us, it could not be substituted.

Q. I take it that the sets, then, are just combinations of the respective—well, that is all right.

I have no objection to the exhibit, Mr. Examnier, except those columns referring t, thermostat No. 150, which is the third column, and the eighth and tenth columns.

Trial Examiner Sheppard: All right, the Examiner accepts the exhibit, exclusive of the matter Mr, Haycraft mentioned, but will give it study.

Mr. Freeman: Just so that the record is striaght, Mr. Tate, I will ask this question:

By Mr. Freeman:

Q. Isn't it a fact, Mr. Tate, that your No. 150 thermostat, when used with your No. 5500 primary, and the limit control, serves exactly the same function in connection with controlling an oil burner that an M.H. T-11 thermostat, a limit control, and the R-117 serves?

A. That is correct.

Q. They are sold in competition, are they not?

A. That is correct.

Mr. Haycraft: Then I withdraw my objection to those

columns where they are sold in combination. I only
1267 object to the third column.

Trial Examiner Sheppard: All right. You may accept that exhibit, Miss Reporter.

(The document referred to was marked RESPONDENT'S EXHIBIT 23 and received in evidence.)

Mr. Freeman: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record now.

By Mr. Freeman:

Q. As a matter of fact, Mr. Tate, the thermostats which are No. 100, which you said might be used with Minneapolis-Honeywell primary, provided, of course, the wiring was changed, as you testified at Milwaukee, those thermostats sell for less money, do they not, than your No. 150?

A. That is correct.

Q. And that has been true throughout the history of your business, starting with 1937, right on up to date?

A. That is correct.

Q. Or as long as you have had both thermostats in your line?

A. That is correct?

Q. So that from a money standpoint, the No. 100 thermostat actually sells for less money than your 150 thermostat?

1268 A. That is correct.

Q. And do you know, Mr. Tate, how your No. 100 thermostat compares in price, relatively speaking, with the Honeywell T-11 thermostat? Is it higher or lower?

A. It is my impression that it is lower, but I have no actual facts.

Q. Well, the thermostat that your company features is comparable to M.H.'s T-11 thermostat, and that is really your 150?

A. That is correct, because that is a heater thermostat, and the Minneapolis T-11 is also a heater thermostat.

Q. Now, for the year 1938 will you produce the contracts that your company had with the oil burner manufacturers mentioned in the subpoena, listing them just as you did in connection with your answer for the year 1937?

A. Acme Tool & Gauge Company; Automatic Burner Corporation; Carlson Brothers Tool & Machine Company;

Cleveland Steel Products Corporation; Fairfield Oil Heating Company; General Oil Heating Company; Hart Oil Burner Corporation.

Mr. Haycraft: What was that last one?

The Witness: Hart Oil Burner Corporation; Harvey-Whipple, Inc.; The Heil Company; Hoban Manufacturing Company; Hupp Oil Burner Company; Muehlbach, M-u-e-h-l-b-a-c-h, Manufacturing Company; Reif-Rexoil, Incorporated; Scott-Newcomb, Incorporated; Stand-
1269 ard Products Company; Volcano Burner Corporation; Wayne Oil Burner Company; Westchester Home Equipment Company; Wisconsin Oil Burner Company.

Mr. Freeman: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Freeman:

Q. And you have here the originals of each of the agreements that you have just referred to?

A. I have.

Q. And those were contracts under which your company did business with the respective names enumerated, for the year 1938, is that correct?

A. That is correct.

Q. And those contracts disclose the price, terms of sale, and other conditions with respect to your dealings as between those individual companies and your company?

A. That is correct.

Q. And, of course, that is true also for the year 1937?

A. That is correct.

Mr. Freeman: We offer in evidence as Respondent's Exhibit 24 the agreement with Acme Tool & Gauge Company for the year 1938.

(The document referred to was marked Respond-
1270 ent's Exhibit 24 for identification.)

Mr. Freeman: We offer in evidence as Respondent's Exhibit 25 the agreement with Automatic Burner Corporation for the year 1938.

(The document referred to was marked Respondent's Exhibit 25 for identification.)

Mr. Freeman: We offer in evidence as Respondent's Exhibit 26 the agreement with Carlson Brothers Tool & Machine Company for the year 1938.

(The document referred to was marked Respondent's Exhibit 26 for identification.)

Mr. Freeman: I offer in evidence as Respondent's Exhibit 27 the agreement with Cleveland Steel Products Corporation for the year 1938.

(The document referred to was marked Respondent's Exhibit 27 for identification.)

Mr. Freeman: I offer in evidence as Exhibit 28 the agreement with Fairfield Oil Heating Company for the year 1938.

(The document referred to was marked Respondent's Exhibit 28 for identification.)

Mr. Freeman: I offer in evidence as Exhibit 29 the agreement with General Oil Heating Company.

(The document referred to was marked Respondent's Exhibit 29 for identification.)

1271 Mr. Freeman: I offer in evidence as Respondent's Exhibit 30 the agreement with Hart Oil Burner Corporation.

(The document referred to was marked Respondent's Exhibit 30 for identification.)

Mr. Freeman: I offer in evidence as Exhibit 31 the agreement with Harvey-Whipple, Incorporated, for the year 1938.

(The document referred to was marked Respondent's Exhibit 31 for identification.)

Mr. Freeman: I offer in evidence as Respondent's Exhibit 32 the agreement with the Heil Company for the year 1938.

(The document referred to was marked Respondent's Exhibit 32 for identification.)

Mr. Freeman: I offer in evidence as Respondent's Exhibit 33 the agreement with Hoban Manufacturing Company for the year 1938.

(The document referred to was marked Respondent's Exhibit 33 for identification.)

Mr. Freeman: I offer in evidence as Respondent's Exhibit 34 the agreement with Hupp Oil Burner Company for the year 1938.

(The document referred to was marked Respondent's Exhibit 34 for identification.)

Mr. Freeman: I offer in evidence as Exhibit 35
1272 the agreement with Muehlbach Manufacturing Company, the name of which was later changed to the Marquette Electric Company.

(The document referred to was marked Respondent's Exhibit 35 for identification.)

Mr. Freeman: I offer in evidence as Respondent's Exhibit 36 the agreement with Reif, Rexoil, Inc., for the year 1938.

(The document referred to was marked Respondent's Exhibit 36 for identification.)

Mr. Freeman: I offer in evidence as Respondent's Exhibit 37 the agreement with Scott-Newcomb, Inc., for the year 1938.

(The document referred to was marked Respondent's Exhibit 37 for identification.)

Mr. Freeman: I offer in evidence as Exhibit 38 the agreement with Standard Products Company for the year 1938.

(The document referred to was marked Respondent's Exhibit 38 for identification.)

Mr. Freeman: I offer in evidence as Respondent's Exhibit 39 the agreeemnt with Volcano Burner Corporation for the year 1938.

(The document referred to was marked Respondent's Exhibit 39 for identification.)

Mr. Freeman: I offer in evidence as Respondent's
1273 Exhibit 40 the agreement with Wayne Oil Burner Company for the year 1938.

(The document referred to was marked Respondent's Exhibit 40 for identification.)

Mr. Freeman: I offer in evidence as Respondent's Exhibit 41 the agreement with Westchester Home Equipment Company for the year 1938.

(The document referred to was marked Respondent's Exhibit 41 for identification.)

Mr. Freeman: I offer in evidence as Respondent's Exhibit 42 the agreement with Wisconsin Oil Burner Corporation for the year 1938.

(The document referred to was marked Respondent's Exhibit 42 for identification.)

Mr. Freeman: May I have your ruling on those exhibits, your Honor?

Trial Examiner Sheppard: You have offered them all, have you?

Mr. Freeman: Yes, I have offered them.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let them be accepted as Respondent's Exhibits 24 to 42, inclusive.

(The documents referred to, heretofore marked for identification RESPONDENT'S EXHIBITS 24, 25,
1274 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, and 42, were received in evidence.)

By Mr. Freeman:

Q. In addition to these companies with which your company conducted its business by virtue of the agreements that I have just offered in evidence you actually made sales and gave quotations for sales in connection with oil burner controls to other companies during the year 1938, is that correct?

A. That is correct.

Q. Would you give me a list of at least those companies with which your company did business in the year 1938, limiting, of course, the question to those companies enumerated in the subpoena which was served upon you in this case?

A. We either sold or offered to sell controls to the following companies in 1938:

Burner Parts & Service; Electrol, Incorporated; Gold Star Oil Burner Manufacturing Company; Herco Oil Burner Corporation; National Devices Company.

Mr. Haycraft: Did you say Herco there?

The Witness: Yes.

Timken Detroit Axle Company; Williams Oilomatic Company; York Oil Burner Company, Inc.

By Mr. Freeman:

1275 Q. And have you prepared a sheet for the year 1938 similar in form to what you have prepared for the year 1937, showing the various thermostats, limit controls and primaries and the respective prices at which you offered the companies enumerated upon the sheet, which we now identify as Respondent's Exhibit 43?

(The document referred to was marked Respondent's Exhibit 43 for identification.)

By Mr. Freeman:

Q. Is that correct?

A. That is correct.

Q. Respondent's Exhibit 43 for identification was pre-

pared in substantially the same manner as Respondent's Exhibit 23?

A. That is correct.

Q. And there you likewise listed the respective prices for the various items, correct?

A. That is correct.

Q. Now, in connection with the prices for sets of controls for the year 1938, I note that your sets for that year omit the limit controls. Is that correct?

A. That is correct.

Q. So that the prices under the columns entitled "Sets" are for a primary and a thermostat in each case?

A. That is correct.

1276 Q. So that if you wanted to get the price for three controls, that is, a primary, a thermostat, and a limit control, all you would have to do is to take the figures of the columns under "Sets", and add to it the particular limit control price which we find in the fourth column on Exhibit 43, correct?

A. That is correct.

Q. And your No. 100 thermostat was used interchangeably with your 5200 primary as well as your 5500 primary, is that correct?

A. That is correct.

Q. And likewise your 150 thermostat could be used with either the 5200 primary or the 5500 primary?

A. That is correct.

Q. And also in each case, according to your second and third columns, on Exhibit 43, the price of your No. 100 thermostat is always less than the respective price quoted the same company for the No. 150 thermostat?

A. That is correct.

Mr. Freeman: We offer in evidence Respondent's Exhibit 43.

Trial Examiner Sheppard: All right. Do you want time to look at it or do you want to ask some questions now, Mr. Haycraft?

Mr. Haycraft: Yes, I want to glance at it.

1277 I offer the same objection on this. No objection to the exhibit, except as to the third column, as to the 150 thermostat.

Trial Examiner Sheppard: All right, I will overrule the objection and accept the exhibit in toto and give it what study I think it deserves in reference to the matter of the 150.

(The document referred to, heretofore marked for identification RESPONDENT'S EXHIBIT 43, was received in evidence.)

By Mr. Freeman:

Q. Have you produced the agreements that your company had with customers for the years 1939, 1940, and 1941?

A. I have.

Q. If so, will you give me first the agreements that you had for the year 1939?

A. Cleveland Steel Products Corporation; Harvey-Whipple, Incorporated; Hayward Manufacturing Company; the Heil Company; Lynn Products Company; Reif-Rexoil, Incorporated; Scott-Newcomb, Incorporated; Wayne Oil Burner Corporation; York Oil Burner Company.

1278 Mr. Freeman:

We offer in evidence as Respondent's Exhibit 44 the agreement with Cleveland Steel Company for the year 1939;

As Respondent's Exhibit 45 the agreement with Harvey Whipple, Inc., for the year 1939;

As Respondent's Exhibit 46 the agreement with Hayward Oil Burner Company for the year 1939;

As Respondent's Exhibit 47 the agreement with the Heil Company for the year 1939;

As Respondent's Exhibit 48 the agreement with the Lynn Products Company for the year 1939;

As Respondent's Exhibit 49 the agreement with Reif-Rexoil, Inc., for the year 1939;

As Respondent's Exhibit 50 the agreement with Scott-Newcomb, Inc., for the year 1939;

As Respondent's Exhibit 51 the agreeemnt with Wayne Oil Burner Corporation for the year 1939;

And as Respondent's Exhibit 52 the agreement with Yorke Oil Burner Company for the year 1939.

Trial Examiner Sheppard: Let those exhibits be accepted in the record.

(The documents referred to were marked RESPONDENT'S EXHIBITS 44, 45, 46, 47, 48, 49, 50, 51, and 52 and received in evidence.)

By Mr. Freeman:

Q. Now, Mr. Tate, will you give us a list of the 1279 companies you had contracts with for the year 1940?

A. Penn Boiler & Burner Manufacturing Co.

Mr. Haycraft: That is the Automatic—

The Witness: Formerly Burner Parts & Service.

Mr. Haycraft: Yes.

A. Carlson Bros. Tool & Machine Co.; Harvey Whipple, Inc.; The Heil Company; Hoben Manufacturing Company; Lynn Products Company; Reif-Rexoil, Inc.; Wayne Oil Burner Corporation; Yorke Oil Burner Company.

Mr. Freeman: We offer in evidence as Respondent's Exhibit 53 the agreement with Penn Boiler & Burner Manufacturing Company for the year 1940; as Respondent's Exhibit 54 the agreement with Carlson Bros. Tool & Machine Co. for the year 1940;

As Respondent's Exhibit 55, the agreement with Harvey Whipple, Inc., for the year 1940; as Respondent's Exhibit 56 the agreement with The Heil Company for the year 1940; as Respondent's Exhibit 57 the agreement with the Hoben Manufacturing Company for the year 1940; as Respondent's Exhibit 58 the agreement with Lynn Products Company for the year 1940; as Exhibit 59 the agreement with Reif-Rexoil, Inc., for the year 1940; as Respondent's Exhibit 60 the agreement with Wayne Oil Burner Corporation for the year 1940; and as Respondent's Exhibit 61 the agreement with Yorke Oil Burner Company for the year 1940.

1280 Trial Examiner Sheppard: Any objection to those exhibits?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let the agreements, Exhibits 53 to 61, inclusive, be accepted in the record.

(The documents referred to were marked RESPONDENT'S EXHIBITS 53, 54, 55, 56, 57, 58, 59, 60 and 61 and received in evidence.)

By Mr. Freeman:

Q. Now, Mr. Tate, will you give us the names of the companies with which your company had contracts for the year 1941, involving, of course, oil controls.

A. Carlson Bros. Tool & Machine Co.; Harvey Whipple, Inc.; The Heil Company; Hoben Manufacturing Company; Lynn Products Company; Reif-Rexoil, Inc.; Wayne Oil Burner Corporation; Yorke Oil Burner Company.

Mr. Freeman: We offer in evidence as Respondent's Exhibit 62 the agreement with Carlson Bros. Tool & Ma-

chine Company for the year 1941; as Respondent's Exhibit 63 the agreement with Harvey Whipple, Incorporated for the year 1941; as Respondent's Exhibit 64 the agreement with The Heil Company for the year 1941; as Respondent's Exhibit 65 the agreement with Hoben Manufacturing Company for the year 1941; as Respondent's Exhibit 66 the agreement with Lynn Products Company for the year 1941; as Respondent's Exhibit 67 the
1281 agreement with Reif-Rexoil, Inc., for the year 1941; as Respondent's Exhibit 68 the agreement with Wayne Oil Burner Company for the year 1941; and as Respondent's Exhibit 69 the agreement with Yorke Oil Burner Company for the year 1941.

Trial Examiner Sheppard: Any objections to those exhibits, Mr. Haycraft?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let the agreements, Respondent's Exhibits 62 to 69 be accepted in evidence.

(The documents referred to were marked RESPONDENT'S EXHIBITS 62, 63, 64, 65, 66, 67, 68, 69 and received in evidence.)

By Mr. Freeman:

Q. I hand you a sheet of paper which you gave me this morning, which is being marked for identification as Respondent's Exhibit 70, and I will ask you now to give me, for the year 1939 the names of the companies enumerated in the subpoena with which your company did business in the year 1939, without a signed contract.

A. Burner Parts & Service; Electrol, Incorporated; Hart Oil Burner Corporation; Hupp Oil Burner Company; Timkin Detroit Axle Company.

Q. Now, will you do the same thing in connection with the year 1940?

A. Automatic Burner Corporation, Cleveland
1282 Steel Products Corporation; Electrol, Incorporated; Gold Star Oil Burner Manufacturing Company, Timkin Detroit Axle Company.

Q. And will you do the same now with respect to the year 1941?

A. Automatic Burner Corporation; Cleveland Steel Products Company; Electrol, Incorporated; Gar Wood Industries, Incorporated; Gold Star Oil Burner Company; Timkin Detroit Axle Company.

Q. And have you prepared Respondent's Exhibit 70 for identification in exactly the same manner that you prepared Respondent's Exhibit 23, except as to the years 1940 and 1941, you have omitted any figures under the column "Total Sales"?

A. That is correct.

Q. And I note now, for the years 1939 to 1941, inclusive, that there is no mention of the No. 100 thermostat. Would you explain what happened to it?

A. There were very few of the No. 100 thermostats sold to these oil burner companies in the years 1939, 1940 and 1941.

Q. In other words, the more general sales of thermostats had to do with the kind that had artificial heat applied to the thermostats, sometimes known as "heat anticipation"; is that correct?

A. Correct.

Q. And that was your No. 150 thermostat?

1283 A. The No. 150 and the No. 155, and they are both listed on Exhibit 70.

Q. That No. 150 thermostat is comparable in function and sold in direct competition to Minneapolis-Honeywell T-11?

A. That is correct.

Q. I notice also that for the years 1939, 1940 and 1941, there is no mention of any price for sets of controls, as you had in 1937, where three controls comprised a set; and for the year 1938, where two controls comprised a set.

Do you want to make any explanation, so that the record can be clear, as to why Exhibit 70 differs somewhat from Exhibit 23?

Trial Examiner Sheppard: And 53.

Mr. Freeman: And 43, pardon me.

A. In the years 1939, 1940 and 1941, we did not have set prices.

Q. In other words, during those years, 1939 to 1941, you could figure out the price of three controls by taking and adding a thermostat, a limit control, and a primary together?

A. That is correct.

Mr. Freeman: We offer in evidence as Respondent's Exhibit 70 the tabulation made by the witness, Tate, for the years 1939, 1940 and 1941.

Trial Examiner Sheppard: All right. Any objection, Mr. Haycraft?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let it be accepted as Respondent's Exhibit 70.

(The document referred to, heretofore marked RESPONDENT'S EXHIBIT 70 for identification was received in evidence.)

By Mr. Freeman:

Q. No, in addition to the companies which you have specifically enumerated for the years 1937 to 1941, your sales people and sales representatives were actually calling on a good many other oil burner manufacturers, is that correct?

A. That is correct.

Q. And calling, in the main, upon those companies that hold themselves out as oil burner manufacturers?

A. That is correct.

Q. And, in each of those cases, I take it, you were soliciting the sale of thermostats, primary controls and limit controls in competition to the respondent here, as well as in competition to the Penn Electric Switch Company and Mercoid?

A. That is correct.

Q. And it had been a practice of your company for the years 1937 up to and including 1941—taking into consideration that in 1942 and 1943 we are engaged in war work—to solicit actively the business of oil burner manufacturers for their control requirements, is that correct?

1285 A. That is correct.

Q. And I take it that your company called upon oil burner manufacturers, whether they had a contract signed with Minneapolis-Honeywell or not? You solicited their business, is that correct?

A. I think that is correct, because, in most cases we probably wouldn't know, or have any way of knowing, whether they had a contract or not.

Q. You were always energetically out soliciting business for your company?

A. That is what we paid our salesmen for.

Q. Now, Mr. Tate, your company recognized the different trade channels in connection with its prices for oil burner controls? That is, it recognized the channels as a manufacturer, as a jobber and as a dealer, is that correct?

A. That is correct.

Q. And now, coming to oil burner manufacturers, to

which I am now directing my inquiry, you had, or gave to oil burner manufacturers different prices, dependent upon their potential volume or ability to buy controls or their requirements, is that correct?

A. That is correct.

Q. And then I take it that you had several different prices, price set-ups, for the years 1939 to 1941, inclusive, and you gave to a particular customer that price
1286 which he was entitled to, in accordance with his purchasing ability or potential requirements?

A. Well, at least that is one of the determining factors of setting the price.

Q. I am not interested in your detailed structures, Mr. Tate, but I would like to get into the record about how many different—oh, call them brackets or price structures—did you have for oil burner manufacturers?

A. I believe we had six in those years.

Q. And you have prepared and have given to me, for the years 1939 to 1941, inclusive, the various brackets, as well as the various items which are sold in competition to the respondent here and the respective prices, is that correct?

A. That is correct.

Q. So that your contracts that have been introduced here, in connection with the years 1939, 1940 and 1941, will show thermostats listed and priced in accordance with these respective brackets, dependent upon the company's ability to buy? Correct?

A. That is correct.

Mr. Haycraft: That is objected to as irrelevant and immaterial to the issues in this case. We are not trying this witness' company for violation of any act that I know of.

1287 Mr. Freeman: Well, you are trying Minneapolis-Honeywell for competition, unfair competition, and whenever we endeavor to show that Minneapolis-Honeywell had competition, you seem to interpose an objection.

Mr. Haycraft: I let him go this far, Mr. Examiner, to put in all the evidence as to competition, but this is something different again. This shows the inner set-up of this witness' company, and I don't think it is relevant or material. The only question that would possibly be material in this case is the actual price.

Mr. Freeman: Well, that is what this exactly shows and that is why I am trying to give answers to you, Mr. Haycraft.

Mr. Haycraft: Well, Mr. Examiner, I don't think it is necessary for any argument along that line. This witness has testified at some length by identifying a number of exhibits, as to the prices at which the company actually sold or offered to sell to certain companies, which were listed, and about which I questioned the respondent's witnesses in my case in chief. That is perfectly all right. But now, we have an attempt to bring out from this witness whether or not his company—not the respondent, that is the Perfex Company—maintained a certain bracket of prices in selling to certain classes of customers and that has no place in this case. That isn't relevant to the issues in
1288 this case as to how this witness' company may make up its prices. It doesn't make any difference. They may have taken a number of things into consideration in fixing their prices and it has nothing to do with the brackets of the respondent, which are in issue in this case—the bracket prices of the respondent, which are in issue.

Mr. Freeman: I am not interested in the bracket structure of this company. I am interested in the exact dollars at which this company offered to sell controls to oil burner manufacturers in competition with Minneapolis-Honeywell and its price structure—and when I say "its" I mean Perfex—is entirely irrelevant, Mr. Examiner.

Mr. Haycraft: He is entitled to know the prices at which Perfex sold or offered to sell in competition with the respondent, but how he arrived at the prices has no place in this record.

Mr. Freeman: Let me ask one question and I think I can straighten this out, Mr. Haycraft.

Mr. Haycraft: All right.

By Mr. Freeman:

Q. Are these prices which appear upon—

Mr. Haycraft: Wait a minute. That hasn't been put in evidence and I am going to object to any interrogation about it.

Mr. Freeman: Well, wait a minute until I get through with the question, and then go ahead and interrupt.

1289 Mr. Haycraft: All right. Go ahead.

By Mr. Freeman:

Q. Are these prices which appear upon Respondent's Exhibit 71 for identification those prices at which your company offered to sell controls for the years 1939, 1940 and 1941 to oil burner manufacturers, generally?

Mr. Haycraft: Objected to, Mr. Examiner, unless it is restricted to the companies which we have here and that evidence is in here already.

Trial Examiner Sheppard: Okay. I will let you answer that.

A. These are not published prices. These are confidential prices and they were not offered—

Trial Examiner Sheppard: Not offered—

A. (Interposing.) To everyone.

By Mr. Freeman:

Q. You did sell oil burner controls—that is, thermostats, the No. 150—at $3.00, did you not?

Mr. Haycraft: Just a minute, Mr. Examiner. He is trying to get in evidence this exhibit, which I am going to object to, when he offers it, and I object to this type of interrogation and I want to call your attention that there is an exhibit in evidence, which I did not object to, which sets forth their prices quoted these people, listed in the left hand column here (indicating).

1290 Those are the companies involved in this case, and I object to going clear out now into a general field, which is beyond the limits of this case.

Mr. Freeman: Didn't you put in our bracket structure, Mr. Haycraft?

Mr. Haycraft: Certainly I put in your bracket structure, sure, but that doesn't follow that every other competitor's bracket structure is competent.

Mr. Freeman: We are not condemning the Perfex bracket structure nor are we defending it. We are not interested in Perfex bracket structure. We are interested in the prices at which it sold controls. After all, we have to meet competition.

Mr. Haycraft: That you have in evidence.

Mr. Freeman: Well, that is your version of it.

Trial Examiner Sheppard: All right, gentlemen, I will let this witness testify along this line.

By Mr. Freeman:

Q. Mr. Tate, maybe I can simplify this. Among the various contracts that you have here produced in connection with the years 1939, 1940 and 1941, you do find the various items therein enumerated at prices corresponding to those prices that we now find upon Respondent's Exhibit 71 for identification?

Mr. Haycraft: I object to that question as irrel-
1291 evant and immaterial, no probative value in this case.

Whether or not this exhibit contains the figures at which they sold is irrelevant. The figures are in evidence at which they sold.

Trial Examiner Sheppard: Mr. Tate, do you understand that question? Do you get what Mr. Freeman is trying to bring in?

A. The majority of the figures on Exhibit 71 appear in these various contracts.

Trial Examiner Sheppard: That is what I thought. Those are in the various contracts, but they are summarized there, aren't they?

A. They don't all appear in the contract, but most of them do.

Mr. Freeman: We have here on one sheet, your Honor, a summary of it, and that is what I want.

Trial Examiner Sheppard: I will let you go ahead and testify, to clear it up, and I will give it what value I think it should have, when I study the matter.

Mr. Haycraft: Mr. Examiner, I think I should make clear to you the nature of my objection to this. Is this an offer of the exhibit or what is this now? If the exhibit is going to be offered, I would like to have a chance to object to it and make my objection.

Trial Examiner Sheppard: Yes. You haven't of-
1292 fered it yet?

Mr. Freeman: No, not yet.

Mr. Haycraft: Well, then, I object to any further interrogation of it, with respect to it, until it is offered.

Trial Examiner Sheppard: Why don't you make an offer of it, and we will relieve that situation right now.

Mr. Freeman: I just wish this man Haycraft would be a little more consistent. I would be only too glad to offer it.

I now offer in evidence as Exhibit 71 the price structure set-up of the Perfex Company for the years 1939, to 1941, inclusive, with respect to oil burner manufacturers.

Mr. Haycraft: I object to that offer, Mr. Examiner, for these reasons. In the first place, it is irrelevant and immaterial to the issues in this case—what the Perfex structure is and how they arrived at the prices they quote; and in the second place, as this witness testified in respect to this exhibit, it contains prices not included in the offers or the sales made to the concerns that are involved in

these exhibits and in this proceeding. As you know, in building up this record, there are a number, about eighty some odd companies that have been involved, and these prices in this exhibit go beyond that.

In other words, you are going into a field now which is not in the Commission's case in chief, and I object to
1293 it on that ground.

Mr. Freeman: Mr. Examiner, may I make an oral statement?

Trial Examiner Sheppard: Yes.

Mr. Freeman: We are not limited to the eighty-eight companies which Mr. Haycraft, at one time or another in connection with the Commission's case, referred to specifically.

We are out to show to the Commission and to your Honor that this company was engaged in active competition—that is Perfex—was engaged in active competition with Minneapolis-Honeywell—and we are not limited to those companies you choose to talk about.

Trial Examiner Sheppard: I think, gentlemen, I rather agree with Mr. Haycraft on the matter he just referred to, but I am going to let it go in.

Mr. Freeman: That is all we are intersted in. If he doesn't want the summary in, for some reason or other it is immaterial, we can fix it up by taking each of the contracts and going through each of them individually and we can sit here another half a day and get this same structure, same pattern, if that is what you want, Mr. Haycraft. We can do it that way.

Trial Examiner Sheppard: If you gentlemen think it is an important part of your case, I will let you put it
1294 in, and then I will give it study when I get to it.

Mr. Haycraft: I don't know, of course, as to how far these prices may be considered confidential by the witness' company, but I can readily see that there might be some quotation in there that they might not want to make public.

Trial Examiner Sheppard: All right, Miss Reporter, I am going to accept that Exhibit 71 for what it is offered for in this case and, in my study, in the probative value, if I want to use it, I will do it, and if I don't, I won't. You gentlemen can do the same thing.

(The document referred to was marked RESPONDENT'S EXHIBIT 71 and received in evidence.)

By Mr. Freeman:

Q. Mr. Tate, in the year 1941, you quoted the Carlson Company a price of $3.00. Is that correct, for your No. 150 thermostat?

A. That is correct.

Q. And that is the price that appears for the No. 150 thermostat in bracket 2 for the year 1941, correct?

A. That is correct.

Q. And we likewise find in this year, 1941, that you quote $2.65 for a No. 150 thermostat to The Heil Company and that we find in bracket 5 for the year 1941.

Trial Examiner Sheppard: That is on 71, that is 1295 on Exhibit 71?

Mr. Freeman: Yes, on Exhibit 71.

Trial Examiner Sheppard: All right.

A. That is correct.

By Mr. Freeman:

Q. And as a matter of fact, we find in your price for the No. 150 thermostat for the year 1941, the prices which you gave us here this morning, all of the figures for brackets 2, 3, 4, 5 and 6? Correct?

A. That is correct.

Q. And likewise, the same is applicable to limit controls and primaries? Correct?

A. That is correct.

Q. Now, when you were out soliciting business for controls from companies other than those specifically enumerated in the subpoena, were you governed by some price structure applicable to the company's potential or ability to buy controls?

Mr. Haycraft: That is objected to as going beyond the Commission's case in chief, as well as being immaterial.

Trial Examiner Sheppard: I don't think I get the significance of the question. Would you read it, Miss Reporter.

(The reporter read the question.)

1296 Mr. Freeman: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Trial Examiner Sheppard:

Q. Mr. Tate, go ahead and tell us about that, and if I think it is important, I will let it stand. If I don't, I will strike it. Just answer that as well as you can.

A. The customer's potential is one of the principal governing factors in arriving at the prices—

Trial Examiner Sheppard: (Interposing) I would think so.

A. —that we quote.

Trial Examiner Sheppard: I think that is an integral part or element of the matter. All right.

By Mr. Freeman:

Q. And when you testified earlier that you recognized different trade channels—that is, as a manufacturer and as a jobber and as a dealer—you meant that you had different prices applicable to manufacturers than you had to jobbers and than you had to dealers, is that correct?

A. That is correct.

Q. Now, none of these contracts that you have here introduced this morning, for the years 1937 to 1941, specify any definite number of controls. That is correct, isn't it?

1297 A. It doesn't specify any total quantity.

Q. It specifies specific controls and the price applicable for that specific control to that specific company mentioned in the agreement?

A. That is correct.

Q. And when those prices are made up, they are made up according to the company's actual ability to buy and not necessarily the exact number that the company is to buy from you during that year?

Mr. Hayeraft: I object to the form of the question. Let the witness state it, let the witness state what he has taken into consideration, for the record.

Trial Examiner Sheppard: Yes, you can do that, Mr. Tate.

The Witness: Now, will you go back and read it to me.

(The reporter read the question.(

A. The prices are based on a number of things; one of which is the potential that we think the customer can buy during the year, but he is not held to any exact number.

By Trial Examiner Sheppard:

Q. In other words, he can buy more if he wants to, or less, if he wants to?

A. That is correct.

Trial Examiner Sheppard: All right.

1298 By Mr. Freeman:

Q. You do not require any initial order when a contract is signed—that is, any specified amount—in order to make the customer any particular price?

A. In some cases, we do.

Q. And, of course, you take into consideration then, the amount of the initial order, as part of your base for prices?

A. That is correct.

Q. And I take it that you likewise have some contracts with companies that never purchase any controls at all from your company?

A. That is correct.

Q. So that when you send out your contracts and they send it back to you, it is, in effect, your price list and terms and conditions of sale? Correct?

A. It is a contract as to the matters covered in the agreement.

Q. It sets forth the relationship that is to exist if the company purchases controls from your company and if you ship controls to the purchaser?

A. That is correct.

Q. It is a regular form of conduct as between your company and the oil burner manufacturer?

A. That is correct.

Q. And am I correct in my understanding that

1299 when a contract is signed, there isn't any necessity that the company purchase any controls from your company?

Mr. Haycraft: It seems that the contract speaks for itself on that point, Mr. Examiner.

Trial Examiner Sheppard: I think the witness already answered it. He said that the man has a right to purchase more than what his contract calls for, or less, if he wants to.

Mr. Freeman: And in some cases here, we have some contracts that I might point out where there has been no purchase during the year.

Trial Examiner Sheppard: That is right.

By Mr. Freeman:

Q. That is correct, isn't it?

A. That is right.

Trial Examiner Sheppard: I gathered that from what he testified.

Mr. Freeman: Just so that we are clear.

Trial Examiner Sheppard: Yes.

By Mr. Freeman:

Q. Now, Mr. Tate, you have endeavored, in the short period of time that you had, to produce here those records or memoranda which you made from records in your office, with respect to those companies mentioned in the subpoena. Correct?

A. That is correct.

1300 Q. And these are the prices at which you either offered to sell controls in competition to others, or actually sold controls in competition to others?

A. That is correct.

Q. Just one more question. During your cross-examination, when the Commission put on its case, you will recall that you mentioned a number of patents.

A. That is correct.

Q. Under which you operate in one way or another, either those that you owned or had a license under which you made primary controls or room thermostats, and I have prepared a book of those patents which I would like to offer in evidence as Respondent's Exhibit 72.

I might say, Mr. Tate, that you may look these over, although they do compare with those that you have enumerated.

Trial Examiner Sheppard: Let's have a little recess, gentlemen, and give Mr. Tate an opportunity to look that over.

(Short recess taken.)

Trial Examiner Sheppard: All right, back on the record.

Mr. Freeman: So that the record is clear we offer in evidence Respondent's Exhibit 72, a book of patents having to do with primary controls and thermostats

1301 under which Perfex makes its primary and thermostat controls.

Trial Examiner Sheppard: Any objection, Mr. Haycraft?

Mr. Haycraft: Has the witness identified them as having been used at the present time or having been used during this period of time that has been covered in the—

The Witness: (Interposing) I have examined the patents and they are the patents that we owned, either own or operate under.

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let Respondent's Exhibit 72 be accepted.

(The document referred to was marked RESPONDENT'S EXHIBIT 72 and received in evidence.)

Mr. Freeman: That is all. You may cross-examine.

Cross-Examination by Mr. Haycraft.

Q. Following further along that line, the last exhibit that was admitted, will you describe the respective patents and the item, when the patent was used and the circumstances under which it was used?

A. Cunningham re-issue, patent No. 21,993; oil burner time control patent, owned by Perfex.

Q. When did you acquire it?

A. It was developed by Perfex.

1302 Q. Developed by Perfex. When was it put into manufacture? In other words, when was the primary manufactured under that patent by Perfex?

A. I think it was the fall of 1937. It covers the intermittent ignition control. That was testified to in Milwaukee. I don't have the exact date here. It may have been the spring of 1938.

Trial Examiner Sheppard: Anything more?

Mr. Freeman: Do you want him to go through all of them, Mr. Haycraft?

Mr. Haycraft: Yes, if these patents are going to be used in this case, I want to find out what use was made of them.

Mr. Freeman: The witness already testified that he has used one or more of the patents in connection with the making of primary controls and thermostats. I don't see that it is material as to when they were used. They have been used from the very inception of Perfex Company, in 1936, in connection with the primary controls.

Mr. Haycraft: That is what I want to find out.

Mr. Freeman: He has answered that.

Mr. Haycraft: No, he hasn't. He is answering it now.

Trial Examiner Sheppard: All right, Mr. Tate, will you give the gentlemen that information?

1303 A. Scott patent No. 1,640,730, covering an oil burner primary control, and is owned by Electrol, Incorporated. We are operating under a license since 1937, I believe.

By Mr. Haycraft:

Q. Is that an intermittent or constant ignition control?

A. Intermittent ignition, primary control.

Burke, patent No. 1,657,065. We have been operating under a license on this patent since about 1937.

Q. Which one is that?

A. Burke.

Q. Burke?

A. That covers oil burner primary controls of either constant or intermittent ignition.

Scott, patent No. 1,836,939. That was an oil burner primary control and is owned by Electrol, Incorporated. We have been operating under a license since about 1937.

Q. Is that constant or intermittent ignition?

A. Intermittent ignition.

Aldrich, patent No. 1,893,875, deals with the slip friction mechanism of an oil burner—either constant or intermittent ignition. We are operating under a license, but I don't remember the exact date; in 1938 or it may have been as late as 1939. I think it was 1938, though.

Duemler, et al., patent No. 1,972,875, oil burner primary control. It deals with both the constant and the in-

1304 termittent control, and is one of the group in the Zoro patents. We have had a license since about 1940.

Q. Have you had to pay any royalty on that to the Zoro patent?

Mr. Freeman: That is objected to as immaterial—just what they operate under, that is all we asked.

Trial Examiner Sheppard: Go ahead. I will let the witness answer.

A. I don't believe we are paying any royalty under that patent.

By Mr. Haycraft:

Q. Is it still owned by the Cleveland Trust Company?

A. I don't know.

Mr. Freeman: Ask him if that is a part of the Zoro. I will say, as a lawyer, it isn't.

Mr. Haycraft: I am trying to get the information from the witness.

A. I don't know what happened to the Zoro pool after this was over.

Cunningham patent No. 2,918,556. That is a patent that has been surrendered in connection with the re-issue patent formerly discussed. I don't know if you need any comment on it.

Q. When was it used?

A. It was used from the latter part of 1937 or
1305 the spring of 1938 until the re-issue patent came out on January 6, 1942.

Q. That is the same as that one you have already referred to, is it?

A. That is correct.

Lindemann, patent No. 2,216,748 is owned by Perfex, deals with the lockout mechanism of both the constant and intermittent oil burner control. We have been using this structure since the last part of 1936.

The next is Tate, patent 2,254,983. It deals with constant ignition oil burner, primary control, developed some time prior to October, 1938.

Q. When was it put into use?

A. I don't—that particular model—I don't know just what year that one, corresponding to the picture in here, was brought out. I think it was probably as late as 1940, but I don't know just from looking at this hurriedly whether or not the claimed material in here deals with some of the other primary controls. There is always an overlapping.

Tate, patent No. 2,254,984. This deals with an oil burner primary control, and deals with the same type of control as that in No. 2,254,983.

Christiansen, patent No. 2,266,721. This patent deals with the thermal element and slip friction of an oil burner primary control and was developed and put into use by Perfex some time prior to October, 1938.

1306 Deubel, patent No. 2,269,443, deals with an oil burner primary control of either the constant or the intermittent ignition type, and was developed and used prior to October, 1938.

By Mr. Freeman:

Q. Don't you mean October of 1939, the filing date, instead of 1938?

A. October—there is a misprint there—it is 1938 on one page and 1939 on the other.

Mr. Freeman: Well, you can say it was used at or about the date of filing.

The Witness: That is correct. It was developed and put into use on or before the filing date of the application.

Hotchkiss, patent No. 2,313,072, deals with a thermal responsive device or oil burner primary control. This application was filed October 30, 1940, and the exact structure that is shown here is not being used in the primary controls that were sold. I don't know offhand whether the claimed structure deals with our present oil burner controls or not.

By Mr. Haycraft:

Q. Which one is that, Hotchkiss?

A. That is correct.

Next is the Malone patent No. 2,313,083. It deals
1307 with the thermal element and slip friction, oil burner primary controls. The exact structure here has never been put into commercial use.

Breese, patent No. 1,757,951, deals with a room thermostat and a method of getting a night set-back of the temperature automatic. We are operating under a license dating back to about 1939, as I remember it.

Q. Is that your No. 155?

A. No, that deals with the clock type thermostat.

Trial Examiner Sheppard: Clock?

A. Clock.

Kronmiller, et al., patent No. 2,171,272, deals with a room thermostat. It is owned by Minneapolis-Honeywell. We are operating under a license. I don't remember the date of that license, probably 1939. It may have been as late as 1940.

The next is Cunningham, patent No. 2,171,273. It also deals with a room thermostat. It is owned by Minneapolis-Honeywell. We are operating under a license, along with the previous patent.

Christiansen, patent No. 2,216,032, covers a special room thermostat, which is sold to one of the oil burner companies, included in the list here. The application was filed March, 1939.

Lindemann, patent 2,250,135, deals with a heater
1308 type room thermostat. The application was filed in January, 1938, owned by Perfex.

Lindemann, patent No. 2,269,776 covers room thermo-

stat and was developed and put into use prior to Sep-
1309 tember, 1938. Cunningham, Patent No. 2,290,944, owned by Perfex, and was filed in September, 1938, dealing with a room thermostat.

By Mr. Haycraft:

Q. Now, referring to Respondent's Exhibit No. 23, do you have that there?

A. Yes.

Q. Now, is there any way that you can tell what percentage of the volume of total sales in the first column consisted of a thermostat or the limit controls or the primary controls?

A. No, I cannot.

Q. And this was 1937, and what part of the time of the year did you first manufacture and sell primary controls?

A. I think it was, as I remember it, that constant ignition primary control came out in the fall of 1936.

Q. That is the 5200?

A. That is correct.

Q. When did the 5500 come out?

A. I had that material in Milwaukee. It is my recollection it was the spring of 1937.

Q. What patents were you operating under with the 5200 and 5500?

Mr. Freeman: Read the question, please.

(The question above referred to was read by the reporter.)

1310 Trial Examiner Sheppard: Do you remember that, Mr. Tate?

Mr. Freeman: I take it, Mr. Haycraft, when you say "patents," you also mean applications for letters patent, which covers the period just preceding the actual issuance of the patent?

Trial Examiner Sheppard: Can you tell us that?

The Witness: Well, it would be the things that we worked out ourselves, and certain of these patents in here—

By Mr. Haycraft:

Q. (Interposing.) I was just wondering if you recall any of those patents that were as early as 1936.

A. Patents themselves were earlier.

Q. Yes, I was asking whether they were that early?

A. Oh, a number of these patents are earlier than 1936.

Mr. Freeman: You are talking about filing dates, Mr. Haycraft.

By Mr. Haycraft:

Q. When were they used? When was the use made of the devices?

A. Well, the ones we are operating under licenses. I don't know when there was use made of them by other people.

Q. I mean by your firm. You took your license out as of what time, the licenses that you took out on those
1311 primary controls?

A. Well, our licenses, I don't remember the exact dates of them. I gave the approximate dates as I went through these patents.

Q. Do you recall, for instance, what you sold to the Electrol Company in 1937, what the items were?

Trial Examiner Sheppard: You can refer to that exhibit there, Mr. Tate.

A. I wouldn't know what the items were. I guess it would be mostly limit controls and thermostats, because they manufacture a large percentage of their own primaries, or did at that time.

By Mr. Haycraft:

Q. As a matter of fact, you didn't sell them any primary controls in 1937, did you?

A. I didn't check the record the last few days, and I don't have any sheet before me showing that or setting that forth.

Q. Do you know what you sold, principal sales, to the Burner Parts?

A. I have no breakdown on any of the sales here.

Q. What is your recollection as to what you sold Timken in 1937?

A. Timken bought some of the 5200's, but I don't believe very many constant ignition; and then the 5500 came along later. They didn't buy many of those. They bought the 5520.

1312 Q. Weren't the bulk of the sales limit controls, pretty much?

A. In 1937, I think that is correct.

Q. Was it the bulk of their sales? What about 1938, would that be true of that year, too?

A. I think they were buying some primaries in 1938. That is my recollection.

Q. But they continued to buy these extra sets of limit controls in substantial amount?

A. That is correct.

Mr. Freeman: I would like to suggest to the Examiner that this type of examination has already been indulged in by Mr. Haycraft when he examined both Mr. Luthe and Mr. Tate, and I refer to the record, pages 369 and '70, where Mr. Luthe testified that Timken in 1936 sold about $10,000 worth of controls and in 1937 about $37,000 worth of controls, including primary controls and limit controls.

Then Mr. Tate himself testified on pages 438 to 440, that there were sold to Timken in 1937 11,000 units, in 1938 10,000 units, in 1939, 21,000 units; total sales in each year being roughly 3¼ to 4 times the unit sales.

Mr. Haycraft: What I am trying to do is get a breakdown, if he has it. I have some of that in from the Timken end of it.

Trial Examiner Sheppard: I had a recollection, 1313 Mr. Tate, that you gave us some information along that line in the other hearing.

By Mr. Haycraft:

Q. You are not able to break down any of these figures?

A. No, I have no breakdown on them, no. I haven't.

Mr. Haycraft: That is all.

Trial Examiner Sheppard: Anything further?

Mr. Freeman: One question.

Redirect Examination by Mr. Freeman.

Q. There has been some discussion as to whether or not Cleveland Steel Company had a signed contract with your company for the year 1939, and I would like to have you check your records and tell us.

A. Yes, we have a signed contract with Cleveland Steel for the year 1939.

Trial Examiner Sheppard: Have you got the exhibit number there?

Mr. Haycraft: 44.

Trial Examiner Sheppard: Referring to Exhibit 44.

Mr. Freeman: That is all.

Trial Examiner Sheppard: Anything else?

Mr. Haycraft: That is all.

Trial Examiner Sheppard: All right, Mr. Tate, I thank you, sir. You are excused.

(Witness excused.)

1314 Trial Examiner Sheppard: We will adjourn now until 2:00 o'clock.

(Whereupon, at 12:30 p. m., a recess was taken until 2:00 p. m., this day.)

1315 Afternoon Session 2:00 p. m.

Trial Examiner Sheppard: All right, gentlemen, come to order. Proceed, Mr. Freeman.

Mr. Freeman: Mr. J. W. Owens, will you take the stand?

Mr. Snyder: Mr. Examiner, I wonder if I could interject myself at this time? I think it would probably be as good a time as any.

Trial Examiner Sheppard: Will you state your name for the reporter?

Mr. Snyder: Erwin C. Snyder, attorney for Mr. Owens.

Mr. Freeman: You mean attorney for Mercoid Corporation?

Mr. Snyder: Yes, Mercoid Corporation. My firm is Nicholson, Snyder, Chadwell & Faderburg.

Trial Examiner Sheppard: And you are attorney for Mercoid?

Mr. Snyder: Yes.

Trial Examiner Sheppard: All right, go ahead.

Mr. Snyder: I have here a subpoena duces tecum which has been addressed to Mr. Owens, as vice president of the Mercoid Corporation, asking that he bring with him copies of contracts, with a long list of customers, and a 1316 price list, discount sheets, and other data showing the various prices at which Mercoid Corporation offered and sold such controls to the oil burner manufacturers named during the years 1937 to 1941, inclusive.

It is our contention that this calls for a confidential sort of information that the respondent in this case is not entitled to, and we would like to have this set down for argument at some later date. We are not prepared today. We have been just called into the matter and we are not prepared to argue at this time.

Mr. Freeman: This was served on November 5th, and

it is a rather late date to come in and make an objection, just because you haven't been consulted.

Mr. Snyder: We have an objection just the same, and we wish to express it to you and, if necessary, to the Commission in Washington, because we don't think this kind of information should be requested of a competitor.

Trial Examiner Sheppard: Is this a subpoena by the Federal Trade Commission?

Mr. Snyder: It is issued by the Federal Trade Commission.

Trial Examiner Sheppard: And regularly served upon Mr. Owens?

Mr. Snyder: And regularly served upon you?

Mr. Owens: Yes.

1317 Mr. Snyder: You can set it down for argument on Saturday morning, or something like that.

Trial Examiner Sheppard: I don't know as there is anything you can argue before me.

Mr. Snyder: Then we would like to argue it before the Commission in Washington.

Trial Examiner Sheppard: Of course, the Examiner can't pass on the materiality or relevancy of the testimony until it is presented before me. I haven't anything to pass on, don't you see?

Mr. Snyder: Of course, the fact that it calls for all this confidential information is something.

Trial Examiner Sheppard: I will call you to the stand, Mr. Owens.

J. W. OWENS was thereupon recalled as a witness for the respondent and, having been previously duly sworn, testified as follows:

Direct Examination.

Trial Examiner Sheppard: You testified here before, didn't you, last time?

The Witness: Yes, sir.

Trial Examiner Sheppard: Your name is J. W. Owens?

The Witness: Yes.

1318 Trial Examiner Sheppard: Your address?

The Witness: The home address, 4448 North Mozart Street.

Trial Examiner Sheppard: Miss Reporter, let the record show that Mr. J. W. Owens has already been sworn

in this case and appears again under subpoena of the Commission issued on behalf of the respondent in this case.

Now, Mr. Freeman, you can proceed.

By Mr. Freeman:

Q. You are the same J. W. Owens that testified in behalf of the Commission in this case?

A. Yes.

Q. And you were served with a subpoena on or about November 5, 1943, that is, a subpoena duces tecum, asking you to produce contracts that you had with any one of the 88 companies mentioned in the subpoena for the years 1937, 1938, 1939, 1940, and 1941, is that correct?

A. That is correct.

Q. Will you produce any of the contracts that your company entered into with any one of the 88 companies mentioned in the subpoena for the years 1937 to 1941, inclusive?

A. Will I produce them?

Q. Yes.

A. Not willingly.

1319 Q. Will you produce them in response to the subpoena issued by the Commission in this case?

Mr. Snyder: I object to this procedure, your Honor. I have stated that we wished to argue the validity of this subpoena with the Commission.

Trial Examiner Sheppard: That is all right, Mr. Attorney, but I just want to make something; Mr. Freeman wants to have a record also that you can go up to the Commission on. We have got to have some record on it.

Mr. Snyder: We have a subpoena.

Trial Examiner Sheppard: Go ahead.

By Mr. Freeman:

Q. Do I understand, then, that at the present time you refuse to produce any of the contracts called for in the subpoena, in accordance with the Commission's subpoena issued to you?

A. On advice of my attorney, yes.

Q. Have you prepared and do you have here the price list, discount sheets, or other data showing the various prices at which Mercoid Corporation offered and sold such controls to said oil burner manfacturers during the years 1937 to 1941, inclusive?

A. I have.

Q. You have them here?

A. Yes.

1320 Q. Will you produce them?

A. I can't do it.

Q. I am asking you whether you will make available to me in behalf of the respondent the prices, discount sheets, and other data which you have secured or prepared in connection with the subpoena issued by the Commission.

A. They are all confidential and I don't feel that I can do it, that I can take that action, without taking it up with the members of the executive committee of my company and our attorney.

Q. You have had knowledge of this subpoena since November 5th, correct?

A. That is correct.

Q. And you knew on November 5th that you were to appear here on November 29th, is that correct?

A. That is correct.

Q. Now, what did you do by way of taking up with the executives of your company the request with respect to the information on the subpoena?

A. I took the matter up. They suggested I go ahead and get the stuff together. I did that, and when I appeared here I found out we were laboring under a misapprehension.

Q. Just what was that misapprehension?

A. We thought that this information was for the Federal Trade Commission and not for a competitor.

1321 Q. Well, you knew that you were subpoenaed by the Commission for and in behalf of the respondent in this case?

A. I know, but I am not sufficient of a legal light to just glance at the thing and know who the respondent was. I didn't pay any attention to that part of it and I didn't know until I got here this morning what the set-up was.

When I found out what it was, I just decided I couldn't go ahead and divulge this information. Now, I am ready and willing to go ahead and answer any questions on the general set-up. I am not trying to be stubborn or arbitrary, but I only feel that the information as to prices is confidential, and, getting into your company's hands, could be used against us at some future date and to our disadvantage.

Trial Examiner Sheppard: On these prices, Mr. Owens,

aren't these prices back yonder in sort of ancient history now? Aren't they back in 1938, 1939, and 1937?

The Witness: That is true, Mr. Sheppard, but we are supposed to know—our competitors are supposed to know their capabilities, and I am relying upon my own judgment as to whether or not the divulging of these prices from 1397 to 1941 would be detrimental to the best interests of the Mercoid Corporation, and the answer is it would be detrimental.

By Mr. Freeman:

1322 Q. Do I understand you to say that you would, if you produced the prices, the price lists, discounts, and the like, you were ready and willing to give that information to the Commission?

The Witness: That is true.

By Mr. Freeman:

Q. Now, I understand, then, that you are not willing to testify with respect to prices, discounts, and the like in this hearing for and in behalf of the respondent?

A. Yes and no. I am willing to testify up to a certain point and try to give you all the information I can along the lines that you are seeking, but I do not like to disclose the price set-up or prices to individual customers. I am ready to go along and give you what information I can on the price set-up, if that will be of any assistance.

Trial Examiner Sheppard: Well, Mr. Freeman, I think we can proceed with Mr. Owens on all those things that he voluntarily wishes to testify on.

Mr. Freeman: No, I want him to respond specifically to this subpoena that was issued by the Commission, and I am telling you that if he does not I am going to appear before Judge Barnes, in accordance with the law, and ask that he be produced here with these records. This subpoena has been issued by the Commission and we want him to respect it. He could have applied before.

1323 Mr. Gilpatric: He could have applied any time before this. He could have applied at any time in the last three weeks.

Trial Examiner Sheppard: My suggestion is to go into everything you want that he says he will testify to.

Mr. Freeman: There isn't any reason for doing this piecemeal.

Trial Examiner Sheppard: All right, go ahead.

The Witness: May I ask for a change of venue from Judge Barnes—

Mr. Snyder: (Interposing.) Mr. Owens, let me take care of that.

Trial Examiner Sheppard: Any other questions?

By Mr. Freeman:

Q. Will you tell us the names of the companies that you have contracts with for the year 1937?

Mr. Snyder: I object.

Mr. Freeman: I am not asking for contracts now. I am just asking for the names of the companies.

Mr. Snyder: That testimony may be of a confidential nature and I haven't had an opportunity to go over this with my client.

Mr. Freeman: Confidential nature doesn't have any standing in a case before the Federal Trade Commission. This man came here and testified, he told us what his 1324 sales were to certain of these companies. Haven't we the right to get as much information as the Commission does?

Mr. Snyder: You certainly had a right to cross-examine him at the time.

Mr. Freeman: No, we didn't. It was improper cross-examination then, and you weren't here.

Mr. Snyder: You cross-examined him, didn't you?

Mr. Freeman: Not with respect to any contracts, because that was improper cross-examination.

Trial Examiner Sheppard: We will leave it to you, Mr. Owens, if you will give that information asked in the last question.

The Witness: I will reserve the right to; if my attorney permits me to go ahead, I will reserve the right to refuse to answer any questions bordering on what I would consider confidential information.

Trial Examiner Sheppard: All right, that will be all right.

Mr. Snyder: You have to be the judge of it, Mr. Owens. I haven't gone over it with you.

Trial Examiner Sheppard: You have a right to answer or not in regard to any question that you have the advice of your counsel on.

The Witness: I didn't bring a lot of photostatic copies.

1325 Mr. Snyder: I think we ought to discuss this matter a little.

Mr. Freeman: Would you like to recess?

Mr. Snyder: Yes.

Mr. Freeman: If it is agreeable with the Major.

Trial Examiner Sheppard: All right, I will give you half an hour. Is that all right?

Mr. Snyder: Yes.

Trial Examiner Sheppard: Let the record show a recess of half an hour to accord the attorney an opportunity to talk to Mr. Owens.

(A recess was taken.)

Trial Examiner Sheppard: All right, on the record. Proceed, Mr. Freeman.

By Mr. Freeman:

Q. Did you have a contract with the Acme Tool & Gauge Company in the year 1937?

A. We submitted prices to that company that year.

Q. Will you give me the prices which you submitted to that company in the year 1937 for a primary and control of the intermittent ignition type?

The Witness: Will you repeat that question?

Trial Examiner Sheppard: Read the question.

(The question above referred to was read by the reporter.)

1326 Mr. Freeman: Provided, of course, that you did quote that on an intermittent ignition type primary.

Mr. Snyder: Your Honor, I object to this line of examination. We are objecting to giving any confidential information to the respondent here.

Trial Examiner Sheppard: I am just leaving it up to Mr. Owens. You can put in your objection.

Mr. Snyder: We object to it.

Trial Examiner Sheppard: I am just leaving it to Mr. Owens, and any question he doesn't want to answer, he needn't.

By Mr. Freeman:

Q. What is the answer?

A. No.

Q. That is, you did not quote the company, or do you refuse to give me the information?

A. I refuse to answer the question on the grounds that it is confidential information.

Q. And did you quote that company in the year 1937 for a room thermostat for use in connection with the oil burner controls?

Mr. Snyder: Same objection.

A. I believe there was a price included on the room thermostat.

By Mr. Freeman:

1327 Q. And I take it that you likewise refuse to give me that information?

A. Yes, I refuse to divulge any prices.

Q. And likewise you quoted Acme Tool & Gauge Company in the year 1937 for limit controls?

A. That is correct.

Q. And I take it that you likewise refuse to disclose the price quoted?

A. That is correct.

Mr. Snyder: I don't see any reason for going ahead with this examination.

Trial Examiner Sheppard: You have to make a record for the Commission.

Mr. Snyder: That doesn't make any difference. If the respondent argues he is entitled to this information, he should go before the Judge and argue it then.

Trial Examiner Sheppard: That is true.

Mr. Snyder: And I don't care to have my client make any further record in this matter.

Trial Examiner Sheppard: All right, just inform him what you want him to do.

Mr. Snyder: Mr. Owens, I wish you wouldn't answer these questions at all.

Mr. Freeman: Are you telling him not to comply with this subpoena of the Commission?

1328 Mr. Snyder: You heard what I said.

Mr. Freeman: I am just asking you a question. You can be civil about it, can't you?

Mr. Snyder: Well, I stated my reasons. You are asking for confidential information which you aren't entitled to, and are using this proceeding against you as a subterfuge to get the confidential information of my client.

Mr. Freeman: I have asked him questions specifically with respect to the year 1937, and referring to Acme Tool & Gauge Company. There are some 88 names. Are you telling him now not to answer any of the questions of a similar nature directed to the other 87 companies?

Mr. Snyder: That is right.
Mr. Freeman: For the year 1937?
Mr. Snyder: That is correct.

By Mr. Freeman:

Q. And you, Mr. Owens, you refuse to give me any information with respect to the other 87 companies enumerated in the subpoena for the year 1937?

A. Upon advice of counsel, I refuse to divulge any confidential price information.

Q. I wish you would answer my question. Do you refuse to give me any of the prices at which you sold or quoted any of the 88 companies mentioned in the subpoena for the year 1937?

1329 A. That is correct.

Q. You refuse?

A. Upon advice of counsel, I refuse.

Q. And I take it that you then refuse to give me any prices at which you sold or quoted any of the 88 companies for the year 1938?

A. That is correct.

Q. And likewise for the year 1939?

A. That is correct.

Q. And likewise for the year 1940?

A. That is correct.

Q. And likewise for the year 1941?

A. That is correct.

Q. Will you tell me whether or not you had a contract with Acme Tool & Gauge Company in the year 1937?

A. We submitted prices.

Q. Do I understand that answer to mean that you had no contract, no annual contract?

A. I couldn't tell you at this time whether or not there was a—I couldn't tell you whether or not we even submitted contracts to be signed or if we just sent them prices. I do have a record that we sent them prices in that year.

Q. Did you have a contract for the year 1937 with the Alida Manufacturing Company?

1330 A. I have a record that we sent—that we quoted prices to Alida Manufacturing for that year.

Q. For the year 1937?

A. 1937.

Q. Did you check your records to determine whether or not you had an annual contract with that company in the year 1937?

Mr. Snyder: Mr. Examiner, whether he had a contract with these people or not is confidential information and I don't see why a competitor, even before the Federal Trade Commission, has a right to use the processes of the Federal Trade Commission to get that information from them.

Trial Examiner Sheppard: Well, that is a matter of argument, too, Mr. Snyder.

Mr. Freeman, it seems to me that there is no use to pursue this any further. If you gentlemen want to do something about the subpoena, I will give you time in which to do it.

Mr. Freeman: I still want to ask him some questions.

By Mr. Freeman:

Q. I hand you a sheet of paper which I will have marked for identification as Respondent's Exhibit 73.

(The document referred to was marked Respondent's Exhibit 73 for identification.)

1331 By Mr. Freeman:

Q. (Continuing.) Entitled Form 11—rather Form 11, entitled "Oil Burner Manufacturers Prices—1938, for Manufacturers requiring from one to fifty sets", and will ask you whether or not that is a photostatic copy of your price list for the year 1938.

Mr. Snyder: Don't answer, Mr. Owens. Let me see the exhibit, please.

I object to the witness identifying this.

A. Upon advice of counsel, I refuse to answer.

Trial Examiner Sheppard: Instruct him not to answer any question you don't want him to answer.

Mr. Snyder: All right.

By Mr. Freeman:

Q. Will you tell us whether or not your company in the year 1938 put out price lists in accordance with the one that I handed you, marked Respondent's Exhibit 73 for identification, generally, to the trade?

A. Upon advice of counsel, I refuse to answer.

Q. Do I understand that you have here in your possession a price list for the year 1938, similar to Form 11, which I have reference to as Respondent's Exhibit 73?

A. On advice of counsel, I refuse to answer.

Q. Your company did put out a price list under the heading Form 11, did it not, in 1938?

1332 A. Upon advice of counsel, I refuse to answer any questions connected with prices.

Q. You did testify in behalf of the Commission as to the lowest price which you charged for a combination fan and limit control, is that correct?

A. That is correct.

Q. And in that case you didn't reserve your right of confidential information in connection with the prices when the questions were asked of you by Mr. Haycraft, counsel for the Commission, is that correct?

A. I found no connection between that particular occasion and the matter under discussion at the moment. That covered one single item that I answered every one of your questions on, and your associates' questions, clearly and to the best of my ability.

Q. And I now hand you Form No. 32, oil burner manufacturers' prices for the year 1938 for manufacturers requiring 50 to 300 sets, which we will have marked for identification as Respondent's Exhibit 74.

(The document referred to was marked Respondent's Exhibit 74 for identification.)

Q. (Continuing.) And I take it that you likewise refuse to answer any questions with respect thereto?

A. That is correct. I refuse to answer.

Mr. Snyder: I object to the type of examination 1333 going on, Mr. Examiner.

Trial Examiner Sheppard: Mr. Freeman is just making a record to go into the court with. The witness will just answer the questions on advice of counsel, whatever they may be.

By Mr. Freeman:

Q. I now hand you a price list marked Form No. 33, oil burner manufacturing prices—1938, for manufacturers requiring 300 to 1,000 sets, which I will ask to have marked for identification as Respondent's Exhibit 75.

(The document referred to was marked Respondent's Exhibit 75 for identification.)

By Mr. Freeman:

Q. (Continuing.) And will ask you whether or not that corresponds to a price list put out by the Mercoid Corporation in 1938, to oil burner manufacturers.

A. On advice of counsel, I refuse to answer.

Q. And I now hand you a photostatic copy marked

Form No. 44, which I will ask to have marked for identification as Respondent's Exhibit 76.

(The document referred to was marked Respondent's Exhibit 76 for identification.)

Q. (Continuing.) And will ask you to state if it corresponds to a price list put out by the Mercoid Corporation for oil burner manufacturers requiring 1,000 to
1334 2,500 sets of controls during the year 1938.

A. On advice of counsel, I refuse to answer.

Q. And I now hand you Form No. 55, which I will ask to have marked for identification as Respondent's Exhibit 77.

(The document referred to was marked Respondent's Exhibit 77 for identification.)

Q. (Continuing.) And will ask you whether or not your company put out price lists corresponding to Form 55 during the year 1938 to all burner manufacturers requiring 2,500 or more sets.

A. On advice of counsel, I refuse to answer.

Q. I hand you Federal Trade Commission's Exhibit No. 7, and I will ask you to state whether or not it is a contract entered into by your company with the Cleveland Steel Products Company.

Mr. Haycraft: That is the respondent's exhibit, isn't it?

Mr. Freeman: That is right, Respondent's Exhibit 7.

By Mr. Freeman:

Q. And I ask you whether or not that is an original agreement between your company and Cleveland Steel Products Company.

A. Yes, it is.

Q. And your signature appears thereon?

1335 A. That is right.

Q. And likewise Respondent's Exhibit No. 8 is an agreement between your company and Cleveland Steel Products Company, is that correct?

A. This is a copy of our contract form for the year of 1938, but it wouldn't necessarily represent a contract between Mercoid and Cleveland Steel Products, because none of these contracts would become official without my signature.

Q. Well, you did send out to your customers contracts in form, words, and figures corresponding to Respondent's Exhibit 8, setting forth price lists for various controls in the year 1939, is that correct?

A. Yes, I will agree that it is.

Q. And did you send out similar contracts to more than one company?

A. Did we what?

Q. Did you send out similar contracts corresponding to Respondent's Exhibit 8 to more than the Cleveland Steel Products Company in that year?

The Witness: Will you read the question, please?

(The question above referred to was read by the reporter.)

A. Upon advice of counsel, I refuse to answer.

By Mr. Freeman:

Q. I now hand you Commission's Exhibit No. 53
1336 and I will ask you to look at particularly page 765 and tell us whether or not you had an agreement with Herco Oil Burner Company for the year 1938.

Before you answer that, keep in mind that is an exhibit that was introduced by the Mercoid Corporation as an agreement outstanding, even though it isn't signed. I will give you that for the benefit of your counsel.

A. Well, I couldn't tell from that, but I could look at my records to determine.

Q. Well, give us the information, then, from your records.

Mr. Snyder: Was this identified by him?

Mr. Freeman: Off the record.

Trial Examiner Sheppard: Off the record.

(Discusion off the record.)

Trial Examiner Sheppard: On the record. You may answer.

A. Yes, that is a copy.

By Mr. Freeman:

Q. So that even though the contract wasn't signed, that is, the one that we have here appearing in Commission's Exhibit 53, page 765, you did have a contract with that company?

A. Yes, sir.

Q. And as a matter of fact, on February 16, 1938, you received an initial order for 261 controls, is that correct?

1337 A. Well, I wouldn't know that.

Q. Isn't it a fact that you make a notation upon

your contracts with respect to the initial order that comes back with the contract?

A. I wouldn't remember that.

Q. Do you find such a notation, that is, with respect to 261 controls upon the contract with Herco for the year 1938, page 765 of Commission's Exhibit 53?

A. Well, it is on there, but I don't know anything about it.

Q. Isn't it a fact that you do not recognize a customer's contract, that is, where they signed the contract and returned it to your company, until after you receive an initial order, depending upon what form of contract you give the particular company, that is, whether it is a Form 11, Form 22, Form 33, Form 44, or Form 55?

A. Well, I can't think of any direct answer to that question, Mr. Freeman.

Q. Isn't it true that you have a minimum order requirement—that is, I am now speaking about the year 1938—for contract Form 11, of 25 units?

Mr. Haycraft: That is objected to as irrelevant and immaterial to the issues in this case.

Mr. Freeman: I am trying to get the information with respect to these contracts the hard way.

1338 Mr. Haycraft: I am submitting it is not a proper question in this case.

Trial Examiner Sheppard: I don't know.

Mr. Freeman: It has to do with contracts.

Trial Examiner Sheppard: The witness will give us the information. It may or may not fit into the picture. I can't tell yet.

Mr. Haycraft: Mr. Examiner, it is the same objection I raised to Mr. Tate's examination as to the set-up.

Mr. Freeman: This is a little different because it is directed to when the company, Mercoid, considers that it has an agreement. The mere signing of this paper means nothing until after the minimum order has come in.

Trial Examiner Sheppard: I will consider it in the general study of the case.

The Witness: Is there a question before the house?

Trial Examiner Sheppard: Read the question.

(The question above referred to was read by the reporter.)

A. Well, that question, I would consider, involves matters of a confidential nature, pertaining to the policy of

our company, and upon advice of counsel I will refuse to answer.

By Mr. Freeman:

1339 Q. And I take it, then, that you likewise will refuse to answer any questions that I might ask with respect to minimum order requirements for Forms Nos. 22, 33, 44, and 55?

A. I do, yes.

Q. I now hand you Sales Bulletin No. 41, dated January 14, 1938, directed to Sales Force, and will ask you to state whether or not it is a bulletin put out by the Mercoid Corporation as of about January 14, 1938, to the sales department of the Mercoid Corporation.

A. If you will tell me where you got this, Mr. Freeman, I might consider answering it.

Q. I am asking you whether or not your company sent out bulletins of that kind to the sales force?

A. I refuse to answer.

Q. Isn't it true that for the year 1938 you sent out published prices to a good many oil burner manufacturers, soliciting their business?

A. That would be a usual procedure.

Q. And all I am asking you now is to give me the prices at which you solicited business for the year 1938 from these companies.

A. Wouldn't you like it for 1939, 1940, and 1941 also?

Q. You bet I would.

A. Well, I refuse to divulge that information upon advice of counsel.

1340 Q. And I will ask you the same question during the years 1937—we have been talking about 1938—I will ask you the same question during the years 1937, 1939, 1940, and 1941, your company sent out published prices to the oil burner manufacturers throughout the country, price lists, did it not?

A. Yes, they were sent out to various oil burner companies and other trade classifications that we generally sent prices to the first of the year, whenever we got out a new catalogue.

Q. And you now consider such information confidential, although you sent them out to oil burner manufacturers in rather large quantities in the years 1937, 1938, 1939, 1940, and 1941, is that correct?

A. As far as a competitor is concerned, yes.

Q. I notice in your last answer you mentioned that you sent out price lists to oil burner manufacturers, and I think you said dealers or others?

A. I just said other classifications.

Q. What are these other classifications?

A. There are distributors, dealers, jobbers.

Q. And I take it that you have a different price set-up for dealers than you have for jobbers and different for jobbers than you have for manufacturers?

Mr. Haycraft: I object to that as irrelevant and
1341 immaterial.

Trial Examiner Sheppard: No, that has something to do with this entire set-up. I will let you answer that.

The Witness: May I have the question, please?

(The question above referred to was read by the reporter.)

A. Well, that goes again into the realms of confidential information and I won't be able to answer that.

By Mr. Freeman:

Q. But you do have different price set-ups?

A. I have just answered that question, Mr. Freeman.

Q. Will you tell me whether or not you considered Sears Roebuck a manufacturer or dealer or distributor, or what?

Mr. Haycraft: Objected to as irrelevant and immaterial.

Trial Examiner Sheppard: Yes, that objection will be sustained.

By Mr. Freeman:

Q. Will you tell us now what your low price was for combination fa. and limit control to Sears Roebuck, and the reason I am asking you that question is because it was touched upon by the Commission in its case when you voluntarily testified?

Mr. Haycraft: I will object to that voluntary testimony,
Mr. Freeman. He was called by the Examiner to
1342 testify, to help Mr. McCabe out.

Mr. Freeman: I will withdraw that voluntary part.

Trial Examiner Sheppard: Read the question.

(The question above referred to was read by the reporter.)

Mr. Haycraft: It is in the record. It is a matter of repetition.

Trial Examiner Sheppard: I think it has already been testified to.

Mr. Freeman: I just want to correct Mr. Owens, and I also want to correct Mr. Haycraft. It was Mr. Owens who testified with respect to what was sold to Sears Roebuck, on page 329 of the record.

Trial Examiner Sheppard: Yes, I think it is already in the record. I remember something about it.

The Witness: May I read it off here, because I have found out since that this was absolutely correct? I checked again afterwards.

Mr. Freeman: That is fine.

The Witness: The price to Sears Roebuck was $4.80.

"Q. At what time?

"A. In 1939.

"Q. In 1940?

"A. In 1940 the price was $4.75."

By Mr. Freeman:

1343 Q. Do you know what it was in 1938?

A. I may have that here. I am not sure that they bought any that year, Mr. Freeman

Q. Well, I am handing you a sheet of paper which we will mark for identification as Respondent's Exhibit 79.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

Mr. Freeman: Mark this as Respondent's Exhibit 79.

(The document referred to was marked Respondent's Exhibit 79 for identification.)

By Mr. Freeman:

Q. I hand you this sheet marked Respondent's Exhibit 79, entitled Sears & Roebuck Company, 1938, prices, and will ask you to check it, if you care to, in order to refresh your memory.

Mr. Freeman: We ask now that the sales bulletin No. 41 of January 14, 1938, be marked for identification as Respondent's Exhibit 78. That was referred to in previous testimony.

(The document referred to was marked Respondent's Exhibit 78 for identification.)

By Mr. Freeman:

1344 Q. Does that help you refresh your memory?

A. On advice of counsel, I refuse to answer.

Q. You mean the advice of counsel doesn't help you refresh your memory?

A. No.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Mr. Haycraft: Mr. Examiner, I wish to at this time point out that the testimony of Mr. Owens was upon being recalled with respect to this one particular item that Mr. McCabe had been asked about, and Mr. McCabe was unable to answer, and I recalled Mr. Owens for the purpose of getting that one particular item.

Mr. Freeman: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Freeman:

Q. Now, you do compete with Minneapolis-Honeywell for the sale of oil burner controls to oil burner manufacturers, do you not?

A. We do.

Q. And you compete with a set of controls comprising a primary control, a limit control, and a thermostat for use in connection with oil burners, do you not?

1345 A. We do.

Q. And likewise you compete with other control manufacturers, such as Penn Electric Switch Company and the Perfex Corporation, correct?

A. That is correct.

Q. And a set of your controls comprised of a primary, thermostat, and limit control, when installed on an oil burner, does substantially the same thing as a set of Penn Electric Switch controls, comprised of a primary, thermostat, and limit control?

A. But better.

Q. Much better?

A. Yes.

Q. And likewise your set of controls comprising these three that I have just mentioned were substantially the same as the three controls sold by Minneapolis-Honeywell, to-wit, a thermostat, primary, and limit control?

A. Same answer.

Q. Much better. And I take it that your company likewise is in competition with Perfex Corporation in its sale of limit controls, thermostats, and primaries for use in connection with oil burners?

A. We are.

Q. Same answer, would you make the same answer?

A. I say we are, yes.

Q. In the Cleveland Steel Products Company agreement, Respondent's Exhibit 7, there is mentioned a
1346 specific number of controls for the year 1939, is that correct?

A. Not entirely. If I were to say yes to your question, that wouldn't be actually what it says in that paragraph.

Q. Well, does it specify that the special—

A. Do you wish me to read what it says?

Q. No, let me read it. "The special net prices extended herewith by the company are based on the purchasers' 1939 control requirements, estimated to be 15,000 units."

A. That is correct.

Q. And that 15,000 was inserted by typewriter, correct?

A. That is right.

Q. And when you gave the prices to Cleveland Steel Products Company for the year 1938, you took into consideration Cleveland Steel Products Company's ability to use or purchase 15,000 units?

A. Are you speaking of 1938 or 1939?

Q. 1939.

A. Oh, pardon me.

The Witness: Will you read that question, now?

(The question was read by the reporter.)

Mr. Haycraft: That is objected to as irrelevant and immaterial, whether they took it into consideration.

Trial Examiner Sheppard: Well, it is a part of the same picture. I don't know. I will let the gentleman answer.

Mr. Haycraft: I wanted to make sure that Mer-
1347 coid isn't on trial.

Mr. Freeman: We will connect up all this testimony.

Trial Examiner Sheppard: If they don't I will strike it. I will let it go in, and if it isn't connected up, we will strike it.

Mr. Freeman: Just keep in mind we are doing this the hard way, now.

Trial Examiner Sheppard: Will you re-read the question.

(The question was re-read by the reporter.)

The Witness: Upon advice of counsel I will refuse to answer.

By Mr. Freeman:

Q. When your company extends a price for a set of controls to any prospective customer, you take into consideration the company's potential, do you not?

A. Anything bordering on the price or policy, upon advice of counsel, I must refuse to answer.

Mr. Haycraft: I object to that question as irrelevant and immaterial, too, Mr. Examiner.

Trial Examiner Sheppard: All right, let the record show it.

By Mr. Freeman:

Q. Did you give any company other than—or, 1348 did you give any company in the year 1939, a price for controls different from the price stated in Cleveland Steel Products Company agreement, Respondent's Exhibit 7?

Mr. Haycraft: Same objection.

Trial Examiner Sheppard: You may answer.

The Witness: Same answer. Any questions bordering on price or policy of the Mercoid Corporation, on advice of counsel, I refuse to answer.

By Mr. Freeman:

Q. Did you give out generally to the trade published prices in the year 1941 to any class of customers?

A. I believe I testified that we did send out prices, and I mentioned that to you before, I mentioned that once before, I answered that question.

Q. Do I understand that you refuse to produce any of those documents or price lists, or data sheets here at this trial, in response to the subpoena issued?

A. No, I have got them right here, but they are not for Minneapolis-Honeywell.

Q. Well, are they for the Federal Trade Commission in this case here?

A. The Federal Trade Commission can have access to them, but not a competitor.

Q. You have stated that you compete with Penn, Per-

fex, and the respondent here in the sale of oil burner
1349 controls, correct?

A. Correct.

Q. And isn't it true that price is a determining factor as to whether you get the business or Perfex gets the business, or Penn gets the business, or the respondent gets the business?

A. Not necessarily.

Q. What are the determining factors, then?

A. That depends upon the customer.

Q. What is that?

A. That depends upon the customer.

Q. Well, isn't it true that price is an important factor?

A. With some customers, yes.

Q. So that with some customers, where price is an important factor, the business goes to the company selling at the lowest price, isn't that correct?

A. Sometimes.

Q. What are some of the other factors that change the situation with respect to the manufacture or purchasing from some company at higher prices?

A. I don't believe I care to pose as an expert on that particular point.

Q. Can't you answer the question, Mr. Owens?

A. I did. I wouldn't care to pose as an expert on that point.

1350 Q. Then you refuse to answer the question?

Mr. Snyder: I believe, Mr. Examiner, that the witness has answered the question, that he didn't care to pose as an expert on this question.

Mr. Freeman: This isn't a question of an expert. I am asking what he knows, as a matter of fact, from his twenty years' or more experience in the control business.

Mr. Snyder: You are asking for a matter of opinion, Mr. Counsel.

Mr. Freeman: Based on twenty years of good, concrete knowledge, Mr. Haycraft, of the best kind.

Trial Examiner Sheppard: Okay, answer it any way you want to, Mr. Owens.

The Witness: I would consider that knowledge as something to be used for my own benefit, and not be divulged at this hearing.

By Mr. Freeman:

Q. You would give it to the Commission, but you refuse to give it to Minneapolis-Honeywell, is that correct?

1351 Q. Do you sell oil burner controls to the Aldrich Company of Wyoming, Illinois?

Mr. Haycraft: Objected to as irrelevant and immaterial. This company is involved in this case in no way.

Trial Examiner Sheppard: It hasn't been mentioned before.

Mr. Freeman: But, your Honor, we are charged here with violating the Robinson-Patman Act and we are trying to show we sell at a price to meet competition. How are we going to show we meet competition if we don't get the information from our competitors?

Mr. Haycraft: Get it from your customers.

Mr. Freeman: The Commission has said in a case recently that you have to show affirmatively you do these things to meet competition. We have to show it by the best kind of evidence.

Mr. Haycraft: I object to that. The best kind of evidence is the man who pays the price.

Mr. Freeman: The best evidence comes from the man who receives the dollar.

Trial Examiner Sheppard: Gentlemen, I will let him testify to that.

Mr. Haycraft: There isn't one scintilla of evidence to connect up that point to anything brought out by the Commission, in respect to the Aldrich Company.

1352 Mr. Freeman: I will change my question and ask you this:

By Mr. Freeman:

Q. I will ask you whether or not you sell controls to Williams Oil-O-Matic.

Mr. Haycraft: And that has already been brought out.

Mr. Gilpatric: I don't like to accept this ruling, your Honor, because this is our defense. We are putting in our defense to the charges in this case, Mr. Examiner. It certainly cannot be said that we are limited to ask questions only in regard to companies that were mentioned by the Commission in their case in chief. We are required to meet the charges in the complaint. I want to make it clear that we could go into every oil burner company in the country in meeting those charges.

Mr. Haycraft: That is where we are going to be at issue and we might as well be at issue right now, because it seems to me when the Commission rests its case, that is its case. You can't go all over the map or all over

the world to prove or disprove charges or allegations. You must disprove something we offered and not something we might have offered or thought about offering.

Trial Examiner Sheppard: All right, gentlemen, we will pass up that until we get to it. Whatever Mr.
1353 Haycraft brought out on the Commission's side, you will have perfect right to bring out on your side, but you are not limited to that entirely.

Mr. Freeman: Exactly.

Trial Examiner Sheppard: You have a right to put in additional defense upon a half a dozen different things, if you want to.

Mr. Gilpatric: That is what we are trying to do, but I think Mr. Haycraft is under the impression that we cannot question about anyone he did not choose to ask about—which is the silliest thing I ever heard of.

Mr. Haycraft: I want to make it clear, if that is your interpretation of my remarks, I will try it again and try to straighten it out for you. Here is the point. The Commission introduces certain testimony in evidence to prove an allegation of the complaint.

Trial Examiner Sheppard: That is right.

Mr. Haycraft: Now, it is no defense for them to say, "Well, we didn't do it here, or we didn't do it there, or some place else." You have to meet the evidence we submit and if we don't submit evidence to support these allegations, there isn't any case. But you go out and say, "We did not discriminate with Aldrich or John Jones", when there wasn't anything in our case at all about them.

That isn't going to help the Commission to decide
1354 the issues. The Commission wants to know whether or not the allegations and the evidence which we put in here in this record to support the allegations in the complaint is true.

Trial Examiner Sheppard: That is very true.

Mr. Haycraft: And you can't disprove it by saying you didn't do it with John Jones or Tom Smith.

Trial Examiner Sheppard: Suppose that is one issue brought out in the case by Mr. Haycraft, you will have a right to meet that issue, but in regard to all of the issues, you have got a right to bring out your own defense.

Mr. Freeman: And we are doing that right now.

Mr. Gilpatric: Mr. Examiner, let me point out that the issues in this case are not defined by the Commission's case. They are defined by the complaint. The complaint

didn't name any specific oil burner manufacturer. It just happened that Mr. Haycraft introduced certain of the quotations into the case. We have got to meet all of the allegations in the complaint, in general.

Trial Examiner Sheppard: It covers any incident Mr. Haycraft brings out or you bring out.

Mr. Gilpatric: We meet the charges leveled against us by the complaint, that is what we are on trial for.

Mr. Haycraft: I submit before we go to court to support any evidence the Commission has, it would
1355 have to have the evidence to support the allegations.

The point is this, Mr. Examiner, the Commission, through issuing a complaint which may be general in its terms, the Commission's attorney presents evidence to support the allegations of the complaint, which is specific evidence, taking up the date and all that sort of thing. We contend that the respondents should be confined to presenting evidence to disprove the proof. We offer evidence to support the allegations in the complaint. It isn't any defense for them to come here and say, "We did not do it here or there." If they can disprove the evidence we have offered, the case goes out the window.

You can't disprove our case or tend to contradict our case by testimony with respect to instances of corporations or customers that are not involved in our case in chief.

Mr. Gilpatric: Mr. Haycraft's statement has one basic fallacy in it, and that is what he has proven in support of the allegations in the complaint. Now, what we are endeavoring to show is that the Commission's case here has not fulfilled, carried out the allegations in the complaint, and we are entitled to go away beyond what he may have picked out as bits of evidence in the hope of proving his case.

Trial Examiner Sheppard: Well, after all, gentle-
1356 men, it is a matter of argument between you.

Mr. Gilpatric: It is a matter of our having a fair trial and having a right to put in a defense that we think is essential.

Trial Examiner Sheppard: The facts brought out by Mr. Haycraft will be presented to the Commission, and the facts submitted by you gentlemen will be presented to the Commission, and if there is sufficient to make a finding, they will do so.

Mr. Freeman: And when they make a finding, it is

a general finding. It isn't specific as to these specific companies Mr. Haycraft referred to and says we are now limited to.

Trial Examiner Sheppard: That is true. Now, Miss Reporter, will you read the question.

(The question was read by the reporter.)

A. You mean today?

By Mr. Freeman:

Q. During the period of 1937 to 1941.

A. Well, upon advice of counsel, I refuse to answer.

Q. And I take it you would refuse to answer a similar question with respect to the 88 companies enumerated in the subpoena?

A. That is correct.

Mr. Freeman: In the light of the last answer and
1357 the testimony of this witness with his refusal to answer or give any information with respect to the matters referred to in the subpoena duces tecum, we ask that this witness be kept under the jurisdiction of the Commission and that he be available when and if we want him back here.

Trial Examiner Sheppard: All right.

Mr. Freeman: And therefore, we will not examine further, until we can have a ruling as to whether or not Mr. Owens must respect the Commission's subpoena duces tecum or not.

Trial Examiner Sheppard: Well, I want some definite date to call Mr. Owens back before me again. I don't want it too general.

Mr. Freeman: Well, we would like to have him here tomorrow morning at 10:30.

Mr. Snyder: I don't think that is—

Mr. Freeman: And every other morning until we can release him. I want him under your jurisdiction.

Trial Examiner Sheppard: I will make an arrangement with Mr. Owens to come whenever you want him. I am sure he will do that.

Mr. Snyder: That is right.

Trial Examiner Sheppard: But I don't want to put him to any inconvenience at all, so, Mr. Owens, you hold yourself ready.

1358 Mr. Haycraft: How much advance notice do you need?

The Witness: Well, I will be in town until next—

well, the rest of this week. I will be away all next week.

Trial Examiner Sheppard: That will be sufficient.

Mr. Haycraft: Half an hour or an hour?

The Witness: I can get down here in thirty minutes.

Trial Examiner Sheppard: All right, you are excused until you hear from me.

The Witness: All right, thank you, Major.

(Witness excused.)

Mr. Freeman: But he is not excused from the subpoena.

Trial Examiner Sheppard: Excused until he hears from me.

Mr. Gilpatric: Calling Mr. Doucet.

Trial Examiner Sheppard: Have you got another witness?

Mr. Gilpatric: Yes, we have.

Mr. Freeman: Just for the purpose of the record, we have your name and address.

Mr. Snyder: Yes, Snyder.

Mr. Freeman: And may we serve any paper or notice upon you, as counsel for the Mercoid Company, in this case?

Mr. Snyder: Yes.

1359 E. J. DOUCET was thereupon called as a witness for the Respondent and, having been first duly sworn, testified as follows:

Direct Examination by Trial Examiner Sheppard.

Q. What is your name?

A. E. J. Doucet.

Q. Where do you live, Mr. Doucet?

A. 5900 Trumbull Avenue, Detroit, Michigan.

By Mr. Gilpatric:

Q. Will you state the company with which you are connected and your position in it?

A. Detroit Lubricator Company, Detroit, Michigan, general sales manager.

Q. Mr. Charles H. Hodges, Jr., is the president of that company, is he not?

A. That is correct.

Q. Do you know whether or not he was served recently

by mailing a copy of a subpoena duces tecum, issued in this case at the request of the respondent, Minneapolis-Honeywell Company?

A. Yes, I do.

Q. And you are appearing here today in place of Mr. Hodges?

A. That is correct.

Q. Mr. Doucet, the subpoena that I have referred 1360 to calls for, among other things, copies of contracts for the sale of automatic temperature controls for domestic oil burners, entered into by your company during the years 1939 through 1943, with a number of specified oil burner manufacturers. Has your company, in fact, entered into any such contracts?

A. No.

Q. Has your company, to your knowledge, made any sales of controls during those years I mentioned to any of the companies named in the subpoena?

A. No, they did not.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Gilpatric:

Q. During that period, you did, however, did you not, offer for sale thermostats, limit controls and fan and limit switches?

A. That is correct.

Q. Were those controls offered to oil burner manufacturers?

A. Yes.

Mr. Haycraft: Objected to unless it is restricted to those companies.

Trial Examiner Sheppard: I have been allowing it. I will let it go into the record.

Mr. Haycraft: I know, but I am going to continue 1361 my objections.

Trial Examiner Sheppard: Objection overruled. You can answer.

A. Yes.

By Mr. Gilpatric:

Q. Did you also offer controls of the types aforementioned to wholesalers and to dealers?

A. Yes.

Q. Did the prices at which those controls were offered to the three different classifications aforenamed differ, as between classifications?

A. Yes, they did.

Mr. Haycraft: Let the record show my general objection to all that.

Trial Examiner Sheppard: Oh, yes, the general objection will be shown, Miss Reporter.

By Mr. Gilpatric:

Q. In the case of sales to jobbers and dealers, what was the general basis of the prices on your company's controls? That is, were they list and discount, or net prices?

A. List and discount basis to wholesalers and dealers.

Q. Did the discounts vary, according to the quantities of controls purchased?

A. Yes, they did.

Q. What was the general nature of your com-
1362 pany's price structure on sales or offered for sale to oil burner manufacturers?

A. What was the structure?

Q. The general set-up of the price?

A. We based our prices in accordance with the potential of the customers.

Q. That is the total output of the burners and the total requirements of controls?

A. The total requirement of controls for that customer.

Q. And not the specific quantities of controls purchased from your company?

A. That is right.

Q. And did your company offer for sale and sell controls at different prices, in accordance with quantities of controls purchased by or in accordance with the customers' differing potential?

A. Repeat that question, please.

(The question was read by the reporter.)

The Witness: I wonder if you could simplify that question? It is a little involved.

Mr. Gilpatric: Yes, let me state it this way; did the price at which your company sold controls to oil burner manufacturers vary in accordance with the potential of the customer?

A. Yes, they did.

1363 Q. Did you have different brackets or classifications of prices?

A. Yes.

Q. Determined on that basis?

A. Yes.

Q. How many such brackets did you have during the years 1939 through 1941?

A. To the manufacturers, four different brackets.

Q. Were those prices net prices within the different brackets?

A. They were net prices wherever the controls were specified on those price sheets. Where the controls were not specified on the price sheets, they were on a list and discount basis.

Q. In my questions thus far, I have referred only to thermostats, limit controls, and fan limit switches. Did your company offer for sale to other than your parent company, American Radiator Company, any primary controls?

A. No.

Q. So you do not have any price structure for the sale of primary controls, other than the prices at which you charge the parent company?

A. That is right.

Q. In order for a particular oil burner manufacturer to have the benefit of a particular level of price, was
1364 he required to place any order for any specific quantity of controls?

A. We never had a contract from—such as has been discussed here, no, I would say not. We would take an order based on what we believed is the potential of the company for a period of a year.

Q. Not require that any specific quantity of controls be ordered?

A. No.

Mr. Gilpatric: That is all.

Mr. Haycraft: No cross-examination.

Trial Examiner Sheppard: Thank you very much.

(Witness excused.)

Mr. Haycraft: I move to strike all the testimony of this witness as irrelevant and immaterial, no probative value.

Trial Examiner Sheppard: The objection is overruled. I will give it probative value.

Mr. Haycraft: There is a motion to strike, your Honor.

Trial Examiner Sheppard: The motion to strike is denied, too.

Anything else?

Mr. Freeman: In view of the fact of our little episode with Jimmy Owens, we ask that we adjourn now until tomorrow morning.

1365 Trial Examiner Sheppard: Take an adjournment until ten o'clock tomorrow morning, Miss Reporter. We stand adjourned.

(Whereupon at 3:45 p.m., November 29, 1943, the hearing in the above entitled matter was adjourned.)

1366

Room 1123,
New Post Office Building,
Chicago, Illinois,
November 30, 1943.

Met, pursuant to adjournment, at 10:00 a. m.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Esq., Attorney for the Federal Trade Commission.

Messrs. Cravath, de Gersdorff, Swaine & Wood, by R. L. Gilpatric, Esq., and

Paul J. Chase, Esq., 15 Broad Street, New York, New York, and

Bair & Freeman, by Will Freeman, Esq., 135 South La Salle Street, Chicago, Illinois, Attorneys for respondent.

1367

Proceedings.

Trial Examiner Sheppard: Miss Reporter, you can convene the hearing pursuant to our adjournment yesterday.

MALCOLM E. HENNING was thereupon called as a witness for the Respondent, and having been first duly sworn, testified as follows:

Direct Examination by Trial Examiner Sheppard.

Q. Let us have your name, please.
A. Malcolm E. Henning.
Q. And your address?
A. Goshen, Indiana.

Trial Examiner Sheppard: All right, Mr. Freeman, you can proceed.

By Mr. Freeman:

Q. Your name is Malcolm E. Henning and you are a resident of Goshen, Indiana, and vice president of the Penn Electric Switch Company, is that correct?

A. That is correct.

Q. What is the business of the Penn Electric Switch Company?

A. The manufacture of automatic controls for oil burners, stokers, and refrigerators, air compressor, pneumatic water systems and, at the present time, many pieces
1368 of apparatus for the Navy and Army.

Q. How long has the Penn Electric Switch Company been in business?

A. A little more than twenty years.

Q. When did it start its manufacture and sale of controls for use in connection with the oil burner industry?

A. Early in the 1930's—'31 or '32, approximately.

Q. And that is about the time when you entered the employ of the Penn Electric Switch Company?

A. A little earlier than that—1927.

Q. In other words, you have been with the Penn Electric Switch Company since 1927?

A. That is correct.

Q. And about 1932, the Penn Company started in the manufacture and sale of the oil furnace controls?

A. That is correct.

Q. Now, when you started in the oil furnace control business, what was the over-all competitive picture at that time? Did you start in a new industry?

A. No, the heating industry was well established at that time.

Q. And when you say "heating industry", do you include the oil burner industry?

A. That is correct.

Q. Will you name some of the companies that were
1369 then in business, that is, when you started in 1932?

A. Minneapolis-Honeywell; The Mercoid Corporation; Detroit Lubricator.

Q. Did you make any survey or check-up as to what you might have to meet in a competitive way before you entered into the oil burner control industry?

A. To some extent.

Q. And what did you find, generally speaking, Mr. Henning?

A. We found the industry similar to others which we served, in that the picture was a reasonably competitive one and some of the companies were well entrenched and established.

Q. And what do you mean by "well entrenched and established"?

A. Companies like Mercoid and Minneapolis-Honeywell had been in the field for some time and their products were well known in the industry.

Q. When you say "well established," then you mean companies that had been in business for a long time?

A. That is correct.

By Trial Examiner Sheppard:

Q. You mentioned two companies, Mr. Henning. Were there any more in that category?

A. I mentioned three prior to that—also the Detroit Lubricator Company.

By Mr. Freeman:

Q. And when you entered into the oil burner con-
1370 trol business, what did you do to get your products in the field? That is, what did you do in order to sell your products?

A. The customary merchandising, by contacting prospective customers.

Q. Do you recall some of the early customers you contacted?

A. Yes, Century Engineering; Timkin; Gilbert & Barker; A. B. C.

Q. Williams Oil-O-Matic?

A. Williams Oil-O-Matic.

Q. Had you had some business dealings with some of these companies in other fields—namely, refrigeration—before you entered into the oil burner control business?

A. Some of them we had.

Q. Now, during these nine or ten years—that is, from the period of 1932, when you entered the oil burner control field, up to 1943—what has generally been the history of your business? What has its growth been?

A. Will you state that again, please?

Mr. Freeman: Will the reporter read it?

(The question above referred to was read by the reporter.)

A. We have had a steady growth during this period of time and we built up a million dollar business in the heating field during that period.

Q. By "In the heating field" you are again re-
1371 ferring to the oil burner control business?

A. Substantially, yes.

Q. That is a major portion of your heating business, is it?

A. That is correct.

Q. Have you run into any definite obstacles during the time you started—that is, from the time you started in 1932 up to 1941—that kept you from selling oil burner controls?

A. Nothing other than the usual competition that you would encounter in any other field.

Mr. Haycraft: I move to strike the answer, Mr. Examiner. There is no foundation laid that this witness is familiar with the obstacles that might be found in any other field. It is pretty general.

Trial Examiner Sheppard: Well—

Mr. Haycraft: There is no showing that he is familiar with any other field.

Trial Examiner Sheppard: I think he is competent to testify on a general line of competition that any business man would be called upon to meet in a field in which he is just entering. I think he is competent to do that. I think I will let him testify to that. You may add to it, Mr. Henning, anything that you may see fit, along that line.

The Witness: By "the field" I meant we are manufacturers also of refrigeration controls and we have, the
1372 refrigeration industry has a competitive field in this picture. We manufacture controls for pneumatic water systems and air compressors, and we have a competitive field in that picture and the competitors are not of a different character in those industries than they are in the oil burner industry.

By Mr. Freeman:

Q. In view of Mr. Haycraft's objection, I am now going to ask you whether you found any greater obstacle in your venturing into the oil burner control business than you found in the control business relating to refrigeration or the control business relating to pneumatic water softeners or air compressors, or any other business you were engaged in prior to the time you entered in the oil burner control business.

Mr. Haycraft: That is irrelevant and immaterial.

Mr. Freeman: I am just trying to qualify this man, in view of your remarks.

Mr. Haycraft: I object further, Mr. Examiner, be-

cause it is irrelevant and immaterial whether he found any obstacles in any other fields. We are not trying any other field. This trial is restricted to the oil burner business.

Trial Examiner Sheppard: I am particularly interested in the oil burner field.

Mr. Freeman: I am asking, Major, specifically whether he found any obstacles in this field other than what
1373 he found elsewhere. I am talking about the oil burner field.

Trial Examiner Sheppard: I am interested in the oil burner field.

Mr. Freeman: That is what I am interested in, too.

Trial Examiner Sheppard: I think the answer is sufficient. Go ahead. I think the answer is clear on that point.

Mr. Freeman: What is your ruling with respect to my last question?

Trial Examiner Sheppard: Read that last question, Miss Reporter.

(The question above referred to was read by the reporter.)

Trial Examiner Sheppard: Objection sustained as to any competition this man may have had outside of competition with the respondent. We don't want to go into any other fields.

Mr. Freeman: I don't think you mean that last remark, Major,—"outside of competition with this respondent"—because we want to show there is competition in this industry. It has to be directed to the oil burner industry, but we want to have a right to show that the Penn Electric Switch Company was in competition not only with the respondent but with the Mercoid, the Detroit Lubricator, and the many other companies in connection with the
1374 oil burner business.

Trial Examiner Sheppard: The oil burner business is what I am talking about. I don't care to go into the refrigeration business, but you can determine that in the oil burner business.

Mr. Freeman: I understood your remark to mean we could not show any competition other than what he was in competition with this respondent.

Trial Examiner Sheppard: Not at all. You misunderstood me. I just wanted to limit the competition to the same thing that these fellows compete with you on. Go ahead.

By Mr. Freeman:

Q. Now, Mr. Henning, we are talking now about the oil burner business.

Trial Examiner Sheppard: That is right.

By Mr. Freeman:

Q. I understood you to say that you had a steady growth from the time you started up until 1940, and, thereafter, you began to do war work. Right?

A. That is correct.

Q. And you mentioned the Detroit Lubricator, you mentioned the Minneapolis-Honeywell Regulator Company, and you mentioned The Mercoid Corporation. Have you had other competition during the period from 1932 to 1941, in connection with the oil burner business?

1375 A. We have, yes.

Q. Will you name such other competitors?

A. There is the Perfex Corporation and the White-Rogers Corporation.

Q. Do you actively compete with the companies that you have mentioned in the oil burner business?

A. Yes, we do.

Q. Then you make primary oil burner controls?

A. We do.

Q. Do you make room thermostats?

A. Yes.

Q. Do you make limit controls?

A. Yes, we do.

Q. And how long have you been making controls in sets—that is, the three important controls that usually are usable with an oil burner?

A. Approximately ten years.

Q. During those ten years you have called on the trade generally?

A. I have.

Q. Will you give us just a running list of some of the accounts that your company has called upon during the last ten years?

A. Well, the subpoena covers some 88 odd companies. We, of course, have called on those. That is not a

1376 very good cross section of the country. There are many others that would constitute the greater part of the volume, the field,—such as The Crane Company, and Gilbert & Barker Division of Standard Oil—The Delco Cor-

poration; The American Radiator and Standard Sanitary Corporation.

Q. Your company actually calls upon Delco, or called upon Delco?

A. That is correct.

Q. Have you solicited the sale of controls in that company?

A. We have.

Q. Now, when you talk about "controls," I just wish you would tell us, so that the record is clear, just what controls you try to sell Delco.

A. We try to sell them the necessary set of controls that constitute the required circuit for an oil burner.

Q. And what are those necessary controls?

A. They are a thermostat, safety limit control, and primary control.

By Trial Examiner Sheppard:

Q. You sold in sets, did you?

A. Whenever we could.

Q. Whenever you could.

By Mr. Freeman:

Q. And you solicited the sale in sets whenever you could?

A. That is correct.

1377 Q. Now, you mentioned The Crane Company. What controls did you solicit that company for?

A. The same type of controls.

Q. And would you make a like answer to the companies that you called upon from time to time?

A. That is correct.

Mr. Haycraft: That is leading, Mr. Examiner, and I move to strike the question and answer.

Trial Examiner Sheppard: Well, I don't know. I think in a case like this leading questions won't hurt. I will let both of you lead, because it brings out the answers so much quicker and I will let you go on.

By Mr. Freeman:

Q. Do you maintain salesmen in the field?

A. Yes, we do.

Q. And I take it, from your answers, that you personally called on the trade?

A. I do a good deal of that type of work.

Q. Did you do more of it in the early days, back in

1932, say, up to 1937, than perhaps you do at the present time?

A. That is correct.

Q. Well, you might tell me about how many salesmen you had when you started in the oil burner field, devoting your time to the sale of oil burner controls, in 1932 or 1933.

A. Well, when we started, we had a very small
1378 force, but at the present time, we operate branch offices in the metropolitan centers; such as Boston, Philadelphia, New York, Detroit, Chicago, St. Louis, Moline, Rock Island, Davenport, and we have offices, four offices, on the west coast—enough spots of that kind to cover the metropolitan centers, and then we operate a staff of capable merchandising engineers from our main office in Goshen, Indiana.

Q. And that growth has been constant from 1932 on up to the present time?

A. It has.

Q. Have you had any reverses or set-backs that caused a curtailment in any of your sales force at any time?

A. None whatsoever.

Q. And, of course, now your answers are directed to the oil burner control business?

A. That is correct.

Q. Now, Mr. Henning, you have been served with a subpoena by the Commission in behalf of the respondent here, which asked you to produce any contracts that your company may have entered into with some 88 enumerated companies in the subpoena. Hake you made a check of your records?

A. Yes, we have.

Q. And you have produced a number of contracts—that is, photostatic copies or carbon copies—and I would like to have you just run through the list and give
1379 me the names of the companies that your company had contracts with during the years 1937 to 1941.

A. Well, now, this only comprises those which we had from 1938 to 1941. I have a list, however, here of those which we also had in 1937. The reason for that is that our files are only retained for a five-year period, and the 1937 records are not complete. I had to draw the information from our sales cards, which we keep for a great number of years, and I have the photostatic copies of contracts for 1938 to 1941, inclusive.

Q. So that the record is clear, then, Mr. Henning, I wish you would run through the list of names which appear in that subpoena, and tell us which ones your company had an agreement with in the year 1937.

A. Century Engineering Corporation.

Q. By the way, Mr. Henning, would you just as soon tell us about the sales that you had with Century Engineering Company in 1937?

A. Well, it amounted to $18,333.86, according to the record, and it comprised a master or primary control of the continuous ignition type, and the customary safety switch and thermostat.

Q. That is, it comprised a set of controls?

A. That is right. I called on that company personally and I am quite familiar with the set-up.

Q. Well, go on now and give us, continue with the
1380 company for the year 1937 that you had contracts with.

A. Harrison Sales Company, Seattle.

Q. Well, give us your sales to that company in round figures.

A. $4,491.00. The Heil Company.

Q. Of Milwaukee?

A. Milwaukee, Wisconsin, $3,598.00. Pan American Engineering Corporation, Berkeley, California, $819.00. Rossoe Manufacturing Company, Seattle, Washington, $9.08. Yorke Oil Burner Corporation, $412.72.

Q. While we are talking about the year 1937, can you give me, in round figures, your sales to Williams-Oil-O-Matic for oil burner controls for the year 1937?

A. $194,810.00.

Q. Also, do you have any notation as to your number of units you sold Timkin Company in Detroit for the years 1935 and 1936?

A. Yes, I have.

Q. Will you give me the 1935 and 1936 units of sales?

A. In 1935 there were 2,313 units. In 1936, there were 1,779 units.

Q. Now, for the year 1937, you might give me the sales for Electrol.

A. Electrol, $12,153.70.

Mr. Haycraft: Is that Electrol?

1381 Mr. Freeman: Electrol.

Mr. Haycraft: 12,000 what?

Mr. Freeman: $12,153.70.

By Mr. Freeman:

Q. Now, did you personally call on Electrol?

A. Yes, I did.

Q. And what controls did you sell to Electrol back in 1937?

A. We sold them primary—a special control which they applied to their own stack switches, but they also bought along with it thermostats and limit switches.

Q. Am I correct in my understanding that Electrol used a stack switch employing high voltage?

A. That is correct.

Q. So you sold Electrol thermostats and limit switches, together with some parts that went into the Electrol home made primary?

A. That is correct.

Q. I might ask at this time, has your company continued to call on Electrol from 1937 on up to date—or at least up to 1941?

A. Up until 1941, we did.

Q. And you have made sales annually to that company?

A. Yes.

Q. And substantially the same type of controls; thermostats, limit controls and a portion of the primary?

1382 A. Substantially so.

Q. Now, Mr. Henning, I think we have covered the year 1937. You now have photostatic copies of agreements that were entered into by your company through the years 1938 to 1941, inclusive, with some of the specific companies enumerated in the subpoena. Will you refer to them?

A. Well, Century Engineering. Here is a contract for 1938. Another one for 1939. A contract for 1940, a contract for 1941.

Mr. Freeman: We offer in evidence as Respondents' Exhibit 80-A, 80-B and 80-C the Century agreement for 1938; as Respondents' Exhibit 81-A, 81-B and 81-C, the Century agreement for 1939; as Respondents' Exhibit 82-A, 82-B, 82-C, 82-D, 82-E, 82-F, the Century agreement for 1940; and as Respondents' Exhibit 83-A, 83-B, 83-C, 83-D and 83-E, the Century agreement for 1941.

Trial Examiner Sheppard: All right. Any objection to those?

Mr. Haycraft: No, sir.

Trial Examiner Sheppard: Let the Exhibits, Respond-

ents' Exhibits 80 to 83, inclusive, be accepted into the record.

(The documents referred to were marked RESPONDENT'S EXHIBITS 80-A, 80-B, 80-C; 81-A, 81-B, 81-C; 82-A, 82-B, 82-C, 82-D, 82-E, 82-F; 83-A, 83-B, 83-C, 1383 83-D and 83-E and received in evidence.)

By Mr. Freeman:

Q. Now proceed, Mr. Henning, with respect to the other photostatic copies of the agreements here produced.

A. Contract with the Harrison Company for 1938; another in 1939.

Mr. Freeman: We offer in evidence as Respondent's Exhibit 84-A, 84-B and 84-C the 1938 agreement with Harrison Sales Company; and as Respondent's Exhibit 85-A, 85-B and 85-C, the agreement for 1939 with Harrison Company.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let the exhibits, 84 and 85, be accepted in the record.

(The documents referred to were marked RESPONDENT'S EXHIBITS 84-A, 84-B, 84-C; 85-A, 85-B and 85-C and received in evidence.)

By Mr. Freeman:

Q. Well, now proceed, Mr. Henning.

A. The Heil Company, in Milwaukee, Wisconsin, 1938.

Mr. Freeman: We offer as Respondent's Exhibit 86-A, 86-B and 86-C the agreement with The Heil Company for the year 1938.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: No objection.

1384 Trial Examiner Sheppard: Let it be accepted.

(The document referred to was marked RESPONDENT'S EXHIBIT 86-A, 86-B and 86-C and received in evidence.)

The Witness: The Hoban Manufacturing Company, 1939 agreement.

Mr. Freeman: That we will also offer in evidence as Respondent's Exhibit 87-A, 87-B and 87-C, the Hoban agreement for the year 1939.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let it be accepted.

(The document referred to was marked RESPOND-

ENT'S EXHIBIT 87-A, 87-B and 87-C and received in evidence.)

The Witness: The Master Oil Burner Company, Seattle, Washington, for the years 1938 and 1939 and 1941.

Mr. Freeman: We also offer in evidence Respondent's Exhibit 88-A, 88-B and 88-C, the Master agreement for 1938; as Respondent's Exhibit 89-A, 89-B and 89-C, the Master agreement for the year 1939; and as Respondent's Exhibit 90-A, 90-B, 90-C, 90-D and 90-E, the Master agreement for the year 1941.

Trial Examiner Sheppard: Any objection, gentlemen?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let it be accepted.

(The documents referred to were marked RE-
1385 SPONDENT'S EXHIBITS 88-A, 88-B, 88-C; 89-A, 89-B, 89-C; 90-A, 90-B, 90-C, 90-D, 90-E and received in evidence.)

The Witness: The Montag Stove and Furnace Company, Portland, Oregon, for the year 1938.

Mr. Freeman: We offer as Respondent's Exhibit 91-A, 91-B and 91-C the Montag agreement for the year 1938.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let it be accepted.

(The document referred to was marked RESPONDENT'S EXHIBIT 91-A, 91-B and 91-C and received in evidence.)

The Witness: '39, '40 and '41.

Mr. Freeman: So that the record is clear, you have now handed me agreements with Montag for the years 1939, 1940 and 1941, is that correct?

A. That is correct.

Mr. Freeman: We now offer in evidence as Respondent's Exhibit 92-A, 92-B and 92-C the Montag agreement for the year 1939; as Respondent's Exhibit 93-A, 93-B, 93-C, 93-D, 93-E, the Montag agreement for the year 1940; and as Respondent's Exhibit 94-A, 94-B, 94-C, 94-D and 94-E the Montag agreement for the year 1941.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let it be accepted.

1386 (The documents referred to were marked RE-SPONDENT'S EXHIBITS 92-A, 92-B, 92-C; 93-A, 93-B, 93-C, 93-D, 93-E; 94-A, 94-B, 94-C, 94-D, 94-E and received in evidence.)

By Mr. Freeman:

Q. I might ask you, Mr. Henning. I have referred to these agreements by their calendar years, but you start with the date of the sales agreement for your fiscal year; am I correct in my statement that these agreements were made from time to time and they run for a year or a period of twelve months?

A. They run for twelve months, and they usually start from the date of the signature of acceptance. This is the date we issue them from our own typewriters and dispatch them, and when the recipient signs them, it becomes a running distribution from that period.

Q. So that my reference to the Montag agreement for 1941—Respondent's Exhibit 94-A, through E, inclusive—covers in fact, the period starting December 26, 1941, and running for twelve months, is that correct?

A. Correct. That is all explained, the details are explained on the back of the contract.

By Trial Examiner Sheppard:

Q. I am interested to know, Mr. Henning, if that is a common occurrence among all the men in your industry.

A. I think it is, Major.

1387 Q. They start when it is executed?

A. Yes. In other words, if we draw up this agreement and put a date on it, it really isn't a contract until the other man signs it, and then he signs it and returns it to us. We okay it, put our signature on and put the date on, and it becomes effective as of that date.

Trial Examiner Sheppard: I think the record is clear on that. Thank you, sir.

Mr. Haycraft: I would like to ask a couple of questions on that point, if I may.

Trial Examiner Sheppard: All right, you may.

By Mr. Haycraft:

Q. Do you usually negotiate your contracts in December?

A. I beg your pardon?

Q. Do you usually negotiate your contracts in December for the next year?

A. Well, that has been generally the desire, but if you happen to get a contract in the middle of the year, then, of course, it would run twelve months from that time. And if you will note the dates on these, they are all over the

map. The next one is August, here is one for September, the next one is February, and the next one is March, and here is one in January, so it depends when we get to the customer, and if he is willing to go with us from that period on, we draw the contract whenever we can and it is
1388 drawn for a twelve-month period from that time. But your thought is right, we would like to get as near the fiscal year as we can, but that is not always possible.

Trial Examiner Sheppard: You can't always do it.

The Witness: That is correct.

By Mr. Haycraft:

Q. When you mention the 1941 agreement, that was negotiated in December, 1941, but the sales made during 1941 were really under the 1941 agreement. That would be right, I see. Just so that is clear is all.

Mr. Freeman: That is what I wanted to bring out when I referred to the calendar year.

By Mr. Freeman:

Q. Now, Mr. Henning, will you proceed on with the other agreements you have brought here.

A. Micro-Westco, Incorporated, Bettendorf, Iowa. Now, for example, that was dated in August and signed in September.

Trial Examiner Sheppard: I see.

The Witness: Micro-Westco, 1938. I might mention one significant thing about these two. They are both dated in 1938, one in August and one in September. The second nullifies the first, for the reason that the customer was willing to commit himself for a greater quantity and entered into a new agreement a month later for a larger amount of controls and a lower respective price.

1389 Mr. Freeman: We offer in evidence as Respondent's Exhibit 95-A, 95-B and 95-C the Micro-Westco agreement having date of August 22, 1938 on its face; and as Respondent's Exhibit 96-A, 96-B, 96-C, 96-D and 96-E the Micro-Westco agreement having on its face the date of September 26, 1938.

Trial Examiner Sheppard: No objection to it?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let it be accepted in evidence.

(The documents referred to were marked RESPOND-

ENT'S EXHIBITS 95-A, 95-B, 95-C; 96-A, 96-B, 96-C, 96-D, 96-E and were received in evidence.)

The Witness: Pan American Engineering Company, Berkeley, California, for the years 1938 and 1939.

Mr. Freeman: We offer in evidence as Respondent's Exhibit 97-A, 97-B, 97-C and 97-D the Pan American agreement for 1938; and as Respondent's Exhibit 98-A, 98-B and 98-C the Pan American agreement for 1939.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let it be accepted.

(The documents referred to were marked RESPONDENT'S EXHIBITS 97-A, 97-B, 97-C, 97-D; 98-A, 98-B, 98-C and received in evidence.)

The Witness: The Roscoe Manufacturing Com-
1390 pany, Seattle, Washington, for the year 1939.

Mr. Freeman: And we offer in evidence as Respondent's Exhibit 99-A, 99-B and 99-C the Roscoe agreement for 1939.

Trial Examiner Sheppard: Any objection to that?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let it be accepted.

(The document referred to was marked RESPONDENT'S EXHIBIT 99-A, 99-B and 99-C and received in evidence.)

The Witness: Standard Products Manufacturing Company for the year 1941, Philadelphia, Pennsylvania.

Mr. Freeman: We offer in evidence as Respondent's Exhibit 100-A, 100-B, 100-C, 100-D and 100-E, the Standard Products agreement for 1941.

Trial Examiner Sheppard: Any objection to that?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let it be accepted.

(The document referred to was marked RESPONDENT'S EXHIBIT 100-A, 100-B, 100-C, 100-D and 100-E and received in evidence.)

The Witness: Brown Oil Burning Equipment Co., Cambridge, Massachusetts, for the year 1941.

Mr. Freeman: I might say, with respect to the last agreement referred to by the witness Henning, that it is a typewritten copy, as distinguished from a photostatic copy,
and I trust that my good friend, Mr. Haycraft, will
1391 have no objection to using it?

Mr. Haycraft: Not if he says it is a true copy.

By Mr. Freeman:

Q. That is a true copy, isn't it?

A. It is a true copy.

Mr. Freeman: Okay.

The Witness: We were shy on our tabulation and asked our office late last evening to send it to us this morning and the photostatic machines were not available last night and we made that copy.

Trial Examiner Sheppard: I think that is sufficient. We will mark it 101.

Mr. Freeman: I just wanted to make my record. We offer as Respondent's Exhibit 101-A, 101-B and 101-C a copy of the 1941 agreement with the Brown Oil Burning Equipment Company.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let it be received in evidence.

(The document referred to was marked RESPONDENT'S EXHIBIT 101-A, 101-B and 101-C and received in evidence.)

By Mr. Freeman:

Q. Now, Mr. Henning, I believe you stated that these are agreements that you had with companies men-
1392 tioned in the subpoena after checking your records? That is correct?

A. Correct.

Q. Now your company, as a matter of fact, has other contracts with other companies?

A. That is correct.

Q. And I take it, also, that that is the usual practice of your company, to enter into agreements with oil burner manufacturers with respect to their purchase of oil burner controls?

A. Wherever possible.

Q. That is, you start out on the premise that you want to sign up each company, if you possibly can?

A. That is correct.

Q. And, I take it, from the explanation you made this morning, that you do sell controls though in quantities to companies that do not sign a contract?

A. That is correct.

Q. And is that true of the Williams-Oil-O-Matic that

you mentioned selling some $200,000 worth of controls to in the year 1937?

A. Yes, it is.

Q. That is, you mad those sales without any contract?

A. Right.

Q. Does the contract that you entered into set forth the terms and conditions of sale, your patent guar-
1393 antee, your warranty and things of that kind?

A. Yes, they do.

Q. And does the contract set forth the conduct or relationship that is to exist between your company and the purchaser for the twelve-month period covered by the contract?

A. Yes.

Mr. Haycraft: Mr. Examiner, it seems to me the contracts will speak for themselves.

Mr. Freeman: Well, off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Trial Examiner Sheppard:

Q. Mr. Henning, I would like to ask just one question here. I would like to have some sort of explanation why it is that some of your customers, in selling your products to them, you make a formal agreement, as evidenced by these agreements we have just been talking about, and in others you don't have any agreement.

A. Well, there is a reluctance on the part of some manufacturers to give us an agreement and we do everything we possibly can to encourage them to do it, but some manufacturers just won't respond to our efforts.

Trial Examiner Sheppard: They would rather be free, so that if they would prefer to buy they could buy
1394 where they want, and not be bound up by a contract to one.

The Witness: I would rather imagine that that is their feeling, although it has been our experience that even though they sign contracts, they do buy from others.

By Trial Examiner Sheppard:

Q. I was going to ask you; that although you do make a contract specifically with some manufacturers, they do buy on the outside, too?

A. Yes, they do.

By Mr. Freeman:

Q. Well, Mr. Henning—

Trial Examiner Sheppard: (Interposing.) Just one more question.

By Trial Examiner Sheppard:

Q. With a great many of the customers, that you evidently have in the sale of your products, do you have more that buy without contracts, or do you have more that buy after going into a contractual relationship with you?

A. From the tabulation of customers, I would say that we have more that buy with contracts, but from the dollar and cents volume, I believe we have more that buy without contracts.

Trial Examiner Sheppard: I see. Go ahead, Mr. Freeman.

By Mr. Freeman:

1395 Q. Might you give, in round numbers, your sales to Williams Oil-O-Matic for the years 1938, 1939, 1940 and 1941?

A. 1938 was $73,154.00; 1939, $61,939.00; 1940, $70,445.00; 1941 was $80,093.00.

Q. Mr. Henning, there was some mention here about agreements and you have testified that you endeavor to get them wherever you can. Do you solicit agreements from oil burner manufacturers where you know that they have signed up an agreement with some other company?

A. Yes, we do.

Q. Do you personally know, or have you actually run into situations where, of your own knowledge, you knew that the company had an agreement with one of your competitors, and likewise signed up an agreement with your company?

A. Yes, we have.

Q. And that is of your own knowledge?

A. That is of my own knowledge.

Q. And, following along now on that line, do you know of any instance that you personally have run into where you solicited an agreement, secured the signature of the company on an agreement, where the oil burner manufacturer had an agreement with the respondent, Minneapolis-Honeywell?

A. Yes.

Q. Now, Mr. Henning, I note on the agreements that

you have attached certain net prices, price schedules
1396 for Penn heat controls, and I am going to ask you whether or not the schedules attached to all these agreements that you have here bear the same selling prices or net prices for a thermostat, a primary and a limit control?

A. They do not.

Q. I note on these agreements, in certain places, that "The net prices listed below (or the net prices as shown on the attached schedule) which shall be considered as part of this agreement"—and then a blank space, and in such blank space there is typewritten a key number. Will you tell me what that key refers to?

A. That key or quote number refers to the attached net price which we have extracted from our general price to manufacturers—our general sheet—and attached it to the order—such prices representing the quotations that the customer is entitled to, based on his potential volume.

In the lower left hand corner will be noted, for example, on Brown Oil Burning Equipment—

Q. (Interposing.) Respondent's Exhibit 101.

A. —a quote number H-501-F.

Q. L.

A. Yes, L, rather. The "H" stands for heating, and the last digit of the numbers "501" indicates that it is bracket 1 from our general price sheets.

Q. And the particular quote number which you
1397 just gave, H-501-L, appears in typewritten form upon the face of the agreement?

A. That is correct.

Q. And the prices then to the Brown Oil Burning Equipment Company for the twelve-month period, or for the year period, following the date of the contract, is then governed by the price schedule attached to the agreement? Correct?

A. That is correct.

Q. Now, I note upon the Rossoe agreement—Respondent's Exhibit 99—the key number or quote number, as you refer to it, of H-502, and will you explain what that means.

A. The only difference between that number or numbers and the one previously referred to on Respondent's Exhibit 101, is the last digit "2", which indicates bracket 2 prices.

Q. And the schedule of net prices attached to the agreement is likewise code H-502, is that correct?

A. That is correct.

Q. So that from the code number, can you tell us what bracket or price structure your company extended to Rossoe Manufacturing Company during the period covered by the agreement, Respondent's Exhibit 99?

A. Yes, we can.

Q. And what is that?

A. Bracket 2.

Q. That Rossoe Company had the benefit of a
1398 lower or higher price for oil burner controls than Brown Oil Burning Equipment Company?

Trial Examiner Sheppard: Exhibit 101.

Mr. Freeman: 101, Exhibit 101, thank you.

A. Rossoe received a lower figure than the Brown Oil Burning Equipment Company.

By Mr. Freeman:

Q. So that the higher the digit number, the lower the net price for controls?

A. That is correct.

Q. Now, I find on Respondent's Exhibit 96—the agreement with Micro-Westco—the quotation inserted in typewriting "8-504" and I will ask you to state what that means.

Mr. Haycraft: Mr. Examiner, may we have it understood that I have an objection to all this line of examination with respect to the bracket set-up, the internal arrangement, and so forth.

Mr. Freeman: I am not asking for bracket set-up. I am asking for the net prices, the prices that the respondent has to meet.

Mr. Haycraft: I would like to get my objection into the record. It seems to me we are wasting a lot of time here. It doesn't make any difference how that company makes up those prices. They are there. The fact is evidenced by the
figures in here and the prices are here at which they
1399 sold.

Mr. Freeman: Do you want a four-thousand-page brief with complete analysis or explanation, or do you want this witness to proceed to explain?

Mr. Haycraft: You can have your brief. I don't care what your brief contains.

Trial Examiner Sheppard: Go ahead. I think possibly this will be the last of that line.

Mr. Freeman: No, I have some more and I am going

to offer to prove it if you say we can't put it in. I think it is important. How are we going to know the prices we have to meet? You have accused us of setting prices and extending discriminatory prices and how can we combat that if we don't get our competitors in and bring it out before the Commission.

Mr. Haycraft: Here are the prices right here. Each one of these exhibits he is putting in shows the period covered and the prices on the various items. Now, what he is doing is showing that there is a difference between this man and another man and another man in the internal set-up. What difference does it make? What they have got to meet is the prices each one of the customers were charged.

Trial Examiner Sheppard: Go ahead, Mr. Freeman. I will let you put in your case.

Mr. Haycraft: May it be understood that I have 1400 an objection to all that?

Trial Examiner Sheppard: Yes, let the record show your objection.

Mr. Freeman: I might also add in connection with some of these contracts, this company does business not only in connection with the oil burner controls, but also upon refrigeration controls and they are then keyed on the same contract, or form, by R, which designates refrigeration; and with some of their explanation, God only knows what sort of prices you will refer to, when you get ready to argue the case.

Mr. Haycraft: Don't judge my ability by your own. Don't worry about that.

Mr. Freeman: I don't.

Trial Examiner Sheppard: Go ahead, gentlemen. Go ahead.

By Mr. Freeman:

Q. Then the key number, H-504, refers to another price structure?

A. Bracket 4, yes.

Q. And any of these quotations upon the agreements—that is where they are quoted with any letter other than H—are not applicable to oil burner controls?

A. That is correct.

Q. Now, Mr. Henning, would you give us, from 1401 the years 1937 to 1941, your lowest prices for oil burner controls—and by "oil burner controls", I

mean sets consisting of primary, limit control and thermostats—give us the prices first upon those sets where the primary is of the intermittent ignition type.

Mr. Haycraft: That is objected to, unless it is restricted to the 88 companies or any company that was brought out in the Commission's case in chief, like the Williams-Oil-O-Matic. That is perfectly proper, because that was referred to in the Commission's case, but I submit, Mr. Examiner, that they are not meeting any issues unless they do bring you quotations for the companies where we offered to show there was discriminatory or there were restrictive clauses in the agreement.

Mr. Gilpatric: Mr. Examiner, the complaint in the case —which I think we all agreed defines the issues,—charges this respondent with price discrimination generally throughout the industry of manufacturing controls; and also alleges that that discrimination affects competition among control manufacturers and also manufacturers of oil burners generally, without any reference to Williams Oil-O-Matic or the 88 companies that Mr. Haycraft referred to in his case.

Now, we are entitled, under the Act, first of all, to show that the Commission hasn't proven that the discrimination alleged affects competition. And one of the ways we
1402 can show that is to show that our prices are above the prices of our competitors, so that whenever we discriminate, it can't hurt their sales of controls.

Secondly, we are entitled to show, under Section 2 (b) of the Act that where we did discriminate those prices were made to meet equally low prices of competitors.

Now, on both of those defenses, the price structures of our competitors, not the details throughout, but the general price levels which Mr. Freeman has asked for, are relevant and, therefore, we feel we are entitled to this kind of exhibit. We had this exhibit in the case of Mr. Tate and a similar exhibit was introduced, through him, for the Perfex Corporation.

Trial Examiner Sheppard: All right, go on, Mr. Freeman. Put on your case as you see fit.

Mr. Freeman: I might ask that question again, so that we have it clear.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. I want just the lowest prices that you extended for a set of controls, where the set included the primary of the intermittent ignition type.

Mr. Haycraft: We offer the further objection, even in the face of the explanation made by counsel for the respondent, that unless it was made to a customer of
1403 the respondent and on a certain date, of a certain type of control, and the respondent charged a higher price for a comparable control, there is no relevancy and no materiality to this case.

Mr. Freeman: Will you concede that the respondent charged a higher price, Mr. Haycraft?

Mr. Haycraft: Just a moment. Even accepting the premise, which I don't accept, but for the sake of argument, supposing that you are entitled to go out here now and pick out any customer and say, "We sold at a higher price to this customer than our competitor", it seems to me that if that is going to be their defense, eliciting testimony of this kind, it should be confined to those instances where the respondent sold to a customer at a higher price than a competitor sold, in order to bring it before this Commission. What interest can the Commission have in any other instance? So that, as a basis for this question, there should be a foundation laid—that the customer he is talking about now was quoted a price lower than the respondent's price. Otherwise it has no place in the case.

Mr. Gilpatric: Mr. Examiner, in answer to that, you might say we are simply at the threshold of our case. How are we going to connect up our testimony and show these prices have a bearing on our prices if he is going to object from here straight on out.

1404 Trial Examiner Sheppard: I will let this testimony go in, and if it isn't connected, we will let it go out. I realize that and I am going to let you proceed on that basis.

The Witness: Well, the lowest price which we quoted on a set of controls consisting of a thermostat, limit switch and primary control—

By Mr. Freeman:

Q. Of the intermittent ignition type.

A. —of the intermittent ignition type, during the year 1937 was $15.73. In the year 1938, $14.53. In the year

1939, $14.65. In the year 1940, $14.30. In the year 1941, $14.30.

Q. Now, Mr. Henning, can you give us the low price for the years 1937 to 1941, with respect to a set of controls, where the primary was of the constant ignition type?

A. Yes, I can. For the year 1937, $14.51. For the year 1938, $13.55. For the year 1939, $13.65. For the year 1940, $12.55. For the year 1941, $12.55.

In the last two years, we had two continuous ignition primaries and had another quotation on a different type per set, consisting of a thermostat, limit switch and primary control of the continuous ignition type, of $13.30 for the year 1940, and $13.30 for the year 1941.

Q. I note that you have two prices for constant
1405 ignition in 1940 and 1941, and only one price—that is one price for the years 1940 and 1941 in connection with intermittent ignition. Do you have any explanation?

A. I just explained that. Let the young lady read it to you.

(The answer above referred to was read by the reporter.)

The Witness: What I explained was that we had two continuous ignition type controls during the years 1940 and 1941. We gave the respective prices of the two different types.

By Mr. Freeman:

Q. I understand that and I would still like to have you tell me whether or not you planned on having just a single type of primary of the intermittent type for the years 1940 and 1941, or had you planned on likewise coming into a second form?

A. It was our intention to bring out another intermittent ignition control for the years 1940 and 1941, but the war effort intervened with our usual procedure.

Q. Had you actually made plans to bring out any other primary of the intermittent ignition type?

A. Yes, we had.

Q. Would the set then have sold at a price equal to your $14.30 set, or higher or lower, what are the facts?

1406 A. It would have been lower.

Mr. Haycraft: Objected to, Mr. Examiner, what it might have been.

Mr. Freeman: I am asking—

Mr. Haycraft: (Interposing.) Let's stick to what actually happened.

Mr. Freeman: I think we are entitled to explain it, Mr. Examiner, which we are doing now.

Mr. Haycraft: When the war effort came on, how could that possibly be a defense in this case? Certainly not. The prices that the respondent had to meet were in existence. What somebody might have done has no bearing on the issues.

Mr. Freeman: Mr. Haycraft, I just happen to know that whenever any of these companies—whether Penn or Perfex or Minneapolis-Honeywell—plan on coming out with any new control, they tell that to their prospective customer long in advance of the time that the control comes into the scene, and they tell them it is going to be of a lower price.

(To witness.) Have I stated that correctly, Mr. Henning?

The Witness: That is substantially the way it is.

Mr. Haycraft: You certainly can't urge that as a defense in violating the Robinson-Patman Act.

1407 Mr. Freeman: Is that correct, Mr. Henning?

The Witness: That is the fact.

1408 Trial Examiner Sheppard: We will take a five-minute recess.

(A short recess was taken.)

Trial Examiner Sheppard: On the record, please. We will proceed now.

Mr. Freeman: We offer in evidence as Respondent's Exhibit 102 a tabulation of prices extended to the oil burner industry by the Penn Electric Switch Company for the years 1937 to 1941, inclusive.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: Let me see it.

May I ask the witness a couple of questions about it?

Trial Examiner Sheppard: Yes.

By Mr. Haycraft:

Q. Are these prices reflected in the contracts that have already been identified and received in evidence, or are these prices different from those?

A. No, sir, these are reflected in the contracts referred to.

Q. The two numbers, 672 and 670, those are the pri-

mary, one for the intermittent ignition and the other one for the constant ignition, is that correct?

A. That is correct.

Q. And the price, for instance, in the column 1409 under this one, under Roman numeral I, which is the first column with the figures, the set price is $21.08, that is, for the 672, and below that the 17.85, that is the constant ignition set price?

A. That is right.

Mr. Haycraft: I have no objection, Mr. Examiner.

Trial Examiner Sheppard: Let the Exhibit 102 be received.

Mr. Haycraft: I suggest you mark it some way to indicate just what it is.

Trial Examiner Sheppard: Give a little description of it, Mr. Freeman.

By Mr. Freeman:

Q. Mr. Henning, I have marked upon the tabulation that has been here referred to as Respondent's Exhibit 102 for identification, the words "Penn Electric net prices to manufacturers." That is correct, is it not?

A. That is correct.

Mr. Freeman: And we offer as Respondent's Exhibit 102 the tabulation entitled "Penn Electric net prices to manufacturers."

Trial Examiner Sheppard: Let it be accepted.

(The document heretofore marked for identification RESPONDENT'S EXHIBIT 102, was received in evidence.)

1410 By Mr. Freeman:

Q. In addition to the tabulation or schedule attached to some of the agreements that you have here produced, I note that on the face of some of the agreements you have prices. What did they refer to? And I am showing you now the agreement with Master Oil Burner Company, dated January 10, 1939.

Mr. Haycraft: What is that exhibit number?

A. They refer to thermostats, limit switches, and primary controls.

By Mr. Freeman:

Q. And the document that you are referring to is Respondent's Exhibit 89?

A. That is correct.

Q. So that in some cases the prices were quoted on the schedule and in other cases on the face of the agreements themselves, is that correct?

A. Yes. The reason for that was merely for convenience because in most cases the customer was only interested in the three controls tabulated on the front of the agreement, but for his convenience, in case he should order miscellaneous controls, we always attached the general price sheet in order to facilitate time and correspondence.

Q. Now, Mr. Henning, I note upon the Brown Oil Burner Equipment agreement, Respondent's Exhibit
1411 101, the term "their requirements." What did that mean to you, or why was that inserted?

A. Well, it meant their requirements of Penn switches in accordance with the tabulation of controls as listed in the price schedule attached.

Q. And I notice upon Exhibit 98, by way of example, the words "their requirements of heating controls." What did that mean?

A. That meant heating controls as per the tabulation attached.

Q. Did that mean all of their controls to the exclusion of purchasing any controls from any of your competitors?

A. No.

Q. And I notice upon Respondent's Exhibit 99 the notation "100 or more sets of Penn heating controls." What did that mean?

A. It meant just what it said.

Q. Did your customers know that when they signed up an agreement with you they were free to purchase controls from other companies?

Mr. Haycraft: That is objected to, Mr. Examiner, what his customers knew. This man can't testify.

Mr. Freeman: I will withdraw the question.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

1412 Q. From your calling on the trade and your actual soliciting of orders for controls and the signing up of these contracts, have you ever had any conversations with customers about their right to purchase controls from other companies?

Mr. Haycraft: Objected to as irrelevant and immaterial.

Trial Examiner Sheppard: I will let you answer the question.

A. Yes, we have.

Trial Examiner Sheppard: Just give me your experience on that.

By Mr. Freeman:

Q. Go right ahead, Mr. Henning.

A. Well, it would be obvious, if you were in this business, that there comes a time in the selling of equipment such as an oil burner that customers and dealers will insist upon other makes of controls aside from what may be standard with a manufacturer.

The manufacturer in other circumstances will buy whatever is required to satisfy his dealer organization. Generally speaking, he may be purchasing the lion's share of his controls from one company, to benefit by the better price involved in quantities, but he almost invariably reserves the right to purchase anything required to keep his dealer organization intact and satisfied. And it
1413 is a common thing to discuss with manufacturers that situation, and I know of none that don't buy whatever they want, even though they may be contracting for the lion's share of their controls from some one manufacturer.

Mr. Freeman: Does that answer the question, Major?

Trial Examiner Sheppard: Yes.

By Mr. Freeman:

Q. Do you know of some companies that standardize on different manufacturers' controls, or perhaps different types of burners?

A. Yes, I do.

Q. Will you give us some of those companies?

A. Well, Century Engineering, in that list, Century Engineering Corporation, Cedar Rapids, Iowa, standardize on our controls, and the name plates were imprinted with their name rather than our own, but we know that they also signed contracts with other competitors at the same time they had standardized on Penn products, for the reason which I explained to the Major.

Q. Well, do you know of some company that purchases your controls as a standard on a DeLuxe burner, or one type of burner, and then controls from another company for another type burner?

A. I recall that Timken did that.

1414 Q. You know, do you not, that Penn controls are standard with William Oilomatic?

A. They were during the years 1937 to 1941, as far as I know.

Q. And you know, however, that Williams Oilomatic does purchase a lot of controls from other companies?

Mr. Haycraft: I object to that as a leading question, Mr. Examiner. That is no way to prove his case. If he wants to call someone from Williams Oilomatic, let him do it.

Trial Examiner Sheppard: Be a little careful about that. I hoped to be broad on those things, but if there is too much of it I may not be.

Mr. Freeman: I will withdraw that question.

By Mr. Freeman:

Q. Mr. Henning, do you sell all of the controls for oil burners used by Williams Oilomatic?

A. We did not during the years 1937 to 1941, inclusive.

Q. Do you know of your own personal knowledge of the use by Williams Oilomatic Company of controls made by other companies?

A. Yes, I do.

Q. Will you give me the names, if you can, of some of your competitors who sell Williams Oilomatic?

A. The Mercoid Corporation and Minneapolis-

1415 Honeywell both sold a reasonably good percentage of controls to the Williams Oilomatic Company during the years of 1937 to 1941, inclusive, while the Williams Oilomatic Company was standard with respect to Penn products.

Q. Your prices that you extend to oil burner manufacturers and extended to any of the 88 companies mentioned in the subpoena were made upon what basis?

A. Made on two bases: One, potential; and another, where a customer desired to enter into an arrangement to purchase a fixed number of controls.

Q. And that was the determining factor in extending a particular price to a particular customer?

A. That is correct.

Mr. Haycraft: I object to the form of the question; besides it is leading, and I don't know what he refers to. He has referred to two factors. It is leading and misleading, both.

Trial Examiner Sheppard: Well, the witness has already answered the question. It is more or less a repetition.

By Mr. Freeman:

Q. What do you mean by "potential" as a factor?

A. The estimated quantity of controls that an oil burner manufacturer could use over a twelve months' period.

Q. Now, after—

1416 Trial Examiner Sheppard: Is that the estimate of the manufacturer or the estimate of the customers?

The Witness: It is the estimate of the manufacturer.

Trial Examiner Sheppard: That is what I thought.

The Witness: And the customer generally discussed, we usually discussed it and arrived at some figure which they thought they could use, based on their past years' experience.

Trial Examiner Sheppard: It is a figure that is come to by negotiation?

The Witness: That is right.

By Mr. Freeman:

Q. Now, Mr. Henning, after you sign up a contract of the kind that you have here produced this morning, with a customer, where the customer is going to standardize on your controls, is your selling problem ended when you receive the contract?

A. It gets worse. It hasn't ended. Our problem is to keep the product sold, and the easiest problem is to sell it. The major problem is to keep it sold.

Q. So that we have it definitely in the record, what do you mean by keeping it sold, keeping your product sold?

A. It has been our experience that when we are successful in having a manufacturer of oil burners stan-

1417 dardize upon our product, as soon as our competitors learn about it they usually bear down on the customer en masse, and then the real selling begins, and usually doesn't end for the twelve months' period.

Q. Has that been your general experience over the years that you have been selling oil burner controls?

A. That is correct.

Q. In your selling of oil burner controls, have you actively had to compete with Minneapolis-Honeywell?

A. Yes, indeed.

Q. And how about Mercoid Corporation?
A. Yes.
Q. And how about the Perfex Corporation?
A. We have.
Q. And how about White-Rogers?
A. Yes.

Trial Examiner Sheppard: How do you stand in size compared to the four you have mentioned? You didn't start until 1932, did you?

The Witness: About 1932, yes. Under the best estimates, we are the second largest in the industry.

Trial Examiner Sheppard: The what?

The Witness: We are the second largest in the industry.

Trial Examiner Sheppard: You are the second
1418 largest.

The Witness: Yes, we have gone past all the others.

Trial Examiner Sheppard: You have grown tremendously since 1932, then, haven't you?

The Witness: Yes, we have.

Trial Examiner Sheppard: Who do you refer to as the first one? The respondent?

The Witness: Yes, Minneapolis-Honeywell.

By Mr. Freeman:

Q. Mr. Henning, the Major just asked you about your tremendous growth over a period of the last ten years. Am I correct in my understanding that you started from scratch in 1932, with respect to the oil burner business?

A. That is correct.

Q. And I might ask you, have you personally been responsible for some of the oil burner control developments of your company?

A. Yes, I have. In years past I was in charge of the research division.

Q. And while in charge of the research division, were you actually in charge of sales also?

A. Yes.

Trial Examiner Sheppard: Are you the president of the concern now, Mr. Henning?

1419 The Witness: I beg your pardon?

Trial Examiner Sheppard: What is your official position there now?

The Witness: I am executive vice president of the company now.

By Mr. Freeman:

Q. And today you are in charge of sales, in addition to your other duties?

A. That is correct.

Q. And these records that you have here produced have all been produced under your personal direction?

A. That is correct.

Q. Now, Mr. Henning, I hand you a book of patents, which I will ask the reporter to mark for identification as Respondent's Exhibit 103.

(The document referred to was marked Respondents' Exhibit 103 for identification.)

By Mr. Freeman:

Q. (Continuing.) I will ask you to look through these patents and tell us, briefly, if they are patents that relate to the products of your manufacturer, specifically directed to oil burner controls, that is, primaries and thermostats.

A. The patents contained in this exhibit refer to combustion controls for oil burners and thermostatic cir-
1420 circuits for oil burners.

Q. And by "thermostatic circuits", you have reference to the control for a thermostatic circuit, which we sometimes call primary controls, is that correct?

A. That is correct.

Q. And how about thermostats themselves?

A. The book also contains a number of patents covering thermostatic controls for oil burners.

Q. And I take it that the first patent assigned by George A. Knaak to the Penn Electric Switch Company was one acquired by the Penn Company?

A. When we purchased the Wilboken Switch Company, Milwaukee, Wisconsin, yes.

Q. And aside from the Knaak patent, has your company during the period from 1932 up until 1941 used these patents in connection with its manufacture of controls, or, putting it another way, has your company actually manufactured controls and sold them under these patents?

A. Yes, we have.

Mr. Freeman: That is all. You may cross-examine.

Mr. Haycraft: Aren't you offering that?

Mr. Freeman: Yes, we offer in evidence as Respondent's Exhibit 103 the book of patents of the Penn Electric Switch Company, directed to primary controls and thermostats.

1421 Trial Examiner Sheppard: Any objection, Mr. Haycraft?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let is be accepted as Respondent's Exhibit 103.

(The document referred to, heretofore marked for identification RESPONDENT'S EXHIBIT 103, was received in evidence.)

Cross-Examination by Mr. Haycraft.

Q. Does that book of patents contain any limit control—

Mr. Freeman: It says on its face that it doesn't contain any limit controls, and it has only been offered to show primary controls and room thermostats.

A. Mr. Haycraft, it does not contain any patents on any limit controls, as such.

Many of these patents are drawn around a system where it shows the stack switch, and graphically it shows the limit switch and thermostat in the circuit, but the patent relates primarily to a stack switch on a thermostat.

By Mr. Haycraft:

Q. You go through the exhibit and indicate the different patents, the date they were taken out, and describe their use.

1422 A. The first patent referred to by Mr. Freeman was one which we acquired in the purchase of a company and has never been used, as far as I know, in any of our regular apparatus.

Q. Which is that one?

A. It is the patent known as No. 1708309, G. A. Knaak.

Mr. Freeman: Can I interject here?

Mr. Haycraft: I would rather not.

Mr. Freeman: All right.

By Mr. Haycraft:

Q. Proceed, Mr. Henning.

A. The next patent, 1962095, assigned to the Penn Electric Switch Company, L. M. Persons, inventor.

It covers a combustion safety control with two heaters in parallel.

Q. When did you take that out?

A. This was taken out in 1934—filed in 1934, and issued in 1934.

The next patent, 1962506, is a Henning patent, assigned to Penn Electric Switch Company. It is a special purging feature for stack switches, so arranged that in case of flame failure the primary control would shut down for a predetermined period, then recycle again in an effort to start the burner on a successive cycle.

Q. When was that taken out?

A. That was filed in 1931 and issued in 1934.

Q. You have used that in your company?

1423 A. We used it for a time, yes, sir.

Q. What time did you use it?

A. About the time that the patent issued.

Q. You haven't used it since?

A. No, we haven't, Mr. Haycraft. This art changes rather rapidly. You invent something, and I happened to be in that part of it for a time, and you use it for a time, and you pass on to something else, based upon the progress that the industry makes.

Q. All right, go to the next one.

A. Patent No. 2022826, A. L. Rubel, inventor, filed in 1933; issued in 1935.

Q. What use was made of that?

A. This control had a friction rapid shut-down feature and it was introduced on the basis of extreme safety for large burners, and it was used for a short period only.

Q. About when?

A. About the time the patent issued.

Q. 1934?

A. 1935. Yes, 1935.

Q. The next one?

A. The next patent, 2030941, A. L. Rubel, issued in 1936, filed in 1932.

This is a combustion failure feature with what we call a purge period, and it was an improvement on the
1424 previous invention of mine which I referred to. It was a little less complicated, and it was used for a time, about the time the patent issued.

Q. About 1936?

A. Yes, sir, 1936.

1425 Q. Go to the next one.

A. Patent No. 2034309, L. M. Persons, issued March 17, 1936, and filed in November, 1933. This is a further improvement on a purging period, rapid shut down.

As far as I know, the device was too sensitive, and we never used it. It was impractical.

Patent No. 2034311, issued March 17, 1936. The name is A. L. Rubel, filed in 1932.

This related to a means of a predetermined ignition interval prior to the introduction of fuel.

It was a precaution for safety. I don't think we ever used it.

Patent No. 2040402, issued May 12, 1936, to L. M. Persons, filed November 17, 1933.

This was a safety arrangement to prevent successive cycles of operation in case of a failure on the first or initial start of the oil burner.

Q. Did you ever use it?

A. Not that I recall.

Patent No. 2064181, A. L. Rubel, issued December 15, 1936, filed in 1932.

This is an improvement on warp switches, energized when combustion occurs in order to break a circuit through a heater or safety switch, so that upon combustion occurring, the safety switch will not thereafter trip out.

1426 That is being used today.

Q. All right, the next one.

A. Patent No. 2080580, issued May 18th, 1937, to B. E. Shaw, filed December 2, 1935.

This is a low voltage protection feature so arranged with the split transformer secondary that the combustion safety primary is responsive to low voltage conditions on the line.

It is very important and being used today.

Patent No. 2086823, issued July 13, 1937, and filed in 1936, B. E. Shaw.

This is a combination of resisters in parallel in primary controls so arranged that it is known as a balanced circuit.

It is an improvement on primary controls, as a protective means for oil burners.

After experimental stages it was passed up.

Patent No. 2102091, December 14, 1937, L. M. Persons, filed in August, 1935.

Q. Issued when?

A. Issued December 14, 1937. This is a design patent covering certain improvements in spring leaf contact members on combustion controls used today with some modification.

Q. And the next patent?

A. Patent No. 2256766, issued September 23, 1941,

1427 B. E. Shaw. Filed in 1940.

This is an arrangement of safety heater elements for quick shut down, whereby the safety heater is partially heated all the time in an effort to make it more responsive at the time of flame failure. Not being used today.

Q. Was it used at any time?

A. Yes.

Q. When?

A. For about six months is all, enough to get sample controls out in the field, and then we abandoned it.

The next one comes under thermostats. The first one is a design patent, No. 99758, and merely covers distinctive design features issued in 1936 to L. S. Houghton, filed in 1935.

Next is an Albert Penn patent covering a room thermostat of the bellows actuated type, in conjunction with a magnet and armature, a sensitive room thermostat which is responsive to approximately 1 degree differential.

Filed in 1928, issued in 1930, and that happened to be our first effort in the heating field. It was a very successful control, and is being used still today in its original design.

Q. All right, take the next one.

A. Patent No. 1867756, issued July, 1932, Albert Penn.
A bimetallic metal actuated thermostat, using a mag-
1428 net and armature, responsive to temperature changes,
and is being used today.

Q. What date was that brought out?

A. It was brought out in 1932. Its counterpart was the first one that I mentioned.

Q. All right, go ahead.

A. M. E. Henning Patent 1962505, covering a hygrostat or humidostat, filed in 1930, issued in 1934. A device responsive to changes in relative humidity, using a wet and dry bulb principle, coacting with a magnet and armature arrangement.

Q. To what extent has that been used?

A. It was not used to any great extent.

Q. All right, take the next one.

A. Patent 2030933, issued to L. M. Persons, February 18, 1936, filed in 1933.

This is a double detent magnetic arrangement in order to give positive contact action in both periodic frequencies of the armature. Propelled by bimetallic metal. A sensitive thermostat being used in some modification today.

Trial Examiner Sheppard: When did that clock come on these thermostats the first time?

The Witness: Well, I think it was before my time, Major. The clock was first introduced by the Minne-
1429 apolis-Honeywell Company, and my guess is 40 or 50 years ago.

Trial Examiner Sheppard: I thought it was a late development.

The Witness: We have made many improvements on clocks since then, of the electric type, but the early inventions were, I think, before I was born.

Trial Examiner Sheppard: I didn't know they were that far back. Go ahead. I thought they were late developments.

The Witness: The next one is Patent No. 2040404, filed in 1934, issued to L. M. Persons in 1936.

This covers a cyclator arrangement whereby the periodic cycles of an oil burner may be controlled, either wider or closer, by means of thermostatic adjustment convenient to the service engineer.

That is being used today.

By Mr. Haycraft:

Q. When was that brought out?

A. It was brought out—it was filed in 1934, and issued in 1936. We no longer use this thermostat, but that feature as patented is now in other thermostats.

Patent No. 2054040, issued September 8, 1936, to L. M. Persons; filed in 1934.

It covers a low mounted type of thermostat designed for baseboard mounting, rather than the conventional
1430 high level.

Not being used. It was used for about a year.

Q. And the next one?

A. Patent No. 2083664, issued to L. M. Persons, June 15, 1937, filed in 1934.

This is what is called an anticipating type of thermostat, so arranged that artificial heat is applied to the sensitive element when the burner is in operation, to hasten the operation of the thermostat.

Being used by practically all manufacturers today.

Q. You mean you license other manufacturers to use it?

A. It is a long story, Mr. Haycraft, but this patent covers certain features within the scope of heat anticipation, but the patent that existed at the time, under which we were licensed, was owned by General Electric, and they got

into interference with a patent or pending application of Minneapolis-Honeywell, and I think they finally prevailed over the existing art, and we are now licensed under their patent.

Q. Under whose patent?

A. Minneapolis-Honeywell. Am I correct in that?

Mr. Freeman: You are not.

Trial Examiner Sheppard: Well, now, wait a minute.

1431 Mr. Freeman: I would like to straighten it out. I tried that case against General Electric, and I know all about it, and I know about the patent Mr. Henning is referring to.

The heat anticipating patent owned by General Electric was a Schafer patent. It was involved in a suit filed in the United States District Court at Brooklyn, New York, under the Section of the Statute relating to interfering patents, which is somewhat like an interference, and that is apparently Mr. Henning's understanding, which interfering patent was owned by Minneapolis-Honeywell. It was a fail and re-issue patent.

The sum and substance of that particular controversy involving Minneapolis-Honeywell and General Electric Company was decided by the Second Circuit Court of Appeals, where the Schafer patent owned by General Electric was held invalid, which terminated all of the license agreements, that is, such agreements as Penn Electric Switch Company had under the General Electric Company's patent, and, likewise, Perfex had a license, in fact, some ten or twelve other companies had licenses. That wound up the so-called heat anticipation patent picture.

Mr. Haycraft: But the witness is correct that the Penn Electric Switch is now a licensee of Minneapolis-Honeywell?

1432 Mr. Freeman: Not on any patents that are directed to thermostats of a heat anticipating kind. That was all wound up when the patent picture was held invalid by the Second Circuit Court of Appeals.

Mr. Haycraft: You mean by that that neither one of them had valid patents?

Mr. Freeman: That is correct.

Mr. Haycraft: I see.

Trial Examiner Sheppard: That is informative to you, then?

The Witness: Yes, that informs me. He is correct. It has been a long time, and it refreshes my memory.

Trial Examiner Sheppard: All right, proceed.

By Mr. Haycraft:

Q. Go on to the next patent.

A. The next one is Patent No. 2092327, issued September 7, 1937, to L. M. Persons, and it is a variable means of applying anticipafed heating to a thermostat.

We feel the patent is still good, but we are not using it.

Patent No. 2158435, issued to B. E. Shaw, May 6, 1939, filed in 1937. This is a design or construction patent covering manufacturing details in a low mounted type of thermostat, the construction of which we are using today.

1433 Q. And the next patent?

A. Patent No. 2249259, filed May 13, 1940, issued to B. E. Shaw in 1941, a design and construction patent covering a line voltage thermostat, having some unique features with respect to the application of bimetallic metal, being used today.

One of our late constructions.

Q. And the next one?

A. Patent No. 2262343, issued November 11, 1941, to B. E. Shaw, filed December 6, 1939, covering a convenient means of inserting heating anticipator elements, so that they may be removed conveniently, and replaced with proper sizes, balancing the thermostat with the primary control.

Being used today.

Q. And the next one?

A. Patent No. 2265495, issued to B. E. Shaw, December, 1941, filed in 1939, a design and construction patent on a line voltage thermostat, having some features covered by, or covering special contact arrangements, and being used today.

Q. And the next patent?

A. Patent No. 2319563, issued to B. E. Shaw, May 18, 1943, filed in 1941.

Improvements on one of our earlier designs in sensitive room thermostat controls, also being used today.

Q. Now, does that list of patents that you referred 1434 to there include all the patents under which you are manufacturing and selling primary controls and thermostats during the period 1937 to 1941, or are you licensed

under other patents, or have you been licensed under other patents?

A. We are licensed under other patents.

1435 Q. What other patents are you licensed under?

A. Well, we are licensed under a Dennison patent, owned by Minneapolis-Honeywell. We are licensed under a—

Q. Is that a primary patent?

A. That is a primary patent.

Q. All right.

A. We are licensed under a Rachet patent, owned by Walter Williams of the Williams Oilomatic Company.

Mr. Freeman, I will have to say we were, or still are. You are more familiar with that than perhaps I am. I say that for the reason that that patent may have expired. I wouldn't know.

Mr. Freeman: Which one are you referring to?

The Witness: Walter Williams' patent.

Mr. Freeman: I think it is still in existence. At any rate, you were a licensee.

The Witness: And we were licensed under the Schafer patent, which I referred to, under General Electric Company, which Mr. Freeman referred to as being upset.

Mr. Freeman: That was a thermostat patent.

The Witness: We at times have acquired patents which we have bought outright from other concerns. I know one that has expired, the Massa patent, covering the original magnet construction used in most of our thermostatic controls.

1436 By Mr. Haycraft:

Q. What is this Dennison patent that you referred to a moment ago?

A. The Dennison patent covers a predetermined time delay interposed by the products of combustion, and it is a means by which a control may recycle after it has once shut down from an initial failure on the part of an oil burner.

Q. Is that referred to as a recycling device?

A. Yes, we seldom ever use it, but on occasions we get a call for it.

Trial Examiner Sheppard: Do you want to run through like we did yesterday or do you want to get through with this witness before lunch?

Mr. Freeman: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record. Go ahead, Mr. Haycraft.

By Mr. Haycraft:

Q. Mr. Freeman is the attorney, is he not, for the Penn Electric Switch Company?

A. He has been our patent attorney for a number of years.

Q. And in your knowledge, do any of the officials of the Penn Electric Switch Company own stock in the Minneapolis-Honeywell?

1437 A. Not to my knowledge.

Q. Were you present on September 11, 1940, at the time that the investigator of the Federal Trade Commission, Mr. I. D. Royal, interviewed you and Mr. Albert Penn and Mr. Ralph Penn in the office in Goshen, Indiana?

A. Yes, I was.

Mr. Freeman: That is objected to as improper cross-examination. We didn't mention anything about it.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

Mr. Haycraft: That is always a proper question.

Trial Examiner Sheppard: It may be to attack the credibility of the witness. All right, go ahead.

By Mr. Haycraft:

Q. At that time do you recall telling Mr. Royal that Mr. Albert Penn was a stockholder of Minneapolis-Honeywell stock to the extent of 100 shares?

A. No, sir, I do not.

Q. And he never told you that he owned stock?

A. I don't think Mr. Royal ever discussed that with me.

Q. Did Mr. Penn ever tell you that he was the owner of 100 shares of Minneapolis-Honeywell stock?

A. I don't recall that he did.

Q. And you don't recall him telling Mr. Royal that

1438 in your presence?

A. Mr. Royal interviewed me later. I wasn't in the office at the time he talked with Mr. Ralph Penn and Albert Penn, and I am not sure whether it was later that day or the following day when Mr. Royal spent practically the entire day with me.

Q. He spent a day with you, but weren't you also present during part of the interview with Mr. Albert Penn and Mr. Ralph Penn?

A. That I don't recall, Mr. Haycraft.

Q. Now, you testified on direct examination that your sales of automatic temperature controls during the years since you have been in business, in 1932 to 1941, had been constantly on the increase.

Will you give us the figures, beginning with 1936, and going on down to 1941, of your total sales of thermostats and your primary controls and your limit controls?

A. I am sorry, I didn't bring that information with me. It wasn't requested. In fact, there was no disposition on my part not to bring it.

Q. Wasn't it in the subpoena?

Mr. Freeman: No, it wasn't.

A. It didn't request that, or I would have been sure to bring it.

1439 By Mr. Haycraft:

Q. It didn't require you to bring any sales figures?

A. It didn't say totals for the year.

Have you that subpoena there, Mr. Freeman?

Mr. Haycraft: I just want to call your attention to the fact that this witness was not required, apparently, by the respondent to produce the same figures that the Perfex Corporation produced.

Mr. Freeman: I beg to differ with you, Mr. Haycraft. We didn't ask Perfex as to any total sales, total sales volume. That was not in the subpoena.

The Witness: It says price lists, discount sheets, or other data.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: All right, Miss Reporter, back on the record.

The Witness: Mr. Haycraft, if it will serve any convenience, I will be very glad to get by telephone this afternoon the volume of our sales for the successive years that you requested.

I read the subpoena carefully and thought I brought exactly what the subpoena required, and if you want that I will see that you get it this afternoon.

Mr. Haycraft: Let us see what you have, first.

1440 Mr. Freeman: I just want to call your attention to this one fact, Major, that Mr. Haycraft's figures had to do with the total sales volume, and he didn't say total sales volume for any one customer. If he wants the figures for any one customer, Mr. Henning has that here.

Mr. Haycraft: That is what I want right now.

The Witness: I have that. I misunderstood you, then, Mr. Haycraft. I understood that you wanted our total sales volume per year.

Trial Examiner Sheppard: All right, go ahead and we will have those figures.

By Mr. Haycraft:

Q. What figures do you have in the way of sales with respect to the Century Engineering Company subsequent to the year 1937?

A. The year 1937 was $18,333; 1938 was $9,959; 1939 was $19,234; 1940 was $37,113; 1941 was $63,209.

Q. How do you account for the drop between the 1938 sales and the 1937?

A. Well, market conditions many times are the direct result of that and, on the other hand, it may have been fluctuation in his own business for merchandise reasons beyond his control.

There are so many things that will affect volume total for any one year.

1441 Q. There was not a constant increase, then, in the sales to that company during that period of time?

A. Well, technically, no, for the year 1938, but there was an increase every other year.

Q. Well, that is what I am trying to bring out, that there was an exception to your statement.

A. That is correct.

Q. Now, your sales for Harrison Sales Company.

A. I might add, Mr. Haycraft, that I don't believe that I intended to construe at any one time that our overall picture of increase which we had steadily every year would be reflected in the individual accounts.

Q. I will come to the total figures in a minute, but I am taking up the individual first. Harrison Sales Company, in Seattle.

A. Harrison Sales, $4,491 in 1937; $4,594 in 1938; $2,838 in 1939; $1,917 in 1940. No contract in 1941.

Q. How do you account for the decline in sales there in subsequent years?

A. I have no idea how you would account for it.

Q. The Heil Company in Milwaukee, what were your sales subsequent to 1937?

A. Heil Company, we sold $3,598 worth of controls in 1937 and $138 in 1938.

Q. How do you account for the drop-off there?

1442 A. I wouldn't know.

Q. They didn't sell any in subsequent years?

A. Discontinued the use of our controls entirely.

Q. Pan-American Engineering Corporation.

A. $819 in 1937; $67 in 1938; $43 in 1939; $8 in 1940; and $8.61 in 1941.

Q. The Rossoe Manufacturing Company.

A. $9 in 1937; $83 in 1938; $1,493 in 1939; $352 in 1940. No contract in 1941, although we sold them $349 worth.

Q. York Oil Burner Corporation.

A. What was the name?

Q. York.

A. $412 in 1937; $29 in 1938, and nothing for the remaining three years.

Q. Now, you gave the figures for the Williams Oilomatic, if I remember, $194,000 in 1937?

A. Yes.

Q. And seventy-three thousand and something in 1938?

A. Yes.

Q. $61,000 in 1939; $17,000 in 1940; and $18,000 in 1941. How do you account for the decline in your business with Williams Oilomatic in the years subsequent to 1937?

A. I think I know that their business declined in about that proportion.

Q. You mean their total sales?

1443 A. Yes.

Q. For the years 1938, 1939, 1940, and 1941?

A. Yes, their company was gradually reducing its price and our prices were steadily being reduced, too, and, in addition, I know from what I know of the company—

Q. It was a little less than half in 1938 as compared with 1937?

A. Yes, and in addition I know their volume was steadily dropping.

Q. Do you have access to their books?

A. I talk to them quite frequently about their business. I am personally acquainted with some of their men and I know the Eastern burner manufacturers made quite heavy inroads on their business.

Q. About what proportion of their business did you figure you had?

A. I would have to guess at that. I think in 1937 we probably enjoyed all of it, or at least the lion's share of it, maybe 90 percent of it, and in the years 1938, 1939, 1940, and 1941 I believe that Mercoid and Minneapolis-Honeywell made inroads on some of the business we were enjoying.

Q. Now, you gave the Timken sales in 1935 and 1936. There were no sales in the later years?

A. They were very small. If I have it, I can give
1444 it to you. We only sold $38.95 worth of controls in 1937. I can explain, because I happen to know personally the product we turned out was a very bad one and due to our failure to turn out a device which would function properly with their burner, they discontinued the use of our product.

Q. Now, the Electrol Company, you gave the 1937 figures, but you didn't say what you sold in later years.

A. Electrol, I can give that to you. In 1937 it amounted to $12,000, $12,153; in 1938 it was $8,585; in 1939 it was $4,595; in 1940 it was $3,662; in 1941, $1,879.

Q. Hoban Manufacturing Company?

A. No sales.

Q. In any of the years?

A. We had a contract apparently in the year—March 3, 1939, but according to my records we made no sales to them.

Q. Master Oil Burner Company?

A. Master Oil Burner, $1,558 in 1938; $1,124 in 1939; $49 in 1940; and $561 in 1941.

Q. Montag Stove?

A. No sales in 1938. $462 in 1939; $978 in 1940; $7,741 in 1941.

Q. Micro-Westco?

A. No sales in 1937; $3,145 in 1938; $1,388 in 1939; $813 in 1940; $843 in 1941.

Q. You have given us Pan-American?

1445 A. Yes.

Q. Standard Products Manufacturing Company?

A. Standard Products?

Q. Yes.

A. We had a contract in the year 1940, but no sales. There was a signed agreement but they didn't buy anything.

Q. Brown Oil Burner Equipment Company?

A. Brown Oil Burner Equipment Company, Cambridge, Massachusetts; no contract. Sold nothing in 1938; nothing in 1939; nothing in 1940. Sold them $1,608.87 in 1941. There was another one, Burner Parts & Service, right next to it, if you want it.

Q. Was that mentioned?

A. Yes, it was. $37 in 1940 and $2,409 in 1941.

1446 Mr. Haycraft: Mark these as Commission's Exhibits 207-A and 207-B for identification.

(The documents referred to were marked Commission's Exhibits Nos. 207-A and 207-B for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibits 207-A and 207-B, and ask you whether or not you recognize Mr. Penn's signature on 207-A, and whether or not the figures contained in Commission's Exhibit 207-B are taken from the records of your Company, and are correct?

A. That is Mr. Penn's signature in a letter written to Mr. I. D. Royal, on September 13, 1940.

I don't know what he requested, Mr. Haycraft. Can you enlighten me? Your letter merely states—

Q. (Interposing) You recall him asking for that information at the time he called on you?

A. As I said before, I didn't hear all the conversation between Mr. Penn and Mr. Royal.

Mr. Royal came to visit several times later, and visited me, and I did hear part of it that day, but I don't recall that he asked for this.

Mr. Haycraft: Well, subject to correction, if that isn't correct. I would like to offer that in evidence.

The Witness: Well, I would imagine that is cor-

1447 rect.

Mr. Freeman: Mr. Haycraft, if you will tell me as the Attorney for the Commission that this was the document furnished to you by Mr. Albert Penn of the Penn Electric Switch Company, and the attached memorandum was part of this letter, we will concede it.

Mr. Haycraft: As far as I can go on it is that I found it in my files. Mr. Royal so reported.

The Witness: If it was attached to this letter as part of Mr. Penn's communication, I would say it is perfectly correct.

Mr. Haycraft: That is as far as I can go. I will assume it is.

Trial Examiner Sheppard: All right, I think I will take it on the statement of both of theese gentlemen, and let it be accepted.

Mr. Haycraft: If you find out afterwards that it isn't correct, and you want to correct it, it will be all right to do it.

Trial Examiner Sheppard: That is right.

Let it be accepted under those conditions, Miss Reporter, Exhibits 207-A and 207-B, for whatever use either of these gentlemen want to make of it.

(The documents referred to, heretofore marked for identification COMMISSION'S EXHIBITS NOS. 207-A and 207-B, were received in evidence.)

1448 By Mr. Haycraft:

Q. It gives the figures, the total sales figures by units for the years 1938, 1939, and 1940?

A. To those companies, I presume that is correct.

Q. And it is specific for certain companies named on it?

Trial Examiner Sheppard: Does it tell for 1937?

Mr. Freeman: 1937, 1938 and 1939.

Mr. Haycraft: Yes, 1937, 1938 and 1939 are the three years. That is all he asked for.

Trial Examiner Sheppard: All right.

Mr. Haycraft: I might say that for your information, if you will allow me to do that, Mr. Royal is now dead, and we can't call him, but he reported "That in compliance with the writer's request they agreed to furnish and forward a statement of the total number of controls of different units they made and sold during the years 1937, 1938, and 1939, and the statement of the number of units sold in each year to the nine concerns listed on there."

He says that such a tabulation was received in a letter from Mr. Albert Penn, dated September 13, 1940, and that is what our record indicates.

Trial Examiner Sheppard: Is that the date of that letter?

The Witness: Yes, that is perfectly correct.

Mr. Haycraft: Because I haven't any way of call-
1449 ing Mr. Royal.

I would like to have these marked as Commission's Exhibits 208 and 209 for identification.

(The documents referred to were marked Commission's Exhibits Nos. 208 and 209 for identification.)

By Mr. Haycraft:

Q. I show you Commission's Exhibits 208 and 209, and ask you if you can identify those two documents as being published and put out by your company?

A. Yes, sir, they both are on here.

Q. Can you give the approximate date that they were put out or used?

A. I can give you approximately, I think, when this was used.

Q. What would be the approximate date?

A. The Penn Comparative Application Chart was used, to the best of my knowledge, in the years 1935, 1936, and 1937. Maybe 1938, and, in fact, it is a reference we often refer to even now.

Q. How about the other one?

A. The other one is merely an explanation of how you use the Comparative Chart.

Q. That is the other exhibit?

A. Yes, sir.

Mr. Haycraft: I offer them in evidence.

1450 Trial Examiner Sheppard: Any objection?

Mr. Freeman: None.

Trial Examiner Sheppard: Let the Exhibits 208 and 209 be accepted.

(The documents referred to, heretofore marked for identification COMMISSION'S EXHIBITS NOS. 208 and 209 were received in evidence.)

By Mr. Haycraft:

Q. Now, in this selling to the Century Engineering Corporation, which you say was standard on Penn controls, was that for their entire business, or just for the business they did with the Crane Company, for the Crane Company?

A. Some years it was for Crane, and other years it was on their own. We have both types of name plates, the one strictly with the word Century, strictly for Century, and another name plate under the name Crane, for Crane sales.

Q. As to the Crane Company sales, there wasn't much chance for competitors to get in there after the set up was established, was there?

A. Yes, their dealers, not their dealers, but their branches numbering some 125 odd are permitted to buy anything they see fit to use, and while the Penn controls

were used as standard by the Crane Company, an educational program was put on by us to incorporate the sale of the so-called Crane controls, branch managers were
1451 permitted to buy any control, and did buy from competitors.

Q. They bought, but the Century didn't buy from any other for use on their Crane Company?

A. I wouldn't know.

1452 Q. On their Crane account. They didn't have any Crane name plate by anyone else?

A. It would be my hunch—

Q. Let us get something a little stronger than a hunch. Let us get your knowledge.

A. All right. I feel satisfied that if a branch desired Minneapolis, or some other make of control, that the Century Company would have provided them for the Crane Company. I know the two organizations quite well and know the mechanics sufficiently to say that.

Q. Well, did they have a stock of plates, name plates, other than the one—

A. (Interposing) You mean the Century Company?

Q. Yes.

A. No, the controls came in furnished from the control manufacturer to Century, provided with plates.

Q. My question was whether or not, to your knowledge, any controls for use on Crane burners were equipped with name plates other than those you furnished.

A. Not that I know of.

Q. As to their dealer business, their general dealer business, do you say you also furnished some name plates for that?

A. No, the Crane Company doesn't deal through dealers.

Q. I am talking about Century.

1453 A. Century, yes, we provided name plates for the Century Company with their name "Century" stencilled.

Q. What year did you do that?

A. I would have to guess at that, Mr. Haycraft. I would say, though, 1937, possibly 1938, and then it was discontinued and started again in either 1940 or 1941 because of the insistence on the part of some of our Eastern distributors.

Q. Now, did you have a contract with Gilbert & Barker?

A. No, sir, we did not.
Q. Or the Delco?
A. No, sir.
Q. Or the American Radiator & Standard Sanitary Corporation?
A. No, sir, we did not.
Q. But you did sell the Crane Company through the Century, that is, you sold controls for Crane?
A. To Century for Crane, that is right.
Q. Is that Crane furnace, is that a Crane furnace with Century burners on it or did the whole thing come under the name of Crane?
A. The burner was furnished to the Crane Company in a crate and the Crane Company provided its own furnaces or boilers, as the case may be, and they also sold furnaces without burners or boilers, depending upon the application.
1454 Mr. Haycraft: That is all, Mr. Examiner.
Trial Examiner Sheppard: Anything else, Mr. Freeman?
Mr. Freeman: Yes.

Redirect Examination by Mr. Freeman.

Q. Mr. Henning, in connection with these patents you referred to, you referred to an anticipating thermostat. Is the anticipating thermostat that your company sells in competition with Minneapolis-Honeywell's T-11 thermostat?
A. It is.
Q. And likewise your thermostat is in competition with Perfex's thermostat that employs heat anticipation?
A. That is correct.
Q. And the primary controls, both of the intermittent ignition and constant ignition type that your company makes and sells, is sold in direct competition with Minneapolis-Honeywell's R-116 and R-117?
A. That is correct.
Q. And likewise you sell in competition with the primary controls made and sold by the Perfex Corporation, its No. 5200 and No. 5500, is that correct?
A. That is correct.
Q. And in your thermostats that you referred to, are they sold in competition to Mercoid's Senso-therm?
1455 A. That is correct.

Q. And the primaries of the intermittent ignition type made and sold by your company, are they sold in competition with the K. M. I. Pyratherm of the Mercoid Corporation?

A. Yes.

Q. And are your constant ignition primary controls sold by your company in competition with the Mercoid K. M. Pyratherm?

A. That is correct.

Q. So that your primary controls are in competition with both kinds, that is, your constant ignition and intermittent ignition type are in competition with at least three other companies?

A. They are.

Q. And that is likewise true of limit controls?

A. That is correct.

Q. And likewise true of thermostats?

A. Yes.

Q. There are other companies that make thermostats with which your company competes?

A. Yes.

Q. Could you give me a name or two?

A. General Electric make their own thermostats; also, there is a thermostat made by the Samsel Company. I think they are located in Mendota, Illinois.

1456 Q. And how about White-Rogers?

A. White-Rogers make thermostats, too. We are in competition with those.

Q. And how about additional companies that you are in competition with, with respect to limit controls?

A. The same would apply.

Q. That is, White-Rogers make limit controls?

A. That is correct.

Q. And you sell in competition with White-Rogers?

A. We do.

Q. As well as in competition with Mercoid, Perfex, and Minneapolis-Honeywell?

A. Yes.

Q. I didn't ask you anything about volume of, in round figures, Mr. Henning, of Gilbert & Barker.

It was not one of the companies mentioned in the subpoena, but it was mentioned by Mr. Hayeraft. Can you give us, either percentagewise or otherwise, how you stand with respect to sales of controls to Gilbert & Barker?

A. I would have to guess at it, not having brought the figures, but it would run from $150,000 to $200,000 per year during the time they have been purchasing from us.

Q. You get the major portion of Gilbert & Barker's business?

A. We have enjoyed it for some several years.

1457 Q. How about Standard Sanitary?

A. We have enjoyed that business for some several years, and it runs in like volume.

Q. So that while some of these special accounts show a decrease in overall dollar volume for the years which Mr. Haycraft referred to, your overall business has been on the upgrade, is that correct?

A. That is correct.

By Mr. Haycraft:

Q. I will ask the witness to look at the last exhibit identified, showing the volume of sales for—

Mr. Freeman: Why don't you extend to me the courtesy of asking these questions and you will have an opportunity to recross-examine later?

Mr. Haycraft: I thought you were through. You stopped.

Mr. Freeman: No, I am not.

Mr. Haycraft: I will withdraw the question.

Mr. Freeman: I will withdraw my remarks, too.

Will you read the last question?

(The record was read by the reporter.)

By Mr. Freeman:

Q. There was a slump in the general business conditions for the year 1938?

A. That is correct.

1458 Q. And I take it that your company went along with the curve made by general business for that period of time?

A. The only year that we showed a loss in the history of the company, as far as I know.

Trial Examiner Sheppard: Was that in 1938?

The Witness: 1938, yes, sir.

By Mr. Freeman:

Q. By "loss", you mean where the company didn't make a net profit?

A. Yes.

Mr. Freeman: That is all. You may recross-examine.

Recross Examination by Mr. Haycraft.

Q. Your sales in 1938 were substantially less than in 1937, weren't they, your total sales?

A. Yes, sir.

Q. And your 1939 sales were about the same as 1937, weren't they?

A. Yes, they have increased again. I might explain that the Penn Company moved its plant July 5, 1937.

We went to all of our customers, some 1,500 odd, and prevailed upon them to purchase as much as they could in the year 1937 in order that we might conveniently move our plant from Des Moines, Iowa, to Goshen, Indiana.

1459 Q. This was in 1937?

A. Yes. This unbalanced the two years, the years 1937 and 1938, so that we showed a higher ratio of sales in 1937 with respect to 1938, otherwise the curve would have been the steady increase which we have had of so much per year, even though the year of 1938 was not a very good business year from our standpoint.

Some companies bought an entire year's supply.

Trial Examiner Sheppard: In 1937?

The Witness: Yes, in order to avoid what they knew would be a shut-down of our plant for maybe many months when we moved to our new building in Goshen.

Trial Examiner Sheppard: That took place in 1938?

The Witness: We moved July 5, 1937, so we got heavy orders in the early part of that year and filled those orders before we moved our plant, and while the plant was being moved to Goshen some departments continued to operate in Des Moines, Iowa, building up sales there, before we dismantled the machine tools.

By Mr. Haycraft:

Q. How long was this plant out of production?

A. The plant was out of operation only in part, of course, as we moved one department after another, but I would be safe in saying we were disrupted for the remainder of that year in some department or other,

1460 and then the year 1938 was a difficult one for us to get organized, but the sales, of course, were lean that year because of the overbuying on the part of our customers the previous years.

Q. How were your sales in 1937 as compared with your sales in 1936?

A. They were higher than the year 1936.
Q. How did the 1938 sales compare with 1936?
A. 1938, I don't know.
Mr. Haycraft: That is all.

Redirect Examination by Mr. Freeman.

Q. How did your sales in 1939 compare with 1938?
A. Higher than 1938.
Q. And how did your sales in 1940 compare with 1939?
A. Considerably higher again.
Q. How about your sales in 1941 with respect to 1940?
A. Still higher again.
Q. So outside of the moving period and a general decline in business, your company has enjoyed a rather steady upgrade in the manufacture and sale of oil burner controls since you started in business in 1932?
A. That is correct.
Mr. Freeman: That is all.

Recross Examination by Mr. Haycraft.

1461 Q. How about the potential of the oil burner business in controls during those years 1940 and 1941 as compared with the previous years, generally?
In other words, was there a great increase in the volume of building requiring oil burner equipment during those years?
A. I m not sure, Mr. Haycraft, but I feel that there was. 1941 was a very good year, also 1940, in the application of automatic equipment generally. By that I mean domestic ice machines and oil burners and stokers, that business has just reached its—well, it is past the infancy and going into mass production, was at the start of the war, by everybody, and it was a growing business, although business in general might be on an even keel.
Q. And would you say, then, that that business, that your increase in sales during 1940 and 1941, particularly, that that was probably not at the expense of any other of your competitors but due primarily to the increase in the business generally, that is in the oil burner business?
A. It could be. I imagine there would be a little of both, but, generally speaking, the trend was a bigger volume because of increased potential.

Mr. Haycraft: That is all.
Mr. Freeman: That is all.
Trial Examiner Sheppard: Anything else?
1462 Mr. Freeman: That is all. May we go off the record?
Trial Examiner Sheppard: Off the record.
(Discussion off the record.)
Trial Examiner Sheppard: On the record. The Examiner asks Mr. Henning to send the information suggested by Mr. Haycraft, to write me a letter to Washington and send it to me, and I will put it in the record.
The Witness: Yes, I will do that.
Trial Examiner Sheppard: You are excused.
(Witness excused.)
Trial Examiner Sheppard: We will adjourn at this time until 2:30

(Whereupon, at 1:00 o'clock noon, a recess was taken until 2:30 p. m., this day.)

1463 Afternoon Session.

2:30 p. m.

Trial Examiner Sheppard: All right, gentlemen, come to order. Miss Reporter, you can show Mr. Charles B. Sweatt, who has been previously sworn in this case, resumes the stand at the instance of the respondent.

I want to state to the counsel on both sides that I am allocating Commission's Exhibit 210, inasmuch as Mr. Henning will send it to me and it will be marked and taken into the record as Exhibit 210. After I receive it, I will study it and it can be studied by any of you in connection with his testimony.

(The document referred to was marked COMMISSION'S EXHIBIT 210 and received in evidence.)

CHARLES B. SWEATT was thereupon recalled as a witness for the Respondent and, having been previously sworn, testified further as follows:

Direct Examination (Resumed) by Mr. Gilpatric.

Q. Mr. Sweatt, what year was Minneapolis-Honeywell organized?
A. In 1927.

Q. Did it have any predecessor companies?

A. It was made up of a consolidation of two pre-
1464 decessor companies, Minneapolis Regulator Company—that was originally founded in 1885—and the Honeywell Heating Specialties Company. That went back originally to about 1906.

Q. Were these predecessor companies of Minneapolis-Honeywell engaged in the same lines of business that it has been since?

A. Broadly speaking, yes.

Q. Following the consolidation of the two predecessor companies to form the respondent, did Minneapolis-Honeywell acquire any other temperature control business?

A. In 1931, they acquired the assets of the Time-O-Stat Controls Company of Elkhart, Indiana, which, in turn, had been formed through a consolidation or purchase of assets—I don't recall exactly which—of several other companies; among whom were the Absolute Contactor Corporation and the Time-O-Stat Company of Milwaukee.

Q. Does Minneapolis-Honeywell continue the operation of the Honeywell plant at Wabash, Indiana, and the Time-O-Stat plant at Elkhart?

A. The Time-O-Stat plant at Elkhart was operated for a short period after the purchase, and was later sold. The Honeywell plant was doing a very small amount of work from about 1933 through to 1940, and, since that time, it has been devoted exclusively to war work. The products made there were, however, largely those for an industrial division.

1465 Q. Have Minneapolis-Honeywell and its predecessor companies followed a policy of advertising their lines of controls?

A. Very decidedly. Minneapolis Heat Regulator Company was one of the oldest national advertisers in the country. It was a pioneer in the business of temperature control and was advertising nationally back in the late 1880's and continuously followed that practice from that time to date. The Honeywell Company likewise were national advertisers and in the, oh, at least last five years before the consolidation, they were likewise doing a considerable volume of national advertising.

Q. Have other control manufacturers followed the same policy, to your knowledge?

A. So far as I know, the national advertising of any other control company has been very small.

The only one that I can recall at the present moment is Penn Electric Switch Company, who, in recent years, have been doing some national advertising in some of the smaller publications like "Business Week" and what are generally termed "executives' publications".

Q. What medium has Minneapolis-Honeywell used for this advertising that you speak of?

A. I think we have used practically every known advertising medium. The broad mass national magazines such as the Saturday Evening Post, Life, Time,
1466 Colliers, American Magazine, Good Housekeeping and practically every one of the large national publications, in addition to the, oh, what might be termed the overall coverage, we have used mediums that were directed directly to the home owner or the prospective home builder, such as, oh, "Better Homes and Gardens", which has a circulation of around two millions; "The American Home", which likewise has a circulation of better than two million.

Q. Have you used trade publications also?

A. Well, I would like to finish my answer.

Q. Oh, yes.

A. I hadn't quite finished the other forms of advertising.

Q. Go right ahead.

A. We have used billboards. We have used radio over the national networks, from coast to coast. We have used newspapers widely and have done a great deal of direct "by mail".

In normal times, when building was active, we received in our office every day a complete list of all prospective home builders, that are gathered by the Dodge Corporation. Those people are aggressively circularized, not only the individual home builder, but where there are architects and heating engineers given, we likewise circularized them directly by mail.

By Trial Examiner Sheppard:

1467 Q. That is in all of the 48 states?

A. Yes.

By Mr. Gilpatric:

Q. Does this advertising that you spoke of go on every year or only the years when your business is doing well?

A. No, we have been believers in national advertising,

and have consistently advertised. We have never believed that old adage, that mouse trap fable, that someone will beat a path to your door. We have gone out and told people what we had to sell and why we thought it was good and why they ought to have it in good years, as well as bad years.

Q. Years like 1931 and 1932?

A. 1931 and 1932. I have some figures here covering that.

Q. Just give us generally some indication of the extent of your advertising expenditures.

A. Well, since the consolidation, or from the formation of Minneapolis-Honeywell Regulator Company in 1927, through 1941, we have spent on national advertising pretty close to four million dollars, $3,946,276.30, to be exact.

Q. Now, that includes the sales mediums that you have mentioned; trade newspapers and—

A. The trade newspapers and the professional advertising as well.

I notice here that in the year 1931, we spent approximately $275,000.00.

1468 Trial Examiner Sheppard: Well, that is interesting. I didn't know that you did advertising on that scale. Has that been curtailed since the war activity?

The Witness: We have carried on our normal advertising expenditures during the war period. We know that after the war, we are going to be back in business again and we can't afford to come back into the new scheme of things as a forgotten company, so we are endeavoring to keep our name before the public and show them that in the post war period we are going to have even better lines than we had before the war.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Gilpatric:

Q. Now, Mr. Sweatt, you might tell us something about your policy with regard to engineering research and development, generally.

A. Well, our business is a highly technical business. We have always been leaders in the field and we have felt that to maintain that leadership, we had to be ahead of the procession in the development of new and better controls.

We have always spent very substantial sums of money in engineering and development work, not only creative
1469 engineering of new devices, but a constant redesigning and improvement of our products, to present them in a better way and at a lower cost.

It is rather interesting to note—I had our comptroller prepare some figures that would show the expenditures of money from the formation of Minneapolis-Honeywell through 1941—that we spent almost as much money in research development and engineering work as we did in advertising. The figures are $3,913,982.88.

Q. That is for advertising? Or, rather, that is for research development?

A. For research development and engineering.

Q. You mentioned a moment ago about the Dodge reports on new home construction and how you endeavored to reach the home owners through your advertising and direct mail solicitation. What other means have you used to create a demand for your products?

A. Oh, we have always carried what is termed in advertising circles as a "full schedule", which means usually a full page each month in all of the leading trade and professional publications. For example, "Fuel Oil", a professional publication of the oil burning field. "Oil Heat" is another one.

1470 In the general heating field it is read by miscellaneous dealers. The various trade journals, such as "The Plumbers' Trade Journal", "Domestic Engineering", the "American Artisan", and the "Warm Air Field." In addition to that, we have used the leading professional publications in the architectural and heating and engineering field, such as "Heating, Piping and Air Conditioning", "Architectural Record", "Architectural Form", "Heating and Ventilating Magazine", which go into the hands of the contractors and some go into the hands of the heating engineers and the architects who have a distinct influence on the specification of products.

Q. Well, now, during testimony earlier in this case, Mr. Lockrae described generally the sales organization set-up. Do your salesmen approach directly the home owners as well as the trade?

A. They approach home owners in two different ways. While they don't attempt to cover every new home that is going up, any home of any size or of any substance—well,

let's say above the $10,000 class—we always endeavor to call on those people because they are in a position to buy substantial volumes of controls.

The small house owner usually doesn't buy enough controls to warrant that personal solicitation.

The other contact that our salesmen have with home
1471 owners is through rendering the service to them, if they are, perhaps, having difficulty with our controls, or something of that nature.

Q. Tell us something about the growth of your sales organization, to which Mr. Lockrae referred in his testimony, and the reasons for it.

A. Well, I have to take issue with Mr. Lockrae's testimony. He was speaking from memory, I think, and picking a figure out of the air. We at the present time have 39 branch, or what we term district offices, scattered from Maine to California.

Q. Have you a map of those, showing—

A. Yes, I have.

Mr. Haycraft: Did you say district or branch?

The Witness: Branch and district offices.

Mr. Haycraft: Branch and district offices?

Trial Examiner Sheppard: I would like to have that as an exhibit in this case, Mr. Gilpatric. Suppose you mark it as Respondent's Exhibit 104, have Mr. Haycraft examine it, and if there is no objection I will accept it.

Mr. Gilpatric: The respondent offers the map which is referred to by Mr. Sweatt as Respondent's Exhibit 104.

(The document referred to was marked Respondent's Exhibit 104 for identification.)

1472 By Mr. Haycraft:

Q. These black dots, are they the district offices and the stars the branch offices?

Trial Examiner Sheppard: Will you explain that?

A. The stars represent manufacturing plants—the two major manufacturing plants are in Philadelphia and Minneapolis—and the dots indicate either the branch or the district office.

By Mr. Haycraft:

Q. You don't make any distinction?

A. On this we make no particular distinction. I think our distinction between a branch office and a district office is the number of men employed. One of our branch offices

may have as high as 60 to 70 people employed and a district office may only have four or five people.

Trial Examiner Sheppard: I see.

The Witness: It depends upon the size of the territory.

Trial Examiner Sheppard: The principal offices are in the bigger cities, are they?

The Witness: They are pretty well scattered throughout.

Trial Examiner Sheppard: They are the black dots?

The Witness: The black dots, yes, sir.

Trial Examiner Sheppard: I see. O. K.

1473 The Examiner accepts that exhibit, Respondent's Exhibit 104, for the record.

(The document referred to, heretofore marked for identification RESPONDENT'S EXHIBIT 104, was received in evidence.)

The Witness: The growth of the branch office system really started with the advent of the oil burner business. Before the oil burner was introduced, controls were very simple and few in number. We manufactured really two basic types of room thermostats. We made three basic types of limit controls.

Trial Examiner Sheppard: What year was that?

The Witness: Well, this goes back into 1919 and 1920. And then we had at that time three types of what were then called "primary controls." They were motor operated devices; one they operated by gravity weight, and one they operated by means of a spring like a clock spring, and the third was an electric motor. In those days they were designed to open and close the draft check, with hand-fired coal burning boiler.

After a while the oil burner came into the picture and the controls changed greatly. They became very complicated, very much more complex. The average plumber was able to install the average damper regulator set without much difficulty, but the oil burner in the early days

1474 really required a whole new set-up. The oil burner manufacturer generally went out and found a dealer who specialized in the sale of oil burners. Many of them sold nothing else but oil burners and they sold them and sold them completely installed, so that that meant an entire new group of people coming into the field that had to be educated in controls from the ground up.

Our first branch office was opened in Chicago about 1919.

The second in Philadelphia in 1921. The third in New York in 1924; and from then on they were established at a fairly rapid rate.

Trial Examiner Sheppard: You have 39 now, did you say?

The Witness: We have 39 in the United States, five in Canada, and we likewise have a foreign subsidiary in London and one in Stockholm, Sweden, as well as distributors in most other countries.

By Mr. Gilpatric:

Q. Well, now, these branch offices had what function, or have what function at the present time?

A. They had three main functions: One, they carried a complete line of our controls on hand; they were the headquarters for our sales group who covered the surrounding territory, calling on the manufacturers, the jobbers, and the dealers, the architects, heating engineers, and
1475 home owners. Their third function was that of service. We maintain a complete service set-up of specialized service engineers, so that we were able to educate all of these new people coming into the heating field.

Many of the specialty sales organizations that were handling oil burners had been in other lines completely foreign—like a washing machine merchandiser or vacuum cleaning sales organization—they knew nothing about heating. Our men were experienced in the heating field. We constantly had running—in some parts of the country since back in the early 1920's—a service school for the service men and installers of these various burner dealers. We hold them not only in our branch offices, but particularly in the little towns—for instance, we have gone out into the outlying territories; for instance, we may hold a school for men in Chicago over a period of maybe four or five nights and then we may go out to Peoria, Illinois, and hold that same school for people in that vicinity. Many times people will come as far as 100 miles to sit in and attend those schools and learn how to service the equipment.

Trial Examiner Sheppard: Do you have a lecturer there or somebody to instruct?

The Witness: We have the men in our different branch offices who are fully equipped to do that. We have big demonstrating boards and charts and sample parts of
1476 the different equipment so that they can go on continuously.

By Mr. Gilpatric:

Q. Now, in soliciting sales from, say, manufacturers, for the moment, what is the principal function your salesmen serve? What is their approach?

A. Well, our salesmen calling on the customers have got to be a pretty high grade and high type of individual. They have not only got to be good salesmen but they have got to be good engineers. They have got to understand oil burners. They have got to understand the application of the equipment to the burner.

Many times the manufacturer is planning on a new type of burner and that may take considerable time and effort in getting the proper application of controls to it.

Q. Have you found, in your experience with oil burner manufacturers, that your policy of advertising your product and pushing its acceptance with home owners has proven a sales advantage?

A. Oh, very decidedly so, because, after all, the average manufacturers is in business to sell oil burners and if he finds, as he frequently does, that his trade want Minneapolis-Honeywell controls, why, he will supply them to them, and our contacts with the home owner and with the dealer, with the jobber, have been very successful in promoting that demand.

1477 Q. You mentioned earlier the problem of service and what your branch offices did generally in that regard. What has been the policy of your company for serving controls which you sold and which you distributed?

A. Well, we have always adopted the policy of trying to keep every Minneapolis-Honeywell and every other control giving good service and satisfaction to the user.

1478 We have a very wide variety of models, a very wide variety of types—many of those are now no longer manufactured, but we still maintain repair parts and giving repair service on them. We started—I don't know whether our competitors do likewise—but back in the early 1920's on what we termed a "revolving stock". People are notoriously procrastinators, Major. They generally let their heating problems go until the last minute and then as soon as we get the first cold wave, they start thinking about their equipment, and we have a tremendous service peak. Everybody wants their equipment looked after and they all order at that time. It would be impossible for us to maintain on a year-round basis a big enough staff of men to handle that

particular service peak. Therefore, we established what we call revolving stock service. We maintain in our stock in Minneapolis a representative number—that experience has determined is necessary, of all the popular types of controls that have ever been sold in any quantity.

Q. How many would you say that they stock?

A. Well, in the Minneapolis stock, we have got approximately 24,000 units, representing 950 different models.

We likewise carry on hand in our different branch offices the same type of revolving stock, and I would imagine we probably have from eight to ten thousand additional controls scattered in our branch stock, for the same pur-

1479 pose.

I would like to explain how this revolving stock works. We have the controls that are ready for use and if some owner or dealer sends us in a defective control or a damaged control, we immediately take off the shelf a similar control that would perform a similar function and of approximately the same age as the old control and we ship that to him that very same day. Otherwise, he would have to wait for us to sit down and repair the old equipment and he might be without controls for maybe as long as two weeks—in the peak, it might be as long as six weeks—but in this way, we carry on an immediate and a prompt service and, in the same way, the dealers locally can bring in that equipment to our branch office, getting usable pieces of equipment that work just as well or better, as a matter of fact, than the one he turns in, on which there is a flat price for overhauling, and he can take that immediately back to his user and give him heat that same day.

Q. What would you say would be an average number of control units that are serviced, that were serviced there in your factory under the system you described, during the last two years, 1940 and 1941?

A. We will average from one hundred to one hundred ten thousand units a year, coming in for repair.

Q. Do the bulk of those units consist of what you

1480 might call current models?

A. Yes, the majority are current models, because there are many more of the current models in the field than there are of the very old timers.

Q. By the way, what is the average life span of your temperature controls?

A. Well, some of them last entirely too long. We have equipment coming in for repairs that is thirty-five years

old. It all depends on the type of equipment. For example, the original electric motors that we made for the American Nokol Company back in 1922 are still coming in for repairs.

Q. Does your company make it a practice to guarantee controls for any period of time after shipment?

A. We do. We give to our manufacturers an eighteen-months guarantee; to the dealers a year guarantee. That extra six months for the manufacturer is to take care of the period that it may remain in his stock.

Every instrument is coded by date, so that when it comes back to us for repair; we know exactly how long it has been out of the factory. However, we never are arbitrary about that. If a dealer comes in with a control that may have been two years or three years old, a control that doesn't show evidence of abuse or wear, and says that it had only been installed two or three or four months before and had gone bad, we will take his word for it and repair it

1481 for him without charge.

Q. And I take it that during the guarantee period—

A. During the guarantee period there is no charge at all.

Q. Can you give us any idea about how often your salesmen in the branch offices are called on for minor service problems?

A. Well, not a great many times, because we have endeavored to take care of that by that educational program I have described with the dealers.

If you allowed the dealers to, they would be very glad to use our organization as their service organization, but we do not do that—only in extremely troublesome cases do we go out and, then when we do go out, we insist that that dealer or his service man accompany us so that they, in turn, can be educated on the job. If the dealer service man accompanies our man, that takes any temptation away from him to dump the service load on us and, also, we do it for another reason—that, after all, our controls are just part of the installation. If the man goes out alone and then later on, say, something goes wrong with the oil burner; then the dealer says, "Your man did something to it". So that we not only protect ourselves, we protect ourselves in two ways.

But our service to the dealer is primarily one of education of his men, of assisting him if he has a com-

1482 plex installation or if he has an extremely difficult service problem that he hasn't been able to solve. Then we will very happily assist him.

Q. Did you make it a practice to furnish service manuals to your customers?

A. We do. We have very complete manuals that are available for the manufacturer and for the dealer with each individual piece of equipment, and we pack an instruction sheet, which gives all the installation and service data on it.

Q. Tell us whether or not that service policy of yours has contributed not only to the demand for your controls among home owners, but to good will among dealers.

Mr. Haycraft: I am going to object to the leading question, Mr. Examiner. I think the witness can testify without its being put in his mouth.

Trial Examiner Sheppard: Well, I don't know. Do you understand what he wants to get from you there, Mr. Sweatt?

A. I think I understand what he is driving at.

Trial Examiner Sheppard: Well, I will give it whatever weight I think it is worth. Go on and tell us about it.

The Witness: Well, now, Miss Reporter, will you read me the question so that I get it straight.

1483 (The question above referred to was read by the reporter.)

A. Well, very decidedly yes, because through the availability of our service to the dealer, he has something that he greatly appreciates. We render many services to the dealer, not only actual service on maybe a device that has gone wrong, but advice on an installation. As I say, we maintain stocks in the branch offices. If a dealer happens to have a set of controls on hand that is designed for a steam boiler and he gets an order to install an oil burner for a warm air furnace, he can come into the branch office and bring in his steam boiler control and we will hand him, over the counter, a control for warm air furnace in even exchange. He doesn't have to wait to write to the manufacturer to get that control.

And, in the same way, our method of handling service takes a great burden off of the manufacturer. Most manufacturers instruct their dealers to handle their service direct—either with the nearest Minneapolis service branch or with the factory—so that feature from the manufacturers' standpoint, it is of value to him. From the dealers' standpoint, it is of interest to him, and it is one of those things which, I think, have created the demand for Minneapolis-Honeywell products that we have.

Q. During the Commission's case and in a stipula-
1484 tion of facts, the Commission's Exhibit 1 that has been referred to, the three channels of trade and distribution which have been recognized by your company in selling those controls; the manufacturers, wholesalers or jobbers, and dealers.

1485 Will you define for us what Minneapolis-Honeywell includes within the first of those classifications, namely, manufacturers?

A. Well, we sell through what we term the "historic channels of trade" in the heating industry that have been there ever since I have been in this industry, which is now pretty nearly a quarter of a century, and I guess it was there long before I got into it—which is, to the manufacturer, who in turn sells to the wholesaler, who in turn sells to the retailer. We define, as a manufacturer, a concern who manufactures and fabricates heating equipment,

Q. You include besides oil burne manufacturers, who have been referred to principally he , furnace manufacturers and—

A. Oh, yes, furnace manufacturers, boiler manufacturers, stoker manufacturers, gas burner manufacturers.

Q. What, if any, precaution do you take so as to avoid treating as manufacturers, concerns which are really not entitled to that treatment?

A. Well, we make a pretty thorough investigation of manufacturers, or so-called manufacturers' facilities, to determine whether or not he is really a legitimate manufacturer and a legitimate fabricator of a product.

Many concerns will buy a completely packaged outfit
1486 in their own name and, in turn, resell it with their name on it. I think, in New York, we had some testimony of some people around Brooklyn that would buy burners with a private brand name and then resell them.

We have never regarded those people as manufacturers unless they have manufacturing facilities and actually do manufacture burners or some closely allied product such as boilers or furnaces.

Q. Now, turning to the wholesaler and jobber classification. What does that comprise?

A. There are three general classes of wholesalers. The first is, in the heating industry, generally termed a "jobber" and he handles a miscellaneous line of heating equipment—usually also plumbing equipment—for example boil-

ers, furnaces, radiators, valves, traps, fittings of all kinds that he sells to the heating contractor, so that the heating contractor, let's say, who is going to install heating equipment in a home can go to one jobber and get everything he needs for that installation.

The second general classification is what we term a distributor. He generally is operating on a wholesale basis, selling to the dealers, but instead of handling a broad line of, many times competing equipment, he generally has an exclusive agency for a certain type of boiler or he may have an exclusive agency for a certain type of fur-
1487 nace and so on. He operates a good deal as the broader coverage jobber does, except that he generally does not handle a complete line. He warehouses the equipment and sells it to the contractor, who installs it.

The third general type is what is known as the manufacturer's agent. He generally has the exclusive representation for a number of lines for various manufacturers, but he generally does not stock any of it, he simply takes the order, transmits it to the manufacturer and the manufacturer bills it directly to the dealer and he receives a commission on it.

Trial Examiner Sheppard: Where do you put the fellow in your classification that buys these heaters and then sells them like we had in New York?

The Witness: Well, he is the dealer.

Trial Examiner Sheppard: He is a dealer?

The Witness: The dealer, we define as a concern who is running a heating business. He is usually a heating contractor, making a complete installation, sells to the consumer.

By Mr. Gilpatric:

Q. In the distribution of your controls, do you stress sales to any particular one of these three channels?

A. Well, we stress our sales to the manufacturer. We endeavor to sell the manufacturer first—

1488 Q. (Interposing.) Why?

A. —because it simplifies your selling job.

If a manufacturer, for example, is standardizing on our product, he, in turn, is selling and calling on many of these various contractors and your cost per unit of sale is much lower than it is otherwise. It simplifies your selling job to a certain extent.

Q. In what situations then do you sell directly to wholesalers and jobbers?

A. Well, there are many, many types of controls that the manufacturer doesn't handle. The manufacturer usually handles the equipment—that is what we term "original equipment"—with his product, where it is a part of it or accessory to it.

Now, the oil burner manufacturer, the majority of this business is with the standard room thermostat, the limit control and the primary control. Now, in addition to that, there are many other types of controls that are used in a heating installation. There may be a motorized steam valve. There may be a hot water circulator. There may be a low water cut off. There may be extra limit controls of various kinds for some of the more complex and complicated hook-ups. And it is that type of equipment that the dealer needs, to complete an installation, that we sell to the wholesaler and dealer.

1489 Q. During the earlier testimony it was said that the solicitation of oil burner accounts by Minneapolis-Honeywell salesmen goes on throughout the year and was not simply a matter of getting a contract signed and not calling on the customer until the next year. Can you explain the policy behind that statement?

A. Well, I think it is obvious that when a customer signs a contract, it is just the first step. We call on all of our manufacturer customers constantly throughout the year.

In the first place, we want to keep our ear to the ground and find out if maybe any of our competitors are getting a larger share of the business than they had before.

Q. Does that happen?

A. That happens very frequently. We want to be on hand to give that manufacturer the sort of sales help or service that we can. Our salesman, in calling on a manufacturer, may call on five or six or maybe seven people in a company, depending upon the size—the purchasing agent, the general sales manager, maybe the president of the company, he may even call on the treasurer of the company to collect past due items. He will check with the stock room man to see whether they are low on any controls and then go up to the purchasing agent and get an order for them.

Many concerns have a service manager, and he checks
1490 with that service manager to find out if anything has cropped up, any particular trouble, that might have arisen with the controls out in the field. Many times you can detect those things that way before they become trouble-

some, so that that contact is continuous, month in and month out, twelve months out of the year.

Q. Now, were you speaking simply of manufacturers who purchase your lines of controls?

A. Well, not entirely. I think probably we spend more time with manufacturers that we were not getting a volume of business from than from our good customers. There is always an unfortunate tendency in that way, maybe, on the part of salesmen, to think he will concentrate on a new account and sometimes, we have found, to our sorrow, that he neglects the old accounts and doesn't get the new account and loses the old account, as well.

Q. Well now, what about manufacturers who have actually standardized—as you have defined that term earlier—on Minneapolis-Honeywell controls? It isn't necessary, is it, to devote further sales efforts to him?

A. It certainly is, because very few manufacturers who standardize do not offer other makes of controls to the dealers, and many times we will find that a competitor will have established a lower price with that manufacturer, so that the manufacturer will put out a new sales sheet,
1491 showing a lower cost on our competitor's product than on ours, which will, perhaps, markedly increase the volume to that competitor, and that sort of situation will give our men a real sales job, to convince the manufacturer that Minneapolis-Honeywell controls are really the ones to push.

Q. Do you have any method in your organization of checking up on how the sales to different accounts run throughout the year?

A. Oh, yes, we keep our regular monthly record and we have before us, as soon as the statistical department gets it out, which is usually about the tenth of the following month, a complete summary of each one of our customers, with our sales to them that month, for the year to date, and for the same month of the previous year and for the year to date, the previous year, so that whenever we think that a customer is slipping some place, we can get on the job quickly and find out just exactly what may have gone wrong. Many times we find that it is simply a matter that he became a bit overstocked. His sales may have dropped off and, in that case, we know that everything is fine.

Q. How do you go about testing, out in the field, new equipment?

A. We do that in two ways. We do a considerable

amount of testing by experimenting on members of the organization—much to my wife's disgust sometimes—
1492 and if everything goes well there, then we will ask our different manufacturers to put a limited number of those new devices in the field for field tests, so that we get the benefit of seeing what is going to happen when the average installer installs them and you get them scattered out in widely varying circumstances—different types of boilers, different types of furnaces, in different territories.

Q. Does that require continuous contact with the engineering department of the manufacturers who do that work?

A. That does. And also with the service organization of the manufacturer.

Q. Well now, if you have your manufacturers well sold, what is the need for sales effort in the case of wholesalers and these retails who often buy the burners equipped with your controls?

A. Well, there are two reasons. One is that we want to continue to have the pressure put on the manufacturer from the demand from the dealer and wholesaler for Minneapolis-Honeywell controls and, likewise, there is a substantial volume of business to be obtained in what we term the "plus control market". So that there are two very good reasons for it.

Q. A number of the witnesses have testified, I believe, that your prices, Minneapolis-Honeywell prices have run higher than competitors' prices. In view of that fact,
1493 how do you account for the position that Minneapolis-Honeywell has attained in the control industry, as evidenced by the statements in the stipulation, that it sells about 60 per cent of the total volume in a particular year?

A. Well, I think that really a number of the things that I have covered this afternoon contribute to it. I
1494 have covered our advertising. I believe that Minneapolis-Honeywell has a public acceptance that no other type of control has. We have certainly pursued a very vigorous policy of merchandising and sales coverage. Some of our competitors just hit the high spots. I mean they go after the big accounts. We have always pursued the policy of covering aggressively every manufacturer, no matter how small he is, because we have had experience that a great many of our large customers today were very small fry when they started out and if we had not cultivated them when they started out and rendered them the helpful service

that we tried to, they probably would not be as loyal to Minneapolis-Honeywell today.

Q. Can you give us some examples of that type of account, that started small and ended up large?

A. Well, I can remember calling on Mr. Williams of Williams Oil-O-Matic Company back in 1921, when he was making oil burners in one small setion upstairs of his garage in Bloomington. I remember when Quiet Heat Manufacturing Company was a very, very small concern. In fact, we were selling them, I think, when they started in business.

The Aldrich Company of Wyoming, Illinois, started out—I think, if I am correct, Mr. Aldrich left Williams Oil-O-Matic and started his own business in a very small way—and he has grown constantly and steadily until now, I think he is considered one of the most important factors in
1495 the industry.

Q. You used the term, Mr. Sweatt, "plus control market". What do you mean by that?

A. Well, I think I would define that as being the extra controls that are not normally handled by the manufacturer. The type of controls which I have outlined that we sold to the jobber and to the dealer.

Q. What was the trend in your sales for the year, 1938, in comparison with the year before or the year after, about which we have heard somewhat today?

A. Well, 1937 showed a sharp upward trend in the oil burner industry and all the oil burner manufacturers thought "Ah, the day has arrived. We are now an accepted product and we are going to town in a big way," and the oil burner business practically dropped out from under us in September of 1937 and the sales in the last quarter of 1937—where, normally, they are the largest quarter—were comparatively small.

When we went out to interview our customers at the end of 1937 and the beginning of 1938, we found a great many of them—in fact, all of them—were pretty well loaded up with controls. In the meantime, the start of a business depression no one knew was going to happen had begun. They were all holding back and, as a result of the two fac-
1496 tors—1938 was not nearly as good a sales year for the industry. It affected, I think, most of the control manufacturers rather adversely, in that most of their customers carried an over substantial inventory, and their pur-

chases in 1938 were much smaller than they probably would have been—even with the business recession.

Q. And that was true of your company particularly?

A. That was true of our company very specifically. Our sales dropped way, way down in 1938.

Q. Apropos of a question that was asked this morning, how many shares of stock of your company were outstanding in 1939?

A. In round figures, 622,000 shares of common stock.

Mr. Gilpatric: You may cross examine.

Trial Examiner Sheppard: We will take a short recess now.

(Short recess taken.)

Mr. Gilpatric: I have one more question, Mr. Examiner.

By Mr. Gilpatric:

Q. Mr. Sweatt, you stated that you, yourself, had been connected with the business of manufacturing controls for nearly a quarter of a century. What about the other members of your family in respect to that business?

A. Well, my father was connected with the business since approximately 1889 and, of course, I have been very
1497 closely associated with it all of my life. He was very active in the business up to the time of his death, in 1937. My brother, likewise, was brought up in the business and in the tradition, and he, I think, as the record shows, is now president of the company.

Mr. Gilpatric: All right, Mr. Haycraft.

Cross-Examination by Mr. Haycraft.

Q. How large a corporation is it now?

A. Well, in what terms, Mr. Haycraft?

Q. Capitalization.

A. Well, there are, as I said, 622,000 shares of common stock, with a considerable block of preferred.

Q. What is the par value of the stock?

A. No par value. I can't recall the exact net worth of the corporation, but it is something better than ten million dollars.

Q. And what proportion of your business—I think maybe you have answered this question—but what proportion of your business is devoted to the manufacture of automatic temperature controls for domestic heating?

A. Around eighty per cent.

Q. I think you had available there your advertising figures and your research figures. Could you give us those figures for the years of, say, beginning with 1936 through 1941?

1498 A. Yes, sir. I can give them to you. As a matter of fact, I have them typewritten, if you would like to have them.

Q. Yes, if you want to make it as an exhibit.

The Witness: Do you have any objection?

Trial Examiner Sheppard: Yes, that would be the best way to handle that.

By Trial Examiner Sheppard:

Q. Just tell us what that is, Mr. Sweatt.

A. In 1936—

Mr. Haycraft: No, just identify the paper. That will be sufficient.

Mr. Gilpatric: This being Respondent's Exhibit 105.

A. This paper is a recapitalization of advertising expense and engineering research and development expense of Minneapolis-Honeywell Regulator Company for the years 1927 to 1941, inclusive.

Mr. Gilpatric: At the suggestion of Mr. Haycraft, I would like to offer Respondent's Exhibit 105 in evidence.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let the document be accepted.

(The document referred to was marked RESPOND-

1499 ENT'S EXHIBIT 105 and received in evidence.)

By Mr. Haycraft:

Q. Now, do you have your sales of these controls—take for the last, 1936 to 1941—you don't need to go back any further, but just to show the percentage-wise of your advertising and research.

A. No, I have no figures of total sales with me.

Trial Examiner Sheppard: If you want to, I will have Mr. Sweatt send them to me. They are sending something anyway, and I might as well ask him to do that if you want.

The Witness: It is, by the way, a matter of public record.

By Mr. Haycraft:

Q. Are they in the Census Report?

A. No, they are in the Securities and Exchange Commission.

Q. For those years, you mean?
A. Yes, since 1927.
Q. That would be the over-all sales figure?
A. Over-all sales figure.
Q. Now, do you have with you the units of automatic temperature controls for domestic purposes, such as we have been discussing here at this proceeding?
A. No, sir, I haven't them.
Q. That is either by dollars or by total number? I think I have those figures somewhere. I think you prepared
1500 part of them for us.
A. I think they are somewhere in the record.
Mr. Gilpatric: I think I gave them to you in connection with the stipulation about the 60 per cent.
Trial Examiner Sheppard: It is in Exhibit 1.

By Mr. Haycraft:

Q. Now, I believe you testified that your sales of automatic temperature controls dropped off in 1938, as compared with 1937. Do you know the percentage of drop off, or do you have anything in mind as to the exact figures for those two years?
A. No, I haven't, but a pretty good cross section is shown there on Exhibit 84.
Q. Commission's Exhibit 84?
A. In Commission's Exhibit 84.
Q. That shows 1937 and 1938. Well, that is for a number of companies?
A. Yes, I think that gives a fairly good cross section of respective companies.
Q. Well, I notice here that so far as Quiet Heat Company is concerned, that their sales were substantially increased in 1938 over 1937. How do you account for that?
A. I think that Quiet Heat sales increased every year from the time they entered business.
Q. They didn't suffer a relapse?
1501 A. Evidently not.
Q. How do you account for that? Do you know anything about the peculiarities on their behalf that would account for that?
A. Well, they were very aggressive merchandisers and I think were making inroads on the old line companies who were operating on a very different basis than they were.
Trial Examiner Sheppard: Now, this gentleman who

testified this morning said they had a continual rise since September, 1938; didn't he?

Mr. Haycraft: Yes, but he dropped off in 1938. Everybody dropped off, excepting a few. The Quiet Heat did not, and that is what I am trying to find out.

Trial Examiner Sheppard: Oh, the Quiet Heat did not?

Mr. Haycraft: Did not. They showed a substantial increase in 1938 over 1937.

The Witness: I think they just about got started in 1936, if I am not mistaken.

Mr. Haycraft: That is all.

Mr. Gilpatric: Are you through, Mr. Haycraft?

Mr. Haycraft: Yes, I am through.

Mr. Freeman: Are we all through?

Mr. Gilpatric: Mr. Examiner, may I go off the record a minute.

1502 Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record. All right, Mr. Sweatt, you are excused. Thank you very much. I have enjoyed your statement; and we will recess, Miss Reporter, until eleven-thirty tomorrow, to accommodate some arrangement for the respondent.

Mr. Gilpatric: Thank you.

(Whereupon at 4:00 p. m., November 30, 1943, the hearing in the above entitled matter was adjourned.)

1503 Room 1123,
New Post Office Building,
Chicago, Illinois,
December 1, 1943.

Met, pursuant to adjournment, at 11:30 a. m.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Esq., Attorney for the Federal Trade Commission.

Messrs. Cravath, de Gersdorff, Swaine & Wood, by R. L. Gilpatric, Esq., and Paul J. Chase, Esq., 15 Broad Street, New York, New York, and Messrs. Bair & Freeman, by Will Freeman, Esq., 135 South La Salle Street, Chicago, Illinois, Attorneys for respondent.

1504 Proceedings.

Trial Examiner Sheppard: All right, Miss Reporter and gentlemen, we will reconvene the hearing pursuant to the adjournment yesterday and be on the record for anything you have to offer.

Mr. Freeman: All right. We offer in evidence as Respondent's Exhibit 112—we reserved a few numbers for some other exhibits, if the Court please—the petition of Minneapolis-Honeywell Regulator Company, the respondent in this case, filed in the United States District Court for the Northern District of Illinois, Eastern Division, and now pending before the Honorable John P. Barnes, Judge of said Court.

The petition was filed requesting an order of the United States District Court compelling J. W. Owens, a witness duly subpoenaed by the Federal Trade Commission, and served on J. W. Owens on November 5, 1943, to appear before the Trial Examiner, W. W. Sheppard, on behalf of the respondent, on November 29, 1943.

J. W. Owens did appear on November 29th, but contrary to the subpoena, refused to submit any documents or records and upon advice of counsel refused to answer any

of the questions with respect to contracts, price structure and other data specifically requested in the subpoena duces tecum, which, as I have stated, was duly issued by the
1505 Commission upon a formal application made by this respondent.

I personally appeared before Judge Barnes this morning, and Mr. Snyder, counsel for J. W. Owens and the Mercoid Corporation, likewise appeared.

Judge Barnes heard oral arguments on behalf of the respondent in this case and likewise in behalf of J. W. Owens. The only question the Court was in doubt about was whether or not the respondent could make application to the Court to compel the witness to respond to the subpoena issued by the Federal Trade Commission.

The Court carefully considered Section 9 and there found, and I quote:

"And in case of disobedience to a subpoena, the Commission may invoke the aid of any court of the United States in requiring the attendance and testimony of witnesses, and the production of documentary evidence."

But the Court, after consideration, felt that the application to him, that is, the request to invoke the authority of the United States District Court, should come from the Commission instead of the respondent.

The Court stated that the Commission, who issued the original subpoena, should either join or make the application direct to compel J. W. Owens to respond and answer questions in accordance with the subpoena, or the
1506 Commission should definitely state why it will not.

He then stated that if the Commission refused to appear before him, he would then tell us what he would do. So much for the proceedings before his Honor, Judge Barnes, this morning.

And I now ask counsel for the Commission, Mr. Haycraft, if he has any authority to bind the Commission or appear before Judge Barnes in behalf of the Commission, as counsel for the Commission, and ask that the Court issue an order directing J. W. Owens to appear in accordance with the duly issued subpoena of the Commission.

Mr. Haycraft: I have no such authority.

Mr. Freeman: And I now ask you, Major Sheppard, whether you have any authority in behalf of the Commission where you might appear for and in behalf of the Commission or sign a petition in behalf of the Commission

as its Trial Examiner in this case so that we might then appear before Judge Barnes for the order requested.

Trial Examiner Sheppard: I don't think I have the authority, Mr. Freeman. If I thought so, I would do it in a minute, but my authority simply goes to the presiding over these hearings and hearing the testimony which is adduced before me.

Mr. Freeman: In view of the answers made by Major Sheppard and Mr. Haycraft, we will endeavor to se-
1507 cure, either by telephone or telegraph, authority of the Commission to use the Commission's name in connection with our petition or at least get the Commission directly to ask the Court in our behalf to produce J. W. Owens.

Trial Examiner Sheppard: All right.

Mr. Gilpatric: We will recall, Mr. Examiner, Mr. C. B. Sweatt for further examination.

Trial Examiner Sheppard: All right, come around, Mr. Sweatt.

Mr. Freeman: Before I forget, if the Examiner please, I offer in evidence Respondent's Exhibit 112 for identification.

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let it be accepted.

(The document referred to, heretofore marked for identification RESPONDENT'S EXHIBIT 112, was received in evidence.)

G. B. SWEATT was thereupon recalled as a witness for the respondent, being previously duly sworn, testified further as follows:

Direct Examination (Continued).

Trial Examiner Sheppard: Miss Reporter, show Mr. Charles B. Sweatt as previously sworn and recalled for further examination by respondent.

1508 By Mr. Gilpatric:

Q. Mr. Sweatt, during your cross-examination yesterday you were asked whether you had with you any figures, either by dollars or by total number, of the sales of controls by your company during the period 1937 to 1941.

You said you thought you could get those figures, but you didn't have them with you. Have you endeavored to find those figures and, if so, state what you developed?

A. I have endeavored to get the total figures, but was unable to do so. I did, however, find in our various figures that have been prepared something I think will equally serve the purpose.

I have a tabulation of our sales of primary oil burner controls to manufacturers by those years and, of course, that is really the measuring stick because each oil burner takes a primary control.

I find that in the year 1937 we sold 193,000 primary controls.

Trial Examiner Sheppard: What year?

The Witness: 1937.

By Mr. Gilpatric:

Q. Go ahead.

A. In the year 1938 that dropped 90,000 primary controls, down to 103,000, which, as I pointed out yesterday, was an abnormal drop, and many of our customers at
1509 the start of 1938 found themselves quite heavily loaded with inventory.

I think that is borne out by the fact that in the year 1937 there were 210,000 oil burners sold, and in 1938 179,000, so that the proportionate drop in oil burner sales was not nearly as great as our drop.

I think I pointed out that the bottom dropped out from the oil burner business in the last quarter of 1937. I think that is further shown by the fact that oil burner sales in 1937 dropped below 1936 sales for the total year.

There were 220,000 burners sold in 1936. The first three quarters of 1937 were very good in sales—

Trial Examiner Sheppard: Those burner figures are from the burner manufacturers all over the country?

The Witness: They are from a compilation of Fuel Oil and Oil Heat, which is the recognized trade journal of the industry, and they in turn take them from the Department of Commerce figures, which carry the reports, I believe, of 90 percent of the industry, and those figures are accepted as the correct ones by the oil burner industry.

Trial Examiner Sheppard: You don't make burners at all?

The Witness: No, sir.

Trial Examiner Sheppard: You just make the controls?

The Witness: Yes.

1510 Trial Examiner Sheppard: All right.

By Mr. Gilpatric:

Q. Do you also have, to complete the picture, the 1939, 1940, and 1941 figures?

A. As I pointed out, there is that carry-over of controls from 1937 to 1938, and that is fairly obvious from these figures.

In 1939 our sales were 159,000; in 1940, 177,000; and it was only in 1941 that we reached the 1937 figure again, where we sold 201,000 units. It is rather interesting to note that in the same time in 1939 there were 236,000 burners sold.

In 1940 there were 302,000; and in 1941, 333,000, so that in that period between 1937 and 1941 burner sales increased 59 percent over the 1937 figures. Our sales increased 4 percent over the 1937 figures.

Trial Examiner Sheppard: 4 percent?

The Witness: Yes.

Trial Examiner Sheppard: All right. Is there any other statistical information that you have?

The Witness: Those are the only figures I felt would be pertinent.

Mr. Gilpatric: That is all I have from Mr. Sweatt.

Trial Examiner Sheppard: Any questions, Mr. Haycraft?

1511 Mr. Haycraft: No, I have no questions.

Mr. Gilpatric: Thank you, Mr. Sweatt.

(Witness excused.)

Mr. Gilpatric: I would like to have Mr. Lockrae take the stand.

A. H. LOCKRAE was thereupon recalled as a witness for the respondent and, being previously duly sworn, testified further as follows:

Direct Examination.

Trial Examiner Sheppard: Miss Reporter, show Mr. A. H. Lockrae, having been previously sworn in this case, appears on the stand again at the request of the respondent.

Mr. Gilpatric: I would like to have this marked as Respondent's Exhibit 106-A to Q for identification.

(The book referred to was marked Respondent's Exhibit 106-A, 106-B, 106-C, 106-D, 106-E, 106-F, 106-G, 106-H, 106-I, 106-J, 106-K, 106-L, 106-M, 106-N, 106-O, 106-P, and 106-Q for identification.)

By Mr. Gilpatric:

Q. Mr. Lockrae, I hand you Respondent's Exhibit for identification 106-A to Q and ask you if you will state for the record what that exhibit consists of.

A. This exhibit consists of the Development and 1512 Progress of Minneapolis oil burner controls.

Q. From what sources are the cuts or figures contained in the exhibit taken?

A. They were taken from various catalogues, Minneapolis-Honeywell catalogues, Honeywell catalogues, circulars, printed circulars of the company, and individual catalogue pages of the company.

Q. Do you have with you the various catalogues and circulars to which you referred from which those figures and cuts were taken?

A. I do.

Q. What about the cuts on Respondent's Exhibit 106-E, from what source were they taken?

A. The figures or the cuts on 106-E and 106-F were injected just for informative purposes, and 106-E was taken from the handbook of Oil Burning, a publication that was put out in 1926, and the oil burners depicted on 106-F were taken from manufacturers' advertising matter. I just wanted to show you the difference between a gun type burner and a rotary type burner.

Mr. Gilpatric: Off the record.

Trial Examiner Sheppard: Off the record.
(Discussion off the record.)
Trial Examiner Sheppard: On the record.

By Mr. Gilpatric:

1513 Q. Mr. Lockrae, did you prepare this exhibit or have it prepared under your supervision?
A. It was prepared under my supervision.
Mr. Gilpatric: The respondent offers in evidence Respondent's Exhibit 106-A to Q, inclusive.
Trial Examiner Sheppard: Any objection?
Mr. Haycraft: No objection.
Trial Examiner Sheppard: Let it be admitted.
(The book referred to, heretofore marked for identification RESPONDENT'S EXHIBIT 106-A, 106-B, 106-C, 106-D, 106-E, 106-F, 106-G, 106-H, 106-I, 106-J, 106-K, 106-L, 106-M, 106-N, 106-O, 106-P, and 106-Q, was received in evidence.)

By Mr. Gilpatric:

Q. Mr. Lockrae, what were the first concerns to manufacture oil burners?
A. American Nokol Company, Williams Oilomatic, and Kleen-Heet started the manufacture of burners in the early 1920's.
There was one other manufacturer who was absorbed by American Nokol Company in about 1919, who manufactured a burner prior to the three companies named. This was the Doble Steam Car Company, and they were manufacturing it about 1917.
Mr. Haycraft: How do you spell that?
1514 The Witness: D-o-b-l-e.

By Mr. Gilpatric:

Q. Mr. Lockrae, what was the earliest type of burner, the type manufactured by these companies that you have mentioned?
A. Doble manufactured a pot type and American Nokol continued with this type burner, and I would refer you to Exhibit 106-E; the upper right-hand corner depicts the early Nokol pot type burner.
Williams Oilomatic manufactured a low pressure or emulsifying type of burner. It was equipped with a nozzle and the oil was fed into the combustion chamber under low pressure.

Kleen-Heet also made a pot type burner and later was the first, if not the first was among the first, manufacturer to come out with the high pressure or gun type burner, as we call it today.

Q. What sort of controls, if any, did the early pot type or vaporizing type burner use?

A. Well, I would refer you to Exhibit 106-A, the upper left-hand figure, which shows the Minneapolis Heat Regulator spring wound type of motor.

You will notice the crank on the right and the home owner had to wind it up after each 72nd operation. The crank arm which you see in the center operated a 1515 chain that went to the oil valve and as the thermostat called for heat the crank arm would make a one-half revolution. It would open the valve and allow the oil to run into the pot of the burner where it was ignited. This type of control depended on a trip bucket type of safety, which is shown in Exhibit 106-A, the lower figure.

You can see there where the chain attached to the arm of the valve. As that arm was raised, the oil flowed to the pot. When it was lowered, it was shut off. You will also note where the name trip bucket originated, simply a bucket hanging on the arm of the valve.

If the oil was fed into the pot of the burner and failed to ignite, it ran back through a return line and ran into this pot, or into the bucket, I should have said, and the weight of the oil in the bucket caused it to trip and close off the oil valve.

Now, some of the burners used a motor to obtain the induced draft, that is to blow the air into the combustion chamber in order to obtain combustion. If a motor was used, then the early custom was to employ a simple toggle switch which tied into the chain, in turn operated by the motor, so that when the spring thermostat came on the motor would start up the same time the oil valve opened and shut down the same time that the oil valve closed.

Trial Examiner Sheppard: Does that lower figure 1516 on Exhibit 106-A, is that a part of that up there?

The Witness: No, that was a separate unit. We did not manufacture that unit.

Trial Examiner Sheppard: I see.

The Witness: But this one was manufactured by Bissell Company of Kansas City and was a very popular early model.

Trial Examiner Sheppard: I see that, but you did manufacture the one at the top?

The Witness: Yes, sir, and the thermostat and limit control that functioned it.

By Mr. Gilpatric:

Q. What other companies, Mr. Lockrae, manufactured these early control models?

Mr. Haycraft: May I ask a question before you get to that?

Mr. Gilpatric: Surely.

Mr. Haycraft: As long as he is talking about it here, it might save time.

Mr. Gilpatric: All right.

By Mr. Haycraft:

Q. Where were these various things, these respective devices, located in connection with the burner?

A. Well, the trip bucket was installed adjacent to the burner. As a matter of fact, a lot of them had the
1517 trip bucket built right into the burner. The motor was mounted on the wall, as you can see from the mounting brackets, simply screwed to the wall, and then the wires from the thermostat led to the motor.

And, incidentally, that motor was actuated by dry cell batteries.

Mr. Haycraft: All right.

The Witness: I might add, if you please,—pardon me. What was your question?

Mr. Gilpatric: You may continue with your statement.

The Witness: That is all right.

Mr. Gilpatric: Will you read my question, please?

(The question above referred to was read by the reporter.)

The Witness: In those early days both Minneapolis Heat Regulator Company and Honeywell Heating Specialties Company manufactured the spring type motor and they also manufactured electric motors, which later became more popular, and I would refer you to page 106-B, which shows the Minneapolis Heat Regulator type of motor units.

The one in the upper left-hand corner is the original, which you can note was a pretty crude affair in those days, and quite expensive, as compared with the spring type motors.

1518 The model 24 motor was its successor, and then in 1925 Minneapolis produced the type M. P. S. Program Switch.

Now, this unit had the ability of manipulating the crank arms, the same as the spring motor, but it incorporated a switching means which eliminated the use of a separate toggle switch attached to the chain.

The type M-26 motor shown is the current model of the Minneapolis-Honeywell Regulator Company.

Trial Examiner Sheppard: The one you are using now?

The Witness: Yes, sir.

Mr. Haycraft: That is for use of pot type burners?

The Witness: That was used for pot type burners.

By Mr. Gilpatric:

Q. Mr. Lockrae, you may continue with your statement.

A. Page 106-C shows the Honeywell models, the one in the upper left being the original model. The type A was its successor and was produced in 1920 and 1921 and the type D, that came into being in 1924 and 1925.

Q. When was the first thermostatically actuated relay brought out?

A. Well, with the advent of burners of the type manufactured by Oilomatic and Kleen-Heet. They were either the low or high pressure burners and they didn't
1519 have the need for the valve mechanism because the oil was injected into the burner either under low or high pressure and there was no necessity for a motor operation, which would include the crank arms and the chain and pulleys, and so forth.

All they had to do was to start the burner motor, so about 1920 Minneapolis came out with the relay shown on page 106-D.

Incidentally, that picture simply shows the panel of the relay. It was in turn mounted in a cabinet and mounted on the wall. It simply made a circuit to the burner motor when the thermostat called for heat and it broke the circuit to the motor burner when the thermostat called for less heat.

A trip bucket still was required where this control was used at that time.

Q. When did Minneapolis Heat Regulator Company introduce a line of limit controls?

A. Well, we looked upon the introduction of limit con-

trols as the first major advance in control art. That occurred as early as 1917.

The limit controls not only kept the temperature or pressure of the heating system within safe limits, but in addition they could be set so that the temperature would be limited; in other words, the limit control would stop the burner ahead of the thermostat's demand for less
1520 heat and avoid overcoasting, as we call it, or overshooting of the room temperature. You were able to get a better temperature control through the use of a limit control and today no heating system is considered complete without a limit control. Most ordnances call for their use.

Trial Examiner Sheppard: But you didn't have limit controls when they first started, did you?

The Witness: When the oil burners first started, that was about the time we introduced our limit controls. Doble, according to the best information we have, started in 1917, and we had limit controls as far back as 1917.

Trial Examiner Sheppard: I see.

By Mr. Gilpatric:

Q. When were the first completely automatic systems brought out by Minneapolis and by Honeywell?

A. If you will refer to page 106-G, it shows the first Minneapolis Heat Regulator fully automatic control system. It was sold for trial purposes in 1924 and in volume in 1925.

We looked upon this system and the one shown on page 106-H, which was the Honeywell system, as being our second major advance in the art of oil burner control.

Q. Mr. Lockrae, let me interrupt you there. The figure on page 106-G and H came out on the labels of Minneapolis-Honeywell Regulator Company rather than the labels
1521 of the predecessor companies. Will you explain that?

A. Yes, I can do that very easily. It was a lot easier for us to get these clear cuts from Minneapolis-Honeywell's later catalogues than it was from the early variety of catalogues, and that is why they were used.

Q. But these same units were, in fact, manufactured by the predecessor companies at the time you have indicated?

A. That is correct.

Q. How did the system, then, the Minneapolis system, as shown in Respondent's Exhibit 106-G, operate?

A. It was a relay actuated control and it also included a safety switch.

Now, that safety switch was made up of a piece of resistance wire, which functioned a strip of bi-metal, and when the thermostat called for heat the relay would come in and close the circuit to the burner motor and the ignition means. At the same time that safety switch would start to heat, and if the protectostat which sighted the flame did not respond within the timing of the safety switch, the burner was automatically stopped and it could not be started again.

So, with that arrangement, it was able to eliminate the odorous, messy control that had been used before, I mean the trip bucket type of safety.

Q. Mr. Lockrae, you referred to the protectostat.

1522 I show you Respondent's Exhibit 107 for identification—will you mark it, please, Miss Reporter?

(The document referred to was marked Respondent's Exhibit 107 for identification.)

By Mr. Gilpatric:

Q. (Continuing.) —and ask you whether that is the control to which you referred.

A. This is the current version of that control.

Trial Examiner Sheppard: Is there a picture here of that?

The Witness: On 106 G, Major.

Mr. Gilpatric: There it is.

Trial Examiner Sheppard: I see.

Mr. Gilpatric: The respondent offers in evidence 107 for identification, Exhibit 107.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: No.

Trial Examiner Sheppard: Let it be accepted.

(The document referred to, heretofore marked for identification RESPONDENT'S EXHIBIT 107, was received in evidence.)

Trial Examiner Sheppard: That is what you call a limit control?

The Witness: No, sir, that is the combustion safety control.

1523 Trial Examiner Sheppard: Combustion safety control?

The Witness: Yes.

Mr. Haycraft: Where is it placed?

The Witness: It is installed so that it sights the flame. In other words, the nozzle here, as you will see, is detachable, and that was put right into the brick work, or some manufacturers mounted it right alongside the blast tube so that this end was looking at the flame, and there is a metal diaphragm in there and the radiant of energy from the flame would cause that diaphragm to buckle and as it buckled the movement was in the direction, where the tension was applied, and in that small movement, which we amplified, we were able to close or open up the contact.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Gilpatric:

Q. Proceed, Mr. Lockrae.

A. We looked upon that control as our third major control contribution, and it is rather interesting to note that although that control was made back in 1924 and 1925 and did not have universal usage because of its size, yet our post-war oil burner control embodies the feature of obtaining safety from the flame reactance, and it is built into 1524 and made a part of the oil burner, so this principle that we originated that long ago is still good.

Trial Examiner Sheppard: Yes.

By Mr. Gilpatric:

Q. At what price did this early Minneapolis automatic system sell for, to your largest customers?

A. Well, in 1924—no, I beg your pardon—in 1928 this system sold to the largest users for $40.15, a set. That included the system that you see there.

Trial Examiner Sheppard: I see.

By Mr. Gilpatric:

Q. Referring to—

A. Page 106-G.

Trial Examiner Sheppard: Yes, $40.15.

By Mr. Gilpatric:

Q. Now, what about the type of system that the Honeywell Company offered at this time?

Mr. Haycraft: Just a moment, before you leave that. Will you have him describe the other things on this page, as to what function they performed?

Mr. Gilpatric: Yes.

Trial Examiner Sheppard: And have them all together.

Mr. Haycraft: He has now described the protectostat. Now, if you will refer briefly to the others.

1525 Mr. Gilpatric: All right.

By Mr. Gilpatric:

Q. Will you go ahead and describe the relay and the thermostat?

A. The thermostat, room thermostat, is the upper right-hand figure of page 106-G. The limit control is the figure beneath the thermostat, and this figure shows the upper view and side view of the limit control as well as the separate well, which was installed in the boiler, and then the stem of the instrument went on the inside of that well so that you didn't have to drain your boiler if you had trouble with the control and it protected it and sealed the water away from the instrument.

Mr. Haycraft: It was a hot water control?

The Witness: That is a hot water control.

The protectorelay is the figure directly beneath the protectostat in the lower left.

By Mr. Gilpatric:

Q. Now, Mr. Lockrae, do these various units which you have described comprise the set which you referred to as selling for $40.15?

A. Yes, sir, it comprises the four instruments.

Q. In other words, at that time what we now refer to as a primary consisted of two units?

A. It consisted of the relay and the protectostat.

1526 Q. The set was four rather than three controls?

A. That is correct.

Q. But functionally, the two were the same?

A. Functionally, the two were the same.

Q. Now, will you describe the Honeywell system?

A. Instead of using the relay type of control, the Honeywell principle involved an electric motor, which is shown in the lower left of figure 106-H. On the end of this motor was a switching means and through this switch we controlled the circuit to the burner motor and also the ignition and the safety circuits.

To the right of the motor switch is the combustion safety control, which was installed in the stack and was actuated by changes in the stack temperature.

The vaporstat which is shown is a Honeywell type of

limit control ordinarily used with the steam system, and the room thermostat, which is shown just to the right of the vaporstat.

Mr. Haycraft: Here again you had to have the two to get your primary?

The Witness: You had to have the motor switch and the combustion safety control working together to control the operation of the burner and its safety.

By Mr. Gilpatric:

Q. Which you now get by your protectorelay?

1527 A. Which we now get by one unit, which is our protectorelay, or it has been referred to as the stack control, primary control.

Q. Now, what novel feature did this motor switch system that you have referred to embody?

A. Well, in the early days certain timing functions were necessary in the control of an oil burner. It was often required to have the ignition come on ahead of the opening of the oil valve or the starting up of the burner motor and gas was all that they had for ignition means in those early days.

So where a gas valve was required, it was mounted on the left side of the motor and it would open as the motor revolved. We built those motors so that it would take anywhere from 30 seconds up to as high as 10 minutes to move the crank arm 180 degrees. That made this unit extremely flexible from a timing standpoint because we could open that gas valve slowly or we could bring it on a couple of minutes ahead, if they required it that long. We could also synchronize the switching means in the switch so that the burner motor would start up at a certain time and the oil valve would open at a certain time, depending on the sequence that the manufacturer required.

Mr. Haycraft: Was there any recycling feature to this system?

1528 The Witness: Well, we look upon that as being our fourth major advance in the control art, because incorporated in the switch was a means which permitted the burner to start up once more if the flame should go out.

By Mr. Gilpatric:

Q. You are referring to the motor?

A. The motor switch.

Q. On page 106-H?

A. On page 106-H.

Now, that was highly desirable and it is highly desirable today because if you got some water in the oil or a nozzle may be partially clogged and if the flame goes out, then the circuit employed in the Honeywell system and in those that we are selling in volume today had the ability to stop the burner and then after waiting a certain length of time it would allow the burner to start up again normally.

If it didn't start, then it went on Safety, and you had to manually manipulate the safety switch before it would again start, but that recycle saved an awful lot of service calls and it has been really an outstanding feature in oil burner control design.

Q. Is there any feature of the Honeywell combustion safety control shown in that same page, Respondent's Exhibit 106-H?

A. Yes, sir. We look upon that as our fifth advancement because it was the first control that was actuated
1529 by stack temperatures and sold commercially.

When the burner started up, of course, the stack was relatively cool, but as soon as the combustion took place the temperature in the stack rose. There is a piece of bi-metal on the end of the shaft, as you will note, and that would expand as the stack temperature increased. It in turn manipulated a switching means in the head of the instrument, which all fitted into the circuit employed, so that if the stack remained cold it would indicate that your burner had not started, you had no fire. Then you would go on safety, or you got a recycle with this system, and gave it one more chance to start and then it would go on safety if you got an extinguishment of flame.

Now, if the burner just started up and you got no flame, then it would immediately go on safety.

Q. Yesterday in the testimony of Mr. Henning, he referred to the purging period. Is that the period between the first attempt to stop the operation of the—

A. That is right, as soon as the stack temperature recedes the burner is stopped. Then there is a period of time while the stack temperature is falling, and the bi-metal element of the control is cooling, where the burner stands idle.

Well, now, any unburned gases that might have accumulated from the time that the flame disappeared, and the control stopped the burner, would all have an oppor-
1530 tunity to get out of the combustion chamber and on

up the stack before the burner started up again, and that was what he referred to as the purge period.

Q. If that wasn't the case, if you didn't have that purging period, what might happen?

A. Well, if the burner was allowed to come back on again, you would have a combustion chamber full of gases.

Trial Examiner Sheppard: It would maybe blow up?

The Witness: And you would have your boiler doors flying off or something of that sort.

By Mr. Gilpatric:

Q. Mr. Lockrae, for what price to your largest buyers did this Honeywell system shown on Respondent's Exhibit 106-H, the set of instruments shown on that page, sell in 1927 and 1928?

A. Well, in 1927 that system sold for $42.10.

Now, that price varied as to whether it has a gas valve on it, whether it had a double track or single track, but that was approximately the price.

Then later, after the Minneapolis-Honeywell consolidation, we had the two systems, the protectorelay type of system and the motor switch system, and the manufacturers selected the type that best fitted their needs, and at that time the motor switch system sold at $40.15, exactly
1531 the same as the protectorelay system. They simply took their choice.

Trial Examiner Sheppard: That shows here?

The Witness: Yes, sir.

By Mr. Gilpatric:

Q. What type of circuit was employed in the two systems, or, rather, in the Minneapolis system to which you have referred?

A. I would ask you to look at Exhibit 106-I. Prior to the advent of the Minneapolis system shown on Exhibit 106-G, all of the motors, electric motors and spring wound motors, and the relays, had contained a circuit which we designate as our series 20. That is shown in Exhibit 106-I at the top of the page.

Now, that circuit, in order that you might understand the operation of the motor, if you will refer to the diagram you will note the thermostat on the left.

Trial Examiner Sheppard: Yes.

The Witness: There is a piece of bi-metal, a spiral bi-

metal with contact blade attached to it, a vertical blade. That blade operates between the B and the W contacts.

Now, the B is the cold contact and the W is the warm contact. Now, as the room temperature is receding, the bi-metal would cause the blade to move to the left and
1532 establish the B or cold contact.

Now, that completed a circuit through the motor and would cause it to start up. Now, in the first few degrees of travel, the cam part of the maintaining switch would take hold and permit the motor to run its full starting cycle or 180 degrees, and the burner would be in the running position.

Now, as the burner delivered heat and the room temperature started to rise, the thermostat blade would leave the blue contact and travel across the gap.

Trial Examiner Sheppard: Towards the W?

The Witness: Towards the W contact. As soon as it hit the W contact, that was the point at which the thermostat was to stop the burner. Then your circuit was again completed through the motor and its maintaining switch and it normally would return to the off position and shut down the burner.

However, in that circuit there was a defect and there was a transfer difficulty. If you can imagine the thermostat blade coming over and making contact with the W or warm contact, but visualize some dirt on the contact or on the blade, and even though it were in the proper position, yet the electrical current did not flow through that contact, there would be nothing there to stop your burner. The motor would stay in the on position with nothing to
1533 establish safety.

Well, we wanted to get away from that condition and you understand the same circuit was used in the Honeywell motor switch as well as in the Minneapolis motors and motor switch.

By Mr. Gilpatric:

Q. What did you do about that defect?

A. Well, obviously, we wanted to make an oil burner just as safe as was humanly possible, and we evolved the ingenious circuit that was given the name of our series 10, and that is shown in the diagram at the bottom of page 106-I.

Again we used a thermostat with a bi-metal element, a horizontal blade, and you will note that there is really a

double blade in that thermostat. You will also note that the blue and white contacts are on the same side of the blade.

Now, as the room temperature would recede the blade would make contact with the white contact post, but nothing would happen until the temperature had receded far enough for the flexible blade to—or, I should say, the stiff blade to make contact with the blue contact post.

Now, as soon as both of those contacts were made, then the relay would pull in and start up the burner. Now, at the same time the relay pulled in to start the burner, con-
tact No. 1, as shown in the diagram, was closed. We
1534 called that our maintaining contact.

Now, the burner is running and as it produces heat the room begins to warm up. The blue contact, the one that made last, now breaks first, but nothing happens because the circuit is now being held through the maintaining contact No. 1 of the relay, and the white contact of the thermostat.

As the room temperature continues to rise and reaches the predetermined setting of the thermostat, the white contact would open and then the burner would stop.

Now, there were several distinct advantages in this circuit. We got away from the inherent fault of the series 20, where you had to make a circuit to break a circuit. In the series 10 we didn't have to do that. We made a circuit to start the burner and we broke the circuit to stop the burner and in the construction of this thermostat you might wonder why you couldn't accomplish the same results with just one contact and the blade, but then a condition is prevalent where vibration exists. A street car may be going down the street or someone may slam the door.

Well, with a single contact you get a vibration and your relay would chatter. It could come in and out like this (indicating), which would eventually burn up the contacts, but with this sort of an arrangement just as soon as the
blue made, after the white had been completed first,
1535 just a momentary contact there would bring the relay in and as it came in it established your holding circuit, and that eliminated all of your chattering.

Trial Examiner Sheppard: How long have you been using that?

The Witness: That has been in use since the inception of the Minneapolis Heat Regulator fully automatic control

system, as shown on page 106-G. That was in 1924 and 1925.

By Mr. Gilpatric:

Q. And it is still being used today?

A. Still being used, in all of our oil burner primary controls today.

Q. And it is an important factor?

A. It is an extremely important factor, because we are able to use a lighter thermostat construction and we get greater sensitivity as the result of that.

Trial Examiner Sheppard: Mr. Lockrae, when did you first begin to use the primary control?

The Witness: Well, it all depends, now. We shouldn't confuse the term "primary control." You might look upon the old spring motors and the electric motors as the primary controls but the first automatic primary controls were in 1924 and 1925.

Trial Examiner Sheppard: That is what I meant, 1536 because that was just a further development from the first things you mentioned there.

The Witness: That is right.

Mr. Gilpatric: Mr. Examiner, this might be a good place to break off for lunch. Would that be all right?

Trial Examiner Sheppard: Yes. How long do you gentlemen want?

Mr. Freeman: How about a recess until 2:30?

Trial Examiner Sheppard: All right, we will adjourn at this time until 2:30 p. m.

(Whereupon, at 12:30 p. m., a recess was taken until 2:30 p. m., this day.)

1537 Afternoon Session.

2:30 o'clock p. m.

Trial Examiner Sheppard: All right, gentlemen, let's proceed now. Miss Reporter, we will convene the hearing.

I will call your attention that there is another exhibit, Respondent's Exhibit No. 112 that I have laid up here for you. Show that it is accepted now.

(The document referred to was marked RESPONDENT'S EXHIBIT 112 and received in evidence.)

A. H. LOCKRAE, having been previously duly sworn, resumed the stand and testified further as follows:

Direct Examination by Mr. Gilpatric.

Q. Mr. Lockrae, when we recessed for luncheon you had been describing the series 10 circuit shown on Respondent's Exhibit 106-I.

A. I think I covered that subject, except I would like to say that we look upon this circuit as being our sixth major contribution to the control art.

Q. Now, after the consolidation of the Minneapolis Company and the Honeywell Company in 1927, which of the two systems that you have described this morning was continued as the standard system of Minneapolis-Honeywell Regulator Company?

1538 A. Well, following the consolidation we offered the system shown on Exhibit 106-G and also the system on Exhibit 106-H to oil burner manufacturers, and they could take their choice—which they did—and their choice depended upon the type of burner that they were manufacturing. If a burner was of the conventional gun type, no timing sequences were involved, they logically adopted the Minneapolis Protectorelay system. If a rotary burner was involved—for example, where they had to have timed ignition and gas pilot, and so forth—they continued to use the DSS motor switch previously manufactured by Honeywell, and as I said previously, both of these systems sold for $40.15 to the largest buyers and each system contained a primary control, combustion safety control, limit control and plain pattern thermostat.

Q. During these years 1920 through 1928, what, if any, changes had taken place in burner design?

A. Well, there was a general improvement in burner design, notably electric ignition that had come into effect and had replaced gas ignition on all of the gun type, high or low pressure burners. It was more economical. It was more positive in igniting the oil and, naturally, we had to continue to build controls that would meet the changing burner characteristics.

Q. Well, what type of equipment did Minneapolis-Honeywell supply to meet these changed conditions in
1539 burner design?

A. Well, during 1928 and 1929, there were several other relays and Protectorelays developed, also different types of combustion safety controls. I would refer you to 106-J of the exhibit, in the upper left-hand corner, where we have the U-10-C relay. Now, that relay incorporates a timing mechanism, so that when the thermostat called for heat, the burner and the ignition came on at the same time, but at the end of a predetermined interval—let's say a minute, the switch would operate and open the contact to the ignition circuit and the ignition would be off. Now that was used with the intermittent ignition type of burner.

Now, at the bottom of the page, you will find the BPR Protectorelay, which was also used with the intermittent ignition type burner, but it did not have the timing ignition means. Then, to meet the demand of the manufacturers, who were concentrating on constant ignition, we brought out the U-10-D relay, which is shown at the top of the page, the right-hand side. Now, the U-10-C and U-10-D relays were used with the B3 Pyrostat or stack safety control. The BPR Protectorelay was used either with the two wire Pyrostat or the Protectorelay type of control.

The U-10-C relay in 1928 sold to the largest buyers at $33.60 net per set; the U-10-D relay for $31.60 net, per set;

and the BPR Protectorelay for $34.85 net, per set—
1540 and when I refer to "sets" I again speak of room thermostat, limit control, primary control and combustion safety control.

Q. Did Minneapolis-Honeywell develop any type of control for the pot type of vaporizing burner?

A. That burner continued to be built—as a matter of fact,—it is built in large volume today—but the, shall I say better type of pot type or vaporizing type burner em-

ployed, for the most part, a motor and fan to provide the induced draft.

In 1928, we brought out the No. 10-B-O oil valve, which is shown on Exhibit 106-K, which can be used with that type of burner, employing a motor. With this control, the thermostat called for heat. The motor was started and the magnetic oil valve, which we see on the left of the cut, would open and when the thermostat was satisfied, the valve would close and the burner motor would be stopped. Again, this control had to be used with the trip bucket type of safety.

By Trial Examiner Sheppard:

Q. Mr. Lockrae, I wish you would explain for me and also to the Commission—I haven't got a clear idea of high pressure and low pressure burners.

A. All right. The low pressure burner or emulsifying type uses a particular type of pump, and the oil is emulsified and atomized at around 15 to 20 pounds of pressure.

Now, the high pressure burner employs the pressure 1541 pump on an entirely different principle. Usually a geared type of pump. The gears are so closely meshed that they force the oil through, and they build up a pressure of from a 120 to 125 pounds. That is, the amount of pressure forcing the oil through the small hole of the nozzle and vaporizing it, gasifies it.

The low pressure burner has a nozzle with a hole in it of, I would hazard a guess, of one-quarter of an inch; while the high pressure burner has a hole of about four or five one-thousandths of an inch. That would probably be large for the average burner.

Q. It gives it in more or less of a steady stream?

A. They both make it steady, but one does it under low pressure and the other goes at high pressure.

The 10-B-O oil valve was used with a plain thermostat and limit control, and apparently I neglected to get the price of that, because I don't show it here.

By Mr. Gilpatric:

Q. What type of relay was used with the rotary burner?

A. If you will refer to Exhibit 106-L, the top of the page, we show the PRO Protectorelay and the Type C-40 Pyrostat.

The rotary type of burner still used gas ignition and, as a matter of fact, later on, when they found a means of

1542 igniting the oil with the rotary burner with electric ignition, it was highly desirable to have the ignition come on ahead of the motor or the oil supply. This would heat up the ring where the oil entered and it would vaporize and burn more readily if that was hot than if it were cold and it was common practice to have two sets of ignitions 180 degrees apart, and they would both come on at the same time and warm up in so many seconds and a minute later, the oil and motor would come on and then the ignition would start from opposite sides of the circuit and then they would fan together around the wall of the boiler; but we had to provide a timing means to make either a pre-ignition interval or post-ignition interval, because they might want ignition to come on a minute ahead of time, or they might want it to stay on two minutes, so it required the complex mechanism you see in the PRO Protectorelay, to bring about that sequence.

Q. At what price did that relay sell?

A. Well, this system—again including the thermostat, limit control, primary and combustion safety control—in 1928 sold to the largest buyers at $39.90 a set.

Q. Now, what type of Protectorelay was used with the pressure burners you have described to the Examiner?

A. Well, that is shown at the bottom of page 106-L; and to all appearances, the two relays are identical. However, the circuit was such that you got no pre-ignition, but
1543 you did have timed post-ignition. In other words, your ignition was maintained for a period of time after it first started, so that it didn't snuff out; and, incidentally, both PRO and TIR Protectorelays contain the recycling feature.

By Mr. Haycraft:

Q. Does the PRO contain intermittent ignition?

A. The PRO and the TIR were both originally designed for intermittent ignition; however, either one of them could be used with the constant ignition, if they wanted to, because they simply run it parallel—

By Mr. Haycraft:

Q. You mean interchangeable, if they wanted to?

A. Yes, but it was an expensive process. I doubt if they would use it that way, because you could procure the U-10-D relay at the same time, for constant ignition, for $31.60 a set, so that no one would pay you $8.30 a set more for this relay to use constant ignition.

Q. Just make sure you get that straight, because that is what I want to know.

A. Yes.

Q. And the PRO is usually supplied with intermittent ignition?

A. For the rotary burner PRO has intermittent ignition; the TIR has intermittent on the gun type burner.

Incidentally, both of those instruments sold for, the
1544 sets sold for the same price, $39.90.

By Trial Examiner Sheppard:

Q. Now, Mr. Lockrae, what are those other drawings there on the same page?

A. Those are the Pyrostats, the combination safety controls that were used with the relays.

Q. With the relays?

A. That is right.

By Mr. Haycraft:

Q. I had the impression that the intermittent ignition was used principally with the rotary type burner, but apparently you used it with the gun type. Will you explain what the gun type burner is used with and why.

A. Well, Mr. Haycraft, it is at the option of the burner manufacturer, whether he designs his burner for constant ignition or intermittent ignition. The same burner, the same identical burner, is also used for either constant or intermittent ignition. It all depends upon how they wire it up.

Q. I notice that on this PRO, that there are six posts; whereas here, on the TIR, there are only five. Is one wire missing there?

A. Let me see.

Q. One, two three, four, five down at the bottom, and one, two, three, four, five, six in the upper.

1545 A. That, if I remember correctly—and I couldn't tell positively without having the circuits before me—but I think that that was for the oil valves that were always used with the rotary type of burner. You see, the valves were wired so that they opened at the same time the burner motor started and, I think, that sixth was to make it easy to connect in the oil valve.

Q. You would say, then, that it was peculiar to the Protectorelay for the rotary type burner to have six posts?

A. Yes.

By Mr. Gilpatric:

Q. Mr. Lockrae, the two pairs of instruments shown on Respondent's Exhibit 106-L are today combined, in each case, in what we call a primary control?

A. That is right.

By Mr. Haycraft:

Q. You just haven't gotten to it?

A. That is right.

By Mr. Gilpatric:

Q. Now, what was the next development in your line of instruments?

A. Well, there were several other relays built from 1928 to 1931—I would refer you to Exhibit 106-M, the lower left hand corner, which shows the A-7 Protectorelay, which is simply a modification of the first relay that Minne-
1546 apolis built and is depicted on Exhibit 106-G. If you will compare the two cuts, you can see the progress of development there in those two particular controls.

By Trial Examiner Sheppard:

Q. That is A-7 you are talking about?

A. That is the relay, the line drawing of the relay, as compared with the A-7.

At about that time—1930, to be exact—we bought out the R-100 Protectorelay—there was a requirement from certain manufacturers for relays that would stop the burner just as soon as the Protectostat opened its contact and put that burner on safety. They didn't want it to recycle if anything occurred that would disrupt the flame long enough for the Protectostat to actuate, which would stop the burner.

And then the safety switch circuit came into play again and as soon as it got heated up to the proper point, it went on safety and it couldn't be started without manual attention. In 1931 we brought out the R-114 Protectorelay and it was also used with the intermittent ignition type gun burners. It was equipped with a switch, if you will notice, in between the two relay units shown at the top of page 106-M.

By Mr. Gilpatric:

Q. Well, Mr. Lockrae, before going further with that relay, will you tell us what simplification in the de-
1547 sign, if any, took place about this time, when the two units, which have been previously described as per-

forming the function of the primary—in that connection, I will have this marked as Respondent's Exhibit 108 for identification.

(The document referred to was marked Respondent's Exhibit 108 for identification.)

A. I might put those exhibits in right now, Mr. Gilpatric.

Q. Mr. Lockrae, I show you Respondent's Exhibit for identification 108 and ask you to identify that.

A. This is the Type R-101-2 Protectorelay.

Q. And, incidentally, is that a new instrument or is that taken from your revolving stock?

A. This is taken from revolving stock and has been repaired. The serial number indicates that it was made in 1932 and it was repaired in November, 1943.

By Trial Examiner Sheppard:

Q. What did you say the number on that was?

A. R-101-2.

Mr. Gilpatric: We offer in evidence the instrument that has been described as Respondent's Exhibit 108.

Trial Examiner Sheppard: All right, any objection?

Mr. Hayeraft: No.

Trial Examiner Sheppard: Let it be accepted then.

(The document referred to, heretofore marked
1548 RESPONDENT'S EXHIBIT 108 for identification was received in evidence.)

The Witness: I would also like to offer in evidence Exhibit No. 109, which is the Pyrostat which is used with the R-101 Protectorelay. This is the Type C-52-2 Pyrostat.

By Trial Examiner Sheppard:

Q. That is used in connection with 108?

A. With this relay 101.

Trial Examiner Sheppard: Yes, very well.

Mr. Gilpatric: The instrument which Mr. Lockrae has identified is offered by the respondent as its Exhibit 109.

Trial Examiner Sheppard: Let that be accepted.

(The document referred to was marked RESPONDENT'S EXHIBIT 109 and received in evidence.)

The Witness: If you will refer to—first, please, I would like to say that our code dates show that that instrument was built in 1928.

By Mr. Gilpatric:

Q. "That" meaning the R-109, Respondent's Exhibit 109?

A. That was right,—was built in 1928. It is fifteen years old before it came back to us for repair and it was repaired in November, last month.

If you will refer to Exhibit 106-N—

1549 By Mr. Haycraft:

Q. N, is that?

A. N. You will see photostats of the two instruments just offered in the exhibit.

Q. The top of the page?

A. The top of the page.

Trial Examiner Sheppard: The top of the page, yes.

By Mr. Gilpatric:

Q. What changes, Mr. Lockrae, did this Protectorelay system, R-101, involve?

A. Well, there were two major changes. If you will refer back to the PRO and TIR type Protectorelay on Exhibit 106-L, you will note that that employed three relay units, a time switch and a safety switch. Those relays were approximately the same width as the R-101, but were at least two or two and a half inches longer.

You will note that the R-101 has two relay units, a safety switch and no time switch and yet with the C-52 Pyrostat we were able to obtain the equivalent timing function with the R-101 as we obtained with the PRO or TIR before that, —the TIR, I should say, just the TIR, because the PRO hadn't—

By Mr. Gilpatric:

Q. Was Model R-101 Protectorelay superseded later by another model?

1550 Mr. Haycraft: Just before you reach that, may I ask something?

Mr. Gilpatric: Yes.

By Mr. Haycraft:

Q. This one you offer in evidence as R-101-2, what is the significance of the figure 2?

A. As we make mechanical changes, Mr. Haycraft, we designate between these pages by the suffix letter.

Q. I notice that there are more posts in this and they are arranged differently.

A. Yes, it may be that that was in the revamping of the panel in the layout.

Q. Is that what the "2" is?

A. That is what the "2" designates. The same way with the Pyrostat. That was C-52-2.

Q. You have some extra posts, 6 and 7, in the physical exhibit 108, which don't appear in the exhibit.

A. Well, without the circuit diagram, I couldn't tell you just what those denote.

Q. You say you have got the five here in line?

A. Yes.

Q. And six and seven. Those posts, what were those? (indicating)

A. Without the circuit, I wouldn't be able to distinguish that.

1551 By Mr. Gilpatric:

Q. Well, those are just simply minor structural changes, Mr. Lockrae?

A. Yes.

Trial Examiner Sheppard: That is what I figured.

The Witness. Yes. You would have to have both of them here, you see (indicating).

By Mr. Gilpatric:

Q. Mr. Lockrae, I asked you about—

Trial Examiner Sheppard: I think that there was a question and then Mr. Haycraft asked you something before he could answer. Would the reporter read that question.

(The question was read by the reporter as follows: "Was Model R-101 Protectorelay superseded later by another model?")

A. Before answering that, I would like to say that the R-101 Protectorelay, in the system with the thermostat, C-52 Pyrostat and limit control, sold in a set to the largest buyers at $34.40, as compared with the PRO or TIR, which it superseded, of $39.90.

Then, to answer the last question—

Trial Examiner Sheppard: Would you mind stating the year there?

The Witness: The R-101 first sold in 1930.

Trial Examiner Sheppard: 1930?

1552 The Witness: The R-112 Protectorelay, which is shown at the bottom of Exhibit 106-N, was introduced in 1931.

Now, the circuit arrangement and performance was identical with the R-101, but we came out with a different type of relay, as a unit, shown in the cut, and we were able to effect economies that enabled us to price this system, with the thermostat and limit control and combustion control, at $30.90 a set, or a saving of $3.50 over the R-101.

By Mr. Gilpatric:

Q. Still serving, however, the same function?

A. Still serving the same function.

Q. Now, what was the next change?

A. I would like to inject there, if I could, please; with the advent of the R-101, the timing sequence that I explained and which is accomplished through the ingenious arrangement of the C-52-2 Pyrostat, we looked upon as our seventh major achievement in oil burner control design.

Q. What is the difference between the C-52 and the C-54 Pyrostat?

A. There was no difference in function. As you will notice, the C-52 utilizes the toothed gears in order to perform its function. The C-54 employed a friction mechanism instead of the toothed gears, but the contact
1553 sequence and operation of both instruments were alike.

Q. Now, will you go on, Mr. Lockrae, to describe the next development in Protectorelay?

Trial Examiner Sheppard: That would bring you down to modern times, wouldn't it?

A. Almost.

Trial Examiner Sheppard: Almost.

A. It was in 1932 the Minneapolis-Honeywell brought out the R-116 and R-117 Protectorelays, as shown on page 106-O. They are shown at the top of the page. R-117 used with intermittent ignition burner, and the R-116 the constant ignition burner. And the distinction to be recognized, if you will look at the two cuts; the one on the right being R-117, which employs the mercury switch in the center, which is utilized to cut off the ignition mechanism, and you will notice the absence of it in R-116, because it isn't necessary if you are going to have constant ignition.

The R-116 set, including the thermostat and the limit

control, sold for $20.60 to the largest buyers; and the R-117 for $21.10.

I would like to add here that we are now talking about a set including three instruments and not four. Everything heretofore had had the separate relay and separate Pyrostat. With the advent of the R-116 and 117, we combined the function of both of those devices into one instrument.

1554 By Mr. Haycraft:

Q. This is mounted on the stack?

A. On the stack.

Q. Before that, only the Pyrostat was mounted on the stack?

A. Correct.

Q. And the Protectorelay was on the wall?

A. Was on the wall or on the burner.

Mr. Gilpatric: Will you mark this as Respondent's Exhibit 110.

(The document referred to was marked Respondent's Exhibit 110 for identification.)

By Mr. Gilpatric:

Q. I show you Respondent's Exhibit 110 for identification, and ask you whether that is a type of primary you just referred to?

Trial Examiner Sheppard: That is 116, isn't it?

The Witness: 110.

A. This Protectorelay is the type R-A-117, which superseded the R-117 just referred to. In other words, this is the new and latest model of stack control and which is in production today, but it does show you how we combined the two units into one. This mechanism (indicating) used to be the Pyrostat and this used to be the Protectorelay.

Now, they are both combined into one device and are mounted on the stack. Now, when we made that change—

1555 Mr. Gilpatric: Just let me offer this Exhibit 110 in evidence.

Trial Examiner Sheppard: Let that be accepted.

(The document referred to, heretofore marked RESPONDENT'S EXHIBIT 110 for identification was received in evidence.)

Mr. Gilpatric: In answering Mr. Haycraft's question

off the record, would you explain the difference between Respondent's Exhibit 110—that is the RA-117 and the RA-116, of which you do not have a sample.

The Witness: As shown in Exhibit 106-O, at the bottom of the page, if we removed the right hand relay unit, this control, properly rewired, would become the RA-116, for constant ignition. In other words, the function of that relay is to cut off the ignition once the fire has been established. It isn't required with a constant ignition oil burner.

By Mr. Gilpatric:

Q. In the absence of that extra relay, that is what accounts for the difference in price between the two types?

A. That is right. That is the only difference.

Trial Examiner Sheppard: In other words, without it, it is $20.60 and with it, is $21.10?

Mr. Haycraft: No.

The Witness: On this particular control—we are
1556 talking about the RA-116—a set included the thermostat and limit control and sold to the largest buyers for $13.00; and the RA-117, for intermittent ignition, sold in a set to the largest buyer at $13.75.

Trial Examiner Sheppard: That is right, I see.

By Mr. Gilpatric:

Q. Well, besides combining, as you described, Mr. Lockrae, the function of the separate Protectorelay and the combustion safety control into one unit, what other advantages did the R-116 and R-117 and subsequent models bring about?

A. Well, one of the most important facts was that these stack control Protectorelays had the same function, could be used in the same manner, as all the relays, from the original Minneapolis type. In fact, the Honeywell motor switch the U-10-C, U-10-D, the BPR, the PRO, the TIR, the R-114, the A-7, the R-100, the R-101, and the R-112.

I would like to emphasize the fact that the R-116 or R-117 or R-A-116 or RA-117 can be used wherever we would use those relays just enumerated. Now, that was highly important to us, from a standardization standpoint; to the oil burner manufacturer and to the dealer, to the wholesaler.

It is possible today, with the RA-117, to take care
1557 of any service difficulties that might be had with any

of those relays I mentioned that are used with electric ignition.

They have just one device to be stocked today, and they can answer a service call on any of those relays. As a matter of fact, I think I can say the same of the vast majority of competitive relays that are in the field today, so it was really an achievement when we came out with the stack control and it constitutes our eighth in the oil burner control design art.

Another thing; it was highly advantageous for the dealer or the installer, because in running his wires to the relay and the burner, he would have to go through the limit control, to the stack control, to the thermostat. Now, with this combined device, he would run his low volt wires from the thermostat to the Protectorelay and then he would run his hot line through the limit control, and then from there with the hot and cold line to the burner and his job of wiring was complete.

It saved I don't know how many dollars on every installation for the dealer, when we introduced this particular control.

By Mr. Haycraft:

Q. When was that? That was in 1932, wasn't it?

A. The R-116 and R-117 came out in 1932 and the 1558 RA-116 and the RA-117 came out in 1940. In other words, we carried the earlier models for a period of eight years.

Q. Well, the R-116 and R-117 for eight years, although you had your stack control—

A. (Interposing) That is right.

Q. —already with the relay.

A. That is right. The RA-models are a modification and improvement in mechanism. The principle is identically the same as the two preceding ones.

By Mr. Gilpatric:

Q. Now, what about the difference in price that appears in Respondent's Exhibit 106-O? Do you have any comment to make on that?

A. Well, R-116, with thermostat and limit control, sold to the largest buyers in 1932, for $20.60 a set. There were changes through the years, but in 1940, when we introduced the RA-116, it sold for $13.00 a set.

Q. These prices are your best prices?

A. They are the prices we give to the biggest buyers. Now, the R-117, in 1932, sold, with thermostat and limit control, for $21.10—and again there were changes in prices throughout the intervening years—but in 1940, the RA-117, which accomplishes the same purposes—only does a better job of it, sold for $13.75 a set.

One of the main improvements in the new models 1559 we have shown here is the fact that they are a lot more sensitive to low temperature conditions than the older model, and that was highly desirable, due to improvements in boilers and furnaces, to a point where the stack temperatures are so much lower now than they used to be.

Q. Well, each of those prices, which you have referred to, include the thermostat and limit control?

A. That is right.

Q. In other words, it is a set price?

A. It is a set price.

Q. And those prices continue in effect today?

A. They continue in effect today.

Q. Well, now, during the years—the years from 1932 to 1940, did you make any other type of primary and safety instruments?

A. Well, we made numerous types for different applications. As a matter of fact, I thought they were just too numerous to attempt to include in an exhibit of this kind. It would be more boring than advantageous, and I left them out.

Q. Now, what about limit controls? What took place in the development of them?

A. I would refer you to Exhibit 106-P, at the top of the page. There is shown the original Minneapolis model 7010 Pressuretrol. There is also shown an immer-
1560 sion Aquastat. The immersion Aquastat, although it has been refined in appearance, was practically the same as the cuts show. I took those from a later catalog, because I couldn't find one of the old originals. There were changes and improvements in the design, but—

By Trial Examiner Sheppard:

Q. (Interposing) About what year are you talking now?

A. Well, these earlier limit controls, as I testified this morning, some of them were developed as early as 1917, and we sold those to the largest buyers from eight to ten

dollars net, each. Now, the new limit controls shown at the bottom of the page, sell to the largest buyers for $2.50 net, each.

Q. That is the modern—

A. The modern version.

Trial Examiner Sheppard: Yes.

By Mr. Gilpatric:

Q. And the same function is performed by the modern limit controls?

A. The same functions are performed, only much better.

Q. Well, now, refer briefly, if you will, to the development in thermostat—the third unit in the set today.

A. Well, I would refer you to 106-Q, at the top of the page, where you will see the early models of plain and clock type thermostats.

1561 By Trial Examiner Sheppard:

Q. That was around 1917, too?

A. Well, those models go back, I don't know just how many years. They are at least twenty years old, perhaps older than that. Again, at the bottom of the page, we show the current, plain and clock model. The earlier ones were of the hand-wound clock variety. The new model is the electric clock model that requires no winding, no attention, and is far more accurate than the old hand-wound model. The earlier clock models, in 1928, sold for $23.50 net each, and the current, electric clock models, sell for $11.75 net, or exactly one half of what they were selling for in 1928. The plain models in 1928 sold for $5.25; and our plain models today, the T-11, sells for $2.70, which is almost, again, 50 per cent of the other.

By Mr. Haycraft:

Q. What is the model of clock here (indicating)?

A. That is the T-111.

Q. The T-111?

A. That is right.

Mr. Gilpatric: Will you mark this as Respondent's Exhibit 111.

(The document referred to was marked Respondent's Exhibit 111 for identification.)

By Mr. Gilpatric:

1562 Q. The instrument which I hand you, Respondent's Exhibit 111 for identification, is the T-11 thermostat to which you just referred, is that right, Mr. Lockrae?

A. T-11, that is right.

Mr. Gilpatric: I offer in evidence on behalf of the respondent, Exhibit No. 111.

Trial Examiner Sheppard: Let that be accepted.

(The document referred to, heretofore marked for identification RESPONDENT'S EXHIBIT 111, was received in evidence.)

The Witness: We have mentioned several times the features of heat acceleration or heat anticipation. The T-11 thermostat, offered in Exhibit 111, is of the heat accelerating variety.

You will note that we have the two contacts on this thermostat still on the same side of the bimetal. That is on one side. This is the heater (indicating) that gives you the heat acceleration. The shell with the green and white plug is the heater.

By Mr. Haycraft:

Q. What actuates the heater?

A. Here is what actually happens. The thermostat calls for heat and both contacts are closed. Your burner starts up and starts to deliver heat. Now, on the initial rise in room temperature, your blue contact will open. As
1563 soon as that contact opens, the heater is thrown into the circuit. The electrical heat goes through the heater coil and affects the bimetal and it accelerates the action of that bimetal, so that the white or second contact will be broken prematurely. That is, it reacts quicker through the application of artificial heat than at room temperature and by stimulating the action of the bimetal and, through this heat acceleration, we avoid overshooting room temperature; what happens is that your burner operations will be shorter and more frequent and as the weather gets colder, your burner operation will lengthen out and the intervals between the burner operation will come closer, so that you get an over-all effect of a close temperature that is hardly perceptible on the thermometer of the thermostat.

Q. There will be less changes in room temperature?

A. The room temperature becomes almost constant and we look upon that as our ninth major achievement in control design.

By Mr. Gilpatric:

Q. Now, Mr. Lockrae, if you could just summarize briefly, for the record, the trend in the prices of the controls, the major controls systems which you have described.

Trial Examiner Sheppard: Yes, I would like to have a little summary of that.

A. Well, I would like to say that this summary is 1564 of the more popular type of control systems. I haven't attempted to give a summary of all that we have been talking about after lunch, but these were the more popular types and sold in the greater volume.

By Trial Examiner Sheppard:

Q. That is, you mean by that, the model type?

A. That is right.

Q. The model type?

A. That is right.

Trial Examiner Sheppard: That is what I am interested in.

By Mr. Gilpatric:

Q. And each of the prices mentioned is for a set?

A. A set including thermostat, limit control, primary control, and combustion safety control, where they were used.

Trial Examiner Sheppard: That is right.

The Witness: In 1929, the PRO and the TIR Protectorelay systems sold for $39.90 net in 1930, the R-101 Protectorelay system sold for $34.40 net in 1931, the R-102 Protectorelay system sold for $30.90 per set in 1932, the R-117 Protectorelay system sold for $21.10 net per set; in 1936, the R-117 Protectorelay system sold for $20.40 net per set; in 1937, the R-117 Protectorelay system sold for $17.85 net per set; in 1938 the R-117 Protectorelay system 1565 sold for $16.25 net per set; in 1939, the R-117 sold for $14.40 net per set; in 1940, the RA-117 Protectorelay system sold for $13.75 net per set.

By Trial Examiner Sheppard:

Q. Could you give me, roughly, a percentage of decrease between 1938 and 1940?

A. I will do that. I have a note of it here.

Trial Examiner Sheppard: I would like to have that. In other words, a percentage of increase.

Mr. Gilpatric: Do you mean for the years from 1938 to 1940?

Trial Examiner Sheppard: Where he started.

Mr. Gilpatric: He started—

The Witness: I can give that to you, Major. I can go back to 1929.

By Trial Examiner Sheppard:

Q. You started in 1929?

A. Yes, 1929.

Q. I think it is roughly 50 per cent, isn't it?

A. Just a minute.

Mr. Gilpatric: It is more than that. It is 66 per cent.

The Witness: It is 66 per cent.

Mr. Haycraft: Why don't you begin in 1936?

The Witness: I just didn't figure it out. It would
1566 be easy enough to figure out, Mr. Haycraft. I just did it the other way.

Trial Examiner Sheppard: That is okay.

By Mr. Gilpatric:

Q. That was correct, wasn't it, 66 per cent?

A. 66 per cent.

Q. During the period you have covered, it is 66 per cent?

A. 66 per cent.

Q. Now, do you have any figures for a comparable period showing the trend of production of oil burners—that is both burner units and conversion burners?

A. Again, I can give you that from 1929 on.

Trial Examiner Sheppard: All right.

The Witness: And these figures were taken from "Fuel Oil" or "Oil Heat," which constitutes—

Trial Examiner Sheppard: You gave us something this morning. That is the same thing, isn't it?

The Witness: It will be included in this list.

Trial Examiner Sheppard: Included, all right.

The Witness: But they were taken from "Fuel Oil" and "Oil Heat," the industry's trade papers.

Trial Examiner Sheppard: All right.

The Witness: In 1929, 131,300; in 1930, 126,400; in 1931, 104,000; in 1932, 86,200; in 1933, 87,100; in 1934, 102,100; in 1935, 150,510; in 1936, 220,075; in 1937, 210,740;
1567 1938, there were 179,360; in 1939, there were 236,140; in 1940, 302,210; in 1941, 333,250.

By Mr. Gilpatric:

Q. Now, does that same source show the trend in installed prices for oil burners during that period?

A. These figures were taken from the same sources. And in 1929, the installed price average was $692.00; in 1930, it was $629.00; in 1931, $495.00; in 1932, $438.00; in 1933, $395.00; in 1934, $341.00; in 1935, $317.00; in 1936, $300.00; in 1937, $293.00; in 1938, $263.00; in 1939, $240.00; and in 1940, $233.00. And I am sorry, but I couldn't find prices for 1941.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

The Witness: And in 1941, it was $250.00.

Mr. Haycraft: That is all.

The Witness: And in 1942, the figure is given here, but that doesn't mean much.

Trial Examiner Sheppard: I think those figures are very interesting, but I want to ask you a question about that, Mr. Lockrae.

By Trial Examiner Sheppard:

Q. I notice in both the controls that have been 1568 mentioned, that you have given us a price of, they decreased from 1929 to 1941, and also in the installation the prices show a gradual decrease from 1929 to 1941.

A. That is right.

Q. What do you attribute that to?

A. Well, it shows the acceptance of oil heating through increased volume. The people became better acquainted, through advertising the sales effort put behind the sale of oil burners. The reputable manufacturers that have gone into the business; such as Delco, General Electric, Gilbert and Barker, Williams Oil-O-Matic—nationally known people—behind the product, has all had a bearing on the increased popularity and acceptance of oil burners.

Q. Mr. Lockrae, was one of the elements of that the combination of these controls all in one?

A. That had a decided effect on the increase. There was a radical change in price when we were able to form the combination of two in one.

Q. In other words, in years gone by, all four of these were in separate units?

A. That is right.

Q. And now they are all combined?

A. Two in the combined unit.

1569 Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

Mr. Haycraft: My suggestion is that we ask the witness at this time to give the relative changes in net prices to the trade on these oil burners, in the same set of statistics, rather than the installed prices.

Mr. Freeman: The net price for controls?

Mr. Haycraft: No, for burners.

Mr. Gilpatric: Would that point be made if we put this in evidence?

Mr. Haycraft: The only thing is, I would like to have it right alongside. You have given the installed price, and I would like, if you don't mind, to have the other prices right there, too.

Mr. Gilpatric: Wholesale prices?

Mr. Haycraft: Yes.

By Mr. Gilpatric:

Q. Mr. Lockrae, at the suggestion of Mr. Haycraft, will you give those wholesale prices?

By Mr. Freeman:

Q. Taken from Fuel Oil Magazine, which you gave the other figures from.

A. If I am correct, Mr. Haycraft, the figures you have in mind are these from the factory.

1570 Mr. Haycraft: That is right.

A. In 1929, $240; 1930, $195; 1931, $160; 1932, $140; 1933, $129; 1934, $118; 1935, $98; 1936, $94; 1937, $86; 1938, $79; 1939, $78; and 1940, $76; and 1941, $81.

Trial Examiner Sheppard: All right.

The Witness: It is interesting to note that our decline in control prices was 62.6 percent. No, I beg your pardon. The decline in installed prices was 64 percent.

By Mr. Gilpatric:

Q. Of burners?

A. Of burners. And the decline in M.H. controls was 66 percent.

Mr. Gilpatric: Will you mark this as Respondent's Exhibit 113-A to D for identification?

(The document referred to was marked Respondent's Exhibits 113-A, 113-B, 113-C, 113-D for identification.)

Mr. Gilpatric: The respondent offers in evidence as Respondent's Exhibits 113-A to D, inclusive, four pages from the January, 1943, issue of Fuel Oil and Oil Heat, being the pages from which certain of the statistics which Mr. Lockrae has testified to were taken.

Trial Examiner Sheppard: All right, any objection?

Mr. Haycraft: I have no objection, if it is just offered for the statistics on there.

1571 Mr. Gilpatric: It is only offered for the statistics.

Trial Examiner Sheppard: All right, it will be accepted. The Examiner will use the exhibit for statistics only.

(The document referred to, heretofore marked for identification RESPONDENT'S EXHIBITS 113-A, 113-B, 113-C, and 113-D, was received in evidence.)

Mr. Gilpatric: Will you mark this as Respondent's Exhibit 114 for identification?

(The document referred to was marked Respondent's Exhibit 114 for identification.)

By Mr. Gilpatric:

Q. Mr. Lockrae, I hand you a chart marked Respondent's Exhibit 114 for identification and ask you to describe it for the record.

A. Exhibit 114 shows the trend in oil burner installed prices from 1929 to 1941, inclusive, these figures being taken from Respondent's Exhibit 113.

The chart also shows the Minneapolis-Honeywell Regulator Company prices from 1929 to 1941, inclusive.

Q. To which you have testified?

A. To which I have testified.

Mr. Gilpatric: The respondent offers in evidence the chart described by Mr. Lockrae as Respondent's Ex-
1572 hibit 114.

Trial Examiner Sheppard: Any objection?

Mr. Gilpatric: We do not offer the years 1927 and 1928 nor the year 1942, which are not covered in the evidence.

Trial Examiner Sheppard: Then the intermediate years?

Mr. Gilpatric: Between the years 1929 and 1941, inclusive.

Trial Examiner Sheppard: All right, with that explanation, it will be accepted.

(The document referred to, heretofore marked for identification RESPONDENT'S EXHIBIT 114, was received in evidence.)

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Gilpatric:

Q. Before leaving the subject, Mr. Lockrae, I would like to ask you one question about your thermostat model T-11, Respondent's Exhibit 111.

Could you describe very briefly the difference between this thermostat and the two-wire type thermostat which has been referred to in earlier portions of the evidence?

A. Well, the two-wire thermostat simply has a 1573 blade and a contact mechanism and they are usually of the snap acting variety. This snap action is performed through the use of a magnet or else of a mercury switch type.

The two-wire thermostat, the mechanism is considerably heavier, and we have always contended we can get greater accuracy with the lighter structure of the three-wire type than of the two-wire.

Trial Examiner Sheppard: And that is what you are making now?

The Witness: And the T-11 is the three-wire type. We also make the two-wire type of thermostat.

By Mr. Gilpatric:

Q. Is your present model of primary, that is, your R. A.-116 and 117, especially designed to function in cooperation with this type of thermostat?

A. Correct. Every thermostat is designed to take the proper type of heater to correspond with the primary control with which it is to be used. If the thermostat is used with a gas valve or a stoker relay, the heater plug characteristics are different. You would have to use a different plug entirely for these different purposes; and that all depends on the coil winding of the valve or the winding of the coil of the relay as to what those characteristics will be.

Trial Examiner Sheppard: I notice there is no 1574 clock on that.

The Witness: This is a plain pattern thermostat.

Trial Examiner Sheppard: You do make them with clocks?

The Witness: We do make a clock thermostat.

Trial Examiner Sheppard: That thermostat you have in your hand, Mr. Lockrae,—

The Witness: (Interposing) Is the T-11.

Trial Examiner Sheppard: P-11?

The Witness: T-11.

Trial Examiner Sheppard: Now, the one that you sell with the clock, is that more expensive?

The Witness: Yes, sir. As I testified, the plain thermostat, the T-11, sells today for $2.70 net and the electric clock thermostat, the T-111, for $11.75.

Trial Examiner Sheppard: That is right. I remember that now. There is a picture of it in here.

The Witness: That is right. Those prices are for the largest buyer.

Trial Examiner Sheppard: All right.

By Mr. Gilpatric:

Q. Now, Mr. Lockrae, in the stipulation which counsel for the Commission has put in evidence there are set forth various price brackets on the basis of which Minneapolis-Honeywell sold their manufacturers during the years 1575 1937 through 1941.

Will you tell us, generally speaking, how those prices were established?

A. Trade prices, that is, our list prices or competitors' list prices, are published; also the discounts which they give to the dealer or the wholesaler are also published, and our list prices are pretty generally established on the basis of competitive list prices for similar products.

Q. What about your manufacturers' prices, though?

A. Well, when we establish a list price, then we have a base discount which we give to the dealer. Now, if we sell to the wholesaler, who in turn must sell to the dealer, we have to provide a margin of profit to cover the wholesaler's services.

Now, when we sell to the manufacturer and that manufacturer in turn sells to the wholesaler, we likewise have to establish a margin of profit on our controls for the manufacturer who is serving the wholesaler. That, then, established what we might term our bracket 1 prices.

Trial Examiner Sheppard: To the manufacturer?

The Witness: To the manufacturer.

By Mr. Gilpatric:

Q. Well, now, what about the differences between the bracket 1 and the other brackets shown in Commission's Exhibit 1, generally speaking?

1576 A. Well, it has been standard practice as long as I can remember throughout the year to correlate all the competitors' prices that we can get our hands on. We have always maintained files for that purpose and when we get reports in from our salesmen giving prices at which they can buy competitive controls, then we get prices in from other salesmen with the same kind of information from concerns of similar size and we can pretty well match up and tell just about what our competitors' prices are, and up until the inception of the Robinson-Patman Act, as a matter of fact, until we established I believe it was our 1939 prices, the competitive price situation was quite a factor in the establishment of our various bracket prices.

Trial Examiner Sheppard: Would you say that is most important?

The Witness: Well, it certainly is important.

Trial Examiner Sheppard: In other words, competition?

The Witness: Competition.

By Mr. Gilpatric:

Q. Does that account for the changes in bracket quantities as well as bracket prices in between the years?

A. Yes, sir, because competitors, like we, were finding conditions changing and they had to change bracket structures for one reason or another, for the same reason

1577 we did, and again we had to make our bracket quantities somewhat—be guided somewhat by the bracket quantities of our competitors.

Q. You testified for Mr. Haycraft that prior to the enactment of the Robinson-Patman Act your company made no detailed distribution cost study, is not that true?

A. That is true.

Q. Now, how did you go about making a cost study which you began after the Robinson-Patman Act went into effect and which you referred to in your testimony during the Commission's case?

A. Well, we used the tools which we had at hand. We have always had a system of maintaining sales reports

and when one of our salesmen calls on a manufacturer he writes out a report, a copy of which is kept in his branch, and others copies sent on to us.

We, of course, knew the salaries we were paying these various salesmen and we had an accurate record of each salesman's expenses, automobile travel, and what not, so we took those manufacturers' reports of the various salesmen and segregated them by their calls on manufacturers in the various brackets and then by simple arithmetic, knowing the number of calls that were made, the salesman's salary and his expenses, we could establish an average price per call, and we built up the first figures
1578 we have ever had to act as a guide.

At the same time, we took our indirect expenses and our branch operations and our home office sales and indirect expenses.

Trial Examiner Sheppard: In other words, your cost of doing business?

The Witness: That is right. We allocated those expenses over the sales volume in the various brackets which we were studying.

By Mr. Gilpatric:

Q. On what basis?

A. That was on a percentage basis, cost to sales.

Q. In other words, you allocated your direct selling expenses in accordance with the number of calls as shown by the manufacturers' reports?

A. That is right.

Q. But your indirect selling costs and overhead, that is, both branch and home office, were allocated on the basis of sales?

A. That is right, and from a compilation of those figures we were able to obtain some idea of our cost of selling, the cost of selling a set of controls in our various price brackets.

Q. Now, did you make any further computation to arrive at some selling price or set of prices on the basis
1579 of these figures?

A. Well, after we made up this first set of figures, we did use that as a yardstick.

Q. You mean in connection with future selling prices?

A. That is right.

Q. Well, have you ever made a comparison between your actual selling prices in the year 1939 and what you

have called your allowable selling prices under this cost study that you made after the Robinson-Patman Act went into effect?

A. We made such a study based on 1939 selling prices.

Q. Have you the figures showing the comparison to which you refer?

A. I have.

Mr. Gilpatric: Mark this as Respondent's Exhibit 115 for identification.

(The document referred to was marked Respondent's Exhibit 115 for identification.)

By Mr. Gilpatric:

Q. I show you Respondent's Exhibit 115 for identification and ask you if that is the comparison to which you referred.

A. That is the comparison to which I referred.

Q. Does that exhibit also show a comparison between over-all spreads between your top and bottom bracket prices in the years 1939, 1940, and 1941?

A. It does.

1580 Q. The spread figures being taken from Commission's Exhibit 1, the stipulation showing, or referring to bracket prices for those years?

A. That is correct.

Mr. Gilpatric: I offer that in evidence.

Mr. Haycraft: When was this cost study made?

The Witness: That was in 1938, based on 1937 figures.

Mr. Haycraft: Do you have that with you?

The Witness: Yes, that is the one, Mr. Haycraft, that we gave the Commission, if you recall.

Mr. Haycraft: It is not in evidence, though.

Mr. Gilpatric: The Commission has it in its record.

Mr. Freeman: You will get a chance to cross-examine with respect to it.

Mr. Haycraft: I will object to this until the other one is in, and I have had a chance to cross-examine on the other one. You are getting your cart before the horse. You are talking about something that isn't in evidence and I haven't had a chance to cross-examine on it yet.

Mr. Freeman: We have a right to put it in. We will connect it up, and Mr. Lockrae is going to continue to testify in respect to it. You can make your objection, if you want to.

1581 Mr. Gilpatric: You have that cost study and you can cross-examine him with respect to it.

Mr. Haycraft: It is not in evidence, though.

Mr. Freeman: Well, you seem to put things in rather quickly from your Federal Trade Commission files.

Trial Examiner Sheppard: What is the other matter you are talking about?

Mr. Haycraft: The witness has testified to a cost study he made in 1938 and has compared that with some later prices. I am objecting to the exhibit and the exhibit is objectionable on the ground that no proper foundation has been laid for it, for the introduction or the receipt of the cost study in 1938, and I haven't had a chance to cross-examine on that study in 1938.

Trial Examiner Sheppard: Where is the other sheet? Can we get that and put it in now?

Mr. Haycraft: I don't know why not. You might as well start with the foundation.

Trial Examiner Sheppard: And have the whole thing before us at one time.

Mr. Gilpatric: Mr. Examiner, this subject matter of the 1938 cost study was brought up not by me the first time but by Mr. Haycraft in this case, and all we are doing here is bringing out certain results of that study and comparing them with actual prices.

1582 Now, if he would like to have us put in evidence this rather voluminous detailed cost study, why, we will do so.

Mr. Haycraft: Why, certainly.

Trial Examiner Sheppard: You say Mr. Haycraft has that?

Mr. Gilpatric: Well, a copy of this together with a letter from the witness, Mr. Lockrae, was sent to Mr. Royal on February 25, 1939.

Trial Examiner Sheppard: Mr. Haycraft didn't put it in the record.

Mr. Gilpatric: No, I don't think he considered it a part of his case.

Trial Examiner Sheppard: Well, he said he hadn't cross-examined on it.

Mr. Gilpatric: He referred to the study in his direct examination of Mr. Lockrae.

Mr. Haycraft: He testified that there was such a study that had been made, but I didn't examine him on it.

Mr. Gilpatric: It seems to me if Mr. Haycraft wants

to cross-examine about it, he can put that study in as part of his cross-examination. I don't care. However you want it done.

Trial Examiner Sheppard: I just want to make it simpler for all of you. If this ought to be cross-
1583 examined on first, whatever you call that—

Mr. Gilpatric: (Interposing.) This is a 1938 cost study made by the respondent.

Trial Examiner Sheppard: Yes.

Mr. Gilpatric: After the Robinson-Patman Act became law.

Trial Examiner Sheppard: Now, Mr. Haycraft, would you prefer that we take this into the record now?

Mr. Haycraft: Yes, I think I ought to be allowed to cross-examine on that before they lead up to this.

Mr. Gilpatric: You see, Mr. Examiner, the exhibit being proffered, Respondent's Exhibit 115 for identification, is the end result of the cost study to which Mr. Haycraft referred and which is simply the work sheets.

Trial Examiner Sheppard: The working sheets?

Mr. Gilpatric: Yes, and he can cross-examine on that if he wants to. Naturally, that is his privilege, if we offer the end result as part of our case, but we are not offering that.

Trial Examiner Sheppard: You don't want to prove the preliminary?

Mr. Gilpatric: That is right.

Trial Examiner Sheppard: I don't see why we couldn't do this, Mr. Haycraft, and you can have that before you.

1584 Mr. Gilpatric: He has got it right in his file.

Mr. Haycraft: No, I haven't, Mr. Examiner. I understood we weren't going into the Robinson-Patman on this trip and I didn't bring it along.

Mr. Gilpatric: I will let him have this copy. This is simply historical.

Mr. Haycraft: It is a very important point in the Robinson-Patman defense.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: Let us take a 10-minute recess.

(A short recess was taken.)

Trial Examiner Sheppard: On the record.

Mr. Gilpatric: Now, referring again to Respondent's

Exhibit 115 for identification, I want to point out that it is not our purpose at this time to attempt to justify the figures in this so-called 1938 cost study.

We want to show, however, that following the enactment of the Robinson-Patman Act, Minneapolis-Honeywell made a sincere bona fide attempt to find out what the law requires of it and to act accordingly.

We are only interested in showing the end result of this cost study and we are not asking that it be introduced in evidence or accepted, the underlying figures. We
1585 are not trying to demonstrate their accuracy and, therefore, we simply offer the summary or the end results shown by Respondent's Exhibit 115 for identification.

If Mr. Haycraft wants to examine into the background of those figures, he is free to do so, but we are not offering it as part of our case, the computations, and the work sheets that are behind these figures.

Mr. Haycraft: They are more than work sheets, Mr. Examiner. They are the cost study.

Mr. Freeman: That is work sheets, Mr. Haycraft. Call it whatever you want.

Mr. Haycraft: I am going to object to it unless the offer is made of the cost study and an opportunity given me to cross-examine the witness on it.

Trial Examiner Sheppard: That is what I want to do, give you an opportunity to study it and go through it and make whatever examination you want.

Mr. Gilpatric: Mr. Examiner, we are not foreclosing Mr. Haycraft from cross-examining on the basis of these figures. In fact, we are giving him that opportunity when we offer the figures we are including in Respondent's Exhibit 115.

We are simply not putting in evidence as part of our case for any purpose the work sheets that go to make up the cost study itself.

1586 Now, Mr. Haycraft can have this copy of the cost study and he can cross-examine if he wishes.

Mr. Haycraft: I submit, Mr. Examiner, that is not proper, to submit figures of this kind without the cost study which is the basis of it.

Mr. Gilpatric: You can offer it as part of your cross-examination.

Mr. Haycraft: I won't do it. It is his study, not mine. I won't be bound by it.

Mr. Gilpatric: I think we are proceeding in the proper fashion, Mr. Examiner, and I press my offer with the statement that Mr. Haycraft is free to have this underlying data to cross-examine on.

Trial Examiner Sheppard: Does it make any difference whether you cross-examine now or later? I will do whatever you want. I will defer your cross-examination.

Mr. Haycraft: It doesn't make any difference. There ought to be an exhibit put in evidence which is the cost study. This isn't any cost study, Mr. Examiner. It is just some summary figures taken from the cost study. The only proper way, I submit, is to offer in evidence the cost study itself, then I can cross-examine.

Mr. Gilpatric: Mr. Examiner, I will have it marked for identification, but I am not going to offer it.

Mr. Haycraft: He wants the benefit of the cost
1587 study but he doesn't want it going in.

Mr. Gilpatric: Not at all. We are relying on the fact that the cost study was made and this reflects the end result.

Trial Examiner Sheppard: Are you prepared to cross-examine now?

Mr. Haycraft: No, I want to cross-examine when they get through. I won't be able to cross-examine today; probably not until Friday.

Trial Examiner Sheppard: I mean during the trip here?

Mr. Haycraft: Yes.

Trial Examiner Sheppard: All right, I will defer the ruling on that until we get into the cross-examination and, in the meantime, Mr. Haycraft, you can take this white sheet and give it what study you want so you can be prepared to use it in connection with Exhibit 115.

Mr. Gilpatric: Mr. Examiner, how can he cross-examine on it? It is not in evidence. In fact, we don't even have to give it to him. I think the exhibit should be taken in evidence subject to his right of deferred cross-examination.

Trial Examiner Sheppard: I thought he wanted to use it, like you have done in compiling the exhibit, and he in getting information to cross-examine on.

1588 Mr. Gilpatric: He can, but in the meantime it seems to me our offer of the summary, the end result, should be accepted so we can proceed with our case and he can have his right of cross-examination and examination of the underlying data.

Trial Examiner Sheppard: I have no objection to taking

it in right now, if you want to interrogate him further on it.

Mr. Gilpatric: Yes, on this exhibit.

Trial Examiner Sheppard: I don't understand it myself. I want somebody to tell me more about what it is.

Mr. Gilpatric: We will, your Honor, as soon as it is in evidence.

Trial Examiner Sheppard: Then we will accept that exhibit subject to the objection of Mr. Haycraft and let it be accepted for further inquiry by yourself and later by Mr. Haycraft when he wants to cross-examine on it.

(The document referred to, heretofore marked for identification Respondent's Exhibit 115, was received in evidence.)

Mr. Haycraft: I want the record to show that counsel for the respondent declines to offer in evidence the cost study that was made upon which this was based.

Mr. Gilpatric: I think the record shows that sufficiently.

1589 Trial Examiner Sheppard: Just let the record show that. Proceed, Mr. Gilpatric.

By Mr. Gilpatric:

Q. Mr. Lockrae, will you explain how this exhibit, Respondent's Exhibit 115, has been prepared, for the record and for the Trial Examiner's information?

A. The figures that we used under the heading "Allowable Selling Price" were taken from the figures compiled in 1938. Then we listed in 1939 our actual bracket selling prices current that year.

Q. Did the cost study which produced those figures take into consideration—

Mr. Haycraft: (Interposing.) I am objecting to any interrogation as to the cost study unless the study is before the witness.

Mr. Gilpatric: You yourself raised this in your examination of Mr. Lockrae during the Commission's case. You asked him about this study.

Mr. Haycraft: I can't help it if you didn't object to it.

Mr. Gilpatric: Well, it is in evidence.

Mr. Haycraft: It is not in evidence. That is what I objected to. It is really interrogating this witness on this cost study and he cannot do that unless the cost study is here in evidence.

1590 Trial Examiner Sheppard: I don't exactly understand the point, gentlemen. It seems to me if Mr. Lockrae has used the information on the cost study to compile what he got here in Exhibit 115, that it wouldn't hurt to have it in the record for what it is worth, either for yourself or for the Commission or for Mr. Haycraft.

It may not be especially useful because the summation here that Mr. Lockrae has made, if I get it correctly, in 115, is derived from the information in the other book.

Mr. Gilpatric: That is correct, but—

Trial Examiner Sheppard: (Interposing.) And the two sort of go together, and if you want to put it in now I will accept that right now, so that Mr. Haycraft will have both before him in getting ready for his cross-examination.

Mr. Gilpatric: Well, Mr. Haycraft several times remarked to us that we shouldn't tell him how to run his case, and I don't think he ought to tell us how to run our case.

All I am asking Mr. Lockrae here is to tell us whether these figures which are in Respondent's Exhibit 115 now in evidence exclude certain types of charges. He has already said they include selling costs, and I simply want him to exclude the things they don't include.

Mr. Haycraft: I object to any interrogation upon
1591 an exhibit not even offered or in evidence.

Mr. Gilpatric: I am asking about an exhibit which is in evidence.

Mr. Haycraft: But your question always goes back to your basic study, the cost study that was made.

Mr. Gilpatric: You are free to cross-examine on that and go into that to your heart's content.

I don't think it is a proper objection to the question I asked, the question that was asked of Mr. Lockrae.

Trial Examiner Sheppard: Well, I have accepted 115, gentlemen, and you can examine him on that as much as you please.

Mr. Haycraft: I didn't object to that, but he goes back of that in this question. He asked him whether or not in making the cost study upon which this is based he took into consideration certain things.

Mr. Gilpatric: I will reframe my question.

Trial Examiner Sheppard: All right.

By Mr. Gilpatric:

Q. In the figures shown in Respondent's Exhibit 115, did you take into consideration such charges as for service, shipping, packing, accounting, and the like?

A. I did not.

Mr. Haycraft: Wait a minute, please. Don't answer. I move to strike out that answer.

1592 Trial Examiner Sheppard: It may go out until I hear the objection.

Mr. Haycraft: I object to that, Mr. Examiner, because the question by its very terms requires the witness to take into consideration the cost study, and that is the matter that I am talking about, and I insist it should be in here as supporting this exhibit so that I can cross-examine him on it.

How am I going to cross-examine him on this last question if I don't have the exhibit which he refers to, in his mind?

Mr. Gilpatric: Mr. Examiner, at the outset of this case you made a remark with which I agree, that the objections be few and far between. Now, when we get into our case I think Mr. Haycraft is being unduly technical.

Mr. Haycraft: My objections have been few and far between.

Trial Examiner Sheppard: I think you have both been fine in that respect.

Mr. Gilpatric: I only have these two more questions with regard to this subject, and then I will not press this line further.

Trial Examiner Sheppard: All right, proceed.

By Mr. Gilpatric:

Q. Will you answer my question?

1593 A. The cost study did not include the items you have just mentioned.

Mr. Haycraft: I move to strike the answer on the grounds that I stated, that I do not have the document, that the document is not in evidence that he is talking about in his answer.

Trial Examiner Sheppard: I am going to overrule that and let it be considered in connection with Exhibit 115.

By Mr. Gilpatric:

Q. The other question I had was, Mr. Lockrae, in making up the figures in Respondent's Exhibit 115, was any

attempt made to estimate differences in the manufacturing costs between sales made in one bracket as contrasted with another?

Mr. Haycraft: Same objection.

Trial Examiner Sheppard: I will let you answer.

A. There was no consideration given to varying manufacturing costs as between brackets. The same figure was used covering the cost of a set of controls in all brackets.

By Mr. Gilpatric:

Q. Now, Mr. Lockrae, it was brought out in testimony here before, both in respect to Penn Electric Switch and your company, that certain manufacturers did not actually sign contracts for the purchase of controls. That is a fact, is it not, with respect to your company?

1594 A. That is true.

Q. How do you account for that condition?

A. Well, there were some concerns who simply did not do business on a contract basis with anyone, and then there were other concerns who, before they could sign a sales agreement, it had to go through the long drawn out legal processes of their legal departments, and the delays, and so forth, that were attendant to that sort of procedure were objectionable and we didn't insist on those companies signing contracts or sales agreements.

Q. Can you give us some examples of the two types of situations you have outlined?

A. Well, Williams Oilomatic is typical of the first one. They just didn't want to do business on an annual sales agreement basis and we were not insistent that they do that.

Q. What about Timken?

A. Well, we had Chrysler, for one, and Petro was another one. I believe the Norge Corporation in Detroit was another one. There were several of them.

Q. Which class of cases were the ones you have last named?

A. Those were the ones who had to go through all of the legal procedure before a contract could be signed.

Q. Well, now, when a manufacturer declined to sign one of your annual purchase contract forms, what was your practice?

1595 A. Well, we treated them just the same as though they had signed the contract.

As far as prices were concerned, it was our usual custom to write them and send them a contract and the prices were shown therein and we had information from them that they would observe the terms of sale that were outlined in the sales agreement or contract.

Q. Even though they didn't sign a contract?

A. Even though they did not sign a contract.

Q. But these companies still got the benefit of the prices specified in the formal contract?

A. That is right.

Q. Suppose the manufacturer in question purchased fewer controls than the contract specified, then what happened?

A. Well, it would all depend on the conditions the following year and the competitive situation that might have existed at that time. We might have put them in a higher price bracket or we might have left them where they were or we might have given them a better bracket, all depending on conditions that existed.

1596 Q. Suppose during the year in question the manufacturer's purchases exceeded the quantity specified in the formal contract which was never signed?

A. We would treat them just the same as though they had signed the contract. If they exceeded the quantity limitations of the price bracket in the given year, they would be entitled to our next lower price, and would have gotten a retroactive credit, just the same as though they had signed the contract.

Q. Will you explain how these retroactive credits operated?

A. Well, all of our quantity brackets have a minimum and maximum number of units or sets of controls. For example, we have three hundred to, say, three thousand instruments. Now, if this manufacturer contracted in that bracket, but his purchases any time during the year exceeded three thousand instruments, he would automatically go into our next lower price bracket, and he would be given a retroactive credit in the form of a credit memorandum to be absorbed by future purchases equalizing his price to the new bracket basis.

Q. That could take place at any time during the year?

A. Any time during the year that our tabulation figures, and we keep those up monthly, would show that he had exceeded the bracket he started out in. Then he would

1597 be entitled to and would get the retroactive credit.

Q. At what prices were or are future sales made?

A. They would be made at the lower bracket price that he had earned.

Q. Was such a retroactive credit ever extended to Oil-O-Matic Burner Corporation?

A. Yes. We had two retroactive credits to Oil-O-Matic Burner Corporation.

Q. Do you recall in what years?

A. We had one in 1939, and there was another one in 1940, at which time they earned our lowest prices.

Q. That company is also referred to, is it not, as ABC?

A. That is correct.

Q. And Mr. J. H. Hirsch is connected with that company?

A. Mr. J. H. Hirsch is the president of that company.

Q. Was this retroactive credit situation the matter that was referred to in the testimony of Mr. Owens, of Mercoid, when he said that he was told by Mr. Hirsch that it would cost ABC money if they bought controls from Mercoid?

Mr. Haycraft: I object to that question, Mr. Examiner. It requires the witness to read the mind of two men, both Mr. Owens and Mr. Hirsch, and I think that is a little too much.

Trial Examiner Sheppard: Yes, objection sustained. I don't see how you can do that.

1598 By Mr. Gilpatric:

Q. Did Mr. Hirsch ever tell you about that incident?

Mr. Haycraft: That is objected to.

The Witness: We discussed that incident.

Mr. Gilpatric: On what grounds do you object?

Mr. Haycraft: On the grounds it would be hearsay.

Mr. Freeman: He can certainly testify to what somebody told him. That isn't hearsay.

Mr. Haycraft: It usually is.

Trial Examiner Sheppard: It is usually hearsay, all right. But I will let him tell about that, if he told you, Mr. Lockrae, because if you are so intimate with the Respondent here, that I think you can testify to that.

The Witness: Well, I discussed that with Mr. Hirsch.

Mr. Haycraft: Discussed what.

The Witness: It was in the question, as I understood it.

Mr. Haycraft: I object to the question. The question was ruled out.

Mr. Gilpatric: Not the second one.

Mr. Haycraft: The second question didn't state.

Trial Examiner Sheppard: I thought you asked about what the gentleman told you?

1599 Mr. Haycraft: Let us find out what you are talking about.

By Mr. Gilpatric:

Q. Did Mr. Hirsch ever talk to you, Mr. Lockrae, about the attempts of Mercoid Corporation to sell ABC its makes of controls at the times when ABC was about to earn retroactive credits in the year 1939, and in the year 1940?

A. Mr. Hirsch told me that he discussed that situation with Mr. Owens one time, and that he told Mr. Owens that he couldn't logically take on more Mercoid controls at that time, because if he did, it would cost him money.

Q. Namely—

A. Namely the fact that it would not enable him possibly to earn this retroactive credit.

Mr. Haycraft: I move to strike the answer, Mr. Examiner.

Trial Examiner Sheppard: I will give it what value I think it is worth in connection with the whole situation. That other gentleman testified in this case, did he?

Mr. Haycraft: Hirsch did not. Owens did.

Trial Examiner Sheppard: I know Mr. Owens did.

Mr. Haycraft: Hirsch did not.

Trial Examiner Sheppard: I don't think he testified. Go ahead.

1600 By Mr. Gilpatric:

Q. Mr. Lockrae, you referred, I believe, did you not, during your examination by Mr. Haycraft, to the situation that exists where a burner manufacturer sells burners to a furnace manufacturer without controls, and then the latter, namely, the furnace manufacturer, buys the controls from your company?

A. I did.

Q. Now, under those conditions, do you, or do you not include as part of the volume of the burner manufacturer, on the basis of which their price bracket is determined, the controls which go to the furnace manufacturer for

equipment on the burners that the furnace manufacturer buys from the burner manufacturer?

A. We allow the burner manufacturer the credit on the controls which we sell to the furnace manufacturer, and which are in turn used in conjunction with the burner manufactured by the oil burner manufacturer.

Q. Will you explain why you have followed that practice?

A. Well, it came into being a number of years ago, and its inception was due to a situation that was created in this way.

The burner manufacturer and the furnace manufacturer both might be customers of ours, and customers of long standing. All at once they get together, and the
1601 furnace manufacturer decides to buy this particular oil burner manufacturer's burner. Now, if we sold those controls directly to the furnace manufacturer, then the burner manufacturer immediately thought he had a logical complaint, that he was going to lose the profit on the resale of those controls.

Not only that, but he complained bitterly that he was also going to lose the volume credit on those controls.

Now, he would come back at us with the thought that when I buy controls from your competitors, they give me a price that is commensurate with my over-all or potential volume. You don't do that. You only give me credit for the controls that I purchase from you.

Now, those controls are going to be used in my burner, by this furnace manufacturer, and while I realize that his purchases from you are just as great as mine, and I am going to lose the profit, that is inevitable, and at least you can give me credit for the volume on my purchases, and come somewhere near complying with what your competition is doing when they give me a price based on my potential.

Q. By credit, you mean you take into account the volume of controls sold to the furnace manufacturer?

A. That is correct.

1602 Q. When you extend the price to the burner manufacturer?

A. That is correct.

Q. Now, what specifically, if you can tell, what burner manufacturers actually complained about this situation?

A. Well, I recall rather distinctly that Mr. Hirsch of ABC Company complained about this, and a complaint

arose in our dealing with Micro-Westco, in view of the fact that they were going to merchandise their burners to furnace manufacturers. Those furnace manufacturers in turn were buying controls direct from us. There were several instances like that.

Q. Can you think of any other specific instance?

A. Nu-Way Corporation was another one. Cleveland Steel Products was another instance when they were selling their burners to Fox Furnace Company.

Mr. Gilpatric: All right, Mr. Examiner, we can break off there.

Trial Examiner Sheppard: All right, Mr. Lockrae, we will have to finish you up at some other time.

We will adjourn at this time until ten o'clock tomorrow morning.

(Whereupon, at 4:45 o'clock p. m., the hearing was adjourned until 10:00 o'clock a. m. of Wednesday, December 2, 1943.)

1603

Room 1123,
New Post Office Building,
Chicago, Illinois,
December 2, 1943.

Met, pursuant to adjournment, at 10 a. m.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Esq., Attorney for the Federal Trade Commission.

Messrs. Cravath, de Cersdorff, Swaine & Wood, by R. L. Gilpatric, Esq., and

Paul J. Chase, Esq., 15 Broad Street, New York, New York and

Bair & Freeman, by Will Freeman, Esq., 135 South LaSalle Street, Chicago, Illinois, Attorneys for Respondent.

1604 Proceedings.

Trial Examiner Sheppard: All right, gentlemen, we will come to order.

Let the reporter show the hearing reconvened, pursuant to adjournment yesterday.

Mr. Gilpatric: We are going to interrupt, if we may, Major, the testimony of Mr. Lockrae, so that we can put on this man.

Trial Examiner Sheppard: All right.

A. A. JEFFREY, was thereupon called as a witness for the Respondent and, having been first duly sworn, testified as follows:

Trial Examiner Sheppard: Let the reporter have your full name.

The Witness: A. A. Jeffrey.

Trial Examiner Sheppard: And your address, sir?

The Witness: Cedar Rapids, Iowa.

Direct Examination by Mr. Gilpatric.

Q. All right, Mr. Jeffrey, will you state the company with which you are connected and your position with it?

A. Acme Oil Burner Company, Cedar Rapids, Iowa.

Q. What type of oil burner does your company manufacture?

A. High pressure atomizing type.

1605 Q. Under the trade name of Acme?

A. Under the trade name of Acme.

Q. When did you commence the manufacture of oil burners?

A. October, 1932.

Q. What has been your sales territory for your burners?

A. Well, we had distribution, or partial distribution, of the northern half of the United States, east of the Rocky Mountains.

Q. Do you sell to any large distributors?

A. Well, we have A. Y. McDonald Company; Dubuque, Iowa; Allis Chalmers Manufacturing Company—through their LaPorte, Indiana branch, or LaPorte, Indiana plant, they call it—and Morrison Steel Products, Incorporated, Buffalo; Fleck Company, Philadelphia, and Camden, New Jersey.

Q. Are the burners which you sell to customers you have just named in turn sold to them under the name of Acme, or do they put their own name on the burners?

A. Those companies that I named are our largest distributors and the burners are manufactured by us. They leave our plant with their name plate. In other words, they are known as a name burner. Our name doesn't appear on the burner.

Q. So that to that extent you might be said to be a private name manufacturer?

A. Private name manufacturer.

1606 Q. What makes of controls do you use on your burners?

A. Well, we have used Minneapolis-Honeywell, Penn Electric Switch, Mercoid, and some Perfex.

Q. Have you purchases of any particular make predominated?

A. The majority of the burners,—that is the controls—purchased by us in the last, well, the last five years, have been Minneapolis-Honeywell.

Q. Why have you preferred Minneapolis-Honeywell controls?

A. Well, in our opinion and from our experience, we consider them the best controls.

Mr. Gilpatric: Will you mark this as Respondent's Exhibit 116-A, 116-B, 116-C, 116-D, 116-E and 116-F, for identification.

(The documents referred to were marked Respondent's Exhibit 116-A, 116-B, 116-C, 116-D, 116-E and 116-F for identification.)

By Mr. Gilpatric:

Q. Mr. Jeffrey, will you state for the record just what the paper is that I have identified as Respondent's Exhibit 116-A through F, for identification?

A. Well, these sheets are regular dealer prices, the regular dealer price set-up, for 1941, 1942.

Mr. Gilpatric: The respondent offers in evidence the price sheets mentioned as Respondent's Exhibit 116-A through 116-F, both inclusive.

1607 Trial Examiner Sheppard: Are those your prices to the dealer?

The Witness: Yes, sir.

Trial Examiner Sheppard: Yes. Covering those years, what are they, '41 and '40?

By Mr. Gilpatric:

Q. This happens to be for the year 1942. Do you have similar prices for previous years?

A. '41 and 1942 are identical.

Q. As a matter of fact, you show 1941 net prices here, but you have indicated 1942 at the top?

A. That is right, the prices are identical for 1942.

Trial Examiner Sheppard: All right. Any objection?

Mr. Haycraft: I would like to know the purpose of the offer.

Mr. Freeman: What was that?

(The record was read by the reporter.)

Mr. Freeman: You don't have to tell him the purpose of the offer. It is just evidence, part of our case.

Mr. Haycraft: I object to it as irrelevant and immaterial.

Mr. Gilpatric: Mr. Examiner, we are charged here with having affected competition among oil burner manufacturers. This is part of our showing as to the effect, if

any, of Minneapolis-Honeywell's practice upon oil
1608 burner competition. We are going to connect all this up, in the course of our case.

Trial Examiner Sheppard: All right, for that purpose, I will take it and consider it. Let it be accepted as Respondent's Exhibit 116-A through 116-F.

(The documents referred to, heretofore marked RESPONDENT'S EXHIBITS 116-A, 116-B, 116-C, 116-D, 116-E and 116-F for identification, were received in evidence.)

By Mr. Gilpatric:

Q. Mr. Jeffrey, I notice that this exhibit, Respondent's Exhibit 116-A to F, consists of six pages, which shows, first your burners listed with Minneapolis-Honeywell controls; then with Penn Electric Switch controls and, finally, with Mercoid controls. Is that the manner in which you have customarily offered your burners equipped with controls?

A. That was our general practice in setting up our price arrangement.

Q. Was it optional with the purchaser whether his burner would come equipped with one or the other makes of controls?

A. Oh, that was also optional with our distributors and dealers. They could order burners from us, specifying the controls that they preferred.

Q. Did you charge different prices for different makes of controls that your burners were equipped with?

1609 A. Well—

Q. (Interposing) Well, you show the controls listed separately and I am asking you whether—as between different makes, you have listed different prices for the controls?

A. Well, there was so little difference in the price of the controls of the various manufacturers that we established a uniform price on different controls manufactured by the different manufacturers all on the same basis. In other words, if you buy a Minneapolis-Honeywell Aquatherm from us at a firm price, you could also buy a Penn Electric Switch Company Safetrol for exactly the same price.

Q. You mean thermostat, don't you? An Aquatherm is a thermostat?

A. Oh, yes, well, they used to call that—Cen—I don't recall that. Let's see.

Q. Well, the corresponding equipment.

A. Thermostat, yes, thermostat. Mercoid calls theirs Sensatherm. The same held true with the other controls.

Q. In other words, the corresponding equipment?

A. Corresponding heat controls were all the same prices, whether Penn, Mercoid or Minneapolis.

Q. You simply absorbed any difference in cost to you between the makes?

A. The difference was so small, we absorbed that.

Q. Were Minneapolis-Honeywell prices higher or
1610 lower than the other makes?

A. They were a trifle higher.

Q. Now, when you equipped one of your burners with a set of controls, did you make it a practice to include in that set one make of all three units, or did you use one make of thermostat with another make of primary?

A. Well, the general practice was to ship controls of one manufacturer. The only occasion on which controls would be mixed would be in a case of necessity, where the stock was in such condition that we couldn't ship a complete set of one manufacturer's make—which, of course, was very, very seldom.

Q. Did you have contracts with the Minneapolis-Honeywell for the purchase of their make of controls during the years '37 through 1941?

A. Yes, sir.

Q. Did you also have contracts with other control manufacturers during those years?

A. We had contracts during those years with Penn Electric Switch Company; Mercoid Corporation; and with Perfex for two years.

Trial Examiner Sheppard: Did you say Perfex?

The Witness: Perfex.

Trial Examiner Sheppard: Perfex. And, of course, Minneapolis-Honeywell?

1611 A. And Minneapolis-Honeywell.

By Mr. Gilpatric:

Q. Did you consider that your contract with Minneapolis-Honeywell prevented you from purchasing controls from other control manufacturers?

Mr. Haycraft: Objected to as irrelevant and immaterial.

Mr. Gilpatric: Irrelevant and immaterial? Well, that is one of the issues in this case.

Mr. Haycraft: What he considered, Mr. Examiner, is not relevant in this case.

Mr. Freeman: The best evidence in the world is what this man testifies to in that respect.

Trial Examiner Sheppard: I will let him testify.

The Witness: What was the question again?

Mr. Gilpatric: Read the question, please.

(The question above referred to was read by the reporter.)

A. There was no clause in the contract that we had with Minneapolis-Honeywell Regulator Company that in any way restricted our purchases of controls from other manufacturers.

By Trial Examiner Sheppard:

Q. Well, what I wanted to get from you, Mr. Jeffrey, is despite the various contracts that you had with other manufacturers of controls, did you feel free to make 1612 purchases from others?

A. Yes, we did.

Q. And did you, in fact, do that all the time?

A. Yes, we did that.

Trial Examiner Sheppard: All right, that is what I want to know.

By Mr. Gilpatric:

Q. And all during the years that I have referred to, 1937 to 1941, is that right?

A. We purchased controls during those years from all the different manufacturers.

Q. Will you tell us, Mr. Jeffrey, at what prices you sold your burners, any particular model, wholesale to your largest distributor, say, in 1941?

A. Well, our base price to the larger manufacturers, such as McDonald, on the model U burner was $39.50, less controls. The model U-1 burner was $43.50, less controls.

Q. That is slightly less than your price to dealers, as shown on Exhibit—.

A. (Interposing) That is slightly less than our dealer prices.

Q. Have you been aware of the fact, Mr. Jeffrey, that some of Minneapolis-Honeywell's customers who pur-

chased controls in larger volume got somewhat better
1613 prices than your company?

Mr. Haycraft: I object to the leading question; no foundation laid.

Trial Examiner Sheppard: Repeat that.

(The question above referred to was read by the reporter.)

Trial Examiner Sheppard: If that is within your knowledge, I will let you testify to it.

A. We were aware of that fact.

By Mr. Gilpatric:

Q. Did that fact hurt the sale of your oil burners?

Mr. Haycraft: Objected to as calling for a conclusion, his opinion.

Trial Examiner Sheppard: That, I think, is competent, because this man evidently knows the effect of Honeywell's business—whatever you can, I will let you testify.

The Witness: What was the question again?

(The question above referred to was re-read by the reporter.)

Trial Examiner Sheppard: In other words, did it affect your sales at all?

The Witness: No, it didn't.

By Mr. Gilpatric:

Q. Mr. Jeffrey, did your company make it a practice, during those years I have referred to, the years 1937
1614 to 1941, to advertise its make of burners extensively?

A. We did very little advertising, inasmuch as we were a private name manufacturer.

Trial Examiner Sheppard: Are there many of those private name manufacturers? I think that is the first time that I have heard that special designation.

The Witness: Well, I believe there are a few manufacturers.

Trial Examiner Sheppard: Just a few of them?

The Witness: Yes.

Trial Examiner Sheppard: How many would you say?

The Witness: Well, I wouldn't hazard a guess.

Trial Examiner Sheppard: I see. Half a dozen or so?

The Witness: There might be.

Trial Examiner Sheppard: All right.

By Mr. Gilpatric:

Q. What about service expense? Does your company have much expense of that nature?

A. Well, the service item was very firmly fixed in my mind—for the year 1941, our entire service expense was $26.45. And for the year 1942, we had no service expense. By that, I mean service expense outside of our plant.

Q. Did any of your larger distributor customers buy controls direct from the control manufacturer?

A. Well, it was a general practice with McDonald
1615 and Allis Chalmers and Morrisson to buy their controls direct. The only occasion where we furnished burners to those companies with controls was where we handled their shipments direct.

Trial Examiner Sheppard: On other occasions you just sell them your burners, and they equip them themselves?

The Witness: That is right, Major, except if they would send us an order for a burner.

Trial Examiner Sheppard: I see.

The Witness: It would be shipped from our plant to, say, Los Angeles, California, and then we would include the controls on their order.

Trial Examiner Sheppard: I get you.

By Mr. Gilpatric:

Q. Your customers, then, in that case, were free to buy controls direct, if they chose, from the manufacturer?

A. Well, we left it optional with our customers to buy their controls wherever they wished.

Q. Do you happen to know what makes of control A. Y. McDonald usually put on their burners after purchasing them from you?

A. Well, I believe—in fact, I know, that A. Y. McDonald Company furnish a majority of Penn con-
1616 trols with the burners.

Q. Mr. Jeffrey, I neglected to ask you earlier, what happened, if in a particular year, your purchase of controls from Minneapolis-Honeywell exceeds the particular quantity specified in your contract?

Trial Examiner Sheppard: Did you say "exceeded"?

Mr. Gilpatric: Exceeded.

A. When our purchases exceeded the amount specified in our contract, we received a rebate check from Minneapolis-Honeywell.

By Mr. Gilpatric:

Q. Retroactive credit, you mean?

A. Retroactive credit to adjust our price to the next higher bracket.

Q. What, if anything, happened, if you didn't make your contract quantity?

A. Well, I don't know whether they were just good hearted or not, but they never billed us for any extra prices, in our experience in business.

Q. Again during the years 1937 through 1941, did your oil burner sales increase or decrease?

A. Well, we were fortunate enough to show an increase each year.

Trial Examiner Sheppard: From what year was that?

1617 Mr. Gilpatric: In '37 through '41.

Trial Examiner Sheppard: '37 through 1941.

By Mr. Gilpatric:

Q. Have you any figures you could state for the record as to your sales volume during those years?

A. 1937—

Q. Make an approximation.

A. —our sales volume was about $85,000.00; and in 1938, we run about $90,000.00; and we run about $91 or $92,000.00 in 1939; 1940 and 1941, were leveled at about—let's see, in 1941, we went just slightly over $100,000.00 worth of business, in 1940 and 1941.

Q. Did your company operate at a profit during those five years?

A. Yes, they have.

Q. Do you remember what prices you have been paying during the years 1941 and 1942 for pumps for your burners?

Mr. Haycraft: Objected to as irrelevant and immaterial. Pumps aren't involved in this case at all.

Mr. Gilpatric: Mr. Examiner, I want to show the make-up on the cost, generally, of a burner, because the effect on burner competition of the control prices is an issue in this case, it is in the complaint, and I have got to bring it out through the men who pay the prices. Minneapolis-Honeywell isn't in a position to testify.

1618 Mr. Haycraft: I have no objection to the witness testifying, Mr. Examiner, as to the portion of the cost of the burner that the controls represent, but I sub-

mit that any other device of the burner has no place in this record.

Mr. Gilpatric: I think it should be in the record for the information of the Commission.

Mr. Haycraft: What possible relevancy could there be? Supposing if they were more or less, supposing they were exceeding or discriminating in prices; that isn't involved in this case.

Trial Examiner Sheppard: I rather agree with Mr. Haycraft on that proposition, but if you gentlemen think it is necessary in your case, I will let you answer, Mr. Jeffrey. And you better read the question, too, so that he will know.

(The question above referred to was read by the reporter.)

A. For Sunstrand fuel units we paid $7.00, and for Webster units, we paid $9.50.

By Mr. Gilpatric:

Q. Single stage or double stage?

A. Those are both single stage units.

Q. What about transformers, Mr. Jeffrey?

Mr. Haycraft: May it be understood my objection goes to all of this extraneous matter?

Trial Examiner Sheppard: Yes, let Mr. Haycraft 1619 have a general objection to all this line.

A. Transformers in 1941?

Q. Or your current prices?

A. $4.65.

Q. And fans?

A. $1.90.

Q. And, finally, motors?

A. Motors. Let's see. Motors, $7.24. Those are 1/6th horsepower, single phase.

Trial Examiner Sheppard: Are those all the equipment in a burner?

The Witness: Those are all the equipment in a burner.

By Mr. Gilpatric:

Q. If you add to these prices that you have given to us the cost of your controls, you have the principal elements, do you not, of your manufacturing cost?

A. How is that again.

Mr. Gilpatric: Will you read the question?

(The question above referred to was read by the reporter.)

A. Yes, we do.

Mr. Gilpatric: That is all.

Trial Examiner Sheppard: I want to ask you one question before Mr. Haycraft starts. Mr. Jeffrey, there is something that has sort of worried me ever since
1620 I have been trying this case. I think you can answer me. You make a burner you call the U burner, don't you?

The Witness: Model U.

Trial Examiner Sheppard: What is the other model?

The Witness: Model U-1.

Trial Examiner Sheppard: Supposing you have an order from one of your customers for controls, and they specify Minneapolis-Honeywell, for your U burner; and, in the same mail you get an order from another customer for the U-burner, with the request for Mercoid controls. Now, bearing in mind—those two burners sell at the same prices, do they?

The Witness: That is right.

Trial Examiner Sheppard: Bearing in mind the higher cost of the controls of the respondent as compared with the lower cost of the controls of Mercoid, placed on this burner, would it affect the dealer's price to those two?

The Witness. No, it wouldn't.

Trial Examiner Sheppard: You would sell them the same burner equipped with Mercoid at the same price you would your U burner equipped with Minneapolis-Honeywell?

The Witness: That is right.

Trial Examiner Sheppard: All right, you may cross-examine.

By Mr. Gilpatric:

1621 Q. You just made a little more profit when you sold the burner equipped with Mercoid?

A. Slightly more profit, that is right.

Cross-Examination by Mr. Haycraft.

Q. Do you have any of those contracts with you from Minneapolis-Honeywell for the years 1937 through 1941? Do you have any of those agreements with you?

A. No, I haven't.

Mr. Haycraft: I would like to ask the respondent to produce them at this time.

Mr. Gilpatric: We haven't got the contracts here. Do you want some information about them?

Mr. Haycraft: The witness testified that there weren't any restrictive clauses in them, so I would like to have the contract to see what the contract says. I would like to see whether this contract is any different than the rest.

Mr. Gilpatric: The contracts for these years were in the standard forms that you have in evidence as Commission's Exhibit 2 through—

Mr. Haycraft: (Interposing) It may have been a standard form, but I would like to see how they were filled out as to the requirements and form and the type.

Mr. Freeman: You can check your stipulation,
1622 Commission's Exhibit 1. All information with respect to the filling out is therein contained. It is all in the record.

Mr. Gilpatric: We can give you the quantities if you want them specified in the case; Mr. Lockrae has that information here.

Mr. Haycraft: He has the quantities? Does he have the price?

Mr. Gilpatric: Well, once you know the bracket you can deduce the price from the stipulation.

Mr. Haycraft: Well, I will ask Mr. Lockrae, then, if he will let me have the quantity purchased each year and the bracket that the witness used.

Trial Examiner Sheppard: Have you got that, Mr. Lockrae?

Mr. Lockrae: I think I have.

In 1937, the contract called for 100 sets or 300 units and that was our bracket 1, and the price was $23.85 for the intermittent ignition set of controls.

In 1938, the contract called for 50 sets or 150 units and the price was $21.05 for the Intermittent ignition set of controls.

In 1939, the contract called for 50 sets or 150 units and the price was $18.10 for the set of intermittent ignition controls.

In 1940, the contract called for 150 units or 50
1623 sets. The price was $18.10 for the set of intermittent ignition controls.

And in 1941, the contract called for 1050 units and the price per set was $16.45 for the intermittent ignition set of controls.

Trial Examiner Sheppard: All right.

By Mr. Haycraft:

Q. Now, do your records show much were actually sold?

Mr. Lockrae: They do. I can give you that information.

Mr. Haycraft: During those years.

Trial Examiner Sheppard: And the figures you just mentioned is what the contract called for?

Mr. Lockrae: That is right.

In 1937, Acme purchased 512 units; in 1938, they purchased 639 units; in 1939, they purchased 969 units; in 1940, they purchased 1,366 units; in 1941, they purchased 1,269 units.

Mr. Haycraft: Now, do any of these purchases entitle them to rebates or refunds?

Mr. Lockrae: Yes, sir, Mr. Haycraft. Let me get those figures straight.

In 1940, they had a first bracket contract, which called for 50 sets or 150 units, and their purchases actually amounted to 1,366 units, and they earned, and did

1624 receive a retroactive credit, so that—

Mr. Haycraft: (Interposing) So that their net price was what that year?

Mr. Lockrae: Their net price then dropped to $17.25.

Mr. Haycraft: Hold it a minute. Seventeen what?

Mr. Lockrae: $17.25 for the intermittent ignition type, because their actual quantity purchases exceeded the bracket which they were in.

Mr. Haycraft: There was over 400 sets?

Mr. Lockrae: Yes, roughly that.

Mr. Haycraft: Were 300 sets the minimum in bracket 1?

Mr. Lockrae: No, 150 sets.

Mr. Haycraft: In bracket 1?

Mr. Lockrae: Yes.

Mr. Haycraft: All right. In 1941, they didn't get a rebate?

Mr. Lockrae: No, sir, not in 1941. You see, they contracted for 1050.

Mr. Haycraft: Yes.

Mr. Lockrae: And they actually purchased 1269 which is not sufficient to put them in the next bracket.

By Mr. Gilpatric:

Q. The next bracket in 1941 called for how many minimum?

1625 Mr. Lockrae: Well, that would be 350 sets, or 1050 units.

Mr. Gilpatric: No, I said, the next bracket after that.

Mr. Lockrae: Oh, the next bracket. That would be Bracket 3. That would be 1000 sets, or 3000 units.

Trial Examiner Sheppard: Let the record show that the information furnished by Mr. Lockrae was in view of the fact that the witness testified he does not have the contract or the records.

Mr. Haycraft: All right.

By Mr. Haycraft:

Q. Now, Mr. Jeffrey, do you recall approximately how many burners you sold in 1937 equipped with controls?

A. No. I don't.

Trial Examiner Sheppard: I will tell you what I can do, Mr. Haycraft. If you want the number of burners that this gentleman sold in those years, I will have him write me and use it.

Mr. Haycraft: Do you have those records?

The Witness: Yes, we do.

Trial Examiner Sheppard: Could you write me a letter; Mr. W. W. Sheppard, Federal Trade Commission, Washington, D. C., and give that information, the number of burners that you sold?

1626 Mr. Haycraft: The number with controls and the number without controls in the years 1937 through 1941.

The Witness: Is that Sheppard?

Trial Examiner Sheppard: Yes. And I will tell you now, gentlemen, and you can make a note of it, I am going to put that letter in the record for the use of both of you, and it will be Respondent's Exhibit 107; just so as to have it connected with Mr. Jeffrey's testimony.

The Witness: Any specific address?

Trial Examiner Sheppard: Just "Federal Trade Commission," and you can take your time about doing that, Mr. Jeffrey. We are in no hurry for it.

By Mr. Haycraft:

Q. Now, you stated that you sold—

The Witness: Just a minute. Let me interrupt you a minute. What years did you want those for?

Trial Examiner Sheppard: 1937 through 1941, inclusive.

The Witness: You are interested only in the burners we sold with controls?

Trial Examiner Sheppard: And without.

Mr. Haycraft: And without. You sold some without, too?

Trial Examiner Sheppard: You sold some with and some without, too?

1627 The Witness: Yes.

By Mr. Haycraft:

Q. Now, you stated that you, you testified that you sold your burners for $39.50, less controls. What year was that?

A. 1941, 1942.

Q. And the other was $43.50?

A. That is the larger burner, Model U-1.

Q. What was the price, with controls?

A. The price of the Model U burner, with Minneapolis-Honeywell controls or Mercoid controls or Penn controls, was $65.50; and the Model U-1 with the controls was $70.50.

Q. Now, had that been your price for the preceding years, or had you sold for more or less than that?

A. The price had been a little higher in previous years.

Q. What were the prices in 1938 and 1939?

A. The Model U burner in 1939 and 1940 was $42.50, or $43.50, and the Model U-1 was $48.50.

Q. Making a total price of how much, with controls?

A. Well, I couldn't answer that, because I don't know just what our control price set-up was, back that far.

Q. Well, it was a little higher?

A. It would be a little higher, because—

Q. Than it was in 1940 and 1941.

A. Because the control prices were a little higher.

Q. Would you say that you probably got around

1628 $70.00 or $75.00 for your burners, equipped?

Mr. Freeman: What year are you talking about?

Mr. Haycraft: 1938 and 1939.

Mr. Freeman: And what burner are you talking about?

Mr. Haycraft: U burner and U-1 burner.

A. Our prices weren't that high. Model U burner controls at that time would have been about $69.50, and the Model U-1 would have been about $72.50, but those figures are only estimated. I can't give them as accurate. I would have to check the prices.

By Mr. Haycraft:

Q. What proportion of your business, your oil burners, were manufactured for these distributors under the private names?

A. Ninety per cent.

Q. So only about ten per cent of your business went to the dealers?

A. That is correct.

Q. Under your own name?

A. Yes, sir.

Q. I believe you stated that you got a little less for the burners to these distributors than you did to the dealers. What would you say was the difference there?

A. We got about a $5.00 differential.

1629 Q. $5.00 differential?

A. That is right.

Q. So that would give you a price to the distributor of about $5.00 under the price you have given us?

A. Well, the distributors' prices, as I stated before, on the Model U, was $39.50 for 1941 and 1942; and the dealer's price was $44.50, which is a differential of $5.00. The same differential holds true on the Model U-1.

Q. So that the dealers' price then was $5.00 more than the price you have given to us, on the final prices? I mean, the total price, including controls?

A. What was that?

Q. The prices that you gave us of $39.50 and $43.50,—and when you include the controls, you said they were under $65.50, and $72.50. Those are the distributors' prices?

Mr. Freeman: He said $70.50.

Mr. Haycraft: $70.50.

A. $65.50 and $70.50. Those are our dealers' prices.

By Mr. Haycraft:

Q. Those are your dealers' prices?

A. That is right.

Mr. Gilpatric: One is the dealer and one is that distributor, I understood.

Mr. Haycraft: Well, I understood that the purchase
1630 price was $69.50.

The Witness: That is right. That is the dealers' price.

Mr. Freeman: All in accordance with Respondent's Exhibit 116.

Mr. Haycraft: Please, may I attempt to ask a question without being interrupted?

By Mr. Haycraft:

Q. And the dealers' price on those two burners was $60.50 and $65.50 complete—your distributors' prices?

A. Well, I didn't make the distributors' prices with controls.

Q. That is what I am trying to get at.

A. I made distributors' prices less controls.

Q. That is right, but you did sell some with controls, didn't you?

A. Well, that I couldn't—

Q. You made direct shipments of controls?

A. We made direct shipments of controls. Those shipments were made at our cost, plus freight and expense to our plant. Control were handled on an accommodation basis only.

Q. Now, then, this 10 per cent of your business that you referred to earlier, with dealers direct, were those dealers located in this area that you described on your direct

1631 examination or just around where your plant was?

A. Oh, they were located—we had one dealer in Seattle, Washington, and a dealer in New York. They were scattered all over.

Q. About how many dealers did you have?

A. Not to exceed twenty.

Q. Now, you said once that some of your competitors had lower prices than you had on M-H controls. Just what did you know about that?

A. Well, I was familiar with the prices of M-H controls in the various brackets.

Q. Well, what was their lowest bracket in 1937? How much lower than what you were paying?

A. Well, that I couldn't say.

Q. 1938?

A. I couldn't say that.

Q. 1939?

A. No.

Q. You just knew they were lower?

A. Well, I not only knew they were lower, but I had seen those prices from time to time because we always try to reach a higher bracket if we possibly could.

Q. Well, do you know, do you remember how many dollars difference there was per set of controls, when you were in Bracket 1, and your competitors were in, say, Bracket 5 or 6?

1632 A. No, I don't.

Q. Are you familiar with the prices that were quoted and sold by the Quiet Heat Manufacturing Company?

A. No, sir.
Q. Never heard of them?
A. I heard of them, yes, sir.
Q. Do you know whether or not they sold in competition with you in the eastern territory?
A. Well, anybody that was in the manufacturing business, putting out oil burners, were selling in competition with us, regardless of where they were located.
Q. But you never heard of the Quiet Heat Manufacturing Company or the prices they quoted?
A. I said I had heard of the Quiet Heat and I was also familiar with some of the prices they quote.
Q. What were the prices you were familiar with?
A. Why, I believe the last card I had from them had a price of $54.50 on a burner.
Q. They circularized you, as well as their customers?
A. They circularized everybody.
Q. Now, do you have any idea as to whether or not they took any business from you in eastern territory, or in any other territory?
A. Well, I was so busy looking after my own that I didn't particularly try to keep up or find out whether
1633 they were taking any business away from me, or not.
Q. Do you know whether or not you sold as many oil burners in 1938 and 1939 as you did in 1937?
A. Yes, we did.
Q. You did?
A. Sold more.
Q. You sold more in 1938 than you did 1937?
A. Yes, sir.
Q. But your dealers—now I am not talking about these other big accounts, distributors accounts.
A. Well, to dealers?
Q. To dealers.
A. That is right.
Q. And you will furnish those figures. Do you carry your books in such a way that you distinguish between your dealer accounts and your others?
A. Yes, we do.
Q. So that could you, in making up your statement, the statement you are going to send us, could you distinguish between the dealer and the distributor?
A. We could distinguish between the dealer and the distributor and we could give you the amount they were

shipped and the model they were shipped and where they were shipped and with or without controls.

1634 Q. I don't want all that detailed information. If you would give us just a summary of your dealers' sales and distributors' sales.

A. That is right. I could do that.

Q. Now, when you say that you weren't hurt by the sales of these competitors of yours that had lower prices from M-H, what do you base that on, that conclusion?

A. Well, I don't know just how to put that—the fact that our sales increased each year—we didn't feel that our competition was doing us very much harm, as far as sales. If they had been less each year, then we would have worried about where the competition was and why we weren't getting business.

Q. Of course, you knew that business was expanding, general business, the potential business in the sale of oil burners, was expanding during those years, was it not?

A. That is right.

Q. But you say you didn't make any study, or you didn't attempt to check up among your dealers to see the extent at which Quiet Heat, or some of the other large competitors were getting into your business?

A. No, we didn't.

Q. You didn't make any study of it. I take it then that you don't feel that you were at any disadvantage at all because you had to pay substantially more for your

1635 controls than some of your competitors?

Mr. Freeman: We object to the word "substantially."

Mr. Gilpatric: There is no evidence in the record that they paid substantially more.

Mr. Haycraft: In Bracket 1, as you have indicated there, the prices you have indicated are substantially higher.

Mr. Freeman: That is your version of it.

Mr. Gilpatric: I object to the question. It assumes a state of facts not shown.

Mr. Haycraft: It is shown. It is in the record. The record is very clear on the prices. Exhibit 1 even has the prices in the higher brackets.

Trial Examiner Sheppard: There is no reason why we should fight about it.

Mr. Freeman: Why don't you put in the exact amount, rather than use the word "substantial"?

Mr. Haycraft: Am I not entitled to put my version of the question?

Mr. Freeman: We object to the question as assuming a state of facts that isn't shown.

Mr. Haycraft: I think anybody with any sense of proportion at all would know there is a substantial difference between $23.85 and about $16.00 or $17.00.

Mr. Gilpatrick: That is for the Commission to
1636 decide.

Mr. Haycraft: I can put that in my question.

Mr. Gilpatric: You can't put that in the witness' mouth.

Mr. Haycraft: I can put just as much in his mouth as I want. This is cross examination, don't forget that.

Trial Examiner Sheppard: You can answer the question in reference to both. I will satisfy both of you gentlemen. You can answer in reference to substantial, what you consider substantial; and you can leave the "substantial" out—if there is any difference whatever.

The Witness: What was the question.

(The question referred to above was read by the reporter.)

A. We didn't feel that we were put to any disadvantage.

By Mr. Haycraft:

Q. You don't feel that there is any disadvantage when you had to pay $23.85 for a set of controls; whereas some of your competitors only paid $16.55?

Mr. Gilpatric: I object to that. He has answered it once for me and once for Mr. Haycraft.

Mr. Haycraft: I submit I am asking this question.

Trial Examiner Sheppard: I will let you answer that, whether there is any.

1637 The Witness: What was that again?

(The question above referred to was read by the reporter.)

Mr. Gilpatric: What year was that?

Mr. Haycraft: 1937.

Mr. Freeman: And who were some of these competitors you referred to, Mr. Haycraft? I think you ought to tell the witness. Just give the name of one company at the present time.

Mr. Haycraft: The witness is testifying. I am not testifying. The records shows that some competitors got that price.

Mr. Freeman: Why don't you tell him which competitors?

Mr. Gilpatric: What part of the record?
Mr. Haycraft: I am looking at it right now.
Mr. Freeman: And what companies?
Mr. Haycraft: Answer the question, will you?
A. Well, we were not put to any disadvantage.

By Mr. Haycraft:

Q. Well, I am asking you whether or not in your opinion—

Mr. Freeman: He has already answered the question.
Mr. Haycraft: Just a moment.

By Mr. Haycraft:

1638 Q. I am asking you whether or not in your opinion you were at a disadvantage if you had to pay $23.85 and your competitors paid $16.55.

Mr. Freeman: He has already answered that to the preceding question.

Mr. Haycraft: I am entitled to cross examine this witness.

Mr. Gilpatric: You are not entitled to bully witnesses, because you want the information.

Mr. Haycraft: I am not bullying the witness. You are the bullying one here.

Mr. Gilpatric: I object to the question.

Trial Examiner Sheppard: Let him answer it again. What difference does it make?

Mr. Freeman: Will you give us the privilege of asking again and again, Major?

Trial Examiner Sheppard: Certainly, I will.

Mr. Gilpatric: All we want is a fair trial.

Trial Examiner Sheppard: Go ahead, Mr. Jeffrey.

A. We were not at any disadvantage.

By Mr. Haycraft:

Q. All right, now, in 1938, I will ask you the same question. Were you at a disadvantage when you had to pay $21.05 for your controls whereas your competitors
1639 paid $14.90?

A. No, we were not.

Q. No disadvantage to you?

A. No disadvantage to us.

Q. How much of a difference in price would there have to be in order to be a disadvantage to you?

Mr. Gilpatric: I object to that hypothetical question.

Trial Examiner Sheppard: Oh, go ahead, he may answer.

A. I would answer that in this way, if I may: That we had over the competitors to whom I think you are referring—and I am familiar with most of them—we had a lot of advantages over those competitors that offset any advantages that they might have had over us.

By Mr. Haycraft:

Q. What advantage did you have over them that counterbalanced the advantage that they had over you?

A. Well, our methods of manufacturing and our low overhead and cost involved in our methods of distributing and selling that do not pertain to their business, result in a savings we were able to obtain, which put us on practically even footing with any of our competitors. We went into all territories of the United States and were able to sell our burners and sell them advantageously, re-
1640 gardless of what competition there was in that particular territory.

Trial Examiner Sheppard: All right.

By Mr. Haycraft:

Q. I believe you stated that during the period of years from 1937 to 1941, that the bulk or majority of the controls that you put on your burners were Minneapolis-Honeywell and you said, I believe, that you considered them the best. Is that the reason you—is that the only reason that you gave preference to Minneapolis-Honeywell controls?

A. Yes, sir.

Q. Did you standardize on Minneapolis-Honeywell? That is to say, if an order came in for a burner, without specifying the make of control, what control would you put on it?

A. If an order came in to us without the names of the control specified and our stock of Minneapolis-Honeywell controls was long, we would, no doubt, have shipped Minneapolis-Honeywell controls. If our stock of Mercoid controls was long, we would, no doubt, have shipped Mercoid. We would ship any controls that we had a surplus of stock on, in order to keep our stock leveled off. We had no uniform set-up, so far as shipping controls was concerned.

Q. But you didn't standardize on any one of the three?

A. We didn't standardize on any one set of controls.

Q. Now, you also testified that usually you would
1641 equip a burner with a set of controls that were manufactured by the same manufacturers; that is, a thermostat, a limit control and a primary control, is that right?

A. That is right.

Q. But there were exceptions—that is, where you might be long on some particular one of them and short on some particular one. Can you give us an illustration of what those exceptions would be and how you would handle it; or, rather, how you did handle it?

A: Well, you understand, of course, that that was not a general picture. That was in case of emergency, only. I will put it that way. If you had an automobile and you had a wheel off and probably couldn't get a wheel for your Cadillac, but you might, in order to get into town, on something, put a Buick wheel on it as a temporary expedient. Well, we would do that same with controls, rather than to tie up the job or hold up the operation, providing that particular set of controls would give somewhere near satisfactory service.

Q. Well, you had no difficulty in interchanging your limit controls, did you?

A. Well, we didn't have any difficulty, because we didn't make a practice of that.

Q. Only did it when it was necessary?

1642 A. That is correct.

Q. Do you recall whether or not that the contract that you signed with Minneapolis-Honeywell during the years 1937 to 1941 has the provision in it that the

"Company agrees to sell and the purchaser agrees to purchase subject to the reservations hereinafter named during the life of this contract 50 estimated sets of the company's automatic temperature controls; each set consisting of one thermostat and one limit control and one primary control. It is specifically agreed that other equipment is not to be considered as a part of the set within the terms of this contract, because the company's costs are figured to cover a complete set of controls, and the following breakdown prices are purely for invoice purposes. It is agreed that the purchaser's yearly purchases will consist of at least 90 per cent as many room thermostats and 100 per cent (but at the company's option, not more than 125 per cent) as many limit controls as primary controls."

Do you remember whether or not that language was in the agreement that you signed?

A. That is right.

Q. Is it your testimony that you would not consider that language as restricting you from purchasing con-
1643 trols from other manufacturers?

A. No, it didn't.

Q. What effect, if any, did that have upon your purchase of controls from the Minneapolis-Honeywell Corporation?

A. Well, as far as affecting our purchase of controls from Minneapolis-Honeywell Regulator Company, if you hadn't read the clause to me, I wouldn't even recall it.

Q. You don't remember whether—

A. (Interposing) It never affected us a bit.

Q. It was never called to your attention?

A. Minneapolis-Honeywell Company would always ship the controls we ordered provided we paid for them.

Q. Do you recall whether or not there was a clause in any contract which provided that 95 per cent of your controls should be purchased from Minneapolis-Honeywell?

A. No, sir.

Q. You don't recall whether that was in there or not?

Mr. Haycraft: That is all, Mr. Examiner.

Trial Examiner Sheppard: Anything else, gentlemen?

Mr. Gilpatric: Thank you very much, Mr. Jeffrey, you are excused.

The Witness: I will send that information to you.

Trial Examiner Sheppard: That is fine. Take your time.

(Witness excused.)

1644 Mr. Gilpatric: Might we have a five-minute recess?

Trial Examiner Sheppard: Take a five-minute recess, gentlemen. Show a five-minute recess, Miss Reporter.

(Short recess.)

1645 Trial Examiner Sheppard: On the record, Miss Reporter.

Mr. Gilpatric: I would like to recall Mr. J. W. Pauling.

J. W. PAULING was thereupon recalled as a witness for the respondent and, having been previously duly sworn, testified further as follows:

Direct Examination.

Trial Examiner Sheppard: Mr. Pauling, give the reporter your name and initials.

The Witness: J. W. Pauling, P-a-u-l-i-n-g.

Trial Examiner Sheppard: Let the record show Mr. J. W. Pauling, having been previously sworn in this case, appears on the stand at the request of the respondent.

By Mr. Gilpatric:

Q. You testified, didn't you, Mr. Pauling, before, that you are and have been for some years vice president of the Minneapolis-Honeywell Regulator Company?

A. I did.

Q. And that your work has been of a sales nature, supervision of sales?

A. That is correct.

Q. And it was you, was it not, Mr. Pauling, who handled the negotiations with Timken Silent Automatic Com-
1646 pany of Detroit, leading up to its 1936 contract with Minneapolis-Honeywell, which the record shows was signed on behalf of Timken February 19, 1936?

A. I did.

Q. Do you recognize the provision in that contract, and I now read from Commission's Exhibit 66:

"In view of the special prices listed in this agreement, it is understood that the purchaser"—meaning Timken—"will standardize on and use the company's"—meaning Minneapolis—"products exclusively, except for field test or when other makes are specified by dealer."

Do you recall that?

A. I do.

Q. Was that provision in the form of contract as you submitted it in December, 1935?

A. No, it was not. I think, as I recall, there was a phrase in the contract that we put in leading up to the "except", and from there on, why, that was Timken's insertion.

Q. Will it refresh your recollection if I show you that exhibit?

Trial Examiner Sheppard: What is the exhibit?
Mr. Gilpatric: Commission's Exhibit 66-B.
Trial Examiner Sheppard: All right.

1647 By Mr. Gilpatric:

Q. And I ask you to read the part that was not in the provision I have read when it was submitted.

A. "Except for field test, or when other makes are specified by dealer."

Q. The part in smaller type than the other part?

A. That is right.

Q. Do you know where the part of the clause beginning "except" was put in the contract?

A. In Minneapolis.

Q. I mean the part beginning "except for field test" that you specified.

A. That was put in in the Timken office in Detroit.

Q. Was the first part of that provision, the part that you testified was in the form when it was originally submitted, a customary provision in Minneapolis-Honeywell contracts?

A. No.

Q. Why, then, was that provision included in the 1936 form of contract as you submitted it to Timken?

A. Well, we were negotiating with Timken at the time and they were threatening us with a competitive situation where the prices were lower; in fact, offered us substantial orders, as I recall, if we would accept them at a lower price, and the quantity that we had, the quantity bracket that we had quoted Timken in at that time was our

1648 low bracket, and I was rather convinced that Timken were going to buy some of this competitive equipment and, if they did, I was afraid that the quantity that they would buy from us, unless some provision was made in our contract to protect that quantity, would not entitle them to the prices that we had quoted.

Q. Which were your best prices?

A. Our best prices.

Q. Did Timken, in fact, buy controls during 1935 and 1936 from other control manufacturers?

A. I believe they did.

Q. And you knew that at the time?

A. Yes, sir.

Q. Did Timken ever make good on this—

Mr. Haycraft: I move to strike the last question and answer as not having any probative value. In the first place, it is leading, but, in the second place, you do not specify the time that the witness knew that, whatever it was.

Mr. Gilpatric: I will have that clarified.

By Mr. Gilpatric:

Q. Will you state, Mr. Pauling, just what, if anything, you knew in December of 1935 about purchases by Timken of other makes of controls than your own?

A. I knew that they were buying other makes of controls.

Q. Do you know what the other makes were?

1649 A. Penn Switch.

Trial Examiner Sheppard: You say that was in 1936?

The Witness: 1935.

Mr. Gilpatric: The end of 1935, leading up to the 1936 contract.

Trial Examiner Sheppard: All right.

By Mr. Gilpatric:

Q. Did Timken, in fact, carry out this statement that you testified was made to you, that they were going to buy controls from other companies?

A. They did.

Q. Did that happen during 1936?

A. They bought from other competitors—from another competitor, in 1936.

Trial Examiner Sheppard: Mr. Pauling, did that particular company execute contracts with you for those two years or did they not?

The Witness: No, they did not. I think on that—I am not sure about 1935. I believe that the contract was executed in 1935, yes, with that clause in it, but if my memory serves me right, there was no contract executed in 1936.

Trial Examiner Sheppard: You mean for 1937?

The Witness: For 1937 business, yes.

1650 Mr. Gilpatric: The record shows, Mr. Examiner, that there was simply a letter—

Mr. Haycraft: Order.

Mr. Gilpatric: —letter order for 45,000 units placed by Timken with Minneapolis at the end of 1936 or early 1937.

Trial Examiner Sheppard: All right, I just wanted to know whether they had a formal contract or not. Sometimes, Mr. Pauling, you know, although the people sign these contracts, they don't buy, and they may buy from somebody else, even though they have a contract.

All right, go ahead.

By Mr. Gilpatric:

Q. Did the Timken people tell you why they added that "except" clause to the form of the 1936 contract?

A. Yes, sir.

Q. What was the reason they gave?

A. They wanted more than one source of supply and insisted on having the clause in so that they could buy other controls, if their dealers insisted on it.

Trial Examiner Sheppard: Just let me see that.

You mean the customer put that in, didn't he?

The Witness: Timken, yes.

Trial Examiner Sheppard: Yes.

By Mr. Gilpatric:

1651 Q. Who, if you know, Mr. Pauling, originated that policy of having a second source of controls for Timken?

A. The individual, do you mean?

Q. The individual or group.

A. Mr. Rockwell of Timken.

Q. When he took over the management?

A. That is right.

Q. Did he ever talk to you about that subject?

A. He did.

Q. Did he tell you why he favored that policy?

A. Yes.

Q. Will you state what he told you?

A. Well, he felt that there would be a certain danger in depending upon one source of supply. Timken were planning a rather extensive manufacturing and merchandising program at that time and, if I remember correctly, he mentioned labor troubles or a fire that would put Minneapolis-Honeywell out of business, and another reason that he mentioned was he wanted to have his vendors in competition and he did not want to depend entirely on one company.

Q. To your knowledge, did Timken ever carry out that policy of having two sources?

A. Yes, sir, they did.

Q. What was the other source of supply they ultimately used?

1652 A. Perfex Corporation.

Q. Did you know whether during the time this very contract, Commission's Exhibit 66, was in effect, Timken bought from other manufacturers, from other control manufacturers there in Minneapolis?

Mr. Haycraft: Objected to, Mr. Examiner. That is not the best evidence of what they did.

Mr. Gilpatric: I can ask him what he knows, his knowledge.

Mr. Haycraft: I object to it as not the best evidence, Mr. Examiner: It is hearsay.

Trial Examiner Sheppard: I will let you answer that, Mr. Pauling.

A. I knew that they were buying from another source.

Mr. Gilpatric: That is all I have.

Trial Examiner Sheppard: Cross-examine.

Cross-Examination by Mr. Haycraft.

Q. How did you know it?

A. They told me.

Mr. Haycraft: I move to strike that.

Trial Examiner Sheppard: Let it stay in.

Mr. Haycraft: Mr. Examiner, the Timken men have been on the stand, two of them, and they testified in this proceeding as to what their policy was, and the fig-

1653 ures are in.

Mr. Gilpatric: Just remember what happened when I tried to cross-examine the Timken men on the stand. You objected. Now, I do the best I can without recalling Mr. Rockwell.

By Mr. Gilpatric:

Q. Was that the man that told you?

A. Yes, sir.

Mr. Gilpatric: That is all.

Mr. Haycraft: That is all.

Trial Examiner Sheppard: That is all on that subject. You are excused, Mr. Pauling.

(Witness excused.)

Trial Examiner Sheppard: Off the record.
(Discussion off the record.)
Trial Examiner Sheppard: On the record.
Mr. Gilpatric: I will recall Mr. A. H. Lockrae.

A. H. LOCKRAE was thereupon recalled as a witness for the respondent, and, being previously duly sworn, testified further as follows:

Direct Examination (Continued).

Trial Examiner Sheppard: Show, Miss Reporter, that Mr. Lockrae is recalled to the stand for the continuation of his direct examination.

1654 By Mr. Gilpatric:

Q. During your previous testimony, Mr. Lockrae, you testified, did you not, that in a number of instances your company lost to competitors, in whole or in part, accounts of oil burner manufacturers which at one time had standardized, as that term has been defined here, on your makes of controls?

A. That is right.

Q. Are you now prepared to testify as to specific examples of those situations?

A. I am.

Q. Would you do so?

A. Well, I made up a list of manufacturers who had at one time standardized on M.H. controls and gave us the preponderance of their business and who are now using substantial quantities of competitive equipment. Braden Everedy, E-v-e-r-e-d-y.

Q. What portion of its business was lost to a competitor?

A. It is estimated that we lost 95 percent of that business.

Q. Who was the competitor?

A. Mercoid Corporation.

Q. All right.

A. Chalmers Oil Burner Company.

Mr. Haycraft: Mr. Examiner, I will have to ob-
1655 ject to this testimony unless the witness will specify as to the years that the M.H. Company had it at any time and the approximate volume of the business.

Trial Examiner Sheppard: Mr. Lockrae, can you furnish that?

The Witness: I can give you the year. This study was based on 1941 and, as I explained in previous evidence, it is estimated. It was compiled, to the best of my ability, from our own records and the statements of various salesmen who called on these various accounts.

By Mr. Gilpatric:

Q. The same source that you used in testifying for Mr. Raycraft?

A. Exactly.

Mr. Haycraft: In his testimony for me, though, he told a little more in detail about it, as to the accounts that I asked about.

Trial Examiner Sheppard: All right, go ahead. I had forgotten that he testified for Mr. Haycraft on that subject.

Mr. Gilpatric: You remember, Mr. Examiner, we reserved our right of cross-examination entirely as to Mr. Lockrae, at your suggestion.

The Witness: Eastern Oil—

Mr. Haycraft: (Interposing.) You haven't finished.

1656 The Witness: Chalmers, we estimated that the competition got 80 percent of that business, and Perfex was the competition.

By Mr. Gilpatric:

Q. What was the next company?

A. Eastern Oil, 40 percent loss, and Mercoid was the competition.

National Airoil, 25 percent, and Perfex was the competition.

Pan-American, we lost 10 percent, and Mercoid was the competition.

Sunstrand Engineering Company, we lost 25 percent, and Mercoid was the competition.

Vortex, 5 percent, and Penn was the competition.

Diesel Burners, 40 percent, and Mercoid was the competition.

Q. Mr. Lockrae, when you say "competition", you mean you are referring to the company that took the business?

A. That is right.

Q. Other companies were soliciting this business as well?

A. That is right.

Gold Star, 20 percent, and Perfex got the business.

Herco, 75 percent, and Mercoid got the business.

Lynn Products, 10 percent, and Perfex got that business.

1657 Malleable Iron Fittings, 75 percent, and Mercoid got the business.

Mr. Haycraft: 75, you say?

The Witness: Yes, sir.

Montag, 10 percent, and Penn got the business.

Rossoe, 5 percent, and Penn got the business.

Round Oak, 30 percent, and Penn got the business.

Sanmeyer, 75 percent, and Mercoid got the business.

Beckett, 20 percent, and Mercoid got the business.

The Heil Company of Milwaukee, 90 percent, and Perfex got the business.

Harvey-Whipple, 40 percent, and Perfex got the business.

Silent Glow, 40 percent, and Perfex got the business.

Wayne Oil Burner Company, 65 percent, and Perfex got the business.

Gar Wood Industries, 30 percent. Again Perfex got the business.

Anchor Post Fence Company, 85 percent. Perfex got the business.

Automatic Burner Corporation, 20 percent. Perfex got the business.

1658 Delco, 85 percent, and they manufactured their own controls.

Gilbert & Barker, 40 percent, and Penn got the business.

Timken, 50 percent. Perfex got the business.

York Oil Burner Company, 70 percent. Perfex got the business.

The Crane Company, 100 percent. Penn got the business.

Now, in addition to the 31 accounts just named, there were, according to our records, 126 other oil burner manufacturers that also used competitive equipment.

Trial Examiner Sheppard: You mean customers of yours?

The Witness: Yes, sir.

Trial Examiner Sheppard: During those years?

The Witness: During those years, particularly in 1941, when I made this tabulation.

The 31 accounts gave our competition approximately 53 percent of their business, according to the estimated figures that we compiled.

Trial Examiner Sheppard: 47 to the competitors?

The Witness: No, 53 to the competitors.

Trial Examiner Sheppard: 47 to you?

The Witness: 47 to us.

1659 Trial Examiner Sheppard: All right.

By Mr. Gilpatric:

Q. Mr. Lockrae, the William Oilomatic Company has been mentioned a good many times during this proceeding, to date.

Will you describe the history of your relationships with that account?

A. Oilomatic has always been a highly competitive account. In the early 1920's they used Minneapolis Heat Regulator controls. They then designed a control of their own and they used Mercoid instruments with it.

Later they split their business between Honeywell Heating & Specialties Company and Mercoid; then between Mercoid, Penn Switch, and Minneapolis-Honeywell.

They have always been one of the major oil burner manufacturers, and the volume of their purchases would entitle any control manufacturer to give them their best prices, at least from 1937 to 1941, and perhaps prior thereto.

Now, when we investigated the Robinson-Patman Bill in 1936, we were led to believe that under our bracket structure we could grant prices only commensurate with the manufacturer's actual control purchases from us, and if the manufacturer didn't purchase the quantity specified in his contract in a given year we would be remiss, unless we were definitely assured the following year that the

1660 manufacturer would give us the amount of business called for in the contract.

As the result, our yardstick for 1937 became the number of controls the customer actually purchased during 1936. We had to go by our history, although there were instances where the manufacturer's estimates of 1937 business proved over-optimistic. That oftentimes has happened.

Now, we were not cognizant of the fact that the Robinson-Patman Bill permitted us to meet competitive prices.

Q. When was this?

A. This was in 1936, 1937, about that time. As a

matter of fact, I think it was pretty general throughout this period of 1937 to 1941 before we really were cognizant of that fact.

In the case of Williams Oilomatic, that seemed to me to be a typical example of just what could happen in a situation of that kind. Our records show that in 1936 they had a selling price $2.50 higher on M. H. controls than on competitive controls and in that year they purchased 3,527 units.

Trial Examiner Sheppard: You mean from you?

The Witness: From us.

By Mr. Gilpatric:

Q. They were selling burners with your controls 1661 and other makes of controls?

A. That is right. Ours were optional equipment. So in 1937 we felt we had no recourse except to give them a contract commensurate with their previous year's purchases, and our contract actually called for 3,000 units.

As was testified yesterday, Oilomatic never has signed contracts, but we did extend them the 3,000-unit price in 1937.

Q. What happened then?

A. As the result of that price, Oilomatic, instead of charging $2.50 more as in the previous year,—

Q. (Interposing.) That is, $2.50 per burner?

A. Per burner. —(continuing) increased their price difference to $7.50 a set.

Q. Why was that?

A. Well, our 3,000-unit price was so much higher than had been given them the previous year that they claimed they had to have that differential in accordance with their regular mark-up principle, and so forth.

Then in 1938 we went in to Oilomatic and attempted to meet competition and gave them the best price we had.

Q. In other words, whether or not you were cognizant of what you were permitted to do under the Robinson-Patman Act, you met competition?

1662 A. That is right. We couldn't see that business going out the window and we went in there and gave them our best price. And as the result of that, they then reduced the price difference on M. H. controls to $2.50 a burner again.

Q. By the way, what were your sales to Williams Oilomatic in 1937, that is?

A. There were 3,527 units in 1937, and in 1937 they bought 3,258 units.

Q. What happened after 1938, when, as you testified, the price difference between Williams Oilomatic burners equipped with Minneapolis-Honeywell controls and those equipped, say, with Penn controls was reduced to $2.50?

A. Well, in this control business, in a competitive situation of this kind, our only recourse to get that business is the work that we do direct with the dealers.

Now, in 1936, with a $2.50 price difference, we had succeeded in prevailing upon a lot of dealers to use our equipment. Now, in 1937, when the price difference went to $7.50 a burner, a lot of dealers still continued to use our equipment but, in the meantime, with that great price difference, they were trying out competitive makes of controls.

As a matter of fact, I was told by the Williams organization themselves that they couldn't see the difference in value between our controls and competitors' controls 1663 of $7.50.

Now, with the sales organization thinking in terms like that, that undoubtedly influenced the dealers in the same direction and, while we didn't feel much effect of that $7.50 increase in 1938, yet we did feel it in 1939 and subsequent years.

We had to go back and resell those dealers and had to do this groundwork all over again.

Trial Examiner Sheppard: Were there many of them?

The Witness: Oh, they are scattered all over the country, Major. I wouldn't know how many dealers that they have on their list, but I know it would run into the hundreds.

By Mr. Gilpatric:

Q. What was your sales curve in 1939, 1940, and 1941 with Oilomatic?

Mr. Haycraft: How about 1938?

By Mr. Gilpatric:

Q. Well, include 1938.

A. I gave you 1938.

Mr. Haycraft: You may have given it to him, but you didn't say they were 1938; you said they were 1937.

The Witness: No, I gave a comparison between the two. 3,527 units in 1937 and 3,258 in 1938.

Mr. Haycraft: You said "the other year", that 1664 was it.

The Witness: Oh, I see.

Trial Examiner Sheppard: Now, give us the others if you have got them.

The Witness: Now, in 1939 there were 1,136 units sold to Williams. In other words, from 1936 to 1939 our sales to them dropped 66 percent, and the industry drop for that period was only 33 percent.

Through a lot of effort on our part with their dealers, combined with the fact that no price differential was established in 1939, we sold 6,365 units. Then again in 1940 they reestablished the $2.50 price differential.

By Mr. Gilpatric:

Q. Were they still getting your best price in that year?

A. They were. And in 1940 our volume dropped to 5,009 units.

Mr. Haycraft: Wait a minute. I am all mixed up here.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

The Witness: Shall I list them, Mr. Haycraft?

Mr. Haycraft: Yes.

The Witness: In 1936 Williams purchased 3,527 units from us; in 1937 there were 3,258; in 1938 there were 1,136; in 1939 there were 6,365; and in 1940 there were 5,009.

By Mr. Gilpatric:

Q. How about 1941?

A. And in 1941 there were 16,349 units sold, and if you will remember again that in 1941 they eliminated the price difference.

Mr. Haycraft: Will you state right there what the price difference was in those years?

The Witness: Let me list that for you, Mr. Haycraft. In 1936 there was a difference of $2.50 in the price of M. H. controls to the dealer; in 1937 there was a difference of $7.50; in 1938, $2.50; in 1939, there was no price difference; in 1940, the price difference was $2.50; and in 1941 there was no price difference.

By Mr. Gilpatric:

Q. Each of these differences, where they existed, being per burner sold by Williams with a set of controls?

A. That is right, set of M. H. controls.

Q. M. H. controls.

Mr. Lockrae, another account that has been referred to —

Mr. Haycraft: (Interposing.) I shouldn't interrupt you here. May we go off the record?

1666 Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Gilpatric:

Q. Mr. Lockrae, will you state whether or not in the years 1939, 1940, and 1941 you gave Williams the best price?

A. In the years of 1938, 1939, 1940, and 1941 we gave Williams our best price.

Q. Why?

A. We had to give them our best price to come close to the competitive control prices that we encountered at Williams'.

Q. Whose prices were those, what other control manufacturers'?

A. Well, they purchased from Mercoid and Penn Switch and Minneapolis-Honeywell and offered those controls on their standard order forms throughout those years.

Mr. Gilpatric: Is that what you want, Mr. Haycraft?

Mr. Haycraft: That is all right.

By Mr. Gilpatric:

Q. Did Minneapolis-Honeywell's prices actually go down to the prices charged Williams Oilomatic by competitors?

A. I was told that they did not. I was told that we did not go as low as the competition.

1667 Q. You simply approached the competitive prices?

A. We approached their price. We got closer to it, and in those years where Williams had no price difference on M. H. controls, they absorbed that difference in cost themselves.

Q. Now, Mr. Lockrae, will you describe your business during the years 1936 through 1941 with Micro-Westco, another company about which you were examined during the Commission's case?

A. Micro-Westco had standardized on our controls in 1936 and 1937. In 1936 they actually purchased 10,681 units, and in view of these purchases and the general

business outlook we had no hesitancy in giving them our 12,000 quantity prices for 1937.

Q. Did they think they were going to buy that many?

A. They certainly did. They were very optimistic.

Q. What actually happened?

Mr. Haycraft: I move to strike that, Mr. Examiner. He can say what they said.

By Mr. Gilpatric:

Q. Did they tell you they were optimistic?

A. At that time—I can explain that, I think, to your satisfaction, Mr. Haycraft:

Trial Examiner Sheppard: All right, make an explanation before I rule on it.

1668 The Witness: I think I can explain that to your satisfaction.

At that time they had a new sales manager down at Micro-Westco and he was in there to do one job and that was to put over that burner. And they hired extra salesmen and they established offices in the East, and they went the lengths that they hadn't gone heretofore in merchandising their burners. And I handled that account personally, and I can say frankly that we had no hesitancy in giving them that price and we were as optimistic as they were about the possibilities in 1937.

Now, the fact that they didn't meet that quantity in 1937 was no fault of ours or the sales department of Micro-Westco Company. That was the year in which the terrific slump hit and everybody's business was down generally.

Trial Examiner Sheppard: All right, with that explanation, I will let it in.

By Mr, Gilpatric:

Q. Were they using competitive controls at the time?

A. Well, they were standardizing on our controls, and I am not certain whether they used other makes or not. It runs in my mind that they did use some Penn Switch controls in 1937.

Q. Now, when it came to 1938 prices, did your company keep them in the same bracket they had been in in 1937?

1669 A. Well, because their volume had dropped to 6,438 instruments in 1937 we weren't quite as optimistic as they were about their 1938 business, so we gave them a higher price in 1938 and those prices well in our 2,250-899 unit bracket.

Q. How many controls did you sell them at those prices in '38?

A. Well, they standardized on Penn controls in 1938 because of the fact that we increased our price, and Penn Switch came in there and took that business away from us and we only sold 732 instruments in 1938.

Q. Did you try to get back that business in 1939?

A. We certainly did; we tried to get it back, and we did get back a substantial part of it.

Q. What happened in 1939?

A. Well, in 1939 we had a general lowering of prices and whereas they had paid us $19.35 for a set of controls in 1938, our 3,000-unit price in 1939, which was extended to them, was $16.65, so that that represented a substantial reduction.

Q. How many units did they purchase at that price?

A. As a result of that price they purchased 3,098 units.

Q. Now give us the story for 1940, if you can.

A. Well, there was another change occurred down there in 1940. Instead of going out and merchandising 1670 through the dealers, they decided that they were going to capitalize on the greater volume that was obtainable through the furnace manufacturers and the boiler manufacturers.

Now, this type of business represents considerable volume and, in view of that volume and also the competitive situation that existed, we gave Micro-Westco our bottom price of $14.65 per set in 1940.

Mr. Haycraft: Fourteen what?

The Witness: $14.65. And their purchases went back up to 6,526 units. Now, that is just what they bought from us direct.

In addition to that, the other furnace companies whom they were selling, such as Lennox and Dowagiac,—oh, they had eight or twelve of them.

Trial Examiner Sheppard: Dealers?

The Witness: Oh, no, they were furnace manufacturers who bought the burners from Micro-Westco but bought the controls from us.

By Mr. Gilpatric:

Q. That is one of those dual transactions you referred to yesterday?

A. Yes, sir. So again in 1941 we continued our low

prices with Micro and that year sold them for $13.75 a set. They bought 7,017 instruments direct from us.

Trial Examiner Sheppard: Off the record.

1671 (Discussion off the record.)

Trial Examiner Sheppard: On the record.

The Witness: Now, we in turn sold controls to furnace manufacturers to be used with Micro's burners that Micro, of course, supplied.

By Mr. Gilpatric:

Q. The other end of this dual transaction?

A. That is right, so that the overall volume credited to Micro for that year was 33,237 instruments which, of course, more than justified our lowest price.

Q. Well, now, take another account.

A. Pardon me, I would like to make this one statement, Mr. Gilpatric: According to the information supplied by Mr. Henning of Penn Switch Company, now in the evidence, I find that in 1938 Penn quoted Micro $16.85 a set, and in September of that year $14.53 a set. And our price to them for 1938 was $19.35 a set, so it is small wonder that we only sold them 732 instruments.

Then in 1939 Penn's price continued at $14.53 a set. Our price was $16.65 a set. Then in 1940 Penn quoted them their lowest price of $14.55 and our price was $14.65.

Mr. Gilpatric: Perhaps, Mr. Examiner, before we begin another account, do you want to break off for lunch? It is about 12:15, and we would like to make a few phone calls.

1672 Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record. All right, Mr. Freeman.

Mr. Freeman: Before we adjourn, I would like to read a telegram in the record.

Trial Examiner Sheppard: All right. Mr. Lockrae, you are excused until after lunch.

Mr. Freeman: A copy of Respondent's Exhibit 112, which is the petition now pending before his Honor, John P. Barnes, Judge of the United States District Court, was forwarded yesterday to the Federal Trade Commission, Washington, D. C., attention Otis B. Johnson, with the request that the Commission join with us or ask the Court to enforce its subpoena against J. W. Owens, issued under

date of November 2, 1943, and served upon J. W. Owens on November 5, 1943.

I further want the record to show that I talked to Mr. Otis B. Johnson yesterday afternoon long distance, advising him that we were sending him a petition corresponding to Respondent's Exhibit 112 and that we had appeared before Judge Barnes, all in connection with the Commission's subpoena to J. W. Owens.

We now have a telegram from the Commission sent from Washington, D. C., at 11:46 a. m., addressed
1673 to Messrs. Bair & Freeman, 1400 Field Building, 135 South La Sallet Street, reading as follows:

"Your letter of December 1st and enclosures received. Commission will consider the matter during week of December 6th. Will advise you whether it will grant oral hearing or decide matter without oral hearing; if oral hearing is granted, it will be advised during week of December 6th as to the time.

"Otis B. Johnson, *Secretary,*
Federal Trade Commission."

Trial Examiner Sheppard: All right, then, we will recess until 2:00.

(Whereupon, at 12:25 p. m., a recess was taken until 2:00 p. m., this day.)

1674 Afternoon Session.

2:00 p. m.

Trial Examiner Sheppard: Are you ready to proceed, gentlemen?

Mr. Freeman: Mr. Hirsch, will you take the stand?

J. H. HIRSCH was thereupon called as a witness for the Respondent and, having been first duly sworn, testified as follows:

Trial Examiner Sheppard: Will you state your name, please?

The Witness: J. H. Hirsch.

Trial Examiner Sheppard: Where do you live, what is your address?

The Witness: 1823 Carroll Avenue, Chicago.

Direct Examination by Mr. Freeman.

Q. You are the president of Automatic Burner Corporation, is that correct?

A. Yes.

Q. And where is that company located?

A. 1823 Carroll Avenue, Chicago.

Q. What is its business?

A. Manufacturing and selling oil burner equipment.

1675 Q. How long have you been engaged in the sale of oil burning heating equipment?

A. The company, since 1920, and myself since 1923, January, 1923.

Q. So your experience in connection with the manufacture and sale of oil burners is of at least twenty years?

A. If you ask me, yes; some people might not think so, but I think so.

Q. And with these oil burners—

Trial Examiner Sheppard: (Interposing.) What is your position with the company?

The Witness: President.

Trial Examiner Sheppard: President, okay.

The Witness: And general manager.

Trial Examiner Sheppard: And general manager?

The Witness: Yes.

By Mr. Freeman:

Q. And with these oil burners that you have manufactured and sold in the last twenty years, do you sell controls as part of the oil burner?

A. Yes.

Q. And whose controls do you use?

A. Oh, any that the customer wants.

Q. Well, now, let's go back to about, oh, 1935 or

1676 1936, do you recall whose controls you used then?

A. Yes, we used Minneapolis-Honeywell, and I think we used some Mercoid back in there and possibly—no, I don't think Perfex had gone in business then, had they? If they were, we used some of those.

Q. Did you ever use any Penn Electric Switch controls?

A. Yes, but not for many years.

Q. Have you been solicited by Penn Electric Switch Company?

A. No.

Q. Have you been solicited by Mercoid Corporation?

A. Yes.

Q. When did that solicitation start, within your own memory?

A. Ten, twelve, fifteen years ago.

Q. And has it continued right on up to date?

A. Yes.

Q. And how about the solicitation of the Perfex Company? Have they solicited you for your requirements of oil burner controls?

A. Yes, ever since the company started.

Q. And do you recall any of the individual's names—that is, Perfex Company—that solicited you?

A. Mr. Boalt.

Q. Is that Ben Boalt?

1677 A. Yes.

Q. Now, whose controls do you use at the present time and by "present time", Mr. Hirsch, I would like to confine that to about 1941—the last year or so, due to the war effort, we will just eliminate that.

A. Well, principally Minneapolis-Honeywell, and, in a minor way, both Perfex and Mercoid.

Trial Examiner Sheppard: When your customer does not specify what controls they want, what do you use?

The Witness: Minneapolis-Honeywell.

By Mr. Freeman:

Q. Now, following the Major's question, how does the price of M-H controls compare with those of Mercoid and Perfex?

A. You mean cost to us?

Q. Yes.

A. They were slightly lower.

Q. That is Mercoid and Perfex were slightly lower than Minneapolis-Honeywell?

A. Yes.

Q. And notwithstanding the lower price of the Mercoid and Perfex controls, you still sent out burners equipped with Minneapolis-Honeywell controls when the customer did not specify?

A. Yes.

Q. The type of control?

1678 A. Yes.

Q. Why did you do that, Mr. Hirsch?

A. Well, we knew that our dealers preferred them and our price list specified Minneapolis-Honeywell shipped unless other controls were requested.

Q. And if other controls were requested, then did you ship other controls?

A. Oh, yes.

Q. That is, Perfex and Mercoid?

A. Oh, yes.

Q. You gave the customer what he wanted?

A. Gave him his choice.

Q. And whenever you sent out a burner equipped with Perfex and Mercoid controls, in accordance with a request from the customer, did you pass any savings to the customer on account of your purchase price being any less?

A. No, no, the price was the same.

Q. So that it cost you money to sell your Minneapolis-Honeywell controls?

A. Yes, if you want to look at it from that angle.

Q. Well, looking at it from any other angle, can you point out any savings?

A. Well, I have always conducted my business on the theory that I was selling oil burners, and I wasn't selling anybody else's controls. Let the control man sell his 1679 own goods. We save time in selling, and all that sort of thing, which we thought resulted in benefit to us.

Q. Was that because of Minneapolis-Honeywell's name or—

A. Yes.

Q. —or service policy?

A. Yes, they had better public acceptance.

Mr. Haycraft: That is a leading question, Mr. Freeman.

By Mr. Freeman:

Q. Tell me just why your customers, if you know, preferred Minneapolis-Honeywell controls?

Mr. Haycraft: I object to that—why his customers preferred.

Mr. Freeman: I said, "if he knows".

Trial Examiner Sheppard: I will let you testify.

A. I can only talk from hearsay. I think Minneapolis-Honeywell has better public acceptance than the other controls. They have had considerable publicity.

By Mr. Freeman:

Q. How did you get that information?

A. General knowledge.

Q. From coming in contact—

A. With dealers and the public.

Q. All right.

A. As a matter of fact, a great many concerns made a feature of advertising Minneapolis-Honeywell controls when they advertised a price "complete with Minneapolis-Honeywell controls". They would say that.

1680

Q. Now, Mr. Hirsch, when you started in the oil burner business back in 1923, what were the types of oil burners then being sold.

A. There were some steam atomizing burners sold for industrial purposes. There were some pressure atomizing burners, which one called "gun burners" and we started out in a new line of rotary burner, vertical burner. The original ABC burner was a rotary burner.

Q. Did you ever manufacture a pot type burner?

A. No.

Q. Have you had any experience in connection with pot type burners?

A. In manufacturing?

Q. Yes.

A. No.

Q. While I am asking these questions, have you ever run into any competition from pot type burners?

A. Oh, yes, that is standard, to run into that, particularly in the last several years.

Q. By "last several years", what years do you refer to, so that I can—

A. The last four or five years, they have been coming along.

1681

Q. Back as far as 1938, 1939, 1940 and 1941?

A. Yes, the pot type burner was originally designed for a small, manually controlled job, and the other type of burners were for the larger, automatic type, and I think the pot type burners have been on the market ever since I remember.

Q. Do they have pot type burners now that are automatically controlled?

A. Yes.

Q. Have you actually lost any business to that type of burner in recent years?

A. I can only answer that question by inference. I think I can say "yes".

Q. Have you had any experience when you tried to sell an oil burner with the rotary or gun type and found yourself without that business because of the pot type burner?

A. Yes.

Q. And will you give us the name of that company?

A. I am afraid I can't do that, because they were builders down east, where the building was being done for a huge real estate development, and then our salesmen would report, "I couldn't get this order on account of the competition with the low priced pot type burner."

Q. And do those reports come from the salesmen in your company?

1682 A. Oh, yes.

Q. And those are reports that are usually used by your company as to what is going on in the field?

A. Yes.

Q. And they were received by you in the regular course of business?

A. Yes, sir.

Q. Those pot type burners, were they for domestic house heating?

A. Yes, sir.

Q. Small homes?

A. Small homes.

Q. And do you sell your oil burner in connection with small homes?

A. Yes, if we can.

Q. That is, you sell them if you can?

A. We do our darnedest, yes.

Q. And on that occasion you just didn't?

A. Yes.

Q. Now, Mr. Hirsch, you have signed agreements or annual contracts with the respondent here, Minneapolis-Honeywell in years gone by, is that right?

A. Yes.

Q. And in signing any of those agreements, were you informed by any of the Minneapolis-Honeywell repre-

1683 sentatives that you had to buy from Minneapolis-Honeywell?

A. That would be the best way I know of for them to lose the business.

Q. So that the record is clear, in other words, had they so insisted, they wouldn't have gotten any business?

A. They certainly would not.

Q. Now, as a matter of fact, did you, at the same time that you were under contract with Minneapolis-Honeywell, in accordance with these annual contracts enter into contracts with competitors of the respondent here?

A. Oh, yes, every year.

Q. I have asked you to bring with you some of the Mercoid agreements, and I now hand you an agreement dated April 5, 1939, together with a letter which is attached thereto, dated April 10, 1939, from the Mercoid Corporation, addressed to Automatic Burner Corporation, attention J. H. Hirsch, and I will ask you to identify those and tell me whether or not you received this from the Mercoid Corporation.

A. Yes.

Q. Do you recall with whom you conferred, if there was any oral conversation in connection with this agreement?

A. Mr. Owens.

Q. Is that J. W.?

A. J. W. Owens.

1684 Q. Of the Mercoid Corporation?

A. Yes.

Q. Do you know him personally?

A. Yes.

Q. And has he called on you in connection with your sale of controls from time to time?

A. Over a period of years.

Q. And, Mr. Hirsch, I note on the fourth page of the agreement which was referred to as dated April 5, 1939, a signature thereon, and I will ask you whose signature that is.

A. Well, mine is on one side and Owens' is on the other.

Q. That is, you signed on behalf of the—

A. (Interposing) Company.

Q. The Automatic Burner Corporation.

A. Yes.

Mr. Freeman: We will offer in evidence Respondent's Exhibits 118-A, 118-B, 118-C, 118-D and 118-E.

Trial Examiner Sheppard: All right.

Mr. Haycraft: Let me see it.

(Counsel hands document to Mr. Haycraft.)

Mr. Haycraft: Objected to as irrelevant and immaterial. No objection to its competency.

Trial Examiner Sheppard: It will be accepted.

(The document referred to was marked RESPONDENT'S EXHIBIT 118-A, 118-B, 118-C, 118-D and 118-E and received in evidence.)

1685 By Mr. Freeman:

Q. Now, these prices appearing on Respondent's Exhibit 118-C and D, inclusive, are the prices that were extended to you by Mercoid Corporation in connection with any oil burners that you purchased from them, is that correct?

A. Yes.

Trial Examiner Sheppard: What date is that contract?

The Witness: April 5, 1939.

Trial Examiner Sheppard: 1939. It is good for 1940 then, isn't it?

Mr. Haycraft: It is good for 1939.

The Witness: No, it ran from April, 1939, to April, 1940. There was nothing very hard and fast in these contracts as to dates or anything else.

By Mr. Freeman:

Q. Now, I notice in that blank space on Exhibit, Respondent's Exhibit 118-B, that there is filled in, in typewriting, the figures 15,000, so that the paragraph now reads, and I quote:

"Subject to the terms and provisions hereinafter contained, the company agrees to sell and the purchaser agrees to purchase, during the term of this agreement their requirements of the company's automatic controls. The
1686 special net prices extended herewith by the company are based on the purchaser's 1939 control requirements, estimated to be 15,000 units."

That is right, isn't it?

A. That is right, yes.

Q. Now, did your company purchase any 15,000 units from the Mercoid Corporation?

A. No.

Mr. Haycraft: Mr. Examiner, I move to strike the question and answer, because that paragraph doesn't indicate that they ever agreed to do it.

Mr. Freeman: Didn't indicate what?

Mr. Haycraft: That he ever agreed to. It simply says the company's requirements, the total requirements. There is no probative value to that question or answer. If you

want to, you can ask him if he purchased that many that year.

Trial Examiner Sheppard: Just to relieve the situation, Mr. Hirsch, can you give us some idea, from your recollection, of what the performance was under that contract?

The Witness: Maybe two per cent.

By Mr. Freeman:

Q. Well, you bought whatever Mercoid controls you needed from Mercoid Corporation, is that correct?

1687 A. Yes, yes. We bought all the Mercoid controls that we required.

Trial Examiner Sheppard: All right, I will let the testimony stand just exactly like it is for what it is worth.

By Mr. Freeman:

Q. Now, I hand you a manufacturer's purchase contract dated January 23, 1940, of the Mercoid Corporation, and I will ask you if that is an agreement that you produced here this afternoon.

A. Yes.

Q. And that is an agreement executed by—

A. Mr. Owens and myself, the same as the other one.

Q. And does it likewise contain a price schedule for your requirements of Mercoid controls for the year 1940?

A. Yes.

Mr. Freeman: I will offer in evidence as Respondent's Exhibit 119-A, 119-B, 119-C and 119-D, the agreement just referred to by the witness Hirsch, between this company and the Mercoid Corporation.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: Let me see it.

Trial Examiner Sheppard: Let it be accepted.

Mr. Haycraft: No, I said, "Let me see it."

Trial Examiner Sheppard: Oh, pardon me.

1688 Mr. Haycraft: Same objection.

Trial Examiner Sheppard: All right, the exhibit is accepted for whatever value I think it is worth.

(The document referred to was marked RESPONDENT'S EXHIBIT 119-A, 119-B, 119-C and 119-D and received in evidence.)

By Mr. Freeman:

Q. Now, Mr. Hirsch, I notice in the printed price list on Respondent's Exhibit 119-B that after the figure $2.70, for

Type H Sensatherm, there is a typewritten figure of $2.50. What does that mean?

A. That means there is a modification in their price to us.

Q. Does that mean that when you bought Type H. Sensatherm room thermostats you paid $2.50 instead of the printed price of $2.70?

A. That is right.

Q. And is that likewise true with respect to JM Pyrotherm or KMW—that is, you paid the typewritten price?

A. The typewritten price.

Q. Instead of the printed price, the typewritten price. And the typewritten price on each one was lower?

A. Yes, whenever there was a change in the price, we paid the corrected price.

Q. So that you were able to buy the primary controls from Mercoid Corporation, either of the constant ignition type or intermittent ignition type; or intermittent ignition of the re-cycling type?

1689

A. Yes.

Q. So the price was less than the scheduled prices printed in the agreement, is that correct?

A. Yes.

Q. Now, Mr. Hirsch, I notice in the agreement on Respondent's Exhibit 119-B and C, a notation, M-H CO and, thereunder, the abbreviation for the word "No." with a number of figures and characters therein. Will you tell me what they represented at the time you put them in?

A. Well, we were entirely familiar with the Minneapolis-Honeywell names or numbers, stock numbers, and we were not familiar with Mercoid, so we asked Mercoid to put down the comparable unit opposite theirs.

Q. So that opposite the M-H or JM Pyrotherm appears the notation R-116-A.

A. Well, we knew that the R-116-A of Minneapolis would perform the same function as the JM Pyrotherm of Mercoid.

Q. And the lines were put in there at your request?

A. Yes.

Q. And they show a comparable control for accomplishing similar results, is that correct?

A. Correct.

Q. And that is true of all these notations?

1690

A. Yes.

Q. Appearing on both pages?
A. Yes.
Q. Did you have any discussion with J. W. Owens about that?
A. Yes, I requested him to do that.
Q. And he did it in accordance with your request?
A. Yes.
Q. That is, he set forth those controls of his kind which were comparable to Minneapolis-Honeywell controls?
A. Right.
Trial Examiner Sheppard: Does that show on the other contract, too?
Mr. Freeman: No, it does not.
The Witness: Only on this one.

By Mr. Freeman:

Q. I think you have already answered, but even at the sake of repetition, I want to be sure your price for controls, for Mercoid, was less than you paid?
A. Well, our cost price—
Q. (Interposing) Your cost price was less than that?
A. Yes.
Q. What you paid Minneapolis-Honeywell?
A. Yes.
Q. For comparable controls?
1691 A. Yes.
Q. Now, do you have any price list of the Perfex Corporation?
A. Yes.
Q. I notice you testified that Mr. Ben Boalt of that company solicited your business. Did you produce any price list that was submitted to you by the Perfex Corporation?
A. This is it.
Q. And is that the one you produced this afternoon?
A. Yes.
Q. Taken from your files?
A. I got that from our files this morning.
Q. And was it given to you by the Perfex Corporation?
A. Yes.
Mr. Freeman: Now, we offer in evidence Respondent's Exhibit 120-A and 120-B, the price list of the Perfex Corporation addressed "Automatic Burner Corporation, Chicago, Illinois," and dated November 25, 1941.
Mr. Haycraft: Same objection.

Trial Examiner Sheppard: Let the exhibit be accepted for its probative value.

(The document referred to was marked RESPONDENT'S EXHIBIT 120-A and 120-B and received in evidence.)

By Mr. Freeman:

Q. Mr. Hirsch, in Respondent's Exhibit 120-A and
1692 B I note some pencil notations opposite the typewritten price list and I will ask you to explain what those pencil notations are directed to.

A. Well, they are the prices we actually paid for these items.

Q. So that for a low voltage thermostat of the non-heater type, the price was $3.10 for less than 12, but it was actually $2.85?

A. Correct.

Q. And, likewise, the price for more than 12 was $2.60 instead of $2.85?

A. Correct.

Q. The controls that were furnished you by the Perfex Corporation were invoiced to you at the penciled figures, is that correct?

A. Yes, yes, that is right, they are penciled.

Q. So that for No. 150-A Perfex thermostat, you actually paid $2.45 in quantities of more than 12?

A. Correct.

Trial Examiner Sheppard: I forgot to ask the year of that contract.

Mr. Freeman: It is dated November 25, 1941, your Honor.

The Witness: That isn't necessarily the date we received
that, however. It was in printed form. It was not in
1693 effect at that time, but I wouldn't remember the exact date that it was brought to us.

Trial Examiner Sheppard: That is when I wanted to know, when it was in effect.

The Witness: November 25, 1941.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. And whatever Perfex controls you actually bought, you bought at the penciled price?

A. Right.

Q. Now, did you ever have any conversation with Mr.

J. W. Owens of the Mercoid Corporation with respect to your buying controls from them and such controls costing you money?

A. The question isn't quite clear, Mr. Freeman.

Q. I will withdraw the question and ask it again. Did you ever tell Mr. Owens that if you bought controls from him, it would cost your company money to do so?

A. Yes.

Q. Just what did you mean? What was the purpose of such conversation?

A. Minneapolis-Honeywell had a policy of reducing their price as you increased your purchases, going from one bracket into the next higher bracket, which amounted to a reduction in price. Quite naturally, the more controls we bought from the Minneapolis-Honeywell Company,
1694 the lower we paid for the controls. If we failed to get from one bracket to the next, we naturally didn't get the rebate that would accrue to us in the event we did reach that market.

Q. That is, you were looking forward to the so-called retroactive credit?

A. Exactly. And it was very much worth while, as it turned out.

Q. And you had such a conversation with Mr. Owens?

A. Yes.

Q. Did you explain to him then that you were working for the retroactive credit?

A. I don't know that I did. I wouldn't say that I did, but I told him it would cost us money if we divided our business the way he wanted us to.

Trial Examiner Sheppard: The other manufacturers of controls didn't have that system?

The Witness: I don't know, sir. We never got up high enough to find out.

Trial Examiner Sheppard: You did business with two of them here?

The Witness: We did business with three concerns.

Trial Examiner Sheppard: Three concerns. They didn't have that retroactive clause?

The Witness: No, no, our conversations with them were based on the line "if you can't give us a price that is
1695 at least as good as, and possibly lower than, Minneapolis-Honeywell, we won't be interested in your product."

Trial Examiner Sheppard: I see.

By Mr. Freeman:

Q. And whatever controls you bought from competition, you bought at a lower price?

A. Yes.

Q. Now, Mr. Hirsch, I call your particular attention to Commission's Exhibit 2, and particularly to the insert in typewritten form in the agreement, wherein the phrase "7500 estimated" is used.

A. Yes.

Q. Do you recall why that was put in there? What brought it about?

A. Well, that was one of your bracket breaks, one of your bracket—let's put it another way. That was the quantity required for us to purchase in order to get the price set forth in the contract.

Q. Now, did that phrase "estimated 7500" restrict you in your purchase in any way, of controls from other companies?

A. No, sir.

Q. I notice you said that rather emphatically. Just what do you mean?

A. I wouldn't sew myself up, obligate myself, to buy that quantity of material from anybody. That would involve too much from a financial point of view, in case we couldn't sell them.

Q. Did the Minneapolis-Honeywell annual agreement serve as a basis of your conduct or your relationship with Minneapolis-Honeywell for the period of the agreements?

A. Yes, I would say yes. It set forth, did it not—

Mr. Haycraft: (Interposing) I object to the leading questions, Mr. Examiner.

Trial Examiner Sheppard: A little bit too much.

By Mr. Freeman:

Q. Well, what did you use the annual agreements with Minneapolis-Honeywell for?

A. As a basis for our cost, so that we could arrive at our selling price.

Trial Examiner Sheppard: Read that to me.

(The record was read by the reporter.)

Trial Examiner Sheppard: Well, you said a little while ago, to get the benefit of the retroactive.

The Witness: Yes. Well, that isn't entirely true, Major. We knew that this would be the highest price that we could possibly pay during the life of this agreement.

By Mr. Freeman:

Q. And by "the highest possible price" is that referring to the price scheduled in the agreement?

1697 A. Yes, the price set forth here. And we knew that would be the highest price that we would be called upon to pay during the twelve months.

Trial Examiner Sheppard: I see.

The Witness: And we knew that if we exceeded the quota here and got it into the next bracket, we would get a rebate.

Trial Examiner Sheppard: Rebate, all right.

Mr. Freeman: That is all. You may cross-examine.

Cross-Examination by Mr. Haycraft.

Q. As a matter of fact, what was your experience as to the prices that you paid for Minneapolis-Honeywell controls during the years 1937, 1938, 1939, 1940 and 1941?

A. I don't quite get the drift of the question.

Trial Examiner Sheppard: Read it.

(The question above referred to was read by the reporter.)

The Witness: You mean what did we finally pay?

By Mr. Haycraft:

Q. Yes.

A. Oh, we got quite a nice—there was one year, I forget which year it was—either 1939 or 1940, we got a nice retroactive credit pretty close to $7,000.00.

Q. What was the unit price or set price that you

1698 paid and how much did you buy from Minneapolis-Honeywell during those years?

A. Well, if the contract is there, it would be according to the contract.

Mr. Freeman: May we have Mr. Lockrae, who has the record, supply the figures of actual sales, the bracke number and so on?

Trial Examiner Sheppard: Yes, Mr. Lockrae, if you will, please, just give the witness the benefit of your figures on that.

Mr. Lockrae: What years was that, Mr. Haycraft?

Mr. Haycraft: 1937 to 1941.

Mr. Lockrae: Automatic Burner Corporation in 1937 purchased 17,656 units.

Trial Examiner Sheppard: In what year?

Mr. Lockrae: 1937.

Trial Examiner Sheppard: All right.

Mr. Lockrae: In 1938—

Mr. Haycraft: You didn't give us the price in 1937. What were your set prices?

Mr. Lockrae: I better do that as I go along.

Trial Examiner Sheppard: Yes, give us the prices.

Mr. Lockrae: In 1937—and these prices are all for the intermittent ignition controls—were $19.85 a set.

Mr. Haycraft: What bracket was that in, 2 or 3?

1699 Mr. Lockrae: No, that was in bracket 4, in that year.

Mr. Haycraft: 4.

Mr. Lockrae: And then in 1938, I gave you the units didn't I?

Mr. Haycraft: No, I haven't got the units.

Mr. Lockrae: 1938, their purchases were 6,569 units, and the price was $17.25.

Mr. Haycraft: Still in the fourth bracket?

Mr. Lockrae: Yes, that was in the fourth bracket.

Now, in 1939, their purchases were 11,529 units and the price was $15.95 a set.

In 1940, their purchases were 15,739 units, and the price was $14.65 a set.

In 1941, they purchased 19,851 units, and the price was $13.75 a set.

Mr. Haycraft: What was that figure?

Mr. Lockrae: $13.75.

Mr. Haycraft: No, their number.

Mr. Lockrae: The units, 19,851.

Mr. Haycraft: Now, what bracket?

Mr. Lockrae: They changed brackets. I think they had the 5 bracket in the years 1940 and 1941.

Trial Examiner Sheppard: That is when you got that credit?

The Witness: Yes.

1700 Mr. Haycraft: And during that period of time—if I am correct about the brackets, during the years 1937 to 1941, it shows 8,000 sets.

Mr. Lockrae: '37, Mr. Haycraft?

Mr. Haycraft: Yes.

Mr. Lockrae: Well, I have this down here in units. Divide it by 3. 22,500 to 44,999. That would be 7500.

Mr. Haycraft: That is bracket 4, and what year?

Mr. Lockrae: '37.

Mr. Freeman: Well, Mr. Lockrae, are you taking into consideration the burners sold by ABC, the controls that you sold to the Holland Furnace Company?

Mr. Lockrae: They are not included in the figures. These are just our sales to Automatic Burner Corporation.

The Witness: They should be. There was a sale of controls to Holland Furnace for use with Automatic burners.

Mr. Haycraft: When was that?

Mr. Lockrae: That was carried through the years.

The Witness: Yes, all the way.

Trial Examiner Sheppard: You may bring that out.

By Mr. Freeman:

Q. I might ask you, in addition to the purchases of controls—the figures which Mr. Lockrae just gave us—
1701 did your company manufacture oil burners for other companies where the furnace companies picked up the controls direct from Minneapolis-Honeywell?

A. Yes.

Q. And what company?

A. Several of them.

Q. And how did your volume run with such companies?

A. Oh, very large with Holland, in the case of Holland Furnace Company.

Q. How did it compare with the burners that you made and sold under your own trade name, ABC?

A. Oh, I guess we manufactured from 80 per cent—this is an estimate—about 80 per cent of what we sold altogether.

Mr. Haycraft: I am going to hold you to actual figures on that, if they can be obtained. Have you got them, Mr. Lockrae?

Mr. Lockrae: I can obtain them for you, Mr. Haycraft.

Trial Examiner Sheppard: Will you make a note of that?

Mr. Freeman: Mr. Lockrae will furnish the combined figures of controls actually shipped to ABC.

Mr. Haycraft: Or for ABC's account.

Mr. Freeman: Or for ABC burners, to the Holland Furnace, and to all the furnace companies.

1702 Mr. Haycraft: That is right.

By Mr. Haycraft:

Q. I will ask the witness whether he had the arrangement during all those years that he would get credit for sales to those burner manufacturers.

A. Yes.

Q. When you sold?

A. Yes.

Q. That is during 1937 on through 1941?

A. Well, I can't be entirely specific, whether it was 1937, but that is about right.

Mr. Haycraft: It is my understanding that Mr. Lockrae will only include those figures that were given credit for over a certain period of time. That wasn't done in all instances.

The Witness: What year was it, Mr. Lockrae that they started to get direct from you?

Mr. Lockrae: Well, I can't reconcile that from the reports I have here, Mr. Hirsch.

The Witness: During the first few years of our dealings with Holland Furnace, we furnished burners and in some period in there, we changed and they bought them direct, because there wasn't any use in swapping dollars.

Mr. Freeman: When you say "burners" you mean with controls?

1703 The Witness: Yes.

Mr. Freeman: When you say "swapping dollars", you mean you did not charge them any more than what you paid for them?

The Witness: No.

Trial Examiner Sheppard: It was just a bookkeeping matter?

The Witness: That is all. It was tying up our money in handling the stuff, and the bookkeeping involved, without profit.

Mr. Freeman: And it was perfectly agreeable for you if Minneapolis-Honeywell got the controls direct, and relieved you of the billing?

The Witness: We preferred it, since we couldn't make any profit on the controls.

Trial Examiner Sheppard: All right.

By Mr. Haycraft:

Q. Now, I understand that you gave both Mr. Owens and Mr. Boalt to understand that they couldn't expect to

sell you any controls unless they made a better price than Minneapolis-Honeywell, is that right?

A. Yes.

Q. And you have already related the reason you didn't divide the business with Mercoid, you gave it to Mr. Owens at that time?

1704 A. Yes, same thing.

Q. Now, you testified that you had certain competition from manufacturers of the pot type burner. I will ask whether or not you had any experience in competition with Quiet Heet Oil Burner Company?

A. Oh, yes.

Q. And what has been your experience in competing with that firm?

A. Quiet Heet?

Q. Yes.

A. They were always lower in price than we were.

Q. Did you lose much business to them?

A. Many a sale.

Q. And that was because of the—did you ever discuss that matter with Minneapolis-Honeywell representatives or officials, the price that this Quiet Heet was quoted?

A. Yes.

Q. For the Minneapolis controls?

A. Yes, I think so.

Q. What did you say to them and what did they say to you?

A. We said that they appeared to be buying controls at a lower price than we were and they investigated, I think, and Mr. Lockrae came back and assured me that that was not true.

1705 Q. When was it that you had a conversation with Mr. Lockrae?

A. Oh, I couldn't pin it down to a date. Mr. Lockrae has come to see us over many years, and I couldn't tell you the occasion of that visit.

Q. Could you tell whether it was 1938 or 1939?

A. No, I couldn't say.

Q. Did he give you figures at which they were selling to Quiet Heet at that time?

A. No, except to say they were paying the same prices now.

Q. And they didn't change your bracket on account of that, did they?

A. I don't think so.

Q. And give you a lower price on account of Quiet Heet?

A. I don't think so.

Q. As a matter of fact, you don't know what bracket Quiet Heet was in except—

A. (Interposing) No, except for what they said.

Q. —except what they told you?

A. Yes.

Q. And you couldn't remember the exact date of the conversation?

A. No, I think we had a dozen conversations along that line.

Q. This was quite a period from this, wasn't it?

A. Yes.

Q. Have you any idea as to the number of accounts
1706 that you lost to Quiet Heet?

A. No.

Q. But you know it was substantial?

A. You couldn't put it on the basis of the number of accounts we lost. We may have sold some burners even to those people who bought from Quiet Heet.

Q. But you do know that you suffered loss of business?

A. Yes.

Q. Was that the firm that you had in mind when you said that some of the firms competing with you featured the M-H controls in their advertising matter?

A. One of them, yes.

Q. And how did the prices at which they featured their controls compare with the prices that you were paying for Minneapolis-Honeywell controls?

A. You couldn't arrive at that, because the controls were sold in connection with a burner and we don't know how they split that up.

Q. Didn't they say something about that?

A. No, no, they operated the same way we did, burner with controls.

Q. Do you remember the prices at which they advertised their burners?

A. Yes, I think they got down, one year, to around $45.00.

Q. And what were you getting at that time?
1707 A. Around 60, I think.

Mr. Haycraft: That is all.

Redirect Examination by Mr. Freeman.

Q. Mr. Hirsch, there were other companies besides Quiet Heet that were selling at prices lower than yours?

A. Oh, yes, we were rather high priced.

Q. So that, as far as competition was concerned, you had competition from other oil burner manufacturers, aside from Quiet Heet?

A. We had competition from every oil burner manufacturer in the United States, operating in the territory we operated.

Q. And your territory was rather extensive, was it?

A. East of the Mississippi and north of the Ohio rivers.

Q. And I understood you to say yours is a rather high priced burner?

A. Yes.

Q. Just what do you mean by that?

A. Well, we were always up in the upper brackets in the dealers' prices.

Q. And has that been true throughout all your business career?

A. Yes.

Q. And that was true long before Quiet Heet ever entered the picture?

1708 A. Yes, yes.

Q. And even in the years back in 1923 and 1924, you were still in the high priced bracket?

A. Yes.

Q. And that has been carried on all through these years?

A. Oh, yes, our prices to dealers have always been above the average in the market.

Q. And there were always, all during these years, many oil burner manufacturers selling at prices lower than yours?

A. Yes.

Q. And some of those were equipped with Minneapolis-Honeywell controls and some with other controls?

A. Not all of them were equipped with Minneapolis-Honeywell, but I would say that all of the oil burner manufacturers got in on some of that business.

Mr. Freeman: That is all.

Recross Examination by Mr. Haycraft.

Q. Do you recall what other firm, besides Quiet Heet, featured Minneapolis-Honeywell controls in their advertising and sold at lower prices than you did?

A. Without attempting to name them by name, I would say all of them.

Q. All of your competitors sold below you?

A. No, you asked me if they featured Minneapolis-Honeywell.

1709 Q. I asked you if any competitors besides Quiet Heet featured Minneapolis-Honeywell controls and advertised their burners at lower prices than yours.

A. No, very few advertised prices at all, but they sold, a great many of them sold them under us.

Q. But Quiet Heet was the firm that made the national, this nationwide advertising campaign?

A. On a price basis.

Q. On a price basis and featured Minneapolis-Honeywell controls?

A. Yes.

Mr. Haycraft: That is all.

Redirect Examination by Mr. Freeman.

Q. There were other firms that featured Minneapolis-Honeywell controls?

A. Yes, but not prices. They did not advertise their prices like Quiet Heet did.

Mr. Freeman: That is all.

Trial Examiner Sheppard: Thank you very much.

(Witness excused.)

J. C. WESTMONT was thereupon called as a witness for the Respondent and having been first duly sworn, testified as follows:

1710 Trial Examiner Sheppard: Give us your initials, Mr. Westmont.

The Witness: J. C. Westmont.

Trial Examiner Sheppard: And your address?

The Witness: 1134 Regent, Madison, Wisconsin.

Mr. Haycraft: Where?

The Witness: Madison, Wisconsin.
Trial Examiner Sheppard: All right.

Direct Examination by Mr. Gilpatric.

Q. Mr. Westmont, with what company are you connected?

A. Wisconsin Oil Burner Company, Madison, Wisconsin.

Q. Are you one of the owners or proprietors of that company?

A. I am secretary and treasurer and one of the proprietors.

Q. What type of oil burner does your company manufacture?

A. Spinning flame pressure burner.

Mr. Haycraft: What, I didn't get that.

Mr. Gilpatric: Spinning flame.

The Witness: Spinning flame pressure burner.

By Mr. Gilpatric:

Q. How long have you manufactured oil burners?

A. Since 1928, I believe.

Q. Your trade name is what?

A. Wisconsin.

1711 Q. Where do you market your burners, Mr. Westmont?

A. Principally in Wisconsin, ourselves, and then we have a distributor in Portland and in Fort Worth; the Morley-Murphy Hardware at Green Bay is a distributor; and the other burners are nationally distributed—it is really of our manufacture but sold under the L. J. Mueller Manufacturing Company name. They handle the national distribution, so we stay out of the field.

Q. Mueller doesn't market the furnace under your name, "Wisconsin" do they?

A. No, they market it under their own name.

Q. Mr. Westmont, what has been your experience in purchasing controls beginning with the time you started in business? Tell us the names of controls which you have used.

A. We used a Tim-O-Stat, Penn control sold by General Electric; Penn Switch; Perfex; White-Rogers.

Q. Any Mercoid controls?

A. And Mercoid. We used them, yes.

Mr. Gilpatric: Will you mark this for identification as Respondent's Exhibit 121-A, 121-B and 121-C.

(The document referred to was marked Respondent's Exhibit 121-A, 121-B and 121-C for identification.)

By Mr. Gilpatric:

Q. Will you identify that for us, Mr. Westmont, Respondent's Exhibit for identification 121-A, B and C?

1712 A. Yes, sir, that is one of our oil burner circulars.

Q. Does that have any reference to controls?

A. Yes, sir, any standard make.

Mr. Gilpatric: We offer in evidence the circular referred to as Respondent's Exhibit 121-A to C.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: It will be accepted.

(The document referred to, heretofore marked RESPONDENT'S EXHIBIT 121-A, 121-B, and 121-C for identification, was received in evidence.)

By Mr. Gilpatric:

Q. Referring to the period in the subpoena, from 1937 to 1941, which make of controls did you purchase the most of for your burners?

A. Minneapolis-Honeywell.

Q. Even though you offered your dealers and customers any standard make?

A. That is right.

Q. Will you explain the reason for that fact?

A. The dealers all demanded Minneapolis-Honeywell, because up in our territory, on account of the advertising and the service, that is the only control that they really know; even though it costs more money, it would be easier for us to furnish that on account of the lessening in

1713 sales resistance.

Q. You said it cost you more money. Do you mean that the other makes of controls cost you less?

A. Yes, all of them.

Q. Did you charge any more for your burners when equipped with Minneapolis-Honeywell controls?

A. Even though they cost us more, we found, with each sale, we saved money, on account of less service.

Trial Examiner Sheppard: Less what?

The Witness: Less service that we would have to render.

Trial Examiner Sheppard: I see. Service. I see. Well, they asked the same question of somebody else this morning—who was it?

Mr. Gilpatric: Mr. Jeffrey.

Trial Examiner Sheppard: That is right. Go ahead.

By Mr. Gilpatric:

Q. Did you have a contract with Minneapolis-Honeywell during this period from 1937 to 1941?

A. We did.

Q. Did you have a contract with other control manufacturers?

A. We did.

Q. Did you feel that your contract with Minneapolis prevented you from purchasing from other manufacturers?

A. No, sir.

1714 Trial Examiner Sheppard: In fact, did you?

The Witness: What?

Trial Examiner Sheppard: In fact, did you purchase from others?

The Witness: Sure, from all of them.

Mr. Gilpatric: Yes.

By Mr. Gilpatric:

Q. You mentioned White-Rogers. What type—

Trial Examiner Sheppard: I want to know, before you do that, if you had a contract with others.

The Witness: We had a contract with most of them, yearly contract, and then we purchased without any contract.

Trial Examiner Sheppard: All right.

By Mr. Gilpatric:

Q. Well, I asked you about White-Rogers. What type of control did you purchase from that company?

A. Combination fan and limit control.

Q. Did you also purchase that unit from Minneapolis-Honeywell?

A. Few, very few.

Q. Most of your purchases of that control were from White-Rogers?

A. White-Rogers.

Q. When you ship your Wisconsin burners, Mr. Westmont, are they equipped with a set of three controls

1715 of the same make, or do you use different makes of controls on the same burner?

A. In most all the cases, all the same make, except when that burner calls for a combined fan, burner furnace unit, but it has a matched control set with combination White-Rogers fan and limit.

Q. But the primary and thermostat are of the same make?

A. The same make.

Q. What was your best price to distributors, of your burner, say in the year 1941?

A. $70.00.

Q. And to dealers?

A. $86.00. We are the highest priced burner to the dealer.

Q. How are you able to sell your burner at that price in competition with the other lower priced burners we have heard about?

A. Well, that is quite a story. That is a precision made job and, in that price, is the service that we render and we enjoy at the city of Madison, about 75 per cent of the business because we do render that service and, even though we have competition with most all of the other burners, the majority of the good dealers will pay us a higher price for our burner, because the public demands that type of service. We render that and there is nobody there that can render it, except ourselves.

Trial Examiner Sheppard: What percentage of 1716 business do you do in Wisconsin?

The Witness: Most all of it.

Trial Examiner Sheppard: Ninety per cent?

The Witness: Well, we have this Mueller furnace that we call a national account, and we just confine ourselves to the state of Wisconsin.

Trial Examiner Sheppard: I see.

By Mr. Gilpatric:

Q. Does Quiet Heet Manufacturing Company of Newark solicit your dealers in Madison?

A. Yes, sir.

Q. What effect, if any, has that competition had on your sales?

A. Not any.

Q. Do you know that Quiet Heet has gotten a better price for Minneapolis-Honeywell controls than you have?

A. Yes, sir.

Q. How do you know that?

A. Because the Minneapolis representatives lay their bracket prices right down before me and ask me which bracket we are going to go in for the coming year, based on our experience in the past year, and I know my cost.

Q. This takes place when you sign your annual contract?

A. That is right.

Q. And the fact—

1717 Mr. Haycraft: I move to strike the question and the answer. The answer is not responsive to the question.

Trial Examiner Sheppard: Well, let's go back and see.

Mr. Freeman: That kind of objection lies only in the mouth of the examining attorney and opposing counsel cannot make that kind of objection.

Mr. Haycraft: I suggest you study your evidence, your rules.

Trial Examiner Sheppard: We will go back and ask the reporter to read that.

(The record was read by the reporter.)

Mr. Haycraft: You say that was what his cost is and bracket prices, but it doesn't indicate that he knows what price Quiet Heet pays.

The Witness: Yes, I do. I know all the Minneapolis lowest prices and I know by the quantity that Quiet Heet produces that they are in that bracket.

Mr. Gilpatric: All right. I think that makes it pretty clear for everybody.

Mr. Haycraft: How does he know what Quiet Heet produces?

Mr. Gilpatric: You will have a right to cross-examine.

Mr. Haycraft: And I move to strike that. There

1718 is no foundation laid that the witness is familiar or knows anything about the volume of sales to Quiet Heet.

1719 Trial Examiner Sheppard: Well, I will let it stay there and give it what value I think it deserves.

Mr. Freeman: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: All right, Mr. Gilpatric, we will proceed.

By Mr. Gilpatric:

Q. Now, speaking generally of your competition, Mr. Westmont, has the fact that other oil burner corporations receive better prices because of their volume hurt the sale of your burners, to your knowledge?

A. Not a bit.

Q. You mentioned earlier the fact that you sold your burner to the Mueller or "Miller" Furnace Company. Do you sell that without controls or with controls?

A. Without controls because we just trade dollars on those controls and there is no use tying the money up.

Q. Do you remember when you first attempted to get this business, this Mueller business?

A. I think 1936.

Q. And did you encounter any competition in getting this business?

A. We took that business away from Timken.

Q. Was there any other company, to your knowl-
1720 edge, other oil burner company, endeavoring to get that business at the same time?

A. Yes, all of them, Quiet Heet, principally, and Reif-Rex Oil.

Q. Do you do any advertising to speak of, Mr. Westmont?

A. Just once in a while in the trade papers.

Q. Could you give us some idea of the volume of your sales during the year 1941, dividing them per year between controls, and sales, your other sales?

A. I think our sales were around 400 and Mueller's sales were about 900 or 1,000, in there.

Q. So you manufactured about 14 or 15 hundred burners that year?

A. Practically.

Q. What price did you pay in that year, for example, for your motors?

A. For our motors?

Mr. Haycraft: I am objecting to this whole line, Mr. Examiner, the same as I did before as to other items than controls.

Trial Examiner Sheppard: Yes, allow that Mr. Haycraft has a general objection on this line. Proceed.

By Mr. Gilpatric:

Q. Did you answer that question, Mr. Westmont, what price you pay for the motors that go into your burn-

1721 ers, along with controls and the other component parts?

A. The present price on a motor is $8.07. You mean control prices, to date?

Q. No, I mean the accessory price for motors and the other component parts, pumps—

A. (Interposing) $8.07 for the motor and $5.10 for the transformer and $7.15 for the pump.

Q. Is that a single stage or double stage?

A. Single stage; and the fan, $1.11.

Trial Examiner Sheppard: Those are all integral parts?

The Witness: Yes, those are the principal parts.

By Mr. Gilpatric:

Q. When you add the controls, you have got the—

A. You have got the housing and the labor of assembling the machine work, but those are the principal parts.

Mr. Gilpatric: That is all.

Trial Examiner Sheppard: Cross-examine.

Cross-Examination by Mr. Haycraft.

Q. What do you pay for controls?

A. Controls, I don't remember offhand. I think our control set price in 1937 was $17.25. Mr. Lockrae could look that up and give that to you exact. Some have been dropping in the last three or four years.

1722 Mr. Gilpatric: Mr. Lockrae, would you give us the set prices on sales to Wisconsin Burner Corporation for 1937 to 1941?

Mr. Lockrae: In 1937 it was $22.60 a set for intermittent ignition controls; in 1938 it was $19.35; in 1939 it was $17.25; in 1940 it was $17.25; and in 1941 it was $15.90.

Trial Examiner Sheppard: All right.

The Witness: That is right.

By Mr. Haycraft:

Q. Now, what bracket was he in during those years, that is, his actual sales, for actual purchases, what did he buy?

A. In 1937 he bought 636 instruments, exclusive of Mueller's purchases. In 1938 he bought 1,135 instruments; in 1939, 1,189; and in 1940, 1,495; in 1941, 1,486. All of those are exclusive of the Mueller.

Q. You don't have the Mueller figures?

A. No.

Q. Now, you stated on direct examination that you knew how many burners Quiet Heet sold. Where did you get that information?

A. From Sam La Pidus himself, right in New York City.

Q. When did he tell you that?

A. What year was the Heating and Ventilating Convention in New York?

1723 Mr. Lockrae: I think the last one was in 1938 or 1939, one or the other.

The Witness: I went to Sam and I asked him how in the world he could put on those standard parts and sell at that price, and he showed me where he could make an easy $10,000 a year making a dollar a burner, and he said, "You could do the same thing."

By Mr. Haycraft:

Q. How many burners did he tell you he was manufacturing?

A. 10,000.

Q. What year was that?

A. I think it was 1938 or 1939.

Q. Did he tell you what price he was paying?

A. Yes, sir, he offered to sell me burners. He could sell them to me cheaper than I could make them.

Q. But he didn't—he couldn't sell them cheaper than you could sell them in Madison?

A. No.

Q. Because it was too far away or because of that peculiar service you had?

A. That is right.

Q. Does he sell any burners in Madison at all?

A. I think he sold two.

Trial Examiner Sheppard: That is a sort of strange circumstance, Mr. Westmont.

1724 The Witness: It is.

By Mr. Haycraft:

Q. La Pidus doesn't give any service?

A. You buy their burner and it is shipped to the transportation company and it is yours, whether it runs or not it is your baby. You have just paid a price. You ain't paying anything for service. You just paid a price for what he called a burner and it is made of standard parts.

He capitalized on the General Electric name, the General Electric transformer, Webster pump, all good units.

Q. But he didn't sell but two out of that in Madison?

A. He didn't sell but two in Madison.

Q. And that is the only place you were competing with him?

A. That is all I would know exactly.

Trial Examiner Sheppard: All right.

By Mr. Haycraft:

Q. Now, how did you come to buy your fan and limit controls from White-Rogers?

A. Well, all the peddlers will tell you that I am kind of an ornery buyer. They don't sell me. I buy just what I want to, and I just like it, that is all.

Q. Did it cost you less than the one you got from Minneapolis-Honeywell?

A. Yes, it cost me less, had a better price. Price 1725 don't mean anything to me, though.

Q. Do you remember what the difference in price was?

A. I think the price was about 15 cents. It would have been less—it would have been more than that, but I used the Standard control; I had a special knob put on the fan side. They built it just the way I wanted it.

Q. Has that price been more all the time or was there a time when the price was the same?

A. No, all the control manufacturers are higher than Minneapolis.

Mr. Gilpatric: Are higher?

The Witness: Yes, all of them are higher.

By Mr. Haycraft:

Q. You don't mean that.

A. I mean Minneapolis is higher than the other controls.

Q. This particular question I am asking you now is with reference to the fan and limit control which the White-Rogers Company, according to the record in this case, manufactured under a license from the Minneapolis-Honeywell Company, and I am asking you whether or not the price during all these years has been less than the Minneapolis-Honeywell price, or was there a time when it was the same?

A. No, White-Rogers' price has been lower.

Q. How long have you bought from White-Rogers?

A. Ever since they started manufacturing controls.

1726 Q. Do you remember when that was?
A. I think that was in 1937, 1936 or 1937.
Q. Do you remember what the price was that you paid White-Rogers?
A. I don't know right offhand what that was.
Q. Was it $4.75 or $5.25?
A. No, it was $4.75. We never got over the $5. It seems to me it was $4.65.
Q. $4.65?
A. I think it was $4.50, and 15 cents extra for the knob on the fan and limit.
Mr. Haycraft: That is all.
Trial Examiner Sheppard: Anything else?

Redirect Examination by Mr. Gilpatric.

Q. I just want to make sure that the record is clear that the price at which Quiet Heet burners were offered at Madison, even though they didn't sell, as you said, was lower than your burner.
A. Well, they offered that for $45.50 and sent post cards to all the dealers in the State of Wisconsin. As I would go around to my dealers, I would see that card. When they wanted to know how I was going to meet it—they said, "$86, think of that", and I said, "Go ahead and buy." I just told them, "Well, you are getting a burner in a
1727 box. If you don't appreciate my service that I rendered to you all these years, just buy it."
We have increased, you will notice, all along we have increased our business every year on that policy of giving the customer and the dealer the benefit of the doubt. He is always right with us.
Mr. Haycraft: You don't find many manufacturers doing that, do you, these days?
The Witness: Well, who we do business with have to do that with us, too. I throw it right into Minneapolis' hands if their stuff isn't right. I want that replaced if it isn't right.
Mr. Haycraft: Did Quiet Heet pay the freight to Madison?
The Witness: No, f. o. b.
Mr. Haycraft: There was some freight on it?
The Witness: Yes.

By Mr. Gilpatric:

Q. But that freight wouldn't make up the difference between $45 and $86?

A. No.

Mr. Gilpatric: That is all.

Mr. Haycraft: That is all.

Trial Examiner Sheppard: Thank you very much.

(Witness excused.)

1728 Trial Examiner Sheppard: We will have a short recess.

(A short recess was taken.)

Trial Examiner Sheppard: On the record.

Mr. Gilpatric: I will recall Mr. A. H. Lockrae.

Trial Examiner Sheppard: Miss Reporter, let the record show that Mr. A. H. Lockrae's testimony continues on behalf of the respondent.

A. H. LOCKRAE, was thereupon recalled as a witness for the respondent and, having been previously duly sworn, testified further as follows:

Direct Examination (Continued) by Mr. Gilpatric.

Q. Mr. Lockrae, will you explain your competition in doing business with Cleveland Steel Products during the period from the time you started selling them in 1938 through 1941?

A. Cleveland Steel Products Corporation has been in the oil burner business for at least 20 years, that I know of, and we have always sold them some controls.

In the early days they standardized on our equipment and because they were building burners for Timken at one time their combined volume enabled us to give both Timken and Cleveland Steel our lowest prices.

Q. That was an example of that dual transaction 1729 type that you referred to yesterday?

A. That is right. But when Timken started to build their own burners, we did not think that Cleveland Steel's sales would justify the continuance of our low prices, and, as a result, Cleveland Steel started to use a lot of competitive controls and standardized on them for their gun type or pressure burner. They built both the rotary and the gun type.

Q. What was the competitive name for that?

A. The first competitive make that got in with Cleveland Steel was the Mercoid Corporation.

Q. What did you do to meet that situation?

A. Well, in 1939, to come closer to competitive prices, we lowered our prices to Cleveland Steel, and in that year they purchased over three times as many units from us as they did in 1938.

Trial Examiner Sheppard: 1939?

The Witness: Yes, sir.

By Mr. Gilpatric:

Q. What about 1940?

A. In 1940 we gave Cleveland Steel our lowest prices and we sold them 14,977 instruments. We continued this practice in 1941 and we sold them 19,143 instruments, and, to our knowledge, our control prices were—we never met the competitive price, we lowered our price, but we 1730 did not meet it.

Q. Besides Mercoid, what was the other competition you had for a while?

A. For a while we had some Perfex competition at Cleveland Steel Products.

Q. Those were the companies that continued to solicit Cleveland during the ensuing years, to your knowledge?

A. For one year, I believe it was, Mercoid and Perfex and ourselves split the business, and then Perfex dropped out of the picture and then it was Mercoid and ourselves.

Q. Mr. Lockrae, refer now to the Century Engineering Company, which has also been referred to in the evidence, and give us briefly the sales of controls to that company during the period from 1936 or 1937 to 1941.

A. Well, Century has always been a highly competitive account and, to my knowledge, they never used a single manufacturer's controls exclusively. They always bought from two or three sources.

As I recall, they first standardized on Mercoid, then on Penn controls, using ours as optional, and that condition exists today.

In 1936 we gave them our 7,500-unit prices and they purchased 8,090 units. In 1937, to come closer to the competitive situation, we gave them our 25,000-unit prices and that purchased 14,619 instruments. In 1938 we gave 1731 them again our 22,500-unit prices, and they purchased 6,672 instruments. In 1939 we gave them our 15,000-

unit prices and they purchased 10,484 instruments. In 1940 we gave them our 15,000-unit prices and they purchased 9,857 instruments. Again in 1941 we gave them our 15,000-unit prices and they purchased 8,423 instruments.

It is interesting to note, too, that from the evidence on record given by Mr. Henning of Penn Electric Switch Company, that in 1938 Century purchased a set of Penn controls for $15.50 and paid us $16.05 a set.

And, incidentally, these figures are all the constant ignition type control because that is all the Century uses; and in 1939 Penn was $14.70 and M.H. was $14.85; and in 1940 Penn was $13.50, which was the price of our No. 661 constant ignition control; that is, the set included that control, and M.H. was $14.75.

Then in 1941, again including the No. 661 control which Century catalogued and used, Penn's price was $12.80 and our price was $14.05 a set.

Q. Did Nu-Way Corporation at any time standardize, as that term has been used here?

Mr. Haycraft: Are you talking about Nu-Way or Century?

Mr. Gilpatric: Nu-Way.

Mr. Haycraft: You have left Century, then?

1732 By Mr. Gilpatric:

Q. Have you anything further to add to Century?

A. That is all. What was your question?

Mr. Gilpatric: Read the question.

(The question above referred to was read by the reporter.)

By Mr. Gilpatric:

Q. Did they standardize on Minneapolis controls?

A. Yes, they did for several years.

Q. Did you ever lose that business to competition?

A. Well, we lost a goodly share of it to competition.

Q. What are the facts there?

A. Well, in 1936 Nu-Way had our 3,000-unit prices and they purchased 4,561 instruments; in 1937 we gave them our 3,000-unit prices and they purchased 2,753 instruments. In 1938 we gave them our 2,250-unit prices as being—

Q. (Interposing.) 2,200 or 22,500?

A. Pardon me. I wonder if that is wrong. I was right. Bracket 2 they had in 1938, which was 2,250 units. But in that year they standardized on the Penn control and only purchased 1,676 instruments from us.

The competitive situation continued in 1939. We gave Nu-Way our 3,000-unit prices and they actually purchased 2,106 in that year. In 1940 they made our controls—we gave them our 7,500-unit prices and they made our con-
1733 trols optional to the dealer with no price differences.

In previous years, when they were using both Penn and M.H., the dealer was charged more for a burner equipped with M. H.

Q. Even at those prices were your controls costing them more than competition?

A. As far as I know, that is the case; at least, I was told. Let's see that was in 1940; that year they purchased 3,641 instruments.

Trial Examiner Sheppard: What class would that be?

By Mr. Gilpatric:

Q. What bracket?

Trial Examiner Sheppard: What bracket, I mean.

A. Well, the 7,500 unit was bracket 3-A.

Mr. Haycraft: They were actually purchased in bracket 2, then, is that right?

The Witness: Not in 1940. I get your point. They actually purchased 3,641 instruments, but we gave them our 7,500-unit prices that came closer to the competitive prices that year; and in 1941 we gave them our 15,000-unit prices, which again did not meet the competitive prices that existed but they did purchase 5,875 instruments from us that year.

By Mr. Gilpatric:

Q. You gave that price to meet the competition?

1734 A. That is it exactly.

Mr. Haycraft: I object to it as leading.

The Witness: I think I already stated that, didn't I, Mr. Haycraft?

Trial Examiner Sheppard: Yes, I will let the record stay the way it is. Sometimes those leading questions help out.

By Mr. Gilpatric:

Q. Mr. Lockrae, in view of the earlier examination of Mr. Hirsch, I wish you would state how the prices which Minneapolis-Honeywell sold controls at to A.B.C. during the years 1937 to 1941 compared with Quiet Heet Manufacturing Company's prices for those same years.

A. In 1937 Quiet Heet was in our 22,500-unit bracket. They purchased 27,584 instruments and the price was $17.85 a set. In that year A.B.C. was in our 12,000 to—well, our

12,000-unit bracket. They purchased 17,656 instruments, and their price was $19.85 a set.

In 1938 Quiet Heet started in our 22,500 bracket. They actually purchased 38,835 instruments, which gave them another retroactive credit, and that made their price $16.25 a set.

Q. Mr. Lockrae, let me interject to ask you whether or not the sales figures of A.B.C. which you are giving include sales to Holland Furnace and these other furnace
1735 manufacturers to which Mr. Hirsch referred as having purchased his burner without controls, the controls being purchased from you.

A. These figures do not include any of the sales that we made direct to Holland Furnace Company, the controls to be used with the A. B. C. burner.

Q. All right, go on to 1939.

Mr. Haycraft: You didn't give the A. B. C. price.

The Witness: I thought I did, didn't I?

Mr. Gilpatric: No.

The Witness: A. B. C. was in our 22,500 bracket and they purchased 6,569 instruments, and their price was $17.25, and that, incidentally, was the price which we gave Quiet Heet at the beginning of the year, but they did get a retroactive credit and got a lower price before the year was over.

And in 1939 we gave Quiet Heet our 30,000-unit price. They bought 53,590 instruments, and our price was $14.90 a set. A. B. C. was in our 15,000-unit bracket. They purchased 11,529 instruments, and the price was $15.95 a set.

And then in 1940 Quiet Heet was in our 30,000-unit bracket and purchased 82,173 units. The price was $14.65 a set. A. B. C. was in our 30,000-unit bracket, purchased 15,739 units, and our price was $14.65 a set.
1736 In 1941 Quiet Heet purchased 91,638 units. Our price was $13.75 a set; and A. B. C. was in our 30,000 bracket, purchased 19,851 units, and the price was also $13.75 a set.

By Mr. Gilpatric:

Q. Mr. Lockrae, does your company sell thermostats and limit controls to manufacturers of pot type burners?

A. We do.

Q. Those burners use the primary control, do they not, of the oil float valve type?

A. Constant level float valve, yes.

Q. Are those burners, to your knowledge, sold in competition with and for the same purposes as pressure and rotary type burners?

A. They are.

Mr. Gilpatric: Will you mark this as Respondent's Exhibit 122 for identification?

(The document referred to was marked Respondent's Exhibit 122 for identification.)

The Witness: You want me to explain that?

By Mr. Gilpatric:

Q. Yes, will you identify it for us and explain it?

A. This circular covers a vaporizing oil burning furnace manufactured by the Perfection Stove Company of Cleveland, Ohio.

Q. Is that a pot type burner?

1737 A. That is a pot type burner and it is advertised up to 70,000 BTU capacity.

Q. What size home will that heat?

A. Well, that would be an average small home.

Trial Examiner Sheppard: Five or six rooms?

The Witness: Five or six rooms.

By Mr. Gilpatric:

Q. Will it refresh your recollection if I show you the booklet put out by the Perfection Stove Company, which I will ask be marked for identification as Respondent's Exhibit 123-A and B?

(The document referred to was marked Respondent's Exhibit 123-A and 123-B for identification.)

A. This is a catalogue or home owner piece of advertising put out by Perfection Stove Company.

By Mr. Gilpatric:

Q. Are the types of heaters referred to in Respondent's Exhibit for identification 123-A and B the same type as that shown in the circular, Respondent's Exhibit 122 for identification?

A. The same general type, yes.

Q. Is the Perfection Stove Company one of the larger manufacturers of pot type burners?

A. They are.

Mr. Gilpatric: Respondent offers in evidence Re-
1738 spondent's Exhibits 122 and 123-A and B.

Mr. Haycraft: May I ask the witness a question about it?

Mr. Gilpatric: Yes.

Mr. Haycraft: Which one of the exhibits which has been identified here as a primary control 116 or 117 was used on this pot type burner?

The Witness: Neither the R-116 or 117 primary controls are used with that type of burner. The room thermostats and limit controls of standard makes are used.

Mr. Haycraft: Which one of these primary controls that you have here is used on this that you identified, I mean limit controls?

The Witness: The limit controls?

Mr. Haycraft: Yes.

The Witness: That would be today's type No. LA-419, if just a limit control was involved. If the furnace was equipped with a fan, as most of them are, it would probably be the type 404 combination control, which includes the fan switch and the limit control.

Mr. Haycraft: I object to the exhibits, Mr. Examiner, as being irrelevant and immaterial. As the witness has stated, they use a different primary control than was involved in this proceeding up to this time.

Mr. Gilpatric: On the other hand, Mr. Examiner, 1739 I think it has been made evident now by testimony of other witnesses, Mr. Crawford of Timken, Mr. Hodges of Detroit Lubricator, and this witness, and Mr. Hirsch of A. B. C. that these pot type burners are sold in competition with the pressure type and rotary type burners and carry controls made by this company, the respondent here, and we think it is material, in view of the stipulation, that you include all types; but this company only sells 25 percent of the annual volume of sales of the whole country, and I don't want to burden the record with all this other data.

Trial Examiner Sheppard: You just want to put that in as an illustration?

Mr. Gilpatric: Yes, as an illustration.

Mr. Haycraft: On that point, Mr. Examiner, we seriously urge that this is irrelevant and immaterial and going into a field entirely foreign to the Commission's case in chief and foreign to the allegations of the complaint. The testimony we have taken, the stipulation we have, the first exhibit in this case was confined to the type of products that have been in evidence up to this time, in which the field is in domestic pressure and gun type burners.

It is true that these witnesses on previous occasions have testified, have referred to the pot type burner as being competitive, but that doesn't qualify or make
1740 that testimony, or at least the evidence here, relevant and material to the issues in this case.

Respondent is not engaged in the manufacture of burners. He is engaged in the manufacture of temperature controls that are used on burners.

As I say, as far as the Commission's case in chief and all its proof is concerned and the stipulation, it is all referring to the pressure and gun type burners, rotary and gun type.

Now, we are going to be led into this field, another field, in this type of testimony, and you are going to have a much longer record than needed and you are going to have a number of exhibits that are not relevant and are immaterial to the instant case, because if this is going to be allowed in there will have to be more testimony taken on rebuttal.

They are going beyond the Commission's case in chief.

Trial Examiner Sheppard: Does that Exhibit No. 1 have anything to say about pot type burners?

Mr. Freeman: Exhibit 1 has to say about pot type burners and as to what constitutes the primary control and, if I might here, I would just ask Mr. Lockrae whether or not the pot type burners of the kind he referred to, as made by the Perfection Stove Company, where there
1741 is included a limit control and a thermostat, likewise include a primary control.

The Witness: They do include a primary control.

By Mr. Freeman:

Q. And what is the purpose of that primary control?

A. It is to provide for the safe operation of the burner.

Mr. Haycraft: Yes, but that primary control, Mr. Examiner,—

Mr. Freeman: (Interposing.) Will you please let me get through?

Mr. Haycraft: I am still making the basis of my objection.

Mr. Freeman: Mr. Haycraft, I want to be courteous to you.

Mr. Haycraft: I am beginning to doubt it very much.

Trial Examiner Sheppard: Go ahead, gentlemen. I will hear you both.

Mr. Freeman: Mr. Haycraft, I just call your attention to the fact that I said if I could ask one or two questions of the witness I would then show the pertinency of the pot type burner primary with the Commission's exhibit, the stipulation, Commission's Exhibit 1, in response to your question.

Trial Examiner Sheppard: Proceed.

By Mr. Freeman:

1742 Q. So that I get it clear, there is a primary control used in connection with the pot type burner for safe operation?

A. Yes, sir.

Mr. Freeman: Now, Mr. Examiner, I would like to read the definition of a primary control as found in Commission's Exhibit 1, and thereafter I would like to ask this witness, who is familiar, as your Honor well knows, whether or not this definition covers the primary of the kind referred to in that exhibit, where there is illustrated a pot type control, and I now read from Commission's Exhibit 1:

"A primary control"—

Mr. Haycraft: What page?

Mr. Freeman: Page 6.

"A primary control, which is a control device controlling the cycle of operation of the oil burner so as to start and stop it when heat is needed or no longer needed (as governed by the thermostat) and to prevent a hazardous condition from occurring when there is a failure of combustion, the primary controls manufactured by the respondent being called a protectorelay"—

that is merely a notation of what is manufactured by the respondent. However, I will now ask the witness.

By Mr. Freeman:

Q. I am asking you whether or not the definition given to a primary control as found in this stipulation
1743 covers the structure shown in the pot type burner or used with the pot type burner about which we are talking now.

Mr. Haycraft: I object to that question, unless it uses the word "protectorelay", which we have been talking about here, and which has been a matter of proof in the

Commission's case. If he will tell us whether that takes a protectorelay, I will withdraw my objection, but the protectorelay is the respondent's product we are talking about now.

Trial Examiner Sheppard: I will leave that to you, Mr. Lockrae.

The Witness: It is a primary control, that is, the constant level float valve is a primary control, and it safeguards against the failure of combustion or the abnormal discharge of oil.

Mr. Haycraft: But it is not a protectorelay.

Trial Examiner Sheppard: Does it have a different function from the protectorelay or do they act the same?

The Witness: They both perform the same results but they are not designed the same.

Mr. Haycraft: Mr. Examiner, I think it is only fair to say further for the record that at the time this stipulation, Commission's Exhibit 1, was prepared and entered into, we stayed away from pot type burners deliberately, I did, and there was discussion of it at the time, and
1744 we kept it out of the stipulation because I didn't want to get dragged into it, and I don't think it is fair to drag it into this case under those conditions.

Trial Examiner Sheppard: Do you gentlemen think it is important in your case to go into the pot type when we haven't up to this time? I tend to agree with Mr. Haycraft that it will make the record longer

Mr. Freeman: Mr. Examiner, Mr. Haycraft said he wanted to keep that out. He is now talking about some of our preliminary conferences before this stipulation was entered into. But let us look at the stipulation as entered into.

Mr. Haycraft: We just read the difinition of a primary control and it was limited to protectorelay.

Mr. Freeman: I am going to read from the stipulation, page 4:

"The total volume of respondent's sales of said products annually during the years 1939, '40, and '41 constitute approximately 25 percent of the total number of temperature controlling devices (including, but not limited to automatic temperature controls as hereinbefore defined) sold annually in the United States to manufacturers of all types of burners of oil for domestic heating plants, including vaporizing, pot, and distillate types, and to contrac-

1745 tors, dealers, and wholesalers in such burners and controls."

Now, I have read from the stipulation. Pot type burners are specifically referred to.

Mr. Haycraft: That is the only reference there is in it, and you will find in the balance of the stipulation every paragraph refers to the various items with respect to the other types of burners and specifically defines what an automatic temperature control should be and goes on and defines it as the type I am talking about and does not include the pot type burner.

I think, in all fairness to the Commission, they should follow the line we took in the stipulation.

Mr. Freeman: Mr. Examiner, in all fairness, if you followed Mr. Haycraft's argument through to a logical conclusion, protectorelay is the trade name of a primary control as used by this company. Mercoid calls it its K. M. I. Pyratherm. The Penn Company calls it its Safetrol. If you followed Mr. Haycraft's argument to a logical conclusion, all of the testimony where they mentioned a primary, and it was known as a Pyratherm or a Safetrol, it would be contrary to his theory.

Mr. Haycraft: I deny that, but I do insist it would be a comparable type of control to the Protectorelay, and that is what we referred to in the case in chief.

Mr. Freeman: Mr. Examiner, the principal issue 1746 here is one of competition.

Mr. Haycraft: No, it isn't, not between burners; between manufacturers of controls.

Mr. Freeman: Will you please extend me the courtesy of letting me finish my statement before you interrupt?

Mr. Haycraft: You have consistently denied that courtesy to me.

Mr. Freeman: Let me make this statement.

Competition is one of the issues, as I understand this case. Now, we have in the stipulation reference to a pot type burner. Does that mean we can't put in any evidence to show what pot type burners are? Does that mean that after witnesses, such as Mr. Schafer of Timken, Mr. Hirsch here, and Detroit Lubricator Company's Mr. Charley Hodges, testified that they were actively engaged in competition with such type of burners, that we can't put in any evidence to show what they are?

Mr. Haycraft can argue when he argues his case before

the Commission that it is immaterial, but we certainly are entitled to show the pot type burner is in competition with burners upon which we put our controls.

After all, competition is one thing that determines price, and I think we are entitled to put it in, in view of the stipulation.

1747 Mr. Haycraft: The answer to that is: I wish to point out that the competition between manufacturers of burners is not involved in this case. It is competition between manufacturers of controls, and that is competition between manufacturers of comparable controls.

Mr. Freeman: And also I would like to call the Major's attention to Paragraph 4 of count 3 of the complaint, and I am going to read it in its entirety, because it is important on this point:

"The effect of the said discriminations in price mentioned in Paragraph 2 and 3 hereof has been, or may be substantially to lessen competition in the line of commerce in which respondent is engaged, and to injure, destroy, and prevent competition between the respondent and its competitors, and to injure, destroy, and prevent competition between the customers of the said respondent in the sale and distribution of automatic temperature controls for heating plants, and has been and may be to tend to create a monopoly in said line of commerce in the various localities or trade areas in the United States in which said respondent and its competitors are engaged in the sale and distribution of said products."

Now, in the light of that sort of an allegation, I think we are entitled to show that the price of oil burners,

1748 including controls—Mr. Haycraft has referred a good many times to Quiet Heet and some of these other companies, that those prices extended by such companies are made on the basis of meeting this kind of competition, and the complaint here alleges competition as between customers of the respondent with other people engaged in selling automatic temperature devices mounted upon oil burners, and I think it is pertinent.

Mr. Haycraft: In answer to that, Mr. Examiner, I desire to point out that throughout the Commission's case in chief, including this stipulation, we have confined our proof to automatic temperature controls that are found on the domestic type burners or described as and defined in the trade as the pressure and the gun type burners.

Now, then, when the Commission interprets its complaint in the taking of testimony and the making of stipulations in that manner as outlined, then it seems to me that going beyond that is irrelevant and immaterial and going into a field not involved in this case.

Mr. Gilpatric: Is the Commission abandoning the allegation in the complaint that refers to competition between customers of the respondent?

Mr. Haycraft: No, because the complaint is specific in its language and I followed it in my proof. It is customers of the respondent engaged in the sale of auto-
1749 matic temperature controls for use on pressure and gun type burners.

Mr. Gilpatric: I just repeat that we are not bound by your interpretation of the complaint. That is for the Commission.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

While the Examiner agrees with Mr. Haycraft that this line of testimony is not important and not necessary to the determining of the issues in this case, the respondents have indicated that they think it is an important matter in their defense and to that extent the Examiner is going to allow them to put in these exhibits and allow Mr. Haycraft the opportunity to go to the Commission to strike, if he finds it necessary, and we will take the testimony so we won't have to return on another trip here.

I will accept Exhibits 122 and 123-A and B in evidence in reference to that particular matter.

(The documents referred to, heretofore marked for identification RESPONDENT'S EXHIBITS 122, 123-A, and 123-B, were received in evidence.)

Mr. Gilpatric: We respectfully differ with your Honor's views on this point.

Trial Examiner Sheppard: All right.

1750 Miss Reporter, let the record show an adjournment to 10:00 o'clock in the morning.

(Whereupon, at 4:30 p. m., December 2, 1943, the hearing in the above-entitled matter was adjourned.)

1751

Room 1123,
New Post Office Building,
Chicago, Illinois.
December 3, 1943.

Met, pursuant to adjournment, at 10 a. m.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Esq., Attorney for the Federal Trade Commission.

Messrs. Cravath, de Gersdorff, Swaine & Wood, by R. L. Gilpatric, Esq., and Paul J. Chase, Esq., 15 Broad Street, New York, New York, and Bair & Freeman, by Will Freeman, Esq., 135 South La Salle Street, Chicago, Illinois, Attorneys for respondent.

1752

Proceedings.

Trial Examiner Sheppard: Miss Reporter, show the hearing is convened in the matter of Minneapolis-Honeywell Regulator Company, Docket 4920.

Show a continuation of the examination of Mr. Lockrae by the respondent.

A. H. LOCKRAE, resumed the stand and testified further as follows:

Mr. Gilpatric: Mr. Lockrae is now available for cross-examination, if the Examiner please.

Trial Examiner Sheppard: All right.

Cross-Examination by Mr. Haycraft.

Q. On this matter of bracket prices, how long has your firm been following that bracket system of classifying their customers in the varying discounts and varying volumes?

A. Well, I came to work with the Honeywell Company in 1924 and that plan was in practice with that company at

that time, and when we consolidated with Minneapolis Heat Regulator Company in 1927 we continued to follow that plan, and Minneapolis had followed a similar plan of selling various quantities at varying prices for varying quantities, so my experience in the control business, in all my experience in that business that plan has always been practiced.

1753 Q. Well, has there been any change in the method of arriving at bracket prices and the margins between the various brackets or the arrangement of those brackets during the time that you have been holding your position?

A. Well, the scene in both respects has fluctuated. As conditions change, why, we had to change. We changed the bracket quantities from time to time and we changed the bracket prices from time to time.

Q. Well, when you first came with the firm, did they have more than six brackets at that time?

A. I don't remember. It seems to me that they had five.

Q. Well, now, at the beginning of the period defined in Commission's Exhibit 1 for the year 1937, when was that arrangement put into effect?

A. You mean the number of brackets?

Q. The number of brackets and the range in each bracket.

A. Well, it was put into effect either early in the year or late in the previous year.

Q. Do you know whether it had been used during 1935 or 1936, or were there different arrangements during those years?

Mr. Gilpatric: I have no desire to be captious, but of course this line goes back further than the direct examination did. I didn't question him with regard to bracket prices prior to 1936 and 1937.

1754 Trial Examiner Sheppard: I think he wants to get some idea when it started.

A. Well, I have a record here, Mr. Haycraft, that shows we had six brackets in 1937 and we also had six brackets in 1936.

By Mr. Haycraft:

Q. When did that six brackets start? That is the question.

A. I can't tell you whether it started in 1936. We might have had six brackets in 1935. I don't remember.

Q. Well, now, how did you arrive at this range in your brackets that you had in 1936 and 1937, Mr. Lockrae?

Mr. Gilpatric: Speaking of dollar range or quantity range?

By Mr. Haycraft:

Q. Quantity range first.

A. Well, it was undoubtedly the same theory that was used there and the same practice that was used in later years, in that we had to have our prices and our brackets somewhat commensurate with the competition and I imagine we used the same logic then as we would today if we were establishing prices for 1944.

Q. What competition did you have in mind in your arrangement of quantity brackets?

A. Well, our competitors, the control people with
1755 whom we were competing.

Q. Who were they?

A. Well, at that time we had Penn Switch and Mercoid and we had Perfex.

Q. What were their brackets that you had to meet?

A. I don't recall what they were at the moment.

Q. Well, do you have any records to show what you were shooting at?

A. In 1936?

Q. Yes.

A. I couldn't answer that.

Q. As a matter of fact, now, Mr. Lockrae, Minneapolis-Honeywell is the leader of the industry and it isn't a case of your following your competitors so much as your competitors following you?

A. That is not true, Mr. Haycraft.

Q. You deny that?

A. I deny that.

Q. You deny that you are the leader of the industry?

A. No, sir.

Q. But you deny that your competitors follow you?

A. I made the statement that we had to take the competitive situations into consideration and we had to have our bracket quantities and our prices somewhat commensurate with that situation in order to exist.

1756 Q. Well, did your competitors have six brackets arranged just as you had these arranged in 1936 and 1937?

A. I can't answer that. I don't know. I don't know that I have any records now, this late date, showing that.

Q. Well, you know, don't you, from your recollection, that they did not?

A. Well, I can't say that I do.

Q. You know that some of your competitors didn't even have bracket prices?

A. I couldn't say that today. I know that they sold on quantity. That was the consideration in the establishment of their prices, the same as it was in ours, and my recollection is that they did have brackets but what they were and what quantities I can't recall.

Q. You heard Mr. Hirsch testify yesterday as to what he told one competitor; at least, that the price had to be lower than Minneapolis-Honeywell if he expected to get any business.

A. I am not surprised at that remark.

Q. Isn't that true of all the oil burner manufacturers?

Mr. Gilpatric: Isn't what true?

By Mr. Haycraft:

Q. In other words, don't they all tell any of your competitors that if they hope to get any business, that they must quote lower than Minneapolis-Honeywell?

1757 A. I think a shrewd buyer would make that statement to anyone.

Q. Did they ever tell you that you had to get lower than your competitors in order for you to get any business?

A. They certainly told us we would have to get lower or we wouldn't get the business.

Q. But they never told you you would have to get lower than your competitors?

A. Not that I recall.

Q. As a matter of fact, to your knowledge, have you ever seen a bracket set-up which was similar, insofar as the arrangement of the quantity is concerned, to yours at any time?

A. Yes, I have seen bracket set-ups, that is, where it would show the prices in the various brackets. That was in evidence here from Mr.—

Q. (Interposing.) Yes, but were those quantities or the prices comparable to the prices or the quantities that you observed in your brackets?

A. I don't recall just exactly what they were, but I know that they were similar.

Q. Hasn't it been your experience that your competitors would wait and see what you were going to do in the way of brackets and prices before they get out their brackets and prices?

1758 A. Oftentimes that would happen.

Q. Well, didn't that usually happen?

A. I couldn't say as to that. I know that we always endeavored to have our prices set up very early in the year or late the previous year because the manufacturers were all getting out their price sheets and their literature and it was quite a convenience for them if we could have our price data in their hands early, and when our prices were figured and our quantities were set, we issued our prices.

Now, competition may have followed or they may have been in ahead of us, I don't know.

Q. Did you have any fixed policy as to the margin that you would observe between your prices and your competitors' prices?

A. We would take the history of our competitors' prices for the previous year and their bracket structure, and after we had established our first bracket manufacturers' price, as I explained a day or so ago, then we would arrange our bracket structure and our prices as we thought best to meet the conditions that existed.

Now, if the competitor came along and changed them, that was their prerogative; that is, changed their structure.

Q. Well, you say that you took these competitive brackets of prices into account in arranging your own.

1759 What I am trying to get at is, just what use did you make, or how much of a factor were these competitive brackets or prices in arranging your own?

A. They were a very vital factor.

Q. If they were a very vital factor, can you recall just what you made of them? What was your policy?

A. Why, certainly. Let me explain a little in detail. Perhaps it will give you a better idea.

When our salesmen were calling on manufacturers throughout the year, their sales reports were constantly containing information on competitive prices and quantities. Now, we would watch those reports very carefully. We would get a report from one part of the country on a particular manufacturer; we would get another report from some place else on another manufacturer.

Well, in our experience and knowing just about the potential of those various manufacturers, we could get a

very good idea of whether the prices mentioned were right. Oftentimes they were very misleading; but when we would get the same figures from two or three different accounts of comparable price, we took that as fact.

And we garnered that information and we picked it up throughout the months of the year and that guided us in bringing up our new bracket structure and our prices for the succeeding year.

1760 Q. Well, what prices did you observe from your price reports, from your reports from your investigators in 1936, that were the basis of your price structure in 1937?

A. Well, you are talking back six or seven years, Mr. Haycraft, and I can't make any statements in answer to that question unless I could dig up more records than I have with me.

Q. Well, do you keep your records of your reports that far back?

A. No. I could probably dig some out of the files, or something of that sort.

Q. Do you keep work sheets or notes for the preparation of your brackets for 1937?

A. Ordinarily not. When the year was over, it was past history as far as we were concerned.

Q. Don't you make a comparison year by year as to the factors that are taken into consideration?

A. Certainly.

Q. Which is the most important factor in 1937, your cost of production of your controls or your competitive situation?

A. Well, the competitive situation is the guiding factor. Costs, of course, are given considerable consideration. We know the mark-up that we must have in order to make a profit. Naturally, we give that consideration.

1761 Q. Well, now, you figured a price of $23.85, that is, your net price on 50 to 99 sets, or 150 units, as a basis. Now, what factor did you take into consideration to determine that price?

A. Well, I think, Mr. Haycraft, we followed the same practice as I explained yesterday or the day before.

Competitive list prices are published; they are available anywhere, also their discounts to the dealer and to the wholesaler, and when we sell a bracket 1 manufacturer who is going to do business through the wholesaler we have to allow him a margin of profit and that is taken into consideration in the setting of our bracket 1 prices.

Q. What margin of profit do you figure on them?

A. Oh, it would vary.

Q. Well, your bracket 2 price in 1937 was $1.25 less than your bracket 1 price. How do you arrive at that margin, that difference?

A. Undoubtedly just as I explained, with the knowledge we had of the competitive situation with manufacturers who would be classed by us in that bracket; we established that price with that knowledge.

Q. What competitors had a bracket the same as yours?

A. I don't know. I didn't go by the competitors' brackets. We went by this information we accumulated.

Q. Your bracket 3 was $1.30 less than your bracket
1762 2. How did you arrive at that differential?

A. I would say exactly the same as explained.

Q. Your bracket 4 was again $1.65 less than your bracket 3.

A. They were all arrived at on the same basis, as far as I know, Mr. Haycraft.

Q. Now, you can't recall any competitor that sold any product at anywhere near those prices at the time you made up that bracket, can you?

A. Well, I know this, that our competitors' prices were always lower than ours and some one of those prices might be less than another, but I couldn't answer that question intelligently.

Q. As a matter of fact, didn't you work these brackets out on a basis of your varying costs of production and your distribution and all that on these various quantities?

A. Not in 1936 and 1937. You see, Mr. Haycraft, we know these manufacturers, we know what volume they have. We have a general idea and sometimes very authentic information as to the competitive price situation that exists with those manufacturers.

Now, we may have four or five accounts that might be in bracket 2 one year and their quantity might have been, say, 300 sets of controls. Well, competition, the situation
1763 that existed there and the prices that they were given, this group of manufacturers, we might change our bracket structure or our prices to meet that particular situation.

Trial Examiner Sheppard: Have you had cases like that?

The Witness: Well, the conditions are fluctuating like that all the time.

Now, we always were very careful about that because you could see the situation that we were in, because if we lowered our prices too, that is, lowered our bracket prices, then at the start of the year everyone that was in that bracket was going to have the benefit of those lower prices, so this wasn't just a hit and miss proposition with us. We had to weigh the overall picture and then decide on our brackets and there were long lengthy discussions and hours and hours of time spent in arriving at those brackets.

By Mr. Haycraft:

Q. Who actually figured these differentials on these brackets?

A. Well, usually I did the base work. We would all get together and consult, as I say, and spent hours and hours together in suggesting these brackets, in determining where the various accounts would fall in proportion to their purchases, and so forth.

Trial Examiner Sheppard: When were these new prices gotten out on these brackets, as a rule?

1764 The Witness: We always tried, Major, to have them ready by the first of December of the previous year. That is what we strive to do. Sometimes conditions are such that we can't do it.

Trial Examiner Sheppard: That is, prices for the succeeding year?

The Witness: The succeeding year.

Trial Examiner Sheppard: That is what I want to get.

By Mr. Haycraft:

Q. Now, in 1938 you made a change in your bracket structure by increasing your quantity for bracket 1, increasing the quantity for brackets 2, 3, 4, and 5, and then put certain customers in a sixth bracket which was the same so far as the quantity was concerned but they got a lower price, at the time you attempted that 10,000 set price, to September 1, 1938.

What was the reason for your quantity set-up in those brackets in that year? Was there a change in your cost of distribution or production?

A. Now, your question again, Mr. Haycraft, if I remember correctly, you said in 1938 we increased the quantities in the first bracket?

Q. That is right, 50 to 749 rather than 50 to 99 sets.

A. Wait a minute. In 1937 it was 100 to 349.

1765 Q. That is your bracket 2.

A. No, our bracket 1 in 1937 was 100 to 349 sets.

Q. According to this exhibit, I am talking about.

A. There is an error there somewhere.

Q. Your testimony yesterday was 150 units, or 50 sets was your bracket 1.

A. 150 units or 50 sets.

Q. Bracket 1.

A. In 1937 this record I have shows it was 100—

Q. (Interposing.) Your testimony yesterday was 50 to 150.

A. I wonder if I made an error.

Trial Examiner Sheppard: Off the record while they straighten it out.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

The Witness: I would certainly want to check again before I could be positive, in view of that.

By Mr. Haycraft:

Q. What was the situation in 1938? According to Exhibit 1, the bracket 1 is 50 to 749; bracket 2, 750 to 2,999; bracket 3, 3,000 to 7,499; bracket 4 is 7,500 to 14,999; bracket 5 is 15,000 and up; and bracket 6 is 15,000 and up.

A. Mr. Haycraft, you remember in previous testimony that business in 1937 sloughed off in the last quarter of the year. To start the year it looked very promising:

1766 everyone was enthusiastic and, as Mr. Sweatt pointed out, there was a lot of optimistic buying; and in 1938 we again had to take the customers' 1937 purchases into consideration, and we regrouped those manufacturers to come under the new bracket structure, as is outlined.

Q. Well, that year did you make those changes in accordance with the different varying costs of production and distribution, as the result of the reduced volume?

A. We also took into consideration the fact that our prices were lower in 1938 than they were in 1937.

Q. I am talking about the quantities now. I haven't talked about the price.

A. All I can say about these quantities is just as I have explained, Mr. Haycraft, two or three times here this

morning, that we did take into consideration the actual year's experience in establishing those quantities.

Q. The previous year?

A. That is right.

Q. Well, now, what factor or what experience in the previous year would cause you to change your quantity bracket, the quantities of the various brackets, increase them as you did in 1938 over 1937?

A. Well, oftentimes it was more logical.

Q. Let us try and recall what happened in 1937 to make that change in 1938.

1767 A. I won't be pinned down specifically to something that happened that long ago. My memory is not that good.

Q. Well, do you have any reports or recommendations, written recommendations by anyone or yourself or others that would help?

A. I wouldn't have any of those. As I said before, once this job was done we were thankful it was out of the way and we didn't maintain any of those records.

Q. You do recall the matter of the four customers and the special prices being made to them of $14.90 if they would buy 10,000 sets, prior to September 1, 1938?

A. Yes, I do remember that.

Q. Now, you will notice that your bracket price structure in 1938 not only reduced in dollars and cents for each bracket but that the relationship between the brackets was changed.

A. That is correct.

Q. In other words, your bracket 2 was 8 percent lower than the bracket 1 in 1938 and it was over 5 percent lower in 1937. Your bracket 3 was almost 13 percent lower in 1938, whereas it was not quite 11 percent in 1937. The bracket 4 was 18 percent lower, as compared to 16 percent, almost 17 percent, in 1938 as compared with 1937; but your bracket 5 price, neither one, neither the special price for the 4 or the other was as great or as much lower per-

1768 centagewise in 1938 as in 1937.

Now, what factors prompted those particular changes?

A. There was no attempt to make any percentage differentiation between brackets. As I have testified previously, we felt we had to establish these brackets and the prices commensurate with competitive conditions that

existed during the year previous to the establishment of these prices.

Q. Well, what competitive conditions prompted you to increase the quantity on the lower prices to make those prices lower to the middle brackets in proportion to your first bracket but not 5 and 6?

Mr. Gilpatric: Are you still speaking of 1938, Mr. Haycraft?

Mr. Haycraft: Yes, comparing 1938 and 1937.

A. I couldn't state the specific instance, Mr. Haycraft.

By Mr. Haycraft:

Q. Did you have less competition in your large volume customers in 1937 than you had previously so that you didn't need to give as low a net price to your volume customers in 1938 as you did in 1937?

I am comparing their $16.25 bracket 5 price in 1938 with $21.08, which is your bracket 1 price, with the relationship between your $17.85 bracket 5 prices and the $23.85 bracket 1 price in 1937.

1769 A. Well, your overall differential between those brackets fell where the good Lord willed, after we had reviewed this competitive situation, and established these various bracket prices, and that condition existed until we made the preliminary cost study in 1938.

Q. Well, these, of course, were made up before that study?

A. That is right.

Q. Well, is it your recollection that competitive conditions eased up in your volume accounts in 1937 as compared to 1936 so that you could increase the ante a little bit in 1938?

A. Well, if there was any easing up in competition it was beyond my knowledge at any time that I have been in this business.

Q. Well, you didn't make as much of a price reduction in 1938 for your large customers as you did for your smaller ones, did you?

A. From the figures, no.

Q. And why?

A. Because we didn't have to, apparently, from our cost study.

Q. That is what I am trying to get at. Was it the cost study or the conditions?

A. I beg your pardon. I meant our competitive condition study for that year.

1770 Q. You didn't make any comparison of costs that year?

A. Not at that time. The first comparison, to my knowledge, that was ever made was that one based on 1937 figures.

Q. Now, then, in 1939 you made another shake-up in your quantity differentials. You reduced your quantity in volume in these respective brackets in all of them this time. What prompted you to do that?

A. Exactly the same explanation that I have given before, Mr. Haycraft.

Q. Well, by that you mean that there was a less competitive situation that required your large volume discounts?

A. I can only tell you this, that they were based on the competitive situations as we found them when these prices were established.

Q. But not upon your varying costs of production and distribution?

A. The varying costs of production and distribution in 1939, to be as consistent as we possibly could, to follow the only example which we had, we set up the overall differential and we took it very rigidly into consideration at that time, and that was the allowable selling prices that we had figured through the medium of our cost study.

Mr. Gilpatric: You mean difference in prices between the top bracket and bottom bracket?

The Witness: The difference between bracket 1

1771 and bracket 5, the difference between the top and bottom prices, and then as we set up these other prices we tried to be as consistent as we possibly could with that cost study.

In some places competition wouldn't permit it; in others it would, and we set it up, and we were more consistent that year, I believe, than in any previous year.

By Mr. Haycraft:

Q. Well, had there been any change in your competitive situation that would prompt the change in your bracket differentials there, either in the quantity or the price?

A. There could very well have been.

Q. I am trying to get your recollection.

A. No.

Q. This isn't so long ago; this is 1939.

A. There are a lot of things happen in a year in this business. I wouldn't answer any differently than I have heretofore.

Q. Again you have reduced the percentage differential between your bracket and your other prices so that your quantity of 10,000 and up, which was formerly 15,000 and up, is less. In other words, you give less reduction in price for that quantity than you did in previous years.

Was it your experience and recollection that the competitive situation had eased up so that you didn't need to allow your volume customers as much of a discount
1772 as you had been allowing them?

A. The discount hadn't a thing to do with it. We had to establish our low prices to meet the red hot competition that always existed amongst those major manufacturers who were entitled to it and to whom we gave those prices.

Q. Had your red hot competition lessened so you didn't need to lower your prices as much?

A. We based those prices on the competitive situation as we found it at that time.

Q. Well, was the competitive situation easier in 1939 than it was in previous years?

A. I couldn't answer. If it was easier it would be awfully surprising. But there is always a vanishing point, you know, even with a competitor that wants the business. He can go down just so low and then he goes into the red; and then it would cease. It might have ceased in 1939, I don't know.

Q. You admit, don't you, that you didn't allow as much of a volume inducement in 1939 as you had in previous years?

A. Those figures were checked pretty carefully.

Mr. Gilpatric: Same price.

The Witness: The answer is obvious.

By Mr. Haycraft:

Q. In other words, you charged $18.10 to a man that bought 50 sets in 1939; a man that bought 10,000 and
1773 up paid $14.90, or a difference of about 18 percent; whereas, in 1938 you charged $21.05 for a man that bought 50 sets and you gave as low as $16.25 to the usual customer who bought 15,000, and $14.90 to a customer, these particular four customers that you testified to?

A. Well, that is exactly what we did.

Q. But you haven't any recollection of the change in competitive conditions that brought about the change in your prices?

A. No, I haven't other than the fact that those competitive conditions always existed and we were always up against lower prices from competition.

Q. Now, in 1940 you inserted a couple of new brackets there, 3-A and 4-A. 3-A changed your bracket 3 from—splitting it, rather; that would be 1,000 to 4,999 and now 3-A is 2,500 to 4,999.

A. That is right.

Trial Examiner Sheppard: You mean seven brackets instead of six?

Mr. Haycraft: Yes, there really were seven brackets. They put in these new brackets, which really made seven.

By Mr. Haycraft:

Q. Now, what was the situation that caused that?

A. There is only one word to answer that, and that is "competition." We were losing business to some accounts that we could not hold in bracket 3 and it was to the best interests of our company to set up those two intermediate brackets, come closer to competition, and try to recapture or hold those accounts.

Q. You maintained those new brackets through 1941, did you not?

A. Yes, sir, we did.

Q. To what extent in both 1940 and 1941 did you take into account the varying or changing costs of production and distribution?

A. Undoubtedly the same as we had in previous years.

Q. Prior to 1938 you didn't take that into consideration, as I understand it? You didn't make any study?

A. I am speaking now of the competitive situations that existed in the year in which these figures are made up.

Q. I am not talking about competitive situations. I am asking you the extent to which you took into account, took that into account, in the years 1940 and 1941, in establishing any of the brackets for those years, either of the volume or the price, whether you took into account your costs of distribution and manufacture.

A. The costs of distribution and manufacture were not given as much consideration as we gave to the competitive

situation that existed in the various brackets, and
1775 also the consideration that we gave to this preliminary cost study to maintain our overall differential as close as we possibly could and yet be consistent with competition, and those were the factors that were considered there in the establishment of 1939 prices and thereafter.

Q. Well, you noticed that in 1940 and 1941 you increased that overall differential quite substantially, didn't you?

A. I just don't recall what the—let's see.

Q. Well, 1941, your low bracket price, that is, your low price of $13.75, was 23 percent below your top or bracket No. 1 price of $17.35, whereas your overall differential in 1939, the year that you say you took this 1938 study into account, your overall differential was 17 percent plus.

In other words, you found it necessary to increase your overall?

A. We did.

Q. Now, what change in your accounting procedure or results of studies of varying costs of production or distribution accounted for that?

A. Well, Mr. Haycraft, let me get that record just a minute, please.

Well, this cost study that we made revealed that you could have an overall price differential of $3.32, and in
1939 we actually carry that year with a $3.20 overall
1776 differential.

Now, in 1940 we had a differential of $3.45 and in 1941 we had a differential of $4.

Q. $3.60, wasn't it?

A. That is right, $3.60. Now, when this cost study was made up, Mr. Haycraft, we didn't take into any consideration the varying production costs in making controls for these smaller manufacturers. We didn't segregate out our difference in invoicing prices where you might invoice the manufacturer for 10 sets of controls and another one for 10,000.

We didn't take into consideration the added costs of shipping these controls in small lots versus large lots, and so forth, and if we went over what we termed our allowable overall differential, we still felt that an actual cost study would reveal that we were well within bounds.

Q. You didn't make that actual cost study, though?

A. We did not.

Q. The only study, then, that you made during this period of time was the one you made in 1938?

A. That is right.

Q. Do you have that cost study?

A. Yes, it is here. Do you have that study, the green book, Mr. Gilpatric?

Mr. Gilpatric: Yes.

1777 (Document handed to the witness.)

By Mr. Haycraft:

Q. Do you have that now?

A. Yes, I have it.

Mr. Haycraft: Will you mark this for identification?

Trial Examiner Sheppard: Just a minute. We haven't got that in now?

The Witness: No.

Trial Examiner Sheppard: I am going to take it as the respondent's exhibit.

Mr. Gilpatric: He can put in his own copy. We gave the Commission a copy.

Mr. Haycraft: It should be with 115, it should go along with that.

Trial Examiner Sheppard: 115?

Mr. Haycraft: Yes.

Mr. Gilpatric: We are not going to put our copy in.

Mr. Freeman: He has a copy.

Trial Examiner Sheppard: Have you got a copy, Mr. Haycraft?

Mr. Haycraft: If you will give me a recess, if the Examiner please?

Trial Examiner Sheppard: We will take a recess.

(A short recess was taken.)

1778 Mr. Haycraft: I would like to have the witness produce the letter of September 25, 1939, which is supplemental to that.

Trial Examiner Sheppard: Will you mark these Respondent's Exhibits 124-A through M and 125-A through D.

(The documents referred to were marked RESPONDENT'S EXHIBITS 124-A, 124-B, 124-C, 124-D, 124-E, 124-F, 124-G, 124-H, 124-I, 124-J, 124-K, 124-L and 124-M; and 125-A, 125-B, 125-C and 125-D and received in evidence.)

Mr. Gilpatric: I want to have the record show that even though these exhibits are designated as respondent's

Exhibits 124 and 125, they are being offered by Mr. Haycraft.

Trial Examiner Sheppard: That is right, and the Examiner takes them as Respondent's Exhibit, for convenience to himself, the Commission and attorneys.

Mr. Gilpatric: Now, Mr. Lockrae, I am going to ask you to step aside for a while so that we can accommodate these gentlemen that are from out of town. I don't know which one we will take first.

(Witness excused.)

C. C. KINSTLER was thereupon called as a witness for the Respondent and, having been first duly sworn, testified as follows:

1779 Trial Examiner Sheppard: Give us your name.

The Witness: C. C. Kinstler.

Trial Examiner Sheppard: And your address, Mr. Kinstler?

The Witness: Bloomington, Illinois.

Trial Examiner Sheppard: All right, Mr. Freeman.

Direct Examination by Mr. Freeman.

Q. Your residence is Bloomington, Illinois?

A. Bloomington, Illinois, yes.

Q. And you are in the employ of Williams Oil-O-Matic Corporation?

A. Williams Oil-O-Matic Corporation, yes.

Q. How long have you been an employ of that company?

A. Just a little better than thirteen years.

Q. And in what capacity are you employed?

A. Sales capacity.

Q. What are the items that you actually sell? That is, what items do you direct your attention to?

A. Well, automatic heating products.

Q. And are those heating products for domestic or household use?

A. For domestic and household use, yes.

Q. For heating houses of six, seven, eight, nine, ten rooms?

1780 A. And for buildings.

Q. Commercial as well?

A. Yes.

Q. Let's go back to about 1936 and I would like to have you tell us what make of controls Williams Oil-O-Matic used in connection with the sale of its domestic oil burners.

A. There were three types of controls used; the Minneapolis-Honeywell, the Mercoid and the Penn Electric Switch controls.

Q. You used the term "types". Do you mean controls made by—

A. (Interposing.) Three different manufacturers, yes.

Q. So far as the controls themselves, am I correct in my understanding that a set of Minneapolis-Honeywell controls is substantially comparable to a set of Penn controls or Mercoid controls?

A. That is right.

Q. Have you made a check-up with your records for the years 1936 to 1942, and can you give us, percentage-wise, the controls manufactured by Minneapolis-Honeywell, Penn Electric Switch, and Mercoid, used by your company since 1936?

A. Yes, these figures here are from our records and disclose the figures for each of the years.

Q. Yes, I would like to have it so that the Major can get the benefit of it, as we go along.

A. In 1936 this figure shows 88.81 per cent of the 1781 controls that year were of the manufacture of Penn Electric Switch; 2.71 were of the Mercoid Corporation; 8.48 of the Minneapolis Control Regulator Company.

In 1937, the percentages are: 78.75 of Penn Electric Switch Company; 10.03, the Mercoid Corporation; 11.22, Minneapolis-Honeywell Regulator Company.

1938, 77.28 per cent Penn Electric Switch Company; 9.56 the Mercoid Corporation; 13.16 per cent, the Minneapolis-Honeywell Regulator Company.

1939, 55.21 per cent, Penn Electric Switch Company; 9.17 Mercoid Corporation; 35.62, Minneapolis-Honeywell Regulator Company.

1940, 67.32 Penn Electric Switch Company; 8.42 Mercoid Corporation; 24.26 per cent, the Minneapolis-Honeywell Regulator Company.

For the year 1941, 42.58 per cent, Penn Electric Switch Company; 14.18 per cent, the Mercoid Corporation; 43.24, Minneapolis-Honeywell Regulator Company.

For the year 1942, 64.84 per cent, Penn Electric Switch Company; 9.65, the Mercoid Corporation; and 25.51, Minneapolis-Honeywell Regulator Company.

Mr. Haycraft: I move to strike the 1942 figures, because they are outside of the issues.

Trial Examiner Sheppard: Yes, I think you can strike that. I am not interested in 1942 figures.

1782 Mr. Freeman: We offer in evidence Respondent's Exhibits 126-A through 126-P, the tabulation just referred to by the witness Kinstler.

By Mr. Freeman:

Q. Will you now refer to Respondent's Exhibits B through P, inclusive, for identification, and tell me whether or not there were any differential charges for Williams Oil-O-Matic burners, including a set of Minneapolis-Honeywell controls.

A. Yes. On the price effective May 1, 1936, there is an additional charge of $2.50 a set for Minneapolis-Honeywell controls.

Q. And will you tell us if these controls were put on the oil burner as standard during the year 1936?

A. The Penn Electric Switch controls were standard and Mercoid, likewise, were available at basic prices.

Q. That is, Mercoid controls were optional?

A. That is right, they were optional.

Q. And when you say they were at the "basic prices", that is at no additional charge? In other words, anyone could have gotten Mercoid controls without any additional charge?

A. That's right.

Trial Examiner Sheppard: But there was an additional charge for—

Mr. Freeman: (Interposing.) For Minneapolis-Honeywell, there was an additional charge of $2.50. Is
1783 that correct?

The Witness: That is correct.

Trial Examiner Sheppard: That is all right.

By Mr. Freeman:

Q. Now, will you tell us what the prices were in 1937 with respect to controls of the three different companies which were used in Williams burners?

A. On burners that were equipped with Penn Electric Switch Company controls, as well as Mercoid controls,

there was no additional charge—that is, they were optional or standard—and on burners equipped with Minneapolis-Honeywell controls, there was a charge, or additional charge of $7.50 net.

Q. That is in 1937, you raised that differential sum from $2.50 to $7.50, is that correct?

A. That is correct.

Q. And was Penn standard in the year 1937?

A. That is correct.

Q. And Mercoid was, likewise, optional?

A. That is correct.

Q. Now, will you give the prices effective March 2, 1938, and tell us what the facts were with respect to differentials in the year 1938 as to oil burner controls?

A. The Oil-O-Matic burners equipped with Penn Electric controls or Mercoid controls carried no additional
1784 charge or were optional. Those that were equipped with Minneapolis-Honeywell controls carried an additional charge of $2.50 net.

Q. So that in 1938, the differential was dropped from the 1937 amount of $7.50 to $2.50, is that correct?

A. That is correct.

Q. Was Penn still standard?

A. Penn was still standard.

Q. And I take it Mercoid was optional?

A. Optional.

Q. Now, will you give the prices effective on February 8, 1939 and tell us what controls were standard, and what controls were optional, and if there were any differentials, will you give us the amount?

A. Penn Electric Switch Company controls were standard. Mercoid controls and Minneapolis-Honeywell controls were optional. No additional charge.

Q. So that the differential in the year 1939 for Minneapolis-Honeywell controls was done away with?

A. That is correct.

Q. Now, will you turn to the next prices effective November 1, 1940, and tell us whether or not there were any differentials in connection with the oil burners equipped with different controls?

A. There was no differential on one of the models.
1785 On the second model burner, there was a differential for Minneapolis-Honeywell controls of $2.50. However, Mercoid controls were optional on all models. The Penn Electric Switch Company controls were standard.

Q. And the $2.50 extra for Minneapolis-Honeywell controls was connected to which one of your model oil burners?

A. It was the model that is called our high pressure model, the Williams high pressure burner.

Q. Now, will you turn to the next price list, effective January 6, 1941, which states "Supersedes November 1, 1940 data and price list", and tell us what the facts were in connection with the controls used on oil burners thereafter.

A. On that price sheet, in respect to Williams Oil-O-Matic low pressure burner, Penn Electric Switch Company controls, and Mercoid or Minneapolis-Honeywell were optional. However, on the Williams high pressure model there was an additional charge of $2.50 for Minneapolis-Honeywell controls.

Q. In connection with the low pressure burner, when you say "optional", that option was at no extra cost?

A. No extra cost, that is correct.

Q. Now, will you turn to the price list of the Williams Company effective August 1, 1941, and tell us what make of controls were standard on Williams Oil-O-Matic burners, what was optional and, if there were any differentials, with respect to the optional controls.

1786 A. The Penn Electric Switch Company controls, the Mercoid controls, and the Minneapolis-Honeywell Regulator controls were optional, at no extra charge, on all models on our, shall we say, both models, both low pressure and high pressure models.

Q. And tell us what make of controls was considered standard by Williams Oil-O-Matic, in accordance with your prices August 1, 1941, and which were considered optional.

A. The Penn Electric Switch Company controls were standard. The Mercoid and Minneapolis-Honeywell controls were optional.

Q. Now, with respect to the quantity of sales, do you sell more high pressure burners than you do low pressure burners? What are the facts?

A. The volume of sales of the high pressure and low pressure burners are substantially about the same.

Trial Examiner Sheppard: Are you talking about all these years, 1937 to 1941?

The Witness: Yes. Perhaps in 1937 we had a larger volume of business on the low pressure burner, because our high pressure burner was relatively new at that time.

Trial Examiner Sheppard: But outside of that it was the same?

The Witness: Substantially the same volume, comparable volume.

1787 Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. Do you know, with respect to these prices that your company paid for controls covering this period of our inquiry, from 1936 and 7 up to and including 1941, how the Minneapolis-Honeywell prices compared with Penn, and likewise with Mercoid?

A. It is my understanding, from our purchasing agent, that we always paid a higher price for Minneapolis-Honeywell controls than we have for the other two, Mercoid and Penn.

Trial Examiner Sheppard: Mr. Freeman, before you go any further, let's take care of that exhibit.

Mr. Freeman: All right, we now offer in evidence Respondent's Exhibit 126-A through 126-P, inclusive.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let it be accepted.

(The document referred to was marked RESPONDENT'S EXHIBIT 126-A, 126-B, 126-C, 126-D, 126-E, 126-F, 126-G, 126-H, 126-I, 126-J, 126-K, 126-L, 126-M, 126-N, 126-O and 126-P and received in evidence.)

Trial Examiner Sheppard: Now, go ahead with the examination.

By Mr. Freeman:

Q. I now ask you, do you know which of the con-

1788 trols your company paid the lowest prices for?

A. Penn Electric Switch Company controls. It is my impression that we purchased those at a little lower price.

Mr. Haycraft: I move to strike the answer. What his impression is isn't enough. If we can't have figures here, we don't know.

Trial Examiner Sheppard: I didn't hear that.

Mr. Haycraft: It was his impression. If he has an exhibit or some definite proof or evidence, all right.

Trial Examiner Sheppard: Well, yes, can you give us something definite on that?

Mr. Freeman: I am going to give you something, something definite. I have some Mercoid invoices.

Mr. Haycraft: All right, I move to strike the last answer.

Trial Examiner Sheppard: That can go out. He can make it more definite, yes.

By Mr. Freeman:

Q. I hand you a photostatic copy of Mercoid's invoice dated August 12, 1938, and will you give me the prices of Mercoid KMI primary controls?

Mr. Haycraft: Why don't you put it in evidence?

Mr. Freeman: I don't have to put it in evidence yet.

Mr. Haycraft: All right, I object to reading from 1789 an exhibit marked for identification.

Trial Examiner Sheppard: Well, I want the witness to identify it first, and then we can come back.

Mr. Haycraft: He can identify it without having to tell us what is in it.

Trial Examiner Sheppard: Well, tell us what that is.

The Witness: That is an invoice from the Mercoid Corporation.

Trial Examiner Sheppard: What year?

The Witness: Dated August 12, 1938.

Trial Examiner Sheppard: All right, make your offer.

The Witness: The prices shown for the—

Mr. Haycraft: (Interposing.) No, I object to what the prices shown there are. If the exhibit is going in evidence, let it be offered in evidence and received in evidence.

Trial Examiner Sheppard: You don't have to talk about it. Just make the offer.

Mr. Freeman: We offer in evidence Respondent's Exhibit 127, Mercoid invoice of August 12, 1938, just referred to by the witness Kinstler.

Mr. Haycraft: Let me see it. Where did you get this, Mr. Kinstler?

1790 The Witness: That is from our files. That is a photostatic copy of the invoice from our files.

Mr. Haycraft: Who gave it to you?

The Witness: Well—

Trial Examiner Sheppard: (Interposing.) Let it be accepted.

Mr. Haycraft: I said, "Who gave it to you?"

The Witness: I took it from our files, myself.

Mr. Haycraft: Yourself?

The Witness: That is right.

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let it be accepted.

(The document referred to was marked RESPONDENT'S EXHIBIT 127 and received in evidence.)

By Mr. Freeman:

Q. The KMI is the intermittent control?

A. That is right.

Q. And is there a constant ignition control referred to in the invoice? And if so, will you give the prices?

A. There is a type KMW Pyrotherm, which is priced at $8.70.

Q. I now hand you an invoice of the Mercoid Corporation dated July 27, 1939, which we will ask to have marked as Respondent's Exhibit 128, and I will ask you to state what it is and where you got it.

1791 (The document referred to was marked Respondent's Exhibit 128 for identification.)

The Witness: This invoice is from the Mercoid Corporation, dated July 27, 1939, and it was taken from our files, from the files of Williams Oil-O-Matic Heating Corporation, by myself.

Trial Examiner Sheppard: All right, pass it over.

(Exhibit handed to Mr. Haycraft.)

By Mr. Freeman:

Q. And just what control is referred to therein and the prices thereof?

Mr. Haycraft: Just a moment.

Mr. Freeman: I am not offering it yet.

Mr. Haycraft: I am going to object to any reference to it until you do offer it.

Mr. Freeman: I will offer in evidence Respondent's Exhibit 128.

Mr. Haycraft: No objection.

Trial Examiner Sheppard: All right, Respondent's Exhibit 128 is accepted.

(The document referred to, heretofore marked RESPONDENT'S EXHIBIT 128 for identification was received in evidence.)

The Witness: The control billed here is a Type KMW Pyrotherm at a price of $7.75.

1792 By Mr. Freeman:

Q. And is that a constant ignition control?

A. That is a constant ignition control.

Q. Used for domestic oil burners sold by Williams Oil-O-Matic Company?

A. That is correct.

Q. I now hand you a Mercoid invoice of October 11, 1940, addressed to Williams Oil-O-Matic Heating Corporation, Bloomington, Illinois, marked for identification as Respondent's Exhibit 129, and I will ask you sto state what it is and where you got it.

A. This is an invoice from the Mercoid Corporation, dated October 11, 1940, secured from the files of the Williams Oil-O-Matic Corporation, by myself.

Mr. Freeman: We offer in evidence Respondent's Exhibit 129 for identification.

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let it be accepted.

(The document referred to was marked RESPONDENT'S EXHIBIT 129 and received in evidence.)

By Mr. Freeman:

Q. And do you find thereon any reference to primary controls and, if so, will you tell us the kind and the prices.

A. There are some primary controls of the Model 1793 JM Pyrotherm billed at $7.75 net.

Q. And that is a constant ignition control?

A. That is a constant ignition control.

Q. I now hand you an invoice of the Mercoid Corporation, addressed to Williams Oil-O-Matic Heating Corporation, dated November 5, 1940, and I will ask you to state what it is and where you got it from.

A. This is an invoice of the Mercoid Corporation, dated November 5, 1940, and it was secured from the files of the Williams Oil-O-Matic Heating Corporation, by myself.

Q. Do you find thereon any primary controls and, if so, will you tell us the type and price thereof?

Mr. Haycraft: Is it received in evidence?

Trial Examiner Sheppard: Yes, you better offer it.

Mr. Freeman: I will offer in evidence Respondent's Exhibit 130, marked for identification.

Trial Examiner Sheppard: Accepted.

(The document referred to, heretofore marked RESPONDENT'S EXHIBIT 130 for identification, was received in evidence.)

The Witness: Yes, there is billed on here some JM Pyrotherms, which are constant ignition controls, at a price of $6.75.

By Mr. Freeman:

1794 Q. And do you find thereon any room thermostats, and, if so, will you give us the type and price thereof.

A. Yes, there are some room thermostats. Type H, Sensatherm, at the price of $2.50 net, each.

Q. I now hand you an invoice of the Mercoid Corporation, addressed to Williams Oil-O-Matic Heating Corporation, dated February 21, 1941, and I will ask you to state what it is before you start.

A. This is an invoice of the Mercoid Corporation, dated February, 1941. It was secured from the files of the Williams Oil-O-Matic Heating Corporation, by myself.

Mr. Freeman: We will offer in evidence as Respondent's Exhibit 131, the invoice just referred to by Mr. Kinstler.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let it be received.

(The document referred to was marked RESPONDENT'S EXHIBIT 131 and received in evidence.)

By Mr. Freeman:

Q. Do you find on the invoice reference to a primary control of the intermittent ignition type?

A. Yes.

Q. And the price thereof?

A. The price thereof was $8.25.

1795 Q. I now hand you an invoice of the Mercoid Corporation, dated 9-16-41, addressed to Williams Oil-O-Matic Heating Corporation, and I will ask you to state what it is and where you got it. Said invoices being referred to as Respondent's Exhibit 132, for identification.

A. This is an invoice of the Mercoid Corporation, dated September 16, 1941. It was secured from the files of the Williams Oil-O-Matic Heating Corporation by myself.

Mr. Freeman: We offer in evidence Respondent's Exhibit 132 for identification.

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let it be accepted.

(The document referred to was marked RESPONDENT'S EXHIBIT 132 and received in evidence.)

By Mr. Freeman:

Q. Do you find thereon any reference to room thermostats?

A. Yes.

Q. What type and price?

A. Type H Sensatherm, $2.50 net, each.

Q. And how about primary controls, will you tell us the kinds thereon appearing.

A. There are some JM Pyrotherms which are the constant ignition primary control as $7.50 each; also the model JMI Pyrotherms, which are the intermittent type control, at $8.25 each.

1796 Q. And do the thermostats referred to in the invoice, Respondent's Exhibit 132, and the primary controls make up comparable sets or complete sets of primary and thermostats?

A. Yes, they make up complete sets of thermostats and primary controls.

Q. That is, one of the thermostats goes with one of the primary controls?

A. That is correct.

Q. And is that the way you used them at Williams Oil-O-Matic?

A. As sets, yes.

Q. And that is, likewise, true with Minneapolis-Honeywell controls and also of Penn controls?

A. Yes.

Q. They are used as sets on the same burner?

A. Used as sets.

Q. Now, will you tell us over what area Williams Oil-O-Matic does business?

A. Domestically, throughout the United States.

Q. What type of coverage does it have? Does it use salesmen, distributors, dealers, jobbers? What are its trade channels?

A. Our products are sold through dealers.

Q. And about how large sales organization does it have—and I am talking about the period prior to Pearl Harbor.

1797 A. An organization of from eight hundred to one thousand dealers. They would vary from time to time during the different periods.

Trial Examiner Sheppard: Scattered all over the country?

The Witness: Throughout the country, yes.

By Mr. Freeman:

Q. Do you know about what your dealer prices are? How does that run, say, to the oil burner manufacturers sold—to the oil burners sold in the United States.

A. We generally have rates that run beyond that of other manufacturers. We have been recognized as the highest priced oil burner.

Q. That is, you sell at relatively high prices?

A. That is right.

Q. And how do you account for building up such an organization, of from between eight hundred dealers to one thousand, selling oil burners at a relatively high price?

A. Well, first of all, we have an excellent product, which has an acceptance. It has been on the market for a number of years, and we merchandise that product. By that I mean to say—

Trial Examiner Sheppard: (Interposing.) How long have you been working for Williams Oil-O-Matic? Did you say 1936?

The Witness: How long have I been with Williams 1798 Oil-O-Matic?

Trial Examiner Sheppard: Yes.

The Witness: Thirteen years.

Mr. Freeman: And the company goes back to 1920.

The Witness: Yes.

By Mr. Freeman:

Q. Will you name some of the companies you are actually in competition with?

A. There is Electrol; Petrol Nokol; Timkin; Aldrich; ABC—many others.

Q. You compete with Quiet Heet?

A. Quiet Heet, yes.

Q. You understand that Quiet Heet sells at a relatively low price. Now, from your actual experience in meeting that kind of competition, what has Williams Oil-O-Matic done to meet that competition?

A. We meet that kind of competition by stressing better design and construction of the Oil-O-Matic burner, the features of the Oil-O-Matic burner to the organization that is behind it, both dealer as well as factory organization. Briefly, we offer a better product and better service, and, for that kind of service, we do require a better price.

Q. Service is an important factor in connection with the sale of oil burners?

1799 A. Yes, it is.

Trial Examiner Sheppard: What does that word mean with reference to an oil burner? Does that mean maintenance service?

The Witness: Broadly speaking, it means service offered by our local dealers on maintenance and, in addition to that, we have a well organized factory service department for training those dealers in service and for assisting them.

Trial Examiner Sheppard: I see. And do you do any business with Madison, Wisconsin?

The Witness: Madison, Wisconsin, yes.

Trial Examiner Sheppard: Do you compete with Mr. Westmont?

Mr. Freeman: The Wisconsin oil burner.

The Witness: The Wisconsin oil burner, yes, we do.

Trial Examiner Sheppard: And they sell at a very substantial price too, don't they?

The Witness: I would say that is an average priced burner, rather than an expensive burner.

Trial Examiner Sheppard: I thought he said it was the highest priced.

Mr. Freeman: Major, when he said "one of the highest", he meant above the average.

Trial Examiner Sheppard: I see. Go ahead.

1800 By Mr. Freeman:

Q. Would you say that the Williams price of oil burners with controls is above the average all over the country?

A. Yes, I would say the Williams control is sold at above the average.

Q. And has that been true at least since you have been with the company, some thirteen years?

A. Yes.

Q. And still is?

A. And still is.

Q. You have stated that Minneapolis-Honeywell controls cost you more than comparable competitive controls. And will you tell me how it is that at least in 1941 that Minneapolis-Honeywell exceeded the sale of controls to your company over and above Penn Company by about three-quarters of one percent?

A. We find a preference among many of the dealers for Minneapolis-Honeywell controls and it is our best knowledge that is because of the wide public acceptance among the prospective purchasers of oil burners, they show a preference to those types of controls.

Q. And the service that may be rendered by Minneapolis-Honeywell likewise, has a bearing?

A. Oh, certainly.

Mr. Haycraft: Objected to as leading.

1801 Trial Examiner Sheppard: Yes, that is leading, Mr. Freeman.

By Mr. Freeman:

Q. What are some of the factors which you definitely know have an effect on the preference by the purchasing public?

A. Performance, of course, and the service back of the set of controls or of the instrument.

Q. What was the situation when your company was charging $7.50 more for a burner equipped with Minneapolis-Honeywell controls than one equipped with Penn or Mercoid controls?

A. There was a tendency on the part of many of the dealers, in spite of their preference for the Minneapolis-Honeywell controls, to save some money on their purchase, and they would select other types of controls in many cases.

Trial Examiner Sheppard: I don't understand that answer, Mr. Kinstler.

Mr. Freeman: What is that?

Mr. Gilpatric: He doesn't understand the answer.

Trial Examiner Sheppard: Read it to me again.

(The record was read by the reporter.)

Trial Examiner Sheppard: I don't understand how you are going to save money by paying more for the controls.

The Witness: Well, perhaps I didn't make my answer clear. The point was this; during the period that we were charging $7.50 additional for the Minneapolis-Honey-
1802 well controls, the dealers would select Mercoid or the Penn controls, on which there was no additional charge.

Trial Examiner Sheppard: To get it cheaper?

The Witness: In order to get a lower price, yes. To save money on the purchase.

Trial Examiner Sheppard: Oh, you referred to the other two?

The Witness: I didn't specify the controls. I said The "other two".

Trial Examiner Sheppard: All right, go ahead.

By Mr. Freeman:

Q. And what happened when that was again lowered to $2.50, so that the differential in Minneapolis-Honeywell was only $2.50?

A. There were a greater number of dealers selected the Minneapolis-Honeywell controls.

Q. And what happened when the differential was wiped out?

A. Again, there was an increase in the selection of Minneapolis-Honeywell controls on the burners.

Q. And I take it that Williams Oil-O-Matic had absorbed any difference in price?

A. Yes, it did.

Mr. Freeman: You may cross-examine.

1803 *Cross-Examination by Mr. Haycraft.*

Q. What was the difference in cost?

A. I don't have that information. I am not in the purchasing department and I don't have that information at hand. I am in the sales department.

Q. And do you know why the $7.50 extra was paid?

A. It was because of the additional cost. I don't know the amount of the additional cost.

Q. You don't know whether it amounted to that much?

A. No, I really couldn't say.

Q. So you don't have anything to do with the purchase of the controls?

A. No, I don't have anything to do with the purchase.

Q. And you don't know what the differential was in the cost?

A. I couldn't tell you the amount of it, no.

Q. Do you know anything about the difference in the service rendered by Minneapolis-Honeywell and the service rendered by Mercoid and Penn Switch to the dealers in the United States?

A. I am afraid that I—anything that I might say on that would be my own personal opinion. I do know this—well, let me state this, that no analysis was made by us relative to that, but we do know, through our con-

1804 tact with the dealers that those dealers who liked the Minneapolis-Honeywell controls did feel that they had less service. They felt that they didn't have service problems with that control.

Q. How about the dealers that preferred the Penn Switch and the Mercoid? What did they feel about it?

A. They probably were quite satisfied with the service they had on those controls. Of course, there was a time when they were influenced by the differential in the cost of Minneapolis-Honeywell controls, when furnished with the burner.

Mr. Freeman: Will you read that?

(The answer above referred to was read by the reporter.)

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

Mr. Freeman: Just remember, Mr. Haycraft, when we examine a witness, we don't want you to open your mouth with respect to any cross-examination until the witness is through, from here on out.

Mr. Haycraft: I was attempting to do that.

By Mr. Haycraft:

Q. What service was rendered by the respective manufacturers to the dealers, to your knowledge—that is control manufacturers?

1805 A. You are referring to the respective control manufacturers?

Q. Yes.

A. They do maintain a service to dealers, selling oil burners.

Q. And just what do you mean when you say "service rendered"? What service do they render to dealers?

A. Engineering service, maintenance service, training of the dealers in the proper installation and maintenance of those controls.

Q. Do you have any information with which you are familiar, so that you can testify as to whether or not Minneapolis-Honeywell service thus rendered was better or superior to the service rendered by Mercoid or Penn Switch?

A. I wouldn't have any authoritative knowledge regarding that.

Q. When you stated that Penn Switch was standard in your organization, do you mean that on orders received, where no controls were indicated, you put Penn switch controls on your burners?

A. That would be the purpose in specifying a standard set of controls.

Q. However, they do not have their name plate on those controls, do they? They are sold under the Williams name?

A. Some are sold under the Williams name and
1806 others are sold under the Penn Electric Switch Company name.

Q. When was it one way and when was it the other?

A. I couldn't specify the years now. There had been some changing back and forth.

Q. With respect to this Exhibit 126, I notice that the standard controls were the Williams controls and, the optional controls are listed as Mercoid and Minneapolis-Honeywell.

A. If they are referred to in that price sheet as standard, some of those controls, they would have carried the Williams name plate. They are controls manufactured by the Penn Electric Switch Company.

Mr. Freeman: Will you point out what switch you are referring to?

Mr. Haycraft: The one I was looking at, I don't have this exhibit lettered or numbered. It is dated—

Mr. Freeman: You must be talking about Respondent's Exhibit 126-G.

Mr. Haycraft: November, 1940 price sheet, following that, and the one following January 6, 1941. And those are the ones I had noticed. In fact, I haven't seen Penn Switch mentioned anywhere.

Mr. Gilpatric: Look at Respondent's Exhibit 126-K.

Mr. Haycraft: Well, I haven't got them lettered—I will have to see.

1807 Mr. Freeman: Oh, I want this one back.

Mr. Haycraft: You want this one back?

Mr. Freeman: Yes.

Mr. Haycraft: I thought you gave it to me.

Mr. Freeman: It was just a courtesy, to use it.

Trial Examiner Sheppard: That is marked, isn't it?

Mr. Freeman: That is the one we marked.

Trial Examiner Sheppard: All right.

Mr. Freeman: And that will help you to refer to the pages. (Handing exhibit to counsel.)

Trial Examiner Sheppard: Okay.

By Mr. Haycraft:

Q. I notice on Exhibit 126-E, reference is made to "Penn controls standard, unless otherwise specified".

Mr. Freeman: What is that?

Mr. Haycraft: I notice on 126-E, also, that it says there that the burners are equipped with Penn controls, as standard, unless otherwise specified.

Mr. Freeman: Mr. Haycraft, perhaps I can help you along to save time.

Mr. Haycraft: Also on some of the others. I think it is clear from the testimony now, though, both ways. The exhibit will show on careful inspection.

Trial Examiner Sheppard: All right.

1808 By Mr. Haycraft:

Q. Now, what were your volume of sales of burners beginning in 1937 on down through 1941?

A. I don't have anything, any record of our sales volume during that period, during those years. I am not prepared to supply that information, and I can't recall it from memory.

Q. Do you recall whether or not you sold more in 1937 than you did in 1936?

A. As near as I can recall now—and this is just recollection—our sales were, as near as I recall now, a little larger in 1937 than 1936. However, I could be wrong, as I said, I am going entirely by recollection now—some years ago.

Q. How about 1938 as compared with 1937?

A. 1938 was considerably less.

Q. How about 1939 as compared with 1937?

A. '39 with '37? As near as I can recall now, I don't think there was a great deal of difference in sales volume. I think it ran pretty much the same.

Q. In other words, 1939 was higher than 1938?

A. '39 higher than '38?

Q. Yes.

A. Yes, it would have been a little higher than 1938.

Q. It wasn't quite as high as 1937?

1809 A. No, no.

Q. How about 1940?

A. We showed some increase in 1940.
Q. Over 1939 or over 1938?
A. Over 1939.
Q. How about 1941?
A. Quite a decided decrease.
Q. Decrease.
A. I might suggest that was due to war conditions.
Q. Now, your biggest year was 1937?
A. That is my recollection now. As I say, I could be wrong about that.
Q. Mr. Henning was on the stand here and testified—he is of the Penn Electric Switch Company—and you know him, don't you?
A. Yes.
Q. He testified that the volume of sales to your firm in 19—

Mr. Freeman: I wish you would read from the record, so that the witness would have it complete, rather than from your notes, Mr. Haycraft.

Mr. Haycraft: Well, I will let you read from the record. I haven't got the record, so that I can read from it. I think my notes are as accurate as the record.

By Mr. Haycraft:

1810 Q. In 1937 $194,810.00; 1938 the sales were $73,154.00; which at that time was apparently 78 per cent of your controls; and in 1939, $61,939.00; 1940, $70,445.00.

A. Is that his testimony on sales to us?
Q. That is his testimony.
A. Dollar volume of their control sales to us?
Q. Dollar volume. That would indicate, if the percentage of business was anything like that indicated in your exhibit No. 126, Respondent's Exhibit 126, that your sales dropped quite substantially in 1938, as compared to 1937, and 1940 didn't even come up to 1938.

Mr. Freeman: Oh, I object to that, Mr. Examiner. Mr. Haycraft is leaving out one important factor. Dollar volume doesn't necessarily determine the number of oil burners sold or oil burner controls, because the prices in 1941 were much less than they were back in 1937 and 1936. I think Mr. Haycraft can include that as one of his statements or—

Mr. Haycraft: The witness can include that.

Mr. Freeman: We object to your form of question. It is assuming something that isn't a fact.

Mr. Haycraft: I am not assuming something that isn't a fact. It may be that all the facts are not included in the questions, but—

Mr. Freeman: Well, then, we object to that type 1811 of examination because it goes beyond the scope of the direct examination and it is improper cross-examination.

Mr. Haycraft: I am using that to refresh the witness' recollection.

Mr. Freeman: You didn't say anything about refreshing.

Trial Examiner Sheppard: I think the witness may answer.

The Witness: You recall I stated earlier, when you asked about volume of sales, I was not able to submit any figures on sales—I was not prepared to.

By Mr. Haycraft:

Q. To refresh your recollection as to the volume of sales of burners subsequent to 1937, or 1937 and subsequent years, I am giving you the figures of Mr. Henning.

A. Yes.

Q. To give you some idea as to the volume of controls that were sold by your firm during those years, to see whether or not they will assist you in your testimony.

A. Well, frankly—

Mr. Freeman: (Interposing) Just a minute. We object to that question, Mr. Haycraft, because you are not presenting all the facts which Mr. Henning testified to with respect to the sales.

Mr. Henning, if you will recall, Major, said in 1937 1812 that they oversold everybody, because they were going to move to Goshen, and they would be shut down, and I think if he is going to refer to his testimony, it is only fair to the witness to give him full and complete information.

Mr. Haycraft: I am giving it as full as I can, if counsel for the Respondent wants to add anything on redirect examination, that is his privilege, but I don't think he should dictate the form of the question to me.

Mr. Freeman: It is absolutely beyond the scope of our direct examination and we move—well, that is all.

Mr. Haycraft: Beyond the scope of the direct examination? You asked him about sales.

Mr. Freeman: We certainly didn't.

Mr. Gilpatric: We certainly did not.

Mr. Haycraft: You did that on your direct examination.

Mr. Freeman: We did not.

Mr. Gilpatric: We certainly didn't.

Mr. Haycraft: I will let the record speak for itself on that.

Mr. Freeman: Well, we want the record re-read.

Mr. Gilpatric: We couldn't cross-examine on Timkin and the Examiner so ruled.

Mr. Freeman: I suggest that the record be re-read as to whether we asked anything about sales.

1813 Trial Examiner Sheppard: It would take a whole lot of time.

Mr. Freeman: I don't care.

Mr. Gilpatric: We will take the time.

Mr. Haycraft: Do you want the whole direct examination read?

Mr. Freeman: Do you recall, so that we can avoid reading the whole direct examination?

Trial Examiner Sheppard: I don't recall anything about it. It would take a whole lot of time. We kept him on the stand longer than we expected.

Mr. Freeman: I have kept within my half hour.

Trial Examiner Sheppard: Just what do you want? Let us go off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

Mr. Gilpatric: It is beyond the scope of the direct examination.

Mr. Haycraft: I say it isn't.

Trial Examiner Sheppard: I am not going to take the witness' time or anybody else's time. Turn to the last question. Go on from there. This question of opinion does not matter.

Mr. Gilpatric: I wish you would apply those rules to us.

1814 Trial Examiner Sheppard: They apply to both of you.

(The record was read by the reporter.)

Mr. Haycraft: That is right. I had read to him some figures of sales of the Penn Electric Switch Company to see

whether or not that would refresh his recollection as to volume of sales of burners in those years, subsequent years.

I will ask this question. I will withdraw that one.

By Mr. Haycraft:

Q. Do you recall now, after I have refreshed your recollection with the figures from Penn Electric Switch, whether or not your volume of sales of burners subsequent to 1937 ever was as much as 1937?

Mr. Gilpatric: How is that relevant? I object to it on the ground that it is immaterial. Suppose it was more or less, so what.

Trial Examiner Sheppard: You may answer if you know, Mr. Kinstler.

The Witness: I haven't any record here of sales. I don't definitely recall the volume of sales or the trend from year to year and I can't answer that definitely.

By Mr. Haycraft:

Q. Can you tell from Respondent's Exhibit 126 whether or not these percentage figures indicate a decline or
1815 increase in the volume of sales, actual volume of sales of these respective companies?

Mr. Freeman: Which figures are you referring to?

The Witness: Will you repeat that, please?

Mr. Haycraft: 126-A. For instance, you show here that in 1941, Minneapolis-Honeywell percentage was 43.24; and the Mercoid was 14.18; and the Penn Electric Switch 42.58. Now, in 1940, the Penn Electric Switch was 67; Mercoid, 8, Minneapolis-Honeywell 24.26.

Can you tell whether or not those relative percentage figures are indicating an increase or decrease in the actual volume, number of controls sold?

The Witness: You mean to say of their volume?

By Mr. Haycraft:

Q. Yes.

A. I couldn't tell you.

Q. In other words, you don't know whether you bought more or less in 1941 than you did in 1940?

A. I don't have the purchasing department records, beyond this that we compiled, and I don't have those figures before me. All I have here is the percentage figures.

Q. And you have no figures and no evidence as to the actual prices paid?

A. No.

Q. By your firm for the Penn Electric Switch or
1816 the Minneapolis-Honeywell controls at the same time that the invoices that you identified as coming from Mercoid?

A. I don't have those invoices here.

Q. Do you know whether or not there was any difference in price that the Williams Oil-O-Matic was paying for Minneapolis-Honeywell controls in those years when dealers would charge $7.50 extra and those years where they were only charging $2.50 extra for Minneapolis-Honeywell?

A. In conversation with our purchasing agent repeatedly and over a period of time, I had always been given the information that we did pay more for Minneapolis-Honeywell controls than we did for Mercoid and Penn.

Q. He never told you how much?

A. He never mentioned the differential, but we did pay more.

Q. What I am trying to get at; why did you cut or reduce your $7.50 price, optional price, extra price on Minneapolis-Honeywell to $2.50?

A. I understand there was an adjustment of price. That is, I got information.

Q. And you don't have the—

A. (Interposing.) I couldn't give you the differential, no, sir.

Q. Was there more than one year that you paid the $7.50 extra for the Minneapolis-Honeywell?

Mr. Freeman: Would you read that last question?
1817 (The record was read by the reporter.)

A. Just that one year. That is 1937.

By Mr. Haycraft:

Q. And that was the year that you sold most oil burners?

A. I wouldn't make that statement without having some actual figures before me. I don't clearly recall.

Mr. Haycraft: That is all.

Trial Examiner Sheppard: Anything else?

Mr. Freeman: No, but I do want to call attention to the fact that on pages 1428 to 1432 of the record there is contained the prices at which Minneapolis-Honeywell sold Williams Oil-O-Matic controls during the years about which Mr. Haycraft has just been examining this witness. And if he just refers to that testimony, he will then have in the record the prices paid by Williams Oil-O-Matic for its con-

trols—that is, the controls purchased from Minneapolis-Honeywell.

Mr. Haycraft: Well, I move to strike all the testimony of this witness as irrelevant and immaterial to the issues in this case.

Trial Examiner Sheppard: That is denied. I will take the testimony and give it the probative value I think it is worth.

Anything else?

Mr. Freeman: That is all.

1818 Trial Examiner Sheppard: Thank you.

Mr. Freeman: It is twelve-fifteen. Why don't we adjourn and come back at two o'clock.

Mr. Haycraft: Are we going on with Mr. Lockrae?

Mr. Freeman: Yes.

Mr. Haycraft: That would suit me fine.

Mr. Freeman: We have got two other out of town witnesses coming in at twelve-thirty and we will have two short witnesses—especially if Mr. Haycraft will stick to our direct—and we will be through in a little while.

Trial Examiner Sheppard: Okay. Miss Reporter, take an adjournment to one-thirty.

(Whereupon, at 12:15 p. m., a recess was taken until 1:30 p. m. this day.)

1819 Afternoon Session.

1:30 p. m.

Trial Examiner Sheppard: All right, on the record. We will take your witness that you said was a short one, Mr. Freeman.

Mr. Freeman: Mr. Aldrich, will you please take the stand?

L. I. ALDRICH was thereupon called as a witness for the respondent and, having been first duly sworn, testified as follows:

Direct Examination.

Trial Examiner Sheppard: Will you give your name to the reporter?

The Witness: L. I. Aldrich, A-l-d-r-i-c-h.

Trial Examiner Sheppard: Your address?

The Witness: Wyoming, Illinois.

Trial Examiner Sheppard: All right, Mr. Freeman.

By Mr. Freeman:

Q. You are L. I. Aldrich of the Aldrich Company, Wyoming, Illinois, is that correct?

A. I am.

Q. And what is the business of the Aldrich Company?

A. We manufacture domestic oil burners and boilers.

Q. Mr. Aldrich, how long has that company, that is,
1820 the Aldrich Company, been in existence?

A. Since 1935.

Q. And have you been connected with it all that time?

A. I have.

Q. Will you just give us briefly the growth of your business, that is, how you started in 1935 and where you were then located, right up to the present time?

A. I was located in Peoria, Illinois, and operated alone in 1935, took in a partner in 1936 and moved to Wyoming, Illinois, in 1940.

Q. And did you continue in the same location in Peoria from the time you started in 1935 until 1940?

A. No, we had five different locations of the plant. The office remained in the same place.

Q. And what was the reason for having these five different factories?

A. We outgrew each one of them.

Trial Examiner Sheppard: You had five factories?

Mr. Freeman: Five different factories.

Trial Examiner Sheppard: Five different factories?

By Mr. Freeman:

Q. That is, you didn't have all five at any one time?

A. No, we moved from one to the other.

Q. And each move was to a larger place?

A. Yes.

1821 Q. I was right in my understanding that you outgrew your old place and moved?

A. That is right.

Q. And then you moved from Peoria, Illinois, to Wyoming, Illinois, in 1940?

A. Spring of 1940.

Q. And that is where you are located now?

A. Yes, sir.

Q. Mr. Aldrich, when did you personally become acquainted with the oil burner business?

A. Well, I devoted my time exclusively to the oil burner business in 1921.

Q. In 1921?
A. 1921.
Q. And what company were you located with then?
A. I started to work for Williams Oilomatic.
Q. Of Bloomington, Illinois?
A. Yes.
Q. And between 1921 and 1935, when you organized the Aldrich Company or formed the Aldrich Company, what was your connection with the oil burner business, if any?
A. I was chief engineer with the Hart Oil Burner Corporation, or its predecessor.
Q. And when did you commence or begin with Hart Company?
A. 1922.
1822 Mr. Haycraft: 1922, did you say, or '32?
The Witness: 1922.

By Mr. Freeman:

Q. And you continued with Hart until when?
A. 1935.
Q. And as chief engineer?
A. Yes, sir.
Q. And the Hart Company is located in Peoria, Illinois?
A. Yes, sir.
Trial Examiner Sheppard: Then you had good experience in that before you started in on your own?
The Witness: Yes, sir.

By Mr. Freeman:

Q. Now, Mr. Aldrich, when you started in the oil burner business in 1935 you, of course, bought oil burner controls from control manufacturers, is that correct?
A. Yes, sir.
Q. And who enjoyed your business?
A. Mercoid exclusively, in 1935.
Q. And how about 1936?
A. I began to buy from both Minneapolis and Mercoid.
Q. And then how about 1937 and 1938?
A. I continued that, and ultimately added Perfex and Penn controls.
Q. So now you sell or use controls manufactured
1823 by Penn Electric, Mercoid Corporation, Perfex, and respondent here, Minneapolis-Honeywell?

A. Yes, sir.

Q. Can you tell me about how many oil burners you made in the year 1937, and I hand you a slip which you may use for the purpose of refreshing your memory?

(Handing document to the witness.)

Mr. Freeman: I might say on the record we are not introducing this. This is the figures that Mr. Aldrich gave us personally some time ago.

The Witness: Are you talking about controls or burners?

By Mr. Freeman:

Q. I am talking about the number of burners made by your company in 1936; and, while you are at it, you might give us 1937, 1938, 1939, and 1940.

A. I made 250 in 1935.

Mr. Haycraft: How many?

The Witness: 250.

Mr. Haycraft: What year?

The Witness: 1935.

By Mr. Freeman:

Q. All right, 1936?

A. 1,250. 7,200 in 1937; 12,500 in 1938; 17,500 in 1939; and in 1940 I made 20,037 exactly; and in 1941 1824 I made 20,227.

Q. Now, did you sell all of these burners equipped complete with controls or do you sell burners without controls sometimes?

A. From 1937 until date there was between 4,000 and 4,500 burners furnished Sears Roebuck & Company without controls.

Q. And are they the only burners that you sell without controls?

A. Yes, sir.

Q. And whose controls are used on those burners that you sell to Sears Roebuck?

A. All Mercoid.

Q. You know that as a fact?

A. Yes, sir.

Q. And you have actually seen the burners crated and equipped?

A. I have seen—no, we don't crate the controls, but I know.

Q. Of your own knowledge, now?

A. That is right.

Q. Now, with respect to those burners that you sell with controls, whose controls do you use?

A. All makes.

Q. That is, some of those go out with Mercoid controls?

A. Yes, sir.

1825 Q. And likewise with Penn controls?

A. Yes, sir.

Q. Perfex controls?

A. Yes, sir.

Q. And the respondent's controls, Minneapolis-Honeywell?

A. Yes, sir.

Trial Examiner Sheppard: You let your customers indicate what they want?

The Witness: Yes, sir.

By Mr. Freeman:

Q. Now, Mr. Aldrich, I asked you sometime ago to give me your purchases of controls from Mercoid, Minneapolis, Penn, and Perfex for the years 1936 to 1943, inclusive.

A. I sent you that by letter.

Q. And you have just stated you sent that by letter, and I ask you now to refer to Respondent's Exhibit 133, which I will ask to have marked by the reporter for identification.

(The document referred to was marked Respondent's Exhibit 133-A for identification.)

By Mr. Freeman:

Q. (Continuing) And I ask you if that is the letter that you referred to, the first page of that exhibit, 133-A?

A. Yes, sir.

Q. And did you make up that list, or have it made 1826 up from the records of your company for the years 1936 to 1941, inclusive?

A. Yes, it was made by our bookkeeping department.

Mr. Haycraft: What is the number of this exhibit?

Mr. Freeman: 133-A.

By Mr. Freeman:

Q. And while we are at it, I wish you would look at Respondent's Exhibits 133-B, C, D, E, F, and G and tell me whether or not they are circulars put out by your company from time to time.

A. They are. These contain both price lists and net prices.

(The documents referred to were marked Respondent's Exhibits 133-B, 133-C, 133-D, 133-E, 133-F, and 133-G for identification.)

Mr. Freeman: We offer in evidence as Respondent's Exhibits 133-A to G, inclusive, the documents identified by the witness.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: I would like to inquire as to whether or not this witness is under contract with the Minneapolis-Honeywell.

Mr. Freeman: I think that is immaterial. That is certainly immaterial with respect to the particular exhibits.

I merely have had the exhibits identified and I now
1827 want to offer them before I examine him further.

That is what I understood to be the Commission's rulings.

I will examine him further on it, and we will also examine him with respect to contracts, and you will have an opportunity to cross-examine.

Mr. Haycraft: All right. At the time, then, there will be no objection, but I may move to strike later.

Trial Examiner Sheppard: All right, let them be received.

(The documents referred to, heretofore marked for identification RESPONDENT'S EXHIBITS 133-A, 133-B, 133-C, 133-D, 133-E, 133-F, and 133-G, were received in evidence.)

By Mr. Freeman:

Q. Mr. Aldrich, I noticed you purchased $129,376.61 worth of controls from the Mercoid Corporation between the years 1936 and 1941, and I now ask you whether or not that figure includes the Mercoid controls for the 4,000 or 4,500 burners purchased annually from you by Sears Roebuck, using Mercoid controls.

A. It does not. Sears Roebuck purchase their own controls.

Q. From the Mercoid Corporation?

A. Yes, sir.

Q. The remaining three numbers, however, that is
1828 the amount of purchases from Minneapolis, Penn Electric, and Perfex, are those used on your own burners sold with controls?

A. Yes. Mercoid's also.

Q. Now, Mr. Aldrich, will you refer to Respondent's Exhibit 133-B and tell me whether or not you had any different price for a Mercoid primary of the constant ignition type than you had for a Perfex control or a Minneapolis control?

A. Yes, sir, there is a difference.

Q. And, just for convenience and ready reference, will you tell us what your price was for a Mercoid constant ignition primary?

A. $12.60.

Q. And what did you get for a like control or comparable control of the Perfex type?

A. $15.

Q. And a like or comparable control of the Minneapolis-Honeywell?

A. $16.60.

Q. Now, do you likewise have upon your price list the price that you charged for an intermittent ignition primary control?

A. Yes, sir.

Q. And was the price for Mercoid, Perfex, and 1829 Honeywell the same?

A. No.

Q. What was the Mercoid price?

A. The Mercoid was $13.40; Perfex, $17.20; and Minneapolis was $18.70.

Q. Why was it that you priced the Mercoid primary of the constant ignition type for $4 less than what you sold a Minneapolis-Honeywell primary of the constant ignition type?

A. Well, that represented the exact difference in cost to me.

Trial Examiner Sheppard: What was that answer?

(The answer was read by the reporter.)

By Mr. Freeman:

Q. That is, you paid less for a Mercoid control than you did for a Minneapolis-Honeywell control?

A. Yes, sir.

Q. And likewise you paid less for a Perfex control than for a Minneapolis-Honeywell control?

A. Yes, sir.

Q. And how about the room thermostats? What was your charge for a Mercoid type H Sensatherm thermostat?

A. Excuse me. I wish to, in replying to the former answers and to the balance of the answers, on this page, to say that these prices were subject to a discount, that these are not the net prices but that they are all
1830 subject to the same discount.

Q. So your answer still holds, that you paid less for Mercoid than you did for Perfex and less for Mercoid and Perfex than what you did for Minneapolis-Honeywell?

A. Yes, sir.

Q. These are your prices subject to a discount?

A. Subject to a discount.

Q. And the discount was the same?

A. On all controls, yes.

Q. Now, what was your list price, subject to a discount, for the Mercoid Sensatherm?

A. $5.10.

Q. And what did you get, list price subject to the same percentage of discount, for a Minneapolis-Honeywell thermostat?

A. $5.80.

Q. And how about a Perfex thermostat of their No. 150-A type?

A. $5.

Q. And how about the Perfex thermostat of the 100-A type?

A. $4.30.

Q. So that in each case the Minneapolis-Honeywell's prices as charged by you were always higher than what you got for like products put out either by Perfex or Mercoid in the year 1938?

1831 A. That is true.

Q. Now will you turn to Respondent's Exhibit 133-C, which is entitled "List prices for Aldrich Heat-Pak standard line of oil burners", and tell me whether or not you allowed any differential or made any price adjustment where Mercoid controls were used with the oil burner, as distinguished from oil burners equipped with Minneapolis-Honeywell controls?

A. I did.

Q. And what was that difference?

A. $2.50 net.

Q. And is that the notation which appears upon Respondent's Exhibit 133-C, reading as follows:

"Deduct if with three Mercoid controls in place of Minneapolis, $2.50"?

A. That is right.

Q. And I notice in your 1939 price list that your burner is equipped with a; and I now quote:

"Three standard Minneapolis-Honeywell controls (stack relay, T-11 Acratherm, and a limit control without adjustable differential)."

Is that correct?

A. That is right.

Q. In 1939 you were still featuring Minneapolis-Honeywell and Mercoid controls, is that correct?

A. Yes, sir.

1832 Q. Now will you turn to Respondent's Exhibit 133-D, entitled "Aldrich Compact X oil burner, 1940 list prices, f.o.b. factory, and specifications", and tell me whether or not there was any differential in the sale of oil burners equipped with Mercoid controls and those equipped with Minneapolis-Honeywell controls?

A. There was.

Q. And can you look at your price list and tell me what the difference was for an oil burner equipped with, let's say, the constant ignition primary?

A. $3, list.

Q. That is, Mercoid sold for $3 less?

A. List.

Q. And what was the difference in list between Minneapolis-Honeywell and Mercoid in connection with the primary of the intermittent type?

A. $3.

Q. That is $4, is it not?

A. On intermittent?

Q. Yes, intermittent.

A. $4, even. Both of those were subject to the same discount.

Q. And by "subject to the same discount", you mean percentage discount, so that in all cases a burner equipped with Minneapolis-Honeywell controls sold for more money?

1833 A. That is right.

Q. Now will you turn to the 1941 price list effective March 15, 1941, entitled "Aldrich 'Standard' Oil Burner", and give me the controls that were there considered standard? That is Respondent's Exhibit 133-E.

A. Minneapolis constant ignition control, RA-116, T-11, and standard limit control.

Q. Now, those three controls were standard with the oil burner, is that correct?

A. If they ordered them that way. They also get an option as to any control they wanted.

Q. Now, if they bought an oil burner and asked that it be equipped with three controls of the Mercoid Corporation's make, that is, constant ignition, how much did you allow net?

A. $1.

Q. That is, a burner equipped with Mercoid controls was sold by you for $1 less.

A. That is right.

Q. Did you at the same time offer other makes of controls besides those manufactured by Minneapolis-Honeywell or the Mercoid Corporation?

A. Either Penn or Perfex.

Q. And did you make any charge extra or allow any deduction in connection with either Perfex or Penn?

1834 A. Well, they were the same price as Minneapolis.

Q. So that Mercoid's price on controls with oil burners was always less than the other three companies?

A. Yes, sir.

Q. Now, will you turn to the price list entitled "Controls and Accessories", dated as of August 1, 1941, and tell me of those there disclosed with respect to prices for controls?

A. Well, in this sheet we started out showing the amount to deduct if a control was taken with a burner, and that was at the top of the page.

Then below that we listed the charges or deduction that would be made in case they substituted one make of control for another make.

Q. And by "your own make of control for another make," you mean of the same manufacturer but a different kind of control?

A. No, if they substituted a control of one manufacturer for another that was comparable.

Q. Well, just tell me what is meant under the heading "Minneapolis R-117 relay (intermittent) in place of constant spark relay".

A. Well, it also applies to the controls that could be used for the same purpose of any one make.

Q. In other words, you allowed a differential where they bought a constant ignition primary of Minneapolis-
1835 Honeywell and did not take a primary of the intermittent ignition type, is that correct?

A. Well, we listed it with the constant ignition and then we would charge them more for the intermittent relay, or if we listed it with the intermittent ignition relay, we would charge less than with the constant ignition relay.

We were not in the control business; we were only concerned with selling burners, and we added our cost of controls according to what the dealer took. If he took a cheap control we charged him less than if he took a high priced control.

Q. I notice on the sheet you are just referring to, Respondent's Exhibit 133-F, you have there listed quite a number of controls under Minneapolis-Honeywell, a like quantity under Mercoid, and a substantial quantity under Perfex and likewise under Penn.

A. That is correct.

Q. And are those substantially comparable controls?

A. They are. Sometimes we even mix those controls on a job. A dealer will want a Minneapolis relay or maybe a Perfex relay and he will want a Penn or Mercoid thermostat and limit control.

Trial Examiner Sheppard: I was going to ask you, Mr. Aldrich, if you had that experience in your business.

The Witness: Oh, yes, many times.

1836 By Mr. Freeman:

Q. But you don't ordinarily mix a series 10 T-11 Aeratherm of Minneapolis-Honeywell with somebody else's primary, do you?

A. You can't.

Q. When it comes to Minneapolis-Honeywell's primaries and thermostats, they go out on the same job?

A. The series 10 controls must go together because you can't use the series 10 room thermostat or a series 10 limit control with a—

Q. (Interposing.) You mean primary?

A. With a primary control of any other make, because those controls are three-wire controls and they have a lock-in circuit which the other people are not using.

But we can sell other thermostats and limit controls with the Minneapolis series 10 relays and we do it.

Q. But so far as selling thermostats and primaries of the Minneapolis-Honeywell kind, that is, the series 10, they usually go on the same burner?

A. In the majority of cases, yes, but not always.

Q. Well, you don't follow the general practice of mixing Minneapolis—

Mr. Haycraft: (Interposing.) I object to the leading question.

Trial Examiner Sheppard: Turn it the other way.

1837 Mr. Haycraft: Ask him what he does.

By Mr. Freeman:

Q. Well, do you make it a practice, then, of sending out Minneapolis-Honeywell primaries with thermostats of the two-wire type?

A. Yes, certainly.

Q. And how are they connected up, then?

A. Bridged to posts on your relay.

Q. And when you do that, you eliminate this lock-in circuit?

A. Yes.

Q. And you eliminate one of the functions of the Minneapolis primary.

A. No.

Q. Well, would you say it is just as good?

A. Just as good, yes, sir.

Q. Do you know why Minneapolis-Honeywell has the series 10?

A. Well, it is easier to get sensitivity than it is with the others.

Q. A little better performance?

A. That is right. Easier to get it.

Q. Now, following along in Respondent's Exhibit 133, 133-G, I call your attention to the November 15th, 1941, price list, and I will ask you if there is disclosed

1838 thereon the prices at which you sell Minneapolis, Perfex, Mercoid, and Penn controls.

A. Yes, this is the price of controls, but separately from burners.

Q. And I notice under the general heading of "Control", you have a series of items, and I now ask you whether or not the items under Minneapolis, Perfex, Mercoid, and Penn, that extend in the same horizontal column, are comparable items.

A. They are. They perform the same function.

Q. Did you have annual contracts for your purchases of oil burner controls from Minneapolis-Honeywell during the years, say, 1936 to 1941, inclusive?

A. I am not sure about 1936. I think I did, but in the rest of the years I know that we have had.

Q. And have you likewise during that period of time entered into annual contracts with the Mercoid Corporation?

A. Yes, with all makers.

Q. Likewise with Penn?

A. Yes.

Q. Or Perfex?

A. Not all of the years with Penn, but the last few years we have had contracts with Penn.

Q. That is, you signed annual contracts with all of the companies?

1839 A. Yes, sir.

Q. And have you ever felt, in signing up with any one of the companies, that that contract kept you from buying controls from any one of the other companies?

A. No, sir.

Mr. Haycraft: I object to that unless there is some showing of what those contracts were. There might have been some provision in there—this Aldrich Company is not one of the 88 that have been a matter of discussion heretofore in this case, and I don't know what kind of a contract they have.

Mr. Freeman: Just read the stipulation, Mr. Haycraft. It will state.

Trial Examiner Sheppard: What is that?

Mr. Freeman: The stipulation states there are more companies with contracts than merely those 88 you refer to.

Mr. Haycraft: Well, it may be in a unit contract, I don't know.

Trial Examiner Sheppard: Well, this gentleman knows whether he has the contracts or not. I will let you make your statement, whatever it is.

The Witness: We had contracts with all makers. None of them were exclusive and none of them specified that we had to buy controls from no one else.

1840 Trial Examiner Sheppard: What I am interested in, Mr. Aldrich, is, and I want you to tell me—

The Witness: (Interposing.) All right.

Trial Examiner Sheppard: I don't care whether you

had contracts with all of them or not, but if you should have a contract with them, all of them, I want to know if you felt free and easy to buy wherever you wanted to, outside of any contract?

The Witness: Certainly.

Trial Examiner Sheppard: That is all I want to know on that point.

Mr. Freeman: That is all I want to know.

The Witness: I wouldn't have contracted unless I felt that way.

Trial Examiner Sheppard: In other words, you want more than one avenue of supply?

The Witness: I want what the customer wants.

Trial Examiner Sheppard: What is your position with that concern; are you president?

The Witness: Well, it is a co-partnership and Mrs. Aldrich and I own a half interest.

Trial Examiner Sheppard: It is a co-partnership?

The Witness: Yes, sir.

Trial Examiner Sheppard: You are not incorporated?

1841 The Witness: No.

Trial Examiner Sheppard: Just you and your wife?

The Witness: Well, there are four of us.

Trial Examiner Sheppard: What?

The Witness: There are four, Mr. Hill and his wife and myself and my wife.

Trial Examiner Sheppard: Oh, yes. All right, go ahead.

By Mr. Freeman:

Q. When you started in the oil burner business and bought controls from Minneapolis-Honeywell, do you recall what your price set-up was at that time? Did you get Minneapolis-Honeywell's low price?

A. No, I don't think I did, not at first, when I first started, because I didn't have very much credit established yet. I had to buy wherever I could get them.

Q. How about your volume, have you established yourself with respect to volume, or had you at that time?

A. They come around all right.

Q. That is, as your volume increased you got better prices?

A. That is right.

Mr. Freeman: I am wondering if Mr. Lockrae would merely state in the record the particular brackets that the Aldrich Company was in for the years 1936 to 1941.

1842 Trial Examiner Sheppard: Maybe you could tell us yourself?

The Witness: No, I couldn't.

Trial Examiner Sheppard: Do you know the first bracket you were put into?

The Witness: No, I don't know the first bracket.

Trial Examiner Sheppard: All right, in view of the fact that he can't tell us, Mr. Lockrae, you can prompt him and then you can testify to it.

The Witness: Your Honor, I don't think we had the same brackets every year. Now, I don't know for sure, but I think they probably had those classifications set up differently different years, Minneapolis-Honeywell did.

Trial Examiner Sheppard: Mr. Lockrae will fix it up for you.

Mr. Lockrae: In 1936 he bought in our bracket 1; in 1937 in our bracket 3; in 1938 in our bracket 4; in 1939, our bracket 3; 1940, bracket 4-A; and 1941, bracket 5.

By Mr. Freeman:

Q. Is that correct, Mr. Aldrich?

A. Yes.

Trial Examiner Sheppard: That showed a steady rise for you, except in one year you duplicated?

The Witness: In 1938, you see, we had a drop in the industry, but I increased the number of burners that I

1843 sold but I was unable to increase the profits.

Mr. Haycraft: And the price?

The Witness: In 1936 we paid $28.90 for a set of controls of the intermittent ignition type.

Trial Examiner Sheppard: That was when you were in bracket 1?

The Witness: Bracket 1. In 1937 it was $21.30.

Trial Examiner Sheppard: That was in bracket 3?

The Witness: Right. In 1938, bracket 4, $17.25; in 1939, bracket 3, $15.95; in 1940 I was in bracket 4-A, $15.15; and in 1941, in bracket 5, $13.75.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. Mr. Aldrich, when you came on the market in 1935 and 1936 with your Aldrich burner, how did your net price

to dealers compare with the average price for oil burners at that time then on the market?

A. I think it was probably a little below the average in price. However, there were burners selling as much as $10 less.

Q. And there were likewise burners selling for about how many dollars more than your price?

A. Oh, 35.

Q. And what has happened since? Now, let us get that same comparison, bringing it down a little closer to 1941.

1844 A. Yes. We get about $6 net more than my lowest priced competitor.

Q. And that price that you get is still lower, though, than other oil burner manufacturers?

A. Well, when they go out after one of my large dealers they quote lower prices yet than I do.

Trial Examiner Sheppard: Do you do business all over the country or locally?

The Witness: All over the United States and in all foreign countries, that is, when there isn't a war on.

By Mr. Freeman:

Q. So you are in competition with burners selling for less than what your burner sells for and likewise with burners selling for more than what you sell for?

A. Yes.

Q. Well, who sells for less than you do?

A. Well, nearly any of them when they are selling especially to builders, even our highest priced competitors will cut the price.

Q. So that your competition is just everybody, then?

A. That is right.

Mr. Freeman: That is all. You may cross-examine.

Cross-Examination by Mr. Haycraft.

1845 Q. What has been your price range during these years? What were you selling for in 1941, and then go back?

A. Well, in 1941 we were selling burners in whole carload lots for as low as $47.50 and $48, with three controls; that is, where we could get large volume in carload lots and have n service of any kind and the customer took all responsibility.

We started out with an $82.50 price in 1935 on the same item.

Q. What were you selling for in 1937?

A. In 1937, about $55, with the controls.

Q. 1938?

A. We lowered that about $2 a year as we increased our volume. I think you will find that will run down about $47.50.

Q. Did you follow during that entire period this same policy of selling only in carload lots to large buyers?

A. We made a specialty of large outlets, such as furnace companies and boiler companies and appliance people and Sears, Roebuck & Company, where they sold under their own brand.

Q. You usually sold in carload quantities, then?

A. Yes.

Q. Did you have any dealers at all that serviced your—that sold your burner and serviced it?

A. Oh, yes.

1846 Q. About how many throughout the country did that?

A. Well, on an average of probably, through those years, about a thousand.

Q. About a thousand?

A. We have had as high as 2,000 dealers.

Mr. Freeman: 2,000 accounts?

The Witness: Yes.

By Mr. Haycraft:

Q. Now, when you sold these burners in less-than-carload lots, did you get a higher price for them?

A. Yes.

Q. What did you get for them then?

A. Well,—

Q. In 1941, and going back.

A. Well, they would run about an average of about $3 apiece, maybe more, to the small dealer.

Q. About $3 apiece. In other words, about 50, 51 dollars?

A. 51, 51, 52 dollars; that depends on how much assistance the man wanted. If he happened to be a fellow that required a lot of service, a lot of help, we always charged him enough more to cover it.

Q. Now, referring to this Exhibit 133, on the last page, 133-G—does the witness have it before him?

A. Yes.

1847 Q. Will you look at the last page; November 15, 1941, was there any difference in your price, in the price of your constant ignition control whether it was manufactured by Minneapolis, Perfex, Mercoid, or Penn during that time?

A. 1941?

Q. Yes.

A. Constant ignition?

Q. Yes, constant ignition stack relay, R-116A of Minneapolis.

A. Same price.

Q. Same price for all four?

A. Yes.

Q. How about the intermittent ignition relay, was there any difference in your price on those four?

A. No, it was the same price.

Q. Same price.

A. That is where they bought without buying a burner. Please understand, we try to discourage them buying any controls without burners. We are not in the control business. We were never in the control business.

Q. Now, the low voltage thermostat, is there any difference in the four brands there?

Mr. Freeman: Are you asking him about selling price or the cost price?

Mr. Haycraft: Selling price. That is what this 1848 is.

Mr. Freeman: That is the best evidence, then.

Mr. Haycraft: You asked him about it. I want to ask him something about it, too.

By Mr. Haycraft:

Q. Is there any difference between your low voltage thermostats?

A. There was none that year.

Q. The clock thermostat, what differences was there there?

A. Well, the Minneapolis had three kinds and the Mercoid and the Perfex and Penn only had one kind each.

Q. For comparable clock thermostats what was the difference?

A. The Minneapolis cost the dealer $1 more for a comparable outfit.

Q. That T-109A, what is the difference between that and T-111A?

A. The T109A is an elapsed time manually wound thermostat.

Q. And the T105A, that high priced one, what was that?

A. That is a deluxe old model of Minneapolis.

Q. An old model?

A. Yes, sir.

Q. Now, the T111A and the 126D4-D8 and 772, they are comparable in their performance?

A. That is right.

1849 Q. Now, the line voltage thermostat, what difference was there there?

A. Well, the T45, T44-T45, is a comparable one, is comparable to the Perfex 200D. That is wrong.

The Perfex 200D is a heavier instrument; it is comparable to the No. 855 Mercoid. No, correction again. I will start out with the T42. The T42 is comparable to the 200D Perfex and the 855 Mercoid.

Q. What difference in price do you have there?

A. Well, we had a $5.50 price on the Perfex, $6.50 on the 855 Mercoid, and $5.75 on the T42 Minneapolis.

Q. In other words, Minneapolis was cheaper than the Mercoid?

A. Yes, sir.

Q. What is the Penn one? You didn't mention that one. Was that heavier or lighter than the others?

A. Well, that job is comparable to the T44-T45 of the Minneapolis.

Q. The $4.50 Minneapolis line voltage thermostat was comparable to Penn's $6.50, is that right?

A. That is right.

Q. Now, the Strap-On-Aquastat?

A. Those are all comparable.

Q. They are all the same price?

A. They are all the same price.

1850 Q. The Submerged Aquastat?

A. There is a difference. DA-36 and 37 Mercoid are very much superior to any of the others listed in performance. They are a better control.

Q. And cost more?

A. And cost more, yes, sir.

Q. Well, what is there comparable to the Minneapolis L170A?

A. Well, I would say that there isn't much preference between that and the others listed, outside of the DA-36 & 7, they are comparable.

Q. So that it is a little higher in price, however, than the Perfex and Mercoid, but lower than Penn?

A. Yes, sir.

Q. The Steam Pressure Control P404A—

A. (Interposing.) They are all comparable.

Q. And the Minneapolis price is less than the price—the price on the Minneapolis control is less than on the Mercoid and the Penn, is that right?

A. That is right. The same as Perfex.

Q. Now, the combination high and low Aquastats, you just have two there, don't you, Penn and Minneapolis?

A. Yes.

Q. Are they comparable?

A. Well, I never handled any of the Penn so I can't
1851 tell you for sure. They cost us the same.

Q. The warm air limit control, L419, the Minneapolis number, is that comparable?

A. You will find two prices there, and that is because the M51 Mercoid has an adjustable differential. Minneapolis have a control in their line that sells for a dollar more that is comparable.

Q. It is the same price, then?

A. Same price.

Q. How about the Penn item?

A. I think the Penn is always a little bit less. They are adjustable, anyhow.

Q. Now, the fan control, LA412A of the Minneapolis, is that comparable to the others listed?

A. They are all comparable except the same thing applies to the M53, which has an adjustable differential.

Q. Now, the combination fan and furnace control, LA401A, are they all comparable?

A. No, they are not. The M-80 has an adjustable differential on both the fan switch and the burner switch.

Q. How about the Perfex?

A. And the Penn also. Perfex is adjustable. Minneapolis is fixed.

Q. Now, where you have got higher prices for Mercoid and Perfex and Penn than you do have for Minneap-
1852 olis, does that mean that you paid more for them?

A. Yes, wherever they show higher prices, in either

case, either the Minneapolis or the others, we paid more for them.

Q. Now, on this August 1, 1941, that is 133-F, I believe where you have deductions for—you start off by saying, "Deduct the following where a control is not taken."
